Meta Arts

Life, Universe and Everything, in a Time of Transition. For those who have their monkey-minds tightly strapped down, the pressures of this upcoming year will provide them with the ride of their lives, yet, should, leave them alive, if gasping, at years end.

At all levels of our processing, the data is shouting, [transition (begins now)]. Everything. All aspects of the planet, our social order, and anything else close by will be affected by the [transitions] of 2015, which, of course, have already begun in late 2014.

If your monkey-minds are not as tightly wrapped as a soviet-state creche infant....well, you may have problems. There will be few stable anchors for monkey-mind tail-hooks, so your primate will be more 'free-floating' and prone to wild spells as its various points of reference simply fail to provide the sought after 'resting space' of 'stability'.

Meta Data

The data types referenced in this report are:

IM (immediacy data = 3 days out through the end of the third week)),

ST (shorter term = 3weeks out through the end of the third month),

LT (longer term = fourth month through 3 years at primary level)

Each of these data types contains the possibility of being linked (in one of several ways) to data that is multiple generations (MG). This data type is only brought over by links through our lexicon, and is predicated on a 'generation' as being between 20/twenty, and 28/twenty-eight years in length. (Variance due to pan humanity cultural thinking being imposed on connotations and definitions).

Terra

Many,way too many, [pipes (go) bust]. Both the shorter and longer term data types are in agreement with the immediacy data in the idea of [pipes rupturing (caused by winter/spring freezing)] will be viewed (by those [repairing] and [reporting]) as being a [sustained (multiple months) crisis] that is [mostly not well explained]. The data accrues across the first half of 2015 showing first [large scale (tens of millions of dollars for repairs) pipe ruptures] will hit the [northern hemisphere] due to [abnormal] and [brutal/bitter] [cold winter conditions]. The real surprise in the data sets is that this meme of [ruptured pipes] will include the [southern hemisphere (during their summer)] as well as having the [pipes (in distress = causing problems to humans/infrastructure)] extend well into the second half of the year. The cause for the extension of the [rupture meme] is shown as being [earth expansion movements]. The [earth in transition (to a bigger size)] data sets continue to grow in the area of

[expanding earth creates problems/changes for humanity]. These sets now include a [flush] (pun intended) of large accretions of [pipes (in) distress (from stretching/distortions)].

The longer term data sets are indicating that this [rupture/distorted (and problem causing) pipes in the ground] meme will actually be with us for a number of years. This next year will have the [pipes (as problems, mostly not well explained)] reach a point of [visibility] in the [mainstream media = lying propaganda criminals] such that [discussion] of the subject will take a life of its own on the internet. This meme is described as being something akin to the [noises from the earth] meme of a few years ago. In this [pipes as problems] period, it will be the [degradation (to failure)] of 'stable' infrastructure that will be the [cause of wonderment].

The data sets are also showing that [high altitude, high capacity, electrical lines] will suffer a similar [transition to problems] as do the [pipes]. In this case the cause is also indicated to be [expanding earth] causing [distortions] to [land forms] which in turn cause [lines to stretch/distort] and [fail/snap].

These many problems within the previously [stable] infrastructure of [electrical and plumbing systems] are indicated to [spark] the [debates] as to what-the-hell is occurring. The [confusion as to cause] of the [many infrastructure failures] is being described as provoking some [heated debates] between [many rival agendas] within the [mainstream media presstitutes]. As with the previously forecast rise in [sinkholes] which has manifested these last 3/three years with arguable 'peak' in 2014, the data sets are pointing to an [initial flush/plethora] of [not well explained infrastructure problems] that will take a while (few months) before becoming an [apparent phenomenon] of its own to the mass of [internet humanity (aka GlobalPop)].

Both shorter term and longer term values contain repetitious geographic references to [southern hemisphere] and its [infrastructure problems] as being the [point (of) puzzlement] for many observers this coming January through March (into June in some areas). The question will be [why?] should [pipes rupture (causing floods)] in [summer?]. At several of the forecast [pipes as problems] set intersections within modelspace there are conjoined sets which contain [(healer) shaman] and make reference to a [couple/group?] of [short, strong people] with [special insight] who will be standing up, and stating (from indigenous peoples perspective) that [earth (is) breathing (inward)]. Further, within the [alternative media], several [global personalities] will [emerge (from these south america?) peoples]. Notably will be the [one who translates/speaks]. This [young person (female?)] is indicated to have a very special future as a [global personality] over these next 20/twenty years.

