

Half Past Human presents

ALTA Report

Asymmetric Language Trend Analysis Report
'Changes in language precede changes in behavior.'

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

This report created from 56.223 million reads of the ALTA 1308 series.

04.04.2008

Meta Arts - A funny thing happened on the way to the forum...

Well, actually on the way to pick up a hyperlink to place into the text of this report. The hyperlink referenced climate change, and some specific predictions that Isaac Asimov had made in a certain year in the 1950's. We won't go into specifics as to the exact wording of the search. As I connected to the most prominent hyperlink offered from the search engine page, a 'virus' keyed, crack attack was instigated against our interpretation/modelspace machine and network. The hijack took over the specific HTML port which was in use and open. The attack further used operating system low level calls to bind the keyboard and other inputs into a fatal loop while access to the disk drives was attempted. A quick pull on some power and external drive cords stopped the attack. Unfortunately, the machinery was not recoverable. Large parts of the disks have been either damaged or blocked out at the bios level. Several of these destroyed sections of the data sets, programs, and modelspace.

We now have new machinery on its way, and have worked out a method of continuing operations while these are in transit. The modelspace is restored in a temporary way, but will have to be rebuilt and processing restarted, once the new interpretation/modelspace computers arrive. So continuing delays can be expected in posting the remainder of the ALTA 1308 series.

Our data gathering servers, and the SQL server/database were not involved in the attack, so that component of the work continues without interruption.

Nasty bit of stuff though.

Now back to it (April 2, 2008).

Meta Arts - Millions, 2.7 degrees, Albedo, 'R' Biters, Squatting Birds

The 'millions of small particles' linguistic set has grown into what we call a "clear, persistent, and pervasive" meme. This differs from a "meta data layer" in that the meme does not show up in all entities, such as the many forms of [revolution/rebellion], or [duality] which have been discussed (ad nauseam) these last few years. Rather a CPPM (clear, persistent, pervasive meme) is seen as a continuous encounter with the same supporting sets in various differing aspect/attributes. Usually this falls within just a single entity, though in the case of the [millions of small particles] we have this now in 4/four entities as a continuing-to-grow supporting aspect/attribute set. These entities are the Populace/USofA, where the CPPM first appeared, and then in order of appearance, the Markets entity, the Terra entity, and then the GlobalPop entity. This meme may

yet grow to a meta data layer, but with the current form of the structure as a supporting layer, and with no clear emotive central theme attached, this seems unlikely. Our only previous encounter with a CPPM was when we had the 'green death' meme pervasive in several entities 2/two years ago. That meme went on to find expression in many, highly [visible] ways over the course of several months. It also did not show the patterns of growth expected in the formation of a meta data layer, and it eventually faded off into a background level of supporting sets.

The current CPPM of [millions of small particles] has manifested within the [millions of foreclosures], and the [millions of job loss], and now the meme is becoming visible in the [millions of credit card accounts] which are 'at risk', as well as the other forms of economic chaos resulting from the [housing bubble]. We also now are seeing the [millions of small particles] in the Terra entity as the visible expression of the USofA Navy smashing the 'errant satellite'. It has also shown up in various forms across the Markets entity as the 'millions' of losses which have been sustained as the [dollar death] meme continues to roll across the planetary economic landscape. We are now seeing the [millions of small particles] also surface within several areas of the GlobalPop entity. Most recently within the EU zone as 'millions of liters of water' are coming off the glaciers in Europe and in Asia which is supporting the [diaspora] meme in that entity. We also note the same [diaspora] meme within the Populace/USofA, though at this point there is still far more 'pending' language than [visible] language.

The CPPM of [millions of small particles] continues to grow. It now has a very small supporting appearance within the ThePowersThatBe entity where it is showing up within the

emotional chaos supporting [economy] and [political power centers]. In this supporting role, the meme is associated with the bespoke [hope] that the 'governmental action', (likely the 'economic stimulus package') will indeed have *any* result. Given the supporting layers within the Populace/USofA entity, and the cross links over to the Markets, and GlobalPop, the meme is suggesting that [yet more millions of small particles are about to crap out]. The [crap out] is *official* language which is the head of a context group within the TPTB entity, as well as the Markets entity. The indication from the higher level view is that as Spring progresses, a [crisis] of proportions that cannot be imagined will emerge within the [markets] as the previously described [wave] of [repudiation/crapping_out/abandonment] of [credit card/revolving paper debt obligations] takes place. There is measurable bespoke [fear] of *just* such circumstances at very high levels within the Markets entity, TPTB entity, and most especially, at nearly double the summation values, the Bushista entity.

