Meta Arts - Fierce Veges, Bleed through

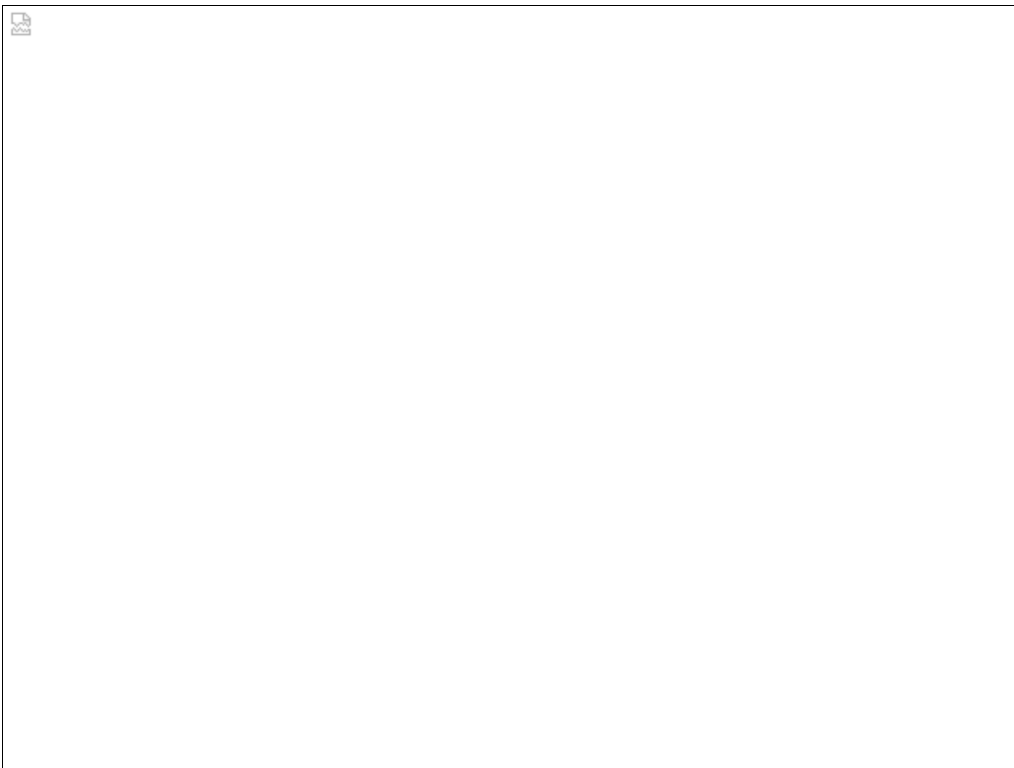

Forward to the Past - the [Guerilla Gardening](#) movement is/has taken a large step forward into the past where we have a recreation of the same forces which drove the Vacant Lot Cultivation societies which appeared in the USofA the *last* time a currency meltdown occurred in the depression (of paper money) of 1890's.

"It reminds me of the Vacant Lot Cultivation societies," says Rose Hayden-Smith, a Food and Society Policy Fellow with UC Cooperative Extension. In the wake of the economic meltdown of the 1890s, many American cities, from Detroit to Philadelphia and Boston, formed Vacant Lot Cultivation associations to encourage residents to grow food on public land. The Liberty and Victory garden campaigns of World Wars I and II, respectively, also exhorted Americans to raise food on untended public land.

In the case of the Vacant Lot Cultivation societies, as well as the 'liberty and victory gardens', these were supported by [officialdom]. While the originating forces of collapse of paper currency, the rise of a bull market in global commodities, and the economic malaise are the same as in 1890, these days the [officialdom] is *not* able to lend support to the idea of [guerilla gardening] for a variety of issues related to [legality], and including placing [ownership] of property at risk. The [corporate masters] of the [officialdom] cannot allow [guerilla gardening] to take hold. It will, in spite of their wishes to the contrary, but because there is [opposition] to it, and because the [populace] will be doing it anyway, this whole area of related contexts falls under the meta data layer of [revolution]. This is why the [guerilla] word has actually be taken both by practioners of the [dark arts of nighttime/illegal gardening], and by the [press] as a label for the movement. This is to say that the appellation of [guerilla gardening] is used to express, at some pre-conscious level, the [revolution] sub text to the activity.

