## Meta Arts - We'a cupla, Metals Quake

The issues surrounding the interpretation of the linguistics are complex. Even with a system as crude as ours, there are nuances which frequently fly right over the mostly vacant brains here at HPH. As a case in point, the Sumatran tsunami was partially forecast here, but the interpretation had merged several linguistics from that event with details from other earthquake situations of that same year. Specifically we had provided a forecast in which the earthquake would affect the 300,000, but also included the details of the delayed/postponed wedding, and the emptying of the courtroom in which a trial was being held which had very high visibility. In that summer, we had a minor earthquake here in the USofA which affected the Californian courtroom in which the Peterson trial was being conducted. Ok, we got that, but figured that the 300,000 affected/knocked back to a previous age was incorrect. That calculation proved to be wrong in that the 'electric/force driven wave' of the Sumatran tsunami was still pending, and it was associated with an earthquake. The earthquake associated linguistics

were caught, and were interpreted correctly, but our assignment of timing was incorrect. We were wrong then in the first place in seeing all the earthquake linguistics in that year as being focused on a single event, rather than the totality of all of the earthquake language for that year. Make sense?

Then, we were wrong again, and further complicated things, by thinking that the 300,000 people kicked back to a previous age language was itself wrong. It was not, and it proved to be nearly 6/six months further on in the progression of time. We now conclude that our filters were off. That that total 'weight' or 'emotional summations' of the [earthquake] associated language was spread over a number of events was masked by the very powerful language around the Sumatran tsunami coming "forward in time" to "sweep up" the other, more minor earthquake incidents of that year, in its "temporal bow wave". Does that make sense? Clear as grounds at the bottom of Navy coffee? What happened was that the largest of these events was the last in the series, and so 'blocked the light', or put all others in its shadow. Yet the details did show an 'earlier' temporal marker, i.e., the 'courthouse being emptied'. Of course we now know that we had...

- 1) assumed that only a single event was being referenced;
- 2) taken the emerging details, which necessarily showed the first of the total series in greater detail, including its temporal markers, as being indicative of the total data set; when it was merely the first of the details to emerge, and that many more were pending.
- 3) thereafter, we had assumed we were incorrect in the language yet to be manifest, which indeed did show up some 6/six months later.

Said yet another way, what apparently happened was that the total size of the linguistic set concerning the tsunami overwhelmed the smaller sub sets of the same context, which is to say, [earthquake]. The interpretation was made from the merged detail sets of basically \*all\*

of the major earthquakes for that year. Again, does that make sense? Hopefully so, as it is a key point. 'Cause we are there again now.

It *\*appears\** that yet another instance of the interpretation being overwhelmed by a series of temporally stacked events all merging into a single view due to the largest of the events being last has occurred. This time it is the [bankruptcy] which will precede the [double] and [triple] language being applied to the [dollar price] for [gold/silver].

As of this report, there are still data sets accruing to the supporting details for the [bankruptcy] which will [precede] the [shocking deterioration (of the) usofa dollar], and then the subsequent [sky reaching prices] for [gold/silver]. The problem for us has been that we had data suggesting that the [bankruptcy] would arrive around the March 21 equinox. Which it did. That is, *\*IF\** the Bear Stearns fiasco *\*was\** the [bankruptcy]. For reasons suggested by the data sets, we no longer believe that this is the case. Rather we think it is yet-another-instance of [stupid interpreter] and an occurrence similar to the Peterson trial/courtroom situation.

In this instance, the data is continuing to indicate that the [bankruptcy] is pending. And when analyzed, the Bear Stearns language only fits about 28/twenty-eight percent of the language set for the total [bankruptcy] context. Soooo.... it would appear that just slightly over one-fifth of the total language has been expressed. Yes, we were correct on the initial timing of the first occurrence, which is the *\*near\** bankruptcy of Bear Stearns in proximate to the March equinox. No, we do not yet have a definitive date for the remainder of the language to manifest. Yes, it is still growing in supporting details, and yes, it is still very very large.

Oh, and the next instance of it is very soon.

See the Markets section for more on the coming [metals quake].

## Terra - Abandoned Fats, Fork it (they're done), Noisy (SpaceGoat) Farts

As the modelspace is progressed past the June [solstice], the Terra entity acquires several new data sets in support of [heat]. This [heat] sub set is also supported at the primary level by [pressure], and [pressure cooker], as well as [contained/holding in]. The aspect/attributes down to the detail level include references to [hot/miserable] and [pressured (by) steam hot] as descriptors for [summer]. The aspect/attributes continue to grow as the modelspace is advanced through [summer], and the interpretation is that an [intense] and [hot] Summer will [pressure] the [minds] of humans and other critters here on earth.

