WARNING: This report is not for the faint of Heart. Very nasty stuff follows that **WILL** impact your consciousness in a negative manner (at least at first). And may affect your health. **BE WARNED NOW!**

So make a decision now to **NOT** read this material any further if you have any health or consciousness problems that may weaken your bodily systems.

NO BULL HERE! VERY SERIOUS WARNING!~

DO NOT READ FURTHER IF WEAK IN HEART OR MIND!

Stop now and make your decision. Refunds are available on request.

Disclaimer of Methods

The predictions herein are produced using our radical linguistics method that has been in development and production since 1997. The data sets employed are a result of the data gathering begun in October of 2008.

Conventions employed in this interpretation.

Within this document, words or phrases that are enclosed within square brackets [example] are extracted from the data presented in its more raw form. Words, not delineated in other ways, and that surround such bracketed words or phrases are used to place the marked word/phrase in context. This is to say that there is a deliberate attempt to present the information in as coherent an essay format as is possible, given the complexity of the subject matter, and the process involved.

Disclaimer of the Extremes

The process employed to produce the ALTA reports seeks out emotional associations with words in common use on the internet. As a result of the nature of emotions, it is easier to find and identify such words that are associated with extremes of emotions. Thus there is an in-built artifact of our production that will always tend toward the most extreme ends of the emotional range. Further, it is easier to identify words associated with negative emotions than with positive emotional states, therefore, again, there is an in-built artifact within our processing which tends to focus on the more extremely negative range of words.

Disclaimer of status of knowing

This document presents forecasts of trends and predictions based on radical linguistics that are derived from a process of invention. This invention process is on-going, and self-transforming. This invention process is inherently flawed at so many levels that it discussion of the discrete problems is beyond the scope of this presentation. The reader is cautioned against the in-built process in humans to 'believe' the written word. The information presented herein is at best a very poor process of mapping the collective consensus reality and some small amount of the changes that it manifests. To restate this premise: it is our understanding here, that each viewing of the future, changes the future. Usually these changes manifest in unanticipated ways. Likely this is due to universe favoring 'surprise' as a method of keeping consciousness awake and slightly jittery.

To repeat this in other words:

Do not assume we know what we are doing in the presentation of this material.

Always discount the information presented as it has an in-built error toward the most extreme connotations available in language and trend interpretation. In yet more words, the information presented uses words that presume the worst-case for future manifestation of the collective consensus.

ALTA Disclaimer

The text of the last of our subscriber 'runs' is included in this presentation. The following disclaimer applies to all the text of this document, with special emphasis applied to the text of the ALTA reports.

Note that this report is offered for entertainment only. Any resemblance between the events portrayed in this report and any developing reality is purely coincidental and in no matter represents foreknowledge on the part of the authors of this report.

Note that the results presented herein are derived from humans expressing themselves on the internet. As such, emotional values and the words used to express these emotions are being sampled and interpreted here, not the future. Any resemblance between this report and future developments is entire in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy, or lack thereof, in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment only analysis demonstrate themselves incapable of rational appreciation of reality, and the Authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

Meta Arts – Beyond Linguistics, Why Hyperchronism exists

It should be apparent to all except the TeeVee befuddled, that planet Terra has entered a period of crises. This arises at the same time as the [failure/collapse (of the) anglo-american corporate empire], and the rise of the [potential] for a [mass awakening (of the) global populace] to trigger the first halting steps toward a [type one civilization] .

http://en.wikipedia.org/wiki/Kardashev_scale

The spread of the crises descriptors is broad, and disturbingly deep. In all of modelspace, there are no crisis descriptors for any problem that will be an easy fix. The crises period that terra and its lifeforms have now entered will be around for a while. There may indeed be solutions for many of the crises now emergent and pending, but the nature of our linguistic view from the totality of modelspace progressed across the upcoming months shows that any solutions proffered now may well be lost in the froth of the chaos of yet-more-crises emerging into omnihumanity reality. The linguistic view also indicates that most of the crises do have technical solutions, but alas, there are politics and politicians actively blocking the way. The relationship between humans and energy sources is a good example. Perhaps the single largest crisis in play is human energy use on planet earth, and it is rapidly growing, yet this crisis is probably the easiest to solve. And as had been forecast, **is** being solved, with the technical solution having been labeled [the new electrics] in these reports.

The first of the [new electrics] is appearing in both the ways forecast in the ALTA reports of these last 3/three years. The devices making the news now are manifesting as forecast, and perhaps even more exciting are the several over-unity patents being granted in major (non-american empire) countries. This [crack] in the [power structure] has been forecast to begin over this past Fall, and to [flower] in Spring and [bear (productive) fruit] in late Summer, or early Fall (2010). However, the politicians as minions of TPTB, who make considerable power (political/human control kind) out of oil, stand squarely in the way. Further problems (so it would appear) for the energy solution appear in the background of human activity and other problems of the times. The appearance of these new [over unity energy generators] will occur during a period of increased [intensity] of [economic crisis] across the globe. Also in the background of the release of the [over unity devices] will be huge levels of [social disorder] and [climate change] planet wide. So it looks to be a busy year ahead by any and all measures. Best to think beyond the linguistics into scenario planning for your particular circumstances.

Hopefully the document below will assist in providing perspective and range for your noodling on the future. As with all of these reports, the language can have a profound impact on the emotions, and a proper warning for lots of pies, and multiple naps is hereby issued.

Why Hyperchronism exists

A continuation of the concept of the [new electrics] points us toward the 1953 to 1956 [breakthrough point] for the [shadow (black ops) government/space alien reverse engineering]. At some time in those 3/three years, the [shadow world] was able to successfully establish what is known as [free energy], or [electrogravitics] as a [functional technology]. In order to explain what is occurring out-and-about, or [in the wild] as the [shadow world people] refer to universe in general, it is necessary that we take a brief excursion into [time control technologies].

Imagine that universe is an ocean in which a component of the 'water' is its relationship to time. Within the ocean, time is smeared more or less evenly across all of the water. Then along comes intelligence (and the occasional smart human), and technology is used to create a [magnetic bubble] in the [universe ocean (aka Dirac Sea)]. Within the [magnetic bubble] some of the ocean's water is trapped and thus in a sense, is [isolated] and subject to influence from the bubble itself. Make sense so far?

Ok, so now the bubble still exists within the [universe ocean], and thus is still subject to the [flow of time] as is perceived by those of us also within the [universe ocean]. So in this sense, nothing is really changed, the bubble and its contents float along with the rest of the [universe ocean experiencing time]. Though, it turns out, we, which is to say, intelligence (and the occasional smart human) can use our technology to alter the properties of our bubble, that is to say, we can affect the qualities of the bubble material itself (of course we remember that it is just a magnetic containment vessel really). In our example here, what we can do is to make our bubble 'denser' to time, and thus restrict the amount of 'time stuff' that gets through the bubble's time permeable membrane. In this case, the contents of the bubble would have 'less time' coming through the bubble skin, and would, while in the bubble, experience time at a much slower rate than the rest of the universe ocean. In this case, such an effect might be used to 'slow down time' within the bubble so that a class of chemistry students would be able to watch a chemical reaction take place in 'slow motion', though of course to

the reaction itself, it would still be happening in 'real time'. Confusing? Well, hang on a minute....yet another time reference...anyway, imagine that same bubble, only this time we alter the skin to concentrate lots of 'time stuff' inside the bubble. And this time we put radioactive waste in the middle of the bubble, say something with a nasty one million years danger span. Then we tune our bubble, and concentrate 'time stuff' inside it the way a magnifying lens concentrates sunlight, and within only minutes of 'our time' on the outside of the bubble, the radioactive decay process is complete, and the waste is then safe. Tres cool, eh?

However, of course there are tons of real universe affective side effects that need to be considered. At the moment, we are only considering a single effect, and it is what has accounted for the escalating instances of 'hyperchronism' that are being experienced by humans across the planet over these last few years.

Returning to our bubble, let us note a couple of points. This is NOT time travel, nor can time travel arise from this technology as the bubble is still within the universe ocean and it is still experiencing time with the rest of us. And we note that as soon as the bubble is removed, the contents are once again back in the 'time sea' with the rest of us. So no time travel. However, there are very seriously interesting side effects involved. One of which is that when the bubble is created, and time is altered, for a very brief instant, the contents of the bubble will, from the perspective of those of us outside the bubble, disappear. This [vanishing act] is due to the instantaneous loss of all mass, including the ability to [reflect light]. Now the really cool part is that when the contents have lost their mass, albeit extremely briefly, it is possible to have the bubble travel great distances with almost no energy being involved. This is due to the absence of any mass to have to shove about in space. Again, very cool. So merely creating the bubble (and knowing how to control it) allows for travel beyond 'time stuff'.

Now to the matter at hand. The existence of the [hyper chronism] experience that humans are reporting across the planet. This experience is real, and is not a mental quirk nor sign of dementia. Rather the [hyperchronism] results from yet another side effect of the creation of the bubble. Many people, sailors, pilots, even hard disk drive designers are familiar with the 'bernoully effect' <http://www.grc.nasa.gov/WWW/K-12/airplane/bernnew.html> , in which 'lift' is generated by the shape of the thing that the atmosphere must pass around. Well, in the [electrogravitics] view of the world, there is also a

‘bernoulli effect’, only in this case it is the ‘lift’ effect of the ‘waters’ of the [universe ocean] having to pass around our bubble floating in it. As these ‘water molecule’ pass around the curve of the bubble, a certain ‘lensing effect’ http://physics-edu.org/lensing_effect.htm is created which in its turn is the actual causal agent that brought [hyperchronism] into existence.

As an example, let us use George Ure as our ‘water molecule’. In this case, George Ure is speeding down the empty county road near the supposedly shut down super collider in Texas. As he reaches the bend in the road, the workers underground in the super collider switch it on, and create a bubble in the time stuff of [universe ocean]. Now George and his red Mercedes are not within the bubble, but he is just within the range of the lensing effect from the bubble membrane. So as George Ure zips around the bend in the road, he is also zipping around the bend of the bubble membrane and happens to transit a distance of altered ‘time stuff’. In this example, George and his Mercedes happen to get a concentrated dose of ‘time stuff’ and George experiences [hyperchronism] as, while he travels barely a quarter mile on the road, the rest of local universe experiences nearly 2/two hours of actual time passage. So George pops out of the lensing effect a paltry quarter of a mile away, but is mentally stunned as the sun is nearly ready to set (it had been late afternoon just a perceived ‘minute’ ago!), and he has no flippin’ idea as to just what the hell has happened or where has his 2/two hours gone!?!

Of course, the [hyperchronism] could just as easily expressed the other way for George, and instead of missing 2/two hours, he could have ended up transiting a depleted layer of ‘time stuff’, in which instance he would have come ‘round the bend’ in a millisecond of perceived time, and feeling it. In this form of [hyperchronism], the impact on those within the experience is that they have no ‘missing time’, but rather that the rest of the world is what is out of kilter. It appears that they have ‘sped up’ or that the rest of the planet has gone into slow motion. They would experience several days (or more) passage of time while [external motion] becomes perceptively excruciatingly slow.

Now, let us return to the ‘real world’, and note that most experiences of hyperchronism are not that pronounced. Indeed, these episodes appear to be much ‘smaller’ in duration, feeling almost fleeting, but still within what the perceiver considers to be a ‘real world’ experience. What makes the [hyperchronism experience] a really interesting phenomena is that multiple

people are frequently involved, and at multiple levels of the phenomena. As an example consider the story of the fellow going into the big box store in the SW of the USofA. The details of the where and when are not important for this example. Our experiencer, let's call him Patrick, parks his big ass truck way out in the parking lot where it is easy to find a space. Mostly the lot is empty, the day is hot, and there are few shoppers out. Patrick gets out of this truck, turns, hits his remote locking device, and the [hyperchronism] experience begins from that point. When Patrick turns back to walk into the store, he observes casually that there are 4/four cars in the lot. He walks past the cars in the lot, and sees NO other humans whatsoever, either in the lot or exiting the store. This particular store is built in an older commercial building and has the older style of pressure mat triggered self-opening doors. Patrick stares at the door as he walks up to it, lost in thoughts about how technology has progressed. The door is closed (air conditioned store after all this is the SW on a summer afternoon) and Patrick is just about to put his foot down on the mat when the opening of the door attracts his attention. Patrick almost falls down as his brain does a major disconnect. Standing right in front of him, so close as to be breaking personal space boundaries, is a man who is just 'suddenly there!' between Patrick and the door, and obviously on the pressure mat with the door open. Patrick's mere presence also so startles the other man that he walks into the door itself, bashing his head a bit, rather than the opening. Both he and Patrick more or less stumble into the store, and a brief conversation ensues in which each man tries to figure just what-the-hell-is-going-on. The other fellow tells Patrick that he could have sworn that no one was behind him, as he had had to slow down to let the woman with the stroller who was leaving the store walk between him and the door. On hearing this, Patrick turns and steps out of the store. He is met with a startling sight. There is a woman with a stroller about to get into one of the now nearly dozen vehicles in the lot. Yet, barely 1/one minute ago in Patrick's experience of time, there were only 4/four cars and no people. Now there were over a dozen cars, and several people in the lot.

None of which makes sense to Patrick. Further, on examining his watch when he finally shakes off the hyperchronism mental effects, and completes his shopping, Patrick discovers that his watch is now nearly 12/twelve minutes slow. Hmmmmm! Something is happening here, what ain't exactly clear. On talking with the fellow he nearly ran down in the doorway, Patrick discovers that his watch (unlike Pat's) has gained over a half an hour. Hmmm....murkier and murkier the mud gets.

We can speculate that Patrick and the other people in that SW big box store area were subjected to the lensing effect of a transitory electrogravitics device (aka UFO), and they experienced the [time wash side effect (TWSE)] that we have labeled as [hyperchronism].

There are other devices that may also produce these [time bubbles]. Some of these are operating now in a laboratory near you (same planet is too close for comfort). These laboratories are studying [time control technology] as well as [electrogravitics] and [standing wave fields (aka torsion fields)]. Further, there are **probably** industrial processes already in place employing [micro time control features] {ed note: including ‘room temperature smelting’} that are also causing the [hyperchronism] effects. And let us not forget the Norway Spiral....output of a [hyper dimensional device] that may well [throw lensing effects]? Hmmmm. I wonder.

As a last note, since this is a radical linguistics site, it is recognized that our [hyper-chronism] label is also being applied to instances of [hypo-chronism]. It is however a label in this case, and not the descriptor. So mox nix, either hypo or hyper are being labeled as [hyperchronism] in these reports unless it is pertinent to the description of the effects.

Meta Data - Gaps

The data sets around the 2012 Mayan calendar end date of December 21, have had a curious ‘gap’, that we first noticed in perhaps 2003. Upon seeing the gap initially, the thought was that it was an artifact of processing, that is to say, an ‘unintended consequence’ or ‘side effect’ from the manner in which our temporal associations are placed within the lexicon. Over this past year, a thorough examination of the code allows us to conclude that this is not the case.

The ‘gap’ in the data is a structured loss. This is to say that the gap always appears in more or less the same location. To explain, the data gap maintains its temporal consistency in spite of the shifting of the data types as we progress in time.

