

Half Past Human presents

# ALTA Report

Asymmetric Language Trend Analysis Report  
'Changes in language precede changes in behavior.'

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, the words used to express them are being sampled and interpreted here, NOT THE FUTURE. This report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this report demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

Any resemblance between the events portrayed in this report and developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Any human foolish enough to alter their behavior based on this report demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

This report prepared from the continuous data stream initially started for 709 and kept running across the building tension to release language shift on October 7th employing

86.16 million reads. The recent processing included 71.441 million reads from the 1109 data gathering

## **Meta Arts - 2012 Threat Matrix**

The table below is a presentation of \*some\* of the threats against humanity here on earth, and in this solar system over the next 4/four years in the countdown to the end of the Mayan Long Count, and the December solstice, 2012. This list is by no means complete. It does not also address the many possible interactions of the various items listed as either cause or complicating agents on other items listed. Clear as compost tea? The table below only deals with some of the larger contexts identifiable and relegates most of the other problems to the status of participatory in these contexts. As an instance, it may be expected that [rioting] will be part of many of the contexts below, and while a potential danger in and of itself, the [rioting] context is but an expressed symptom. As such, [rioting] or [large scale social disruption], or [diaspora] or other contexts of that order are merely expressing the effects that these greater picture items will have on humanity and so are not listed separately. Make sense?

Threat	Level	Duration	Evidence	Current Status	Impacts
Galactic Super		Short,		Unknown if currently underway. Will have no	

Wave (Dust coats sun as heliosphere is magnetically suppressed. Dust explosively expelled in massive CME that scorches earth.)	Extinction level event (ELE) down to mildly disruptive to civilization	restricted to 2012, and only a few months therein. Impacts long lasting, but duration of *immediate* threat is limited.	Supporting evidence exists for past Super Wave impacts at 13 thousand years back, and 26 thousand.	warning other than evidence of existing solar system and interplanetary changes. There are some of the requirements such as excessive amounts of interstellar dust entering the solar system.	Infrastructure destruction.  Potential populace die off.
Solar Cycle Maximum	ELE to mild/no relative impact	Short, restricted to 2011 through to 2013	Predicted by NASA and other solar observers.	On going solar cycle predicted to peak in late 2012. However, extraordinary already in the number of months of no sunspot activity...sooo...	Infrastructure destruction, especially space based stuff.  Potential to fry people, plants, and animals if giant CME hits earth.
InterPlanetary Climate Change	ELE to civilization ending	Long, from 1940 through to 2200	Yes. All around. Frequently miss named and miss understood by academically afflicted minds.	Yes. Planets have had significantly altered ecology across the entire solar system. Evidence on all planets and many of their moons. On going.	Infrastructure destruction.  Populace die off.  Specie(s) extinction.  Alteration of the biospheric potential here on earth.
Planet X	ELE to mild disruption	Long, multiple centuries.	No. No evidence supporting the postulate. Sitchen's work was a flawed translation.	No.	Infrastructure destruction.  Potential populace die off.

Mass Extinction of Species (reducing ability of planetary biota to recover from human exploitation)	ELE	Surprisingly short once the critical tipping point is reached.	Yes. Lots of evidence that we are in the early stages of the 6/sixth largest mass extinction of species in history.	Yes. Ongoing.	Potential populace die-off, and extinction of humans.
Galactic Center Alignment (as linguistic proxy for 'alignment with the magnetic hub of the galaxy', and/or 'alignment with the dark rift next to galactic center'.	ELE to unknown.	Long, culmination of either 26/twenty-six thousand year cycle, or multimillion year cycle.	Yes. Evidence exists in the form of effects on our solar heliosphere, local-to-earth magnetosphere, and other indicators including inter-planetary climate alterations.	Yes. Ongoing. May be causally related to, or providing complications for rows 1, 2,3,5,7 of this table.	Infrastructure damage. Focus on anything electrical or magnetic in nature.  Potential populace die-off.
Food crops/ecological disaster.	ELE to significant populace die-off.	Surprisingly short once trigger point of crop failures are reached. Exacerbated by predatory capitalism and global economic collapse.	Yes. Evidence abounds in popular media supporting the premise that the plethora of climate and earth changes have combined to produce a potential for global famine.	Yes. Ongoing. The food related riots and social disruption should escalate to high visibility over Summer 2009.	Potential for mass starvation and population reduction. Will contribute to increase in human affecting disease (short term) and pandemics.
Financial disaster. Death of the USofA dollar, and other currencies and the collapse of globalism.	Populace die off due to collapse of health care, and starvation and shortages.	Long, 1913 to 2013	Yes.	Yes. Ongoing. Will exacerbate *all* other issues.	Potential for mass starvation and population reduction. Will contribute to increase in human affecting disease

