## SpaceGoatFarts - Very Cold Haggis, Ossary

The [Egyptian Mystery Schools](#) will soon be taking a back seat to a new [center/locus/focus] of [terra/earth mysteries]. The data sets have a descriptor set which goes to the idea that a [phenomena], already (or may very soon be) discovered in the [antarctic/arctic], will [capture/seduce] the [attention] of [mystery hunters/seekers] globally. The data has very extensive cross links over to the ThePowersThatBe entity where we note that bespoke [excitement], modified by supporting aspect/attribute sets for [electric conditions] is the terminating set. These cross links are also dominated by supporting sets within the [scottish rite] sub set of TPTB entity. The idea coming across from the detail layer aspect sets are suggesting that the [scottish rite mob] will be so very excited about the [discovery/find] of the [phenomena] that, by their [motions/movements] of [persons/equipment], they will [alert] their [enemies], as well as [betray] the [secret] to the [populace].

The [betrayal] aspect/attribute set can also be interpreted as

[unleashed], and [released (from) bondage], as well as the more mundane, [exposed/revealed]. In this set the data provides support for the more active forms of [unleashed], and [released/cut (from) bondage]. This 'more active' state is indicated on several levels, including the sheer mass of the supporting lexical sets. So in this case, we have a high degree of action indicated, but as of the current processing, the [visibility] level does not come close to matching the [intensity] summations of the active verb supporting sets for this descriptor. Make sense? The [visibility] \*may\* be hidden from the general public for a while, but the [discovery] itself is showing as initiating \*all\* kinds of [excitement] and general thrashing around. There are suggestions that the [mysteries of the arctic/antarctic] will rise in [visibility] within the global mediastream as 2008 fades into 2009. The data suggests that [leaks] about the [mystery] will be first about what it is [not], and then about what it [does/creates?moves? animates]. These [rumors] will cause some serious consternation within the TPTB, \*and\* will be a very good temporal marker for yet another, much more intense [unknown energies from space]. The SpaceGoatFarts entity is clearly indicating that the first half of 2009 will far exceed 2008 in 'strange goings on', but also that the [volume/quantity] of [mental shocks] in the last half of 2009 will [double] the [weight/amount/measure] of the first half of the year. This is due in no small part from the forecast [growth] of the [antarctic/arctic mysteries] in both [leaks] \*and\* in direct impacts on [terra/environment].

The impacts of the [exposure/unveiling] of the [arctic/antarctic mysteries] is also shown as introducing a new word into our lexicon, and probably soon(ish) into the general parlance. This word defines a [place], a [state of mind], and a [form of education]. The word is [ossary]. Not to be confused with the 'bone houses' of the [ossuary](#) definition arising from Persia and spreading through old Europe (mostly as a result of the plagues, famines, and wars), the new word of [ossary] is defined by the [form of education], which is to say, the [study of the language of the unknown/not\_perceivable]. This [form/type of education/study] is apparently \*already\* underway in several

places scattered across the planet, however the [visibility] is very low and primarily restricted to those 'in the know'. The data sets are suggesting that this [lack of exposure] will be altered as the whole subject of [unknown language/tool] is now modified by supporting aspect/attribute sets for [emergent/manifesting], \*and\* it is recently shifted over to direct support for both the [secrets revealed] and the [conflict] meta data layers. The data would seem to be indicating that the/an [ossary] will be involved in a [conflict] \*at\* its [location/site] which will precipitate a very rapid rise in [visibility] of the \*place\*. Within a short period of the exposure of the [site/location], and the [naming of the place publicly], the [revealing (of its) purpose] will also be exposed. The data indicates a gap of perhaps months between the [minor], but [visible], [conflict], and the subsequent [revealing] of the [purpose/goal/function].

## GlobalPop - Mercy, Mercy, Tua Culpa

The data sets are indicating that the [place of sorcerers/vaticus/vatican] will be having some problems, described as being [very severe] with the concept of [mercy]. Some of the details sets are suggesting that this [mercy] issue involving the [red pope] and his [slaves/servants] will be only a small part of a general wave of [secrets revealed] which will sweep through other [organized religions]. This will include the [mormons/LDS church], and several of the [evangelical organizations] within the USofA. However, the first, and largest of the data sets to grow to [visibility] is centered around the [vatican]. In a curious turn, much of the data is focused more on the actual [site/location] of the [vaticus centrum], rather than the [tenets] of the [religion]. The data seemingly is suggesting that a [discovery] at the [vatican] will [place/expose] the [core (of the) religion] to [risk] of [crumbling/losing glue].

