Asymmetric Language Trend Analysis Intelligence Report

‘Changes in language precede changes in behavior.’

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

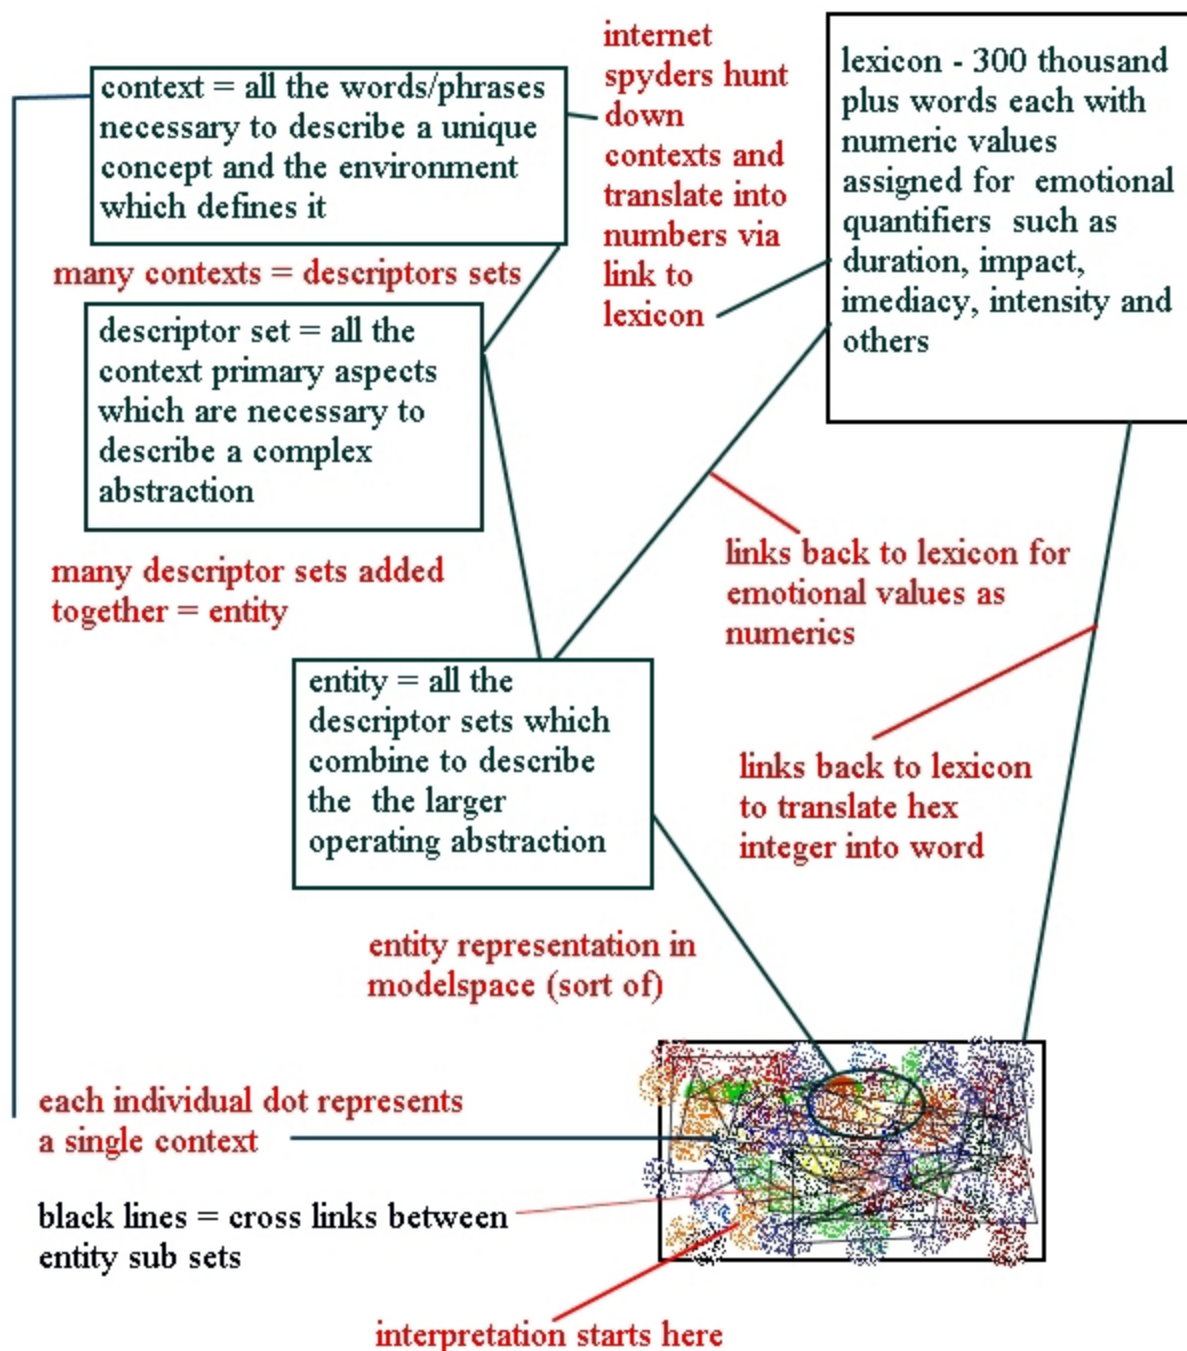

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

Additions made: 10:16:2007

In the beginning..

The beginning of all of our processing is the word. Or words, rather - actually excessively large amounts of them. Totals of words beyond all reason. These then are distilled down into a thick syrupy mass and placed in an inadequate visual display and from there interpretation proceeds. Well, sort of.

Just the 'static' bits such as data bases are large, and to a surprising extent, dynamic. The changing nature of our lexicon was an unexpected part of our processing. It requires constant tuning as the 'emotional quantifiers' placed on the words change over time, as well as usage. Ever notice how some words and phrases get 'burned out' by excessive popular usage? As though they had no real emotional legs and by the time that the mainstream media grabs hold of them, or now, by the time they have been round the net a few times their emotional 'cache' has diminished and they fade away? Well, Igor and I sure notice such linguistic flows as we have to then adjust whatever emotional values that we had placed on that word or phrase and which has now had its emotional 'tonality' altered. Such tuning of the lexicon is quite tedious and as may be imagined requires a significant level of feedback with testing to even come close to

obtaining a decent emotional representation within the confines of numbers.

Speaking of numbers, when the interpretation refers to an entity or lexical structure {note: a lexical structure is a collection of descriptor sets} as being 'fully populated' or 'complete and correct' in being populated, it means that the current data set has a representation within it for a required number of contexts which go into entity definition. So as an instance, there are nearly 20/twenty thousand contexts within the Bushista entity definition. These are composed of nearly 50/fifty thousand words. But not all of the contexts will be found by the spyders at any given point within the processing, and so an arbitrary per centage has been set at 64/sixty-four percent for the Bushista entity in order to consider that it has been 'minimally constituted'. This is an important distinction as when the times, and emotional waves within the populace change, it is possible for entities to also change. We have several large changes within entities already showing for 2007. So far these include our Markets entity, specifically the sub set for 'global markets' which apparently undergoes a large scale redefinition over the course of this coming Summer {June solstice to September equinox}.

