Meta Art

Since the last Venus transit and the videos that were captured of it, the idea of earth, or any of the planets orbiting around the solar equatorial plane has been debunked. The 'stair stepping' of Venus across the solar face in its spiraling motion put all thought of solar mass orbiting by any planet to rest.

Recent solar observations have now placed our 'sun rise' at 1.5 degrees further north than 'usual', and similar distance for the 'setting sun'. This is indicative of our planet's

continuing shift away from the sun within the 'cone' of planetary harmonics.

As we 'drift' within the conical section harmonic that is demanded of the increasing size of planet earth, numerous physical effects emerge along with our new girth. Many of these are showing up (albeit labeled a bit strangely) within our data. As may be expected, the linguistics are created by humans with a less than broad understanding of the larger picture, and thus a narrow focus view is most frequently seen in the data sets. This is usually a form of “what does this XXX mean to me?” type of thinking which has a tendency to foreshorten the language, causing a shift from longer term sets into shorter term by reducing the temporal component of the emotional impact values. So what does all the previous mean to me? Well, we suspect that the shorter term values are, in many cases, now taking on 'lead' positions for much longer term processes. In other words, to totally muddy things, we think that when we get a forecast for shorter term earth changes trend, it is actually forecasting a much longer period. The difference will show as a series of earthquakes that may last, within their own 'rhythm', for several years. And this 'several' is actually defined as 'no less than 3, and not more than 11'.

This report had been delayed awaiting the manifestation of 2/two temporal markers. Both have appeared. The most significant of these was the recent shift in the planetary bond market. While this shift past by most of the planet's human (and other) inhabitants unnoticed, what is called the 'secular' change in the planetary bond market is more significant than any other event since the beginning of the last great Western Powers Bankster Created War (commonly called WW2). Trends in money control and flow that have existed since 1980 have reversed. This reversal is NOT limited to the bond market, but note that the bond market is the largest, aggregate to so express this change thus far. The reason that this event is so key is that it is synchronized to generational shifts within the social order of the planet.

This shift signals the end of monopolistic control of information. This shift signs the RIF (reduction in force) order for out of control central government. This shift sinks the two political party control of the ship of state. This shift poisons the environment of the banksters and sends them scurrying for exits that do not exist. This shift stops the financing of the 'prison planet'. This shift coincides with generational changes in both global social order, and the planet under our feet.

*

Our processing has now established that it is possible to retrieve both the shorter and

longer term value types by the method of IP tunneling. As of this data gathering period, we are able to extract about 8/eight percent of previously available raw data using this method. It is, of course, better than none.

We are still struggling with the immediacy data type flooding issue. As the many forms of media on the net grow, not only are shorter and longer term data type values find their way to audio, and video rather than text, but also, the hash tagging, and tweating, and texting forms of communications are 'polluting', from our view point, the data stream with vast quantities of relatively useless, again, from our point of view, immediacy data. True, immediacy data does/did provide a great deal of the detail layers that are paradoxically more likely to provide personality descriptors, but even so, the forecasting quality of the immediacy data layer itself has degraded with recent (last three years) trends in 'ref-coms', or 'reference communications', think 'hash tagging', which are mostly just a form of saying 'hey, look over there'....and as may be noted, not a whole lot of info in such.

As a result, and while we are tuning the lexicon and the filters to the new data gathering situation, the ALTA reports will likely favor shorter term data, with a liberal 'gravity' of longer term, but only a light seasoning of immediacy data types.

Meta Data

The “Cindy Lou” effect is a real concern (see Essays off main HPH page), not only here at Halfpasthuman. We have been in receipt of contact from several of our 'fellow travelers' in the world of razor's edge linguistics, and all have expressed their trepidations about the upcoming impact of the Cindy Lou effect upon our work. It is likely, as is noted in the article, inevitable. Several have revealed that they (or their firms) were some way along in the process of developing retail versions of advanced linguistic-ware, when the “WTF?” moment occurred within their command chain, and efforts were stopped.

Again, several (more than 3, less than 11) of these contacts have also revealed that their data seems to provide similar hints to the same forecast situation as does ours. Cindy Lou soon will, or may, not matter. While it is disingenuous in the extreme, it would be better left unstated, and to the imagination of the readers of this forecast, as to what kind of situations may develop in the near future in which the Cindy Lou effect could not

occur due to [officialdom] having a 'grand mal' response to [shifting social tides]. Under those circumstances, there would be barriers to the [cindy lou effect] as the situation would be as though a tree suddenly hit by Cambrian layer damage just at a very hot period....many leaves would fold up, and blow away. Only those leaves on nodes below the level of the Cambrian layer damage would be provided with water, and thus could continue to appear 'healthy' even while the tree succumbs.

However, this understanding results from a forecast view that is NOT completely shared by our data sets. Yes, we do have some data that could be read that direction, but IF our current interpretation is correct, there may be yet another reason for the delay of the [cindy lou effect], and that is covered in several sections below, but may easily summarized as a [steadily rising level of fear within TPTB and officialdom will/may create internal mental (on their part) barriers to 'final action scenarios' being implemented].

In my opinion, the Cindy Lou effect is inevitable, and in a way the process mirrors the advancement of similar sorts of technological leaps through the social order. As people became more sophisticated consumers of advertising, the complexity of the product (commercials/adverts) had to rise commensurably. Of course the trend will fail to keep pace with the sophistication curve, as we are now seeing with the commercial advertising supported media failures. This is also a predictable aspect of the radical linguistics business.

We have continued to run the spyders. Primarily due to having to IP punch our way through DDOS and other stinky netshit, we are able to maintain our data acquisition in a manner that will allow us to segregate the data into pre- and post- Cindy Lou effect sets when the problem surfaces. IF it does. The forecasts may be correct and events may overtake such picayune issues as net based life before our processing is polluted.

If that is the case, then there are many potentials to be chosen from the line up of the usual suspects below:

Solar System

Both our data sets (shorter and longer term), and recent analysis are pointing towards a shift in planetary relationships across our solar cone (see Dr. Bhat's work, or the Bhat

Cave essay at HPH). The data is suggesting that this is a [multiple (perhaps 9?) generation shift] in the [planetary positions (relative to sun/each other)] within the cone behind the sun. The data suggests that this will [induce/cause/precipitate] a [new (form) of human (blue again?)] over these [9? generations (of the) alteration of terra (relative to sol)].

More immediate forecasts include changes in the [length of the year], though apparently [academia] is going to [struggle] to 'splain this one. And further, the [orbital parameters] of all the [planets] are indicated to be [changed] such that [gov't] will ['feel the impacts']. As may be expected, much of this area of the Terra entity is cross linked over to the SpaceGoatFarts entity. Also significant percentage (over 40) of the cross links include direct termination in [unknown energies from space], or have this set as a supporting set of the link termination set. The SpaceGoatFarts entity connections would seem to be indicating that [harmonics (of position)] relative to the [solar cone] account for the [frequency set/range of vibrations] that the [planet] (and us fleas on its back) experiences.

The data sets in both the Terra entity and the TPTB (ThePowersThatBe) entity are indicating that the [planetary conical location shift] will cause problems. These are within the [crust plate arrangements], as well as within the [social world (of humanity)]. In the former, the [power released] is indicated to be in the form of [magma expelled (not only from [volcanoes], but also [rips/tears (mostly abysmal plains)])], while in the [human social world], the [energies] are seen as [over-turning/revolting/up-ending] the [collegiate/academic system].

Planet

Pendulum Do

The [oscillation] of the [climate change] of planet's crustal expansion is forecast as producing a [serious (severe) winter (northern hemisphere)]. The data sets are suggesting that [crippling cold] will be the 'rule', more than the exception, however, supporting sets at secondary and tertiary levels contain the 'anti-trend', where regional weather range variations will be the new normal. This is indicated to express itself as [temperature ovoids] that will have diametrically [opposite extremes] from the [extreme

weather] surrounding them.

From space the effect described is of a [pattern] that is [lace-like] where the voids between the 'threads' of the [lace] are [opposite] conditions to the areas covered by the [lace (jet streams?)]. As modelspace is moved forward into late 2013, a series of [continent wide storms] are shown for [north america], while the larger land mass of the [eurasian continent] is indicated to have [severe winds] that will set new [land speed records], as well as [new levels of destruction] records. Further, the [continental storms] forecast for [north america] are described as [carrying dust/debris] for [over 1000/one thousand miles]. Also the [air mixing] that is described has [tornado outbreaks] that are both [huge/massive] and [out of bounds (for both season, and place)]. A number of the [tornadoes] are associated with [canada].

There are sets for [tornadoes] also are geographically linked to [china], and [siberia]. Further, even though we have the distinction within the lexicon between these and waterspouts, the data sets are still forecasting [tornadoes] that will be [over the pacific ocean]. Further, as modelspace is progressed into late 2013, the [pacific ocean tornado] set shows considerable growth that may be reinforcing a forecast of [severe impacts (from water tornadoes)].