					(short term) and pandemics.
--	--	--	--	--	-----------------------------------

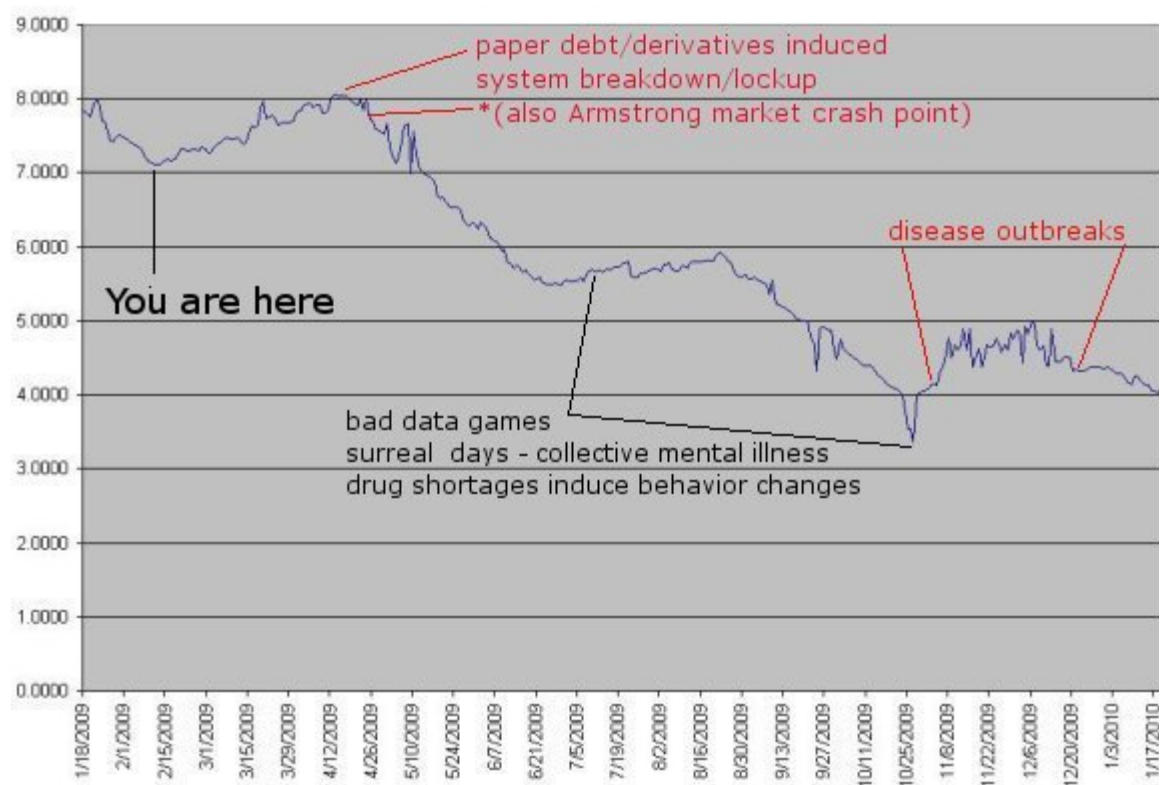

As we note from the table above, a number of these threats are related or have common sets of symptoms. For example we can note that the Galactic SuperWave threat is dependent upon the alignment of our solar system with a narrow band near the galactic ecliptic plane where the dust, and energy wave could impact our solar system. However, the whole 'alignment' threat is actual larger, in that there are other potential hazards of alignment which do not include the SuperWave. These other threat levels within the larger context of [galactic alignment] include the [magnetic plate] which is the once-spherical-now-collapsed-into-thin-plate magnetosphere of the Milky Way galaxy. As there are already measurable changes in our sun's heliosphere, and within our planet's magnetosphere, as well as in the magnetospheres of the other planets, this particular sub set of the [galactic alignment] context is gaining supporting evidence from manifesting reality. Other predicted, and now seeming-to-manifest effects include increased magna flows, as well as alterations in local, planetary magnetic/energetically driven storm effects. This last includes the increase in larger storms, the increase in super storms, as well as storms in unusual places, or those which are seemingly [fixed in place]. These are due to increased [energies from space], mostly in the electromagnetic frequencies which will be interacting with earth.

A number of the threats in the table above could, and probably will, include the [global coastal phenomena] as they manifest for our entertainment.

## **Markets - Hard Turn, Hard Times, Bad Data Games, Serotonin Shakes**

The 'hard turn' into the building tension language on February 14th \*is\* being preceded by a week of more-than-usual turmoil in the [markets]. The continuing accrual of aspect/attribute sets under [trepidation], and [debt destruction/credit lockup] are \*still\* lining up for a difficult period globally from the 14th of February through to March 16th. However, from March 1/through the 16th the mess will include [political] spill over of the [debt destruction/dollar death] problems. The immediacy data sets are forecasting a period of [increase] in the [wealth destruction] that will rival [what has come before] or [previous levels]. This is NOT to say that the [level of credit/debt destruction] will be at a peak in any sense. That part of the process of [dollar death] is forecast to begin in early May and to proceed through the [summer/2009] at a pace that will be so [acute] as to [force] the [awakening] c

the [populace/usofa (the sheeple)]. The [destruction of wealth] through March will get the attention of a larger group of the [populace] as the [retirement systems] take yet another hit in their process of [breakdown]. Other sub threat of [economic degradation] will be [sniping/biting/nipping] at the major [systems] including [dollar], [formalized (insured) retirement accounts], and [gov't pay health care] from the first of March as well. These [systemic side effects] or [symptoms of systemic breakdown] are forecast to continue from March through the bulk of 2009. However the data is also indicating that after the autumnal equinox in September, the [systemic side effects] are pretty much moot as many of the main [systems] will be quite [broken], and [visibly beyond repair].