The bespoke [fear] aspect within the TPTB entity is heavily supported by variants on the [intelligence/knowledge/gnosis] context. The whole idea of a populace of aware observers threatens the [power elite control systems]. The various 'officially unofficial' voices of the [power elite] have had significant changes within their publicly used lexicons recently and this has been noted within our data capture. The discussion of the TPTB entity continues below, but it is reasonable to assume that the reports of [secret society abuse] of various [gnostics] is quite real, especially given the mental state of the TPTB, which is both [paranoid] and [nervous]. Not a good combination.

As the observed numbers of cross links from the TPTB over to the Terra entity grows with each of our ALTA series, it has become obvious that TPTB **are** expressing a very real fear of **profound** changes to the very structures which maintain life here on earth. And thus, also their lives and again, [control mechanisms]. As an aside, it is possible to interpret the data in such a way that the motivating core of the [fear] is **not** actually about the biospheric degradation, but rather is more centered on the [loss of control during the process of the biospheric degradation]. While only slightly different in the emotional tone of the summations, it is a world of difference in mental attitude.

Much of the TPTB bespoke [fear] language is either directly supported by or is associated with the [biospheric degradation] currently progressing. The data sets at a meta data level are pointing toward the [magic 2.7/(two point seven) degrees centigrade threshold]. This is the linguistic label for the context of a [global, environmental tipping point of no return]. In the details the 2.7/(two point seven) degrees was first proffered by Jonathon Gregory at Reading University in 2004 as the "degrees required above today's (2004) ambient temperature at which the Greenland glacier will melt, and continue to melt, until it is gone". We know now that there is mounting evidence both globally, and specifically in Greenland, that the glaciers are indeed melting. And we know from the math's involved in the transfer of energies to the melting process, that once begun, it will take an equal number of years (40/forty+) to reverse.

We also know, much to our horror, that indeed the [magic 2.7 degrees] **HAS** been passed as the Greenland glacier **is** melting. So much melt has already occurred that new islands

[[\(video\)](#)] are visible in Greenland. The fact of the [sub surface melt] of the Greenland (and other) glaciers has now validated such predictions for destruction of major, [coastal urban areas](#). What is *not* recognized by most writers or observers in regards to the whole of the 'sea level rise' problem, is that *most* of [civilization] is coastal. Yes, if we take into consideration that if all the glaciers on Greenland and Antarctica either melt or slide into the ocean, then we now have a proffered definitive range of ocean water level rise of [80/eighty meters (262/two-hundred-sixty-two feet)] with which we will (eventually) have to contend. This means that any part of any coastal area that is at or below 262/two-hundred-sixty-two feet in elevation is at risk of inundation. Further, this also means that any coastal (and some inland areas) within 400/four-hundred feet of elevation are now at risk for [oceanic storms] which will/ may include very high waves of over [40/forty feet]. Further, the increase in water loading on the coastal plates will increase both the number and destructiveness of earthquakes. Further, the water levels will themselves precipitate [tsunami] and [tidal flooding] (different types of bad waves) as islands crumble into the ocean under the impacts of suddenly rising waters. Depending on how it is defined, the current coastal areas of the planet house between 60/sixty, and 89/eighty-nine percent of *all* assets/infrastructure for the pan-global human civilization. Further, it needs to be noted that if various sectors are selected, the problem gets even worse. As an instance, the pharmaceutical industry globally has over 99.4(ninety-nine point four) percent of all its processing centers within our 'at risk' coastal area. The same is nearly true for [petroleum refining] with close to 70/seventy-percent of the refining capacity also being coastal. However in the case of [oil/energy] it will not matter as the

entire, that is, 100/one-hundred percent of trans-continental movement of [oil] is currently dependent on a stable ocean level.

Other coastal ocean level related risks to civilization include all the hydroelectric power generation globally as such generation is dependent on the temperatures to produce first snow, then run-off melts which are then dammed and slowly released (relatively) as needed for power production. With the advent of the loss of the polar, land fixed ice masses, the heat equation of terra changes, both dramatically, and rapidly. The loss of the reflective [\[albedo\]](#) of the ice creates completely new global heat absorption patterns. Some of the changes thought to arise from these new heat absorption patterns include the rise of the Sahara desert over the Mediterranean and up into EU zone perhaps as far north as Berlin. Other problems will come from the shifting of the jet streams toward the poles, and the 'flattening' or [stable/dead air masses] which will circle the planet around the equator and likely as far as the [Tropics](#). This is predicted to create new [\[trade winds\]](#) which our data sets are showing as a significant factor in the development of the still-forming FuturePop entity. Our data suggests that many of these new trade winds will be in place and in use within 5/five years.