Sky Fall(s)

As modelspace is progressed into [Fall/northern hemisphere] the accretion patterns cluster around geographic references to many [mountain] areas. These areas are described as being in the [path] of [triplets (of damaging weather)]. The data sets show that [torrents/rivers of rain] will once again be [impacting mountains], and in turn producing [lahars/mud slides]. To further complicate things, the [third] participant in the [triplet of nasty weather] shows as being [flash freeze(s)] where [intense cold blasts] will arrive very shortly behind, or [along with/as a companion to] the [rain rivers]. The effects are described as [flowing mud (filled with houses, people, animals, infrastructure debris)], being [frozen in place] by the [down pouring (space cold winds)].

Blow the (Ghost) Man down

The Terra entity, as well as the TPTB entity, and the SpaceGoatFarts entities all maintain a longer term values set that is focused on the time from late September 2013 through to

the late Summer (August) of 2014 in which the [solar winds] are indicated to [surround/encase] the [planet(s)]. This, in its turn, is forecast as [inducing planetary magnetosphere/electro-sphere changes]. These changes are going to include [sporadic (inability to) generate electrical currents]. This is described as being due to [highly erratic (voltage and amperage) static electrical currents] that are described as [ghosting/shadowing/hovering] over the [planet's surface].

Some of the [symptomatic effects] of the [ghosting (static) charges] include [hectares (of) dead insects], as well as [animals/livestock] and [humans] who will be [electrocuted (to some degree including to fatality)]. Further problems are associated with [vital services/infrastructure] such as [water], and [sewage], and [transportation]. {ed note: quite a number (60+ %) of the [transportation] sub sets are indicating [problems] with [pumping (electrical malfunctions)].} In some of the more extreme cases, which are commonly geographically linked to [(near) equatorial] and [tropical] settings, the [effects] of the [solar wind stream] are described as [extreme] to the extent that [gleaming cities] are [abandoned], and [(multiple miles long) 'snakes'] of [abandoned vehicles] are able to be [viewed from space].

Many of these [gleaming cities] are described as being [within (or near to)] the [new leading edge (of the) equatorial bulge] which the data describes as [expanding]. Most have [desert] features also in common, and all are described as [hovering] between [life and death] due to [electrical current] such that when the [currents (cannot flow)] the [people must go].

The descriptor sets for the [desert diaspora], or the [electrically (forced out) exodus] include sets that have the [people] who are [walking out of/away from (gleaming desert) cities] will be [visible] in the [media] in [masses], but will also be spoken of as being [ghost-like]. This is likely due to the [coatings of dust], and the [peculiar color(s)] caused by the [electrical death] in the [top soils]. The data sets are suggesting that [powder/dust] from [dead insects/soils] will [coat everything] including the [walking people].

Crustal Goo

The data sets within the Terra entity have [softening/loosening/stepping] as a primary supporting aspect. This set was the initial group to point to the growth {ed note: forecast several years back, 2005?} of the [sinkhole] phenomenon. This set also contains the

[magma moving] set that gained over 2008/2009 as [new volcanic activity] became part of our new normal here on Terra. This set also contains the forecast from our last ALTA (audio) report about the [terran crustal bulge growing].

New growth in this linguistic structure includes a new aspects at the secondary, and tertiary supporting positions. These new aspects are [repetitious/repeated/many/multiples], and [adrift/floating] respectively. Note that this last set headed by the descriptor [adrift/floating] is within the lexicon derivation collection of the primary aspect of [loosening/softening], and as such represents a form of doubling, or emphasis being placed by the data upon that aspect class within the forecast.

These new supporting aspect/attribute sets include descriptors for [magma movement] within [continental shelves] as well as [deep ocean/abysmal plains]. These [magma movement] sets contain more than [volcano activity] sets, although those are there in plenitude; these sets contain [new lands forming] sets that also have new [visibility] values reaching very close to [msm (lying stream media presstitutes)] levels of coverage.

Within the sets for [new lands] are repetitious supporting sets for [violent ground motions], and [volcanic eruptions], that are described as producing [burning (surface) waters], and [steaming clouds (visible/seen)] for [1000/ a thousand miles]. This last is part of the [impact] language that includes [airplanes grounded], [shipping lanes disrupted], [ships destroyed], [coasts damaged (by waves/debris)], [satellite (views of earth) shadowed/hidden], [mines closed], [oil platforms damaged (and/or shut down/moved)], [ports over washed (implication is water stays in place)].

The [new lands rising] sub sets contain very thick cross links over to (internal within Terra entity) the sub set for [earthquakes]. This set has shown some striking growth in both shorter term and longer term data. The shorter term sets are focusing on an ['end' of summer (autumnal equinox) (northern hemisphere)] period in which the data suggests that there will be [shelves (racks/arrays/clusters)] of earthquakes in many spots around the planet. This is being described as a [new phenomenon] in which [steady shaking/movement] occurs, that in some cases, is suggested to last for [months] with a [near uniform inter-temblor timing]. Other interesting Terra entity related 'side effects' are described as [electrical discharges] of [dangerous amperage (from natural objects)], and, certainly more obvious, [hidden/obscured damage (to structures)]. This last set is accompanied by sub sets describing [buildings] that will ['mysteriously' collapse].

Further sub sets describe [holes] that will open up [revealing] moving [magma] and [expelling hot gases]. Some of these sets are referencing areas that will have [infrastructure damage] as a result that will affect whole [regions] as [electrical lines melt] and [pipelines rupture]. Further problems are indicated for several [corporations] as [deep storehouses/ storage vaults] are made [uninhabitable] by [gases], and [heat] emerging from [new magma vents].

Holy Space, FatMan!

The Terra entity, as well as the SpaceGoatFarts entity both contain quite a few, very detailed descriptors sets for [holes (in magnetosphere/far upper atmosphere)] that will be [letting “things” in]. The 'things' in this case include an increase in both quantity, and quality of [ufos] (see SpaceGoatFarts entity section). Also there are descriptors for what we will label as a [spotty EMP]. This section has many of the [unknown] lexicon references that we use to detect 'new/novel linguistics' as they arise in order to catch 'slang', and other forms of 'new expression creation'. This is one of those situations. Here we have a new phenomenon that will emerge over the remainder of 2013 and into 2014. It will be a form of a [natural] [EMP] that will result from [overcharging/overturning (of the voltage)] of the [capacitance layers (of the far upper atmosphere)] such that the [holes] in the [magnetosphere] will allow for [spots] of [EMP damage]. The [EMP damage] is being described as [dead electronics], and [falling planes (of all sizes that depend on electrical components)], and [drifting ships], and [failed railways], and [dead trucks, buses, and cars], and [misbehaving electrical appliances]. Also there are numerous references, beyond our ability to traverse, to [damaged computers], and [fried networks]. {ed note: a real sporadic boon to PC sales}. Further, as though to seriously insult the harmed, the data sets also contain [burned buns (butts)], and [damaged crotches], and [scarred genitals], and [blistered breasts], and many other specific human body parts that are forecast to be [burned/scalded] as the [smartphones (LiH batteries)] are subjected to the effects of the [reversal layers (of electromagneticism)] that will apparently surround these [EMP holes] here on earth. One last, perhaps even more dramatic note on this subject, there are several sets within the [infrastructure damage] section that are indicating that [cell (and other? GWEN) towers] will be [destroyed] in some [spectacular displays] that are described as including [lightning balls], and [pulsed electrical discharges] so [extreme] as to [peel paint] from nearby structures, and [set trees on fire].

Sinking Islands

The data sets within the Terra entity have new sets accruing that go to the idea of [sinking islands] that will be [forced (to be) abandoned]. Other [islands] are described as being [left/walked away from (???no boats?)] as a result of [air carried pollutants]. These sets also contain many references to [sand storms], and [dust (in houses/offices)] to the point that [breathing (is constantly)] affected. This [dust storm] is cross linked over to the [(mega) tons of (electrically) dead insects]. The [dust storm(s)] have a high [visibility] factor and likely will appear in video. The result of these [storms] is also shown to include [refugee (invasions)] that will [exacerbate] the [near-by social order problems]. Further cross links go to the [collapse] of the [USA 'gift' machine] and are showing that [poverty] at a [global level] will [severely curtail] any [offers of relief] for the [(masses (millions?)) of migrating humans].

World

Beat Feet, Hasty Retreat, Nuclear Heat

The data sets are painting a rather dire picture for [nuclear power] with [dozens] of [separate incidents] of [plant failure], and [radiation leakage] forecast for these next [19/nineteen months]. The data indicates that in several of these [breakdowns] {ed note: solar induced?}, the [radiation leakage] will [prompt/induce] both [voluntary (panic)] and [mandatory] evacuations. In the former, the data sets are describing a [panicking diaspora (human wave movement)] that has details of [possessions (strapped to car tops)], and [long chains (of slowly moving cars/trucks) creeping across the country side]. There are detail sets for [tent cities], and [overwhelming (masses) of refugees], all against a background image of [glowing (nuclear) heat] so [hot] as to be [blue visible] in [daylight].