The cross links from the [pressure cooker/corked heat] sub set over to the 2/two populace entities suggests that the [summer] experience of being human within the stew of [melting] [dollars] will be further aggravated by [melting glaciers]. The data for the [oceans] sub set of Terra entity are accruing in support of the [open] aspect/attribute set. The [open] set includes aspect/attributes which explicitly state that [water] will be [above old earth/ground], and further that [new lands] will be [increased] by [energetic actions]. This last has large numbers of cross links over to the SpaceGoatFarts entity where the originating sub sets are in the [unknown energies from space] aspect/attribute set.

The Terra entity is also providing support via cross link to the populace entities, specifically the [diaspora] sub set. New supporting sets are accruing which reference a [migration/fleeing southward] from [intolerable conditions]. This last is related to the [wet hot pressured] Summer. The effects of the [heat] and the [sun] this [summer] within the Populace/USofA, and the GlobalPop entities are shown as being so severe as to [bring out straw hats]. While a curious sort of reference, the [straw hats] sub set has interesting details. As it is within Terra, but directly tied to the populace entities, the trend lines take their emotional sums from the Terra entity and these are applied to the trends within the

terminating sub sets. Within these sub sets we find a majority are also in support of [children], and the interpretation of the whole of the linguistic construct is that a manifesting [social wave/trend] will be for [straw hats] to be seen as a [requirement] for [children] going out under the [sun] this [summer]. The trend suggests that this [straw hats] meme will take on many new connotations as the context matures, and that within only a few years the [straw hats] will be a [central/core social identifier]. It will even become a global [political symbol] over these next few years.

The Terra entity is forecasting that the [summer pressure cooker/heat/steam] will produce [aggravation] which is described as being [beyond/limit\_of] the [normal weather]. This [normal weather] is shown as [migrating] to the [poles/north/south]. However we need to note that [poles] can also be interpreted as [extremes]. Further the Terra entity is forecasting that, at least in Europe and Asia, the [rainfall] which is indicated to [follow upon slowly] after the [pressure cooker] will bring [exhausted disappointment]. This sub set is further filled with [uneaten food] aspect/attribute sets, as well as deriving support from [fat (of) fowl] which is forecast as being [unconsumed] and [abandoned]. While the [personal sacrifices] which are [demanded] by the [pressure cooker climate] of [summer] are indicated to [persist] beyond the [season].

The [grasp] that [humans] have on the [climate] arises as a context within the Terra entity as supporting sets for the [pressure cooker environment], and as the modelspace is progressed into Fall, this [grasp] starts to acquire very large volumes of new supporting aspect/attribute sets. Just from watching the accretion patterns it becomes apparent that the [environmental alterations/changes] of [summer] will kill off the [old view] of [planet earth] and its [climate]. The idea coming across is that the [grasp] on 'things' [environmental] will be [done/finished] by the end of the year, and that the majority of the mental [transformation] will be [rolling/cascading] into very high [visibility] starting in [fall]. This probably is not a good thing, at least in the short term. Although the idea of the [pressure cooker summer]

releasing does sound ok, the follow on may not be as welcome as might first be supposed.

As we follow the cross links from the [grasp] aspect in Terra entity over to the 2/two populace entities we note that the termination aspect/attribute sets include bespoke [embittered] and, in an expressed synchronistic duality, bespoke [perseverance]. The 2/two aspect/attributes are at opposite ends of the range of values around [action]. This is to say that the data suggests that many people will become [embittered] by the [changes] and will [abandon action], and basically go off for a [deep sulk]. The [persevering] crowd is indicated to be [agitated/shaken], but not reduced to [crazy/immobile]. Rather the interpretation is that the [split] in the [human species] which begins in Fall, and gains [visibility] over the rest of the year, will be at a very [core/deep] level, and will be long lasting in the extreme as we have longer term values for [over/exceeding 20/twenty generations (420/four\_hundred\_and\_twenty years)]. A very long time indeed.