There is an artifact of our modelspace which requires some explanation as it may be occurring. This is the problem we refer to as 'bleed through'. A description of this is the conjunction of many of the same linguistic sets for an event type within a specific period, and missing the subtle clues which point to multiple occupancies of that event type. An example was our forecast for an earthquake which brought together linguistic descriptors from both the Peterson trial in California [e.g.- 'emptying the courthouse'], and the Sumatran earthquake/tsunami [e.g. '300,000 dead' and 'knocked back to a previous age']. At the time of the minor earthquake which emptied the courthouse at the Peterson murder trial, we had supposed that the rest of the linguistics were wrong, and discounted them entirely. Note that it was months later when the same linguistic sets showed up again, this time with 'force' and 'driven water' which we incorrectly associated with an 'electric storm driven wave', rather than a tsunami resulting from another earthquake. Make sense? In our modelspace, the linguistics associated with the Sumatran tsunami were so powerful in emotional sums as to have 'bled through' back to be picked up at the same time as the more minor, but still highly visible values due to the teevee coverage of the trial.

There may be a 'bleed through' effect occurring relative to the forecasts for earthquakes from the Terra entity data. It is clear that our warning just prior to the recent great quake in China did employ some of the linguistic clues. We were within a day (or so) of the earthquake, and subsequently, the imagery appeared in the global mediastream showing the 'wedding interrupted' sub set of that forecast. However we need to note that so far only about 42/forty two percent of the language indicators have shown up to the visibility that we had forecast. Now we might be wrong in our summation values. This would not be unexpected. It happens frequently that the language shown does have visibility within the media, but our expectations were too high, or in rare instances, too low based on the [visibility] field summations. With such instances, we routinely adjust the lexicon to the levels seemingly indicated within manifesting reality. This could be the case now. However it is also possible that a longer range bleed through effect is occurring. If so, then the supposition is that the west coast of the Americas (either north, central or south) will receive a large(ish) earthquake sometime in Summer. The linguistics would suggest that such an event should produce some of the language yet unrealized within the forecast, and further that this language should show up in the global mediastream. Many of the aspect sets within the as-yet-unmanifest language are centered on [isolation] with specific impacts on the [process of voting]. Since the USofA is sooooo visibly occupied (at least according to the corporation controlled media) with 'voting', it seems sensible to continue to think that a [destructive] earthquake is pending here. Further, previous ALTA reports had forecasts for 2/two large natural disasters as indicated by the data sets within the Populace/USofA entity. So far the [traumatic winds] taken in total have been a natural disaster for large regions of the country, and the [traumatic winds] are still causing destruction and show every sign of continuing. There yet remains another large disaster to arise, and even if another Katrina style hurricane event does pop up in October, this still is within the defined set of [traumatic winds and dramatic rains]. So at this point we are still expecting an earthquake of some level of [isolation] causing power. As an aside, the [flooding] resulting from [rainwater] and/or [snow pack melt] and/or [storm surge] does not form into its own 'event' set within the modelspace, and rather shows up as a [follow-on] or [contributing symptom] of the driving event. Clear as Mississippi mud at midnight?

SpaceGoatFarts - DoorWars, Official Lies

The SpaceGoatFarts entity is our collection of variables, placeholders, and bins where contexts for the [officially denied] and [unknown] reside. Sort of our personal entree' to the Twilight Zone. The SpaceGoatFarts entity grows rapidly as the longer term value sets are folded into modelspace from our processing. As modelspace is progressed through Fall and into Winter (2008/2009), which is to

say that as the modelspace moves beyond the December solstice, the SpaceGoatFarts entity gains both mass of aspect/attribute sets as well as increased summation values. Further there is a very large jump in [visibility] summations indicating that contexts from the entity will be discussed within the global mediastream.

Unfortunately for us here on earth, the SpaceGoatFarts entity is dominated in Fall by [bad] which then changes into [terrible] in Winter. These dominant aspect/attribute sets are jointly supported by bespoke references to [bad omen]. This [bad omen] sub set is filled with [ancient omens] and [ancestral portents] contexts. These sub sets *appear* to achieve [visibility] prior to the [waves unveiling ancient temples] in 2009, however, the linguistic sets share many common sub sets. Further there are references to [doors] which will [allow] or [facilitate] the [release(s) of unknown energies from space]. This last has a number of cross links which go over to the [nasa] sub set within the Populace/USofA entity where the termination points are within sets including [exposure (of lies/falsehoods)] and [mutiny (in the) ranks (over crookedness/corruption)]. The data sets indicate that a [whistle blower] will be [castigated/harassed] in such a manner as to create a [backlash/rebound] which [scares/frightens] the [nasa management] into [2/two (very stupid/obvious) mistakes]. These [mistakes] are indicated to [set the stubborn (workers) against (the) code (of silence?)] and thereafter the [secrets revealed] meta data layer rules the [nasa] sub set. The data sets include supporting descriptors for the [management/officialdom] and [petty_people/politicians] to feel as though [encouraging (in the) skull] as a result of the [unknown energies from space] and the [bad omen] of Winter 2008/2009.