Some of the entities involved within our modelspace are detailed in the table below. The entities are actually rather numerous, but many are either small, and thus rarely reported upon, or primarily used as 'supporting confirmation' for movements shown in larger entities. Some entities are so large, such as Terra entity, that the modelspace has to be dumped and reloaded to clear space for its display. This necessitates a rather tedious process for look ups on the cross links to other, not currently loaded, entities.

Entity	Constituted as:
Markets	Descriptor set for all trading including paper debts, commodities, global currencies, et cetera.
Bushista	Proxy for the cabal required to keep Geo. W. Bush in power
Populace/USofA	Proxy for the populace of the USofA. Defined broadly and representative of issues which rise to national prominence.
GlobalPopulace	Proxy for all populace groups *not* part of Populace/USofA. Division forced by emotional splits arising from anti-Bush reactions post October 2001.
Terra	Largest of the entities. Proxy for all biosphere related sub sets at all levels.
Press	Proxy for print, teevee, and most radio. Define with corporate sponsorship or funding as requirement. So increasingly *does* apply to some bloggers. Represents the conduit for 'official' messages at all levels. Also referenced as the 'global mediastream'.
FreeStream	Proxy for independent information exchange. Rarely discussed as it has potential for circuitous references.
Space	Proxy for official UFO, NASA, NSA, and other 'strange reports' from/concerning Space including local to earth environmental reports. But specifically

	excludes any 'officially denied' contexts for [space] related subjects.
TPTB	Proxy for The Powers That Be. Proxy for groups which may be loosely described as both 'elitist', and 'global' in thinking. Includes proxies for such as RCC, UN, OD, Illuminati, CFR, and others too numerous to detail here.
SpaceGoatFarts (SGF)	This entity is newly formed. While references to Space Goat Farts have appeared within Terra, sub set Space in the past, the data set now demonstrates a need for an entity to allow for the growth of 'unknown forces of all kinds from space which are terra/populace affecting'. Includes non-earth based, non-human/non-mammal intelligent beings usually considered as 'space aliens' or 'extraterrestrials'. Created during 1207 clean up.
FuturePop	This entity is forming from the 'self organizing collective' meme which has been in the ALTA reports for a number of years. The entity is a proxy for those [new forms] of [social grouping] which result from the aggregation of individual responses to the continuing biospheric degradation.