So how do we explain the strikingly cold winter currently ending here in the northern hemisphere? Well, there are more than a few things going on. First it must be noted that any given season, no matter how extraordinary or extreme, is merely 'weather', and not 'climate'. Climate is the on-going processes, not the current symptom of the behavior of the complex system that is expressing the planetary weather. We also need note that as early as the 1950's, [Isaac Asimov](#) had postulated that [catastrophic climate change] would begin and end with

[oscillation] between very hot summers, and very cold winters, *usually* ending in very cold winters which lead to increased glaciation due to excessive moisture in the atmosphere coming down as ice during a huge, hemisphere girdling storm. This starts the process of planetary cooling as the albedo of the new ice kicks in a new feedback loop in the climate, both reflecting radiated energy back into space as well as altering wind patterns such that even more water is brought in as rain the next year. The problem for Terra with this particular period of [oscillation] is that the human contribution of tens of millions of tons of carbon dioxide is seen as forcing us into the very rare end state of a [hot planet]. For details of just how this will affect humans, and what the planet is projected to be like, see James Lovelock's [Revenge of Gaia.](#)

To return to the issue of the 'extremely cold winter' in spots of the northern hemisphere, we can note that the cold is isolated to those areas where coincidentally the chemtrails have been reported as 'exceptionally thick/heavy'. Could the cold and stormy winter in those areas under the chemtrails be related to these high altitude sprays altering regional albedo? Naw...stuff like that can't happen, eh?

So far, the [traumatic winds] forecast for planet earth/terra for 2008 has manifested and continues to grow. We note that [winds] are so strong globally as to suddenly burst the total electric production via wind farms [dramatically \(Spain up on 1/ day to 40 % from 28%\).](#) As the biospheric degradation/alteration continues, the manifesting reality seemingly will creep closer to the more extreme language now showing up in our data gathering. As with the recent [winds/tornadoes] and other [severe weather] in the Central and Eastern/Southeastern parts of

the USofA, the data sets continue to reflect a year in which [manifestation (of the) feared/dreaded changes] is the dominant theme.

Along with the recent [visibility] rise in [terra intrusions/dramatic rains/traumatic winds], there are now repeated [visible] discussions of the [encounter with scarcity] meta data layer as it pertains to [food supplies] as we have noted for these last 4/four years. The sad

The many submissions to us via email of 'candidates' for the [female personality] who we have labeled the [uniter] and who has Central American associations miss the point. We are not the arbiters of who meets the linguistics for this [visible] rise to prominence. While universe is sublimely subtle, it is also exquisitely exact. Universe knows just how much it takes to get our attention, so while the rise to prominence for this personality *will/is* replete with nuance, when the [visibility] occurs, it will will *not* be subtle at all. We expect an 'aha' moment for all aware observers, including ourselves, when this [visibility] does appear, we will *all* know it that day. (see Populace/USofA for more of this discussion.)

The manifesting problems with the global airline industry, especially here in the USofA are just the beginning of the [no fly time/period] in which the data is forecasting the [squatting] of most [commercial airplanes]. This has been a meme for over 2/two years, and following the Ure Postulate, we note that events/circumstances that we see waaaay ahead of time are usually very high impacts on very large sections of the populace. So we expect that the manifestation of the many developing circumstances within the markets infrastructure, including the

dollar death impacts on the price of jet fuel to continue to pressure the whole of the USofA based flying industry. Some of these pressures will also impact the airline industry globally. Exceptions will include Russia, and parts of the Oil Crescent.

TPTB - Gnosis Knows, Stutters/Spitters

The TPTB entity has undergone what can only be described as a [mental shift] these last few months. Since the ALTA series of the latter half of last year, the rate of [paranoia] context growth within the TPTB entity has scaled upward dramatically. The *real* problem is that there are *real* problems. These real problems demand *real* solutions, and as we of the [plebeian class](#) recognize fully in the daily suffering which places the incredible stressors on the social order upon which the TPTB depend for their [social control mechanism](#). Within the [mental shift] presented by the TPTB entity, the rising aspect/attributes include sets going to [moving rapidly], [increasingly quick], [sudden appearance(s)], and others of similar vein prompting imagery of [hastening] combined with [paranoid looking over shoulder].

