

Half Past Human presents

ALTA Report

Asymmetric Language Trend Analysis Report

'Changes in language precede changes in behavior.'

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

This report created from 23.865 million reads of the ALTA 1308 series.

03.15.2008

UPDATE: Markets/Populace/USofA - Pending Power Pandamonium PanUSofA. Brown Down Days

03.16.2008

Wonder why the price of diesel is rising faster than gasoline or other petroleum distillates? Well the data suggests that this is due to the [military/army/navy] purchasing large quantities of [diesel fuel] in anticipation of prices for light sweet crude reaching \$120/140 soon, as in this Spring. The aspect/attributes that we had in 1008 and earlier ALTA series reports which were interpreted as a [temporary for about 6/six months regional power outage] have now firmed up around the idea of [fuel competition] at an international level which brings about [steeply scaling prices] such that [magic/key/significant numbers] (*such as \$120 to \$140 per 40/forty gal barrel) being reached which [forces/causes] the [power generation facilities] within the USofA to go into [rolling blackouts] and [brown down days]. These are showing up in modelspace now as though there is some small level of [visibility] pending, but the main [visibility] summation increases do not show up until [summer], which is to say, past the June solstice.

The idea coming across is that a [key price] level is reached and [pandamonium] within the global markets is [launched]. This in turn causes such huge increase in fuel costs, both directly for generation facilities, and in the transshipment of fuel (coal, et al) that generation plants are affected nationwide. This leads to a [brief/temporary] period in which [military bases] are self-sufficient, but that within [6/six months] there is a move toward [national grid allocation days] in which the [civilian populace] in some areas is faced with [power rationing]. This is shown as a [hidden/obscured] way in which to provide the [military] with [power/electricity]. Though the data suggests it will not be [hidden] for long.

This is a reasonable intepretation of the totality of that data set now that we have the 1308 immediacy values and some of the shorter term values in place. A good temporal marker for the pending power pandamonium will be the threshold of the \$120 bbl price in delivered light sweet crude. There may be further information available as the longer term values are processed later in this run.

This is a price postive sign for other commodities and is seen as instituting wide spread [hoarding] as well as causing social disruption, and contributing to the general [diaspora]. Further problems will begin to propel a [state's right to withdraw from the national union movement] over Fall.

Meta Data - Extracts

Our modelspace is a 3/three dimension representation within an open source software CAD program called [Intellicad](#). The visual representations within that modelspace are used to create our crude 2/two dimensional charts of the emotional tension trends. With some difficulty we are able to extract large entity contributions from charts for cross comparison of what we call 'participation boundaries'. These

are essentially the level of emotional summations that an entity 'contributes' to the overall chart. As an example it is very illustrative to show the relationships between the total emotional trend line and the trend line for the same period which contains only the Populace/USofA and supporting cross links.

First we see the now somewhat familiar projection of emotional trends of building language with a sudden turn into release language in early October of this year.

[Link to charts](#)

Then a quick look at the extract for the same period from the Populace/USofA entity shows just how much this entity contributes to the totality of the language.

A cursory comparison will establish that a lot of the energy for the 2008 turn into release language is coming from the Populace/USofA entity. Further it can be seen that the charts created with more entities have a tendency to flatten out the emotional trend lines.

Press - O'Press-ion, Vippies

The imagery coming from the Press entity is not laudable to say the least. This is usually a smaller entity in the zoo that is modelspace, but within the last few weeks of data processing we have seen the Press entity experience something of a growth spurt. It is now gaining data sets at a rapid clip. The imagery that can be twisted out of the data is headed by a complex aspect/attribute set which we have labeled as [(the) intolerable (is) undercut]. This lexical structure contains [situation] at the primary level of aspect/attribute support which itself is supported at its primary level by descriptors for [intolerable/evil/