As the [species split] gains [visibility] within the global media stream, it will do so around the idea of [skills], and [developments/collective/collections/groups] of persons with [cooperative/collaborative] [skills]. The [visible] component of this split is given some additional weight (emotional summation values) by events of [terra intrusions] in late Fall {ed note: we \*think\* around December 10 through 12th). Obviously, the [persevering crowd] is the 'favored' sub set. The data within the Terra entity, including the cross links over to the populace entities, and the Markets entity are also bringing back our [female uniting personality] who will presumably be back from the [wedding (of her) sister/cousin/female\_relative] in time for the [walking appearance(?)] of the early Fall. Seemingly the data is forecasting that the [female personality] will be gaining her [visibility] concurrently with a [walking appearance]. There are very few details in this set, but what is available suggests that the [walking] somehow takes place [across the planet] and [across the (span/time of) only/just days]. Likely the best interpretation for this set is that it is indicating that the female personality will be part

of a [wave of walking/movement] which [goes round the planet in only a few days]. This would also make sense relative to the past descriptors for the [female personality] and the other future predictions for effects of this person's rising [global visibility (within the) global mediastream]. While the [female personality] is \*not\* tied to [government], nor [officialdom], the Terra entity to Populace/USofA entity cross links indicate that the appearance of the [female personality] will be a very good temporal marker for the [revolution] having [spread (so far)] as to [catch fire] at the [grass roots] level. The Terra and Populace/USofA entity are \*both\* indicating that the [local citizenry] will also be [stricken] by the [split], but the [persevering crowd] will [emerge] from the [trauma] of the [pressure cooker summer], and will basically tell the [state/federal officialdom] to [step off/go away]. In some very [visible] cases, the [federal government agents] will be [forcefully expelled] from [local jurisdictions] over the issues of [power/electricity]. The data shows that several, perhaps as many as 12/twelve incidents will be [visible] over a short period and will be able to be used as a temporal marker for the soon-to-follow [regional blackout]. Of course, eh? Universe gets us all whipped up, and then delivers the [synchronistic punch line] to our efforts. These [visible incidents] will involve [public meetings] as well as [hidden/occult/secret officialdom meetings]. The Populace/USofA entity is forecasting that the significant points for the aware observer will be the [disruption] of these [very visible/high profile] meetings by [local citizens]. We need to also note that a curious label of [scruffy] will be [applied] by at least 1/one [teevee personality] to the [locals] in an attempt to [denigrate] the [disrupters]. In some instances the [disruptions] are indicated to be [near riots] in which the [federal agents] are [hoisted] and [heaved] out of the venue.

A similar emotive trend is forecast for [china] over the late [summer] and into [fall] as their [forceful government] runs into a [agitated/stressed populace] \*just\* as Terra entity starts to [intrude] on [chinese life] in a large way with [heat/pressure/moisture]. Further, there will be [water wars] within the various [southern provinces] as well as within

the [western grass sea] such that the central [chinese government] will be [compelled] to devote a considerable amount of their [military resources] in [peace keeping]. The [intercine squabbles] are indicated to begin in early [summer] and to continue for [16/sixteen months].

As the Terra entity is moved along with modelspace beyond Fall/Winter of 2008, and into 2009, the rising aspect/attribute set is headed by the descriptor set for [intrusion], with primary support coming from [sky/space/above] and further support coming from [noise/shock] and [frozen/rigid authority]. The [authority] is further described as being [thrown/cast\_into rigidity/frozen] by the [suddenness] and the [loudness/volume] of the [space shock/noise]. The [upset] which is caused within [global/planetary officialdom] has very high [visibility] summations such that we can expect the 'caught in the headlights' reaction on the global mediastream as the [shock of the noise (from) space/sky] is discussed. The [electric nature] of the [phenomena] is also has its own [visibility] summations placing it at level of [seen within the global mediastream] as well. The linguistics are describing a period in which the [media] is showing [people (running) in alarm] and [extreme agitation] among the [political faces]. This period is currently forecast to have its first appearance of the [phenomena] within the first half of 2009, but then the meme seems to be growing such that it will maintain a hold on the public mental state for perhaps several years thereafter. Clearly the data goes all the way through 2009 with this sub set in place. It gains considerable emotional summation from the continuing accrual of values under [agitation], and [distraught], and [oppressed], and [stressed]. As the Terra entity progresses through the longer term values within modelspace, and deep into 2009, the result within the Terra entity shows that the [distress] caused by the [noisy phenomena] acts as a [catalyst] which [propels movement] at very large scale within the [global population] of humans \*and\* [animals]. There are repetitious references to [birds] and land animals of all sizes and kinds which suggests that the [noisy phenomena] will be [felt] as [injurious] by humans and other critters crawling about here on earth. Bearing in mind that our longer term data sets lose granularity of details as we

push out to the edges of our range of perceptions, the data is nonetheless indicating that [6/six waves/instances] of the [phenomena] will be [experienced] over 2009.