A very large part of the problems showing for the [red pope], as well as the [variants (of) religion] in the [usofa], and [europe], will be the

[sudden] and [shocking] global [poverty] which is indicated to [overtake] the [planetary populace mind] this [fall]. As the modelspace and the GlobalPop entity are progressed past the first of November, the [religion, organized/structured] lexical set starts accruing values for [stress] and this aspect/attribute set is supported by the most extreme levels of language both in emotional sums and in general connotation. The [extreme stress] affects the [red pope] and the [organized/structured religions] almost simultaneously, but the [red pope] meme will be the most [exciting]. The data suggests that [sudden, catastrophic land alterations] as well as [global poverty] of a [rapid] and [unimaginable] level will [conjunct/join/union] to place the [red pope] in an [impossible position] to [maintain]. Further aggravation comes to the [red pope] and his minions by way of the [inattention] of the [government, usofa]. As of this processing, the data sets are showing that the Populace/USofA is forecasting a period from Fall of 2008 onward some number of months/years, in which the [focus] of the [americans] is on themselves. This will involve the [total captivation/preoccupation] of the [government] as the individuals within it decide which actions to take to [save themselves] from the [rising revolution (s)] within the [populace, usofa]. Additional pressures on the [red pope] are shown manifesting as the [global populace] [shouts out/cries out] for [relief] at the [purse] of the [church]. The data suggests that the [common knowledge] of the [ongoing pedophilia] and [history of corruption], as well as the soon-to-be-revealed [inglorious past] of the [red pope], will have the [global populace] [calling] for the [church to open coffers] for the [planetary poor]. The linguistics are going to a 'catch phrase' emerging which is something along the lines of a [final cry/desperate wail] of "if not now, then when?".

Further problems will develop for the [red pope] after he [refuses] the [supplicants/seekers], and [professes] the [poverty] of the [church]. The data indicates that this does not sit well with the [starving hoards/millions], and soon a [wave] of [church ransackings/seizures] including [legal blocks] on [money transfers] at the governmental level will manifest. Following these temporal markers we note that [kidnappings]

of all manner of [church officials/red\_pope\_minions], \*including\* [bank officers] will manifest globally. These are indicated to have a very high [visibility] factor with some of the supporting data showing that [priests/officers/minions] will be [arrested] on [beaches] while on [holiday]. This sub set is also forecasting that the encapsulated memes of [hypocrisy] and [lying], will be the next [action point] as several [nations] will begin [legal proceedings/seizures] against the [church]. This then also has a [following/rising] supporting value set which is indicating by its [visibility] that it will also rise to prominence, and it is composed of [secrets revealed] being [spread] from [captured/impounded records] within a [nationalization of church property] campaign. These [secrets] will be the [undoing/death] of the [red pope]. They will link the [pope] to an [illness] so viscerally [deep] as to [remove the possibility of parole/pardon] from the [minds] of the populace. The longer term data sets involved suggest that once begun, this will be a process which proceeds around the planet for a number of years, perhaps even a decade.

## Markets - Bad Hot Days

City Bonds. College scholarships. Retirement funds. South Korean banks. European banks. Tax battles between states and federal government. Dollar distribution system bottlenecks, and overheating. Federal advisory committees under suspicion. Indian sub continent farming problems. All this and more as the data suggests that October will usher in the first, truly [global depression]. The current emotional summations have over a third of the values being directly part of the [economic] sub set. Further, within this sub set, the [economic] aspect/attributes are decidedly inferior to their supporting sets which focus on [home] and [support (for) family]. These sub sets are very extensively covered in cross links over to the [new society/social\_order movement] discussed in the Populace/USofA entity.