2003 – gap in the very long term data types
2005 – gap in the longer term data type
2009 – gap in the long term data type
2010 – gap in the shorter term data type (far edges)

2011 – Will the gap show up in the main body of the shorter term data type?
Early 2012 – will the gap show up in the immediacy data?

The data gap maintains its consistency in that it always is centered between the temporal boundaries of March of 2012 through to the end of May in 2013. The totality of the data gap is not reached until late in Summer, perhaps early Fall in 2012. The data flow does NOT resume as normal thereafter.

While there are data points that show up past the gap, these are statistically insignificant to the present data flows.

Huge Caveats Here!

Note that there are some seriously huge caveats in our work. First is that the longer term data has ALWAYS been at a very low level of granularity. Thus it is actually to be expected that longer term data sets would ‘trail off’ into near nothing, especially when viewed from 2003. Second caveat is that we are frequently wrong about the details of how reality manifests, so while we will get the larger themes correct, we can get the ‘causes’ for specific language 180 degrees out of phase. As an example, we had the ‘wounding’ language associated with the former Vice Dick Cheney. When we saw the data, we ‘naturally’ interpreted it to mean that the Vice Dick was to be the recipient of a wound. Of course we all remember that it was the reverse and that the Vice Dick was the person inflicting the wound. So we can get such details round the wrong way due to the inherent ambiguity of language.

The Good News

The absolute good news is that the planet is NOT at risk from any events manifesting in 2012 or beyond. Repeat, the planet is NOT at risk.

Of course civilization and all of humanity is at risk, but that is a minor issue compared to our deep fears for planet earth. Whew! Dodged a bullet on that one.

Since we have at least a small investment in global civilization and all of humanity, it makes sense to examine the data sets just prior to the gap for any clues that may be there. There is considerable work to doing this, and we at HPH will be undertaking some software alterations to proceed along these lines over 2010. Likely this work will take all of Summer, although the

circumstances may make it moot by the time we get there....for reasons made clear below.

Markets(?) – Devious Deceitful Deviations Denouement

The Markets entity has additional data sets that accrue over late Spring and then seem to [flower/bloom/blossom/come to fruition] in early Summer that go to the idea of [bank shutdown/lock-ups]. The accrual patterns suggest that the [economic malaise] goes [vertical] within both the Populace/USofA, and the GlobalPop after March 4th, 2010. This pattern maintains a very steep (building tension) rise through to July 8th (note date change from previous reports) when both the populace entities, and the Markets entity reach the first emotional tension release in months. Albeit very small, and simply one of many small ‘crocodile teeth’ that express in the emotional trend until mid November 2010, this first release in July brings about a distinct change in the emotional patterns that will express in both the populace entities, as well as the Markets entity.

As the July through November ‘crocodile teeth’ pattern of [daily emotional build (and) release] instances are explored, the Markets entity participates at several different support layers. The Markets entity shows a pattern of [sudden volatility], as well as [crushing emotional waves]. This last is supported by aspect/attribute sets that relate to a [wave (of crashing confidence)]. This last is referencing a [paradigm shift] within the [american populace] that is supportive of a [rebellion/revolution (against the) banking system] as it is currently constituted globally. The [confidence (and support) withdrawal] of the [american populace] for the [markets] as is defined by their [perception] of what the [propagandists] call [‘wall street’] comes about as a result of the confluence of many emotional factors including some intrusions from Terra in the form of [regional disasters] {ed note: unseasonable and major storms?}. The primary problems with the [public perception] of the [financial system] within [america] stem from the [dollar death] sub sets that permeate all of the Markets entity as well as both the Populace/USofA entity, and the GlobalPop entity.

As the [bankruptcy wave] first forecast in the ALTA reports in 2006 begins to shift from the [sovereign (whole countries)] level in Spring to the [globalist corporations], the [impact] of the [bankruptcy (of the provinces)] will start to be [visible] within the [heart of the system]. Some of the forecast

impacts to be used as temporal markers should be [visible] through March and April. As the temporal markers of [assaults (on bankster/stock hustlers)] move to [the streets] of large [financial centers], and as the [arrests (for corruption)] begin, the aware observer will be anticipating the [next shoe drop] relative to the [economy (of the western dominated hegemony of dollar based banking)].

Further problems for the [bankster system] will emerge in Spring in both the USofA and other parts of America, and within [bread baskets] in other regions, as [catastrophic weather] causes [food crops failures] at levels never before [recorded]. The Terra entity cross links back over to the Markets entity point to [fiscal], and [financial] impacts of the [large scale crop failures] as well as [food supply shortages] and [hyper-inflation (in food prices)]. The [food price crises (more than one)] at a global level are indicated to [affect (or alter) immigration patterns]. This [alteration] of the [immigration patterns] includes [reverse migrations] as the [competition (for lower cost foods)] is indicated to [escalate] to the level of [social pressures] being put upon [illegal immigrants] both in the EU and in USofA that will lead to a [reverse wave] of the [immigrants] returning to [country of origin]. Other [economic pressures] will manifest over 2010 as the [construction industry] in both the US and the EU will face [major collapse] with [millions of layoffs] resulting from the [failure (of the) commercial real estate market] at a global level.

The Markets entity is clearly forecasting a very large and negative impact on the [banking/fiscal/financial] structure from the [weather] over 2010. The negative impacts are supported by [shipping (going idle)] {ed note: even more than current as of this posting}, as well as [reduction] in the [flow] of [electronic currency]. This last is indicated to arise from a number of conditions that will include [weather impacts (on) communications], as well as such [massive] levels of [property damage] as to [drain] the [insurance industry globally] as the [warrantees] are [redeemed] to [partially cover] the [monetary losses] from [natural disasters] including [volcanoes], [earthquakes] and [storms] {ed note: see Terra entity for further discussion on this subject}.

The Markets entity also points to [markets] being [fundamentally changed] by the [climate crises] that will emerge over 2010. The data sets are accruing for [breakdown] and [separation] within what had been a [burgeoning global

consortium]. The [planetary markets] are indicated to be [split (into) fractions] based on [geographic regions (and their related climate impacts)].

The [climate crises] of 2010 will also be boosted, at least in terms of the impact on the Markets entity, by the [immigration shifts] which will become [visible] over Spring and swell to a trend over Summer and beyond. These [immigration pattern shifts] are also indicated to [significantly] shift the [skill sets] and [assets] of the [immigrants en masse] to [new homes]. The impact on the [markets], especially those based in the USofA and in both Britain, and Germany, are indicated to be very [altered] by the [transition] of the [immigrant funds/assets]. The manifesting circumstances of [summer] are forecast to include [visible] language that includes [puzzlement] and [wonder] and [confusion] on the part of the [mainstream/propaganda media] over the [unusual state of affairs]. Hmmm, it would seem that it takes the spinmeisters a while to discover just what the hell is going on, and then they just apparently can't cope with what it means.

Other impacts are seen to [rock (the) markets] over the [revolutionary] period from July through November. After about the 11th of November, the Market entity joins the other entities in a 'tipping point' that sheds lots of building tension language in a 2/two month (actually until January 23rd 2011) period that will be most intense time since the days immediately following the 911 attack, or the 2004 tsunami.

It is difficult to decide where to place the next area of discussion since the mass of emotional support comes from the GlobalPop entity, and the intensity values from the Populace/USofA, and the details from the Markets entity. Since the primary significant impact will first be in the area of [financial/fiscal/currency], it has been decided to put the [war on banksters/corporate] within the Markets entity.

As the July 8th plateau of building emotional tension values begins following the very steep building emotional tension of Spring, the Markets and Populace/USofA and GlobalPop entities all point toward a [people versus corporations] form of [active warfare]. The [revolution] meta data layer rules this area, but the core of the [conflict] is not being described as [political], rather its descriptors are specifically going toward [revenge] at a very [personal] level.

Having noted that the [war against corporatists] will be [powered/driven] by [personal revenge attacks], there are yet accretion patterns that indicate that [organization], albeit at an [asymmetric] and [self organizing] manner, starts to appear in mid Summer as the [revolution] meme ‘ramps’ up in its [visibility]. The initial [skirmishes] of the [people versus cartels/cabal/banksters war] becoming [visible] as the [tax problems] of Spring surface (within the American Empire). The [debt] of the [federal/national] and [state/province] governments starts to accrue language around [hyperinflation] that has/will affect [food supplies]. As the [retirement systems] and [university system] and [federal government] all hit [funding walls] in late Spring, the [financial failures] are shown to [rip the intestines] from the [middle class] at a global level as the mythic [consumer of last resort (aka the American Sheeple populace)] ends up [dying]. The impacts of the very rapid [cessation] of [purchasing] within the [american populace] due to their [dire financial situation], the ripples within the [just in time production/shipping system] push a number of sub systems into [failure]. The [banking system], being at the [apex of corruption] is indicated to become a defacto [enemy of the people]. This status as [primary face (*of the corporate enemy)] will be demonstrated over Spring as the [attacks] {ed note: some lethal, some legal} begin to gain [visibility] at a [planetary level]. Note that within the [USofA] the [propaganda press] will be [keeping a lid] on the [revenge on the banksters] stories, though this effort will only go to diminish what little credibility they have left as the internet reporting takes over their former role.

The ‘feed back loop’ of [sovereign failures] and [bank failures] and [state/local government failures] leading back to [unemployment] which leads to [tax loss] and so on through many permutations of repetitions is showing as producing a [spectacular wave] of [epic proportions] over Spring and Summer. The [number] and [sizes] of the [bankruptcy] and [unemployment] incidents globally are described as being [staggering] to the [unaware]. The [unemployment rage] globally will also [fuel] the [anti-bank (and) anti-government (and) anti-NewWorlders] across Summer. Much of the [rage] will be expressed in [riots]. Unfortunately the [riots] are indicated to [grow into] or [spill over into] a [global political crisis]. This [planetary crisis of control] will be [fueled/driven] by [unemployment] and [hunger], but the TPTB {ed note: especially in the USofA where the propaganda press is most dominant}, will [spin] the [riots] into a series or group of [internal political crises] within [countries] across the [northern hemisphere]. The Markets entity is indicating that the [riots] at the global level will be used to

[propel] the [visibility] of [corporate fascism] through the use of [corporate soldiers (shock troops)]. This particular [tactic] on the part of the [corporate masters] will have some very interesting but [unanticipated consequences]. More on this will become [visible] in late Fall, 2010, just as the ‘tipping point’ is reached.

As the [populace consensus] is [expressed] in [new forms] over Spring and Summer, a [perception/characterization] will be formed, initially outside the USofA, in which [capitalism] as a concept will take on the same negative connotations as does [communist dictatorship]. This shift of [perception] is indicated to become [planetary], as the [predatory capitalism] meme is [experienced] at its [worst] by [billions of people]. This will come from the planetary [currency crisis] that will end with the [crash/death of the dollar], though in truth, the [currency crises] is actually merely part of a [failure of complex systems]. Never designed for [sustainability], and only for [growth], the [predatory capitalism] of the last few centuries is shown as coming to a [screeching (of those at the top) halt] in 2010. Likely this will be most [visible] within the ‘tipping point’ period from November 8th through to January 24th (or so).

The data sets are indicating that the [shift] of the [paradigm (about money)] will be part of a multiple year process. The aspect/attribute sets accrue within patterns indicating that a [long war/battle] will be [curtailed] or [cut short] by [intrusions from universe]. The data accretes in very distinct patterns that show a slow build-up of [bankster battles] into a full scale [bankster (corporate fascist) war] by late 2011 that then abruptly simply stops gaining new supporting sets within a very short time, perhaps as little as week. Prior to the [universe intrusion] the [warfare] is described as escalating to the point of [organized assaults] on [bankster enclaves]. This language is eerily similar to linguistic structures that first appeared in the [revolution] supporting sets a number of years back. In those (and current) sets, the [enclaves] are described as being [security compounds], or [gated communities]. In some of the descriptors for the [battles], there are details describing [starving people] who are [bereft/stripped of (any wealth)] who [form up mobs] that [assault] and [burn/raze/destroy] whole [communities of banksters (and their families)]. The horror of the details need not be imagined long as instances of this form of activity will soon enough be reaching alternative media near to us all.

The data sets are indicating that an ['accident'] of the future history of 2010 will be that the [bankruptcy wave] and the subsequent/concurrent [unemployment wave] will cause a shift in the [american (usofa) populace] in which some [80+/eighty-plus] per cent of all [assets] and [wealth] will be [concentrated] into [less than 1/one percent] of the [usofa populace]. Very near to this point, the [stresses] of the [poverty] and [continuous hunger] as well as the [emotional shock (of the loss of the retirement system)] will shift the populace/usofa emotional stance **away** from [predatory capitalism], indeed, away from [capitalism] as an [economic system]. This [paradigm shift] is a participatory factor in the rapid rise of [revolution] and [violent revenge] against the [power elite].

Amidst the building [social] and [political] crises of 2010, the [economic degradation] into [depression] on a planetary scale is indicated to act as a [trigger] to [completely new] forms of [social arrangements]. As the [predatory capitalism] of the last millennia dies off, a [global wave of social experimentation] is to be expected. The early signs of the [new social organizations] will be [visible] in some of the [successes] of the [SOC's (self organizing collectives)] which will be much discussed even in the midst of the building [poplar war against banksterism]. As may be expected, many, if not most, of the [new social arrangements] will fail, but this is just what the data sets indicate that [planetary omnihumanity] needs at this time.

Along with the [planetary depression] progressing to [high visibility] {ed note: meaning that the word 'depression' will go mainstream} across Spring and into Summer, the Markets entity has new aspect/attribute sets for a [war] between the ['self described' exempt institutions] and the [minions/civil servants]. These data sets are accruing around a set of descriptors for a very complex situation in which [economic warfare] breaks out between the [churches] and the [governments (including USofA: and later led by the USofA)]. The issue will be [taxation] or [funding] at its core. The [removal of vast tracks] of land and other [assets] from the [tax base] over many decades brings the [focus] of the [battle over taxes/money between church and state] to [disclosure (of hidden and potentially taxable) assets].

The side effects of the [desperate need] by governments for [money] and their casting their starving eyes on the [fat cat churches] will far exceed the emotional impact of the [government gorging on church money (albeit temporarily)]. These side effects are extensively cross linked to both the populace entities as well as to the SpaceGoatFarts entity. The descriptors go

to [shock (of the populace)] when the [churches (face) discovery (by government auditors)]. The [shock] emotional language and impacts cannot be overstated. The aspect/attributes sets are filled with superlative descriptors that have lexicon associations going out 4/four generations, or about 84/eighty-four years in duration. The impacts also go to the [hidden space program], [extra (solar) space aliens], as well as [2012 cataclysm]. These [side effects] of the [tax the churches] descriptor sets are also cross linked very extensively over to the [NASA] sub set and will mark a confluence of circumstances in which [thousands] of [whistleblowers (disgruntled former employees)] will be [attempting] to [disclose (hidden) knowledge]. The idea is that the [unemployment wave] affects the [space community/industry] {ed note: data indicates this also includes the shadow government} in such a way as to turn [thousands] of former [sub contractors] into [security (about hidden knowledge) issues]. This situation develops just as the [desperate need (for funds)] has the [governments] sending their [agents] out after [hidden church assets], and mostly [ignoring] the [hundreds of whistleblower claims]. This situation is indicated to last until very close to the November 8th through 11th tipping point, and then to be completely [transformed] by the release period that extends from the tipping point out into late January of 2011.