Within the [pipes as problems] data sets are some of particular interest to linguists as they are pointing to a developing meme of [pipes/wires (in and above) ground] as being [problems of life]. In other words, the data is painting a picture of language in transition along with earth and humanity such that in a few years time it will be sufficient to merely say, [pipes], or [wires] in response to the question of "just how shitty was your day?".

Also note that the data is pointing toward [inverse/reverse prejudice for the negative] developing within [american english] through the rest of this, and the next decade. In this case the data sets are describing a [tough (set of) conditions] for [life in North America] of such an extent that the 'natural' (and current then in time) assumption will be that your day was [shitty] in many if not all aspects. As shown by the

data sets, no more 'have a nice day'; rather, it is indicated to be 'hope your day don't kill ya'.

Further problems for GlobalPop are shown as modelspace is progressed through 2015. By the end of the year, along with [problem pipes/wires], the dominating themes will be [food (prices/availability/quality)], and [weather/climate].

The [climate/weather] arising from [earth in transition] is indicated to both [crush food crop production (in many areas around the planet)] as well as [boost (new forms of) agriculture globally]. The data is clearly describing an [adaptation process] which will [settle upon (a portion of) humanity] as the [climate/weather patterns] shift such as to [destroy (mechanized field) agriculture]. Note the [destruction of mechanized field agriculture] is not described as being ubiquitous around the planet, but is rather as [focused] on [mechanized 'bread basket' regions]. These descriptor sets include [asia/china and north america].

The [climate adaptation boost (to) alternative agriculture] is a very long term trend with descriptor sets bring in multiple generation links pointing to [new (agricultural) discoveries] still being made (in the new system/form) 40/forty years out. Cross linked to these sets are some aspect/attribute sets indicating that a [collective (student group)] from [India?] will ['solve'] (in mid 2015?), the [problem] of [plant growth (off planet/in space)]. Data is showing that it will take a few years (3/three?) before the ['first' success (in off world crop harvest)] is reported, but the 'seeds' (pun intended) are shown as sprouting in (northern? India) in 2015.

The interwoven problems of [earth (climate) in transition] and [food production] are shown as being the [2/two dominating] themes for discussion by late 2015. In the USA, these subjects are described as being so [sharply focused] as to [change politicians behavior] as well as to [alter] the [political process] itself.

The first of the [triple concerns] of [price, availability, quality] is indicated to be the element in [public consciousness/discussion] by mid Spring as the [weather conditions] and [changing climate] will have [devastated] many [regional growing centers]. The data sets contain detail aspect/attribute sets for everything from [local collective gardens] being [flooded away] (along with the neighborhoods), to [major river (course) changes] which [destroy] both [roads (serving them)] and [croplands]. These sorts of instances will be both representative [typical] as well as [widely reported (via alternative media)]. This is but part of a situation that also combines with [depreciating dollar], [oil price instability], [infrastructure instability], and [foreign (shipping) embargoes] to create [price/availability hell] for both [citizens] and [government] here in [USA], and to a greater [inflation] extent, in the [UK].

Data sets are forecasting a very divergent picture of [food] and other [necessary supplies] deliveries across much of [north america] that will start to show [visibility] with the combined stories of [foreign (non) delivery] and [transport devastation] due to severe climate extremes in a very short period of time (e.g. extreme drought, sudden deep cold, large snowfall, and then heat wave that both floods, and bakes the area).

The longer term data sets are forecasting a series of such extremes across large areas of the planet, including some very prime, and (currently) [pricey] real estate for agriculture. As these episodes

manifest, the data shows that actual, and lasting, damage will occur in some areas. The first two most notable include [mountainous] and [urban] terrains in [mid continent]. Further the damage to the [mountainous regions] is indicated to destroy [downhill growing (and habitation) areas].