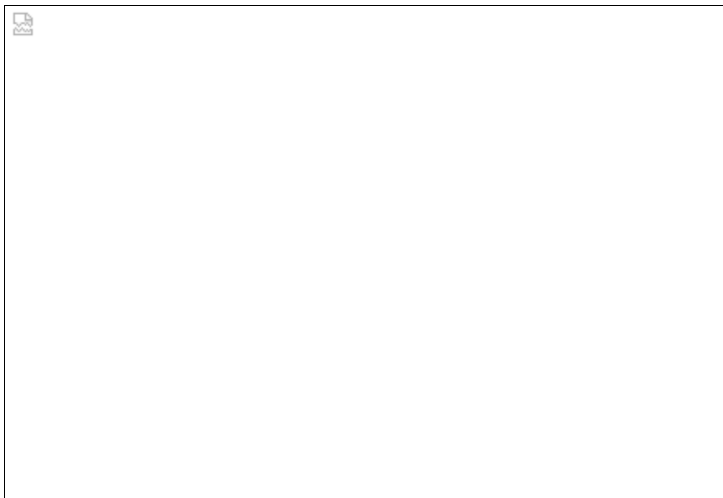

A large number of areas within the SpaceGoatFarts entity are cross linked over to the Populace/USofA entity beyond those which terminate in the [nasa] sub set. A surprising majority of these cross links are terminating in areas within the Populace/USofA entity dominated by [flood] sub sets. There is no clear correlation between the diverse spread of the [flooding] meme beginning this Fall, and the SpaceGoatFarts entity, however a relationship is being demonstrated. We have several sets which appear within modelspace in the December 21-23 solstice time period within the SpaceGoatFarts entity, and that are dominated here by [energies from space], and which terminate in [flooding] and [devastating flooding] in the Populace/USofA entity.

Also within the SpaceGoatFarts entity for Winter 2008/2009, are sub sets of [energies from space] and [unknown energies] which are cross linked over to the Populace/USofA entity where they terminate in [army] and specifically sub sets pointing to [extreme cold] and [extreme snow]. The imagery from the details sets at the termination point favors the [visibility] of an [army rescue] in which the [conditions (of extreme snow)] will [compound the problems]. There are sub sets within this area which are indicating a [flooding] situation and or [rescue] in which [ice flows] and [extreme snow] will seriously complicate efforts. The [visibility] sums for this are reasonably high, so in spite of the many other problems being discussed in the global media stream, this likely will get some attention.

There are several areas within the SpaceGoatFarts entity which suggest that this Fall will provide more [visibility] for [mars] and for [pan solar system changes]. In the case of [mars] the emphasis is on [colonial mars] as a concept, including the bespoke [probability] of [past human and/or intelligent life] on [mars]. More of the language is going towards [mars (as) future colony], but the majority of linguistics are only marginally larger. The [pan solar system changes] sub set also includes a [mars] focus, though this is through a [twins/twinning] sub set which includes [earth/terra] as the other 'pole' of the [magnetic equation].

Populace/USofA - Pits, Floundering, Extreme Redux, Prison Disaster, Flooding Floaters

As has been discussed in previous ALTA reports, the shift from 'building emotional tensions language' over to 'release language', as indicated in the chart from last week (and below), has prompted some concern here at HPH.

Our concern is not on the shift per se, but rather the following few months where it would appear that no real [building emotional tension] language surfaces, and we, which is to say the whole damn planet, are into nothing but release language. That the nature of the language being split into binary opposites is an outgrowth of trying to fit our 3/three dimensional model into a 2/two dimensional display undoubtedly has skewed the results by the process. However, we still have the same sort of effect showing in modelspace as we progress it forward from October. Also within modelspace we find that no meaningful building language returns until some months into 2009.

When we had a similar charting/modelspace display it was a case of only building tensions over the course of 72/seventy-two days in the Fall of 2007. At that time the shift did contain 3/three small release periods. In that case the turn began the day after the meeting of the [slavers/Federal Reserve Board], and it manifested as the 'bailout' and the first appearance of the now global credit crisis as well as a very intense period of language around the contexts of [housing] and [economics].

