

Half Past Human presents

ALTA Report

Asymmetric Language Trend Analysis Report
'Changes in language precede changes in behavior.'

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

This report crafted from the last of the ALTA 509 data sets and the first 18.77 million reads of the ALTA 709 series.

Posted September 13, 2008.

Meta Data - Extreme Aspects, Advantageous Farts

The larger meta data layers are just aspect/attribute sets which are found in all the entities, and which have corresponding supporting layers in most of the entities where they are found. Thus the linguistic set for [revolution] exists in the GlobalPop entity, as well as the Markets, entity, and the Press entity, and so on. This is true for [duality], and [transformation]. These 2/two meta data layers are the most active currently, and are gaining very large sets in both the ALTA 509 data series just completed, and the current processing for ALTA 709.

The immediacy values being inserted into modelspace are now consistently filling in supporting layers under meta data influence to a greater degree than other aspect/attribute sets. This may have to do with the nature of the language shift forecast for October 7th into what we call 'release language'. As 'release language' is composed of words in which emotion is expressed, it necessarily makes a big impact on our emotion driven modelspace. We recognize that our system has a tendency to err on the extreme side of things by the nature of how we collect our data points, and so, constantly reminding ourselves of this propensity toward extreme language, we practice the gentle art of interpretation of the language shifts.

The SpaceGoatFarts entity is our repository for all things either [unknown], or [officially denied]. You see, we know that both exist. There are indeed many millions of things that are [unknown] to humans, and so it makes sense to have a bin for categorization of these. And there are also many things that exist, but which are

[officially denied], so it also makes sense to have a bin in which to collect this data. We created the SpaceGoatFarts entity a number of years back when it became apparent that the [officially denied] part of things was going to break down fairly rapidly in the near future (back then, but it is now our now, make sense?). It seems that the data sets are indicating by sheer amounts of growth that the SpaceGoatFarts entity was made *just* in time. This probably does mean that the [alien wars] are on, at least at some level. Perhaps not quite the grade-B movie level in which humans do well by virtue of viruses....but still, perhaps we can use our Farts to gain a tactical advantage.

At the highest level of summations (similar to the sums used to create the charts), the data sets are continuing to point to a [collective inhale] which lasts for 11/eleven days from the 27th of September through to October 7th. The emotional release triggered continues in force through to mid March or slightly beyond in 2009. The [confusion] aspect in support of the election here in the USofA continues to gain values from late November through to late January.

Terra - Dam Flood, Boaters, Floaters, Stackers

More damn [floods], and this time with the potential for a [dam flood] as [excessive rains] are indicated to [cover the plains/grass lands] and lead to a [too full] situation at the local [lake]. The data indicates that the [lake(s)] will cause a [back flood], but that the real damage will be felt [down river] as the [dam(s)] are [breached]. Part of the [flooded down stream plains] problem is indicated to come from [too lax] an [adherence to standards] which has caused a [weakness] in a [system] of [restraints]. As the first is [overwhelmed], it is only a matter of time before each succeeding [restraint/dam] also fails. This linguistic set also participates in support for longer term data under the [corruption] sub set. The indications are that the [failures] will be investigated for [loyalties] to the [wrong people].

The [flooding] meme is now a planet wide linguistic set with only [antarctica] and [australia] not participating. The [usofa, continental] sub set shows particular emphasis for [flooding] induced by [storms] for October. This is to the level that [armies are set marching] in order to [react] to the [needs] caused by the [storm damage]. The [damage] aspect/attribute set is supported by aspects going to [5/five (out of/from) 6/six] structures being damaged.

There are also sub sets within the [damage] aspect set which relate to the [damage] inflicted on [people] by the [storm(s)] and [flooding]. This is indicated to include [fatigue] and [exhaustion] which will themselves be at such levels as to require medical attention.

The descriptor sets for the [usofa, continental flooding] include sub sets painting pictures of various [groups of trapped/restrained people] who will take differing approaches to the [weather problems] presenting as [blockages] to their [movements]. The data sets seem to indicate that those who are in a situation of an [enforced wait] will actually do better than the [groups] which [press ahead/persevere with their plans].