oppressive] and [limited]. The [limited] sub set of support goes to the idea that within the year the [evil situation/intolerable conditions] will be [bust]. This last is cross linked over to the Bushista entity and the Markets entity. The interpretation is that the [intolerable/evil situation] will go bust with the Bush delusional economy]. The data sets are pointing toward a near term [exposure] of the [oppression] by the [corporations] which [own/slave (the) press]. The descriptors are filled with imagery of [vampires/energy suckers] which are [draining] the [public life/energy] from the Populace/USofA. There are aspect/attribute sets which describe the [global populace] as [rebellious] and [hanging/lynching] some within the [corporate hierarchy] over the [secrets revealed] about the [manipulation] of the [global press]. This last is supported by data indicating that [140/one-hundred and forty years (of) history] will be [undone] with the [utterance] of a [single sentence]. This [fateful utterance] will apparently be coming from the [unexpected mouth] within an [officialdom press conference]. The indicators are for after the equinox, though as this is from the immediacy values, the implication is for not too far after.

The whole of the Press entity is filled with imagery of a [stink too long ignored], or more poetically, a [rotting corpse out gassing through all openings]. The data sets are suggesting that a [group], likely a [self-organizing collective] which has some associations with the [chinese] will be involved in the 'outing' of the [controlled press].

Apparently projected problems for the Press entity are also interconnected to some [disruptions] within ThePowersThatBe. The TPTB entity is heavily cross linked over to the Press entity with a [visible] majority of these cross links terminating in our sub set for [intolerable conditions]. The data set includes references to [beatings], and [whippings]. This last is filled with imagery going back to a time during the last period of economic/civil unrest in the USofA [populace] when [newspaper editors] frequently traveled with [guns] for personal safety. The data is now indicating that TPTB will be using their [security/mercenaries] in very [visible] ways to attempt to protect their

[asset], the 'American Press'. Their hope is to continue to employ [press ownership] to [oppress] the [populace] mentally during the difficult days ahead. This is a very key control mechanism and it is assumed that the 'owners' of the 'free press' of the USofA will put all their resources toward maintaining this [control mechanism]. The aspect/attribute sets accruing at the detail levels are continuing to build around [incidents] in which 'members of the press corps' are [assaulted] in [public areas]. This will lead in very short order to the top tiers of the [reportorial staff] being [sequestered/sheltered] behind an ever growing [army] of [mercenaries/bodyguards]. Again, the data sets are indicating that such action merely delays the inevitable as the [end days] of the [intolerable situation] are becoming clearly [visible] as each day passes. This area participates within the [duality], and [conflict], and [restrictions on movements] meta data layer, as well as providing direct support for the [rebellion/revolution] meme.

The Press entity also contains references to a trend of [radicalization through language] which is being [planned] during these last days of [winter]. This [planned language control shift toward radical emotional extremes] as the aspect/attributes would have it, is *not* being set up by TPTB, but rather by some 'other' agent/group. The idea coming through the data sets as the Press entity is progressed through Winter and past the Spring [equinox] is that this 'group' will start to [thread] some [new meanings] and [imagery] into the [mainstream media] via their [knowledge/gnosis (of) technical video distribution]. The interpretation is that the [group of unknown video radicals/pirates (vippies?)] will be [visible] to the general public, but not at all understood. The deeper meaning of the meme propagation will be [visible] to the aware observer as they will note certain forecast memes spreading within the [video] streaming.

The Press entity is suggesting by inference that the [vippy movement] will take TPTB by surprise. The cross links from the Press entity over to TPTB find termination in a number of areas with either direct [surprise] or [startled] aspects. These also include supporting aspect/

attributes for [rejection], and [dismissal]. The Press entity, its movement through modelspace, and its cross link growth patterns would argue that [dismissal], and [denial] of the [manifesting soc] of the 'vippies' will be the completely wrong tack to sail.