Apparently the bespoke [paranoia/fear] elements within the TPTB are perceived as being justified. The data sets include aspect/attributes for [attacks], and [suspicions] which both are supported at the primary level by [knowledge], and this in its turn is supported at its primary level by [independent sources], and [without/absent control]. Noting that repeated references go to the [internet] as the proximate 'cause' of the [paranoia] of the TPTB, there are several layers at which this [independent gnosis/

knowledge] is operating. First there are now a number of internet postings which are clearly threats against the lives of the various members of TPTB. These are based on increasing knowledge about the once-obscured 'invisible hand' players in international politics/financing. For the TPTB, the clear problem is that the blatant threats are obviously within the realm of probability as events progress further into social degradation, *and* the number of [plebes] with [nothing to lose] grows exponentially.

Several of the memes which are emerging from the longer term data sets are going to an explicit [loss] of [control] which is so [frustrating] to TPTB. The entity is impacted by data sets showing that [knowledge] about the [space alien/contact] meme, as well as [ufo] suppression will emerge from very [unexpected sources] over Summer/Fall in such a manner as to [derail/buck/throw] the TPTB into a [field of traps] also defined as [visible consternation]. The data is indicating that at a [visible] [press conference] some members of the [the_powers_that_be/NWO/illuminati/establishment] will be soooo nonplused by the questioning that they [spit] and [stutter] before the cameras. Not a good day for them. The geographic references indicate a [france/french] association with this incident.

Populace/USofA - Crazies Talk, Hot Artist, Summer Wedding, Jet Fuel BBQ, Fiscal Constipation

The Populace/USofA entity is forecasting that the [dollar, usofa] will be at the core of virtually *every* major news story over the

course of [summer]. The data is showing a curious 'stuck' or stable movement, or lack of any dynamic growth within the [dollar, usofa] sub set over the course of [summer]. This *may* be implying that a 'static state' condition may develop relative to the [dollar] such that whatever the trends are at the beginning of [summer], which is to say, from the June solstice and beyond, that such trends continue without much deviation across the Summer months.

The growth within the [dollar] sub set is centered around the aspect/attribute of [hollow inside]. Within the many supporting aspect/attribute sets the primary emotional drivers for this group include [raining/pouring/flooding] which is supported by language going to [hyperinflation]. Within the supporting sets for [hyperinflation] are aspect/attributes indicating a [compelling need] for the [giving of charity (in mass amounts) in all directions]. The supporting sets also include [escape (from death of dollar) by narrowest margin]. Please note that this last is supported and defined by aspect sets showing a [temporary reprieve] and [death throes]. The supporting sums are *NOT* large at all, and merely are containing the emotional response to the continuing dollar demise. Said another way, the idea is that the emotions around the dollar do not show a [demise/death] in [summer], though only through the [heroic measures] of [hyperinflation]. Also note that the [hyperinflation] data sets rapidly lose their emotional support as the middle of September is passed.

The [dollar condition], and its [visible and convulsive distress] will be *THE* [visible] background in all the national [news/propaganda] this Summer, whether from the [official corpgov] or from [indie sources]. In all stores the speculation descriptor

sets being shown now, in spite of their histrionic tones, do *not* come close to the forecasts for descriptors around the [dollar] in Fall. The data sets are clear in the [stuck/static state] about the [dollar] and the nature of the [manipulations] of both the [buck] and the [national media] within the USofA. The accretion patterns of the sets in modelspace are not quite as clear as the descriptors, though as [summer] winds down across [september], the change in the [state] of the [dollar], and the [emotional sets] bound up with it within the planetary [populace], the patterns are very clear that a [precipice] of [emotional release] is encounter after which, [no things] are the [same]. Even more ominous language lies in support providing clues that [no return] is possible, and even the [mad/insane] will [recognize] the [new days] manifesting. Within the supporting subsets for the [insane/mad] of the [populace], we find that the data suggests that they will be hard pressed to [discern] their own [mental illness] as the [officialdom] and the [populace] react to the [dollar destiny/fate] as we pass the [autumnal equinox]. The [mentally ill/insane/mad] of the [populace] are described as being [bewildered] as the [rest of the populace] and all of the [petty people/politicians] react in [crazy ways] to the [dollar fate] in Fall.