As the [flooding] aspect/attribute set is progressed along through October and into Fall, it gains support from aspect/attribute sets such as [negative], and [bed-ridden/invalid], and [illness(es)], and [broken united]. This last can also be interpreted as [not (being able to be) reunited or recovered]. There are further and deeper supporting layers of aspect/attribute sets which include [broken mirror], an aspect with [bad omen] emotions cross culturally, as well as being a [long time following] archetype. Other supporting sets include [long roads], and [no chance (to reach goal)], and [too extreme], and [sorrow]. Other supporting sub sets even deeper are cross linked over to the Populace/USofA entity where they terminate in the [diaspora] aspect/attribute set.

Again, part of the supporting sets within the [diaspora] sub set in the Populace/USofA entity is going to the idea of [forced evacuations] due to [second rate/sub standard materials]. The impact on the [diaspora] sub set is a large increase in the [intensity] sums as well as the extension of the [duration] length out several years. The idea is that a [large group] perhaps in the [thousands] will be impacted by the [aftermath] of the [flooding] as [second rate/sub standard materials] will [be revealed] by the [damage] during the [storm]. The data suggests that some [evacuees] will actually be [returned home] and thus [in danger] before being [alerted] and [evacuated] all over again.

There are descriptors for [board walk], and [wooden piers], and [wooden sidewalks] for the area which takes the [largest] degree of [storm damage/flooding], and while a relatively common descriptor around seaside resorts, this bit of [wooden sidewalk] is apparently [famous] for its [round holes] which provide [ocean views]. This

seems to imply walls of some form with [round windows/openings] for [ocean views] of such prominence that the [image] of the [round window] is [associated] with this place. Or will be, after the [storm damage]. Part of the problem with future viewing, it is hard to tell what was to be previously known when. Clear as scottish oatmeal?

Other descriptors for the [storm damage] include [collapsing piers] and [stacked supports/props]. This last is a sub set for [rhythmic action] which is also supported by [vertical columns (all) lined up]. The idea seems to be the collapse of some form of [parking structure] or other building whose image is one of primarily [vertical posts] rather than complete walls. The [collapse] of the [vertical posts structure] has very high degree of [visibility] and likely will have a global medistream presence.

Populace/USofA - Floods, Confused Politics, Dumping Bears, Fainting Fall

While the [populace/usofa] is working through its [Fall] encounter with the [flooding] meme, there are other indicators that [flooding] in other parts of the world will provide a curious [shadow play] in which the TPTB, as represented by the Bushistas will be [politely slapped down] after [offering 'help'] following the [flooding] being expressed in this [coveted parcel/entry]. The idea is that [extensive flooding] will [present] an [opportunity] for the [neocons/zionists] within the Bushistas to [enlarge] their [presence]. However the data sets suggest that the [offer] will be [viewed] as [exploitive] and [refused], and will further [rebound/backfire] on the Bushistas as it will present an image of [callous disregard] to the [suffering] of [populace/usofa flood victims].

The [election] data set within any populace sub set is *always* a dodgy thing for interpretation as the language found within elections is *always* emotionally hot, with very few differences, mainly the objects of the hot language are of differing parties, but that it about it. The totality of the [elections] sub set within the Populace/USofA entity has been forecasting [confusion] around and within the [elections] since back in December of 2007. While [confusion] still dominates the [election] sub set, there are now immediacy value sets with shorter term values going out 3/three months which are forming around the [peeling away] of the [old regime] and its replacement with the [new faces]. The idea is

clearly that the [republicans] are gone from power, and [replacement tasks] are being [parceled/assigned] near the end of the shorter term value sets out 3/three months. There are also threads within the ThePowersThatBe entity which go to the [gathering/polling] of the Populace/USofA entity sub set where they terminate in [trepidation]. The originating points within TPTB entity include [crimes], and [corruptions] and both contain supporting sets for [incarceration], at least at the bespoke [fear] level. There are also sub sets within the TPTB entity which indicate that is is [yet another 'government' to infiltrate]. The sub sets are quite clearly pointing toward [getting positions within government], and [newly successful careers in government]. The whole of the cross links makes it seem more of a [chore] than a really challenging task, and in the end does not bode well for the coming new year and subsequent changes.