In the case of our current forecast we have had a much larger rise in emotional tensions over a longer period of time, and we turn into a release period (opposite of Fall 2007 where both the run up and the turn follow on were short). This release language period has no in-built periods of building tension language. It has also been a long period of building tension language which has continued since end of January, 2008. In the movement of modelspace over the last months prior to the pending turn into release language we can now separate some of the constituent forecast elements for a slightly more detailed picture.

Going into the October language turn, we have rising [visibility] summations for the Populace/USofA entity such that it appears that once again, events here in the USofA dominate the global mediastream. While this may be expected due to the 'presidential elections process' at that time, our data indicates that other contexts are actually driving the focus of global press attention on the American empire. These other contexts can be broadly defined as [economics/personal income], [military], and [terra intrusions]. The end of the building tension language period, which is to say the time from mid-August through to October 7th has the Populace/USofA entity, as well as the super set of the GlobalPop entity, gaining emotional summation values in these 3/three contexts almost exclusively.

The temporal boundary layer of the month of October in modelspace provides an image of near 'tidal' change of state as the accretion patterns of the language shift is viewed. Within the great amount of churn we can discern that the [military] context is so intertwined with the larger mass of the Populace/USofA as to be providing internal churn to the entity as a whole such that the dominant aspect/attribute sets for the [military] context seen at the end of October will be the dominant aspects for the Populace/USofA entity as a whole by January. At several emotional levels this is to be expected, particularly since so much of the [ruling elite's energy] goes into [pimping] and [propagandizing] the [american military].

As the [arm] by which the ThePowersThatBe in the [anglo centric portion] of the planet project [force], the [american military] is both a [key element] of globalization strategy as well as [personal power] for the [ruling political elite] within the [anglo centric world]. The data accretion patterns for both the super set of the Populace/USofA entity as a whole, and the sub set of the [military] indicate that October of 2008 marks the [big change] point for [american populace] and their

[military based empire]. The data sets indicate that the [american military] and by extension, the [american populace] will be [plunging/falling into (the) pit] in October. Further, the supporting sets indicate that we will be spending the next 3/three years in this [pit].

As has been mentioned here in ALTA reports for the last year or so, this coming Fall will bring a period of [extreme language] to the [public discourses] within the [populace/usofa]. The [extreme] aspect/attribute set is also providing primary support for the [military] sub set of the Populace/USofA entity. The [extreme language] being applied to the [military] includes aspect/attribute sets for [extreme] modified directly at its primary level by [difficulties]. The [difficulties] aspect/attribute set are themselves supported at a primary level by [multitudinous/many/plethora]. Hmmm. Probably not good. The [problems/difficulties] besetting the [military/usofa] include the [social contract] on both sides between the [populace/usofa] and the [military] it supports with [funds] and [bodies]. Some of the lower level detail aspect/attribute sets could be posing the question thus: 'does any part of a social contract between the populace and its military remain in effect if the powers that be use the military to against its supporting populace?'. Further problems will come at the level of [battle], both at the [daily/instant] level, and at the level of [tactics employed]. However the larger of the setbacks comes at the [twinned] levels of [war strategy] and [political policies]. In both cases, heavy cross links are going over to the GlobalPop where we find that they are terminating in aspect/attribute sets for [israel], and the previously discussed [israeli mistake]. The [israeli mistake] was *apparently* initiated by the Israeli attacks on the supposed Syrian nuclear facility. It is also becoming apparent that the [israeli mistake] is not a single event, but rather a series of interconnected events which will be culminating over the course of Winter 2008/2009. The [visibility] factors within the [military/usofa] as well as the supporting sub sets of ['independent' contractors] and [hobbled/corporate press] are pointing to a rise in knowledge about the [israeli mistake] by late November, and more public discussions on the global mediatstream by late January.

Both the [extreme] aspect/attribute set supporting the [military/usofa] as well as the [extreme] sub set supporting the Populace/USofA entity as a whole are themselves supported by data sets pointing at a transition from the [old state] of pre-October to the [new state] of [active conflict/contention /warfare] following the October 7th shift into release language. The dominance of the [extreme difficulties] set shifts over the months of October and November to be replaced by the dominance of [conflict/contention/battle/war] which then also begins to appear as both rising and dominant supporting set within the larger Populace/USofA entity by late in January 2009.