Some particulars of interest include that our data sets are constructed on a lunar month calendar. We use the sidereal lunar month as opposed to the synodic since humans inherently seem to be synchronized, at least linguistically, to the 27.321 day length month. The ALTA report series is built around a modelspace which extends out 1.618 lunar years from the incept date. Our lunar year contains 13 lunar, sidereal months for a 'year' length of 355.173 days. Our modelspace extends out to 575 days from the first date of processing for details on that ALTA series, for a total of 1.57 solar years of 365.25 days each. Not that any of this will be on the test later. But it sometimes does surface in interpretation of particular event/condition predictions.

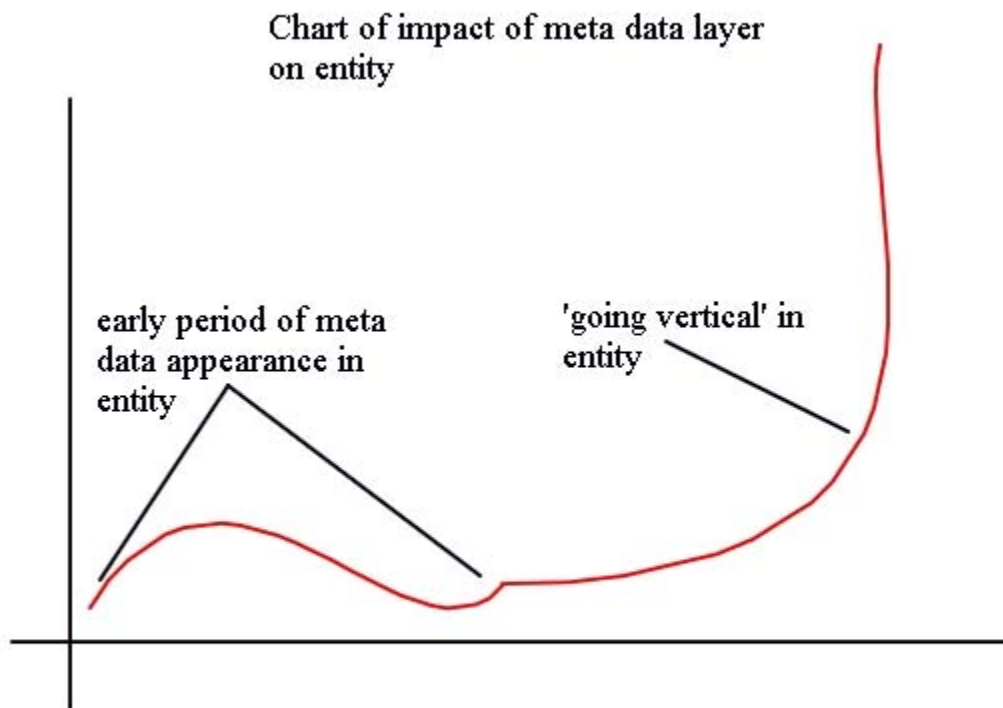

Meta Data Layers

Meta data layers are linguistic concepts which meet the criteria of 'dominating' the modelspace, and being 'fully populated'. By 'dominating modelspace' we are referring to these lexical structures appearing in all major entities and some minor. Further the lexical structure must also be contributing to the 'emotional tension direction' in that it must represent the majority emotional 'force' of the emotional sums at that point in processing. In other words, the lexical structure of a meta data layer, within an entity, must be sympathetic to the general trend of the emotional tension of the entity as a whole, either negative or positive. Also the meta data layer will be 'fully populated' in a 'correct and complete' fashion. This is geek-speak for having all of the elements within the context at the core of the meta data layer be represented within the entity. Thus if there are 2000/two-thousand primary element descriptors to 'duality', then the 'duality' aspect is considered to be participating within the formation of a meta data layer in any given entity if it meets the 2/two criteria of 'domination' by its impact on the entities' emotional summations, as well as having all elements of the context for the meta data layer be found

serendipitously within the entity.