The huge number of common linguistic sets between Markets entity and the Populace/USofA entity prohibit discussing either alone. In both entities, the [dollar, usofa], as well as the [economy] sub sets are supported by data sets which accrue as the modelspace is moved past the [autumnal equinox] and which go to the idea that the [best (is) now behind]. The interlinked sets show dominant aspect/attributes for [drying out/evaporation]. This is supported with data sets of [wealth], and [millions upon millions] of [failures] which are indicated to [promote] a [social wave/movement] for [abandonment/leavings]. There are some sets indicating that a large and [visible] counter wave of [possessing's/squatting] will also take place, but at this point the higher [visibility] sums are within the [abandonment (as) social movement]. As may be expected, this [abandonment] by the [millions upon millions] will cause no end of [consternation], and [teeth grinding anxiety] for the [politicians].

It must be noted that shortly after the [autumnal equinox], the Populace/USofA and Markets entity join modelspace in falling over the edge into a long wave of [release language]. This sudden [shifting] into [release language] may be good for the [petty\_people/politicians] in the short term as it would appear that everyone is too busy [wailing] over [loss] in early October to cause much in the way of [fear] about [personal safety]. It needs to be noted that the [personal safety] issue arises for all manners of [politicians], and [bankers/financial\_workers] very early in November, and is of a constant concern thereafter through at least until June of 2009.

As the modelspace is moved from [vernal equinox] through April and May, the emotional tone increases in the fields of [intensity], and [duration] within the Markets, with the [usofa dollar] and [liquidity (of) debt] as the central focal points. These linguistics are also at the core of the Populace/USofA entity beginning at that time. The 2/two entities track very closely from the end of May forward through Summer as they are both orbiting around the upward scaling emotional tone summations of these core linguistic sets. The data shows the [state of

decay] to be [shocking] to both the Markets and the Populace/USofA. The [shock] sub set within the Populace/USofA is a component of the support for both the [revolution] in [government] pending {ed note: associated with the rise of [bloody revolution] in 2009}, and the [revolution] in the [social order] which begins to be [visible] in late Spring to the aware observer, but which is showing as being [hidden] from the [general populace]. The [social revolution] is [hidden] only due to the [trauma] which is supported by [shock] which in its turn is supported by [poverty], and [desperation].

The data has a very large number of detail layers within both entities, perhaps several tens of thousands in each, which are headed by very [visceral/stomach churning] sorts of bespoke emotional conditions. The [behavioral breakdown/degradation/loss\_of\_control] forecast is extreme even for our work which has an in-built bias for extremes of language. The extremes being forecast as a directly result of the [meltdown] of the [dollar] are encapsulated by the contexts of a [national psychosis]. The idea is that the act of [observation], which is to say, the [being forced to watch/observe] the [death] of the [dollar], and the [evaporation] of the [american dream/mythos], will result in very high [visibility] levels of [humans behaving badly]. The [bad behavior] will include [pillage], [murder], [mob actions/lynching], and [demonstrations] of all kinds, including [violent food/medicine riots].

As the [financial system] spirals [beyond bounds/out\_of\_control] over [summer], there will emerge a [demand] from the [moneyed class] for the [army] to be [engaged/purchased/hired] to [suppress dissent] and to [restore order]. This set also exists within the Populace/USofA entity, though its focus is pointedly noted by the lead attribute set headed by [oppression], and supported by [government]. This set is also involved in direct support for the [revolution] meta data layer, as well as [transformation], and [duality]. Further it is influenced by the [encounters with scarcity] and [restrictions on movements] meta data layers.

As the modelspace is progressed through Summer, the [gold/silver] sub sets within the Markets entity begin to diverge from the same sets held within the Populace/USofA entity, and to a lesser extent from the GlobalPop entity. The view from both entities is of a related sub sets. The imagery of the aspect/attributes suggests that [summer] and more probably [later in summer] will be a period of [resting/separating] for the [precious metals] from the [dollar death woes]. The idea coming across is that after a period of [hardships] {ed note: already past}, the [gold/silver] sub sets have hit a time in which seeming [obstacles] will [mount up/build walls] only to [crumble upon testing for strength]. These [walls] are [dollar/debt structures] which are shown as \*not\* preventing [silver/gold] [demand rise/pressure], and which actually result in a [false optimism] which [fails] at a [critical moment], after which [everything/all\_circumstances] will [fall into place] for [gold/silver]. This last has corresponding sub sets within both of the populace entities where the complementary emotional sets are being expressed. This is to say that the Populace/USofA and the GlobalPop entities are forecasting the [rise] to [very high prominence] of a [new class] of [wealthy persons] who had [bet/gambled] on [reduction (of the) dollar], and [sought surety] in [metals]. Please bear in mind this is \*NOT\* referencing [paper holdings] of metals. These fall into the category of [paper debt instruments] and as such do not show up in the [gold/silver] sub set directly. While the [paper trade] in precious metals \*may\* indeed be as [flourishing] as the data suggests, it is also shown as being [nonexistent/gone/removed] by [late fall/early winter]. This is directly related to the [shortage/lack/dearth] of actual [deliveries] of [metals], and there is special emphasis on [silver] within the supporting sub sets.