## GlobalPop - Populace/USofA - Rotten Eggs

The 2/two populace entities have a common data set around the [medicines] of [disappointment/undoing/dissolving]. The [medicines] sub set is directly held within both entities at the level of the primary emotions, that is, bespoke [fear], [hatred], et al. These emotional sets hold the highest individual summation values for the [intensity] of the named emotion. Said another way just to confuse the hell out of everyone, the [medicines] sub set is held very close to the central core descriptor sets which define the [populace] entities. This is probably \*not\* a good sign. To further weight the [medicines] sub set, the supporting aspect/attribute sets are replete with instances of bodily function indicators. Here at HPH, we take bodily part or function language very seriously as that is about as archetypical as it gets for humans. So the [medicines] sub set is being taken quite seriously just due to the number of sub sets which are either directly headed by bodily function descriptors, or which themselves contain supporting sub sets with such descriptors. That said, the interpretation for the [medicines] sub set is that there is about to be an ["accident"] with [medicines] made very [poorly] which is described as [causing/creating poisonous conditions]. Note that the [causing/creating poisonous conditions] has large levels of cross links over to both Markets and to the Bushista entity. The [medicines] data set is apparently forecasting that a [batch/type] of [medicine] will soon place the [political life] of many here in the USofA at [risk of death] due to the [poisons] which are shown as [within the poorly made medicines]. The particular impact of the [medicines] is indicated to [make sick/ill] a whooole lot of people nearly simultaneously such that, seemingly from out of nowhere, the [visibility] will [rocket to the sky]. The data sets are indicating that

perhaps [10/ten millions] will be directly [made ill] due to the [medicine], and an additional [20/twenty millions] will be indirectly affected. This last may be referring to family members, or care givers, the data is not clear about the relationships here. The [medicines] descriptor is quite clearly in the 'plural' form indicating that it will not be a [single brand] or even [type] of pill that causes the problem. Rather what is described is a [sub strate] which has/will become [contaminated]. This area is closely linked to the [bad eggs] issue, and seems to be indicating that a [contamination/life\_form] which [invades] the [eggs/incubation] early in the process, will go [undiscovered] until after the [poisonings] result.

While the [poisonings] are shown as being [deadly] and [debilitating], the larger part of the total emotional summations, including the [visibility] sum, are going to the idea that the [relationships] between [nations] will shift [dramatically] as a result of the [poisonous conditions]. Further, at least within the USofA and the EU, the [poisonous conditions] are supported by [political poisonings] indicating [malfeasance], and [corruption] will also be brought into the discussion due to the [outbreak].

Note that initially the [poisonings] will be reported as an [accident], but over the course of the next few weeks/months, the whole nature of the [poisonous conditions] story will change, and in many instances the [war] word will be brought up. However the cross links over to the Populace/USofA are showing that the [discussion/debate about war] will bring up some very [negative/bad practices] on the part of [petty\_people/politicians] here in the USofA, and abruptly, the energy goes over to support the [revolution] meme locally. The [war cries] here in the US are also cross linked internally over to the sub set of the [revolution] meme which goes to the idea of a 4/four generation (82/eighty-two years) [withdrawal] from [foreign complications/wars], and a [focus/dwelling] on [internal conditions]. The imagery suggests that the [calls for war] over the [poisonous conditions] will very rapidly bring our [own sins] into the [discussion], and many of the [populace],

now [primed] for [gnosis] as a direct result of the [poisonous conditions] and the [secrets revealed] will be [appalled] at their own complicity and enter into a kind of traumatic shock.

## Populace/USofA - Common Destruction, Dark Companion Cometh, Retreat

Previous ALTA series of the last year have forecast a [rise/elevation] in emotions for the [populace/usofa] over the course of 2/two months which span from mid to late July out through to near the end of September. This forecast rise of emotions has been difficult to interpret as there are both conflicting and ambiguous trends within the data set. As we approach the period indicated we are able to pick up more details from the various longer term values, and to acquire aspect/attribute accretion from the shorter term and immediacy value sets. These have unfortunately added bulk, but so far, not added much clarity.