The [static state] of the [dollar, usofa] over [summer] will be flavored with interactions with the Terra entity forecast [intrusions], as well as the SpaceGoatFarts forecast for the [revealing of the sun's eyelashes]. Both are shown within the Populace/USofA as only [background noise], albeit very loud, to the [dollar] story. Within the [dollar] story over Summer, the data suggests that [nothing] will [happen/benefit] the [deterioration]. This will remain true in spite of all [efforts] at [resuscitation]. The data shows that the [politicians/petty_people] will curiously *not* be [blathering] the way they

usually do, and will have all [slunk] away from [visible] exposure as [conditions] deteriorate]. The data would seemingly include both factions of the [dualopoly (2/two political parties)] as the [anger] of the [populace] rises to [actions/visible ire]. Again we note that the meta data layer for [revolution] takes a very large jump up over [summer]. Igor insists that we acknowledge just how mainstream the [revolution] meme has become with a link to Jesse Ventura's [Don't start the Revolution without me!](#).

The [revolution] meme is also an active player in the supporting sub sets for the [hyperinflation] aspect/attribute set. We note that [revolution] as a supporting set here includes [topsy_turvy] and other colloquial expressions for [upside down/inside_out] and [screwy circumstances]. The data is clearly pointing toward a [reverse] set of conditions than had existed within the Weimar Republic's brush with [hyperinflation](#). In the data sets now are descriptors pointing to [hyperinflation of food prices], the reverse of what happened within Germany in 1923, and the [hyperinflation] of [industrial fuels]. A word about both sets of data are in order. Unlike the 1923 death of the Weimar mark, where food and agricultural commodities were relatively unaffected, and any form of industrial machinery was hugely bid up as the currency perished, the Populace/USofA entity is forecasting [hyperinflation] on all things such as [foods] and [daily necessities], but conversely is pointing to every form of [machinery] and [digital device] as [demand less] or [not (worth the) energy], or [not adding value]. Small pockets of exceptions such as [solar energy], and [windmills, electric] will buck this trend, as will all tools which aid in self-sufficiency, but in general, machinery will *not* have the demand of recent

decades. So the idea coming out here is that the [daily bread] will be very expensive, but digital toys will plunge in demand, and thus price, even though the [dollar, usofa] is undergoing [hyperinflation] relative to other currencies. Further, the data suggests that [gasoline], and other [consumer fuels] will be relatively {ed note: repeat that, *relatively*, which is to say, in relation or comparison to other things} unaffected by the [hyperinflation]. The data suggests that the [plunge] in [demand] for [gasoline] takes away from the [hyperinflation] pressures as [summer] matures. The modelspace suggests that this is *not* true with [industrial fuels] such as [diesel], as *other forces* create demand for these [distillates] such that they do react within the [hyperinflation] trend. Please note that this is from the Populace/USofA perspective and does not reflect how the global populace will be fairing, though some of the [hyperinflation] does create similar trend lines in other countries as the [middle class dollar holders] suffer [wealth decay].

Outside the [dollar death], there will be few other [visible] national stories that are in any way positive. The data sets show that the Populace/USofA will be in a rather nasty place emotionally over [summer]. The [bad days] of this Summer will be long remembered. The data indicates that many echoes of 1968 will emerge as the months progress, but that these will not be dominant themes, merely the 'flavoring' which [evokes] the [emotions/memory] of other days.

A key theme this Summer will be the [loss of possessions] which, while directly related to the [dollar death] meme, is robust enough in its own right to have a separate supporting set of aspect/attributes whose summations come close to the [dollar death] in both tone, and intensity values. The [loss of

possessions] is supported at the primary level by [great amounts], and further with dual supporting sets of [across/over/blanketing], and [penetrating/filling/enveloping]. The idea coming across is that the [populace] as a whole will experience a large level of [possession loss]. This area is very high in emotional tone summation values, and is also directly supporting the [revolution] meta data layer as well as being supported by the [millions of small particles] theme manifesting these last few months. The [possession loss] suggests that it will not merely be [housing] involved, nor [repossessions], but rather the [loss] of 'possessions' such as the [right to credit], and the 'possession' of [access to credit (credit cards)]. This part of the set is indicating that a [systemic glitch] within the [financial order] will manifest over Summer such that the [availability] of [digital dollars] *may* be placed at risk. If the interpretation of the data is correct, this *may* be referring to an actual [breakdown] of the physical system by which [digidollars] are accessed, such as ATM machines. Or it could be referring to the [financial system] by which the ATMs get their access to [cash]. What is less cloudy is the idea that [millions] of the [populace] will not have [access] to [cash] as the [decay] progresses. We do not have a definitive date for this [access] to have its [encounter with scarcity], but we do have longer term data sets showing both that the aftermath of the emotions continues for years, and that by mid Fall the aspect/attribute sets of descriptors about the [loss of access/possessions in great amounts] will be in general use. This reinforces the idea that this Summer will host this particular emotional sub set.