Further wrinkles within the [hunt for taxable assets] are forecasting the [discovery] of a [hoard] of [2012 documents], and [2012 related military documents], and [2012 artifacts (of many kinds)]. While all these linguistic areas within the Markets entity are extensively cross linked over to the populace entities, this area has more cross links over to the SpaceGoatFarts entity than do other linguistic structures. It is worth noting that the Markets entity is forecasting that the [2012 artifacts/documents (and meme in general)] will be [affecting] the [markets] globally over 2010 and beyond. The idea coming from the descriptors is that the [2012 impacts] will hit the [markets] through [extraction (of liquidity)] at many different levels. This [extraction (of paper denominated wealth)] is slated to also include [digi-dollars] and to fuel a brief buying wave during the [hyper inflation], and then a slightly larger [conversion wave] {ed note: people converting currencies to 'things'} as the [deflation] settles in along with the [despair] period of the [planetary depression]. Is at the point that the [hidden (by government) 2012 information] comes out via [leaks], and [stolen documents] (which go to alternative media), that the [cataclysm] meme will seriously impact the [daily flow (into/out of) financial markets].

There are indications that the [disclosure (of hidden assets)] meme will also intrude between the 2/two halves of [fascist government], i.e. [government] and [corporations]. The idea is that the [taxing authority] will be [pressed] by [desperate need (for money)] {ed note: especially during the [hyperinflation months]}, and it will begin to [turn on (parts of itself)]. The [battles (over taxes) between government and corporations] will escalate to use of the [propaganda press]...and that will be [against their owners (corporate masters)]. This situation will be a very good temporal marker for the events that are described as [piling up] following the [public vilification (of corporations)]. Following the [visibility] shift of the [war (over funding)] between the factions of [fascism], a series of events will manifest that the Markets entity describes as [lockup/cessation] of [international (currency) trading]. This may not actually be referencing the lack of markets to trade currencies, but rather some other form of strangeness between countries over their currencies and that of others. The descriptor set defies easy interpretation and *may be pointing toward some form of [international currency competition] that would cause [trading] to become [not profitable]. This interpretation seems to fit the continuation of the growth of these aspect/attribute sets. It is as though the data accretion patterns are describing a period of [bidding wars] within the [currency structure] that is related to *both [hyperinflation] and [deflation], and the [bidding wars] somehow mark the [transition into (national) desperation].

For a number of reasons, some obvious, some not, those firms producing (or calibrating) personal radiation equipment, are in for something of a boom period from late Summer onward. It will **not** last, but is forecast to be quite a powerful trend.

Other industry notes include warnings against [leverage] situations that involve [gaming/gambling real estate]. We think this means real estate owned by casinos, but it could also be interpreted as being a general warning against 'gambling' **in** real estate, though the former will probably prove more accurate.

There are conditions forecast to emerge over late Summer (August) and through Fall that will be able to be viewed as pre-echoes of pending problems for the pharmaceutical and other medical corporations including hospitals, supply houses, et al. The problems will stem from economic conditions, but the proximate temporal marker will be [sudden flows (of digidollars)] out of [health care 'management' companies]. The idea from

the detail layer is that the [collapse (of the insurance industry)] will coincide {ed note: may actually trigger, hard to interpret} with the [bankruptcy (of the) health care corporations]. Of course this will be against the more general economic degradation at large, however there are specific linguistic structures going to the idea of [separation (from assets – forcefully)] that will [ripple] through the [health care system] in less than [3/three weeks]. These problems are indicated by the accretion patterns to start with a small [spark (in a hospital setting)] and then to be [enflamed] by [sudden currency swings] and [unreasonable conditions (claimed)] on the way to [default]. The net result is a [systemic seizure] that will affect all sectors of the [health care delivery] across the planet, although most of the initial action is within the USofA. Data patterns indicate that it affects [health care] in such far away places as [india] and [thailand] before too long though.

Food shortages are indicated to join up with nascent [hyperinflation] across the planet from [summer, northern hemisphere] onward through into deep into 2011. These shortages will [create fortunes] as [food (as a commodity)] obtains a [new status] in many places. However the data indicates that [commodity brokers] in the [precious foods business] will be at [severe risk] in many countries as [governments] (deep in coagulation due to planetary depression) try to [regulate through taxation]. In almost all cases, those linguistic conjunctions of [SOC (self organizing collective)] and [food producers] have very, even extremely, positive values. The idea is that [foods (especially quality)] will be come so [precious] that [producers] will be treated very much as [assets] as [precious] as their [produce].

Terra - Shaky Glumps, South Rises, Current Seas Converge, Air Holes and Masses, Blue Flue, Islands Stew, Flu and Flew, Summer Blues

The recent 8.8 earthquake in Chile (February 27, 2010) is 1/one of 6/six such forecast within the data sets for 2010. The Terra entity has [7/seven (total) large damaging (great) earthquakes] forecast for 2010. The [span (of the earthquakes)] is indicated to take [most of the year], and further to be [punctuated] by [2/two (large) damage inflicting water events]. These could either be very large [storms (ala Katrina)], or it could be [2/two large tsunamis] generated *either by [earthquakes] or [volcano]. The Terra entity has several separate instances of [volcano activity] in which [land forms (are

changed/alterd)] and also in which [human populations (are made to relocate)].

The dominant descriptor for the [earthquake] sub set within the Terra entity is [decrease] and this set is extensively cross linked back over to both the GlobalPop and the Populace/USofA entities where the termination points are also in sub sets headed by [decrease]. In both populace entities the termination areas include [bad summer (decrease) property (due to) earthquakes]. The idea coming across from the detail layers in the populace entities goes to the [decrease] at a [substantial] and [significant] level of the [property (wealth)] of the [humans] due to [earthquake damage]. The [earthquake damage] sub set also includes references to [disapora], and how the [costs] of [relocation] will be [nearly/close to] the [costs of damage] of the [earthquakes]. The details within the Terra entity suggest that a [series] of [no more than 8/eight] very large [earthquakes] when [measured in damages] will [beset/sit upon] humans here on earth in 2010.

The [diaspora] and [relocation] linguistic structures include support for other causes of [populace relocations] than simply earthquakes. A large area of support that is tangentially linked internally within the Terra entity to the [earthquake] descriptor set is [volcano activity]. The data suggests that nearly as many humans will be [forced into new houses/locales] by [volcanoes] as by [earthquakes].

Glumps

The data sets split into 2/two separate ‘glumps’ {ed note: a ‘glump’ = an aggregate of 3/three or more sets that do not have common sub sets, yet still grow apace of each other within a single broader accretion pattern} around the descriptor of [earthquakes]. In the smaller ‘glump’, the pattern shows that the forecast 5/five remaining [damaging] earthquakes spread more or less evenly across the rest of 2010. The larger data glump has the earthquakes clustered in a [bad fall] in which the [damaging earthquakes] are [felt (rapidly)], which is to say, within a [short period of time] relative to each other. Further, there are distinct sub set internal cross links that go to the idea that, without regard to how the earthquakes manifest, the [earth changes], especially those which will manifest within the [oceans], are cross linked to [earth changes]. These cross links are more than temporal marker relationships, rather these links are associated with [authentic (?) earth changes] that will be [visible] [once/following] the [onset of the earthquakes].

The [oceans] are described as being [unlike (not as before)] the [Fall (autumnal equinox)] before. While confusing, the concept is that this coming Fall of 2010, after a [disastrous Summer (both from terra and humans)], the [weather/climate] that used to be [expected] for [Fall], is [lacking]. The [disappointment] is described as being [apparent] by [very early] in Fall. The data sets go to the idea that [oceanic convection currents] will [shut down] across the [planet], and thus will trigger similar levels of changes in the [atmospheric currents]. Bearing in mind that the Summer of 2010 will produce a record year for [natural disasters] and [freakish weather] such that it will also be among the [worst years] for [food crops production] in the [northern hemisphere]. Further impacts from [earth changes], most notably the [deep ocean warming] are indicated to have [significant], and [crushing] impacts on [planetary fishing operations].

The supporting aspect/attributes sets for the [oceans being (unlike) their former selves] include descriptors for even more severe [weather] this coming [Fall and Winter] in the [northern hemisphere] than has been experienced this year. The forecast for 2010 includes a [winter] that will go down in history as being [brutal], and that will follow a [fall] that will be [wild] and [unpredictable]. The [oceanic currents] at the [heart] of the [climate change phenomena] will show even more [erratic] behavior over late Spring and into Summer, and that will set up the [disruption (of old patterns)] for the up coming Fall and Winter. The cross links over to the GlobalPop and Populace/USofA entities have very extensive ropes of linguistic threads around [damage (from climate change)], and [food shortages (from crop failures)], and [energy shortage (leading to frozen humans and animals across the USofA and EU)] for Fall and Winter 2010.

Further impacts from the [oceanic nightmare (of twisting convection currents)] are forecast for the [shipping industry] as various [ports] become [affected (by) climate change] that is also indicated to include [portage link up problems]. This last is supported by [tidal height problems] of such magnitude as to [impact the off loading] of some ships in some ports. Many of the supporting aspect/attribute sets for this are internally cross linked over to [ice shelf] or [Antarctica] or [Greenland] descriptor sets within the Terra entity. The data has been forecasting {ed note: since 2003} a continuing [event stream (of) changes] within [Antarctica], and apparently a large part of those [fundamental alterations] will be come [visible] in 2010. The rise in the [visibility] sum is pointing to a [Summer] occurrence of [mainstream]

coverage of [problems] at the [southern pole]. The linguistic in use at the time by the [propaganda press (aka mainstream media)] is being forecast as being [shocking (to the sleeping sheeple)]. Before the forecast rise in [visibility] for [south pole] problems, the data is indicating a very large [turn-around] or [shift] in the [mainstream/propaganda media terminology] when it comes to [planetary climate change]. The forecast [change] in [word usage] is also seen as bringing us all [closer to reality], at least on this subject. This [closing in on real conditions] within the [mainstream media] is also (via cross links to the Press entity) indicated to have all kinds of [unintended consequences] within the [mindset], and [behavior] of the [propaganda media]. Many of these [side effects (manifest in behavior)] will be showing up in [Summer] and into early [Fall].

South Rises

The main [climate change] sub set within the Terra entity is also extensively supported both directly and by cross link to [solar behavior] sub sets within the Terra entity and within the SpaceGoatFarts entity. Some of the [southern pole] problems that are indicated to [rise to mainstream media coverage] this Summer are causally associated with [solar activity]. The supporting aspect/attribute sets include [ice shelf changes] as being [directly linked] to [solar activity] over [late Spring] and into [Summer]. The data sets for both the [south pole/antarctica], and for the [oceans, southern regions], are showing that [current changes (driven by solar magnetic activity)] will [induce] larger scale [current changes] over Spring such that the [current alterations] and their [climate effects] start to become [visible] by Summer. Again, these [climate changes] are forecast to [impact (lower) planetary food production].

There are further iterations of the [south rising] meme in that supporting aspect/attribute sets for [antarctica] are indicating that inhabitants should be expecting [earthquakes] and [rising lands] there as terra shakes about a bit this year. The level of the [land rise] is not described as spectacular, but is showing as having real [significance] for all humans and the [oceans] of the planet. The first of the [rising land] episodes in [antarctica] will mistakenly be viewed and discussed as a [unique] or [freak] occurrence, and will likely have impacts on the [ice sheets], however it will be the slightly more subtle second and third instances that will have the larger impacts on the planet, and humans. The temporal spacing between [rising land] episodes would appear to be on the order of months.

Current Seas Converge

The [ocean changes] which participate in [climate changes] at a [global] level are also linked to both [volcanoes] and to [earthquakes]. The data suggests that [large scale] changes in the [ocean floor contours] will also [surface] this year as [problems for shipping]. This latter also includes [submarines], and other [military transports]. The data is indicating that even [volcanoes] will become involved in the process by [altering currents] in very unexpected ways that will [trouble] the [military] especially as it relates to [heat signatures].

Many areas of [coastal habitat] are forecast to be effectively [forbidden] for [use] by [governments] as a result of [coastal climate problems] over Fall and into Winter of 2010. These areas are spread among a number of countries including the USofA and China, and many areas in the southern EU. These will include [extreme tidal activity (flooding)], as well as [destruction (via climate/weather incidents)] of [power] and other [required life support systems]. There are indications of a number of [ferry 'accidents'] relating to [weather] such that whole [populations] are [left isolated]. The supporting sets point to the [ferry problems] as being something of a [global phenomenon] over 2010.

Other [ocean changes] related global phenomena will include [tidal flooding] that is described as [not withdrawing], and also as being [extensively invasive]. There are descriptors also for at least 2/two [huge hurricanes/typhoons] over late Summer (early Fall) of 2010. These 2/two storms are forecast to [cover/blanket] areas so large as to [elicit comment] on the sheer size of the [storm mass]. The supporting aspect/attributes suggest that the [storms/hurricanes] will have [record breaking] amounts of [water], and will [flood entire regions] to [greater depths] than previously [recorded].

Air Holes and Masses

The Terra entity is also forecasting problems for humans and other life from [atmosphere holes] and [strange (bizarre) atmospheric phenomena]. While there are many cross links over to the SpaceGoatFarts entity from the Terra entity, this area of [atmosphere problems] is mostly internally cross linked within the Terra entity. The indications are that many of the [problems] within the [atmosphere structure] both those known now and those forecast to appear over the course of 2010 are related to the [core of planet] at the [magnetosphere] level. Though this itself is directly related to [earth-to-sun

relationship], the [magnetosphere] and the [planetary core] are described as the actual [generators] that [affect] the [atmosphere structure (health)]. The [atmosphere problems] of 2010 (and beyond), are forecast to include [negative impacts on food crops], as well as [negative impacts (on) humans] both [on the ground], and [in the air]. The [negative impacts] on humans include descriptors for a wide range of both short and long term health issues from [sudden heat stroke] to [skin degradation (due to solar radiation)].

Many of the [strange (bizarre) atmospheric phenomena] include internal cross links over to the [sun] sub set within the Terra entity where the termination points are within aspect/attributes going toward the long standing forecast for [sun disease]. The sub sets within the [strange (bizarre) atmospheric phenomena] descriptor include aspects/attributes for [extreme behavior]. Supporting sub sets for this area include [jet stream], and in the supporting sets for this group include [atmospheric waves (or ripples?) (or tunnels?)] which will [propel (out of season) storms]. Much of this area has northern hemisphere] geographic associations and focuses on [very large storms]. These areas are cross linked back over to the Markets entity as well as both populace entities (Populace/USofA and GlobalPop) where many of the termination sub sets are within the [food (crops) shortage] meme.