There are still [confusion] aspects to the [election], and especially now, as we have indications within the immediacy values that September 27th or there about's will bring out new [scandal] and [questioning] about [Palin]. This is indicated to have a [continuing] impact through October and to place the whole [candidacy] in question. There are also still growing sets indicating that [illness] will result in [withdrawal] that will [alter] the political landscape and raise the emotional [confusion] levels prior to the [election].

A large segment of the Populace/USofA entity is held under the meta data layers, with [revolution], and [transformation], and [duality] at the primary level, and in that order of size of impact. The data sets coming into the support layers of the meta data layers within the Populace/USofA are also cross linked extensively over to the GlobalPop entity where termination points are also predominantly within the meta data layers. Within the Populace/USofA, and under the [revolution] sub set there is also an area where the primary aspect/attribute is [physics], and is cross linked over to the SpaceGoatFarts entity where the termination is within the aspect/attribute of [unknown/denied]. This area within the SpaceGoatFarts entity is internally cross linked over to the [contact] meme. This sub set of [contact] within SpaceGoatFarts is cross linked back over to the Populace/USofA where it terminates in the [contact] sub set within this entity. The [contact] sub set within the Populace/USofA entity is in direct support of the [revolution] meta data layer. This data set takes a large amount of its emotional energy from the longer term value set from the last of the ALTA 509 data sets. The current immediacy value sets and the

first of the shorter term sets are continuing trends already established and are furthering the duration summations of the trends further into 2009. The [physics] within the supporting layers of the [revolution] aspect/attribute is heavily weighted toward [occult/hyperdimensional] and not the academic forms of [physics].

Within the [occult/hyperdimensional physics] sub set are numerous aspect/attribute sets supporting [new electrics]. Much of these are within a sub set for [distribution] and [reduce (by) half] is the primary sub set supporting it. The idea coming across from this sub set is that a new form of [distribution] of [electricity] is being developed that [reduces by half (the) costs] of delivery. This area, including several support layers going to [torsion method controls] and [torsion work-meets operations] are themselves extensively cross linked from the Populace/USofA entity over to the GlobalPop entity, sub set [russia]. It is also the [russia] sub set within the GlobalPop entity which provides the largest segment of the emotional support within the [secrets revealed] meta data layer within the Populace/USofA. This is likely due to the [russians] being about to [dump a world of shit] on the ThePowersThatBe, including the [american factions] of the [bilderbergers].

Sub sets of the [secrets revealed] meta data layer include [mind control] and [social steering] that will be [revealed] with high [visibility] levels. It appears that the timing has the [secrets] being [presented] in late Winter 2008/2009. The data suggests that while the [secrets (about) mind control] and [steering large population segments] will be [available], the degree of [visibility] will be low until later in 2009 when the cross links to the Press entity indicate that the [revolution] meme has caught on in that 'industry'. This is a supporting thread which comes from the [active] or [action] phase of the [revolution] meme in which an [act] of [rebellion] in late 2009 ends up with a [bonus] in the form of actual [tens of thousands] of [pages] of [hidden secrets] that are then [revealed] with very high [visibility]. It is during the latter part of 2010 that the data suggests the [reformation] of the [mainstream media] is in full [blossom], but early [fits and starts/erratic noisy operation] of the [revolution] meme within the Press entity begins to show in mid 2009. As a part of the [revolution] expression within the [mainstream media], the Populace/USofA entity is suggesting that some of the [formerly employed press people] will begin to [gather] as a [collective] with the intent of producing a [national news paper]. This effort will very quickly morph into something akin to the [Daily American Revolutionary Times] and will become a

[global sensation]. Later, in 2010, the [Daily American Revolutionary], or whatever the effort will be titled, will end up playing a very key role in the [contact] meme of 2010 and beyond. The [contact] meme sub set of the SpaceGoatFarts entity has very large threads of originating cross links that terminate in the [Daily American Revolutionary publication effort] sub set.