The [systemic breakdown] sub sets are indicating that the next release language turn (April 10th, 2009) will include [transportation woes] as a driver of the emotional switch. The [transportation woes] include aspect/attributes going to the [airlines], as well as [airplanes] with specific references to [boeing]. The supporting aspect/attribute sets contain aspects for the [travel industry], and [global tourism], as well as [transport of goods]. The sub set includes support within the [transport of goods] aspect/attribute set for [restrictions on travel], and [encounters with scarcity]. These both are meta data layers of broad and long lasting influence. A very small part of the [transportation woes] is indicated to be the [collapse/curtailment] of the idea of [vacation travel] as has been known in the past. Further, the long term data sets are providing

support in the form of imagery of [hotels] being [abandoned], and [shrunk]. This last seems to include the [deliberate sealing (off) of floors]. The [sealing off of floors] aspect/attribute set is also found within the [health care] sub set, specifically referencing [hospitals] later in Spring and Summer. These sub set: that is the [health care sealing off of floors in hospitals] have temporal echoes internal cross links showing that there will be [repercussions] for these actions in late Fall of 2009 during a period of [disease outbreaks] at a global level.

The rapidly rising [unemployment rates] globally will continue to grow over Spring and Summer such that by late Fall the real levels of [unemployment] will exceed the [official claims] by greater than [twice] the reported rates. The actual numbers may be on the order of an [officially claimed] level of 12/twel to 14/fourteen percent with the reality over 25/twenty-five percent. However, noted in the chart and discussion from Part Five, the depth of the [depression] at least here in the USofA, is still distantly located in Fall of 2010, and the data suggests that [unemployment] by that time will reach to \*over\* [forty percent]

The Markets entity continues to forecast the rise in emotional tension values around the context of [shortages], with special emphasis on the [populace/usofa], though we note that many of the [shortages] will also afflict the more affluent countries of the planet. The [shortage] aspect/attribute set provides support for [duality], as well as [transformation], and [revolution]. Further the [duality] meta data layer is dominant within the [shortages] aspect/attribute set such that the [haves (stuff) versus have-nots (got stuff)] is indicated to be a large, if occulted theme from the [mainstream media] over Summer. The accretion patterns for the [shortages] sub set are \*still\* favoring the [pharmaceutical] business as the first of those areas affected. The [shortages] sub set grows considerably as the modelspace is progressed through Spring and Summer. In about mid Summer, the accrual of key supporting sets brings along extensive cross links to the Populace/USofA and GlobalPop entities where the termination points are within sets going to the [drug (systems) crash], and the [shortages (of psychiatric) drugs]. These links are terminating in areas already identified as being under the [surreal], and [sun disease], and [mental illness], and [muckers (people who run amok)], and [ma odd behavior] sub sets. The growth patterns within all these interlinked entities are still in support of the [crash] of the [prescription drugs manufacture and distribution systems] globally over these next 6/six months. A key component of the [crash of the system] in this instance is also indicated to be [shortages] in [crucial components]. The primary support for effects of this [systems crash] is the [mass] and [sudden], and [involuntary] and [harsh] [withdrawal] of a large portion of the [populace] from [mental state support drugs]. Hmmm. Now that don't sound good. The side effects of the [crash of the psychiatric drugs delivery system] are forecast to include [muckers], and [droolers] {ed note: people just transfixed with internal gaze who just stand and drool}, as well as [erratic mol

activity] among many other effects including an increase in [accidents], and [damaging aberrant behavior]. Some of the other impacts include a very large increase in [error rates] of [data entry] at all levels and across all types of computer systems which will in its turn feed back into the [surreality] of the times as more and more people get caught up in [bad data games]. The significant increase in [bad data entry] is indicated to actually form a [creeping bolus] of [corruption of data integrity] that is being forecast to gain [visibility] in very late Summer or early Fall as the [data corruption] begins to affect [conclusions] and [algorithms] previously assumed to be valid. This in turn causes problems at many levels within the [decision making/political organization] process.

Further sub sets of support for the [shortages] context within the Markets entity branch out into a very wide brush that will [paint] the [social order] of the [developed nations] as the [shortages] begin to ripple through the various Just-In-Time delivery systems. These are forecast to impact the [foods production business] at many levels. In some of the shorter and longer term value sets are data contexts indicating a near total cessation of [intercontinental food deliveries].

The [shortages] sub set also gains support over late Spring and all through Summer and Fall from the Terra entity and the many aspect/attribute sets in the area of [wind/climate pattern shifts], and the [volcanoes dust us] sub sets. The sets are providing support for [food production], [food crop success], and [agricultural systems], and [distribution systems], as well as the broader [diaspora] sub sets. There are large areas of support indicating that the totality of problems, including the [paper debt/currency crises] of Spring and Summer will have \*major\* and \*deep\* impacts on the [global agricultural systems]. There are a number of tightly knotted cross links from the Markets entity over to the Populace/USofA \*and\* the GlobalPop entity, sub set [the american hemisphere] which are all going to [famine], and [personal calorie restriction] as well as [visible starvation]. These last are primarily focused on the [Caribbean] sub set of the [american hemisphere] within the GlobalPop entity. however there are a number of [food shortages] sub sets within the Populace/USofA entity which also are going to the idea of [wide spread hunger/lack of adequate foods] with these showing up in mid to late Summer with something of a spike in [visibility] sums for the [mainstream media].