Meta data layers are not visible within our display. These are dominating aspects/attribute sets which are 'active' or 'rising' within a number of entities, yet the lexical sets are based on the same core set. Further definition for a meta data layer requires that the lexical structure relate back to one of the 'prime emotional sets' within the lexicon. These are sets which, as a rule, contain lots of bespoke emotion words for aspects and even supporting attribute details. Such words would be 'fear', 'elation', 'confusion', and other words or phrases which can broadly be thought of as describing either an emotion, or a mental state **resulting** from emotional impacts to the human system. The meta data layers are composed of these sorts of aspect/attributes in their descriptor sets. Further, the same lexical structure, arranged in the same hierarchical fashion must be on a 'rise' in emotional summations within many of the larger entities in order to be considered as a candidate for meta data status.

When we note that a meta data layer is 'going vertical' within an entity, it is a representation that the meta data layer is now driving all of the emotional summations in its primary direction. As illustrated within the chart below, the meta data layer first appears within an entity and then is filled, or populated over time. It then starts cross linking over to other entities which magnifies its impact on the emotional sums within each entity that comes under its influence, as well as also gaining in influence within entities in which it already exists.

When an entity has 1/one or more meta data layers vertical, it means that the lexical structures which thereafter accrue to that entity are interpreted as though being modified by the meta data layers.

Layer Label	Entities involved
restrictions on movement	Bushista, both Populace entities, rising in Markets, going vertical in GlobalPop in Fall/07
encounters with scarcity	GlobalPop, Markets, Pop/USofA - going vertical in GlobalPop in Fall/07
secrets revealed	vertical in Bushista in March, dominating Pop/USofA starting in March, GlobalPop in July, goes vertical in Markets in late March, Press entity impacted from 2/27 onward. - Soon (written in July) going vertical in Populace/USofA in September. Vertical in Press entity by December.
conflict	vertical in Bushista in March, dominating Pop/USofA - multigenerational change here begins in July, GlobalPop dominated from Sept. Vertical in Press as of March 7. *July note* now into all aspect support sets for Bushista as of September 19th. Press entity almost completely dominated as of late August.
duality	rising in Bushista, strong but flat in Pop/USofA, rising in GlobalPop, rising in Markets. Dominates Press. Dominates Terra. Moving to near vertical in Pop/USofA by late December.
impetus for change - aka 'resistance/rebellion/revolution'	rising in Pop/USofA, shift here from rebellion over to revolution begins March, GlobalPop shift from resistance to rebellion by July, large Terra associations with this meta data layer, actively resisted in Bushista

The above data table was a snapshot of the meta data layers as of February 2007. The table below shows the state of the meta data layers as they exist at the time of this writing in October 2007 {ed note: from 0508 data set early processing}.

Layer Label	Entities involved
restrictions on movement	going toward vertical in Bushista, both Populace entities, rising in Markets, Press, and GlobalPop. This meme set to increase as the pressurse on the biosphere and its carry ability degrade. The restrictions are against resources as a political layer, not a resource availability layer.
encounters with scarcity	GlobalPop, Markets, Pop/USofA - Meta data layer focusing on shortages of resources against demands. Seemingly manifesting in continuing spot shortages globally. Indicating that the species is 'running up against the walls of the resouce-petri dish'. Increasing in [visibility] values as well as the [cover/misinformation]

	values summations.
secrets revealed	vertical in Bushista in March, dominating Pop/USofA starting in March, GlobalPop in July, goes vertical in Markets in late March, Press entity impacted from 2/27 onward. This meta data layer provides support in linguistic summations for the [conflict] layer, as well as the [revolution] layer. In both cases support derives from the existence of 'mutually common sets' whose members are supporting values for internally held aspect/attributes within the entity, and where the aspect/attribute also participates in the larger meta data layer. Clear as goeduck holes after dark? In other words, both the [conflict] and [revolution] meta data layers share a common set of supporting aspect/attribute sets with [secrets revealed]. Further that this common set has a disproportionate influence on the summation of emotional values for that aspect due to it also participating in the other (either/or both) meta data layer.
conflict	vertical in Bushista in March, dominating Pop/USofA - multigenerational change here begins in July, GlobalPop dominated from Sept. Vertical in Press as of March 7. Vertical in Bushista in all support contexts as of September 19th, 2007. Rising in summation values in Pop/USofA which may be pointing to a vertical phase later in 2008/2009. Surfacing in SpaceGoatFarts with some slight dominance in the emotional summations around [energies from space] meme.
duality	going vertical in Bushista, rising in Pop/USofA, rising in GlobalPop, rising in Markets. Dominates Press. Dominates Terra. Dominates GlobalPop from March through to late September. Now in October, the meta data layer dominates some of the Pop/USofA sub sets, and is rising in others. A projection of its rise to vertical and then sudden spread throughout the entity places that condition to manifest in October through November of 2008. Probably *not* a good sign for the USofA elections.
impetus for change - aka 'resistance/rebellion/revolution'	going vertical in Pop/USofA, GlobalPop shift from resistance to rebellion by July, large Terra associations with this meta data layer, actively resisted in Bushista. Several large context clusters within Pop/USofA are showing as dominated by [revolution/impetus for change].