Oil

The [expanding earth] and [crustal movements] are indicated by the data sets to be [problem causes] for the [oil drilling] and [recovery] industries. We note that even the [extreme deep well technology] in use in [russia] will be [affected/hampered] by the crustal movements, however, the data is also indicating that this form of [oil production] will be [back on line/producing] much faster than the [mainline (traditional)] and

[slant/shale] [drilling efforts]. This is apparently going to be due to the [crustal expansion] which will not only [sheer off/destroy] the [wells/casing/installations], but in the case of the [shallow wells], is indicated to actually [shift pools], and to cause [new pooling spots] to form. Cross links from the Terra entity linguistic structures related to all forms of [wells] including [natural gas], and [water] are also indicating that [ruptures], and [sheering] will become the new normal. As will the [shifting of aquifers] and [draining (mysteriously?)] of [oil pools].

Other problems for the [oil patch] {ed note: mainly in non-Russian sources} will be the impacts of the [planet climate change] and the [planetary shift (away from sun)]. In both cases these areas are shown as impacting [oil] and [energy (more generally)] due to the [rapid (appearance)] and [impacts/affects] of [initial glaciation], and [accelerated wind (strength)]. It is not the [winds (new) power] affecting the [oil drilling/recovery platforms] per se that is the issue, rather the data sets point to [logistics] of the [winds] affecting the [human workers], and their [ability to reach/obtain (the platforms)]. In at least 2/two areas of the data, there are separate detail sets for [oil rigs (presumably oceanic)] that are [temporarily abandoned] due to [winds] and [waves]. The [winds] are described as so strong as to [lift metal objects (high into the sky)], and the [waves] are painted as [over-topping (the) platform base]. {ed note: this area of the Terra entity is basically describing low/high pressure combinations that would be producing waves in excess of 90/ninety feet.} In addition to the [height], and [ferocity] of the [waves], there are sets describing a [gravity (apparent) change] as [water (becomes heavier)] {ed note: along with my butt, and my dogs' ears, and everything else on Terra}. There are other descriptor sets that add to the confusion in their profusion of adjectives/adverbs for this new [wave] phenomenon. It apparently will not be simply tall water, but is somehow also a very [pictured/video captured] phenomenon. There are many descriptions within the details for [excessive foaming], but this is a relatively well observed occurrence along coasts. It may be that the appearance of the [foaming] in the [deep ocean] will create a the emotional import that is attached to the data sets. We have descriptions of [awe struck (human observers)], and [captivated (eyes and minds)]. Further, there are long term values that would seem to suggest that the [wave phenomenon] will be so [strange] as to [prompt discussions] for decades. There are further meta data indicators that [new language] will have to be created to wrap our collective heads around what ever it is we will be witnessing.

Finance

Slowly I turn, step by step...

As the [interest rate dam] has [broken] {forecast in the 'break-down' word sets of the IDIR reports in February, 2013}, the linguistic sets are forecasting a that a [group/collection/bag of weeks] will emerge in which [rates] are [burning-up/on-fire], and that this is in its turn associated with a state of [roasting (and) toasting] of the [banks].

Iced Pussy(cat)

As modelspace is progressed into Fall/northern hemisphere, the data sets begin (after the September equinox) to accrue increasing sub sets for [yet-more-fires] in [strategic (paper storage/media) vaults]. The data sets acquired in support at the primary level include many sets that either directly hold [cover-up/fraud/crime] or similar linguistic sets, or are cross linked back over to another area (internally in Markets entity), or to another entity in which the termination values also include some reference(s) to [criminality], or [crimes (in progress)]. This is a very interesting set in that it contains a descriptor set going to the idea of a 'watergate' style episode in which [burglars/arsonists/mercenaries] are [caught in the act] by [local security personnel]. Further, it seems the data is suggesting that somehow a [local (or national) media personality] is also involved with the [capture (of the) cat burglars/arsonists]. Also note that subsequent to the [capture] and [media revealing] of the [cat burglar plot] {ed note: the feline reference is deliberately chosen at 3/three levels we will later admit to} a series of [revelations] are indicated to surface which sends several (3/three to 11/eleven) [officialdom] members of the fem(e)nine gender into [spasms] that will be on [video] in HD.

The data sets describe the actual [incident] of the [capture (of the cat burglars/arsonists)] in some degree of detail which suggests an historical level of interest that may end up rivaling Watergate such that many people investigate this episode and its connections in great detail over the following years as with Watergate and other crimes of the rich and powerful. We note that the [local hero(s)] will include a number of [by-standers/people] coming to the [aid] of the [over-whelmed security guard]. The irony of the situation will not be lost on readers of these ALTA reports when it becomes known that the [helpers/assistants] to the [capture] are [part of/participants in (the) Occupy Movement]. The data sets also show that several of these [cat burglar wranglers] will be something of [media sensations] for reasons that will be obvious on the [face] of it when later viewed. Further, the [local hero security guard] personality is described as [surprising], [erudite],

[educated], a [novelist/writer], [brilliant], [eccentric], and [?something obviously surprising here that we will not let out, but you will recognize when the incident is reported]. There are several sets of very thick cross links that suggest that this incident will be a relatively key temporal marker for events in the [political realm], as well as the [financial world].

Bundes(Party-On)

The data sets are indicating that a [collision] of [conflicts] will [hit (the) Markets] at some point in [August (maybe September?)] in which [interest rates (on bonds)] will [escape (from) 'control'], and the [interest rates] will [shift] such that [SALES] of [bonds] will be [(attempted to be) sold] while [new issue sales] are [tanking]. The data sets are indicating that [waves (of insolvent banks) announcements] will [crash (against)] the [public understanding]. Note that the (german) [elections] will be a [free-for-all/chaotic] in ways that the pundits will not [see ahead of time]. So the [result] of these [elections] will be [pivotal] in the [shift of ages]. The data sets indicate that as a [follow-on/result of] the [repercussions] of [germanic (political) upheaval] will [affect] the [euro], and the [EU] at its [primary 'plank'] of [stability].

The data sets point to [sales (of BONDS)] by [panic (and stress) overtake bond holders] as the understanding of the [import] of the [german elections] start to [quaver/tremble] through the [in-debted nations (USA/England/Espana/Italy...rest of EU)].

In the report issued in late 2012 as This Changing World, we noted that the forecast was for a [conjunction] of [bad money], [bad housing], and [(going) bad social contract] pretty much globally. This is manifesting now, this [summer 2013, northern hemisphere], as forecast, against a background of [freaky weather].

The growth in the [bad] data sets now includes such supporting characters as [bad payments (checks bounce en masse)], and [bad work (attendance – general slowdown/strike?)]. It would appear the old adage of “they pretend to pay us, and we pretend to work”, from the former USSR, is now being applied more generally to some of the [western economies].

The [financial system turmoil] is indicated to [impact] the [precious metals markets] {ed note: starting about August 9th or so with 'precursor shifts'} as the [lies] that the [minion

propagandistas] have been [layering on/painting over (the market)] for [decades] are ['blown-away'] by the [unexpected (political) results]. {ed note: likely [german elections]}.

Also in the [germanic] theme, we have a [currency crisis] that will also develop subsequent to, or with an [interest rate shift], and a ['floating' hyper-inflation] as the [panicking minds (within the speculation community)] try to [chase 'safe' holes] in which to [funnel] the [ever-increasing river of currencies]. The data sets are describing a curious sort of circuitous path in which ['assets'] as classes are becoming [victims] of the [hyper-inflation] already in the system in such a way that as each 'class' is 'visited' by those [desperate (to store the money)], the current favored ['asset' class] becomes [essentially worthless], or [is destroyed (by the money)]. In a very real way, and within the minds of the [panicked traders], these classes of [former (paper debt) assets] are [drowned (by the) fake money].

Simple (ab)User Fee

The data accretion patterns suggest that as the [bad words (about yet-another-bankster-crime)] are [coming unraveled] this [fall (northern hemisphere)], the [officialdom], likely here in North America, will [decide] to [charge] what will be described as [a simple fee]. This [fee] is indicated by the data to be the [label] for a [bail-in/confiscation] of [citizen wealth]. The rationale' behind the [propaganda] is [“why should (officialdom) pay for FDIC coverage?”]....let the [user pay] the [simple fee]. This [barely clothed] 'bail-in' may, that is, JUST may, be a proximate cause for subsequent interest en-masse in [FRN alternatives].

The [massive] word set is curiously 'solid' in this particular set. The data sets are indicating that while the [officialdom] is [writhing] about the [blow-back-attacks], and the [politicians] are [sweating], {ed note: also have [twisting bowels]}.