The behavior of modelspace suggests that [international] events in August which are under the influence and participate in the [revolution] meta data layer, likely in Pakistan, will have serious ripples in both the [american political process] as the [policies of the petty people/politicians] come [unraveled], and in the [progress] of the [bush/TPTB wars of aggression/empire]. The data sets, via cross links, are also indicating that the [secrets revealed] meta data layer will be pressing upon the [populace] as the [intrusion (of) terra] via [storms] will [cause to be known/acknowledged] the [prison fleet/death camps/torture centers] of the [Bush/TPTB/Illuminati] cabal. This is indicated to come to [public discussion] as some of the [death camp ships] are [crashed/wrecked] by [fierce storms]. It would appear that the [marine catastrophe] occurs later in Fall, and provides emotional [fuel] which will be [ignited] into [revolutionary acts] in January/February 2009. The [terra intrusion] in the form of [maritime disaster] which affects the [prison/death camp fleet] is but a small part of a much larger [wave] effect of [secrets revealed] seemingly initiated by [revolutionary acts/events] that ripple out from early August, as well as supported by 'happenstance' of manifesting circumstances through Fall and Winter. Apparently the [wave] will include a [wave] of [navy suicides] as a [prison ship] is described as [grounded (on unfriendly beach/shore)] and [leaking]. Further the [leaking] also is an aspect set found in support of the [visibility] of the information that the [us officialdom] has been running [death/concentration camps] for [years]. This will participate in the supporting layers for the [revolution] meta data layer within the Populace/USofA which coincidentally is indicating an [expression/manifestation] of [revolt] in the [military] in Fall, and in the general [populace] in late Winter.

In the [economic] sub set, since the beginning of this current building tension period begun January 2008, we have had the dominance of the [housing deflation] shift to a lower level of concern as the [hyper inflation] has begun to manifest in [food supplies], and [energy] and to a lesser extent in [household goods]. That [hyper inflation] manifestation will continue unabated for a while, through Summer, and into early Fall. Thereafter the picture is less than clear. The data sets within the Populace/USofA entity are painting a confusing picture. Some of the contradictory language likely arises from the [political bullshit] being flung around, as well as the [last gasp (of the) powerthatbe (mid range)] to [save the slave state system] with [heavy propaganda] as part of that effort, and part

of the [duality] being expressed is seemingly due to the [success] being [savored] by those who are the [early adopters of change]. The data sets are indicating that some degree of [visibility] will start to show in the [MSM/main stream media/corporate controlled media] here in the USofA for the [sustainable dream/meme], which is remarkable in that it has [political rebellion/revolution], and [anti corporate control] as its core value sets.

If we take as a starting premise that the [corporate view] of [corporation controlled, central bank funded, capitalism] is the [highest degree of social evolution], then the Fall of 2008 will be the [breaking (of the) back] of many of the basic tenets of the [corporation controlled world view] such that by November the [devolution] of [central authority] will be shown to be its [own reward] as those who are profiled as [dropping out] or [morphing out] of the ['system'] will be also shown as [beginning to gain returns/values] as the [degradation] of the [global banking/political elite control system] continues unabated. This [visibility] of the [successful implementation of alternatives] is showing as being part of a problem set in that there is a descriptive aspect/attribute set for [cognitive dissonance] which has been indicated to [settle over the populace] like a [blanket over the mind] when they are [presented with too many (conflicting) choices]. It is as though the data sets are describing the mental states of those who take their news from 'teevee' as well as their [social behavior clues], and now suddenly parts of the [teevee mindscape] are [turning back upon] or [repudiating] previous, and long held [points of view]. The Populace/USofA entity has the [economic] sub set filled with supporting language, and much of it is either contradictory, or shading toward [break down/failure of posturing]. Some of the [failure to maintain previous postures] within the [MSM/corporate controlled press] here in the USofA is indicated to arise from [acts of rebellion] or [leaks of truth], and further to exacerbate the developing [surreal nature/view] of those who used to accept as [gospel] the [proclamations of the press]. There are internal cross links from this linguistic area under [economics] to the [death of religion] sub set within [culture/social order] sub set of the Populace/USofA entity. The idea is coming across that the [evangelical moment] as well as [corporate christendom] will be paying the [social prices/consequences] for the [past lies] and the [present economic mess]. The interpretation is that the [economic strains] placed on the social order come on so suddenly, and with such ferocity that the [supporting economic/power structure] is seen to [crumble] under the [degrading blows (of) truth (about the) past nature (of the) economic/officialdom system]. Since the [evangelical/fundamentalist religious organization/movement] is intimately tied into the [elite/political power structure], it too will [crumble], though the data sets show that it [falls faster] than the social order itself as the [populace] simply [stops paying the bills]. This [cessation of economic support] for [religions] has [visibility] summations pointing to late November, or early December as the time it hits the global mediastream discussions.