## Bushista - Fear Sour Farts, Party Crumble Mix

As of the processing of this week, the number of cross links from the Bushista entity over to the Markets entity has grown more than 4/four fold. The cross links originate in a number of areas within the Bushista

entity, but all seem to converge on the termination side in Markets within just a very few sub sets, and these are centrally supporting the aspect/attribute set of [attacks/confrontation/conflict]. These data sets continue to accrue all through Spring and up to mid Summer, finally slowing down in mid August.

There are actually 2/two distinct patterns of accretion of these cross links. The first is in a broad wave, or blanketing pattern which covers from mid April through to about the 10/tenth of May. These cross links terminate in the aspect/attribute sets of [disappointment], [shameless], and [unease/disquiet]. This part of the accrual pattern fades into a background level of emotional turmoil as May begins, and the next phase of the [attacks] against the US, and specifically the [bush interests/initiatives/history] begin. It is this latter part of the pattern which persists through to mid August, then winds down into a very brief few days of [calm] before the [september problems] begin in the Bushista, which then propagate over to Markets. The [attacks], and [counter attacks/responses] are shown as involving the [military, usofa] though the most direct impact is felt on the [usofa economy] and specifically the [bush buddies] on [wall street/financial center]. These [attacks] on [us interests] are also indicated to have a very [unsettling/disruptive] influence on [israel] and in particular, the [zionist agenda (here in the ) usofa]. This conjunction of [aggression] against [us interests/slave states/power plays] is shown as continuing through these last months of the [bush terms] and even into late [february] of 2009. It is worth noting that as the [attacks] of [spring] and [summer] escalate in [fall], the [usofa military] comes under a huge level of cross links from the [populace/usofa], and the [economics] of the [national economy], and \*other\* influences which are shown as [limiting] the [ability] of the [military] to [respond well] (if at all?) past [november].

It is the [defeat] and [breakdown/degradation/disintegration] and [mutiny] of the [military] within these last months of the [bush reign] which brings the Bushista entity the most [anguish]. There are several layers of aspects/attributes which are going to the bespoke [fear] of the

Bushista's as 2008 fades. This bespoke [fear] is directly supported by the [expectation of personal safety] which is seemingly the most troubling to the Bushista. This entity has a greater value placed within the [personal safety] summation for the entity than it does for the success or failure of the many military actions underway. The idea coming across is that following about November 21st, the Bushies will enter a period in which [fear of personal safety] will [dominate all thinking].

Much of the data sets for the [attacks] and [responses/counter attacks] of the mid April 2008 through February 2009 also involves the Markets entity. While many of the [attacks] are shown as being [political rhetoric], these are clearly in the minority as the larger group of [warfare against multinational corporations] grows indicating a [global wave] of [insurrection/mutiny/rebellion] against the [current world order]. These [attacks] are so [ferocious] as to elicit bespoke [fear] on the part of many individuals within the Bushistas, and a minor wave of [abandonment] will take place in which [resignations] from the Bush admin escalate to a large degree of [visibility]. The continuing problems for the Bushies grow over Summer as various elements of the [social order] and the [military, usofa] get into [active revolt/rebellion], and as several [mutinies] within the [ranks] manifest. While this is occurring, the pressures are shown as [escalating] for the [bushies] from the Markets entity as the [global dollar death] suddenly becomes the \*only\* thing under discussion as September replaces the [military actions] of August.