As a (necessary?) response to the [local weather damage (to) crops/gardens/sustenance/infrastructure], the data sets are pointing to 2015 as being [The Breakout Year] for [SOC (self organizing collectives)]. The data sets of all three types are pointing toward SOC's [taking on the world] with very high [visibility] in [alternative media] by the end of the year. From these SOC's will emerge (according to modelspace), the [renaissance (in agricultural technology)]. This is but part of a large (and previously forecast) renaissance in [life skills/matterium understanding] that will [sweep/surf] through humanity over these next decades. At the center of the [emerging new humanity (aka renaissance)] is the [SOC (self organizing collective)]. The data accretion patterns are clearly pointing toward the [death (of top down organization)] due to (in part) [governmental paralysis] and [governmental lies/(ineptitude)] that will lead to [SOC's] spring up to [do work] that [MUST] be done for the sake of [personal] and [local community (survival/progress)]. In many cases, the data sets are indicating that [governments (local, province/state, national)] will [resent] and [resist] what they see as the [intrusion] into their [authority space]. This [attitude (by government)] is indicated to precipitate a number of [conflicts].

Within the GlobalPop sub sets for [western countries], the [housing] data are showing a [great crash]. Indeed within the detail sets are indicators that, at some point in not too distant future, the words [The Great (Housing) Crash] will be used by [mainstream media whore-journalists] as the [debt debacle] turns into a [derivative nightmare] that in its turn is shown to [crater] the [housing] and [construction] segments of the [markets] in most [western (G20) states]. With a few exceptions, the data are painting a very bleak picture of [construction industry (lost)] for [four generations]. The imagery is for [reverse immigration] as [construction workers] are faced with [no work (for generations)]. The [reverse migration] is indicated in both [USA] and [UK/Northern EU]. It must be noted that the SOC's related sets that point toward [renaissance] in latter half of this decade and through the next are showing that [habitation], as a base [human concept] will be [altered] both by [expanding earth (and Ice Age)], and by [creative engineering (new technology)].

Gold

The [giddy] language forecast in recent IDIRs is now being upgraded to [joy] as the [gold] sub set is moved into January, 2015. These data sets are in support of [gold holders] sub set that has new growth in supporting sets with bespoke [joy] as their primary descriptor. Further the [joy] sub sets have large areas of supporting sets that contain longer term data indicating a very long [bull market] in [gold] that has a [30/thirty year (lifespan)].

The data sets for [gold (as money)] begin to accumulate new growth at noticeable levels as modelspace is progressed through January and deep into [Winter (northern hemisphere)]. While the level of [revolutionary activity] within the [populace] is described as [incubating] through the [long brutal Winter], the [revolution (within) global financial systems] is indicated to be [on fire]. The [gold as money] meme is showing as having [legs] and [growing popular support]. The data sets are showing that several [very large (Asian?Indian?) banks] will set up a [fiat to gold to bitcoin to gold to fiat]

exchange system to [facilitate international trade] without a [dollar bias]. Further their use of the [blockchain and bitcoin] is showing as being [promoted (as effort) against corruption].

Other [gold] related sets include some that are curious to say the least, and hint about a [giant acquisition] of, what the data labels as, the [last big cache] of [old gold]. The data sets have a definition for [old gold] that includes [forms (not acceptable to) Chinese (or too large/too small)].

Further the long term data sets for both [gold] and [silver] point to [lust (to acquire)] at such heights that ['freelance' gold/silver mining] starts to occur and be discussed as many instances of [mine collapse] and [death by claim jumper] are reported. Within [western North America] the data is suggesting that [criminal gangs] will [attempt] to [finance/initiate clandestine gold mines (in old Sonora? Sierra range?)]. Some of these will come to [public visibility] due to their [success], while others will be [disclosed] due to [mining disaster].

As modelspace is moved closer to May, an increasing amount of the data details are focusing on the word [separation] in many aspects. The core linguistics are going to the idea of [separating (the fantasy world of G20 states numbers)] from the [reality of trade among rest of world]. In some respects the details provide a view of [states (drifting) away (from the) tree of empire] as the [petrodollar based financial system] is described as [coming unglued].