The largest number of cross links between the Populace/USofA entity and the GlobalPop entity, and by far the largest number of cross links in the whole of modelspace at the moment, go between aspects centered around [bad influence(s) in Fall]. This aspect/attribute set, in both entities, is supported at the primary level by [wealth], with special emphasis placed on [tangible assets] including bespoke [gold/silver coins/bars]. There are some small number of references to [jewels], but these are very secondary levels of support. The whole of the area of [wealth] in both entities takes a very large turn from 'nervous' but positive supporting aspect/attributes to definitively negative language which is *also* release language and as such is *also* participating in the shift into release language in October. These cross linked sets of [bad influence(s) in Fall] are also supported by [political changes/regime change], and [aid requests].

Part of the [political changes] which are also to be [market affecting] as indicated by cross links to the Markets entity includes a descriptor set going to a [suit/confrontation] with [newly hatched/recently graduated students] who will be maintaining a [truculent] and [determined] attitude. These [uncompromising young people] will inadvertently set into motion a chain of events which will provide support for the [secrets revealed] and ultimately [revolution] meta data layers. The data sets indicate that their [mucking about] will become [visible] this Fall, *and* will be a very good temporal marker for the [shifting] or [transfer] of [value]. This is the language that leads the [dollar death] meme and we are taking the appearance of these [uncompromising kids] to be a marker for the [wealth transfer] sub set. The [wealth transfer] sub set is supported by language indicating that this will be a mental shift which will precede the subsequent reactions in the [markets].

The descriptor sets for a developing economic chaos includes aspect/attributes that might be read as descriptors of the recent currency problems in Argentina. For a number of reasons we think that these are slightly misleading. The larger view of the data for the [dollar death] is taken from the GlobalPop entity, and it can

easily be interpreted as [intense and extreme dislocation]. Within the Populace/USofA the same set is getting its primary support from [loss of the currency] with it being supported by [reduction (in) resources] at the primary level. Again, the [economic chaos] language shifts from building tension to release language in early October, and continues in that mode through to February 22th 2009. At the same time there are shifts within the summation values for the [dollar/currency], and [wealth] sub sets within the Populace/USofA which are forecasting a huge reduction in the [visible] standard of living nationally. The data sets are suggesting once again that the 'theme' of [going green] will now also enfold the emotional context of [deliberate expressions of poverty], or an emerging esthete of [low impact living] which will be [visible] in [fashion], [media], and even [language] itself. Stay tuned for more on that.

The [dollar death] thread continues to gain supporting sets, and the data continues to support the rise, relatively, of [gold/silver] and other commodities. The [loss of currency] impacts are continuing to accrue supporting sets as modelspace is moved through Fall and Winter. The impression suggested by the accretion patterns is that a [bad situation (the loss of currency)], on its way from [bad to worse] is [derailed] into [disastrous] by [government intervention]. In common with the GlobalPop entity, the Populace/USofA entity has new data sets supporting continued [rationing] for [physical delivery] of [gold/silver]. The continuing [discontinuity] between [officialdom pronouncements] and [real world evidence] is still pointing toward [cognitive dissonance] at such levels as to become a social phenomena in its macro manifestations as a 'disease' afflicting an 'organism', e.g. 'society'.

The whole of the Populace/USofA entity takes on a decidedly strange cast as modelspace is progressed in very late September. The immediacy values are clustering around some rising supporting aspect/attribute sets and these include [lightheaded], and [knowledge bound/corked/stopped] and [shaky] and [poor health]. The impression coming from the accretion patterns is that the release language shift *will* be accompanied by some form of a [shock] which induces the feeling of [rocking] while [standing still]. Other incoming lexical sets are bringing in language such as [lightheaded], and [swimming consciousness] as well as alternative statements of mental impact such as [kicked (in) abdomen], and [slapped], and [struck], and [shocked]. These are all in support of the general emotional attitude of the Populace/USofA entity. As the

entity is moved through the early days of October along with modelspace, the tone changes from this [innocence rocked/slapped] into [great/large shaking] which can also be interpreted as [impact of many shocks]. In both cases the interpretation suggested by the data accretion patterns is that the national mood will shift in a response similar to the trend line suggested by the charts. This mood shift is being described as triggered by a [sharp pain] in the [sole of the foot]. This national [pain in the foot] is somehow intertwined with the shift into release language and the reaction of the populace.