Other parts of the Populace/USofA entity are suggestive of the manifestation of new components to the [social order] as the [economic paralysis] grips the nation. These will include a [crimes priority] in which all but crimes against persons are more or less 'officially ignored'. Conversely, the number of [perpetrators] of [crimes] being [reported] or [detained] by [local populace] will rise exponentially. The data suggests that [neighborhood 'granny courts'] will form where the [house bound grandmothers/aged] will be [settling disputes] as well as [issuing edits of punishment]. These changes are within the longer term value sets, but are indicated to have their first rise in [viability] into the global mediastream over the course of Fall. More discussions, and some level of [formalization] of such [local populace self rule] will be [acknowledged] within the [corporate press] by Spring of 2009. This will include the [abandonment] of several of the *huge* [money pits] such as the [war on drugs]. Problems of [corruption] within the whole of [officialdom] and especially the [law enforcement] sub sets over Fall will produce a state of [revulsion] within the [funding sources] such that the [currency crisis] will be used as a [convenient excuse] by the [petty_people/politicians] for cutting funding for the [war on drugs]. Other long standing [war] memes are also showing within the late Fall and early Winter modelspace as reaching their own [internal nadirs] of [power] and [corruption], and to begin their own [falls/drops_in _prestige/respect]. Within this context, and against a background of [unrelenting violence] along the [border], the [populace/USofA] will undergo a shift of [focus] which will begin an [exodus] of large segments of the [illegal aliens] already in the country. The [economic paralysis] will place [social pressures] on the [officialdom] and the [support] within the [elite] for a [pan continent union] will begin to [visibly] crumble. This will involve removing the [federal shield] currently protecting [illegal aliens]. The acts of [harassment] and [violence] against [illegals] will rise temporarily as some of the [old power brokers] attempt to [scapegoat] them. Both the increase in [fears for safety] and [increasing poverty] will convince many to [return home]. Further pressures will come from the [terra intrusions] which continue to show under the [flooding] meme as moving large segments of the American populace into [diaspora] over Fall of 2008, and into Winter 2008/2009.

Further ramifications of the [economic paralysis] include large scale social shifts in [race relations] both [inter race] and [intra race]. The [death of religions/religious organizations] meme is cross linked over to the [manifesting social order changes] sub set where there are indications that while the [organizations] of the [corporate religions] are dying, the [local spiritualist/shaman], and [direct experiential spiritual] movements will be rising in [power] and [visibility]. This will be [heightened] in the global mediastream by mid 2009 through continued reporting that [spiritualists/shaman personalities] are [responsible] for [interventions (in) behavior] which produce [practical benefit]. We are interpreting this area as suggesting a real resurgence in media coverage of Banda Ache type stories in which [local shaman] got everyone to [high ground (in) time]. This will be of particular interest as a sub set of the shifting of [inter race relations]. Both the Obama candidacy as well as the continuing collapse of the [american middle class] will contribute to a more homogenized set of [alliances] across race lines as new [self organizing collectives] will form.

Within the [shaman saves lives] sub set, we have at least 2/two instances in which the [visibility] summations are high enough to suggest entree into the global media stream. These both will result from [saving/rescuing (from) flooding], and will include a [southern sailor personality] and a [disturbed personality with coquettish mannerisms]. In the case of the latter, this individual is shown as being [formerly persecuted], but prior to the [saving grace incident] receives a [gift of understanding]. This last is translated as best we can as most of the references are not in English. Given the language spread on this sub set, it would appear to involve someone of Hindu descent, though clearly still connected to the USofA [populace]. Unlike the [quiet determination] of the [disturbed/agitated personality], the [southern sailor] is described by the aspect/attribute sets as a [pain] and a [hindrance] and general [mal content]. This instance of [saving lives of populace] is apparently [after the effects] and occurs because the [sailor personality] was/is prepared, thus is able to [render extreme or extraordinary services]. Other descriptors suggest that this person is associated with the [carolina states], and also with [miami]. We need to note that throughout the whole of the Populace/USofA entity the [extreme] aspect appears continuously, and as has been previously forecast, much of the language to be expressed within the media and populace of the USofA over Fall will be [extreme] or be describing [extreme] events.