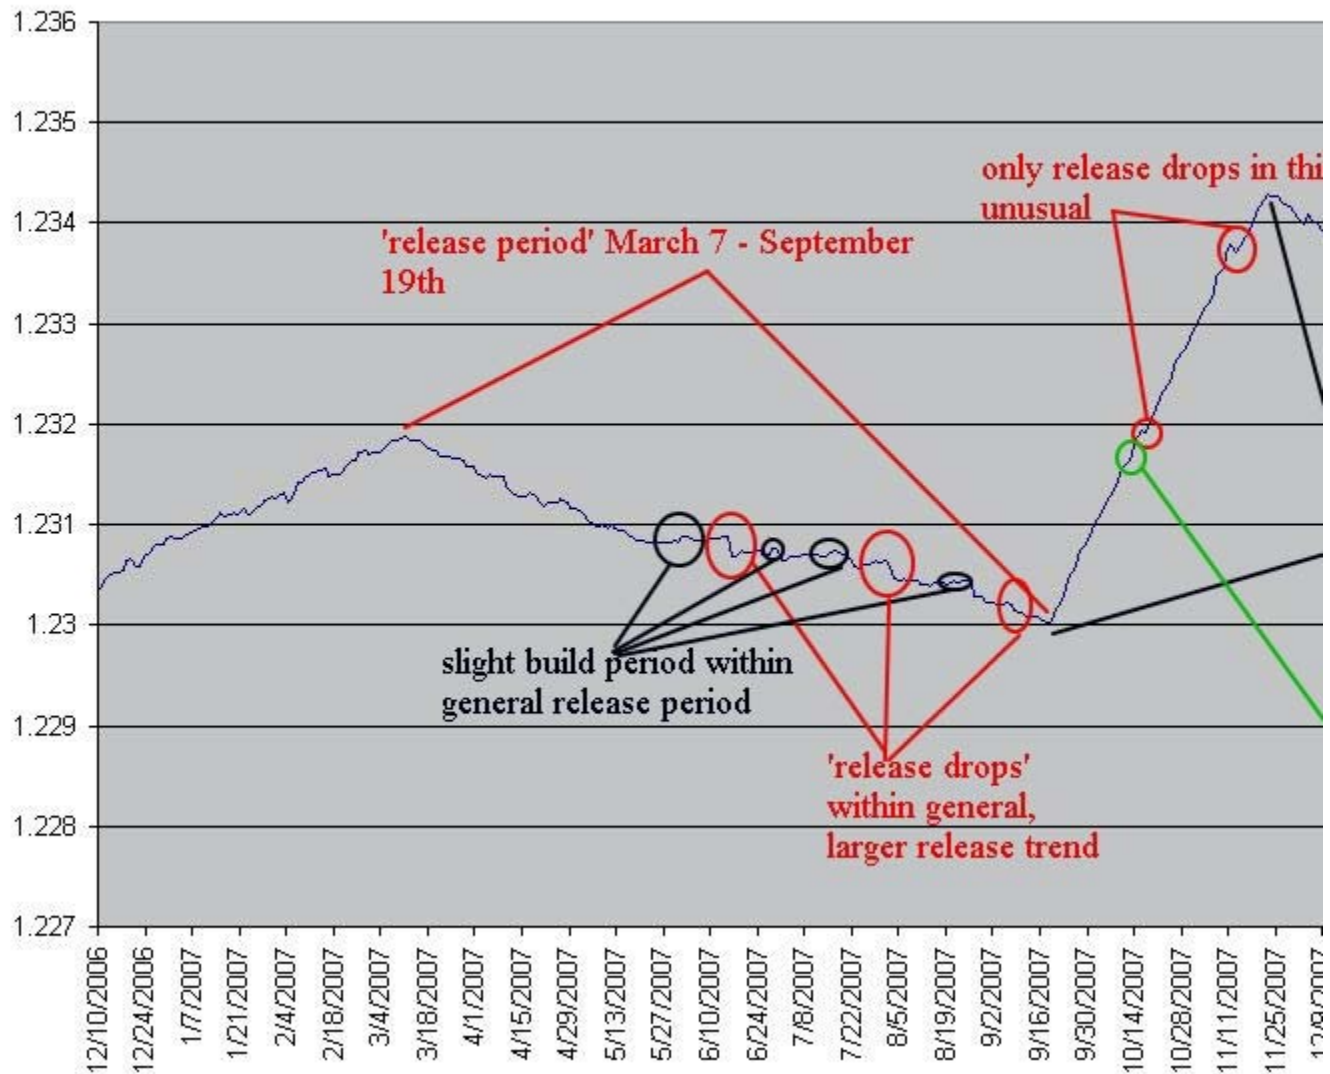

The projections for the trend are for a rising [visibility] factor over the course of the Spring 2008 building period. Early and less reliable projections indicate a peak or manifestation point in November of 2008 here in the Pop/USofA.
--