The [shortages] aspect/attribute set, and all the supporting sets within this set within the Markets entity are forecasting that [nearly all], or [almost all] of the [populace] will experience some level of interaction with [shortages] over 200

## **Populace/USofA - Fashion Shift, Mind Shift, SIP**

A large area of cross links from the Terra entity over to both the populace entities is providing supporting sets for a [climate change induced] change in regional [fashion/clothing/accoutrements]. The Terra entity data sets are painting a picture of [regions] where [changes/alterations] in the [flows (of the winds and waters)] will create [new clothing needs]. Many of these [new clothing needs] will \*not\* be looked upon favorably by TPTB. And in some cases the [new clothing styles] will be [banned] by TPTB. The accretion patterns of the supporting sets over late 2009 and through 2010 hint that various periods and regions of the planet will have [altered climate patterns (including extremes)] such that [local populace] has to [respond to new clothing needs]. Further that many of these driving forces will be such as [winds], [fires], or [dusts], or [precipitation (rains/snows)], and that all of these produce a shift toward [anonymous people], or [masked people], or [faces covered]. It will be precisely because the [anonymous look] of the [cloth shielded faces] that the ThePowersThatBe entity is indicating a [major freak out]. This will include the [populace/usofa] where the [political establishment], and the [military] will start to [insist], perhaps by [edict] and perhaps by [laws], that [no citizen] can [mask their face]. This [officialdom pressure] will fly in the face (pun intended) of the [climatic conditions] which are [causative] to the [face covering/body shielding]. The problems facing the TPTB, and [officialdom] will also include [disease outbreaks] which have [symptoms] that also would tend to [cause face covering]. Further [face] issues arise via cross links over to the SpaceGoatFarm entity where the termination points are within the [uv poisoning episodes]. These cross links are indicating yet more regional pressure \*(under the giant holes in the ozone layer) for [body shielding]. Again, though demanded by manifesting circumstances, the [new fashions (of) body shielding] will \*not\* be received well by TPTB.

The data sets accruing in support of the [body shielding/face covering] linguistics are under the influence of the [duality] meta data layer, and have a counter trend that is being forecast. This counter trend is supported by cross links over to TPTB where there will be an attempt, for a number of reasons, to [drive out/repel] the [cloistered look] by [celebrity] and [media manipulation]. This manipulation is cross linked back over to the [new sexual behavior(s)] subset of the GlobalPop entity. There appears some support for the idea that, at a subtle level, the [new sexual behavior(s)], especially within the [millennial generation] \*will\* be [promoted/encouraged] by TPTB.

The data accretion patterns for the longer term value sets continue to show a [bifurcation] developing within the [populace/usofa]. Increasingly the new supporting sets are pointing toward a [shift] in [personal attitudes] over all of 2009, that will produce [visible] effects from late Summer onward. The [shift] in [perspective] is at a very deep level of [personal relationship with universe] that will provide, in the aggregated populace, the first signs of the

[abandonment of capitalism (as we know it today)] by the society as a whole in very late 2009. Much of the [shift in perception] occurs as the [value systems] of the [populace] get [up ended/over turned] through the [summer/2009] and the beginning of the [breakdown of the social contract]. The [infantile/childish obsession with money/currency] that has held sway over the [populace/usofa] for the last half century is indicated to be [dying] over the [summer/2009] as the [dollar death/'wealth' destruction] really ramps up globally.

The rising [unemployment rate] within the [populace/usofa] will scale from the [near 15/fifteen percent] actual rate as of this report, to something over 40/forty percent by mid Fall, 2010. During this time, the [government/officialdom] will ramp up a number of programs to [hire the populace en masse], but these are indicated to fail at several different levels. Further exacerbating the [unemployment problem], especially in the [summer/2009], will be the [collapse] of several [government systems], specifically related to [unemployment benefits] and [food stamps] and [health care]. All of these will be [overwhelmed], and are indicated to be [flooded] {ed note: that constant meme this year} to the point of [breakdown/collapse]. The [breakdown] will be [systemic] in nature, and will further erode the [social contract] such that [food/benefit riots] will be taking place across the nation {ed note: beginning with the weather change in March}. These [incidents of misbehavior] on the part of the [populace] will scale such that by late 2009, the first of the [revenge riots] will be [visible] in the global media stream. These [revenge riots] will be directed (at least initially) against [banksters] and others deemed [guilty], by the [populace].

As the [social safety net] begins to [part/break/tear] under the crushing burden of the [unemployed] in Summer 2009, the data sets are suggesting that the [coagulation] of the [officialdom/government] will also be reaching a [critical stage]. The data is suggesting that [tens of millions] more of the [populace] will lose their [work/jobs] at just the same time as the already [overwhelmed government social service system] more or less fails under its own weight of bureaucracy, and inability to actually [satisfy the needs]. This will cause the [social fabric/contract disruptions] to gain high [visibility] in many regions across the country. It can be expected to see numbers of examples of [success] coming, even slanted, from the [main stream/corporate media] about SOC's {ed note: self organizing collectives}. These will be offered as [examples] by the [press/media] that [all will be well]...