The data sets within the [climate change] sub set of the Terra entity are forecasting a most [bizarre] year of weather. The accretion patterns suggest that [extra seasonal], in the meaning of [out of season] or [out of place in time], will become **the** adjective to be applied to [weather] over 2010. The data is forecasting [extraordinary (size and strength) storms] that will be bringing [20/twenty years (worth of) rain] in mere [hours] in some [northern hemisphere] locations. Further, large [continent covering] storms will also be appearing in the [southern hemisphere] over their [Fall and Winter 2010]. Without regard to the geographic references for the [storms], there are significant cross links back over to the populace entities where the termination points are in [food shortage], and [food crises]. The latter reference is found more fully formed in the GlobalPop entity {ed note: a food shortage in the USofA becomes a food crisis elsewhere on planet}.

The [climate change] and [mega storms] sub sets are but part of a very large area of the Terra entity where the aspect/attribute sets that have accrued over the processing for this report are **all** extensively cross linked back to the Populace/USofA, and GlobalPop, and Markets entities. The cross link 'ropes' are so extensive as to show several feed back loops that are forming

ahead of the ‘tipping point’ period of November 8th through the 11th. These cross linked areas from the Terra entity are indicated to become [driving (causative) forces] over early 2010 for many of the [dire] and [dread] conditions faced by humans in the latter half of 2010 and through 2011. These cross linked areas are heaviest within the larger linguistic descriptor of [sun disease] than at any other point. Further there are more internal cross links terminating in the [sun disease] sub set than in any other area of the entity. The feedback loops showing within the cross links {ed note: linguistic set A links to B which in turn links back to A at some other depth of aspect/attribute sets} within the [sun disease] descriptor set are forecasting a situation in which [sun disease (anomalies)] will [power (or) propel] some very [radical behavior changes] within the [social order] over 2010. As these [behavior changes] emerge, they are forecast to have impacts on the [populace] which in turn alters the [behavior (en masse)] of the [populace] which in its turn affects other areas such as [markets] which also affect [popular behavior].

Note that even the Terra entity has a [change (of) paradigm] sub set which is focused on the impacts on the [mind set (perception) consensus] of [planetary omnihumanity]. The idea being that the [commonly held consensus] of [omnihumanity] about [planet earth (and its immediate future)] change in a radical way as a result of the pending events of 2010. The [change of paradigm (common consensus view of reality)] is a very well supported linguistic set with very high levels of emotional values indicating that the [change of mindset] itself will drive both short and long term changes in planetary humanity behavior.

Blue Flue

The Terra entity has aspect/attribute sets within the [oceans] and [ocean health] descriptors which are forecasting a very [sticky] situation for the [planetary populace (human and other)]. Further there are also some very impacting changes on TPTB indicated to come from the [blue flue] crisis of 2010. The data sets are accruing supporting details under a [blue ice methane release] sub set. This area is mostly associated with the [pacific ocean], and has further geographic associations for the [arctic]. The idea coming across from the accretion patterns is that a [large release (of blue ice undersea) methane] causes problems with [shipping] and other [transport] on and around the affected region. This [big blue methane release] incident then goes onto cause a [big stink] within TPTB [minion class]{ed note: most

notably the CFR – Council for Foreign Relations}. Not only are humans and other life directly impacted by the large [clouds of drifting complex methane housing gas], but the mere [release] of the [quantity] to be seen causes the TPTB and their [minion class] to go [apeshit] trying to [locate (a believable) scenario] to explain the [blue flue event(s)]. The only temporal markers we have for the [blue flue event(s)] comes from the Press entity where there are cross links indicating that these [methane release] events coincide with [disarray] and [dysfunction] within the [propaganda press].

Islands Stew

There are accretion patterns that seem to be [island] focused and that have forecasts for [significant (large numbers of separate incidents)] levels of [volcano activity]. The data accrual patterns have lots of supporting linguistic sets going to the [diaspora] and indicating that some [islands] will be [evacuated (in toto/completely)] due to [volcanoes] being [in active (and spreading) eruptive states]. The geographic references we have mainly favor [equatorial islands], however there are smaller, but fully supported sub sets indicating that [japan], [taiwan], and other [northern hemisphere] {ed note: north of the tropic} islands with [large populations] will also be [moved (shifted) by volcano output].

Flu and Flew

The [sun disease (flu)] sub set within both the Terra entity and the SpaceGoatFarts entity have had areas for [increased radiation] for these last several years of ALTA reports (precursor to The Shape of Things To Come reports). Now the data sets are indicating that the [radiation], and specifically the [increased] word part of the descriptor set will become very [visible] over 2010. The [sun disease (flu)] sub set is indicated to affect humans in several specific ways. In the case of [air plane travel (use)] both [commercial] and [military], the [sun disease] is forecasting that 2010 brings about a [change in understanding (of the radiation risks of upper altitude flying)] such that [popular behavior patterns (i.e. commercial airline travel for leisure)] are permanently affected. Further, the [radiation risks] are also forecast to affect the [military pilots (et al)] of the planet, and to [significantly alter] their [upper atmosphere use patterns]. Also there are indications for [satellite problems] which will also be [sun disease] related.

Summer Blues

Separate from the [oceanic health problems], though still extensively cross linked over to the [sun disease] sub sets, is a linguistic structure indicating

that [government] and [power authority] will be [visible] in some [strange ways] over [summer 2010] as [odd (national) behavior (on the oceans)] is reported. The idea percolating up from the detail aspect/attribute level is that [governments merge (their) naval operations] into some very [massive/large] and [mysterious] [fleet operations]. Following on the rather odd behavior of the assembled international fleet (so reported) in the Gulf of Aden, this section drew our attention for an in depth analysis.

The details layers of these linguistic structures are describing [large scale (never before seen)] levels of [international marine (military) activity]. The idea is that some very [substantial changes] within our [planetary environment] {ed note: could include the ‘exposure’ of an under ocean UFO base?} cause a [flip out/freak out/(public shitting session)] from some [prominent members] of the [upper minion class] in a very [public forum] that then goes [viral] and which relates (somehow) to the [odd behavior] of the [planetary navy]. The temporal marker show a distinct gap between the [whatever event] and the [public knowledge (inadvertent leak)] of the [activity], and seemingly place the latter in late Fall 2010. So it may be a case of the [summer (navy) blues] being very active, but the [populace] (as usual) being ignorant until Fall.

The geographic references for this [navy activity] show for the [Pacific ocean (deep blue waters)] **and** for the [Mediterranean (sharp coastal drop off region, aka ‘green water’ in local parlance)].

There are clear accretion patterns indicating that [July and early August] of 2010 will be the key [center] for [storms] this year. Coincident with the [storms], the [sun disease] will be also very [intense] {ed note: and likely will lead the storms}. The indications are for a [string] of [earthquakes] and [volcanoes] that cause [change] and [visible drama]. Again the accretion patterns indicate a slight ‘peak’ of activity within July through to perhaps mid August, and then to be a [steady stream/flow] of yet more [earthquakes].

The Terra entity is also indicating that [natural disasters] will be contributing to the [summer (2010) blues (emotional depression)] of millions of humans around the planet. These [natural disasters] include, as already touched upon, [coastal flooding (due to tidal actions/ocean levels)], as well as [flooding (of low lands – including coastal plains)] from [rainwater]. Again we note that the primary supporting layers for the [rainwater] are specifically referring to [20/twenty years (worth of) rainwater] in merely

[hours] that will be [settling over] some very [unexpected regions] where the [rain] will not be a blessing and instead is forecast as a definite [disrupter] of [local transportation]. The supporting areas for the [flooding] includes large emotional values for [land slides], and [devastating mud flows]. Note that the [mud flows] fall within both the [natural disaster] descriptor set supporting layers as well as being a primary support for [un-natural (humans contributing to) disasters]. These [un-natural disasters] are also showing as being a particular problem over July through August.

TPTB (The Powers That Be) – To Be or Knot 2B

The ThePowersThatBe entity is indicating that the [revolution] meme will be very much on their [collective mind] over Summer 2010. The accretion patterns indicate that the [revolution] meta data layer will be **THE** source of [fears] for the ThePowersThatBe *and* their [minions]. Especially the [political minions] who are indicated to [recognize] over 2010, that they are the [vulnerable ones].

The TPTB entity comes under the domination of the [revolution] meta data layer at what we here at HPH call 'going vertical' in late Fall, coincidentally in mid November. Hmmmmm. The [revolution] meta data layer is within multiple entities and does begin rising to a peak of building tension values in pace with the planetary economic depression.

The data sets are indicating that [several] of the [(self-proclaimed) monarchies] will be under [extreme stress] over 2010. Much of the [stress] is indicated to come from [sudden death], and in particular [death by medicine]. There are some indications that the [monarchies] include the [vatican (pope et al)], though the largest set of particular identifiers point toward the [cabal of the Windsors]. There are some, albeit small, pointers toward the [seeming coincidence] of [several 'royals'] all choosing a very short period in which to [die]. Since TPTB do not necessarily believe in 'coincidence', the [timing] involved as well as the [circumstances] 'under' which the [royal demises] take place will be of some specific interest to the whole class of ['royal' members of TPTB]. The accrual of the aspect/attribute set of [consternation] as well as cross links over to the Press entity indicate that the [confusion and fear (amongst the monarchists)] will be [visible] to those who care to look. The aware observer will find it worth

noting, especially when [robes (priestly)] are involved, the ‘exact’ circumstances ‘under which’ the [death] occurs. Future hint here.

There is a lot more data for TPTB entity. Many of the new data accretion patterns are quite surprising, however, such glimpses into trends developing produce a clear understanding of why there are ‘some things best left unspoken’. Soooo....to the future and beyond ->.

PopulaceUSofA – Here We Be, Alternative We, Poor US, Respite?

Here We Be

Both of the populace entities, that is to say, the Populace/USofA entity and the GlobalPop entity will be dominated by linguistics around [revolution] over the rest of 2010 and at least into late January of 2011. Further the [revolution] meme is directly a result of the combination of several other memes that show up in support. The supporting, major linguistics for the [revolution] meta data layer include [economic collapse (of the american/debt empire)], [economic collapse (of the american government)], [social disorder (as a result of economic collapse)], and [unemployment] (you guessed it, as a result of economic collapse). There are also sub sets within the Markets and Populace/USofA entities that go to the idea of the [forced merger] of all kinds of [corporations] as they [desperately attempt] to [stall/fend off bankruptcy]. The [mass mergers] are indicated to be far less than successful, and merely serve to [muddy/pollute] the [bankruptcy situation] with [competing claims (of ownership of assets)]. These supporting sets will fuel the [revolution] meme as more of the pressures of [economic collapse of empire] begin to be felt directly by the [sleeping] members of the Populace/USofA over late Spring and into Summer.

Summer of 2010 will bring marvelous weather for [rioting] here in the USofA. At least [sporadically]. Well, enough anyway for some pretty decent size [brouhaha's] between [citizenry] and [governmental minions]. The data suggests that by the late Spring, the number of [individual actions] against [government] by [citizens] will have increased to a steady [stream] that will [flood] over [summer] such that the [minion classes] within the [beltway] will be [painfully fearful] with [corrosive digestion].

It would be useful for the aware observer to plot incidents against a map as they manifest over the next few months. Patterns likely will be able to be perceived that may prove to be meaningful.

As a part of the [revolution] meme, there are several new linguistic structures that appear in the accretion patterns from July 8th onward. The largest and most interesting of these is a structure that includes, as a minor part of its total support, the idea of a [tax revolution] within the [usofa] that will lead directly to the [taxation] of [church property], as well as [income tax] on [church funds]. There are further data sets in support of a [wave of seizures] of [churches] and [shocking church property] over [refusal to pay taxes]. This area is internally cross linked within the Populace/USofA to the [governmental] and [media] descriptor sets. Further the [elites] and [minions] sub sets within the Populace/USofA entity are also cross linked to the [tax revolution/reformation] internally. And to cap it all off, there are cross links from this area over to the GlobalPop entity where the termination points include structures going to [international crises] with [vatican] and [queen (of) england]. The support areas for the [tax revolt] within the Populace/USofA actually has more aspect/attributes show up after the ‘tax day’ of April 15th, than before. However the whole of the [tax revolt] sub set is formed and gaining support almost in lock step with the economic tension increases from March 4th onward. The pace of the accretion picks up significantly in late April, and gains real traction across the months of [revolutionary fervor] in the Summer of 2010.

The [economic crises] of Spring 2010 produce the building tension wave that sits ready as emotional fuel for the [revolution meme] going active in early July. Of a certainty, the [bankruptcy] wave at all levels of ‘corporate’ America and globally beginning in Spring, 2010 provides the largest of the emotional pressures for [revolution] later in 2010. The direct result of the [bankruptcy] wave is a leading [wave] of [unemployment] globally that itself is described as [driving (governments) mad/insane]. The [madness/insanity] that the [unemployment wave] produces in [governments] stems from a linguistic descriptor set that go to [huge beyond knowing]. In the detail layers the aspect/attribute sets describe a situation in which [NO activity] from [governmental minions] will produce ANY result worth having against the [self powering bankruptcy and unemployment feedback loop] just now (as of the writing of this report) developing.

The Populace/USofA entity is indicating that the [usofa populace] will be [leading] the planetary populace into the [chaos] both at the [economic] and [social] levels. Though the [economic collapse] is well underway, the [social dissolution] does not kick in until Summer. The data is indicating that [muckers] {ed note: people running 'amok' and causing death and destruction}, and others of the [take-some-of-them-with-me] mindset will be making nearly daily [stand-off with law enforcement] a constant source of [drama] in late Spring. The data sets derive support for [violent (revenge motivated) acts of revolution] from a wide area of the [populace]. Such instances of [violence] in which the [social fabric] is [blamed/challenged] by [desperately unemployed persons]. The support sets also include pointers to [bankrupt (speculators)] and [bankrupt (investing) victims] who will also join the [revenge attacks], and [expressions of violent behavior]. The trends projections for this area indicate so many of these [incidents of violent revolution/revenge] that by late Summer, the [minion classes] are [visibly] affected to the point of [hunkering down] in [preparation] for [open revolution]. ALL of the [revolution] meme supporting aspect/attribute sets up to the point of July 8th are primarily driven by [economic collapse]. After that point, a [self sustaining revolutionary movement] has apparently formed and is indicated to provide [thematic intellectual frameworks] for the [second american revolution]. Note that the [revolution] meme is NOT limited to the USofA, and will be expressing globally, however the USofA forms a special case of the [revolution] meme that develops more or less independently until some time in 2011 when the planetary expression of the meme dominates.

The level of support for the [economic chaos] and [social order dissolution (due to fiscal collapse)] is very hard to over state. Within the Populace/USofA, and lasting all through 2010 with a huge emotional boost (in the form of release language) occurring in early November, the [economic disaster] dominates all other concerns in the supporting aspect/attribute sets by several orders of magnitude. The data indicates that TPTB and their [political minions] will NOT be able to 'spin away' the impacts of the [dollar death] meme. The flow of the accretion patterns shows a movement from [equity implosion] {ed note: coincident with massive bankruptcy}, through to [bonds (of all kinds, gov & commercial) collapse], then onto [currency repudiation (implosion)]. In the last 2/two of these, the [federal government] is indicated to enter its [coagulation] stage in which [limbs] will be [sacrificed] in order to [keep the torso alive]. The data sets have the [commercial real estate] 'sacrifice' arriving first, to be followed by

the [university system]. Note the [university system] problems will first show up in what can be thought of [ancillary financing] from [deep (or shadow) government sources]. As a side effect of the [collapse of funding], a number of [scientists] and [teachers] are indicated to [go black] and to [disappear (into the shadow world)]. This last sub set has cross links over to a number of other entities including the TPTB entity where the termination points indicate that the [high level minion class] will [order] the [continuation of key programs] via a [transition] to [in house research]. This will apparently involve the actual [kidnapping] of at least a few of the [scientists] will be very [reluctant] to leave what they perceive as the [real world]. This data set plays a very important role in support for the [revolution] meme [american specific case] as well as the growth of the [behavioral expression] meme within the SpaceGoatFarts entity over late Summer of 2010.