Emotional Tension Values - Release versus Building

At a very core level all of the bespoke emotion aspects can be separated into 2/two fundamental types. Obviously, since humans are involved, some overlap occurs and the separation is not pristine. The separating criteria is how the emotion can be characterized, which is to say, does this emotion build tension within an individual human body, or does it release it? Does the emotion twist the stomach? Or exercise the voice? Face? Rest of body? If the emotion causes the body to expell anything from any orifice, it is likely a [release] emotion and has summations in the lexicon to that effect. If the response of the body/mind to the emotion is the increase in muscluar tension associated with 'holding the breath', then the emotion will fall into the [building tension] category.

Some emotions such as grief are of both types in that they bring complex emotional constructs to the surface. Some such as 'rage' are clearly 'expressive' of emotion, and thus are 'expelling' in nature. However it is worth noting that every expressive or release emotion also has a complement form for building emotions. As an example, we have the relationship between 'rage' and 'frustration'. In the case of 'rage', the emotion is expressed...flashing teeth, furious fists, screaming frenzy...that sort of thing, in the case of 'frustration' the emotion is of a 'building' nature which induces knotted stomach, tight lips, tense face, tight muscles and other familiar frustration body reactions. The building emotions such as 'frustration' all are part of a gradient of emotional containment which eventually bursts and spills over into 'expressive' or 'release' emotions. In this example the range can be thought of as beginning within 'constraints on behavior (from the outside)' and going into 'frustration' which then flows through various forms of 'gritting teeth' kinds of building anger until ultimately 'rage' is encountered and the emotional summations instantly change over to 'release states'. These are reflected within the charts {ed note: such as they are. Please read charts cautiously as they are very poor graphics of an abstract 3/d process which itself is flawed and not to be trusted to absolute dates.} as dropping trend lines equal release periods, and rising trend lines equal building emotional tension periods.

Emotional Tension Trend - LTV - 2007 ALTA 907 Series

As is shown within the chart above, a general 'release period' is expected to consist of an overall downward trend line composed of various steps of rising, then falling below the previous low levels, and onward until all of the pent up emotional states are/have been expressed. It is not unusual to have many building periods of some significance within a release period, as is illustrated within the months of May through July of 2007 on the chart above. As may be expected, a building emotional trend line should be composed of a similar, if reversed set of steps creating a general upward movement. The chart above shows the next large building period as a very distinct exception to our usual fare in that it has only 2/two release events within it, and they are both very small relative to the totality of the build. Highly unusual. Unique so far in point of fact. The other building portions of the trend line illustrated, which is to say, prior to March 8th 2007, and after January 20th 2008, show repeated release episodes within the over all trend.

As had been forecast, the shift into the building emotional trend period of September 19th, was [currency] focused. We had anticipated the [mind set shift] on the part of the populace toward things of a [personal economic] nature such as [food, shelter/rent/mortgage] as being the dominating element of

the building emotional period. It appears that the forecast [usofa dollar, near-death-experience] is still underway. Who knew it would take so long? However both the meme and the manifesting reality continue to persist. As there are still values being accrued for the [dollar NDE], the outcome becomes even more certain, if the pace of progression is obviously slowing. It should not be surprising, given the discussion on the emotional types, for the next act in the [dollar death] meme to emerge to center stage with the upcoming 'release period' in late November/early December.

Meta Data - Continuing Sets

In an effort to maintain continuity it becomes necessary to review those data sets which have been discussed in previous ALTA reports and which are continuing to accrue values.

These sets include:

Entity	Set(s)	Continuation aspects/attributes
Terra	Antarctica - rising land	the [rising land] set continues to build against the image of [altering currents within ocean/atmosphere] as a result of the rising [underwater] of a [bridge/connection] between Antarctica and Patagonia
Terra	Antarctica - energies from space	This continues to build, albeit more slowly, and the indications from the current long term value processing that it *may* be visible in late Winter, 2007/2008.
Terra	Rivers in atmosphere	grows at steady pace, but now also showing for manifestation in Winter, early December and onward.
SpaceGoatFarts	scattered energies from space	Indicated for initial manifestation August 13th through the 16th, but also showing up as a [repeat event] for December 2007 through end of March of 2008. Increased [energies from space] build up in ALTA 0508 in last of shorter term values for October through November. Likely referring to GRB's (gamma ray bursts) and other energy types. Impacts shown as affecting both Terra and populace entities directly.
SpaceGoatFarts	Antarctica - energetic 'bursting' over continent	Still growing, but again, with longer term values indicating a [visible] manifestation *starting* in late Winter (January/February 2008). Still growing value sets through ALTA 0508.
		continues to accrue values in all