What we do have is a range from July 8th out to September 29th which is the period over which the rise of the emotional state will take place. There are several peaks and some small valleys in the data movement over these months, with mid August having the highest levels of summation values. These start to reach their zenith on August 13th and the peak continues through to August 18th. This peak coincides with [destruction] held within the Populace/USofA entity which also is cross linked to the GlobalPop entity where the links also terminate in [destruction]. The termination point is within the sub set of [iran/persia], and has a primary support area of [crisis].

Note that the data is ambiguous with several possible interpretations. It could be that the USofA and Iran will both suffer [grievous harm] as a result of [earthquakes] which will result in the [displacement] of [millions of households]. Please note that the [millions of small particles] meme is present in both of these [common destruction] sub

sets. The data is suggesting that [2/two] out of [3/three] of the [elements (of infrastructure) involved] will be [destroyed]. While the [2/3 (two-thirds)] destruction pattern is clear, the [infrastructure involved] element is not. This may refer to [2/3 (two-thirds)] of the [buildings/roads/electrical supplies], and other forms of [infrastructure] in the areas of the [destruction] being [destroyed]. There are very large groups of supporting aspect/attribute sets which contain [military] as a primary supporting aspect. If the [common destruction] is interpreted as a [natural disaster/terra intrusion], then the [military] sub sets within the [destroyed] group are those [assets] which are located within the [rings of common destruction]. As may be expected, the whole of these areas are involved with the forecast shift in early October into [release language].

Alternatively, the same data sets *\*might\** be interpreted as indicating that an [optimistic] and [expansionist] [bushies] may [launch/initiate] an [attack] on [iran]. However, if that is the interpretation, then the scenario supported by the data would be for an [overwhelming/reducing defeat] of the [attacking forces] with [2/3 (two thirds) casualty] levels. The data sets are distinctly linked such that the [common destruction] would indicate that the [totality] of [resources] is [reduced by 2/3rds] in the 'event', whether that be a [terra intrusion] or a [military attack].

While the Bushista entity is indicating that this [summer], especially from July 1, through to September 27th will be a period of [optimistic] and [delusional] thinking on the part of the [bushies], the cross links from this section over to the Populace/USofA terminate in areas of [disbelief], and [rejection], and [somber appraisal], and [discontent]. The imagery of the supporting aspect/attribute sets suggest that the [lunacy] of the [bushies] will [not be accepted/understood] by the [populace], and further that the [republican party] will be the [first casualty] of the [aggrandizing] and [puffery] of the [bushies] over this [crisis]. This section would seem to be prima fascia in support of an [attack] versus the [natural disaster] interpretation, however, even within the [natural disaster] interpretation, there are indications for the

[bushies] actions to be [wrong] such that the [greater/greatest majority] of the [populace] of the [usofa] becomes [violently opposed] to the [bushies] as a result. of course we note that [everybody/vast majority] here in the [populace/usofa] is \*already\* opposed to the Bushies, but the new component is the introduction of [violence], and [spontaneous actions] as a result of the emotional [turmoil] caused by the [unthinking/stupid actions] of the [bushies/officialdom] this [summer].

The August 13th through the 19th peak of the emotional tones is a smaller sub peak within the larger emotional swing/shift forecast for the [populace/usofa] which ranges from July 22nd out to August 29th. Thereafter, a small reduction in the emotional tension values manifests for a few days, a minor [cooling off] of the [emotional loading] which [refreshes the attitudes]. However we note that the single largest sub set within the Populace/USofA entity for this period of July 22 to August 29 is [military] and further that this sub set has the largest accrual levels of all sub sets for that period.

Sooo....is the data suggesting an Iran war for summer? Well, perhaps, but it certainly is suggesting that the [madness/irrationality/insanity] of the [Bushies] will be at its peak this summer, and further that the [bushies] will be [focusing] on the [military], and \*could\* focus on Iran. However, there are several other variants of the interpretation which also will be moving into play during that time. The first is that the probability for [aggressive] and [ferocious] and [successful] attacks on the [military] within the [iraq] war zone increases dramatically during this period, so any 'issues' with [iran] \*may\* be, as the data supports, [diverted] by [developing events]. It also needs to be kept in mind that the GlobalPop entity \*still\* continues to forecast the emergence of the [israeli] mistake. The [israeli mistake] is also still accruing values, and these sets are \*still\* pointing toward such a huge mistake that the [israeli military machine/policy] is [destroyed] in a [single hour]. The [mistake] sub set continues to gain supporting sets in the areas of [military], and [aggression], and most significantly [brutal/brutish] which itself is supported by [accident] and [accidental