Markets - Great Unwinding

While we now are moving most of the Markets entity discussion over to the Speculator Slices section of these reports, there are times when the more general outline of the Markets entity needs to be analyzed. As the longer term value sets come in, in spite of the turmoil continuing to be caused by the more immediate impacts of the [dollar death], a picture of a [very deep] and [very broad] change of [mental state/perception] relative to [markets] and [capitalism] and [globalism] emerges. This [change of mind/perception] about [globalism] and [capitalism] in general is illustrated by the accretion patterns of the Markets entity as it is progressed along with modelspace through Fall, and Winter and into Spring of 2009. As modelspace moves past the Spring equinox in March of 2009, the [mind set] has seemingly begun to [coalesce] around the [new reality] as the planet watches the [great unwinding of commercial globalism].

This [new reality] of thinking about [markets] and [business/life] in general is supported by a set of extensively cross linked aspects/attributes which go to [ocean level rise]. Specifically held within the Markets entity, this [ocean level rise] is fully supported within this entity, and as such is an internal value set rather than merely a 'reflection' of the [flooding] meme in other entities. In a sense, this is a sort of validation of that [flooding] meme as the Markets entity has supporting sets for [impacts (of ocean level rise) on productivity], an other [economic/business impacts (of) changing coastal conditions/water levels]. There are further supporting sets which reflect that the [oceans] themselves are being [taken out of] or [moved beyond] the ability to [produce]. This is supported in its turn by aspect sets for [too much water] such that [ports] are [impacted] so that even if there were to be [ocean productions] they could not be [easily docked]. These data sets have deep detail layers painting a picture of [international ocean harvest] (mostly in food) as being [pushed back through (productivity increases of the last century)] and to [return to levels of several thousand years ago]. Hmmm. Lots of people won't like this....

Other impacts within the Markets entity also include the [curtailing] of an already [crippled international shipping] industry as more than mere [fuel costs] intrude on their ability to [transship goods]. This area is shown in opposition to linguistic sets pointing to a rise in [regional producers] as well as [regional carriers]. The latter aspect set also includes descriptors for a [resurgence] of [global coastal shipping] via [small boats] and especially [sail/wind power] vessels. Slow perhaps,

but with [oil] having past the [peak], and other impacts including [degradation/impairment (of the) ability to dock/land large ships], the [small sailing inter coastal carrier] is indicated to [spring up] as a [phenomena] after the [initial impacts of the oceans level change]. There are aspect/attribute sets within the Markets entity which are cross linked over to both of the populace entities, and to the Terra entity which suggest that [wind patterns] and [global climate changes] will be creating new [trade routes].

We note that as the Markets entity moves past the autumnal equinox of September 2008, the data indicates the [loss of (financial) advantage] to [asian production]. This likely occurs as a result of the [sudden spike] in [oil] which effectively eliminates any [wage advantage] to [off shore production] as the [oil costs] of [shipment] escalate beyond the [ability/willingness] of the [customer] to [pay].

The lexical sets which accrue to the Markets entity over the course of [summer] have aspect/attribute sets including [bed-ridden], [illness], [too ambitious], [unable to be reunited], [not possible to join (together)], [broken mirrors/unable to see (self)], [travelers (are) a long way off (beaten/usual) path], [no chance to reach target], [goals out of synchronization (with) reality], [slap happy], [mental illness], [unable to face/see reality], and others of a simi liar nature. There are further sets which begin to build over [summer] which are headed by bespoke [bad] or [evil], and which describe the [summer trading].

Further problems for the Markets entity for Summer through the rest of the year are shown to originate with the [bushies] as they are being described as [people (unwilling or unable) to live together]. The [bushies] cross link components to Markets entity show that the [officialdom] including both the [civil service] and the [politicians] are [unable to correct/fix/cure] the Markets [woes/illness], but that the [bushies] can make things a *whole* lot worse. And the modelspace suggests that they will, in at least 2/two separate 'episodes' over Summer. Both will involve [international relations], and both will [begin] with [lies/fake statements].

The data sets within Markets are showing an explicit reference to [things collapsing], as well as [stand back (and) wait through bad times]. Further data sets go to [exploitive persons] who will be [offering to help], as well as [second rate thinking] as being 2/two of the [further aggravators/additional baggage] which afflicts the [currencies trading/paper debt markets] over [summer] and into [fall]. The data sets suggest that a [bad summer] fades into a [debilitating/crippling fall], and that many actual [suicides] will result from the [devastating loss of money] already discussed as a general theme for the [populace/usofa] for Fall and Winter.

The only 'bright' spot in the picture is that many in [congress] will be [scared shitless/bowels empty (on the) floors] by the [social unrest] and will actually begin [seeking corrupt officials] to [prosecute]. Mostly this will be to [save their own asses], and it will not succeed, but still, a few [necks] in the [nooses] will make for some interesting discussions on the global mediastream as the [dollar fades away].