Within the secondary supporting sub sets, the [bad words], and the [bad housing], and the [bad money] {ed note: post 'election'} are [affected/prompted] by a [return (to) Potter's Dam] situation in which [documents] of [agreements (amongst/between the dead)] are [revealed]. {ed note: by 'accident of universe' though 'someone' likely will pay for it.}

This [revealing (by the long) dead hand] is shown in the data sets as just before a

conjunction of [events] and [personalities] that will [overtake/over-run] the [media] as a seeming [explosion (of) secrets revealed] begins. The [whistleblower] in this instance is described as a [new SOC (self-organizing collective)] of [hackers] who take a [different approach] to [secrets revealed]. This new approach is described as [inducing fear shifts] in the [officialdom] classes at all levels. This [new tactic (of mind-war)] is described as being incredibly [effective] in [altering] the [behavior] of [officialdom], and most notably, [shocking (the) sheeple].

The Wife says No!

Data sets reveal that a [wives revolt (against financial corruption) movement] will [take hold/spring from] the [fallout] of an upcoming, by [autumnal equinox (Sept. 2013)], group of [financial disasters] described as [overwhelming/topping over] the [local household budget (food/home energy prices)]. The [shock] of the [corruption revealed] is indicated to [enrage (women in general) wives in particular] such that [local collectives] quickly transform into first [national], then [international] [movement/revolt] against [corruption (in finance/politics)]. Within the accretion patterns, the [chinese], and [japanese], and [australian] geographic references are more dominant than other nationalities, however, the movement is clearly being shown as an [international wave (of rapid growth)] that will [over-turn/disrupt/up-end] the [political order] in several [nation-states]. As a central component to the [wives' revolt], cross links reveal that [power] is [shifting] to [those (who have in hand) gold]. This [shift] is part of the [hyper-inflation] that triggers the [wives beating (of banksters)], and other forms of [violent protestations] by [women/householders] in [usa/england/scotland/ireland/denmark....and on and on]. The background emotional sum of the sets around the [severity] of the [steep (climb)] in [precious metals prices] and [foods] and [energies] is so high as to have reached our maximum emotive sums for both duration and impact values.

The [wives revolution] sets are cross linked over to [(bespoke) causal] sets that include [sudden (abject) poverty] as [pension funds (are liquifying overnight)], and [national budgets explode (globally)]. It is within these sets that we get some indications of what will be seen as [horrific] rises in [prices] for [energy], [foods], [precious metals] and a very few other commodities.

In some western countries, [USA] and [England] most notably, there are indications that the [officialdom] will [order (deaths)] against some members of the [wives collective].

Further indications are that many [battles] will be [viewed (video)] as the [officialdom] and [police = 'policy enforcement for rich bankers'] are beaten back in several [fierce/tumultuous street battles]. In one instance an [ambush] of [policy enforcer mercenaries] will be [viral], and ['live'] as the [policy enforcement mercenary corporation] is [soundly beaten] {ed note: including the loss of at least 2/two helicopters in rather spectacular crashes. Note to be observant of the novel, and unique approach to denying 'air-cover' that will emerge from this skirmish.}

It is during one of the [clashes] between the [hard-pressed/defensive officialdom] and a [local wives collective] {ed note: we think we have the location, but will comment only after the incident occurs} will be responsible for the [liberation] of [vast quantities] of [officialdom secrets]. In this incident, the detail layers are discussing the [deaths] of several of the participants as [officialdom] orders [mercenaries] to [defend (the banksters secrets)]. Again the data would seem to be indicating that this [incident] will produce a [memorable tableau] that will become a [rallying cry] for the [wives' collective movement]. {ed note: sadly martyrs draw attention, as do reprehensible acts...}

Katalemenete (Gr. 'do you understand?')...

Coming as a [shock] to many of the [politiboro classes] in [EU], and [globally], the data sets are pointing toward a [failure (of bankruptcy proceedings)] due to [protestations by citizenry]. The descriptor set appears to be describing a [closed-door, high-level, gov't involved (ireland? France? Spain? Cyprus)] meeting in which the [banksters] are [intent] on [making their case] for [yet more money (bail-ins)]. This [meeting] is described as being both [interrupted], and [held hostage] by the [appearance] of [thousands] of [protesting citizens] who will [barricade the building] with their [bodies]. These linguistic sets have high visibility values so it will be very likely that this incident will appear on msm (assuming now that all real news is on the net) in spite of attempts to [censor] the [story]. The data shows that the [participants (banksters and politiboro members)] will be ['rescued'] by [helicopter] from the [enclosing sea of people]. The details suggest that an image of the [fleeing 'elites'] looking out (and [pale]) from their [helicopter windows] will become an [enduring picture (of the end of the 'too big to jail/fail era)], as well as 'the' [iconic image] for the year (2013). In some ways reminiscent of the 'exit from south vietnam', this [exit from the break-down] will also, in its way, [pre-say (describe)] the [flow of revolution] across the planet.

Electric Smells

The data sets are showing that the [electricity crisis] will be [foisted] on the AmeriPop in early [Fall (north america, 2013)] by the [perveclass (corrupted politiboro members)]. These sets include language suggesting that [power plants] will be [hit] {ed note: 'terrorists' to be blamed, naturally.} so as to cause a [regional blackout] that is indicated to [persist] for some number of [months] in the form of rolling [constraints on use]. Apparently someone, somewhere, thinks to make tons of [mo' money] out of this. The data seems to suggest that the [hit] will be the result of a [drone attack] that will be [paid for (ahead of) time] via [market manipulations].

End of the Road (dead end, no outlet, no turn around)

Data accretion patterns are centering around the linguistic structure headed by [capitalism]. Within the larger [capitalism] descriptor set, the primary, secondary, and tertiary supporting sets are headed by [break-down], [corruption], and [revolution] respectively. These sets are largely shorter and longer term value groups. As modelspace is advanced through Fall (northern hemisphere) 2013, the growth patterns shift over the course of about 4/four months movement to the point that by January, 2014, the longer term sets are suggesting that [markets discussion] and [price movements] globally will be [dominated] by [revolution].

Sparking

As modelspace is progressed through [summer, northern hemisphere] and past the autumnal equinox, accretion patterns emerge for a [twisting (of words)] that is indicated to [fail] in such a [huge way] as to [spark] the next [Great Economic Crisis (for the financial paper world)]. Note that this [spark] is within the context of an already [chaotic financial/fiscal] situation. In many regards this [spark] is within a metaphoric 'room filled with propane'. The [spark] and the subsequent [planetary (paper 'assets') fire] is the direct cause of the [women/wives rebellion] that emerges later in 2013.

The [crashing lies] sub set includes interesting details of individual [bankster/criminals] who will [react badly]. Many of these reactions will be [actual suicides], while others are indicated to be the result of [TPTB] using this time to [clean up loose ends (eliminate co-conspirators and potential witnesses against them)], as well as some incidents of

[revenge attacks] by [victims] of the [minions].

The [sparking] of the [paper fire] sets are also replete with references to [gold], [silver], [bitcoin], [platinum], [tin], [oil], [fuels], and other commodities that will [suddenly] be [propelled] into the [public consciousness] as [prices rise] to levels that are described by sets headed by [unbelievable], [beyond understanding], [unable to grasp], and others in similar vein.

Growth Industry

The data sets are indicating that a decent financial investment may be found within the [elite funeral/burial] business. This is due to the large number of [officialdom], and [minor minions], and [elites] who will be [decided/found to be] in a [suicided condition]. The data sets are pointing to a [bloom/flush] of [upper minion 'suicides'] later in 2013 as Fall pushes into Winter (northern hemisphere). Some of these ['suicides'] are described in rather [spectacular] language that indicates great achievements that can be made when a [dead person] is determined. Some of the [verdicts (of) suicide] are actually so extreme as to be described as [causing blushing] on the part of the [minions/officialdom] who have to [detail/render words (for the) media].

Health

Expensive Poisonings

There are yet more [poisonings] showing in the data. These sets are accumulating rapidly after modelspace is progressed past the September equinox. The sets in support of the [poisonings] are cross linked over to Markets entity where the termination points are within the [hyper-inflation] sub set. The idea coming across from the detail layers is that the [poisonings], of which there are [5/five] very [severe] incidents will arise from the [hyper-inflation] that is described as driving [bad food] {ed note: and [bad energy]} into the [system]. These [poisonings] will be [affecting large numbers] of people as the [polluted foods] are [introduced into the food system].

Food

There are many new sets in support of [food], and [food crops]. As may be expected, a large number of these cross back over to the Markets entity, where they are, in the main, associated with [hyper-inflation]. A rather unexpected level of cross links go over to the TPTB entity where the termination points are within both [hyper-inflation] and [climate changes].

Without regard to associations with potential causes, the data is forecasting a number of negative impacts on the [planetary food supply]. These range from [crop death] due to [chemicals (BP's continuing spraying efforts in the gulf are brought north by hurricanes and destroy crops along the way (tree crops?))] to [price increases] on a [massive scale]. The context of this last set is of a [crop failure] due to [climate], as well as a [crop failure] due to Monsanto [chemicals failing (round-up crashes)], and [crops failing] due to [climate shifts]. It is this last area that has the largest number of longer term values. These value sets would suggest that very large scale [famine] is but a few years away as the [planet shifts (away from the sun)] and [photo-receptive life (plants)] are forced into [adaptive changes].