Much of the language newly processed from the longer term values within the Populace/USofA entity is tinged with aspects of [return], and [manifesting karma], as well as direct references

to [long term cycles]. In the case of this last, these are also supported by [return] as well as [completion]. Inference is left for the aware observer to extract, however we will note that this 'sub theme' of support in the form of [return (of) cycle/karma] is found within all of the descriptors for all facets of the social/economic order of the [populace/usofa]. Probably this is not a good sign.

We also note that the [female personality] with the [south and central america] ties will be [visible] this Summer, as will a new national figure within the global mediastream. This other personality is cast as [male], and arrives on the [visible] [national] scene as a result of a [promotion] from a relatively minor position, to vast new [responsibilities]. This [male personality] will be very important over the next few years, and is indicated to be a [new form] of [social artist] with [unique creative abilities] who has [passed a point/area of blockage] such that [large creative projects], previously [blocked/corked] by [time/circumstances] will [flow]. This personality has longer term value support indicating a [multiple decade] influence on the [social order]. There are some indications that this [personality] will be [housed] within an [imperfect form/body] which [suffers], or has [suffered] some rather [blocking limitations] now [fading away]. The [visibility] factor for this [male] personality is supported by [sudden], unlike the [female personality] who is indicated to [gradually/incrementally] make her presence felt. The data indicates that each, and both of these personalities will be **very** important to how the Populace/USofA experiences reality over these next few years.

The data sets for the [male personality] show support around [unusual success], and [deep personal sacrifice]. Both of these

aspects/attributes are core elements of what elevates the personality to prominence among the public. The [suffering endured] on the way to [unusual success] as well as the [deep personal sacrifice] provide a [platform] from which the [populace] is able to [bridge personal experiences] into a [collective will]. There are some indications that the [male personality] will be [offered riches/bribes] which will both [refused] and [acknowledged/visible] by the [populace]. In support for this set, the [male personality] is shown as having a lot of [unwanted] interaction with the [sick/ill hoarders (of) wealth/power] over the course of the beginning of the rise in [visibility] in Summer.

Other descriptor sets for the [male personality] are similar in nature to the [female uniter personality]. These include a [sage/aw are_observer] base, as well as [educated] and [intelligent] descriptors. The [male artist] is shown as being [favored by circumstance/universe] such that several [undertakings/efforts/projects] which he brings to the [public] will [resonate] with the deep meme currents and [confound/shake/disturb] for [decades]. Most of the descriptor sets around this personality also support involvement with [chances for youth/young people], and [new social directions], and [flow (of resources)] into [opportunities] for [others/next_generation]. This personality **is** the first distinct reference to an individual which carries over into the FuturePop entity. The data suggests that the aware observer pay attention as this personality begins the [art projects] this Summer as they will hold very strong clues to dominant themes to be generally manifest within the coming FuturePop which has germinated as a [seed populace] by 2015, and seemingly 'taken over' by 2018.

As the Populace/USofA entity is progressed through Summer along with modelspace, we note that a [marriage] will occur which involves the [sister, relative] of the [female uniter personality], and that will be the first [visible] appearance of this person on generally available video. She is indicated to [attend] the [wedding] of the [sister] and while there to be in the [surroundings/background] to the central story, but nonetheless, she will also elicit a bit of [press] attention, such that the aware observer may be able to spot her first appearance out-and-about {ed note: pronounced 'oot and aboot'}.

Both the [wedding] and the [visible] appearance of the [female personality] are shown against the background of a [striding Bush] and a [simpering officialdom] who are shown as [pointing/reaching (for the) sky] as they [spew forth great ambitions] which [reach (to) impossible/unrealistic goals]. This [strutting] and [simpering posturing] will be [visible] and an egregious instance of which is coincident to the [walk of the marrying couple] which will show the [female uniter] under [unique lighting/illumination]. There are supporting value sets here which include both [[siddhis](#)] and [[aura](#)] displays which will be [discussed] and apparently will be captured on [video].