There are sets of aspects/attributes which are in support of the [tax debacle (of 2010)] within the Populace/USofA entity which also are either directly held (duplicates) or extensively cross linked over to the SpaceGoatFarts entity. A large number of the cross links terminate in areas within SpaceGoatFarts entity where those areas are in turn cross linked back over to the Terra entity. The termination points within the SpaceGoatFarts entity are predominately linguistic structures which are in support of the [revolution] meta data layer. The detail aspect/attributes go to the idea that concurrent with a highly [visible] [tax collection problems] for the [federal government] in 2010, there will be some form of [catastrophe] {ed note: likely arising from Terra (weather problems)] that is described within the data as producing a [crushing (wave/incident of) disappointment (in government)]. In reading through the many detail aspect/attributes sets, an idea of a the [rejection (of the federal government)] as a [rescuer] becomes a [national] meme. In other words, yet more [failures] on the part of the [minions] and [civil servants] within the [federal government] during a time of a [regional disaster] causes a very large [paradigm shift] within the [populace of the USofA] over late Spring and through Summer. This [paradigm shift] is described as [yet another *(coffin) nail] in the [authority image] of the [federal government]. The impact of this [confidence collapse] within the [federal government] should not be underestimated. The data suggests that it is so profound as to [alter/change forever] the [political process] within the [USofA]. Further, the [confidence crash (in the politicians/civil servants)] comes at a [terrible] time of [crushing poverty] and [fiscal burdens] and apparently is enough to [derail/disrupt] the [federal budget process]. The

idea being that the [federal agencies] are [so abysmally bad] at assisting the [populace] during this [crisis] that an [active revolution meme] pops up around [pay issues] for these same [political minions] and [civil servants]. The subsequent crises are indicated to have a huge, and highly [visible] impact on the [revolution] meme at a national level. Further the data suggests that a whole [legion/thousands] of [videos] are developed which riff off of the various [phrases (word groups) and memes] involved such that the videos become a [rallying point] of sufficient size as to [cause/initiate problems] for the [feds] in [controlling] the [spread of the visuals]. The data seems to point to the [federal government] going into [constant censorship] mode attempting to [stay current] with the postings of the video [attacks].

The whole of the [federal government cannot save our butts] linguistic area is filled with support for [disappointment], and [disillusion] and [shocked] and [(forcefully) awakened]. These areas are extensively cross linked over to the Terra entity, and more curiously, over to the SpaceGoatFarts entity. In both cases the cross links terminate in descriptors for [turning away] and [rejection]. The idea being that the [populace of the USofA], at least the [sleeping sheeple (aka 'the masses')] are presented with such a [shocking] example of [failure of delivery of services] as to have their [faith] **and** their [collective point-of-view (world or universal view)] under such [stress] that it is [destroyed] during the [continuing (crises) debacle] of Spring and Summer of 2010. The [revolution] meme sets suggest that this [paradigm destruction] is a huge blow to TPTB and will participate very heavily in the support for [active revolution] across the USofA. There are also areas of linguistic structures that go to the very powerful emotions of [shame] and [embarrassment] within the Populace/USofA over this period. There appears to be a certain segment of the populace of the country who will be much more affected by the [shame] that they will [feel] over the [failure] of the [governmental rescue], than by the [dire results] themselves. This group of the [shame motivated populace] is actually indicated to be among the [most active] in the upcoming [expressive behavior] phase of the [revolution] here in the USofA. Apparently the [shame] and [disgust (over personal embarrassment)] is more of a motivator toward [violence] than [reasoned rationale` for revolution], as the data sets indicate that some of the [most violent] of the [early revolutionary acts] will arise from the [shame affected] populace.

The data sets under [crime] are showing growth in 2/two ways; first the data sets are indicating that [crime], primarily [property] will be on the rise due to

to-be-expected [economic circumstances]. The second growth pattern observed in the [crime] sub set shows that [political reclassifications] will cause a very large increase in [crimes]. The idea is that [government], at the [behest] of [political minions], will be [elevating] certain [behaviors] to the [status] of [crimes]. Many of these [behaviors] are descriptors that are in support of the [revolution] meme. The [reclassification] of the [new crimes] is indicated to also include a number of [activities] related to [credit] and [credit usage].

Later in 2010, and in early 2011, the [abandoned resources] of [malls] and [other commercial real estate] will be [facing seizure] not only by [local governments] but also by [squatters]. In both cases, incidents of [abandoned malls] and [other commercial property] being [converted to emergency housing] will begin to reach [visibility] here in the USofA. While other parts of the [anglo-sphere] have a history of [squatting], the legal structure within the USofA does not provide [populace domain (ownership)] rules for [abandoned] and [under utilized] property, and as a result, the data in both the Populace/USofA and the Markets entity are filled with examples of [clashes] and [skirmishes] being described as [breaking out] between [private 'law' enforcement], and [citizen action committees (groups/SOCs)]. Further many of the [battles] **will** be televised by way of on-line video services. This new [wrinkle] in the [revolution] meme is showing that a [new class] of [citizen reporter] {ed note: soon to be labeled as 'criminal extremist' by the political power structure} will rise up from the [chaos] of late Spring and Summer of 2010 here in the USofA.

The early July peak of building tension coincides with the rise of a [reformation] wave within the [american military]. This [move toward amalgamation (due to economics)], will push the [naval and air force(s)] to undergo a period of [chaos] as the [minion classes (politicians)] try to [force] a [series] of [changes] on the [structure of the USofA military]. Another conjunctive trend with this [intense focus] on the [USofA military] will be [announced threats (from outside the USofA)] {ed note: announcement may be of a [nuke threat]} that will bring up the [need] on the behalf of the [controllers (of the nation)] to [institute a massive draft]. The [scale] of the [draft] is described as being [shocking] to the [sleeping populace]. The linguistics have [extraordinary] and [extreme] as the aspect/attribute set descriptors most prevalent within the [draft] linguistic structure.

Yet another interpretation of the data would have [intense focus] on the [USofA military] beginning in early July (around the 8th) and continuing with no significant release until November. The release period in November is global in scope, and as of this writing is developing as a ‘tipping point’, however, that notwithstanding, the first real significant release period of the sub set for [intense focus] on [USofA military] does come in early November. So the alternative interpretation could be that the [minion classes (politicians)] have the [announcement] in July be of an [internal enemy] and then they [focus] the [USofA military] against the [citizenry] of the [USofA]. Or alternatively there could be something on the order of congressional inquiries into some significant [internal to the military] threat. This interpretation would also have the same level of impact on the [populace] as the [military draft] interpretation, though obviously at an entirely different level. In this interpretation, the [draft] language is within the already existent [USofA military structure] in which a [draft (of controlled minds)] occurs such that this smaller group of [serving military] is placed against the [populace in general].

Again note that it is very unlikely that any [declaration] of [martial law] would be forthcoming. There is no need whatsoever for TPTB or their [minions] to declare ‘martial law’ in order to reap (from their viewpoint) the benefits of it. Rather it is much safer, and actually much more effective to take over the civil courts, rather than place the civilian populace under a [military court system (aka ‘martial law’)]. This does not mean that TPTB would not put [military personnel] on the ‘streets’, but would do so under entirely new [rules of engagement].

However, please note that our data does not show [soldiers on the streets] here in the USofA prior to July, 2010. After that point, it is possible to interpret the data as including threads that support the idea of [soldiers (ordered to) patrol USofA city streets]. Again, this is a sub set of the meta data set of [revolution] which is a meta data layer in both the Populace/USofA and the GlobalPop entities, though obviously, within each entity the expression of the [revolution] meme is bound to be divergent.

It is also possible to interpret the [intense focus] on the [USofA military] can also include the idea that the [coagulation] of the [federal government] will be so [massive] as to [unhinge/set loose] the [elements (personnel) of the military] who will then have to figure out some new [methods] for their own [survival]. With [pensions system collapse], and [savings destroyed (first by

hyperinflation)], the [military] and the [law enforcement] personnel will become a serious issue for some [communities] as they try to [absorb] the [influx] of [idle hands]. There are also sub sets that show a slowly rising [visibility] of the [former (usofa) military] as [squatters] in the [plush ghost towns] of some [cities] that have [over built residential (and) commercial real estate]. The idea here is that [discharged (due to circumstances)] and having [no where else to go], some of the [former military (and their families)] will begin an [organized (militarized?) squatting movement] that will begin to have [national implications] in early 2011. This area is not a happy linguistic area of the data. Be advised that this area presents lots of data for all the [mistakes] that will be made around the issue of [massive unemployment], a [radicalized (through religion) underclass of military core personnel], an [empire dying through economic destruction], and [hidden control structures *(over the military and civilian gov't)]. On an ancient map, this area would be marked as [here be dread beasts]. And seeing the data, none would disagree...dread beasts, indeed.

The [unemployment monster] will [beset] the [minion classes (politicians)] at all levels from [state (through) federal government] beginning in early Spring. As the year progresses, an increasingly [visible] level of [panic] will be [observable] on the [faces (presented by the) media] to provide [public discourse] on the [subject of unemployment]. Noting that the USofA will not be alone in this trend, the [panic] on the [faces of politicians] will not be a good sign. The data sets indicate that in Spring, at least [2/two incidents] of [panic sweats] by [politicians] will be [caught on video] and be [alternative media fodder] for weeks. The [panic sweats] will be [most embarrassing] for the [female minion (politician)] and [her staff] due to the [change (in) speech] that is [prompted]. The [panic (visible) in politicians] will escalate over Summer and Fall, and at will include some [faux pas (mal mots/bad words)] on the part of a [ranking general] here in the USofA. This will be a very very very important temporal marker for the aware observer. Following this [visible] marker of [bad words], significant [displacements] can be expected to begin occurring for large parts of the [populace/usofa] due to several manifesting circumstances. If ever there was a need for a 'bug out bag', the days following this temporal marker will be it.

Alternative We

There is an alternative interpretation for the details as well as the primary through tertiary supporting layers under the [revolution] meta data layer

specifically within the Populace/USofA entity. This alternative interpretation of the [revolution] meme has some similarities to [civil war], but in this instance the term does not do justice to the complexities involved. Bearing in mind that the [revolution] meta data layer is also dominating within the GlobalPop entity, and therefore cannot really be interpreted in isolation within the Populace/USofA entity, but within this entity, the [revolution] meta data layer could actually be referring to a [revolution (to take back the nation) from the shadow(hidden) government]. In this alternative, a [WeThePeople] movement arises, and during concurrent [food shortage riots], some [incidental looting] brings out [documents] that are [very damning (to TPTB)], and which [reveal] the [secrets (and secret places)] of the [shadow government (break away civilization – see FuturePop entity for more discussion)].

As a stranger than normal (joke there) supporting set, this particular interpretation of the Alternative WeThePeople has a supporting set for the [internal revenue service] in which the accretion patterns are around a [revolution] in which the [irs (internal revenue service - tax collectors for TPTB)] becomes an [agent of reform] {ed note: after experiencing reform of itself} and is used to [ferret out] the [hidden wealth] of the [globalist corporations]. In this alternative interpretation, the [IRS] descriptor set still gains support from [conflict], only now the [conflict] is on behalf of the [populace government] that will be [forming] over the period of [November 2010 through to February 2011]. In this interpretation, the [reinvented IRS] becomes a [people's champion] over 2011 as the whole of the [corporate dominated infrastructure] becomes involved in [upheaval] and [dysfunction].

Poor US

There are significant amounts of the Populace/USofA data that participate in the [food shortages and [food riots] sub sets. The accretion patterns indicate that the [poor] and especially the [suddenly poor] portion of the [populace/USofA] will [rise] over Spring to reach [unknown (*never before seen)] levels by early [Summer 2010]. The data rapidly escalates starting in early July in support of [poor riots] which is also a sub set in support of the [revolution] meta data layer. Within this specific sub set of [poor riots/rebellion], the data accretion patterns indicate that early July brings [pressures] likely in the forms of [protests] that [erupt] into [mob actions] fueled by [present hunger] and [future fears]. Note this last could also be the [fears (of the imminent) future]. In either interpretation, the forecast is for [mobs] of [hungry] and [fearful] people to [exert active pressure] on

[government] for [solutions]. This last is very key as there are sub sets indicating that the [proffering (of) speech/rhetoric] will specifically bring [retribution] upon the [stupid minions] trying to [feed (the mob's hunger)] with [words].

Again we note that for a number of years we have had [food riots] at the core of several components of the [revolution] meme. The George Ure postulate of the 'length of time knowing is proportional to the impact' is likely very pertinent in this case. The data sets for a number of years have shown that [food riots] will, as an instance, cause [mobs] to [spill over into (invade accidentally)] several [government bases]. While not imaginable under 'normal' circumstances, the [food riots] will truly be driven by [acute hunger] and incipient [malnutrition] that will be affecting the [former middle class]. It will be the cumulative effects of the [economic degradation] over Spring, which is forecast to [induce] the [government (into) coagulation]. The [sinking] of the [deception (of) entitlements] is forecast to [drastically affect (impact)] the [poor] {ed note: the 'existing poor'}, and then in very short time period of perhaps only weeks, to bring a sizeable section of the [middle class] into the status of [instantly poor]. It will be the combination of [cruel disappointment] within the [former middle class], and the [new suffering] on those [already at the (economic) bottom] that is indicated to [plunge] or [drop] the [national mood] into a [negative cloud] that will dominate Summer and Fall of 2010.

The descriptors for the [government response] to the [populace demands] is [drastic]. The [drastic response] is forecast to be a [causative force] in support of the [revolution] meta data layer. The [drastic response] is indicated to [mirror/reflect] a [deep level (of) fear (about immediate future)] that is indicated to be affecting, at that time, a very large part of the planetary population.

Respite?

The ending of the release period on January 23rd of 2011 also brings a whole new set of very large scale social order changes to the [populace/USofA]. The data sets are accruing for the [revolution] meme to have matured, and to now include [reformation] of the [political structure] of the nation, as well as the [restructuring (of the) civil service]. But there is an actual sense in the descriptors that some very substantial emotional barriers will have been overcome, producing something of a more hopeful/optimistic

view of the remainder of 2011 **despite clearly foreseeable large scale dangers/threats.**

[GlobalPop – Israeli Mistake, Religions Bake, Logical Frank and the Wild Colleen, Turning Point July?, Baguettes and Roast Duck, Flying Blood, Ancients Re-Surge, Anchors Emerge](#)

Israeli Mistake.