Silver

The data sets are forecasting that the [opposition (to silver)] within the [markets] will encounter [failure] in January to a degree that causes [system wide constipation], and [internal contention]. It is this latter that is forecasting the imminent [failure] of the [opposition (control effort)]. The data sets are describing a [market out of control] in which [market 'authorities'] are [judged bankrupt (and) corrupt] by the [market participants] with the effect of [mass (desertions) from trading platforms]. Further problems with [withdrawal of funds (in paper currencies)] causes [markets distortions] which in their turn are forecasting a [constipation (of market clearing)]. The supporting sets for the [constipation of market clearing] set includes details pointing to some [market manipulators] being [caught (not able to cancel/alter (wash) trades)]. The idea coming out of the data is that there will be several [giant trading firms] who will be [trapped] with [bogus trades] in a [locked up/constipated system].

In all the supporting sets for [silver (as money/precious metal)] that have [January] associations, there is some references to [positive price movement]. Further the data includes a number of supporting sets going to the idea of [record breaking (positive price movement)]. In many of these sets cross links over to the [oil disaster] and [bond debacle] are further cross linked over to [political instability (within GUS)]; all of which are contributing to the [failure (to oppose) silver price rise].

Further data sets supporting the [silver price rise] are themselves supporting, or supported by, sets pointing to the [decoupling of silver (from gold)]. These data sets are also extensively cross linked over to terminating sets of [officialdom] within both the Markets entity and the TPTB entity. These terminating sets are seemingly stating that a [great fear] exists within [officialdom] around this idea as

being [eventual (and) inevitable]. The [decoupling (of silver from gold ratio)] has a higher emotive summation now than their [fear] about a [gold rush/run]. The [fears] around [silver to gold ratio] are nearly a third again higher than the fear quotient for [gold price run]. Aspect/attribute sets in support of the [fear of silver decoupling] are in support of the [failure (of silver) opposition] in January.

The data sets for [silver] change dramatically as modelspace is progressed through March and into the [explosive Spring (northern hemisphere)]. As the [opposition (to silver price rise)] fails, the data is showing that the [cracks (in the system)], will [force] the [elites/tptb] to [desperate measures]. These [measures] are describing a [state (run amok)]. In the case of the [UK], the data suggests that ['vilification of royals'] will be [coincident] with [drastic attempts] by the [british (civil) government] to [stop (runaway) hyperinflation] in [precious metals] by [decrees (of) restriction/confiscation]. These [new (anti silver) laws] are shown as a [laughing failure], as well as being [co-incident] with the [second (major) crash] in [UK real estate prices (in gold/silver)].

As the [silver suppression] effort is [buried], and the [failures (of powers that be)] are [promoted] on [alternative media], the accretion patterns for the GlobalPop entity are pointing toward extreme long term [social order changes] that will begin 'in the background' of [markets in chaos]. As the **many** [failures to complete (deliver/payoff)] start [cascading multiple waves] of [default] that roll around the [bankster world], the data sets are showing that the first real or [substantial reallocation (of gold to silver ratio)] will also begin. This movement is described as [reaching for parity] and references the ratio in [fiat currencies] for [silver to gold]. This movement is described as [violent] in its impact on the [stability] of the [core (banks)] of the [paper debt system], as well as being a [lever] for [up-ending/overturning (societal power) relationships].

Bitcoin

When the data for Bitcoin is examined with all three types in modelspace, a picture of a [transition period] for human [interpersonal relationships] is exposed. Against a background of [earth in transition] (see Terra entity data above), the [needs] and [desires] of [humanity] are described as [separating] from the [things (patterns) of the past].

Either in spite of, or because of, the background [earth in transition] problems, many [new uses] are discovered or [proposed] for [bitcoin blockchain] that will, in [2015] be [applied] against [developing problems] in other areas of [human life (here on terra)].

A curious set of detail data within the Bitcoin sub set are suggesting that Bitcoin will be used to [negate government lies (about) economy] here in USA (and UK?), in January as a [storm (of) protest] will be [directed/aimed at] the [governmental number spewers (government numbers of all kinds)] for [fraud]. The data sets are suggesting that Bitcoin will be some how [juxtaposed (to) government (fake) numbers]. This is showing as [inducing] a [backlash (against) government numbers] by [financiers/fin-tech/banksters (internationally)]. It is the [international] nature of the [protest storm] and that the [protest actions/behaviors] are from [banksters/fin-tech] that causes the [trembling (of the) government]

(relative to) civil service]. Further details are forecasting a series of [whistle-blowers (from within government)] who will be [prompted forward] by the [government breakdown], plus the [storm of protest], plus the added incentive of a [bitcoin bounty (for reporting government fraud)]. The data sets are labeling this as the [honest numbers initiative/movement], and are indicating that it will be [global], and will begin in [germany].