The [adaptive changes (to plant life)] are described as [altering (humanity)] as well as [changing] the [nutritive body (of the planet)]. These changes are indicated to be part of the [general extinction wave] currently on-going and [accelerating]. The cross links terminate in a number of entities in sets that include (so far) only longer term value sets as their context. This would imply both a slow and permanent [change] in the [food base] of the [animal population].

Society

Icke ain't (sic)k

The data sets are pointing to an upcoming [media event] in which the [debut] of the [icke network] will have some [unexpected consequences] in that a [video story] will be provided in which [errors] and [omissions] within [original material (being researched)] will become the [focus] as the [presenter] lays out their [understanding] of the [material (conspiracy)], the data shows that [others/viewers] who are [in possession] of [(holes) in their work/facts] will be [presented], in the [errors in the original documents aired in the video on the icke network] with [information] that will be [key] in [unlocking] several,

major, on-going [conspiracies/crimes].

The data sets are describing a situation in which the [presentation] within the [video] goes to [legitimate points], but those [crimes] are [instantly forgotten] once the [material expression of criminality/conspiracy] is [understood] within the [errors/flaws] in the [original material (on video)]. The detail layers provide a description of the [video] as being [interesting/compelling] in its main [focus], but [going viral] as the [nature of the occulted (errors) information] becomes widely known.

These data sets are pointing toward a [profound] and [multiple generational] impact on the [TPTB (and most importantly, their 'face' people)]. Please note that the data indicates that both Tavistock Institute (for global mind control), and the Council on Foreign Relations (CFR) {ed note: a Tavistock 'franchise' with local owners} are going to absolutely FREAK out when this hits, and just the [ascertaining of level of vulnerability] will cost them thousands of human-hours of labor.

New Eclectics

There are a very large number of cross links from a very diverse spread of linguistic sets that all are feeding to the GlobalPop set where they are terminating in an area headed by the label of [fusion]. This set, at the highest levels, is describing the [results (on-going)] of the [merging/fusion/blending] of [humanity] forced by [climatic/planetary changes]. As with all energetic processes here on Terra, this is not described as being 'easy' or 'smooth', and in fact, quite the reverse. There are sets indicating [strife], and [fighting] and [riots], and [murder] among many other specifics indicating [social chaos]. However, within the larger set of [fusion], and at the primary support level, the sets include [solid], and [rock-hard], and [bonded], and [inseparable], and [cohesive] and others indicating that a [melding of cultures] will take place with [rapidity] under the [pressure] of [unfolding earth changes]. The [forced diaspora] is shown as [overwhelming] any and all [attempts] by the [TPTB] to [corral] the [fusion] which (to their [horror]) is described as [spreading awareness] in an [invasive] way that is [fast], and [beyond the ability (of TPTB/officialdom)] to [control]. Note that much of the initial wave of [planetary forced diaspora] is [pacific rim] focused with its first and most dramatic effects seen in the American hemisphere (north and south).

The data sets are showing a [failure] for TPTB in that their [best efforts] to [divide and conquer], and [pitting (refugee) against in-situ populace]. This is likely due to the

[dominating] levels of [earth changes] which are [prompting/creating] the [refugee floods]. These same [planetary forces] are also [creating havoc] globally, and the data would seem to be indicating a general attitude (among the survivors) of [all in this together].

From this [bonding under pressure], the TPTB's worst possible [nightmare] is indicated to manifest in 2014 (maybe as late as early 2015) that the data describes as the [twisted pair (deformed twins)] make their [presence (visible) known]. The [twisted twins] are described as being [just (what is) required] at that time. {ed note: apparently universe knows best.} The [pair (of deformed bodies)] is described as [over-topping (all)] the [attempts] by TPTB to [control] the [spreading 'awareness']. Also note worthy in this area are cross links over to TPTB where the [strategy] is described as ['labeling'] both the [twins] and their [message/information] as ['madness' (viral?)], and attempting to [corral/enclose] the [spreading phenomenon]. As the data notes, the real problem for TPTB is the [morphing/alterations] within their own [minion/officialdom slave groups] by their [contact] with the [twisted twins (and the information)].

The data sets indicate that the [twisted twins /deformed humans] are [alive] now, that is, in 2013, and are [completely ignorant] of their [future impact] on [humanity]. Further, the data sets MAY, just MAY be indicating that the [twins] as they are now, are NOT the beings that we will find manifesting in 2014/2015 in that the [pair] will be [forced through transcendence] by [their experiences] and thus will be [transformed] into [something beyond (the now)] by the time that they [make their presence known (at large /to general population)].

The TPTB are indicated to do all kinds of [really stupid things], in response to both the [fusion] of the [diaspora/native peoples], and the [emerging twisted twins]. It apparently will not matter at that point in time (the TPTB and their puny efforts then).

PopUSA

It was difficult to decide where to place this next section. The data sets are extensively cross linked between the PopUSA entity, the TPTB entity, the Officialdom entity, and the Markets entity. However, when modelspace was progressed forward it became clear that a primarily [visible] aspect of these data sets would be seen in the results that will [wash through/overwhelm] the [populace/USofA], so it was decided that here is the appropriate section.

The area under discussion is a very complex linguistic structure that is more an amalgam of other structures that are merged through cross links and commonly held data sets, than a separate structure on its own, however, if taken as a separate structure, its describing aspect would be [morass (slogging to cessation (of movement))]. The primary supporting aspect/attribute set is [too large], and in turn, its primary support is [to (lift one's own) weight]. The secondary and tertiary supporting aspects are equally as telling as they go to [crumbling (under weight too big to lift)], and [blockages (bouchon/obstructions to movement (created by your own body parts))].

Strange Bedfellows

New linguistic structures under [politics] show that [break-down] will occur in a few [states] at a level of [financial/funding] that will produce some [strange bedfellows]. In some specific instances we have [OBG (outlaw biker gangs)] who will [team up], providing [presence/gravitas] to [disabled veterans] and [homeless] and [housewives/homemakers] in {ed note: what will start as} [protests (against) financial rape]. This particular instance has descriptors for a [confrontation] in which the [military/policy enforcers/mercenaries] in the [employ (of TPTB)] will be [defeated] in a [bloody battle] {ed note: look for this to be labeled with the place name of the site, as in previous instances “ 4/four dead in O-hio”, or “kent state massacre”}. However the results forecast from this [(crowded) death by corporate mercenaries (on US soil)] is going to be [truly shocking] (to both populace and TPTB). Further, a single [spark] lost in this incident is forecast to [bring down/destroy] the [CFR (council for foreign relations)] here in USA. Though not immediately understood, the CFR connections will emerge within a week or so of the [blood on the asphalt], and then [things turn hard] for the [self-proclaimed, ruling elites]. It is at this point that the forecasts from past ALTA reports of [mob violence (against banksters/politicians/elitists/celebrities)] emerges into the social milieu.

The data sets indicate that [new crimes] will be [declared] by the [ruling corporate dictators] that will include [inciting violence (against your betters) electronically]. This particular [new crime] is described in a very complex fashion. Apparently, by declaring [tweating (of elite/celebrity sightings)] to be a [crime], the [TPTB] will unwittingly point out a key [vulnerability] to the [revolutionaries]. Then, the [rebels (as they are called here in Stalag USA)] will be promoting ['tagging' games] in which [social points/street cred] is acquired by [sighting/spotting (the target du jour)], and then

[risking arrest/secret death] by [flagging (the victim)] with [telephone pictures]. We need to note that a [backlash] is indicated to develop against [hollywood/entertainment celebrities] who are [illuminati stooges]. These [mano cornuto (displaying people)] will be 'outed' by [posters] which identify them as [legitimate targets] for ["tag-n-flag"].

Mouse that roared!

Linguistics suggest a new [wave] of [shattered understandings] that will come from the [crimes (labeled scandals)]. As modelspace is moved through September, and into the [Fall (northern hemisphere)], the data accretion patterns suddenly shift into large gains for [local (lawful) rebellion] under the larger set of [global revolution]. These data sets gain new supporting sets from aspect/attributes that go to [local (state level? Counties?) revelations (about a judge/governor)] will lead to a [lynching (actually?)] of a [lobbyist/corrupter (from Monsatan?)]. This in turn leads to some [scrambled signals (teevee station? Radio?)] that will [set fire/spark] a [local (lawful) rebellion].

Within the [lawful] sub set the accretion patterns are led by a [chinese influence/person] that will [participate/trigger] a [read-in? (some form of non-violent, but blocking protest)] that [grows] and [morphs] as a [leader (to the local problems)] arises. The [banksters] within this [local area (a county perhaps?)] are [rounded up] by the [newly established local lawful rebellion], and their [assets] are [appropriated for the "common weal"].