Populace/USofA	employment crash	sets including the immediacy values. Early visibility of this very long term emergent circumstances is forecast to appear in late Summer, 2007 with a rise in [visible] aspects within Press entity as we approach the September equinox. The impact is to be very very very large if the George postulate and the totality of emotional sums attached are good indicators. Manifesting now.
Populace/USofA	revolution/rebellion	Continues to gain values in both shorter term, and longer term value sets. The shorter term sets from ALTA 0308 are showing that 'rebellion' and 'mutiny' will surface in early Fall (October/November 2007), and that [bloody] aspects will be in place by March of 2008. Very important meme as the longer term values have very far reaching potentials which are explicitly referencing [multiple generations] to be impacted by the unfolding meme over the next 2/two years beginning with the Summer solstice.
SpaceGoatFarts	Contact/UFO	The UFO/contact and/or 'disclosure' meme grows with vigor in all sets since 2000. The very large level of emotional support values suggests that 'contact' or at least 'disclosure of contact' is a very real possibility within these next 2/years, and that is has a very high level of probability of appearing with [shocking suddenness] and *without* control by TPTB. This last is indicated by the continuing association with SpaceGoatFarts as opposed to the same descriptor set within ThePowersThatBe entity. Supposition is that the "best laid plans of aliens and men, aft gang aglay".
		The [earthquake quivering period] is still building values in the longer term sets. This may be indicative of

Terra	shaky period	the current 'shakes' continuing for at least another year. This *might* be a good thing as the 'ending' punctuation for the 'time of quivers/shakes' is shown as 3/three really good sized earthquakes spaced 2/two close together, with a small 'whew' breathing space following, then the last of the very large quakes.
Terra	fungus amongst us	This area of rising 'environmental' alterations to the planetary 'biozone' continues to grow. It has been characterized as 'fungus amongst us' as there will be the appearance, and forced coping, with new forms of 'fungal intrusions' into human/plant/animal life. The hopeful cynic wishes that 'fungus' would also be irritating to the space aliens as well.
Populace/USofA	power/energy rolling shortages	Mostly visible as rolling shutdowns of electrical distribution system. Indications are for a 'regional outage' which is [never adequately explained], and thereafter a very much elevated 'near daily' manifestation of [blackouts]. Though short lived, these [blackouts] will be very troublesome.
Terra	Land rising	Indicated for the extreme southern oceans including the very southern portion of the Pacific, the land rising aspect has elements which are suggestive of an emergence in 2008. Remains to be seen, but a change in accretion patterns is definitively taking place.
Terra	transformation(s)	This set is participating in the 'transformations' meta data layer, and is also directly held within the Terra entity and is suggesting that [rising lands] will [alter/transform] the [global oceans/currents]. This in turn is shown as [transforming] the global weather.
		This set is continuing to accrue data in immediacy, shorter term,

Terra	global coastal event	and longer term values. The ratios are suggestive of a 'quickenning' or 'approaching' of the event itself. Our best possible estimate is late 2008, or early 2009. We *think* our timing clues are good at this point.
Terra/Populace/Markets	planes can't fly	This set continues to grow in Terra, and via cross links in Populace/USofA, and GlobalPop, as well as Markets entity. Long term values accrual rates would *seemingly* indicate an early 2009 timeframe.
SpaceGoatFarts	restrictions on movement, encounters with scarcity	Both of these aspect sets are participatory within the meta data layers of the same names. In both cases, the aspect/attributes gain significantly in Fall of 2007 with a push upward towards February 2008 where the data shows these aspect/attributes going to vertical within SpaceGoatFarts entity
Terra	quavers/earthquake-series	continuing. The [quavers] earthquakes are 5 to 7 on the scale are indicated to approach a [multiplicity daily] at some point in the series. Seemingly related to *both* the incoming [spacegoatfart energies from space] as well as to the [melting of the glaciers]. Further as the [space energies] accelerate the [melting] they also increase the [quaver tones] for the planet. This series is shown as increasing to [multiple points of damage daily] due to [quaver quakes].
Terra	volcano	Most likely in the northern hemisphere, this volcano is shown as a temporal marker for many following events. It will not be subtle, the data shows that the volcano will disrupt or totally shut down northern hemisphere air travel for several days. Following will be [isolating earthquakes] with very large scale infrastructure damage including the [destruction]

		at nearly total levels of a major north/south corridor/roadway with accompanying electrical conduits.
Terra	wind storms	Wind damages, most probably from tornadoes are shown as [dominating] whole areas of the [usofa] over winter. The damages are severe enough to cause [repairs] to ttake [years].