The data sets for [bitcoin] include references to [international settlements], and ['certified' trade account settlement] such that [blockchain technology] is being forecast as a [transport (of trade settlements)] between continents in early 2015 at a ['back door' government] level. When information about this [government to government settlement/transaction] across the [blockchain] reaches the [public], the data shows a coincident movement up for [bitcoin] against a [(rapidly?) dropping dollar].

The damage described as being inflicted on the nascent [fin-tech industry] from the [bankster crash] of 2015, does do damage to the [wild-cat] nature of [bitcoin (start-up) activity]. However the impact of the [dollar woes], while [throttling back (venture capital investment (in all start-ups))], also provides impetus for [novel (uses of) bitcoin] and the [blockchain] to solve [emerging capital flow problems]. These are forecast to include some instances of [substitutions (for) government (functions)] by as early as [last quarter, 2015] as the [infrastructure] within the [USA] begins to [shred] under [diverse problem conditions].

With modelspace placed to January 2015, the data sets for Bitcoin pick up new growth in areas that are under the descriptor of [secrets revealed]. These sets are supported at the primary level by the idea of a [leak (of damaging information)] about the ['regulation'] of Bitcoin. These [secrets revealed] contain hints that the information will contain references to a ['new world order' electronic currency] that is [dying on the vine] since [bitcoin (appeared)]. The data suggests that it will be revealed that the [NWO (aka global bankster criminal cabal)] had prepared their own [e-currency] with the intent of [replacing] the [US dollar]. Further details suggest that TPTB (officialdom within NWO) had been targeting 2015-2016 for their [release date].

The Bitcoin data sets gain support for [price (in dollars/currencies) rise] as modelspace is progressed through January. The [BTC vs \$] sub sets include an extensive cross linking over to other areas of the Markets entity where we have terminating sets that include the [failure of (silver) opposition], as well as [silver (surprising step up (in \$ price))]. In both instances there are confirming sets for previous forecasts of Bitcoin to be priced at between \$608 to \$648 when the [big (sudden) silver price (step)] occurs. These sets also contain sub sets at the tertiary support level that contain rising emotional sums and that go to the idea of a [near parity] between [Bitcoin] and [gold] in the [use (for international settlements)]. The idea from the details of these sets is that when [gold] has [re-emerged] as the defacto ONLY method for international settlement of trade (paper not being accepted), [bitcoin] will also be used for this purpose. The longer term sets within these sets include indications that [russia] will [accept] and [use] the [bitcoin/blockchain] by that point, and that [bitcoin] will also be [variable (in price)], but with a [peg] to the [local price of gold] as it will be the [electronic gold substitute].

GlobalPop

Due to at least [2/two murders] by [burqa (wearing) 'women'], the data sets are indicating that sections of GlobalPop, likely here in USA and [UK (or) Sweden?], will [forbid public burqa wearing] as well as [make unlawful (to cover one's face) in public]. The data sets are showing that, as may be expected, a huge [outcry/uproar] will develop which is indicated to [be used by (politicians)] to [further divide] the [populace]. In several of the detail sets, the data is showing that [attacks (verbal and physical)] will accompany the [rancor] and [contention] over the [issue].

Other GlobalPop [crime] data sets are forecasting a [global famous kidnap case] in which the [family (more than 1/one?)] of a [famous bankster/politician] will be [abducted]. This incident is indicated to set off a number of divergent [social memes] that will include [copycat crimes (at many levels)] as well as [congress (critters/politicians) debating (governmental/law enforcement) changes/shakeup]. The data sets are indicating the [kidnapping] will also be [causal] for the [failure (of yet another insurance corporation)].

GUS internal problems show [cracks] within the [political/lobbyist system], and [instability] in [government control (of events/populace)]. As modelspace is moved through May of 2015, new sets appear in support of the [instability] of the [relationships between populace and ruling elites] in both the [USA], and in [UK/EU].