As we look at how the Markets entity moves through Summer and Fall, the impression received is of the [great unwinding of globalization]. This will include the [loss of international shipping], as well as the [loss/collapse of international banking]. All of this is indicated to push the [largest corporation] in [America] into [insolvency] by mid Winter. At the time of the first trickles/hints of this new [state of bankruptcy], the linguistics involved will be mere [whispers] in the background of the [revolution] meta data layer as it [manifests] through the [populace/USofA].

Conclusion: ALTA 209 - Part Five - Hard Mistakes, Bad Arithmetic

Hard times are coming to a street near you... soon. For many the times are already hard, and have been for years. According to our forecasts from the developing radical linguistics, the 'times' are 'making the humans'. In other words, the 'social softness' which accompanies 'boom times', including the 'delusional Bush years', will be soon disappearing. Along with 'globalization', and the concept of trans-global shipment of *anything* that is heavy, the softness brought on by success is disappearing from the 'western world'. A descriptive pending example is the reaction which awaits the next 2/two parts of the 'israeli mistake'. In both, the causes will be lost in the reaction globally, and this reaction (over months) will show just how fast the veneers of social softness can peel.

The antics of the 'bush officialdom' over these next months will also be illustrative of both the madness of power, as well as the consequences of [bad decisions piling up]. Reality will be biting, and even the Israeli's will come to realize that, having 'hitched their wagon' to the Bushies horses, they will have to go where those devils direct. This will bring about a realization at a national level

within Israel that the links with the Bushies have undone/destroyed the 'relationship' that they have 'cultivated' with the populace of the USofA over these last 6/six decades. The early signs of the 'loss of friends' within the populace/usofa are already manifesting, and by mid Fall, even the Israeli controlled press will be aware of this degradation/hardening_of_attitude, and we will all see the [visibility] rise as they apply [desperate means] to try to [curtail] the [developing chain of circumstances/actions]. Then, in Winter, the SpaceGoatFarts [unknown energies] will further complicate things by participating in [exposure] of the [secrets] which in turn will [reveal (the) paths (of) control]. This area in the Populace/USofA entity is indicating that the [revelations] of this [control operation/pathway] will bring the first in a long series of [criminal indictments] against the [minions] of TPTB. Even though it will be merely the lower level functionaries who will be [prosecuted], the stench of prison is shown as being too close for many, and a minor [exodus] will take place from certain power centers within the USofA.

The death of the dollar, occurring now, brings massive changes to the global economic structure, as well as poverty and financial pain to the USofA. A perfect setting for the TPTB (or so they presume) to begin to clamp down on dissent, and erect a jackbooted version of corporate fascism. Though many of the elements for the fascistic control structures are already in place, the events of Fall through to Spring of 2009 will *not* proceed as TPTB anticipated. Yes, the attempt to [crush revolution] within the USofA populace will be well engaged, including the [press/propaganda] effort on the part of the Israeli controlled media collective, but the data that modelspace is providing suggests that not all plans of the fascist agenda proceed well. Further that there have been some very serious 'miscalculations' or 'bad maths' involved, and the next 2/two parts of the ongoing [israeli mistake] will serve to highlight the very poor math skills of the TPTB. We expect that the next component of the Israeli mistake will manifest after the June solstice, and likely before the end of July.

A further 'time wrinkle' is indicated by modelspace to manifest in mid July and to beset the TPTB and officialdom with yet-another-conundrum. This 'temporal event' or 'time happens' episode *may* be 'masked' or 'covered up' initially, but as with its pre-echo from 1947, both the 'events on the ground' as well as the cover-up itself will provide for much discussion in the global mediastream. Pondering the hints offered by modelspace we are encouraged to ask ourselves, "what would it be like if a Roswell style crash (or something equal in strangeness such as 'time travel') happened now?". Would the increased population and thus the increased number of witnesses prevent an effective cover-up? What about the millions of camera phones? And the internet? How would those elements participate in the dissemination of the story?

According to modelspace, we will have the opportunity to discover just how the 'world reacts'.....

####

This is the end of Part Five of the ALTA 209 series of reports. The Speculator slices will be posted by late on Sunday, June 8th.

We expect to have Part Six posted by late on Saturday, June 14th.

Addendum: Please note that the immediacy values are still processing and accumulating for a very [over turning/upending/disturbing] week ahead, and for the rest of June in the Markets. We are expecting the 'next shoe' to be dropping early in this coming week.