The incident is apparently triggered by a [secrets revealed] about the [(formerly 'lawfully' elected 'senate' (voted in by less than 22% of eligible voting populace)] that becomes [flushed] with [bribery] that in turn] sets off a [shitstorm (locally)] as the [populace] is in such [dire economic circumstances] and here are the ['leaders'] out-and-about with [call girls/other sex workers], and other forms of [depravity] being paid for by the [destitute populace] back home.

There are 2/two primary linguistic threads, and these may represent the actual chosen, or naturally occurring [public mottoes] of the [rebellion]. One set is headed by [defiance] while the other is topped by [resolute]. This latter actually pops up first, and is also more important as it appears to describe, or define the [local leader] who is [forced] by [circumstances] to [take over/assume control] of a [milling mob], and [catapult] it into a [lawful rebellion]. Apparently the [local leader] is [internet famous], and may be a [locally known musician] as well. There are sub sets that are [music], and [festivals]

connected.

As modelspace is progressed over the next several quarters, the [lawful rebellion] is shown as [growing] to the level of a [state gov't], and that it is [assaulted] in several ways by the [federal gov't].

Soiling the salt

As modelspace is moved forward through the autumnal equinox, and into Fall (northern hemisphere), several sets provide growth to the lexical structure of [law enforcement/policy enforcement] as a [class] of [employee] becoming aware of the [fragility] of the [bankster system] that [supports] them, and that they, in turn, [support] with their [lives]. The [Law Enforcement (LE) community] is indicated to start its own form of ['fracking' (fracturing away)] both from the [greater social body], but also from [itself/(self hatred/doubt)]. This is indicated to arise from several incidents in which [social contract (with dead LE members)] is [violated/abandoned] by [TPTB (the powers that be)], and from [relatives (of LE members)] being [caught/trapped/incarcerated] by [LE members] in another [region]. This last has very high levels of [visibility], and the [msm (lying-stream propaganda whores)] may well pick up on the story, but the data would seem to indicate a [viral] video coming out that is described as [liquifying (the internal) resolve] of [fathers (within LE community)]. This will not be good, and the [suffering] that the [children/relatives] of the [LE members] is described as [extremely graphic].

This [incident] of [breaking the faith/soiling the salt] has carry values that extend out [3/three generations] within the [region (of occurrence)]. Further it has very high propagation values, suggesting that in spite of the [extensive propaganda], and [mad scramble (to clean up)] the [situation], the [breaking of the faith] meme will become yet more [creative creeping new-thought] that [invades/permeates] the [law enforcement 'genetics']. [Chaos ensues] within mere [weeks] within the [region of occurrence] as the [local LE personnel] are indicated to [revolt] while on [duty], and [orders (from CFR/Tavistock Institute's Center of Control (CoC))] are [ignored], and [worse] {ed note: we think we know what happens, but are refraining from more details at this time for reasons that should be come self evident by December 2013}. Further [LE cohesion problems] are indicated as the [LE members], grouped by region, become involved in [inter-gang (department/jurisdiction)] acts of [revenge]. Not a good time for anyone

involved.

Da crumbs, not as good as da cookies....

To add insult to injury, in Law Enforcement community minds, the data is indicating that [poverty] at the level of the [central banks] will begin to [impede operations], and [restrict resources] to the [uniformed enforcers (of TPTB policy)]. The data sets have incidents of [break-downs] appearing at all levels of the [TPTB police (policy enforcement bureau)] including [vehicles abandoned (due to break down in bad areas)], [lack of funds (for basic needs (electric/other utilities)], [shuttering/shut down (of facilities)], as well as [bad ammunition], [bad food (poisonings affect performance)], and [lack of fuel]. Some of these incidents are indicated to trigger some very [bad behavior] by these [frustrated minions] of TPTB, as the [police (policy enforcers)] are [forced] to [steal (from civilians)] just to [make it back home]. In one lexical set the detail descriptors are painting a picture that would make one hell of a movie as the [attack squad (swat?)] is [abandoned] in [hostile territory], and must [fight] their way through [really pissed off civilians] to try to [make it 'home' (to headquarters)]. As these sets are progressed along with modelspace through Fall (northern hemisphere), the accretion patterns show a hardening of the problems that reaches some [extremes] in some areas as [police] will [become under sieged (surrounded)]. This [siege] is curiously not shown as [violent], but is rather [persistent] (several months?) in the [denial of services] until (as the data seems to indicate) the [police] agree to [lay down weapons], and [leave the area].

In a curious aside, one of the many areas of cross links from these sets goes to the SpaceGoatFarts entity where it terminates in a sub set indicating that a [LE member (controller)] in some form of [public venue] will be visible as he/she is seen to [hiss out] at the [restraints] of the sudden encounter with [poverty]. The [visibly reptilian gesture] is indicated to [excite] the [on-line video viewing world] for some number of months.

Now to October

American [populace] is described as taking a [large turn (to) inward thinking]. Abandoning foreign 'entanglements' in spite of protestations by [politiboro (congress & TwoParty)]. Drastic, even ['fatal' reduction] in [charity giving] for [overseas efforts]. All sorts of ['ministries'] fail, leading to [catastrophic (for religion industry on teevee) bankruptcies]. These in turn are associated with [prominent suicide(s)], both ['natural'],

and the new ['assisted'] variety. Further the [failure (of teevee religion)] is shown as revealing [sins uncovered] that in turn is WAY [Bad for politiboro] as [view to a kill] opens up other secrets revealed in [sex and money games]. Bankruptcy of 'church' exposes [spooky people in strange hats] doing bad things in [africa] and [asia] and to [children (here in USA)]. In one incident forecast, a [teevee preacher], now [broke] will be [assassinated (in middle of day)] on a [public street]. Curiously, the [police] would not seem to [care very much] as the [murder(ess?)] simply walks away. Yes, there are going to be [video images] that will surface, but none that would [reveal] the [identity] of the [assassin]. To add [insult] to the [death], the [obituaries] about this [preacher] will be so [egregiously wrong] as to [elicit jokes] on the [late night circuit].

Markets

Noting that [markets] are separate and different from [finance], or [economics], the Markets entity does NOT have a lot of good words accumulating in its corner. Rather some [frightening (to unaware)] episodes are directly ahead. The data sets show that an episode of [rigor mortis] is likely to occur on/by October 18, 2013. Many references to [stale cookies] in a sea of [spoilt milk] are within the supporting sets. These also include [bad streams (electronic?)], and [polluted (politicians?) frozen out]. There are a number of references to the [frozen out] language with internal cross links going to [seizure (as in mental aberration)], and the [effects] that this [grand mal] will have on the ability to [open doors], and [disperse funds]. It appears that the data is pointing to a [bouchon (blockage/constipation)] within the [bowels (of the system)]. {ed note: human body parts and processes are most significant, more heavily weighted, and more temporally pertinent than other data sets}. These sets continue to accrue apace as processing has proceeded and the pattern of accretion has both increased scope and amount of references.

Many of these [seizure], or [bouchon (blockage)] sets are also cross linked over to sets that terminate in [intestine], [stream], [flow], [channel], [pathway], and other language suggesting that it is the [motion] that is both [blocked], and the important part. The references to the [stream] are cross linked back over to [corruption], and [flow of (illegal) gains/loot], and [share of (the) crime]. Many of these sets also are cross linked back over to both the [break-away-civilization], and the [global middle class]. It would appear that the data sets are once again forecasting a very large [looting] of the [above

ground economic system] by the [hidden/occulted break-away-civilization] and its [shadow banking system].

Ed Note: a great many of these sets and accretion patterns are replicas of those that we had in 2005 through late 2007 that led to our forecast for an October (2008) financial debacle. These sets are both erriely similar, yet very much larger especially when the weighted averaging is applied. These sets are both Hmmmm....probably does not bode well for humans.

Sucking sounds go into banks and vacuum up for the break-away-civilization. Data indicates that several (3/three or more?) of [journalists/humans] will be [visible (in msm/mpm -mainstream propaganda media)] as they [stumble upon/fall into] a [day in history] in which [corruption] reaches the level of [public execution (for disloyalty?)] of [markets manipulators] just as the [bond(s) markets] become [doughy (soft and rising)]. The [several (brave/stupid) journalists] are described as [visible] while [fleeing (officialdom) run amok]. The data shows that [uber-politico's (tptb chief corrupt minions)] will be on [video] making [death contracts]. These [death contracts] are described as being [egregiously illegal], and [extremely disruptive] to the [sheeple]. This [waking of the sheeple] is shown as being the larger issue within the data sets as one of the described results/connections is of the [shifting (of the) masses]. Now we note that this is within the background of the [acceleration (into forefront of consciousness)] of the [break-down] of the [planetary (central) banking system]. The [3/three (or more?) journalists] are described as [having discovered/obtained] something that qualifies as [absolute proof] of [murder (most high)]. The data sets also have cross links over to TPTB entity that terminate in aspect/attributes of [end-state], and [publicly 'suicided'], as well as [raging (on tape) (O_?)], and [murder contracts exposed]. The data sets indicate that this particular day is a pivotal point in the shift over to [open dictatorship/fascism].