The data accretion patterns, as well as the [intensity] summations are pointing to the [visibility] of these 2/two personalities as being significant as temporal markers for both events to occur within a short period (up to 3/three months) as well as the very longer term time frames of out several dozen years. Some of the soon to follow events associated with the [visibility] of these 2/two personalities include severe [intrusions] from terra which will include [regions] of the [usofa] which will be [isolated] and [bereft/lacking] [food

supplies]. This area provides support later in the Summer/Fall for the [revolution] meme which [catches fire/ignites] with the [disasters] of [summer/fall 2008].

Close to 44/forty-four percent of the total emotional support within the new values coming into the [revolution] meme are also associated with the [terra intrusions/severe climate change]. The values suggest that [incompetence] and [abysmal performance] on the part of the [established power elite] will [propel] the [revolution] meme as a [flood] in Fall. The direct cross links from these [terra intrusions] sub set [continental usofa] over to TPTB entity terminate en masse under bespoke [fear] words. It is as though the TPTB is aware of [pending events] and also is aware of just how badly they will be 'managed'.

Other 'propellants' for the [revolution] meme within the Populace/USofA for Fall include the [shitting/diarrhea] which overtakes the [banking system] and especially [global derivatives] over late Summer. This [banking excrement expellation] is **not** to be confused with [bank runs] {pun(s) noted}, but is more indicative of the 'back end' of things. The data is pointing toward a [cross (to be) hoisted] by the [banks] which will [claim/proclaim piracy], but in the data set the supporting aspect/attribute sets are going toward a [background/backroom seizure/lock-up]. This [cross party crash of confidence] is the event **series** which will precipitate the [lock down] of the global currency trading structures. Note that there is not yet any processed data pointing to a resolution of the [lock down]. This area is internally cross linked within the Populace/USofA entity over to the [hyperinflation] sub set. The data sets are suggesting that it will be the [constipation] of the [banks]

which induces attempts at a [cure] that in turn produces a [shitting (in) trousers/pants] within the [banking establishment] which then prompts the [repudiation] of the [dollar], and the [shunning] of [american financial instruments]. The longer term value summations supporting this set go out for [3/three generations] or approximately 62/sixty-two years. The cross links over to the Markets entity are so thick as to resemble a cloud of squid ink.

As the Markets entity and Populace/USofA entity mutual cross links grow, so do the emotional summations around the [economic decay]. This [degradation] meme, over the course of late Spring and into Summer, takes on the [mantle/cover] of [unstoppable]. Further, events within the Terra intrusions of Summer will give rise to a new series of [prophetic voices] which call out that the [degradation] is [deserved/earned]. These [prophetic voices] are also important temporal markers as they will be *just* prior (perhaps less than 3/three weeks) to a *major* [burp] in the global [economic digestion].

SpaceGoatFarts - Blinky Sol, X Marks Spot, Twins

The SpaceGoatFarts entity has an aspect/attribute set of [eyelashes] which in turn is supported at the primary level by [sun/sol], and by [revealing/seeing]. The idea coming across from the supporting aspect/attribute sets is that the [sun (will) reveal (it's) eyelashes] this [summer]. This image is supported within the [revealing] by [moment/dynamic action/rapid change]. So the idea is that a [movement] either [across] or [within] the [sun] will [reveal] the [solar eyelashes] such that the discussion of it becomes a [visible] component of the global

conversation.

The [sun's eyelashes] will also apparently have impacts on [clouds] and [cloud formation]. The data sets has this curious [sun's eyelashes] reference directly tied as both support and precursor for a very large chunk of the FuturePop entity. The suggestion is that somehow the [revealing] of the [eyelashes] will be a [proximate cause] or [conception focal point] for several of the larger sub sets within the [future population (post 2015)]. The [seven year] connection aspect/attribute supporting the [eyelashes] is the originating cross link over to the FuturePop entity where it terminates in the primary layer of that developing entity. Such connections have not been observed within our work in the past. We are taking the data as a suggestion to pay attention to peoples' reactions to the [sun] over [summer] as within this reaction will be the [revealed discriminating minds] which are shown as being [core/central] and [active] in the manifesting [future populace/social order]. In other words, within the reactions of people to the events on/from the sun this summer, will be real visible clues to the shape of the social order in 7/seven years time.