discharge]. This last is most key as it points toward the [deaths] of [many], perhaps [thousands] of [innocents] such that the [revulsion] of the [world/planetary\_populace] comes out in the [visibility] numbers. This sub set is further reinforced by the imagery of the [reaction (to the) visible images] of the [brutal 'accidental discharge']. This [reaction] itself has its own [visibility] thread which goes toward the idea that first comes the videos of the [brutal discharge], and then comes the [videos] of the [reactions]. The descriptors for the [reactions] includes [rising bile] and [public vomiting], as well as [sour (bowel) smells]. Probably not a good thing. The net result, according to the data, is that [israeli things/officialdom/citizens] become [planetary pariahs] up to and including the [rejection] of [israeli transit papers] as well as [rejections of israeli money]. The data sets are very explicit about the [government of israel] and the [usofa officialdom] actually moving into a [state of conflict/war] as a direct result of the [global popular reaction] to the [brutal discharge]. The shorter term values suggest that within only a [few months] the [war/conflict] has moved to the level of [visibility] which will seemingly include [officialdom sanctioned/promoted] [attacks/seizures] of [money/funds] within [israeli accounts] here in the USofA. This last is also shown as bringing \*huge\* new levels of tensions which add to the [release language] shift which is in place from October 7 through to end of February, 2009.

As if the [pissy/irritated attitude] of the [populace/usofa] over [summer] is not enough], we have a reappearance of the [dark companion] meme within the [populace/usofa] set. This [dark companion] meme first arose prior to the Katrina/Rita/FEMA disaster. This does not bode well. At that time, the [dark companion] described as [big around as was tall], or alternatively [evenly distributed] was a supporting sub set of the [american diaspora]. Now the [diaspora] meme has gone global, and the [dark companion] meme is but a single point of support. This [dark companion] meme re-emergence comes about as the modelspace is progressed through the early parts of July. Again, there are lots of direct support points for [diaspora]. Again, this is also during the 'hurricane season', and we have very large data sets for [traumatic winds], and

[dramatic rains] as dominating the north American weather patterns this year.

Along with the [pressure cooker summer], the data sets are pointing to a [set up/positioning] which will [develop/mature/manifest] over [summer] with only very small [visibility] levels, but which will have [ripened/reached\_fuition] in Fall when it will [explode] onto the [global mediastream] with a sudden [burst of energy]. This [explosion into consciousness] is supporting the [army] as its primary aspect. The Populace/USofA is indicating that the [travails/trials/extremes/challenges] of [summer] will manifest in Fall such that along with the [economic] drivers for the [populace] and its [misery], there will be further [aggravation], and [distress], and [agitation] as the [army/military] becomes [challenged] in its [positions] by [developing events]. The detail levels of aspect/attributes suggest that the [visibility] will [erupt] in the midst of a [soldier receiving an award], and that by the end of February 2009, the whole of the [military landscape] will be [engaged in transformation]. We have linguistic structures going to this [incident on the stage] which will be the first of the Fall [visibility] points, but that very rapidly thereafter the global mediastream will be [flooded/immersed/swimming] in images which are described as [wagons/conveyances (of) dead men], and [defeat], and explicit, bespoke [doom]. Further supporting aspect/attribute sets include language going toward [shocking news], and the [slaughter of patients/wounded] as well as [clearly/explicitly pursuing a course of calamity].

The Populace/USofA entity also contains a parallel structure which accrues starting in early August, but which only gains [visibility] in Fall, and which is headed by twinned aspect/attributes of [time] and [retreat]. There are some linguistic elements supporting [retreat] which show it as not totally a [bollixed/screwed mess], but in the main, the sets are not in the 'good' range of things. As the data sets continue to grow over Fall, there are curious references to [animals in the fields] which will both play a big part in the developing themes, and raise the [visibility] level of the [foreign authority(?)] which is described as