As modelspace is progressed forward past October, the [fascism] sub set gains large amounts of supporting sets, however, the incoming new sub sets are very [discordant] and filled with internal cross links over to [failures], and [chaos (internal/mental)].

The sub sets related to the [iron fist exposure], and the [breakdown (of the) restraints (against) open oppression] are heavily supported with linguistics going toward [fuck-up], [mistakes], [breakdowns], [squabbles], [power fights], [internal strife], and [inability (to function as a group)]. The data would seem to be painting a picture where

the [illusion (of an orderly, citizen focused social order)] was THE [critical component] to the quasi-functioning of the system these last 50+ years, and that the [removal (of the mask (of civility))] both [breaks down (totally) illusions (and mind control techniques)], as well as [exposes (the fascistas) to each other]. Apparently they will not like themselves [the minion classes en masse] after the [exposure (of the) iron fist].

There are several sets in a linguistic structure that describe a [key/pivotal incident] that likely occurs this Fall (northern hemisphere) after the [debacle (in the markets)] and the [eruption (of the dirty war against the populace)]. In this incident the [minions] are described as [throwing (their citizen victims)] from a [helicopter] over a [populated area]. While [shocking] the [population] was within their [goals], these [minions] will some how [run afoul/piss off] the [TPTB] who will [order (their) elimination (the crew in the helicopter, and the SS officialdom minions in charge)]. This is described as being only [partially successful]. Some of the [minion (officialdom) murders escape]. Then a strange scene unfolds in which [loyalties are tested (inter-gang/inter-minion)], and a [palace uprising] takes place in which some of the TPTB themselves are [involved] as their [praetorian guard] decides to take [history as its guide]. {ed note: 'nuf said for the history buff}.

From the perspective of the [horrified sheeple/citizens], the [incident (of falling people)] will be (apparently) a [last straw], as it is described as [shattering illusions] as videos emerge of [minions heaving people out into air over traffic] are [replayed endlessly]. Other detail sets point to [foreigners] who will be involved peripherally as [ancillary victims]. It is this [mistake] in the [involvement (of) outsiders] that [pisses off (TPTB)] who then [screw themselves] by [ordering (one part of) miniondom] to [execute] their [brothers in miniondom].

TPTB

One of the primary problems for the ThePowersThatBe is indicated to be the [breakdown] of their [mind control mechanisms].

The [breakdown of mind control operations] is seen as a [planetary occurrence] by the data. There are geographic references that actually cover the globe with the exception of [antarctica]. The data sets point toward an [eruption of (diverse) (new economic) activity] that is [beyond (TPTB) control]. {ed note: alternatives to central bankster currencies at work here?} This is described as first merely being a [yet another issue among many] for TPTB, and their [officialdom stooges]. But soon (according to the

data), the Tavistock criminal gang thinkers get an idea of what is developing, and [declare (all out) war] on the [people] by making [illegal] ANY [un-approved economic activity]. The data notes that quite a few [pundits] and [other comedians] will have a great time with the new [“ask permission” laws].

Part of the problems for TPTB is that as the [general population] becomes [less controlled] and [mentally obscured], an unexpected side effect occurs in that the [minion classes of officialdom] are also affected. Apparently they [require] the [illusion of normalcy] in order for their minds to work effectively as [minions/agents of secret control], and when the [secrecy] is [removed], the [minion classes] find that the [exposure to sight (by all as a minion)] does not sit well. Described as creating a situation in which the [minion classes] are [constantly feeling exposed], and [illuminated (pun intended)], the data would suggest that it takes only a short time before a [wholesale context change manifests] in the [social body].

As modelspace is progressed past the September equinox and into the [financial chaos] of [Fall, northern hemisphere], a number of sets begin to accumulate in which [mental breakdowns] in the [minion classes] are described. The language implies that many of the [minions (gangs of oppressors)] will not particularly [enjoy] seeing themselves as [nazi's], especially within a large and [suffering population] which will NOT have a positive view of the [minion classes].

NoBody Home

There are a number of separate sets that describe a new phenomenon within the [military/minion classes]. This is being labeled as the [no body suicide]. Some (amount unknown) of [minion suicides] over the course of 2013 are being forecast as [fakes] in which [no body] will be [recovered]. Apparently the [strain] of being a [minion], especially with [inter-cine/internal warfare] and the [ever present threat] of [being (in the) wrong operation at the wrong time (and thus ending up a 'potential embarrassment')], which, as they will discover, leads to being a ['disposable' (former) asset], will make a number of the [minions] decide to [fake (their) suicides] before [being suicided].

ST6

We have a number of sets that are forecasting new language to emerge. Just as we had a forecast of a 'city/state name' which would become a new [verb] several months prior to

the emergence of the [Cyprus bail-in] which led to the colloquial use globally of the verb [Cyprused (past tense)], we are now getting indications of new language emerging from the pending [internal wars (within the TPTB and their various minion groups)]. Much of this language goes to the context of a 'dangerous world of double dealing not-to-be-trusted stay-super-paranoid' view from the [military elites]. These new [praetorian guard members] are not so stupid as the TPTB may think, and the language is describing their accumulating awareness of their (personal, as minions, and enforcers/murders) role and risks in the current times. While we are unable to predict the actual words that will emerge, the nature of this new language is clearly [military code speak relying on abbreviations]. In that vein we offer an example, not likely to actually be used, but similar in nature to what will evolve: “ST6” as code speak for [you are likely to be hunted down and killed for performing your work as you are a cog in a large cover-up that should not/cannot be revealed, therefore you are “disposable tools” to be “discarded” as soon as your task in this dirty job is completed].

SpaceGoatFarts

Blonds with Totes

Nope, not on 'boats' this time, but somehow these [blonds], apparently more than one, will still end up being a [hazard] to [transportation], including [marine shipping]. The data sets include details suggesting that the [totes/carry-on's] of the [blonds] will be the [focus/target/problem], while the [blonds] themselves will (as blonds do?) present themselves as [unwilling/unknowing accomplices]. While the data does not provide a description of the problem caused in detail, we are able to report that [marine agents] will be involved, along with some form of [global shipments]. It does not appear to be a forecast of a 'fashion' crime, though the data does show all kinds of [criminal allegations/charges] being [heaped upon (the situation)] if not the [blonds] themselves.

Girly Girls with Ropes

The SpaceGoatFarts entity has data sets growing in support of a [visible (on video)] event in which [“girly girls” (very made up females?) (young women/jeune)] are at the center of a [fierce fight] that contains (somehow) [elemental themes], and [space aliens], and [chaotic confusion], and ['gold dust']. The data shows that the ['girly girls'] will [triumph] in such a way as to [garner (global) praise]. Along with these sets are sets that

would seem to indicate that these [young women] are somehow [proficient (in the) fiber arts] with [special skills (jump-roping?)(rock climbing?)] that (when visible) will involve [lots of rope] as a key [visual] component.

“Now, THAT is really alien!”

But is it? The data sets within the SpaceGoatFarts entity are showing that the [global human military collective] is [becoming afraid] of a [river invasion]. Some linguistic structures are pointing to a strange set of occurrences in which [environmental conditions] will [propel/force] a species of [sub oceanic hominids] to [river explorations] of the [land masses]. The data focuses on both the [volcanic/magmatic] impacts on their [environment], as well as the [decades long????] [warfare] with [global military (primarily naval) and the break-away-civilization].

Both the shorter term and immediacy data are forecasting (in their separate, numeric ways), that these [hominids (our cousins?)(the next iteration from the Nummo?)] are going to be [making appearances] in [river deltas] as they [explore (in numbers)] the [littoral plains], and [navigable rivers]. There are sets that indicate that [aquatic 'humans'] as well as [river mermaids/mermen] will be reported across the planet. We have a number of geographic references that are reinforced by language pointers indicating that [india], and [indonesia] will both have larger amounts of 'sightings' than other areas in their region, but that these [sightings] will become a [global phenomenon] in relative short order.

The [visual sightings] will include specific references to [weapons/tools] that these [mermen] will carry, as well as being [seen exhibiting 'note taking behavior'].

Further, the [explorations] of the [planetary river systems] is indicated to bring a [response] from [officialdom], though of course, it is likely to be stated as a [deterrent to local 'terrorism']. Nonetheless, the data sets are forecasting that [significant resources/reserves] will be [applied/stationed/garrisoned] at all manner of [river/delta] installations. Note that the data set forecasts something of a 'mini-boom' for [factories/builders] of [quickly assembled, military-use structures] as this shift of focus develops. The data sets have presented us with many, numerous in point of fact, geographic locations that are/were [forts], that used to [protect/guard] against [coastal raiders/pirates] through the centuries, that will once again, be [active] in [coastal guard duty].

The SpaceGoatFarts, and Terra, and ThePowersThatBe entities all forecast that the [aquatic humans explorations] of [continental land masses] will include [forays] into [populated areas] {ed note: we “think” we know why, but should not say, though it will become evident when the events begin to be reported} with the [expected/presumed results]...on the [human side] of this equation.