The [israeli mistake] sub set **still** exists within the data sets. It is as though a [hesitation] is being imposed from universe. The data set continues to grow and to stay ‘active’, however, it is clearly also ‘dithering’. This dithering behavior is reflected in some of the linguistic sets where we find explicit references to [difficult (to either) proceed (or) retreat (from the position)]. There are also sub sets going to [2/two positions (persons) are/will be drowning (within) waves (of) indecision]. The [indecision] set is supported by [dangerous (and) challenging (task= attack on iran)], and (yet) [must be completed (to meet expectations of the ‘masters’)]. So the data set would suggest that [pressures] on the [more sound minds] within the [israeli power structure], will still increase over the last days of [winter 2009/2010] and into Spring.

The above noted, the data sets yet accrue within patterns that suggest that if the [israeli’s] do NOT attack Iran by the end of May, the [ability] to [undertake the assault] will have [begun to diminish] due to [unfolding circumstances] at the [global international agreements (and currencies)] levels. The accretion patterns have the [blockages (against) attack (by israel)] as building from May onward. So the idea is that if the [israeli mistake] has not occurred by the end of May, then the potential falls off over Summer of 2010. Note that the totality of [pressures] for the [israeli attack on iran] will ratchet up over Spring as the TPTB will [feel] the [power fading] from their [fingertips] the way that a [dream slips away] with [daylight].

Religions Bake.

With the growth patterns of the GlobalPop entity reaching a critical mass in late October of 2010, along with a number of other entities also participating in a ‘tipping point’, the data suggests that the first of a number of [anti religion aggressive acts] will become [visible]. The data suggests that the actual occurrence will have been some time in the recent past {ed note: at the time (in the future) when it is made known}, but that the [visibility] of

the event will surface in early Winter (2010/2011). Much of the [troubles] for the [religions] will be coming from a [new knowledge base] that points to [faith based religions (judaism, christism, mohammadism)] as being [controlled by (a solar cult)]. Seemingly the [visibility] of the [control mechanism] over the [organized cults/religions] will be first noticed in [europe], but will rapidly spread planet wide. This [exposure of hidden control] will actually trigger [fraud suits] in some of the [less friendly (more religiously abused) countries such as France and Spain]. These [exposure] issues will come following a series of problems as [religions] also become [attacked (for tax free status)] during the more [crippling days] of the [planetary economic depression] earlier in 2010.

A few years back, when we still had the Bushista entity, the data provided us with a clean set schism between GlobalPop and Populace/USofA entities. Over these last few years the fine distinction of the populace sets has blurred considerably at several levels, however the differences between the Populace/USofA and the GlobalPop can now be summed up most distinctly in a single descriptor of [empire]. The two populace entities are now most different in those areas that are related to their [location (or distance)] from [empire central]. At the moment we will define [empire central] as being [washington DC] as the [proxy face], and where ever the [bilderbergers] are meeting this year. So fundamentally the GlobalPop differs now from the Populace/USofA in how far away the populace is from the center of the [anglosphere empire]. This 'proximate test' can be used to place 'risk' components for [emotionally driven behavior changes] within the local population. The proximate factor also is tied to the temporal sweep of what is about to unfold over 2010.

The data sets include specific and repeated references to [councils] and [meetings] in which [spies] will be able to [record] some very [damning statements] that, when released, will cause wide spread [arrests] of [religious clerics/priests]. These [arrests] are indicated to be both [visible] and [public] and to cause even further [panic] in the [upper levels (of the) religious organizations]. The [fear] being expressed by the [senior religionists] is indicated to be [augmented/ballooned] by [communications] with some very very senior members of ThePowersThatBe. The detail layers suggest that [roasting (verbally only? Hmmm?)] of [priests/clerics] will be done for [several days] as the [crises over religious organizations] unfolds over 2010 and into 2011. The longer term data sets are still building support for [trials], [convictions], [incarcerations], and even [re-education] for the [religionists].

Further data has accrued suggesting that the [vatican looting] forecast from a few years back is **still** pending, and is **still** to be associated with [food riots] that [spill over (into the) vatican (place of the sorcerers)] after [over zealous guards] are seen [firing into the crowd]. Many deaths will result, in both the crowd and in the [vatican (sorcerers place)] staff. However, the [liberation] of the [long suppressed knowledge] from the [vatican archives/library] will be judged (so says the long term data) as being very worth the [deaths]. NOT that any of the dead are likely to agree with that view.

Logical Frank and the Wild Colleen

Occasionally the data sets provide interesting forecasts about specific personalities who will be appearing on the 'world stage' in the near future. We have had some data sets for a number of years that described a particular [fierce frenchman] who would become the [philosophical core] of the forecast [global populace revolution/evolution]. The identifiers for the Frenchman included a [rough past], [brushes with legal system/jail], and a distinct association with what can only be described as the [lower levels (of the populace caste system)]. There are links to [savate] and [maritime past] which brought the [frenchman] both his [logic] and his [fighting ability]. Unfortunately this individual was killed for his [political position], but the data is now indicating that [long dead words/thoughts] will be [energizing a new populace movement]. The [visibility] levels within the global mediastream (which includes the internet, and alternative media of all kinds) have been rising for years, and there are now specific detail linguistics pointing toward an [historical figure] as the source for a new [human collective] approach to [rebellion (and) resistance] to [ThePowersThatBe]. A curious new wrinkle to the data sets at the detail levels, as well as in a separate set, has been the rising of a [female personality] who will become the [life voice] to this [long dead (historic) frenchman]. The [female personality] is described as being [irish], and is forecast to [display] a [wild (passionate) character] that will [captivate] the [planetary populace] as we go forward into [open warfare/resistance] against the [minions (and their masters – TPTB)].

The data sets details include that the [wild/passionate colleen] also has a [personal history] of both [repression] and [incarceration] that in some very key ways will be shown to [mirror] the [logical frenchman's mother's past]. The data details are quite specifically referencing a temporal events echo between the forecast [wild colleen live voice] and the [female relatives (of the historical frenchman)]. This seemingly irrelevant detail has a very high

level of [visibility] as well as large levels of support indicating that (for some reason as yet unknown) this curious linkage will provide a very [human touch response (resonance)] with the global populace at large.

The [wild colleen] personality is due to [rise from (the center of) a crises]. The data indicates that during the [Summer crises (of 2010)], and stemming from the [dollar death/equity destruction] of late [spring], and in the midst of [unemployment crises (globally)], the [wild colleen] will [stride (from the center)] of the [unemployment riots] onto the [planetary populace consciousness] in a very [unexpected (or unusual)] way. Again we have numerous associations for this [female personality] to [france] and the [northern hills (of france)]. These associations are at the detail and the tertiary levels, and include both the [historic] links to the [frenchman's logic] which will form the [core of the populace movement], as well as current associations within the life of the [wild colleen] to [northern france]. Other details provide some weaker level links to [middle (of the new lands)], and [indonesia]. A monkey mind speculation would provide a description of a [riot] over [unemployment] breaking out in the [middle (of the new blocks/lands)] in a major city in Ireland and engulfing the [indonesian restaurant] in which the [wild colleen] sits, reading the words of the [historic logical (anti globalist) frenchman]. From this (very speculative) set of circumstances, the activities within the [violent riot] would present an [opportunity] for the [wild colleen] to [act with passion (and determination)] which is video-captured, and thus the [global mediastream] spew catches [his (the dead frenchman's) words] from [her passionate speech]. We doubt very much that the scenario described here is how circumstances will actually manifest, in stead this is provided to connect the linguistic dots into a more cohesive whole and to provide some of the flavors of emotional tone that come from the detail layers in support of this forecast [female personality].

Also note that the [female personality (of passion and connected to the dead frenchman)] is a huge temporal marker. The data indicates a whole stream of events that will be occurring at the same time (more or less) as the emergence of the [wild colleen]. Note that these other events are not dependent upon the rise of [visibility] of the [female personality], but are simply temporally linked.

Also please note that with regard specifically to [female personality] forecasts we have had actual emerging circumstances fulfill the forecast with

multiple persons. So in the past our forecasts for a single [female personality] have, more often than not, actually had the linguistics show up around several women. The [woman of scars] is an example of such a forecast in which many women rose to [visible] levels in bringing the linguistics into manifest reality. The thinking here at HPH is that this expression of universe is somehow connected to the nature of [female-ness] as it is demonstrated in humans.

Turning Point July?

Within the GlobalPop entity the accretion patterns take a very large turn following July 8th. This change reflects the [revolution] meta data layer going [active] at a planetary level from that point forward. These changes are again building off of the [economic collapse] language that accrues across the last of Winter (2009/2010) and Spring 2010. The GlobalPop entity shows that at a planetary level, the soon-to-be-apparent [planetary economic depression] will impact [planetary immigration patterns] for humans. The data suggests that [reverse migration] will begin in Spring and grow to very large [visibility] in late Spring and early Summer. The accretion patterns show that from mid July the [economic depression] reaches such a state of [planetary imbalance] that [recent immigrants] will [turn around] and head back to [country of origin]. The most important driver for this [global reverse migration] takes its power from the [economic crises], however, from July 8th onward, the [revolution] meme also brings [social dysfunction], and [control system energetic destruction] into the mix. The [social degradation] and the [dissolution (of tax supported entitlements)] put great pressure on the [immigrant populace] such that many will [wish for home]. Further problems will occur as [governments] {ed note: especially USofA and Germany}, will [restrict (money flows through) borders]. This [restriction] will all but remove **the** last incentive to [immigrate (to developed world)]...the ability to [send money home]. The [break down/dissolution] of the [skills trading system (immigration)] shows that [short term] impacts on the [social orders] of the [developed countries] will be [visibly] present by Fall as the [service industries] and [food gathering] suffers the [lack of hands]. Please note that [food shortages] at the planetary level are forecast due to [catastrophic climate change], but that these will be [exacerbated] in some locales` due to [inability to harvest].

Baguettes and Roast Duck

Within the GlobalPop entity the [revolution] meta data layer hits some countries harder than others. In the geographic references we have [china]

and [france] that have the highest levels of emotional support values for [riots] and [protests], and [public discord]. The 'usual number' of [riots] in [China] {ed note: over 180 a day in 2008} are forecast to [more than double] over 2010 (including January 2011), and are also forecast to [rise/grow (in) intensity]. Further, in both [china] and [france] the [riots] are being forecast to [involve/include] the [use of (homemade) weapons]. The supporting sets indicate that the [home made] nature of the [weapons] should not lead to underestimation of the potential effectiveness as the aspect/attribute sets accruing for both China and France indicate that [reinforcements] will have to be [obtained (called up)] by the [central government] due to [failures] of the [local constables] to meet the [challenges] of this new expression of the [revolution] meta data layer.

Further problems are foreseen for [china], [france], [italy], [britain], and the [usofa] as a result of the manifestation of [revolution behavior] following July 8th, including [bloody (and) violent riots]. Some of the increased emotional tension values for these countries will come from the [2012 documents/material] that [leaks out] over Spring. This [leaked (secret) materials] are shown as [propelling] or [participating] in the [paradigm shift] that is even now starting to affect planetary omnihumanity. The data indicates that an attitude of [nothing left to lose] will begin to develop within specific [underclasses] of [society] such that when the [riots] begin, these [disaffected] and [newly awakened/aware people] will be [especially (able to) sacrifice] for the [cause]. The whole of the aspect/attribute supporting sets for this area go to the idea that the [too poor to count] group of persons in the [great unwashed (underclass)] of the planet will be [very intensely affected] by the [leaked 2012 revelations]. That this [underclass], on a planetary scale, is composed of over 3/three BILLION humans is forecast to cause the ThePowersThatBe great [consternation] and [fear shifts] {ed note: we always pay very special attention to body parts or process references within the data sets as these are THE highest level of archetypes and are indicators for very emotionally powerful trends}. The [stomach churning] and [bowels burning] references point to a very large trend developing. That TPTB entity also has huge levels of [fear] and [bowel release (from abject fear)] language is also a very good indicator of some 'special times' coming over Summer of 2010.

Flying Blood

The 'special times' for [italy], and [ireland] are supported by extensive cross links indicating that [revenge (for religious scandals)] will [fuel] both [private attacks], as well as [public (anti-church) policy]. The [church] is indicated as [failing] in a [miserable way] to [attend (to) business], and the [predatory] nature of the [priests] is forecast to significantly [taint] the [public perception] of the [church (and its heirarchy)] after an incident involving [flying blood]. {ed note: hints only here. Necessary.} In both countries, the [church] will be [under assault] though from distinctly different [causes], but nonetheless, the results are forecast as being the same, a [drastic revision (of church presence) in society], as well as the [removal of the concept of church 'rights'] from [public support]. This last is a key element to the local to [italy] and [ireland] expression of the [revolution] meta data layer. In both countries the [religious basis] or [deference to (the religion)] in [public policy] and [law] will be radically changed by the events of Summer 2010. Also note that in Ireland specifically, the events of July 2010 will be a 'fore echo' to huge events affecting the [social order] in January 2011. Universe seems to favor the Irish (well, at least adversity has provided strength of character to some), and we needn't worry overly much for those of the 'tanning tribe' in Eire.

Ancients Re-Surge

The [revolution] meta data layer within the [japan] sub set is supported by aspect/attribute sets going to [active] and [violence]. Again the supporting aspect/attributes begin to accrue with significance from July onward. The data seems to point to a [flash point] and an [expression] of [frustration] over [long standing inequities] which will [prompt] the [public protests]. These [protests] have enough emotional tension values within the duration and intensity areas to perhaps bring down the [japanese (form of) government]. Unlike the [revolution] meta data layer in other countries within GlobalPop where the manifestations are described in much more chaotic terms, the [japan] expression of the [revolution] meme is described as very [focused], and [goal driven]. There are certainly [chaotic] elements pending for the Japanese people as they work through this time, however the majority of the descriptors would seem to indicate that a [long simmering issue (of national pride)] will be joined by [economic chaos (fears of the future)], and [food price increases] and [food shortages], and the [leaked 2012 cataclysm documents/material] to form a [perfect social storm] for [hot summer's nights] and [plotting of revolution]. The [revolution] meta data layer within the [japan] descriptor set of the GlobalPop entity is supported at very

elevated emotional levels by references to [ancients] and [ancient technology]. This would seem to refer to [japanese ancestors], but given the number of cross links to the SpaceGoatFarts entity, there may well be some 'off world' kind of inference in this reference. The [japan] sub set of the GlobalPop data also shows that some of the [revolution] meta data emotional energies for significant portions of the [japan populace] will be re-directed toward [2012 preparations] by late August, or early September. It is as though the percentage of the [japan populace] who are [worried] or [fearful] relative to [2012] will take a very large jump upward. The data sets would seem to indicate that the [2012 preparation] meme becomes something of a major sub plot to the chaotic social evolution events in Japan over Summer and Fall of 2010.

In many of the countries where the [revolution] meta data layer goes [active] over [Summer 2010], {ed note: including the USofA}, there are supporting sets for [internal reformation] within the [government] descriptor sets. Specifically focused on [civil service] for these countries rather than [politicians], the [internal reformation] sub sets appear to be a [governmental response (at the legitimate civil service level)] to the [pressures for revolution]. The idea coming across from these combined supporting sub sets is that the [governments] of many counties will basically [freak out] at the [fear] that [revolution] is [imminent] and the [civil service] will [respond en masse] as though an [animal at risk of its life]. This perception on the part of the [civil service] is probably true in the sense that revolutions usually displace the [civil service classes] and in general are a [negative] impact on the [middle class]. However, noting that the [devastating economic conditions] of Spring and Summer pretty much [deplete (the) middle class] of many (most) countries of the planet, the [internal reformation movement (of the civil service)] seems to stand alone as a [response (anticipating) revolution].