During the movement of the Populace/USofA entity through October, the linguistics accruing suggest that [no movement] and [self imposed hiatus] will be a particularly appropriate course of action in many cases. The impression is that some external events or manifesting circumstances make it wise to 'shelter in place'. While noting that the language *always* goes to the extreme end of the emotional range *just* as an artifact of our processing, we nonetheless can pick out lexical sets in support of the idea of some form of [restrictions on movement] manifestation.

The supporting sets from the immediacy value sets include aspects suggesting that [large segments/portions] of the [populace] will [feel faint (as though) the worst (has) occurred] and further that the [doctor spouts platitudes] in the [midst] of a [sea of concern/worries]. There are repetitious inter linked occurrences of [shaky] and [bad doctors]. There are also [problems] indicated to come from [inexperienced doctors]. There are bespoke references to [slight mistakes] which are [self compounding] such that they [cause great problems later]. There are also aspect/attribute sets for [foul weather] being a contributing factor. This area is cross linked over to the Terra entity where it terminates in [thin ice] aspect/attribute set.

GlobalPop - Frigid South, Pissed Press, Pop'd Rocks

Antarctica is resurfacing with very large emotion gains over these last few weeks of processing. The data accretion patterns are suggesting a [many fold/orders of magnitude] increase in [press attention] being directed to [antarctica]. There are several levels of cross links from the Terra entity, and the indications are that the [press attention] will be focused on [antarctica] initially by an increase in [earthquakes] and [glacier movements]. The continuing

scrutiny is fueled by the [curious] nature of the [events] which are happening simultaneously with the [ice shifts]. The continuing [press presence] and [interest] is indicated to not sit well with TPTB, and there are some linguistic sets going to the idea of a rather rude [discharge] from [antarctica] and subsequent [press howling].

Along with the [press howling], the whole of the [northern hemisphere] is indicated to be suffering from [howling winds], with much of the linguistic support coming from [cold]. Other than the ever present [flooding] meme, the weather out look is decidedly [out of kilter/off balance] for all of Fall and Winter. Many parts of [northern latitudes] will be [flailed] by [repeating wind storms] as though the populace lives on a [storm treadmill]. Areas usually accustomed to [cold weather] will have it in abundance. Some of the linguistics for the [winter] of 2008/2009 are describing [cold storms] and [ice storms]. The whole of the [climate/weather] sub set is dominated by [duality] however, and as evidence there are counter balancing sets for [cracking ice sheets] and [shrinking glaciers]. The impacts of the [cold storms] is not to be minimalized as it is contributing support for the [diaspora] sub set, as well as providing secondary support for the [encounters with scarcity], or [rationing] sub set which gets started this [winter]. There are specific references for an exceptionally difficult winter for the [dutch], and other [low lying lands] including many areas around the Rhine/Rhone rivers, and some indications for wide spread flooding such that it [blends/confused borders] in [northern europe].

Other issues within the GlobalPop entity include the LHC (Large Hadron Collider). There are distinct data sets within the immediacy values which suggest that the [october collisions] do not go quite as expected. The data has sets going to [does not function], and [cannot do as desired], and [talk, (but) no action]. Further sets declare that [cannot do/perform as expected] which in their turn are pointing toward a [tuning/realignment] session being [announced]. This data set then grows over Fall until it reaches the point where it shifts the dominance into [explosion]. This data in its turn is supported by aspects/attributes for [great winds], [huge/mighty roar/thunders], and [thunders (under) the earth], as well as [sky's above, thunders below (the) rocks]. The data sets for the [LHC], at this point, are dominated by [failure], and [gradual movement] rather than any form of spectacular success.