The [global depression] stage will be set by events unfolding in September, and by the forecast change to [release language] in October. This change is still showing as being at 7:10 (seven ten AM) on the 7th day of the 10th month. The problems for the Bushista entity forecast for April through August are shown as producing states of [irritability], [agitation], and [unsettled/disquiet/upset]. The data is indicating that Fall will produce [vomiting] and [bowel releases] which will [fill (the) house] with a [great stink]. Curiously this [great stink] as an aspect/

attribute set has a very high [visibility] summation, and is fully supported. Some of the supporting aspect/attributes go to the idea of the [great stink] being somehow [visible] to the [populace]. This area is also extensively internally cross linked to the [mutinies] of Fall/Winter, as though some aspect of support within the [great stink] will act as a trigger to larger events. These larger events will escalate over Fall (sad for all humans) as an increasingly [disturbed/unstable/mad/insane] Bush attempts to cope with both [military] and [economic] [reversals], and personal as well as national [distress], and globally increasing [turmoil]. It is within late October through to late November, that the data sets indicate that the Bushista entity will [create conditions/manifest] a very [fatal] mistake. This [mistake] is shown as having maximum levels of [visibility] and also has longer range data sets for [duration of impact] and [intensity of impact] values which are [multiple generations (4/four) affective]. This indicates that the [mistake] made by the Bushistas will impact the USofA for [82/eighty-two years]. It will be this [mistake] which will be the [legacy] of the Bushes, \*and\* the [republican party].

As we examine some of the political areas within the Bushista entity, it seems reasonable to interpret the many [death] and [hobbling], and [crushing], and [destroying] references which are in support of the [republican party] sub set of Bushista as being accurate, given the developing circumstances. The data, admittedly focused on the extreme, shows that the [whole] of the [political realm] is [tainted] by the [big stink] coming from the Bushista's, though it is the [republican party] which takes the largest amount of the [stress/anger/hate]. There are cross links from this area over to the [israel/zionist] sub set of the GlobalPop which terminate in [destruction], and [implosions] both of which are supported by [corruption], and [sexual scandal]. This last includes repeated references to [pedophilia/child\_molesting]. In this area the cross links are also showing that a ['suicide'] and a [visible murder] will act as triggers in Fall to the [release] of the [big stink]. A sub set of the [big stink] also affects the [democrat party], and seems to initiate a [pogrom] within that party which is aimed at [zionists] and

[corrupt incumbents]. The impact over Fall and Winter of 2008 of the [big stink] on the [established political elite] cannot be over stated. We have a very high level of emotional summations indicating [core (level) changes] within the \*whole\* of the political structure of the USofA which will last for several years as the [revolution] progresses, and all of it is [triggered/initiated] by the [fear fouled farts] from the Bushista entity over late Summer and early Fall.

The [big stink] sub set is supported at the primary level by [fear], and [souring bowels] as well as [diseased rectum]. A curious collection of data sets which also contain numerous internal cross links over to the [military]. As this entity is progressed through Fall along with modelspace, we note that the Bushista entity is forecast to [have lost control/grasp] over the [military] and the [global wars]. The many [attacks] against the [usofa] and the [international business collective] are, in the main, shown as being [successful] in that the Bushista's are so [disrupted] as to [frustrate] and [stifle/curtail] the ability of the [usofa military] to respond effectively. This is apparently especially true from late November through to late February of 2009. The aspect/attribute sets are pointing toward [defeats], and [hampered/hobbled] capacity to [respond (with) aggression]. There are several sub sets in this group, all of them very large with high emotional summations which go to [bankruptcy] and [shortages]. This includes [fuel] and [ammunitions].

## Populace/USofA - Forward to the Past, Epidemics, Clean Nudists, Fading Dreams, Openly Hidden

The data sets for the Populace/USofA for [fall] are indicating that a [new society] or [new social order] [movement] will be in [imitated/birthed]. This past tense support layer suggests that by [fall] the [nascent new social order movement] will be well established, and further the primary aspect/attributes are pointing toward a [rapid