Anchors Emerge

The GlobalPop entity is extensively cross linked over to the [oceanic changes] forecast to emerge over Spring of 2010 and beyond. Some of the specific areas within the GlobalPop entity include aspect/attribute sets going to the idea of [archeology] that will be [accomplished in a hurry] due to [oceanic changes (at the coasts)]. This [archeology] is focused on the [western coast] of [central america/south america] and is being forecast to contribute to a [chain of circumstances] that will produce a [startling reformation]. The [startling] primary supporting descriptor is supported by

[out of no where] and [totally unanticipated]. The lexical set for the [archeology], though described with supporting language such as [tangentially], is nonetheless also at a key spot at a key time in the accretion patterns. From the positioning of the [archeology] within the accrual flow of aspect/attributes, it appears as though this [discovery] will be part of the [2012 information/material] that is forecast to emerge into public [visibility] over 2010 beginning (you guessed it) post July 8th.

Curious included sub sets in the supporting linguistic structures, both directly held and through cross links over to the SpaceGoatFarts entity, include references to the [hyperchronism] experience, as well as [ufo viewing]. This last is curious itself, and is supported by aspect/attribute sets for [through *(a) device], and [viewing (from within) {ed note: as though pictures taken within a UFO}]. It will be interesting to observe how these can affect the [coastal archeology done in a rush].

Much of the descriptor sets in support of this structure go toward the idea that [sea carried culture] will be [examined], and that [some thing (of unknown type at this time)] will be [located] that will be [participatory] within the [2012 meme]. There is actually some anticipation here at HPH over this item as there are supporting sets indicating that actual [real information (about pending solar system changes for 2012)] and not mere conjecture and speculation will emerge. While the emergence of the information is NOT good for the social order, it is forecast to be very effectively ‘good’ for the aware observers on the planet.

[FuturePop – Renaissance, Rummaging among ruins](#)

In previous reports we have had references to a FuturePop entity. At the time, it was thought that the data sets were in support of a [pending populace set] on the other side of 2012 with which we associated the [new electrics], as well as the [renaissance (in science/analysis)]. Further the sets were interpreted as though a [cataclysmic circumstance(s) occurrence] would be the point of separation between the current populace entities and the (then developing) FuturePop data sets. The logic of the thought was clear at the time as we had many sets going to [scavenging] and [coastal (water based) ‘tribes’/collectives] as new forms of [social organization]. Further data sets included descriptors for [recovery technology] and other [sciences] related to [recovering (the capabilities of a ‘lost world’)]. All of which made sense as

the logical follow-on to the [catastrophe] for which the TPTB data have been planning for all these decades (centuries?).

Those thoughts may have been way off the mark. We might have just shot our arrow into the head of the poor person chosen as ‘apple support’ standing in front of the target.

An alternative explanation must now be considered. Given the recent books by such authors as J. Farrel, R. Dolan, and others, the idea of a [break away civilization] is coming to the fore of the collective consensus of the woo-woo community, and its ramifications in regards to our data must be considered. The obvious correlation’s between the linguistic structures within the [break away civilization] descriptors and our FuturePop bring an alternative interpretation into stark relief. The alternative explanation for the FuturePop entity sets emergence, which take into account all of the precursor set movements, would go to the idea that our planetary civilization gets devastated by [natural calamity] and the following [civilization] would arise NOT from the remnants of the former civilization populace, but rather from the ‘invasion’ of the [break away civilization] after things quiet down here on earth. This would be supported by the data which does indicate both a very highly advanced civilization which goes into [renaissance] with [new electrics] along with other woo-woo tech, **and** a much more primitive civilization that will be based on [scavenging amongst water covered ruins].

This alternative interpretation actually fits the data a bit better. Rather than having to postulate a globe affective calamity and a very rapid recovery leading to new heights of technologic capability, it is easier to postulate that the [renaissance] is brought to the [new world] that emerges post-cataclysm, rather than having to be [built] from what will be an obviously [traumatized] populace. This also explains both the rapidity of its emergence as first seen from 2014 ramping up through to a near term peak in 2019, as well as the very strange, almost bifurcated populace described. Bearing in mind that the FuturePop descriptors indicated that the [renaissance] would NOT be equally spread about the planet, and that large portions of the populace were to live for [generations] in [scavenging] mode, the oddities of the descriptor sets spreads can be explained under this alternative interpretation.

Acknowledging the outlandish (pun intended) nature of the alternative theory of FuturePop, that is, that [space based nazi descendents now in type one status civilization] come back to ‘home’ following a [world affective

terrestrial cataclysm], it nonetheless fits the patterns within the data set that have existed since 2004.

SpaceGoatFarts - Army In Space, Drunk Lips Spill Blips,
5:30PM Early Bird Special, Macrobe Pseudopodia Protrusion,
Rocks and Roll, Something About Them Humans, Standing Dead

Well, does it get any stranger out there? {ed note: probably it does}
Spirals in Norway which (according to R. Hoagland/Enterprise
Mission.com) are capturing Russian missiles as a warning to the nations of
USofA and Russia (as well as China) from the Break-away (see R. Dolan
second volume of UFO's and the National Security State) civilization which
is likely of NAZI origin and also likely has gone to Type One status.
http://en.wikipedia.org/wiki/Kardashev_scale Note that most of all of the humans
connected to the internet are still within a Type Zero (0) civilization. Also
note that the Kardashev scale is significantly modified for complete
description of planetary versus hyperdimensional (what we used to call –
space based) civilizations.

And now rampant speculation about 'stargates' opening under the waters of
the Gulf of Aden while a multinational armada of warships circle overhead,
waiting.....to do what ain't exactly clear.

But, while the elevated level of just plain strange sheeit out-and-about on
planet earth is at such a level as to crush the monkey mind into a near fetal
position, according to the data, we ain't seen nothing yet.

The cross links over to the Terra entity from the SpaceGoatFarts entity
include some that terminate in the [atmosphere problems (for humans and
other life here on earth)], and that originate within linguistic structures
suggesting more strangeness similar to the Norway Spiral, or the
[tetrahedron] floating over Moscow. This last is more frequently referenced,
and the supporting aspect/attribute sets include further references to [strange
floating 'apparitions'] across many areas described as [densely populated].
The descriptors include the word [apparition] and its context is defined by
[evidence] though not necessarily any [understanding] of just 'what' the
[evidence] proves...

Army In Space

{ed note: here is where it gets stranger out there!}

Under the [alien wars] descriptor set the newly processed data sets have brought some very interesting sub sets for examination. Many of these are beset with [visibility] changes over the time from July 2010 through to June 2011. Hmmm?! What the hell is it about July of this year? The accretion patterns indicate that the months of July and August of 2010, as well as the months from November 2010 through January 2011 will be very significant for humans here on earth due to deep woo-woo out in space.

The data accretion patterns for the SpaceGoatFarts supporting sets take a very large jump upward in July. {ed note: like lots of other entities!} These supporting aspect/attribute sets are accruing under the [army (military)] descriptor which has a primary support level of [space]. This [army in space] sub set has [earth above (your (the) view from (the) window)] as its secondary level of support. In this aspect/attribute set are descriptors which almost lyrically present the [feeling/emotion (of reading under reflected light from earth)]. Hmmm!

Other areas of the [army in space] are more prosaic and go toward [military decisions]. This descriptor set is supported by large aspect/attribute sets for [activity], and [authority (without dispute)]. There are some sub sets that indicate that [ceremonies (in side warships)] will be taking place [in space (space related?)] in early July in which [rewards (promotions)] will be [awarded] in front of [significant representatives(?) of “the horse”]. This last makes no sense to me either, probably will reveal itself at the appropriate time. The descriptors for the [ceremonies (of the awards)] are quite revealing in that they describe [large (mostly empty) areas] that are [most frequently (used for) preparations]. In these descriptors there are some specifics going to the types of [personnel] involved, and these include [branded (under the patch/badge) people]. The individual aspect/attributes sets that are in support of the [ceremony] itself include [red presentation boxes] which are, in this instance, symbols for the [blood spilled], and the [lives lost]. These [awards] are being presented in [series] as the personnel are apparently going to be [in morning] for a lot of [lost comrades]. Many of the supporting sets at the detail levels indicate [missing (in space, recovery classed improbable)]. Further the [ceremonies] are also indicated to involve the [recent amputees], and those who are [damaged (crushed)] to the point that [hospital equipment] is involved in the planning for the [ceremony]. There are further descriptors which suggest that this represents the [first]

such [ceremony] for the [humans] involved, and that it all stems from something that [occurs or erupts] with [sudden violence]. What is somewhat reassuring is that the [ceremony] is being held **after** [meeting the challenge (of the sudden violent situation)]. Other supporting layers for the [ceremony] indicate that at least one [middle level (Non Commissioned Officer/Warrant Officer) space army fellow] will be receiving a [triple decoration/(award of merit)]. The data sets indicate that this particular [individual] will be the focus of a [military (army and navy) discussion] in early 2011. This [discussion] will be very [goal oriented], apparently will be occurring in [late Winter 2010/2011]. The supporting sets are indicating that this [meeting (for the goal) of protection] will become [visible] at a [top of the mountain] level before Summer of 2011.

Within the detail descriptors {ed note: remember THE most unreliable in our archetype dominated technique} for the support for the [sudden violent situation], there are aspect/attributes that describe a [large force (suddenly appearing?)] that will be [overwhelmed (by the) ferocity (of the) small group (of the enemy)]. This [small group] appears to be those holding the [ceremony], though it is very difficult to resolve subject/object relationships within the detail layer. Caveat stated, the interpretation continues with the descriptors that indicate that the [small group] is now [much smaller] as a result of the [combat/violence] that [suddenly appears]. The [small group remnants] are (assuming they are the subject) [reacting] to the [massive emotional stress] of the [recent violent situation] with the [release of the collective grieving (of the ceremony)]. {ed note: the impression is of losses on the order of 'half'}. There are repeated sub sets in support of [ferrying (the) dead] along [corridors (filled with) smoke and debris and people (hurrying)]. Much of the [casualty levels] are supported by [bad luck (of the army)]. There are further supporting sets that indicate that the [bad luck] comes as a result of the [formation parameters (?)] that were [placed upon the army (in space)] by the [critical king] at the [time of its inception]. The [sudden violent incident] will be described later as [juxtaposition/conjunction of bad luck and **really** bad timing]. As a side note, the data sets indicate that the [sudden violent incident] results will trigger a [shift (by management)] toward the [acquisition/obtaining] of [timing talent]. {ed note: specifically venturing into deep woo-woo on the part of the [space army] here.} The [timing talent] is indicated to receive a [strange restructuring (of universe)] over late 2010 that will provide for a much easier 2011. Other smaller supporting sets indicate that [following success (in coping with the sudden violent situation)], the [key (authority on

site) officer] will [choose] to [retire]. The idea coming across here is a fellow who [ages overnight] due to the [narrowness (of aversion of calamity)] and the [horrific costs] involved in the [narrow victory]. The 'moral' is that 'to be a founder of a great enterprise is beyond difficult, demanding all that has to be given'. Hmmm. Getting a bit grim up there.

With the assumption of the focus of the detail layer of aspect/attributes being the [small group], then the other supporting layers for the [sudden violent incident] includes [machines/machinery] that will be [key] to the [disruption] of the [assumed superiority]. Hmmm. There are further supporting layers that go to the idea that at least some of the [debris] that results from the [sudden battle] **will** be [inconveniently appearing] here on [planet earth].

Drunk Lips Spill Blips

The SpaceGoatFarts entity has supporting aspect/attribute sets under the [alien wars] sub set that describe a situation in which a [drunken (night out)] produces something of a [major flap] at the [teevee visibility] level due to the [drunken slip of speech] in which [rash and foolish admissions] come from [senior staff (of NASA?)] that will, unfortunately for TPTB and their [political minions] be captured on [video] and [spread globally]. This [drunken rambling admission] is being forecast as being [taken so seriously] that it will participate in the [revolution] meta data layer in several situations including within the [USofA], both at the level of the [civil service panic restructuring] and at the [popular uprising]. The data sets in support of this area are extensively cross linked over to both populace entities. Within the Populace/USofA entity, the termination aspect/attribute sets go to the idea that the [drunken rambling] will be **the** most [significant step (toward) disclosure (though of what?)] ever taken.

5:30PM Early Bird Special

The data sets suggest that the [alien wars] as well as the [evidence (of contact (genetic manipulations?))] will be kick started by an up coming incident that appears in the data sets in late Summer 2010. The details are still building within the shorter term data sets, indicating that the [5:30PM event] will be of a [building tension] variety event. Further evidence that the nature of the [leaking of hidden (occult) documents/material] will be [genuine] in spite of many attempts to prove it not to be, comes in the form of supporting sets for [meetings (clandestine)] to [deal with/cope with] the [critical leak]. It also appears from the data that this may be Freudian slip

kind of thing as there are some small sets describing a [reporter] who just ‘happens’ to go to a particular [booth] in a restaurant to meet an unrelated source, and there [discovers] some [documentary material] that quite literally almost causes [fainting]. There are many [Dayton] and [tracks] linguistics associated with this [5:30PM revelations in a diner].

Macrobe Pseudopodia Protrusion

The use of the [macrobe] label here does not necessarily imply the context for ‘macrobe’ as was established by John Dee {ed note: of her majesties secret service}. In this case the [macrobe] label is applied as a generic label for [maha anima (or large scale life form)]. These [large scale life forms] are forecast to involve [space travel] {ed note: Oh, horror! Giant Mutant Space Goats!?!} and to be [water based]. Hopefully the [sudden violent incident] will not involve these [macrobes] as these have supporting sets for [large grasping extrusions] as well as [swimming/slipping (through) space]. The linguistic sets are seeming to suggest that the [macrobes] will be [intruding] on [existing arrangements (amongst ?)] and, perhaps accidentally, perhaps not, cause [havoc] within the [military (in space)] and the [staff officers]. Specific cases of [planning], and [logistics] being [disrupted] are referenced in the accruing aspect/attribute sets. Due to the lack of details it is not possible to do more than speculate, however it **may** be that these [macrobes] appear on the scene sort of like [space whales], and are [hungry]. These [hungry macrobes] are indicated to [extend pseudopodia] in such a manner as to [interfere] with the [logistics (of/for) the army in space]. This data area could be interpreted as a [hungry space whale] stopping by and [munching up (our) space freighter]. There are some small sets in support of just such an idea, as apparently the [macrobes] will [rapidly leave] with an emotional sum that goes to [chagrin] and [embarrassment].

Rocks and Roll

The SpaceGoatFarts entity grows considerably as the whole of modelspace is progressed across the ‘crocodile teeth’ period of near daily shifts between building and release emotional tension values. This period extends from early July through to the tipping point of November. As modelspace nears the middle of October, the SpaceGoatFarts entity has reached a point where it is nearly 2/3rds (two-thirds) the size of the Terra entity, the largest entity in modelspace. A large proportion of the growth of the SpaceGoatFarts entity over the late Summer and Fall period is led by the [alien wars] descriptor set.