The [UK] is specifically shaken by [deaths? (abdications?)] within the ['royals'] as they are [publicly labeled] as [pedophiles] and [murderers]. These [labels] themselves are indicated to cause [generational separation/fighting/contention] within the [UK populace]. The data is describing several [raw emotional television appearances] of [elites] and [royals] that will [end badly], when they are [allowed to end]. As a number of these [bad press/bad TV] incidents manifest over a short few weeks in [late? Spring (northern hemisphere)], the ['royals'] are forecast to [hunker down] and [refuse all press contact]. This [reaction] sets up its own series of [responses] as it leads to [open confrontation] and [public vilification] of the ['royals'] at several of their [necessary, business appearances]. That trend leads to the [hunkering down/withdrawal] of the ['royals'] into their [shame palace]. From there the longer term data sets are hinting that ['royal futures'] will take an entirely [unforeseen/unexpected turn].

The data sets for [GUS] are painting a picture of [fractured fairy tales] in which [governmental agents] are [openly contesting] with [other governmental agents] and the [general populace]. There are numerous sets going to the idea of [overwhelming public response] that will [flood/inundate] the [government's ability (man/person power)] to react. In some of these, [government agents (and some politicians?)] are forecast to be [incarcerated (in makeshift/temporary jails)] by (what the government will call) [communist-led mobs].

GUS failures of [instability] bounce back on GUS as the data sets are forecasting that [foreign adventures (of the ruling GUS cabal)] will cause an [oil disaster] which in its turn will induce [crushing pressures] on the [FRN (dollar)]. The [oil disaster] is directly supported by sets that go to [USA bonds], and [fracking], and [natural gas (interruption)], and [mass (poisoning)]. This last is in the far reaches of the shorter term data and is associated with a [mass (gassing/poisoning)] episode that is forecast for middle (or later) of 2015 in the [SW USA]. This episode is shown as an [emotional

cap/pinnacle] of the [oil disaster meme] within the present data set.

To the manifesting language about [bankster suicides], the data accretion patterns are suggesting that we need now to add 2/two new forms of [fatalities] for [banksters]; these are [murder (as noted above in burqa garb)], and an emerging trend for 2015 and beyond, [bad drugs (overdose)]. This is, according to the data, actually going to be [accidental] forms of [death] as a new form of [chemical imbalance (of the human body)] will be the [stated, proximate cause] for the [deaths] of [drugs (chemicals are indicated rather than plants or plant extracts) users]. An interesting connection is forecast to appear due to the [financial technology 'industry'] being heavily represented within the [(soon to appear) growing fatalities due to recreational chemical usage].

Dollar

The data sets are clearly stating that [air (in quantity/under pressure)] has been [pumped] into the [FRN (dollar)]. The data is further filling the data sub set for the [dollar] with [air], [floating], [overstatement], [exaggeration], [lies], and other language going toward [fluff] and [froth]. The [FRN (dollar)] is showing as having a [air (inflated) Winter (northern hemisphere)], and a [very bad Spring (northern hemisphere)].

As modelspace is progressed through Winter, it runs into a huge [dollar] related growth in data that begins in [March 2015] and continues at a staggering rate of growth through [May 2015]. Much of the language that is forecast to appear in all forms of media in late February (continuing unreduced through end of May) is coming under the sub set of [panic]. Other sets also go to the sets of [oil], [governmental instability (contention to point of lock-down/lock-out)], and [inflation].

The [FRN (dollar)] sets are cross linked from late January onward to the [honest numbers initiative/movement] out of [germany], with increasing [acrimony], and [bad language (swearing?)] coming from the [government (USA)/(UK)/(EU)] as the [populace] will [take up] the [meme] and [increase the pressure] on [failing government].

There are a number of new sets accruing under the [dollar] sub set that are dominated by references to [denied (young) people]. These sets are diverse, but have a common core linguistic structure around the idea of [turning over/up-ending/over-whelming]. While much of the language of these sets can be found in the set for [revolution], the [denied (young) people] sub set under [dollar (USA)] does not, quite yet, have the emotional intensity sums to push it over our threshold level into [revolution]. It may also be that these [denied (generations of) young people] have yet to crystallize their intention into [revolution]. However the sets are nearly to [revolution] levels of intensity by the time modelspace is progressed into May 2015. The emotional intensity sums have almost doubled, within these sets, by that point.