[total/unquestioned control]. This last area is filled with cross links over to the TPTB, and to the Bushista entity. It \*suggests\* in a very loose fashion that perhaps some [contact] will come to the Bushies from TPTB which will [chill] the [ardor for military adventure]. Further the terminating links within the Bushista entity paint a picture of such an [emotional impact/strike] as to [age] the [officialdom] into [old, decrepit men] with [palsy], and [drooling] in mere [hours]. The data suggests through imagery that the [younger Bush] will be [carrying the (load of/cart of/vehicle of) dead men] from that point forward. It will not be an easy burden, even for those described by the data as [mad (in the) soul], and [loose (in the) head/mind]. Further problems will arise in the Bushies to [populace] relationship as the data suggests that the [officialdom response] to the [defeat] will be to [reward the inferior] and to [promote the toady/minion without merit]. This sub set also contains data suggesting that the [assassination] meme will manifest at that time as well, and will [propel] the [fortification] of the [officialdom]. The linguistic structures here point to the [fortification/walling off] of the [officialdom] here in the USofA will be a temporal marker for the [outbreak/opening moves] of the [revolution] meme into high [visibility].

As the modelspace is progressed through Fall, the data suggests that the relationship between the [boy prince] and the [populace/usofa] will undergo its final transformation. Data sets for [overseas assignments/relocations] grow in proportion to other sets pointing toward [resignations], and [officials] who will [flee retribution]. Further there are [chinese bribes] which will [surface], and the data suggests that several persons may be [suicided] in order to [staunch] the [blood flow/risk\_of\_exposure]. The data shows that a [rich and influential family] {ed note: guess who?} will be [preparing to depart], and will be [working diligently] to [avoid unhappiness] in a mood of [personal disquiet]. The data also points to an instance in which an [official] with [red papers/blooded documents] will be [forced to stand outside the door/waiting/shunned/turned away], but that even this will [backfire] on the [rich and influential family] as the [official] will have [friends in

low places] who will see to it that [viability] at a very high level of summation occurs that [day]. The data is also explicitly stating that the [regime] is [weak] both [internally] and [without/externally], and will [proceed] to demonstrate this over the course of Fall.

Then the [populace/usofa] gets hit with the [shocking/shaking events of early December]. And that is how the [bushies reign] will end. Amidst [chaos], [confusion], and [universal/total rejection] which has a descriptor label of [large/great passing/shifting].

The general descriptor within the Populace/USofA entity which has the largest level of supporting growth over Fall 2008 is [revolution].

## Markets - Metals Quake

The Markets entity, when progressed into Fall, is showing that the October 7th switch over to [release language] will be accompanied by nearly 42/forty-two percent of the emotional values being in support of the [economic/money] sub set. This staggeringly huge number points to a near total focus of the population on their [personal finances]. This is understandable given the currently manifesting [hyperinflation trends] in [foods] and [energy]. What is unexpected is the near total \*lack\* of visibility to any positive economic spin. It is as though the situation will be soooo bad as to finally [crush] the [feel good propaganda/patriotic singing] coming from the [officialdom shells].

The Markets entity is so cross linked over to the Populace/USofA entity that the movement of it through modelspace is as though in a strange dance. The Markets entity runs into the growth of the [revolution] meme within the the Populace/USofA entity and [stalls/halts] in its tracks. It moves into a steady state of [battering] as the last of Summer wanes, but just after the October 7th release language shift, the Markets entity takes on its own form of [revolution] meme as the rising aspect/attribute set. This [revolution] is \*not\* an internal, nor reform effort, but rather a [passive] form of [waiting/fearing] the [effects of popular

revolution] on the [global currency infrastructure]. There are several data elements which join the Markets entity in late September which are headed by [loss] and [refusal (to) pay]. This last definitely points toward our previous forecast of the [lock up] in [may/early june] as being the pre-echo of the later Fall events. The described pre-echo is shown within the modelspace such that we get a [20/twenty fold increase] of the [same structures/similar events] in Fall.

The data {ed note: admittedly erring on the side of the extreme in language} shows that a [reduction by one-half] will be part of the Markets entity future over Fall. And further that [1/one out of 2/two] of the [infrastructure components/markets] will be [lost/broken/torn off/separated]. Further problems for the Markets entity arise as the [officials] get involved over the months of October, and November. At that point the data sets suggest that the [officials] will be [broke/bereft] and will be having to [push their cars/lacking fuel]. This relates to both the actuality of the [energy markets] at the time, but also at an allegorical level to the [poverty/lack of effective actions] possible on the part of the [officialdom]. It appears as of this interpretation that the Markets entity is forecasting a very [brutal], and [swift] entry into a [global depression] of totally [unknown scale/dimensions].