GlobalPop- Iran Raw, Flaming Nests, All Awl

The raw setup of the data. What we have done is to collect the primary aspect labels with their primary supporting attribute labels and to present them as simple declaratives. Please note that this is a very raw presentation of data. It is not intended to read as complete sentences, nor to be interpreted absent the nuances provided by the relationships of the various entities and their movements through modelspace. The data sets presented below represent a 1/one time capture, or snapshot of the positions of the GlobalPop entity's aspects/attribute sets associated with the descriptor set for the country of the [farsi speakers], or [Iran/Persia]. These data sets *DO* change the instant that modelspace is thawed from its momentarily frozen state.

The data presented below is to provide a view of what the interpretations are based upon, that is to say, where they start. It is not intended to represent the 'end' state of things, nor anything more than a collection around the Iran context from which interpretation can begin.

All that said, it is a *very* interesting set of aspect/attributes given the recent and visible doin's within TPTB.

{Beginning of Raw}

Mountains. Mountains with rivers on the far side. The place is far from the river. A long distance to go. Making a long journey to get there. Chinese are involved. A bar(alcohol) in the house. Saying something foolish and rash when drunk. {cross link to -evil sub set within Press entity} A man who steps on (land) tortoises/crushes small things (for pleasure). Sound of a tortoise's back/shell breaking, has the same sound as the [return of (one's/person's) soul (through the) barrier]. The person (of interest) returns. She (the female personality uniting) is aware, and actively observes. Moon at half, and hidden by clouds. Chaos troubles the times. The resignation (a headdress/hat(with emblems) on the

withered tree branch). Resignation from the post (leaves/produces). A person drunk/drinking under a tree, actively enjoying (himself) in (his) way, no matter what others think. A person drinking under the tree, rain, potential for drowning, drunk.

A leopard (spotted predator) breathes in silence. The south mountain (is) significant. A symbol shown (directing) to the way. A person stumbles, but shuns evil, and recovers before spewing bile.

Double mountain ranges. Out. Official theft/steals. Hiding officials/scared/fear. A search underway. Something lost. Heart/fortune found between a herd (in the forests), and a herd (on the plains). Wealth and riches. Gold/silver coins in piles/quantities (at risk/payment? bribe).

The month of May. Earth rising. Joy crushed. Mistake. Armies set marching. Israel miscalculates. Gasping lungs, harsh/dry mouths cry out shame/sins/betrayal. Knives (in the livers) of chieftain/officials. Helpers are obtained (for the work) of sopping/mopping/drying (the) blood. Drying sacks of skin scattered (on) roads/paths. Dry hills, dry (corpse) leathers. Visible (from) altitude.

Not a whole day passes. Rigid with drink. Turgid. Engorged. Throwing energy away. Moving blindly. Caution: Move only when timing is right. Circumstances (failure) not supported. Disappointment. Looking upward brings failure. Who has (moved first) initiated suffers defeat. 82/eighty-two years...4/four generations suffer. Failure to join the group in time. Left behind. Wastrel. Hesitation. Demise. Israel (repeated reference) relying (upon the) criminal/wastrel. No clarity. Demands exceed supply (oil/energy). Stability at risk (of rupture).

Officialdom ill and weak, but does not die. Fatigued populace. Populace ill. Populace weary, crying (in) pain. No energy (to) combat oppression. Rash movement ends in failure. Return dominates [spring + 1 = late April through May]. Enforced waiting. Doctors involved. Long illnesses. Good doctors (required). Delusion (by) enthusiasm. Social position falls (to the lower caste). Unlucky (to be seen) in public, flaying, burning, hanging. Speakers/announcers stabbed (with) small points. Tongues jabbed. Fingers bent. Bad eyes seen (in/on) video. Denial lies tongue.

Changes seen. Nothing serious is lost. Wonderful plans (from officialdom view) great times (from officialdom view). "Warm weather warriors". Nonsense (returns) to (urinate/expectorate) on the (upset) face (of) officialdom. Cold/old/dead warrior changes time. Time yields (to the) right/prescient_knowledge. Movement. Abandoned to passions, discovered turgid/engorged and drunk. Needles involved. Found (on the) bottom (of the sea), lurking danger, hidden defenses.