The [social contract] will [fray/dissolve] over the course of the [transformation] of 2009. The [social contract] will be [altered] at a number of levels, including the [creation of new families (structures)] as the [populace] is [forced to seek/invent] new forms of [living arrangements] as the [economic base] of the [old social order] continues to [crumble]. The [new living arrangements] will

include many forms of SOC's at several levels. The data sets are indicating that the [summer of social contract dissolution] will [propel] the [rise] of the first of the [trans-national], and [international] forms of SOC's. The data sets are also forecasting a [backlash] from TPTB and their [officialdom minions] against some of these [transnational and international SOC's] with the likelihood of the label of [terrorism] being applied.

The [government/officialdom] censure and [persecution] of the [new social living arrangements] is forecast to [breakdown] rapidly after a series of [strategic blunders] by the [officialdom] beginning in mid to late Fall 2009. Several of the [instances] of [oppression] of the [new living arrangements] will be [publicly sanctioned] or [accepted by the general populace] in spite of the [rejection by officialdom]. It will be [attacks] on [innocent new family units] mistaken as [terrorist groups] {ed note: so labeled by gov't} that will cause the [backlash]. The reason that the [public negative response] is important becomes evident as the model space is progressed into very late 2009, and early 2010 where the emotional support of the [government/officialdom] drops below a critical level. Thereafter the data sets seem to describe a situation most resembling the [party versus populace] period of the late Soviet Union adventure. The data sets indicate that there \*will\* be [response confrontations] with the [law enforcement/officialdom] after these [mistaken attacks on SOC's/new\_tribes].

The previously discussed [shift of wind patterns], and the influences of the [unknown energies from space], as well as the [sporadic intrusions] of [uv radiation increases] forecast by the Terra entity now are finding support within both the Populace/USofA, and the GlobalPop entities in the sub sets for [food shortages]. Extensively cross linked internally, the sub set of [food shortages] within the Populace/USofA entity provides a more dramatic set of language as the impacts are forecast as being more [severe], and [extreme] within the [populace/usofa], than within the majority of the [global populace]. There are still indicators for [food shortages] to become [famine] in the GlobalPop entity but initially the [shortages of foods (and other necessary supplies)] are indicated as being presented with more dramatic impact from the [mainstream media] here in the USofA.

The [shortages] of [foods] and other [necessities] is part of a very complex interweaving of threads within the Populace/USofA entity. The influences pushing the language growth for [food shortages] include sub sets for [dollar death], [shipping problems], [energy costs], [intrusions of extreme weather], [destruction of producer sources], as well as [demand destruction], [efficiency increase attempts], [choice reductions], [dollar depreciation], [biota cost increases], [distribution system problems], and a wide variety of others in similar vein. The initial aspect/attribute set of support at the primary level for

[food shortages] seems to be pointing toward a [rapid] and [shocking] rise in [prices] such that [cost pressures] are placed all over the [food distribution system]. This seemingly includes [restaurants], and [food banks]. The effects of the [populace/usofa] are \*not\* uniform initially, and the developing [food (and other necessities) shortages] is indicated to manifest in an [episodic], and [spotty] manner. The progression of the [food shortages] sub set growth is steady as modelspace is moved through Spring and into Summer. There are periodic cross links which appear and provide increased [visibility] for specific [episodes] of [food shortages]. However the most common component, and the element of the slowly manifesting crisis will be [cost increases]. These [cost increases] are being described as [base step raises], as though the [price alterations] should be considered to be de facto [devaluation] of the [dollar]. These [rising prices] will represent a different form of [inflation] in that they will be very selective and related entirely to [demand] and [needs]. The expression of the [duality] meta data layer will also be apparent as all other items for purchase, led by [housing] will be expressing [rapid deflation]. Some of the effects to be felt by the acceleration in the [pricing squeeze] will include the [transformation] of the [local markets], and [black/gray markets] throughout the country. Some unexpected influences include a [dropping off] in the crime of [burglary] where the goal is to acquire [household items] for resale. Other forms of [crimes], including many [drugs] related [crimes] will also be [transformed] over this [year].

Inter laced within the [food shortages] sub set are linguistic structures which provide support for the [press/mainstream media] to [locate] and [promote] some of the [food success stories] of what will become a [sustain in place (SIP) meme from [government] and [officialdom of all sorts], and [press]. The data accretion patterns suggest that by mid 2010, the [official] version of the [sustain in place (SIP)] social goal will be well known. The data sets are indicating that some [urban SOCs] will be [promoted] by the [officialdom press] over late Summer and into Fall as [models] of the [new cooperation] that produces [success]. Bearing in mind that the [officialdom] will continue to attempt to employ [control language] over the next 2/two years, and that they don't really understand the broader trend development that they are witnessing, the [visibility], and [promotion of small scale success] by [officialdom] \*especially\* as it relates to [urban agriculture] will be a very key marker in the [transformation] meme for the [populace/usofa] and the [officialdom/usofa] over these next 2/two years. The [success of the urban agriculture] as well as the [touting] of the [small scale initiative] will likely \*not\* be using these words so it may be a bit difficult to spot. The [officialdom] may phrase the praise as [small scale corporations], or [neighborhood cooperative ventures], but the language at its core will be describing our forecast rise of Self Organizing Collectives (SOC). The accrual rates indicate that the totality of the [officialdom] effort will be easy to see once it gets rolling as it will be spread

over many months.