Markets - Gold/Silver Electro smelting

The Markets entity has several new supporting sets adhering to the [gold/silver] sub set as modelspace is moved forward into October. The newly acquired aspect/attribute sets are led by [atmosphere agitations]. This can also be interpreted as [atmospheric hi jinks] (we think). There are sub sets in support of this aspect which include [joyful], and [increase (in) possession], as well as [release (ing) of energy/language (is) favorable]. This last is specifically self referential within the modelspace as it appears only later in October, past the shift into release language globally. This is a very [rich], pun intended, data set as it includes several bespoke references to [wealth], and [riches], and [coins (in) piles/collections]. Further internal bespoke [wealth] values include [increase (in) present, riches (in) future]. There are also other sub sets in support of the idea of a [birthing] of a [movement/trend] which will take a number of years to [mature]. It also points to [maturing] as being [growing into wealth] and being able to [finance/bankroll a town].

Not all is smelling of petunias, as some of the [rose] must [afflict all], and the data sets show that [opposition] to the [gold/silver] advance sets in with November, but that by then the Markets entity is also gaining repeating sub sets of [stench] and [repulsive scandals] which are cross linked over to the Press entity and the ThePowersThatBe entity. These [stinky scandals] may be also participating in the whole [confusion] thing within the [populace/USofA] over the [elections]. In any case, the Markets entity is indicating that in the midst of a background of [growing scandal], a certain amount of dithering around relative to the [gold/silver advance] will take place in November.

There are also indications that the [twin] of [gold/silver], which is likely the ETF's for both, will suffer from some [revealing] of the [fraud] previously noted here in the ALTA reports. The [fraud] is actually indicated to surface to [visibility] as a result of [rationing] of [strategic metals/materials] due to [energy problems]. Locations such as [tidy german forests] will be the sites of [discussions] in Fall weather about the [derailing/disgorging] of the [global financial system]. Again, noting the references to [tidy german forests], the [gold/silver] sub sets have internal cross links which go back to the lexicon where they yield [success] as the primary aspect. This, in its turn, has [great/large/huge] as its primary supporting aspect. However, as noted above the mere fact of the

[gradually exposed success in gold/silver] will bring out [opposition]. The [opposition] is indicated as trying several different tacks in their attempt to [avoid] the real world [penalties] for their [actions].

We need to note that the Markets entity continues to show that the background theme of Fall will be [degradation] and [crumbling] of the global financial order. There are linguistic sets held over from previous longer term values which are going to the idea of [loss of currency] and which are specifically focused on the [usofa dollar]. Further the Populace/USofA entity has very extensive cross links over to the Markets entity where the termination points are within sets relating to the [loss of the global reserve currency], as well as [currencies (in general) under pressure].

SpaceGoatFarts - 4th/Fourth Drawer Down, Quarter Arms, Quivering Aral, Jumping Dalles

The data sets continue to accrue in support of the [photonic coherers/device] which is *probably*, in our little fiction, a [misappropriated object] from a [secret laboratory] somewheres....probably in desert (not dessert) country. Anyway, the hop along device has hopped along with a someone? who now has an issue with [dispensing/sharing] the [knowledge] of the [functions] of the critter. This area is extensively cross linked back to the Populace/USofA entity where it terminates in the [suppressed knowledge] sub set of the [officialdom] context. There are some cross links into GlobalPop entity, but more into the Populace/USofA entity, and these are all of a higher relative emotional level. The data sets are negative from the point of view of the [perpetrators] of the [crime of liberating the devices from the fourth drawer down], in that the whole of the [nasty world] of extra legal, extra government killers are on their case, but, with possession of the [devices for cohering the photons] comes a certain feeling of [resonant harmony] with the flow of [time] and [events/circumstances]. This [feeling] is a noted side effect of the device, and thus it was decided it was a [fourth drawer] object. What has now become apparent to those who [own] the [pursuit/chase/hunt] for the [devices], is that the 'side effect' is its own [gateway/control] point into the [device matrix].