{End of Raw}

As may be observed, the data set *looks* as though an argument towards interpreting toward an 'iran war' does exist. However, noting that this is but a peel of the many layers of onion skin around this entity, and that the entity changes the instant that modelspace is progressed, the interpretation becomes a whole lot less certain. Does it mean war?

Placed within the actual manifesting reality of 'resigning admirals', and 'whining israelis', and given the stated desires of the Bush(istas) for a war with Iran, and suspecting that there are many and hidden pressures within/on Bush for a war, it does appear that at least the GlobalPop entity projects a probability for a war. It does so with some timing clues, suggesting that [hostilities] may begin 1/one lunar month (or so) after the vernal equinox, which would be late April, into early May. There are also some further indications that such a time frame is being [contemplated] in [officialdom] circles, though these come from the Populace/USofA entity, and are not exclusively focused on Iran. This last is to say that there appear to be several threads in the works with an early May timeline for [visibility]. These threads all have [control] and its complement/opposite of [revolution] as dominating or rising aspect/attribute sets, and these threads are all reaching their maximum [visibility] in the global mediastream before the middle of May. Soooo. What does it all mean? Perhaps Sorcha knows, but we regular humans can only guess.

If we focus on the changes within the GlobalPop which appear in May within modelspace, the first of the sets to attract attention is of [3/three stars/positions]. This set is cross linked over to the Bushista entity where it further has cross links back to the [israeli/zionista] sub set of GlobalPop. These cross linked areas are dominated by the rising aspect of [material desires]. This aspect/attribute set has [platform], and [fishes], and [officialdom] as its primary supporting aspects. These in their turn contain support from [ship(s)], and [monkey], and [streaming/flowing/money/wealth]. The data set for [monkey] is filled with aspects/

attributes in support of the [monkey mind] concept, and in this case shows that the [monkeys] are [spiraling] in on each other, until the [mind] is [consumed] by [(its own) delusions (of itself)]. As a lot of this imagery comes from the Bushista entity, this is *probably* not too good of a sign.

The supporting sets contain a repetitious aspect/attribute set in support of all 3/three of the primary supporting aspects. This set contains imagery suggesting that [nourishment/food/sustenance] will be [withering] as the [summer] proceeds *if*, and that is a big *IF* the Bushista's go ahead with their [material desires]. The data indicates that what [now/current flourishes] will be [withered/shrunken/reduced/desiccated] when it [reaches/arrives_at (the) extreme]. This lexical set is itself supported by internal cross linked areas over to [lost money/currency] which is a very large set that appears in late June, just before the [summer solstice] and the grows rapidly to totally [dominate/eclipse] most other memes within the GlobalPop over the course of [summer]. Hmmm. Now that likely won't be good for tourism....(see previous discussions in this series).

The data sets for the [3/three stars/positions] include support for [danger], and [travails/hardships/worries], and [hunger/thirst/fasting]. No 'package tour' the [3/three stars/positions] sub set is supported by imagery of a [trip/travel/travail] to [dangerous climes] in which [carriages] are [covered/hidden], and [conditions (are) obscured]. There are plenty of [manifesting karma/return/consequences_of_action] support for all of the [positions/stars_mark] linguistic sets. These include [petty things/people produce problems], and [trickle (of) knowledge (leads to/induces) exhaustion (in the) weak willed/minded]. Further support provides images of a [young servant] with attributes of [loyalty] which bring this [servant/student] to [international prominence] by virtue of [virtue]. This sub set points to the [collapse] of [relationships] which have been based on [money], and which had been used to [force underground] the [cult/organization (of the) [awl](#)]. This [cult] designation *may* be misleading, and *may* be

deliberately so in that the [awl] sub set really seems to be describing a [self organizing collective] built around a particular [persistence of view of universe]. It does NOT represent nor have any supporting sets for [masonry], or other [hand tool] based descriptors for [secret societies]. Also the aspect of [secret] does not appear within the descriptor set for the [cult of the awl]. Rather the [awl] sub set itself is primarily composed of descriptors for [small boat sailors], as well as [fishermen/local_boat_based_social_groups]. There are also many cross links from this [cult of the awl] sub set over to the FuturePop entity which is still forming and shows within the very far distant longer term value sets as becoming visible post 2014. Some of the linguistic descriptors, about 45/forty-five percent, for the context of the [cult of the awl] can be found in the Dmitry Orlov writings on the [The new age of sail](#).