growth] stage. The [social order renewal] movement is supported by aspect/attributes which describe the movement as a [fast growing vine] which [gets sun] and [accelerates] the [transformation] of [society] here in the USofA. The [transformation] aspect set is a direct support for the [duality] meta data layer. Further the [transformation] is itself a meta data layer and this sub set within the Populace/USofA entity is also supporting a branching of the linguistics so that there is a meta level [duality] being expressed. The idea coming across is that a [fever] of [active denial] which takes place at the [elitist] level of society, in which the data shows that [massive] amounts of [debt/resources] will be [thrown at/dumped upon] the [new society movement] as it [takes away (their) control]. The imagery of the detail levels paints a picture of a [social movement] which is [beyond (their) control], and as such the [elite/TPTB] are shown as [proclaiming war] against this [movement]. They will attempt to [label] and [denigrate] the [emerging consensus] within the [populace]. However the data is also quite clear that the appearance of the [temporal marker] of the TPTB [angrily attacking] the [movement], it will be already too late, and that the [attacks] will [rebound] in their effects. The [movement] is shown as being in [progression] across [fall], and well [settled in/rooted] by [late winter].

There are linguistic structures which describe the [new social movement] as being [expansionist] in nature, and [encompassing] in tone. There are similarities between the description of the [society affective wave] and that of other broad social movements including the 1830-1860's Utopian movements. Other elements present themselves as similar to the "health crazes" of the late 1800's and early 1900's. We note that the descriptor sets also contain language found in the late 1970's "socially responsible/permaculture" movements. The pressures which will bring out the linguistics will clearly be hinged on [economic] fundamentals, and those wide ranging emotional reactions across the [populace]. These reactions are forecast to include the complete width of reactive behaviors, including [mob action] and [personal suicides]. There are also [disease] forecasts now appearing which have long range impact and intensity values suggesting that a

[precipitous drop] in national income will produce the predictable result of postponing of health care needs. This is being forecast as having the unfortunate effect of causing a [regional epidemic] with national consequences. The forecast appears in the data sets which accrue for mid to late [winter], and as such the 'outbreak' in [winter] will be directly the results of [economic conditions] of Fall. The bespoke [fear] levels for this [disease spread] are very high, as are the [visibility] levels. Further the data suggests that [social customs] will be [altered] by the [spread of disease] as well as the [fear of spread of disease]. Such things as [hand to hand] contacts are described as being [reduced (to) near obscurity], while [bowing] and [mudra/hand\_gestures] of [greeting/respect] are indicated to come to the fore within the [lower social castes] and [outlaws], and from there to spread to the [children]. As may be expected, the parents will ultimately [get it], and also adopt the [non touch] mind set.

It is worth taking look into the [non touch/social no contact] data set as it is linked to the [rise of modesty] sub set which is itself a large supporting set for the [new social movement] meme. Within the [non touch/social no contact] supporting sub sets are links over to the [fierce nudists] sub set. This arises as a response to the [new epidemics] {ed note: morgellons, and 2/two other not-yet-visible diseases, as well as parasitic infestations}. The [fierce nudists] are somewhat regionally identified, but are shown as being a [natural response] to both the [fiber disease] as well as the [proofing/curing (via solar ray absorption)] effort for the [skin afflictions]. There is data suggesting that [electric treatments] and [solar ray baths] will indeed be the [vogue] for some regions globally as people attempt to overcome the [debilitations] of the [skin]. We need to note that there are a lot of cross links between this area and the SpaceGoatFarts entity where the origination points are within the supporting sets for the [unknown energies from space]. This area is, in spite of the [nudist] context, fully participatory within the [rising modesty/new\_public\_morality] meme previously discussed in the last few ALTA reports. While this meme holds many supporting sets for [coverings] and [modest clothing], it also holds the idea that

[social nudity] will be a \*requirement\* in some circumstances to [show/demonstrate non-infection]. These seemingly diverse and separate supporting sets are not mutually exclusive, and both include high [visibility] summations as well as very long term duration values which exceed our outer limit of [10/ten generations (210/two hundred and ten years)].

As the Populace/USofA entity grows in the supporting sets for [dollar death], and [financial hardships], there are also a few new sets which swell in step. These include the [empty life/no purpose] sub set, and this sub set is directly related to, and in support of the [death of religion] meme which has been growing these last 5/five or so years. The [empty life] sub set also acts in supporting the [new social order] meme. Further it is cross linked to the SpaceGoatFarts entity and the [mysteries] sub set there. This [empty life] meme is a very powerful linguistic set, even though small. It has very high levels of emotional summations in the areas of both [duration], and [persist ant intensity].