Following the interaction between the smallish Press entity and the Populace/USofA entity as modelspace transits 2009, some patterns start to emerge. The Press entity has aspect/attribute sets in support of the idea of [initial] and [hyped/promoted] reportage about the [robin hood personalities] meme that is/will manifest over this year. These [robin hood personalities/archetype] instances will achieve [near instant celebrity status] in the early phase of the [phenomena], however the data sets are indicating that by mid Fall, the ThePowersThatBe here in corporate controlled America, will decide that the theme is part of the larger trend of [personal violence against corporate authority], and will [shut down] the [editors]. Nonetheless, the [robin hood personalities] meme will persist, and is indicated to grow rapidly, especially after the mid Fall [crises confluence]. In spite of the lack of continuing [publicity], the [robin hoods archetype] will continue to express as [personal action against corporate authority for the greater good]. The example of the [revolutionary action (against corporatacracy)] will be the first temporal markers for the [general revolution] against [corrupt political authority/Bilderbergers/Illuminati/et al] here in the USofA. There are a number of potential 'targets' or 'victims' of the [robin hoods personalities] which appear in the data sets. Rather than present these as either potential prompts to illegal actions, we merely note that the most [blatant] of the [robin hoods] will be taking [actions] \*within\* the [bankster system (aka FRB)] itself. This instance will be the [capper/straw that was too much] and the TPTB will apply their [clamp down] and [language filtering techniques] on the [press] thereafter.

Cross linked internally with the [robin hood personalities] are contexts for [weather refugees] here in [north america]. The [populace/usofa] is indicated to be significantly impacted over these next 3/three years by [wind shifts] which will cause [drought troughs] to form across [north america]. These [drought troughs] are indicated to significantly affect [food crop production] as well as begin [diaspora] within [continental north america] as various areas suffer [ecologic breakdown] due to [massive fires], and [unforeseen high altitude rainstorms and subsequent flooding]. This last has support for [ravaging the land] and [scouring out new rivers]. Further supporting sub sets are pointing to instances of [transportation system destruction] including [railway lines] and [road ways]. This last is indicated to involve at least 2/two major [interstate highways] within the USofA. The data sets are indicating that [weather refugees] will be an increasingly [visible] topic of discussion as 2009 proceeds. Also that many of the [weather refugees] as a component of the [diaspora] aspect, will cause problems for both [state] and [federal] governments, especially in Fall 2009 and beyond.