The descriptors for the [photon coherer device] are necessarily vague, but even so the idea comes across of a device that can be used both as a power generator, including electricity, and a power

redirector in the form of these [coherered photons]. While sounding quite tasty, the actual value of a fresh batch of [coherered photons] is less than clearly described. Igor is of the opinion that the [photons coherered] are some form of a force field. There are some indications that [fields] are indeed involved, though my "official jutnob" interpretation is that these [coherered photonic fields] represent a [static time/space warp]. There are descriptions of people both in [authority] and just regular joe-bird-watching-gov'mint-worker kind of guys going absolutely [mentally unbalanced] when the [fields of reality] around them are [distorted] by these [photonic coherers] and [strange stuff happens]. Some of the [strange stuff] aspect/attribute set is held within our [unknown] aspect set, and within that, further held within the [officially denied] sub set. This [strange stuff] aspect/attribute set also has some descriptors for actual [phenomena] such as [arms] which will [appear] and [hang, actively] in the air in rooms, or even over [freeways]. Other [strange stuff] descriptors include [trails] of [unknown slimes/substances] which will [stain] large areas, and even more disturbing, be [not able (to be) removed] no matter how much [water] is applied. Further problems with the [distorted fields] come from [hundreds] of people who will find themselves suddenly [squinting] to overcome bouts of [shifting reality visions]. This last is described as the [field of vision] becoming [unstable] and [shifting] within its [boundaries], but only if the [vision] is held still. If the person is sweeping the room, no problem, but let them center their sight, and then the [shifting of the reality vision] begins. This last is reported within the data as a separate effect, although to also be encountered when the [strange stuff] such as body-less arms suspended over freeways appear.

Wow, sounds just like what people in Hollywood pay good money for in both their special effects and drugs. In this case, probably will not be as entertaining as it may seem at first blush. Yes, the whole, "mommy, look what I found" joke takes on new meaning with detached body parts just hanging around waiting for any 9/nine year old with a sense of humor, but it also starts to be a bit creepy, in that this is probably a big sign that, dimensionally speaking, we are not as stable as we like to believe.

Further [dimensional] problems are indicated by the data as coming from our [sun] and nearby [space] in Fall. This area is cross linked over to the linguistics that we have for a December earthquake, likely on the 12th, though our actual first appearance in modelspace of earthquake language comes on December 10th, and continues to

build steadily for the next 2/two days inclusive and so involves the 10th through the 12th. The [dimensional] problems sub set within the SpaceGoatFarts entity has divergent cross link sets such that it also is involved in Terra entity events later in the Winter. The originating point is the [unknown energies from space] sub set of the SpaceGoatFarts entity. Further, there are astronomic alignments of some significance on December 12th involving the largest angular momentum holders in our solar system, Jupiter, and Saturn. And, wouldn't you know it, the highest degree of angular momentum interaction will have the [west coast] of the America's directly at 1/one of the 2/two antipodal centers, the other being the border region between Iran and Afghanistan, running as far north as the Aral Sea, north of Turkmenistan. Hmmmm....good luck to us all.

Conclusion: ALTA 709 - Part One :- Dirty Linen, Show us yours, we'll show you ours..., Dutch Apple

There are persistent and repeated versions of stories associated with the [gray aliens] that intimate that the [gray aliens] are the loooong off descendents of humans, reduced to their current miserable, cow-mutilating state by too many thousands of years with too small of a gene pool following some great natural disaster which besets the poor humans of, gulp.....our time. Or pretty damn close. Say...about 2012 perhaps.

We need to note that the [gray aliens] are not at all like humans, and in spite of the many human whistle blowers from deep in the black ops communities who are coming forward and telling their experiences, and what they have learned from the [space aliens], the [gray aliens] are **not** likely human descendents at all. The whole concept does not pass the smell test. Populations reduced in genetic diversity go down 1/one of 2/two possible paths: first is they die off, usually within 3/three generations of the genetic carry point being breached; second possible path is that the species embraces mutations which increase the genetic diversity. There is no 'alterative three' for genetically stress species. Soooo....the initial premise is flawed. That is to say, those humans who were told by the aliens that they are here to regain some form of genetic diversity were told at least a partial lie in that these gray aliens are not likely

our genetically stressed descendents.