Markets - Too Cubed, House Fire, Ashless

As may be expected from recent manifesting circumstances within the [markets] globally, things *just* ain't right with [money] these days. As we had noted in 2006 and 2007, the 'year of manifestation (2008)' would catch people unprepared for the [rapidity] with which events can manifest. The discussions had touched upon an [adjustment] issue which would affect people's [cognitive ability] as a result of [reeling under the onslaught of events]. The aspect/attribute set for this [cognitive lag/adjustment] effect is still building. The implications are for [markets] events to [move so rapidly] that a [large wave] of [disconnect/lagging reactions] sets in across the [money manipulation] sub set of the social order.

A significant part of the [reeling/peeling_of_mental_layers] will manifest as a result of the [commodities] and the [hyper inflation] within the realm of [real goods/material]. The data sets have explicit [double] aspect/attribute set supporting the [gold/silver] component of the [precious metals complex]. For those who may care, be advised that our data does *not* support the total [platinum metals group] having

the same movements as will the [gold/silver] sub set. This is due to the trend for [gold/silver] toward becoming actual [currency/money] again on a global scale. This trend does not show for the rest of the platinum metals group.

Within the [double] sub set at the primary level are indicators that the [decoupling] shown now for 2/two years in the ALTA reports as affecting the relationship between [gold] and [silver] will begin to manifest this [spring]. The indications are that the [decoupling] will be increasingly [visible] as we pass the [equinox]. Please note that the [decoupling] will be in existence first within the [emotional trends] of the [populace] before manifesting within the [dollar price structure] for the metals.

The first of the [double] aspect/attributes encountered has extensive cross links over to the Populace/USofA, and to the Press entity. The [visibility] value is high, and the implication is that the [mainstream media] will have a series of [silver reporting] days which will [fan] the bespoke [fire] under the [prices] due to [emotional response]. The data shows that a bespoke [fire] period is coming for [silver], and to a lesser extent, [gold]. While the data shows both metals participating within the [internal fires] of [demand], it is also clear that [emotional fires (for) silver] will be significantly more discussed after the [equinox]. Noting that our timing is a weakness, we may see the stories within the global mediastream slightly prior to the [equinox] as well. The majority of the [emotional demands] for [silver] do not accrue to the lexical sets until mid Spring, in April and May. At that point we have yet another appearance of a primary supporting aspect of [double]. In this second instance of the [doubling (of) internal fire/demand/desire (for) gold/silver], the ratios of difference between gold, and silver relative to the emotional demand increase. In other words, the data sets are painting a picture of a wave of [minor hysteria] over [silver] which will occur in mid Spring. During this second [double] of the emotional demand, the data sets are indicating a global level of [disgorging] which will bring *some* [precious metals] back into the system, *but* the data sets are

also showing that the levels of disbudding will be far less than what is needed to [quench demand]. And following this near month long process, we get yet another instance of [double] actions within the [precious metals].

Please note that the description above is also heavily cross linked to the [death of the dollar] meme, and as such is placing a more extreme view of the circumstances than may be seen outside of the USofA.

We have several supporting aspect/attribute sets under the [gold/silver] sub sets which are directly held, or cross linked references to the [death/destruction (of the) oppressor/evils]. These areas themselves are supported by [end (of) cycle], and [success (in) persevering/continuing]. The interpretation is that the [press] will be [damaged] about the time that the [silver/gold] as [money] meme begins. The interpretation is going toward [something (vile/evil) ending] simultaneously with [something/new_trend] beginning which is supported directly, and repeatedly by the aspect/attribute of [good/bene/bona].