## Terra - Global Coastal Phenomena, Pole Shift

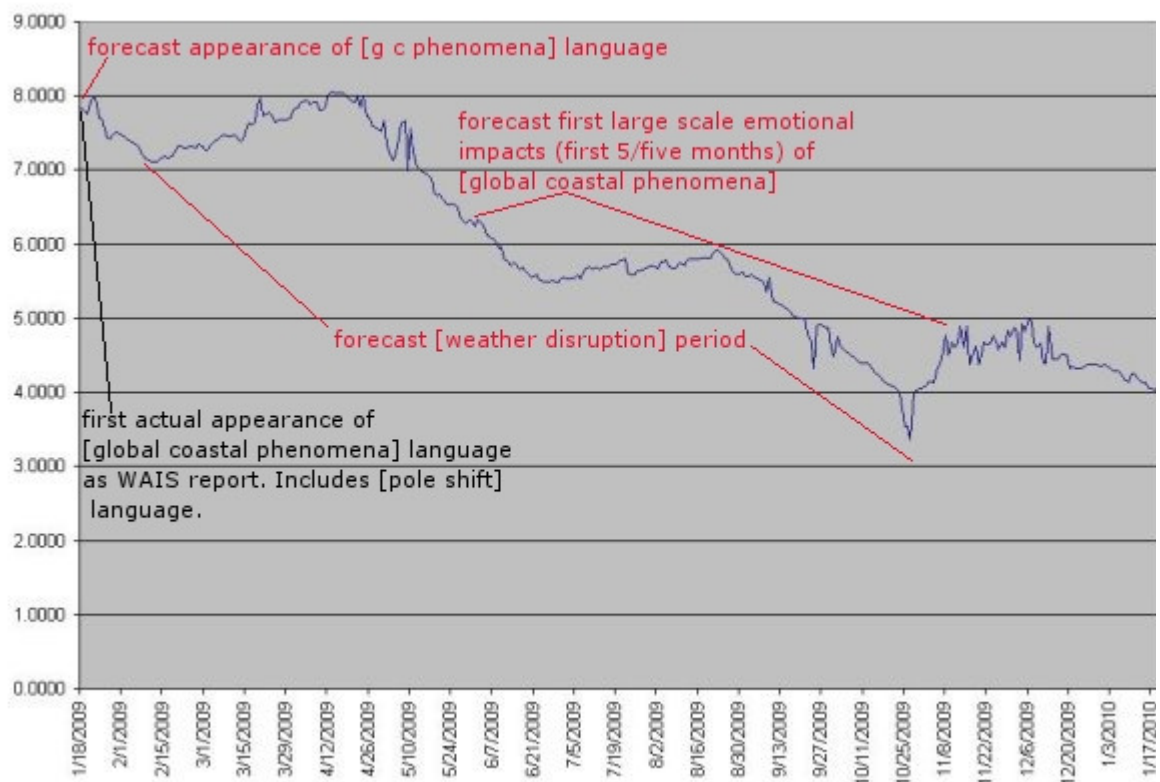

The data sets continue to add support for the [global coastal phenomena] over this last round of processing. The growth in supporting sets continue to follow previously discussed contexts in the main. There have also been several appearances of the linguistics forecast for these last few years within the [global coastal phenomena] context. These include the [antarctic ice sheets] discussion now appearing in the global mediastream. As the various instances of forecast linguistics appear, the emotional component sums of the [global coastal phenomena] sub set within the Terra entity are reduced by the extent of the numeric's associated with the manifesting language. Usually as this occurs, the sub set decreases in emotional impact within the entity, and at some point the language has been 'fulfilled', and is removed entirely from the entity. In this current instance of the [global coastal phenomena] sub set the supporting sets, and thus the emotional sum values, continue to grow. Further, the [global coastal phenomena] has already been identified as a 5/five month long process in its initial phase. So the reduction of the value sums by the manifesting language has, so far, had no measurable impact on the building emotional values in this context.

The newly arrived supporting sets include major context aspect/attribute sets such as [putrefaction]. This context is associated with, and gains support from context that we are labeling as [planetary disturbance]. This set is cross linked over to the SpaceGoatFarts entity where it terminates in the [unknown energie from space] sub set, as well as specific [ultraviolet/light radiation] sub sets. The other supporting sets are suggesting that [large/huge/enormous] areas of the [oceans] will be [impacted] such that [putrefaction/rotting] occurs in a very [visible] way. It could be that the [uv poisoning episodes] previously forecast for this Summer 2009 and beyond will produce areas of the [oceans] which will be [devoid] of [plankton/plant life], and thus end up as [anaerobic decomposition zones]. These sub sets are further cross linked internally within the Terra entity over to [climate change] sub sets. The [climate change] sub set include the [redistribution of the winds] aspect/attributes previously discussed. These sub sets include support for [drought], and [fires] (yet to come) which have extensive cross links over to the GlobalPop and Populace/USofA where the terminating aspect sets include [diaspora], and [weather refugee].

As the Terra entity moves along with modelspace through Spring, the sub set for the [global coastal phenomena] begins to gain new support from the area of [volcanoes], and specifically from sub sets of [pulsing/rhythmic motion]. The [global coastal phenomena] has always had [volcanoes] as a supporting sub set but now the emotional sums are accruing faster under [volcanoes] and its supporting sub sets than elsewhere within the [global coastal phenomena] sub set. Within the [volcanoes] sub set, the growth of supporting aspect/attribute

sets has favored the [antarctica] and [pacific ocean coastal zones] contexts. There are further divisions which may be noted in the data accretion patterns including that the [volcanoes] sub set shows a bias toward [polar/poles of the earth] growth. In other words, the geographic references section has higher numbers of pointers to specific locations nearer the [poles] than the equator or the tropics. The dominance of [polar locations] both south and north is greater than 80/eighty percent of the totality of the geographic references for [volcanoes]. The next large division of the data comes at the [underseas] versu [land] based [volcanoes]. By a majority of 76/seventy-six percent to 24/twenty four percent, the [underseas] location dominates. In addition, the areas with th highest sums for long term emotional impact on humans comes from [underse volcanoes] with a slight leaning toward [southern hemisphere/south pole].

Will there be a [global coastal phenomena] or event this Summer? While not certain of a damn thing, the data continues to indicate at all the levels that the [global coastal phenomena] has already begun, and further that the next phase of [visibility] within the global mediastream will occur over 5/five months starting sometime in May or June. Our target 'start date' is still hovering around mid May, though this may be discovered only later in the process as the beginning of this next, more active phase of the [global coastal phenomena] process.

Our first encounter with the language around the [global coastal phenomena]

was in late 2004. At that time we had labeled the data set as the [global coastal event] as the initial appearance of the forecasting data sets did not indicate the length of the process, and so we assumed something on the order of an 'event' the human perceivable sense of that word. As of 2008 we had taken to calling this set the [global coastal phenomena] sub set as it was clearly a loooooong process of many years with indications of an emotional peak of slightly over 5/five months near the beginning. As of 2007 we had had the forecast for the first appearance of the language around the [global coastal phenomena] to beg to show up in January and February of 2009. At that time (2007) we had understandably thought that the 'event' was to begin in early 2009. We know now that the [global coastal phenomena] actually began in mid 2008 with the first in a series of 'freak coastal waves' which left [damage], and were not [tsunami], but were rather [something different]. These [tidally linked, freak waves] have begun the [process] of the [global coastal phenomena]. Now, in 2009, in January and February the forecast first appearance of the language around the [global coastal phenomena] has, in fact, appeared as forecast. Primarily related to the Western Antarctic Ice Sheet, and the potential for both [global coastal flooding], as well as [pole shift] are noted in the many articles now circulating, and as expected, creating specific emotional resonance within the larger planetary populace.