The recent GRB's (gamma ray bursts) impacting the solar system are just the beginning. The SpaceGoatsFarts entity continues to accrue values under/in support of the [unknown energies from space]. In the recent processing we have indications that the [unknown energies from space] are about to [manifest] a serious [increase] toward [extremes] in their intrusions on the planet. The data sets include aspect/attributes for [extreme unknown energies], as well as [superior (to all previous) outbursts]. This is still building in the SpaceGoatsFarts entity and so does not represent the recent GRB which was the

biggest observed to date. Rather the data suggests that perhaps, *just perhaps* we are interpreting this correctly, and this Summer we will observe an increase in [unknown energies] which may well scale near to an order of magnitude. These projected/forecast manifestations of the [unknown energies from space] meme will be [human impacting]. They are shown as being [disturbing] of both the [mental equilibrium] of the [populace], as well as the [conceptions (about) universe/space]. The [disturbance of the mental equilibrium] is also cross linked to the [flying], and [no flying] sub sets with the implications that [radiation hazards] will soon surface relative to [jet travel] such that a [fear wave] will be [visible] around the idea of [flying]. This will be coincident with other factors also pressuring the [air travel industry] and will feed into the move toward [reduced/no flying].

Several of the Terra to SpaceGoatFarts (or vice versa) cross link sets include linguistic structures which are seemingly [warning] against [losing one's head] in the [tumult] and [shaking] forecast by the [unknown energies from space]. The data contains specific aspect/attribute sets under [caution] and [warning]. The supporting sets for these include aspect/attributes for [careless (walking/fleeing)] which is shown as [leading to trouble]. Further there are indications for a [contention] which may emerge in the [wake/aftermath/quiescence] after a [terra intrusion]. This warning is supported by indications of a [double whammy] or [twinned occurrence] which suggests that a [terra intrusion] such as [earthquake] or [wind storm] will be [followed] or [twinned] to [more of the same], only the second episode descriptors include [catching (people) out/unguarded]. This second episode is shown as being [deadly] to a very [visible] level. In regards to the warning, the aspect/attribute

details suggest that [stopping (mid way/halfway)] is a good thing, and that [pressing on/continuing] during the [twinned] intrusion will be [disastrous]. There are a number of supporting layers which go to the idea that this [twin] meme as regards to [natural disasters] will include, but not be limited to [hurricanes]. It may well be this which is referenced here as the [disaster] appears to be geographically located centrally to the continent and extends northward from the Texas coast to very near the Canadian border.

Conclusion: ALTA 1308 - Part Four - Giving up civi's, Swept Up

It goes way beyond linguistics...shaku, setet, gaz, and other neat words..[pan-global harmonious engineering in 'pre-history'](#) are yet again pointing toward *previous* pan planetary civilization. We now also have other evidence about previous pan solar system disasters (see Dark Mission, by R. Hoagland). The manifestation of the wind storms affecting the USofA this year in an extra seasonal way, as well as the wave storms affecting northern Europe are also clearly indicating that humans alive today need to be paying attention to the FACT of pan planetary civilization collapse as it may well be happening to us.

Noting that the 'letters to the editor' sections of newspapers, and web sites globally are manifesting conscious expressions related to personal preparations for symptoms of planetary climate change, it now becomes clear that indeed we can have a high level of emotional pressures related to environment *and* the emotional pressures on the political system which *both* support the [revolution] meme. As has been noted within our fledgling FuturePop entity, we are now seeing signs of [selective isolation] as many people within the global civilization give

voice to both their alarm at the situation as it exists, and their personal response which frequently goes toward 'opting out' in some form. Early language shifts indicate that younger generations, globally intertwined have settled on "giving up civi's" {for giving up civilization/modern civilized comforts} as the expression of the context. This 'civilization is doomed, let us bug out' meme takes many forms, but is now found around the globe in over 20/twenty languages. The meme is *perhaps* similar to the "tahiti syndrome" of the 20th century, or even the "noble savage" movement of the 19th century, but it has a key difference in that it is not [ennui] over the [separation from nature] which pressures this new [abandon civi's] meme, but rather deeply affecting [angst] over manifest biospheric degradation which moves this emerging social wave. The data suggests that this meme will sweep the planet later in the year as Fall brings further evidence of problems here at home (terra/earth). If correct, modelspace is saying that we will all learn how dust feels by the end of this year.

****A note on processing: in order to *not* use stale data for this interpretation, a decision was made to not interpret the Markets entity until it can be reloaded, and newly processed with the latest immediacy value set. We will cover this entity in depth in Part Five. We also note that we expect to be able to post speculator slices by Sunday, April 6th.

**** A note on getting hit by viruses, and subsequent machine gorking: several areas not routinely backed up become quite annoying to recover. These include things like personal dictionaries in support of spell checkers, as well as reference sites URLs /or personal favorites within browsers.