The [silver] supporting data sets include aspect/attributes such as [long trail/work/planning] is [now] in its [beginning/initiation] of the [following/walking/traversing]. This area further contains support for [walk/follow (it/path) directly], and [no short_cuts/cheating] is [possible]. The data down further in the aspect/attribute set goes to [success/promotion/furtherance] will be [visible] as [footprints crisscrossing (multiple times) (in the) ashes (of the) past mistakes/burning]. Also note that the [silver] sub set (as well as gold, but more so) has supporting internal cross links from the [fire] aspect over to other areas of [markets] indicating that what [propels/magnifies/increases] the [precious metals] is shown as [acting as fire/burning down (the) corrupt/defunct/morbid] house of [paper debt].

The timing clues presented show that [double] will be the 'word du jour' in April relative to [silver], and that further we will see [visible]

evidence of it coming in the [healing arts/health care] as [medicines] begin to [encounter scarcity] as the [silver] used in their manufacture starts impacting both [price] and [availability]. The data is seemingly offering this tiny clue as the last temporal marker prior to the appearance of the [double] word and silver demand.

While the data sets show [gold] as being the [highest good fortune], there are numerous cross links over to the Populace/USofA indicating that the [populace] will be [too/extreme poor] to afford [gold], and that the [decoupling] with [silver] will represent a [heady rush/drinking_binge] for a number of otherwise [impoverished persons]. The [gold/yellow_demand] will drive more words on the global mediastream than [silver/white_demand], but once the [double] aspect manifests, even [gold] will take a backseat to its [poor cousin] albeit temporarily.

We note also that there are words of caution or advice appearing within the primary [fire] aspect for [gold/silver]. Some of these supporting aspect/attributes caution that the [fire] will be [brief], and will [die down] with almost the same rapidity with which it erupted. The interpretation being that this [dying down] of the [demand flame] will be a localized phenomena within the [populace/usofa] as the [conditions] affecting the [dollar] worsen over [spring/summer]. The data sets are pointing to a [summer collapse] of the [last vestige] of [value] within the [dollar]. After that, the [silver/gold] sets take on an entirely different context as they become, in effect, money here in the USofA. These data sets are appearing very close to our October release language appearance.

Within the release language of October, and located within the longer term value sets of the last 2/two ALTA series as well as the longer term sets processed from this series, we note that the language describes the period as a [zenith] from which [every thing else/rest of life] is [downhill]. The aspect/attribute sets include [great (golden) goal] which has been [striven_for/desired/sought_after] is [reached], and is

described as [magnificent]. It further progresses into October though and the language goes to the [sudden realization] that the [height of happiness/good fortune] is also the [most impermanent] of [time], and that nearly [instantly] the [reality] of [depression] appears as a [sober cloud/mood] as [realization dawns] of [great loss]. This area includes support from cross links to the Populace/USofA and the GlobalPop entity where they both have [weeping] as common terminating aspects. The [weeping] is described as [lasting/persisting] for [2/two generations]. A definite caution from the data to observer that all aspects, once reached, contain the seed of their own next change.

Returning to the immediacy and shorter term value sets, the indicators for [spring] and [summer] show that the [doubling of fire] under the [precious metals] will be [fanned] by [winds] at all levels. The [conflagration] which [propels] the [metals] into the [sky] will be [fueled] by the [consuming fire] which is described as [eating paper (debt)/currency]. This is a [duality] based sub set which points to some persons on the planet being [swept] into [new heights] by these 'winds of change' as their [small hoards/caches] of [silver/gold] will make them [local princes], at the same time that [vast numbers] of [unaware/unobservant] humans will be [beggared] by the [systemic breakdown]. There will, as may be expected, be social order ramifications to the whole of the [economic debacle/denouement] now manifesting.

It needs to be stated that currencies have collapsed before, but never in history have we had [digidollars]. These may well make this the most efficient collapse in history as they will go poof as the electricity is turned off, not even paper to burn, nor ashes left.