This [empty life/no purpose] can also be interpreted as the [lost (american) dream]. This meme is appearing across the many supporting layers for the [economy] within the Populace/USofA entity. It has several levels of support which are bound by internal cross links to the [dollar destruction] meme which in its turn is supportive of the [social changes/pressures] which are driving the [new social movement] sub set. The supporting layers for the [lost dream/no purpose] aspect/attribute sets are laterally linked to the [financial hardships] sub set which is linked over in 2/two divergent directions where it supports the [revolution] meme as well as the [death of religion] meme. This last is also a [global/planetary] affective sub set, and the data indicates that over these next 9/nine or so months the [majority/>51 (greater than fifty-one percent)] of \*all\* [private, missionary/gifting funds] to [churchs] within the [usofa] will [dry up], which in turn causes a [global crash/depression] within those segments of the global economy which depend on the largess of [american church folk]. The data sets suggest that this [dearth/lack] of funds will not only cause a [collapsing

bubble] within the [religious aid/propaganda industries], but will also [cut out the heart] of several of the larger of the [evangelical churches] within the [usofa]. Several of these are also forecast to get [wrapped up] in the [nationalization of religious property/funds] which will first, and most [visibly] hit the [wallet] of the [red pope]. As a further wrinkle within the spreading, [unexpected side effects] of the [economic derivatives blow-up] over [summer], will be the near collapse of the [israeli/zionist economy] by [spring] of 2009. It does not help the [israeli/zionist] case that the [pogrom] against the [interference] in global affairs by the [zionists] will begin this [fall], and take root even within the [usofa] by [winter]. This last is shown within the Populace/USofA entity as the [flowering/success/fruition] of an [internal] and [secret] [war] against the [zionists] in late Fall. By the December [solstice], the [pogrom] will be rising in [visibility] such that the aware observer will note the many [casualties] who will be [ushered out] of the [government/civil service] within several countries, including the first such in the USofA.

## Conclusion: Part Five of ALTA 1308 - Warm toes, Serious Skills.

Money. More money. And even more money. But the data is indicating that it will not help. That serious changes at very core/fundamental levels will be in place, at least as frameworks, by late in 2008. The data indicates that the [changes/alterations] to the [social order] which are to be the most [destructive] and [pressuring] will arise from some [ill advised/poor choices] made by the [federal reserve banksters/central banksters] late this Summer. Though [proffered/claimed] to be in the [interests of the people], these moves will have such a [violent] and [bad] response so fast, as to [magnify] the [financial pain] to [new levels] which are described as [draining the blood] from the [face] of the [politicians]. These moves by the [fed banksters] are also shown as providing huge new emotional inputs to the [usofa presidential election], as well as also precipitating the [reduction/decrease] of [incumbents] at the [very last minute]. This last is shown as impacting

the [printing of ballots], and [casting doubts] on the [veracity/truth/value] of several [senatorial] races.

The Terra entity has had a very large growth spurt as a result of the longer term values being processed this week, but also, and rather startling, from the just processed immediacy values held over while processing the shorter term sets. The values show that Terra will be intruding into [life on its skin] across the planet this Spring, Summer, and most notably, early Fall. We will examine the Terra entity in Part Six. It is very large, and may occupy a large part of that report. If any of the immediacy values seem to indicate something very soon, we will send out alerts via email, and likely via George Ure's Urbansurvial site. Remember though, the previous ALTA reports had indicated a time of [hot feet] here on earth for this Spring and Summer. We see no reason in the very preliminary examination of the modelspace with the Terra entity to change that forecast.

While clearly the future holds the [death of the dollar] with its attendant global impacts, and (at least to the nutjobs) while it is clear the USofA is headed into a very deep depression as it works through its karma and corruption issues, we are advised that survival has never been a matter of money, rather it is skill and awareness which provide the path through universe. It may have been noticed that recently universe has gotten quite serious in providing opportunities to test skill and awareness, so probably time to renew a commitment to get very seriously skilled in response.

###

The next installment of the Speculator slices will be posted by late Sunday, April 13th. Part Six (final report of the 1308 series) is expected to be posted by late Saturday, the 19th.