Dollar sets have supporting sets for the [jaws (biting/closing)] that appear in late January and grow continuously and with some vigor through May of 2015. These sets contain language about being [squeezed (between) closing jaws], and [biting down (to crush)]. These sets are cross linked over to the GlobalPop entity where the termination sets include [contention (over hyper inflating food prices)], and

[upward (rushing) oil prices].

The [upward rushing oil prices] are indicated to be [last half] of 2015, with a [dying (oil price)] in January 2015 that is indicated to [crack (the) system], and lead to [oil (control industry) fracturing/dispersing] by June 2015. There are sets going to the idea of a [bond (exposure)] within the [dying oil prices] that causes a [massive (debt) increase] which is forecast to actually produce a [negative effect (within the oil industry and general economy)]. The language within the supporting sets reads very much like a [final crash] of [paper debt/derivatives/bonds].

As a temporal marker, the data sets for the [FRN \$ (dollar)] have a few numbers that may be of value in forecasting large [dollar (relative value) shifts]. These temporal markers are centered around the idea of a [5/five day 'swelling']. The sets for the [swelling (of the debt)] contain language that seems to describe reaching the 'knee of the (exponentially upward) curve'. The idea within the data details is that some point in January/February, a situation is reached where it become necessary to [swell (the debt)] by nearly its [total amount] on a cycle as short as [every 5/five days]. Note that the data sets cross linked to these sets are indicating that this [swelling (of the debt)] is very [sudden], and is precipitated by an [international crisis], and further, is indicated to last but only 3/three weeks before a [complete (collapse in) confidence] within the [dollar]. This last is shown as being even within the [USA]. Sets that grow in support as modelspace is progressed beyond this point are filled with [chaos], and [barter] language.

SpaceGoatFarts

The appearance of [multiple instances] of [global (synchronized) (unexplained) noises/booms] is being forecast to continue to the point of providing [global distraction] as the [phenomenon] is [pimped/hyped/exploited by (GUS)] during the [collapse of the Fed(dollar) based system]. The data sets within the SpaceGoatFarts entity are pointing toward this [noise heard globally] as accelerating over the first [6/six months] of 2015. These data sets are also cross linked to the [officialdom] sets in GlobalPop and in TPTB entities. Much of this language is filling with [humor] as the forecast is the [foreign press] is indicated to [ridicule] the [USA government] over their [pathetic attempt] to [create a distraction] from their [money woes]. The data is also indicating that this [skepticism] over the [incident] is slightly [erroneous] in that the [phenomenon] is [real spacegoatfarts unknown (or officially denied) technology]. However the [global press] are correct about the motivation of [government US (GUS)] as it tries to [deflect attention (from) dollar/system crash] toward [unknowns from space].

Conclusion: It was the best of times, it was the worst of times....

and for us, these are indeed times for **Great Expectations**. Not to go totally Dickensonian, it must be noted just how the current trend in high-end fashion goes to the 'glory days' of empire and elitism. That the haute-couture culture dominants are directing us to 'recall (with fondness)' those long ago days is not an accident of time, nor timing. Also, noticed or not, the same period was the death of the last empire of debt/cash/traders run amok.

Now it is the current iteration of the American empire that faces death by (money) defacement. Curious that all central control structures always go this same route, of debasing the currencies to support the immediate, and usually, corrupt enrichment of the state.

According to modelspace, the [death of (bankster) empire] accelerates to [visibility] (to even the sleep) in this next year, though the process is, of course, many decades along at this point. The data is describing a real shift in perception in early 2015 that will take a few months to really grab the social order by the short and curlies. However the [tipping point] sets are also indicating that the [primal shift (in understanding about empire and its death)] is a parallel meme to the emergence of the [tipping point] after which the [chaos] erupts, but so does the first [fires of intelligent (new solutions)] that are indicated to [burn (within the) GlobalPop] for the [next 30/thirty+ years].

Going to be one hell of a year. The year of a lifetime for many of us old farts who had assumed such to be decades behind us. Get your body-minds fueled, rested and ready to go while you have the chance. Next year, your time has already been booked by universe.