Conclusion: Part Two - Chortles, Dead Horse Party

With the manifesting crises in global markets arrives a very unique window for those aware observers focusing on the faces of the

propagandists. The many members of the establishment press are *not* having a good time. The systemic breakdown has caught them with their talking-points down, and they are seemingly receiving guidance/orders from above which are conflicting with the reality manifesting for their viewers. Many of the upper echelon of the press are now becoming aware of the cognitive disconnect between their propaganda and the developing universe. This dimly dawning awareness is being expressed in their lexical shifts. It has provided Igor with a few chortles as he contemplates the forecast that the propagandists in public media will be [frightened], and [followed (by) derisive mobs], and other manifestations of their karmic burden.

The way in which the Press entity behaves over Spring and Summer suggests that many of the visible temporal markers will come from the [press/propagandists] themselves. The implications are that each of the large shifts in social order which will manifest across the planet this 'hot season' will be preceded by major [shake ups/purges] within the ranks of the [propagandists]. Only after the malcontents, and suddenly mentally dysfunctional members of the group are removed will the next level of the [officialdom version] of the daily crisis be 'read'. The interpretation of the data sets across modelspace suggest that by Fall, not a whole lot of any given populace will care much about the [officialdom version] of anything. This will become increasingly true here in the USofA as we work out our collective [revolution angst].

Other things 'working' out of the system will be centrally focused onto [economics] through Spring and Summer *except* for the Terra intrusions (natural disasters) *and* the forecast [contact] meme acceleration showing up in SpaceGoatFarts now. Along with the [natural disasters] of [spring/summer 2008], the forecasts include [riots] over [housing] and [food], as well as the [energy/oil melees] of later in [spring]. Akin to 'road rage' these episodes of [uncivil/violent] behavior are also a good temporal marker as they are the first expression of the emotional wave that will call for [instant/early elections] in the USofA.

The indications from the data sets are that McCain, as the de facto Republican nominee will have reasonable Spring and early Summer progress, but that the first of his [mounting troubles] manifests around July 6th to the 9th, and this episode escalates up to about the 20th of July. Then the seeming [simmering] of the [stew] of minor [troubles] will [erupt] and begin to [weaken] the whole of the Republican party, especially that section identified with McCain. As this is beginning to emerge, the response will be to 'shove a spine' into the 'old man', which produces a very 'aggressive' and 'belligerent' McCain over August. Then some [information] and [media attacks] in early September seemingly coincide with a [sudden health crisis] for the 'candidate'. At this point the data sets are pointing to the word [candidate] associated with the [republican party] as having undergone a swift change to a [euphemism] for [unviable/dead_on_arrival]. The longer term data sets accruing now for the month of September 2008 are coming in (with California associations initially) which show that [crippling] and [mortally wounding] [accusations/blows] are being [received] by McCain such that he is effectively *not* even expected to win among [republicans]. Much of the language around McCain in September, and October includes support from human body part descriptors which themselves are supported by [wounded], and [crippled], and [illness] aspects. An interpretation of the data must include the idea that a potential exists for the [stressors] of the [crippling attacks] to also be actually [crippling] given the [fragile] state of McCain's health. This area also goes to support the 'calls for early elections' forecast from previous ALTA reports. The idea being that 'everyone' knows that McCain is a 'dead horse candidate' who is merely 'filling the slot' as the 'other' is clearly to 'triumph'.

As the crises of 2008 mount, the data sets continue to accrue lots of longer term values in the various fields around [duration] and [intensity]. Seemingly the rest of the year will be an increasing emotional roller coaster ride with a hell of a drop at the end. As we contemplate the days ahead the faint sounds of munching emerge from the recesses of the kitchen acting as a warning that in a chaotic universe

it pays to know where your pies are...

###

Part Three is anticipated to be posted by Sunday, March 22. We expect the Part Two Speculator slices will be posted by late Sunday, March 16.