As the data sets are progressed past the [pressure cooker summer] and into [fall], the [gold/silver] sub sets start accruing values which suggest that the [coins] themselves will become [money], and that an [infrastructure/support] for [local trading] is shown as developing over the [planet/globally]. The data suggests more of an [unofficial markets] rather than any form of [paper abstractions]. Though not [officially sanctioned], the data suggests that the [government/officialdom] is \*not\* able to [regulate] nor [tax] the [exchanges].

The [metals quake] language appears as a small supporting set in late June to early July {ed note: perhaps as late as July 8th}, and then it gains values at a very steady state until around August 10th when there is a sudden, short lived spike of new supporting sets. These sets are

coming in with [military] and [recklessness] as primary supporting sets, as well as [over-extended/reached\_too\_far]. Then the [metals quake] language settles back down slightly from its growth peak as August progresses into September, but then the accretion patterns have another, very large increase in early October. Some few days into this sudden increase in growth of supporting sets, a new pattern of very large steps begins such that the [metals] sub set actually appears to [shake] as it grows, putting actions in modelspace to the [quake] language. This very clear growth pattern then almost instantly, which is to say, from about mid October into early November, becomes subsumed in the [frothing chaos] which is otherwise described as [covering] the [affairs/interactions of the humans] here on earth.

## Conclusion: Part Six, last report of the ALTA 1308 series: - Millions of Small Particles, Big Karma, Edge of the Bulge, Stage Directions

The [millions of small particles] meme continues to grow in a number of entities including the Markets and Terra entities. Within the Markets entity the expressions of the [millions of small particles] will take a decidedly nasty turn as much of the supporting language is held under an aspect set of [repudiation/refutation/abandonment]. This area is also cross linked over to the Terra entity where it terminates in the [diaspora] meme. The cross linking does not indicate that the [terra intrusions] alone will be a proximate cause for the [abandonment] of the [millions of small particles], though it will contribute to that general trend. A bit more concern is given to the directly held value set for the [millions of small particles] within Terra as there are some cross connections over to the [super collider/CERN] which are supported by sets indicating that a [tire/ring] may [blow]. The data seemingly suggests that this Spring, the [CERN collider/reactor] will put a real flourish into how universe manifests [millions of small particles]. It is hopefully \*not\* going to involve the [BIG KARMA] as we all have

enough problems with more mundane things like rising ocean levels and sinking economies/food supplies. As karma is expressed in this universe as [the karmon](#), a very 'fine form of matter', we can but hope the doofi (plural of doofus) at CERN have a clue, and are \*not\* attempting to start smashing karmons together. Igor complains that his personal karma sack is quite full enough of the small particle kinds and that he just does not need any [big karma] coming into his life.

As we bring the ALTA 1308 series to a close, we note that the \*manifestation\* of events so far into 2008 does support our label of this as the Year of Manifestation. The appearance of a number of the temporal markers place us right at the edge of the bulge of the next 'bubble' of manifestations. As this next bubble pops around us over the rest of Spring, we cannot but note that the aware observer is getting the crap kicked out of them by the sheer speed of universe manifesting. The challenges we will all face in the next few years will easily be able to be traced to this point in our collective history in this particular Spring.

Universe creates the plot and assigns us our roles in the [great unfolding] of things, but it is up to us to accept the responsibility for our actions and our abilities. When we accept our roles, and commit ourselves whole heartedly to our part in the great unfolding of continuous creation of universe, we gradually become aware of universe speaking, that is, providing stage directions that the [good actor] can use to further their efforts to raise their performance to the level of excellence. Catching hold of [universe speak] can be difficult as universe is a subtle director, preferring (usually) to provide the greatest possible freedom for the actors to mature in their roles. It is this 'learning to take stage direction' which is at the core of zen, or the tao, and which is expressed daily in all human activities from cooking to cleaning to caring to growing to learning. It is easily visible in those humans expressing it, though frequently the actors themselves may be quite ignorant of their acceptance of universe direction. This harmonization with universe is at once a goal, and a state of being. When the state of being is reached, the goal is abandoned in its

realization.

Realizing this life-force/chi/ki expression may become more difficult to achieve, and maintain as we progress along with time, through the rest of this year. Yet the effort of attainment/maintaining this state of mind will be well worth the attention paid to those whispers of universe amidst the cacophony of caterwalling headed our way.

This ends the ALTA 1308 series of Reports. The remaining speculator slices will be posted by late Sunday, April 20th.

As details of the next ALTA series are developed, we will send out an email and provide a sign up link for those subscribers not yet seeking professional counseling.

merci, et bon ans.