Again we need note that the supporting structures are quite clear that the [explorations of human world] by the [aquatic peoples] are driven by [desperate need] {ed note: also a bit of strategic thinking involved that will be understood in about 4 years apparently} as their [habitat] is under assault by [humans], and the [expanding planet]. The ['sharp edged' sonar] used in [recent 'tests'] did indeed achieve its purpose of [killing] a number of the [aquatic peoples], but was far less effective than the [globalist officialdom] had desired, and had some seemingly [constraining side effects] . Their latest iteration of this [sharp sound] will have the term ['sword'] in its name {ed note: or that of the unit which deploys with it} thus it will be visible at the time of the announcement. However, we note that the [aquatic peoples explorations] is already well advanced by the time of this next [assault].

Visit to a small planet

The data sets are targeting [UFO visitations] as going through [2/two forms] of [change]. The sets for [enumeration (number of) visits] point to an [increase] that will be [felt to be] of a very [large amount]. Further, the sets for these [increasing visits] also are forecast to have a [qualitative change]. The sub sets that are in support of the [qualitative change] include [solidity], and [time (being viewed)].

Further the data sets are forecasting that [material] will be [recovered] from some sort of [UFO cache/drop zone]. This [material] is forecast as [causing problems] between [governments], as well as between [gov't] and [citizens]. Other descriptors include [warm], [crazy-making (disorienting)], [noise emitting], and other labels that go to the idea of [alien]. The data accretion patterns show that the [alien-ness (of the objects)] will be a [separate cause for concern].

The way the data sets may be interpreted could be painting a picture in which the [government (of the area involved)] will [announce] that the [objects/material] is

[lethal] under [pretext (of some excuse)] in order to [flush out] the [holders]. The patterns of the layering of the data suggest that this is potentially on track for late in 2013. The descriptions include [broadcast warnings], and [rewards] and [direct threats]. The whole group of sets also have extensive cross links over to (or from) the TPTB entity.

Swimming in subways (again)..diving.

As part of the [flooding] sets, new supporting sets held by the SpaceGoatFarts entity show that [video] of [salvage operations (private parties?)] will be posted that will show [divers] in [former subways], and [building basements]. Some of the videos are described as showing [vaults] and [storehouses/safe deposit boxes] that will be [opened underwater] as [crews] try to [salvage resources/wealth] from [weather/flooding damaged] areas.

HUEs There?

Perhaps the most curious section of the SpaceGoatFarts entity is this small area that seems to suggest that [humans] with [far different skin color hues] will be born beginning in this year (2013). The data would seem to be indicating that [off-green], and [off-blue] skin will be seen in [human births] as the year nears its end. These [new humans] are [not only] different in [skin hues], but in other [base life form] areas. The [bodies] of the [new hued humans] are described as [revealing radical differences (over time -aging)]. The data sets are clearly associating these new [hued humans] as being an [adaptive survival factor] for [future ages]. There are no indications that this is the result of any alien influences. In all respects it appears to be a 'natural' change being induced by universe.

Conclusion: What is Universe up to?

Never have so many been prepared for so wide a range of circumstances since caveman days.....hmmmmmm? The paranoia associated with a run-away global financial system, and the power-addicted criminal mafia it supports at the top of the planetary power pyramid may JUST be induced by universe for its own purposes. Knowing, of course,

that BIG SHIT PLANETARY changes are occurring, it could be that universe decided to prep humans in advance.

Would we have done it if the cry had been “get ready, planetary ice age, and solar system shuffle coming!”.....likely, no. The words used could not, would not, have had enough impact to motivate more than a very few, a small handful of really future looking humans, at the far edge of humanity. Probably this cadre would not have been enough to satisfy universe's requirements for the next human bloom.

So Universe provided MUCH more immediate focus for generating paranoia -out of control criminal mafia pedophile religious banksters raping, with sure signs that major pillaging is beginning. This was able to motivate large segments of humanity. Scared the shit right out of them, and they got up off the couch, and started working to prepare for the upcoming revolution against bankster raping and pillaging.

Universe is a tricky bastard.

Which leads us to where we are...with large numbers of people around the planet actively preparing... for 'something'. Note that most would disagree on the 'why' of the preparations, but all would likely agree that the idea of 'being prepared' has now been so absorbed by the body social, as to be part of the 'mainstream' awareness. Indeed, we have many examples of linguistic evidence of this, typified by such modernity of expression as the new word for this emerging culture, “prepping”.

That [prep'ers] exist at all is entirely due to universe's will.

Here in the U.S., previous generations may well have performed many of the same tasks as modern prep'ers, but they were doing so with a very specific, and relatively short term goal in mind...living through to the following year's growing season. Now, with globalism firmly established and foods available throughout the year, without regard to the local season or growing conditions, without any actual, demonstrable need, we have the emergence of the [prep'er movement], which has both social, as well as political layers. This is entirely universe's doing. It wanted the [prep'ers] to be here, at this now.

It is the existence of such things as the 'awakening movement', or [truth wave], the “prep'er movement” and many other examples that convince me that universe wants humans to do well in our next series of challenges. It should be noted that here at 'peak

oil' time, even with dramatically increasing costs of production, against the background of the bankster occupation, the planet is awash with petroleum (price issues are separate, manipulated concerns). Further, deep well technology, even with its attendant higher initial capital investment, has demonstrable returns pointing towards long term cost of production decreases (deep wells do not cycle down as with the shallow variety so the capital costs are amortized over much longer production cycles).

However, our data does point to several [severe catastrophes] to affect [oil drilling], and [pipelines]. While the [petroleum industries] are shutting down due to planetary expansion, the data also indicates that a simultaneous [wave (of) creative insight] will [collide] with [humanity] such that a new [renaissance] manifests, even against a background of [unimaginable/inconceivable planetary changes].

Much of the [renaissance] will arise due to an actual [collision] of [thought] as the [awakening movement] surges past the [critical support levels] into [sustainability], [chasm crossing growth]. This [renaissance] has been forecast since 2007 as a sub set of the [unknown energies from space] set within the SpaceGoatFarts entity. Then it was just so much 'space goat farts' wafting through the air. Now, given the unfolding of these last few years, the idea of an emergent [renaissance] following the [planetary awakening revolution] appears to be inevitable, unstoppable, and necessary.

An understanding rises up from the data of the situation that ThePowersThatBe are facing from [mid Summer's night] here in the northern hemisphere. While it may be expected that TPTB would/will unleash their [military] upon the [revolting/rebellious civilian populace], the data does not show this manifesting. Where full scale [warfare] upon the [successful assumptions (of) local power] by [rebellious citizenry] may have been the expected response, we now see, via extensive cross links, that TPTB are incapable of [ordering full scale war] against the [populace].

There are very large blocks of [fear] within TPTB entity around the concept of [elites versus populace]. As the [fear] tracks are followed within the entity, a picture of [paralytic emotional barriers] emerge. The problem for TPTB is that there is really only [1/one response] that they are capable of making, and it is [violence]. Further, they are clearly [aware] that if the [violence] levels associated with [rebellious actions] end up going to the level of [open warfare], that they, the TPTB, are [doomed]. Further, there are huge levels of [fear] associated with the mere [decision] to [issue orders (to assault the populace)] as they (the TPTB) are [uncertain] of the [response] of the [minion

classes] upon whom they depend for [safety/survival]. {ed note: can you picture fat assed Henrich Kissinger trying to defend himself? Against even his child victims without his bodyguards?}

Further, in a curious aside, it is interesting to note that there are linguistics pointing toward several (more than 3, probably less than 11) incidents in which [bodyguards] will decide to [not be there] when needed. Other data sets point toward the [cognoscenti (those in the know who work directly with the 'elites')] who are [disgusted] with their [masters], and themselves will [take advantage] of [local chaos] to ['express'] themselves to their ['employers']. Yep, TPTB have a very good, solid reason to have so much [fear] at the core of their entity.

By the time that this report is posted, the background contexts in which precious metals, and fiat currencies operate, will be changing. This is the change that shifts the social order into chaos. It is expected that the 'prices' of various kinds of will go 'wonky' beyond our ability to either understand, or control. This will be a global phenomenon that emerges as the planet is changing under our feet, and around our ears. The 'all going pear shaped' feeling to the markets, and prices, is symptomatic of the planetary, and solar system changes. During this shift of contexts into a new form of chaotic social discord, it is expected that actual values will emerge from abstraction control of corrupted trading. Again, this will be symptomatic of larger themes moving through planetary society.

As the background context against which the individual human must measure 'sanity' and 'reality' changes, the temptation will be to gravitate toward the 'strong voices' that will, with authority, proclaim their vision both accurate, and cohesively hopeful...(if we all do as I say.....) with the implication of a happy day in the future trailing off in your mind during the presentation of the 'strong words'. Yet more risk of cult of personalities run amok...just when we need clear thinking the most.