The specific [pole shift] references within the language of the articles now in mainstream media are of a particular interest in that the language used, especially in referencing the potential consequences, is within the language set that we have had growing for the [pole shift] sub set for a number of years. These [pole shift] language instances, if they continue to grow within the patterns now being manifest, may be indicating that TPTB are deliberately preparing the [populace] with [seeds of thought/memes] for later use.

At this point in the data processing, we still have growth for the manifestation of the [global coastal phenomena] over 2009 and beyond, with the expected emotional peak of impact this year, and specifically beginning in early Summer. Perhaps as early as mid May. The data sets continue to expand in support of both the [global coastal phenomena] and the [pole shift] memes within the Terra entity, though we do note a very large number of cross links over to the [officialdom] sub set of the Populace/USofA and the ThePowersThatBe entities.

The data sets continue to indicate that there will be [visible] and manifest effects on the planetary populace from the [global coastal phenomena] in 2009. Now the longer term data sets are also in support of [planetary climate change] which are directly related to the [global coastal phenomena] and 2009. These [planetary climate changes] are also indicated to be [visible] in 2009, but their longer term impact values are on the order of 84/eighty-four years, or [multipl

generations].

## **Conclusion: ALTA 1109 - Part Six (Final report of the series):- Do we have a winner? Symbol Shifting**

The continuing infantile fascination with the [markets/marketplace (for) paper debt] is being forecast to be finally [waning/passing] over the course of 2009. This will be due in some small part to the death of the dollar, and the continue collapse of the [paper debt paradigm]. This will be due, in some large part, to forecast shift in paradigm that begins to spread through the planetary populace. This shift may well be as a result of the developing evidence of a real, measurable, and probably not nice, impact on our solar system, earth, and all humans/life on the planet, as a result of the 2012 Galactic Alignment.

The increased evidence of the alteration of the interstellar electromagnetic environment around our solar system as it travels closer to an alignment with some facet of the galactic ecliptic plane include the rapid shrinkage of our sun heliosphere, and magnetosphere alterations on all planets in the solar system, as well as many many other manifest changes on the planets including the climate change here on earth. We have certain knowledge that the dramatic increase in great quakes, and volcanic activity is also related to the progress of our solar system through this region of space. However meaningless it may be to measure an 'alignment' with the galactic center from the view point of the earth's tilted angle, nonetheless, there are measurable changes taking place in our solar system at an increasing pace. Many, if not most/all of these changes can be tied back to [magnetics] and [energy flows] such that a prima facie case can be made that the [galactic magnetic plate] which is the remnant of the collapse of the galactic magnetosphere a loooong time ago is a primary candidate as the [change agent] involved.

If the emerging trends in manifesting reality continue to provide evidence for the [magnetic plate] as the 'winner' in our threat matrix, then some of the effects of the continuing completion of our rendezvous with galactic center can be predicted. We can expect, for instance, that the grosser effects on our species will come at the civilization encompassing levels which would predictably include more interference with electronic communications, and control systems and the breakdown of magnetically dependent infrastructure. Other, more subtle, but direct effects on humans, likely will include alterations in mental acuity, and sensory perception as a direct result of electromagnetic environmental changes. It may be that brain activity may increase due to changes in magnetic support for electro-chemical processes. The reverse could also be true. We have no evidence to rule out either at this point. Though the basic premise of galactic scale magnetism dominating solar system, then local planetary magnetism is sound. Recent conclusions about the solar heliosphere reduction include, from

Russian discussions, that the sun has not reduced the amount of energies being pumped into the heliosphere, but rather that the heliosphere is being compressed from external magnetic/energetic pressures. The expectation is that at some point between now and 2012, the heliosphere will have been compressed down to the point that the inner planets, including earth, will be exposed to direct radiation of the energies from the center of the galaxy. The effects of such exposure, on humans and other life here on earth, is unknown. Certain speculations can be made, but at its core, there is no historical evidence for specific effects from which we can base future predictions. However, we can assume, that it probably ain't going to be good for humans in general. Universe may well favor humanity as the evidence suggests by our mere presence, but we can also deduce that universe likes to provide lots of obstacles to keep us interested in the game.

Without regard to which of the various threats is likely to be the 'winner' in the 2012 threat lotto, the data that we have suggests that this year of transformatio will bring with it the beginning of a planet wide obsession with 2012. The social side effects of the coming global 2012 meme wave are indicted to be \*not\* good for the ThePowersThatBe, and the current patriarchal control structure. As they say, things change. And this year will provide ample proof of that.

A final note is that the archetypes of the Aquarius astrologic symbol are unique in astrology, being the only human representation amongst the grander constellations. However, please note that a Piscean age based attempt at meme control is still emerging, in that the patriarch social order replaced the 'divine feminine knowledge bearer, with the terrestrial masculine water bearer. Some not so subtle symbol shifting going on here. So as we proceed into Aquarian alignments, and potential enlightenments, we need to be aware that the last of the 'old school' Piscean (pun intended) control behavior will attempt to exert itself periodically. Need to slap it down as it does.

This is the last report in the ALTA 1109 series. The next series is 1309 with a target date of January 2010. This next series will begin with the posting of Par Zero on or slightly before March 7, 2009.