Further arguments against the idea come from the very appearance of the [gray aliens], which is to say that they appear to be as 'cookie cutter cloned' as insects, with NO appreciable facial or body diversity. This is entirely counter to the clearly fifth order diversity-run-amok nature of humans, at least those from here on earth where facial and body differences are extreme to say the least. There is no way that our propensity for diversity is 'rolled up' into the central facial and bodily theme of the [gray aliens]. It is our conclusion here at HPH that the [gray aliens] are [lying scum] with [hidden agendas] until proven otherwise. No offense is being offered to those persons who accepted the alien lies, but our position is that it, the fabric of their story, just don't wash.

Unfortunately, our data sets are continuing to indicate that it may just matter, that is to say, the whole issue of [Not From Here beings] and human interactions. The [contact] meme still grows with each new processing, and is now spreading among many differing entities as though it will be come a meta data layer. The [contact] aspect/attribute set now has representation within the Press entity, as well as the Markets entity. In both cases, the [visibility] sums are growing, and there are modelspace indications that [fall feasting] {here in the USofA/November 23rd(ish)} will be [interrupted] by [contact] increases. The [visibility] of these is *not* very high at the time that they appear, but they do grow over December. However, the other problems indicated by the release language overwhelm the [contact] meme for all but the single minded aficionado.

Still, it will be advisable to remember that all space aliens need to be treated as lying scum until proven otherwise. Universe had a point in making us humans xenophobic, and the aware observer might just want to harmonize with universe on this.

Oh, and as long as we are on the subject of how to properly evaluate [space alien contact], we need to remember that our first criteria will likely *not* be those chosen by government, and should be those to which most all humans would understand. This is to say that the regular human here on earth would not likely be well versed in fundamental technology and such, but would be able to respond appropriately, if asked, questions which demanded a human core response. Such as "show us your art", or "what kind of music do you like?". Even if the questioning space aliens asked

some fellow in East Podunk, USofA and were shown Black velvet paintings of Elvis and 'hot cars', they would be shown art. The concept would be understood, and an appropriate response could be found from most humans. Note that the expression of that response goes specifically to the previous point of diversity among humans in that 'art' would elicit a huge spread of responses depending on just where on this planet the questioner happened to land. But the key point of 'art' would be understood. As would 'music'.

Now ask yourself, why have the many reports of space aliens *ever* spoken about their 'art' or 'music'? Has it been that government minds could not fathom to ask them this sort of questions? And any descendent of ours, which is to say humans, that did *not* know art? Or music? Yeah, right...like that could happen. Look how much of human energy goes into producing or lauding art...and music. Yeah, sure, our descendents are soooo lame after all the genetic problems that they forgot about art and music.

So why have does current space alien lore *not* have any references to art and/or music? Well, at least some of the explanation could be that as fourth order beings, which is to say, nearly robotic clones, and potentially sharing a single, emotive personality, there would be no point, perhaps not even any understanding of the point of art, and music as communication vehicles for non-verbal expressions of emotions and emotionally tinged events. So asking the [gray aliens] what's on their mp3 player is probably not going to be the conversation opener desired. But it should be a very key criteria for evaluating our potential future relationships, intergalactically, and interdimensionally speaking of course.

Do we allow the thirst for ever increasing destructive technology to drive us into deals with critters which have *no* art? Kind of like dealing with ants, eh? It may work for a while, but inevitably it must break down as the underlying motivations are beyond each other's ability to comprehend. Any interfacing between the species represents the archetypical unknown at the very basic core.

As is noted in the Art of War, it is necessary to know oneself in order to achieve victory. The same must be said of [contact]. It is vitally necessary to approach the subject centered on core human values, and not to be swayed by proffered gains in narrow areas. To our way of thinking here at HPH, the [contact] meme brings with it 3/three questions.....what does your art look like? what kind of

tunes are you listening to these days? and what is your favorite pie?

We need to tell all inter spatial and inter dimensional beings up front that they will be graded on this material. Any species with less than satisfactory answer gets a polite, thanks, but no thanks response to contact. If they are not into pies, just what are they into? Can we trust beings that know no art?

And as a small note for those amongst us who 'think' that Hollywood is deliberately encoding information into its movies to prepare you for the coming of the alien wars....well, we are indeed reminded of the movie "Starman" which featured space aliens who *did* like pie....dutch apple to start, eh?