As the SpaceGoatFarts entity transits July, it picks up its volume growth considerably. This growth level actually continues to increase, albeit slowly, through all of Summer, Fall and Winter 2010 at a steady rate. Then, as the rest of modelspace plunges into the tipping point in November, the SpaceGoatFarts entity actually speeds up its growth rate to nearly double what was experienced over Summer. As modelspace goes into a general release period following the tipping point, the [alien wars] sub set of the SpaceGoatFarts entity continues to gain building emotional tension values. In fact the level of building tension values under the [alien wars] sub set actually increases in an inverse ratio to the rate of release in the rest of modelspace.

As the [alien wars] sub sets grow over Summer, there are clear indications of temporal fore-echoes of the coming [explosions (of) interest (and) awareness] of the [alien wars] that will be overtaking the [planetary human consciousness] from January 23rd 2011 onward. Our data sets from the rather minor Press entity {ed note: proxy for the official view of the propaganda media by themselves} support the interpretation that the time from early 2011 onward brings about [extraordinary growth/spread] of the [alien wars] meme. There are also some small levels of support in the cross links from the SpaceGoatFarts entity over to the Press entity that support the interpretation that the [alien wars] meme will [bust out] into [public consciousness] as a [building consensus] resulting from [hot rocks (debris)] indicated to [fall (from) battle 'fields' in space].

Something About Them Humans

Within the SpaceGoatFarts entity there exists a very complex interweaving of internal and external cross links that was nearly the cause for mental overload as the various origin and termination points were teased out of the fabric of this structure. There were over 12/twelve thousand cross links internally, and we stopped counting at 28/twenty-eight thousand external links.

The fabric of the cross links suggests that some [new findings] of what is described as [very (extreme) old knowledge] will come along in late Summer or early Fall {ed note: as part of the [secrets revealed] meta data layer going vertical prior to the tipping point in November} that is indicated to [spook] the TPTB in that the [reaction] of the [planetary populace] is a [forecast unknown]. The idea is that TPTB will [observe] some [events]

occur that will [relate to deep human past], and that will be [unstoppable] in its release into the general public consciousness. This [new findings (of old information)] sub set within the SpaceGoatFarts entity is indicated to set off the [solidification (of the) paradigm change].

There are several sub sets in support of the [fears (of the TPTB)] about the [masses awakening]. However the data sets are pointing toward a [primary group (of awakened people)] that will indeed be a [problem] for [ThePowersThatBe] over 2010. It will not be a real issue until later in Summer and beyond, but the [fears (of TPTB)] will be [triggered] by an [early (in the view of the TPTB) release] of [critical information]. We need to also note that there are temporal markers inherent in the cross links that tie together the [release of ancient (humans) information] and the rise of the [revolution] meta data layer. Further, there are once again accretion patterns that begin in very early July, though in this case around the 5th.

That the cross links fabric is dominated by internal termination points relating to the [alien wars] descriptor set provides some further detail layers. However the problem at the moment is that the sheer mass of the detail layers of aspect/attributes associated with the internal termination points is too overwhelming to aid in the interpretation of the accrual patterns. Just waaaaay too many data points to be able to decide which is important enough to examine. What we can do is to sum the various termination sets for our array of emotional values, and when this is done we find that the [extremely old knowledge (about alien wars)] sub set produces a 5/five generation sum for 'duration of impacts (on the human social order)'. This amounts to a 100+ (greater than one hundred) year span for the impact of the [ancient information] that will apparently actually [fall (into public) hands] over Summer.

The descriptor sets for the [critical (crucial) information] and its [accidental appearance] coincides with an accretion patterns in the GlobalPop entity that go to the idea that [voices (spokespeople?)] will be [self established] that will be able to [project (the) meaning] and to [identify (those affected)] by the [released information]. The idea here in the detail layers is that this information changes [minds] almost instantly once it is accepted. Further that this information will [alter (the fundamental view of) women] {ed note: likely first by themselves given the emotional sums range over 2010}, and their [position in universe]. While poetic sounding, the [information] is [crucial] and [practical] to effecting a [personal enlightenment experience]

that [propels (radical and swift) personal changes]. Apparently mostly this [ancient understanding about humans] will be [lost] to the masses of humans currently here on earth, however the cross links over to the FuturePop have it as a [core] to the [progression of the species].

We note that there are still growth patterns in supporting aspect/attributes for the [commonly shared experience] that will be [mentally affecting]. This [commonly shared experience], reported on in previous reports, now **also** gains its largest growth following July of 2010. This area is cross linked over to the [leaked human-changing information], and just MAY be providing a clue that the [receipt (into the mind)] of the [ancient understanding (about humans)] actually is of an [initiative nature] that thus triggers a [commonly perceived] and [commonly experienced] change of [mind]. This would qualify as filling in the linguistics previously reported about this forecast [mass experience] by perhaps several hundreds of thousands of humans.

Standing Dead

There are extensive cross links from the [alien wars] sub set within the SpaceGoatFarts entity over to the Populace/USofA entity that suggest that [several wars (or fronts)] will be ongoing in the [revolution] meta data layer. Some of these cross links suggest that the [populace/USofA] will have particularly [difficult time (absorbing)] the [knowledge] and that this [lack (of ability)] to [accept (the changes in the consensus paradigm)] is actually indicated to [cause deaths (to those so afflicted)] as circumstances manifest over Summer. There are repeated instances in the detail layers of both the SpaceGoatFarts entity and specifically Populace/USofA entity, though it also happens to a lesser extent in the GlobalPop entity, for [deaths] being described as [resulting] from the [inability] to [take action] in the [face of imminent danger] due to [outright refusal to accommodate (the) information (about the threat)] within [ones' personal world view].

The [standing dead] descriptor set goes to a number of [natural (and) unnatural catastrophes] that will be manifesting over 2010 and 2011, and in the midst of which, the ability to [get to thinking] will be [absolutely required]. The caution coming up from the data sets is to [*not* be frozen] by the [shock (and) awe] of the manifesting circumstances, and to [grab your wits] and [immediately put them to use]. There are several sets that suggest that this will **not** occur with large numbers of people, and they will end up as the

[soon-to-fall-down standing dead] as they [fail to react] to [(potentially bizarre) emerging reality].

Rama Reigns

It was difficult to decide where to place this discussion. The nature of the linguistic structure is a [rain (of) debris] across [large/vast areas] of the [planet]. The linguistics for this are spread throughout modelspace including the Terra entity, both populace entities, and SpaceGoatFarts entity. Because of the large number of bespoke [unknown] {ed note: meaning that the archetype for ‘unknown/terra incognito/no words for it yet’} aspect/attribute sets, it was decided to place it here in the SpaceGoatFarts entity.

Along with the still building values for the [visibility] rise of the [alien wars] sub set, and the [blasting aliens from your (rural) front door (with shotguns)], linguistic structures for [destruction (in space)] {ed note: separate from other sections about the [sudden violent event(s)]} exists in the above referenced entities. Even the Terra entity has detail layers for [hectares] of [hot/flaming debris] that will (bespoke) [bedevil] the [authorities (attempting to control?)] with [crowds (of the curious)]. There are several supporting sets suggesting that [unwise choices] **might** be made by some of those humans who [visit] the [sites (of the space debris)] as there **are** clear indications of [lethal radiation exposure] resulting from [harvesting (the wrong pieces)]. Hmmm...careful now....curiosity will nail the monkey just as easily as a cat...

The whole of these linguistic structures, taken together, also provide a curious glimpse into the [destruction (of)] what we here at HPH {ed note: Igor’s idea from an old science fiction story –Clarke we think} will be calling the inter-stellar space ship Rama. The idea coming from the detail layers are that [bolides (collections of debris more or less glued together)] will be [raining down] on large areas of planet earth as a result of some bespoke [unknown circumstances] in near space. Some of these [bolides] will [flame out], and resemble [strange meteor showers], and others will continue to [burn] for [weeks] after impact. Others will be [dangerous] due to [encapsulated radioactive energy sources]. These are described as being quite the problem to both the [authorities] and the [souvenir (treasure) hunters]. The data suggests that enough [dangerous radioactivity] will be [traded around], both [wittingly] and [unknowingly], that [special groups] will be [tasked by governments] to [track down] and [isolate] the [bolides], and, in many cases, the [treasure hunters] who had handled them.

Conclusion: 7th Heaven, Ratones, Four Days in November, Syrup, Resistors, Solar Hair Day

What is it about July? Whatever it is, this year, July marks the end of a near vertical building tension period that extends from March 3rd through to July 8th. Then, July marks the virtual explosion of the supporting layers for the [revolution] meta data layer. It also is the beginning of a gradual over all trend toward building tension, even though there are near daily shifts into release of emotional tension, these drops are small and are quickly made up as well as surpassed the next day. By November the building tension is at levels not seen before. The emotional tension values reach a peak on November 8th, and then plateau over the next 4/four days before plunging into a release period that goes vertical (down) until January 23rd (late at night), 2011.

I am also informed by adept cognoscenti of the astrology arts that there is some “mighty big juju comin” from alignments in July, as well as some solar eclipse energies being involved in the mix over Summer, 2010. The heavens in July of 2010 are being forecast as especially bright over the USofA {ed note: actually most of north america}, and this is likely **not** a result of “independence day” fireworks.

A very significant temporal marker just **may** be manifesting now. There has been an exceptionally high level of [politicians], and [law enforcement (senior levels)], and [ceo (chief operating officers) – (of strategic government contractors)] who are all [abandoning ship], which is to say that they are leaving their positions of power over 2010. Animals, in spite of the naming involved, do not operate in ‘monkey mind’ the way that humans do. Therefore animals in general have a bit more of their brain power to put toward sensory awareness. It is for this reason that animals were not victims of the Band Aceh tsunami; they felt it coming and got the hell out of there. In a similar way, we here at HPH think of [politicians] as [emotionally manipulative human animals with the inability to focus on anything other than personal survival]. So, just as with [rats deserting the ship **before** it sinks], the supposition is that an exodus of [politicians] is a big “heads up” for the aware observer. Now quite true that current conditions are not favorable for politicians here in the USofA, and so it would be ‘normal’ for a number of the more astute of the politicians to get a scent of the beginning of

the smoke of revolution and political reform, and to move ahead of its manifestation. The same cannot be said for the [law enforcement] and [ceo's] who are also resigning in extraordinary numbers. After a bit of research, and some noodling on the issue, we have come up with a conclusion that this **may** be the early part of that temporal marker manifesting, but it will take the addition of several high ranking military types to 'tip the balance' for us that indeed, the "time" is nearly upon us. The noodles that we chased around include the idea that a necessary component of any [evacuation] ahead of [catastrophe] will require a [large logistical group] to be involved (activated) prior to the [evacuation] of the mass of those involved. Thus certain [personnel] moves would be noticeable ahead of the main [migration (out of harm's way)]. We **think** that some of these are emerging now. Let me repeat that in another manner for clarity....we think that we have seen some evidence that [support personnel] are being positioned now. If that is the case, then the extraordinary (never before been this high) level of politicians and other visible individuals in key occupations currently stepping away from power is but the beginning of what will become a flood as time draws us in tighter to whatever the hell is coming. These first groups are the initial part of the stream that will develop into a river later.

IF we had to guess, given the accretion patterns of the moment, it would seem wise to be paying special attention to political and senior military personnel developments over the first 8/eight days of November. In our graphing of the emotional tension values, the period from 7:20 pm November 8th *{ed note: pacific coast of usofa time zone} through 11:49 pm November 11th form a very wide 'tipping point'. The last time we had a tipping point form it was in the Summer of 2001 ahead of the 911 attacks. Note that the tipping point in 2001 was of only 8/eight hours duration. This November the tipping point plays out over 4/four days. Further, the tipping point of 2001 extended out in its release language just slightly over a week. This November the tipping point is in seriously deep release language from November 8th through to January 23rd inclusive, and without any break in the release of emotional tension during that time. Further, the emotional tension value shed rate {ed note: the speed with which previously built up tension values are lowered by release language} is about 40/forty times faster than in the 2001 tipping point. Further, the emotional tension release delta {ed note: the difference in time it took to build the tension versus release it} has never been this extreme.

Boiled down to a thick syrupy mass, the tipping point data for November of 2010 is forecasting a seriously significant time for omnihumanity. In this case we will **not** bother to restrict this forecast to those parts of omnihumanity here on earth. This tipping point is seemingly so significant as to probably include many of the extraterrestrial humans as well.

It is likely clear to the aware observer that “things change” is a truism about life here on Terra in this multiplicity of dimension. An interesting note is that many humans, even knowing that ‘things change’, even seeing happen before their senses over each and every day, will resist, with all their energies changing within themselves. This rigidity of personal view of universe is not ubiquitous among humans, but may well be predominate among those humans now operating under the TPTB control umbrella. It may well be the inflexibility of the minds bred, born, and nurtured under this control structure, that will account for so many of the unhappy circumstances being forecast for 2010 and beyond. The inflexibility is all around, and is easily observable in others. Modelspace contains data that suggests we can all benefit from scoping ourselves for signs of rigidity of thought. The linguistic structures spread across modelspace for all of 2010 and deep into 2011 have implied clues pointing toward flexibility of mind being the key requirement to successfully navigating the shoals now visible just ahead.

As an example of flexibility of thinking, consider the recent solar prominence (filament) that collapsed proximately causing the large earthquake in Chile. Now consider that our mega sun spot cycle discussion specifically references, as a temporal marker for the shit about to hit the fan, the emergence of ‘chaotic’ appearance on the sun. The recent filament(s) now show both extraordinary solar activity {ed note: big hint, eh?} and an example from which the aware observer can postulate what ‘solar chaos’ may resemble. We humans have sculpted examples from many civilizations of the [angry sun face], and it frequently looks as though ‘snakes’ in large numbers have over taken the solar disk. It is [duh obvious] now that this likely represents a time at the end of the ‘winding’ phase of the ‘mega sun spot cycle’ when many filaments are indeed writhing across the face of the sun. Note that these filaments rise many thousands of miles above the sun surface and twist about with great exuberance, throwing off magnetic energy continuously. That is, until they collapse back into the solar face, and cause the eruptions of Coronal Mass ejection and perhaps Hyder flares. It is purely speculative of course, but imagine what will happen when there are

hundreds of such filaments writhing around in extremely complex structures high above the solar surface dancing with more energy than any human currently alive has ever seen....until a critical mass is reached and they collapse back into the sun en masse.

That will be a very bad solar hair day.

In days such as these, it is important to remember to breathe. Altogether now, inhale.....

###

Addendum: The planet has moved into the building tension period that will level of into a plateau of more chaotic energies in July. Due to the nature of these building tension periods, I will be accepting very few radio interview invitations. This period extends until November when we break into the release following the tipping point. As we all progress along with earth through this time, it should become increasingly apparent as to why manifesting circumstances will be applying a focus to our energies (here at HPH) in directions other than business as usual.

Addendum: The part about the Hyperchronism will be extracted and put on HPH main page with illustrations as a free article later.