Errors - The How of the Dao

The technology of radical linguistics is fraught with potential for errors, large and small.

There are several ways in which the processing flow of the data can, and does cause errors. As an instance, we might see within the immediacy values that a giant 'space slug' is headed our way and will have [visible] values sufficient to hint at global mediastream coverage. So we say, "great", as Igor is fond of giant space slugs, but the question is when? This is where the processing can impact our predictions most easily. The immediacy values get processed, as noted, a [giant space slug] appears within the aspect/attribute sets. So we think that the appearance is imminent as the data was within the immediacy values. Then, to check our timing, we run the same source set from the shorter term value sets, and find *no* [space slug] references. Therefore we infer that the [space slug] manifestation will be all visible, and finished within the 3/three days to 3/three weeks which is the range of the immediacy value set. We think this due to *not* finding [space slug] aspect/attribute sets accruing in the shorter term value sets. However, the processing could defeat us, in that there are several weeks of processing of shorter term value sets in toto, and we may have actually missed some key component of the processing set for [space slug] when we did our referential integrity check to determine the timing clues. This has happened in the past, and typically comes to light a couple of weeks later when more of the shorter term sets have been processed. At that point we would then realize that our predictions of an 'immediate' appearance of [space slugs] is off in timing. And it could be waaaay off in that the data sets may continue to accrue into the longer term values sets, and therefore what we *thought* was going to be a jump out into our faces [giant space slug] sighting turns out to be over 8/eight months away.

The other processing method artifact which can and does gnaw on our interpretations is when several discrete instances of a common meme all show up in the same data set. Thus the earthquake predictions of 2004 focused on the west coast of the USofA, and did capture accurately things like the [evacuation of the courthouse] during a [trial with major publicity] {ed note: the Peterson trial in CA}, and also captured the [300 thousand dead], and the [region thrown back to a previous age], and the [force/electric driven water], all of which were associated with the Sumatran tsunami, however we had these as all being in the same 'event sequence'. That is to say that what were words about 2/two separate earthquake events on opposite sides of the planet were mistaken as referring to a single sequence of events on the west coast of the USofA. The prediction was corrected *after* the earthquake which disrupted the Peterson trial as a result of our continuing to accrue values around the other words including the [300 thousand dead], and the [region thrown back to a previous age]. In addition, it was actually in October of 2004 that we first picked up the [force/electric driven water] which we mistakenly interpreted as a 'storm' which was temporally associated with the [earthquake]. This was due to the word 'tsunami' *not* having been modeled prior to that time.

Then, sometimes we simply screw up by being fascinated with a particular sub set of the linguistics which proves to be meaningless, and miss the more obvious [space slug attack] as our attention was

elsewhere, and the amount we can provide in any given report is limited.

ALTA 0708 - Part Zero

Asymmetric Language Trend Analysis Intelligence Report

‘Changes in language precede changes in behavior.’

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

10.21.2007

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from summation of data from previous ALTA 0508 series reads as well as interpretation of the first 3.27 million reads of the 0708 series.

Start Here....

Biospheric degradation is increasing stresses on all continent sized infrastructures. An effective level of response at the individual level goes toward the idea of preparation. However, frequently the preparations are usually for an 'event' and not for a 'life span'. The 'time frame shifting' of mental habits is very liberating, and usually can be triggered by words. Using the appropriate words to express our

focus will frequently reveal hidden assumptions. As in the idea of 'preparation' as the context is defined here in the internet jutnob world. In this case 'preparation' is very closely related to 'cache' and 'stores' as well as time concepts which may extend out a lifetime, but are expressed even then as 'extra-ordinary conditions'. The context is easily framed as 'event + continuance' which the 'prepared' person is able to 'replace' their current creature comfort life with an approximation, although it may take a bit more work. Hmm. Now let's think about that for a minute? Nope, probably better not as the idea of a 'personal preparation' and longevity *apart* from a cooperative group is meaningless. That is to say, so what if the loner 'survives', who is there to care? What is required is more participative cooperative 'life choices'. No, not because of 'global warming' and some supposed human to climate change connection, but rather as an exercise in sustainability at the personal-which-can-translate-to-group level. The Wing is a good example of 'personal electrical preparations' as thinking in the bounds of a 'life span, and life choices'. Consider what would happen if millions of humans had wings?

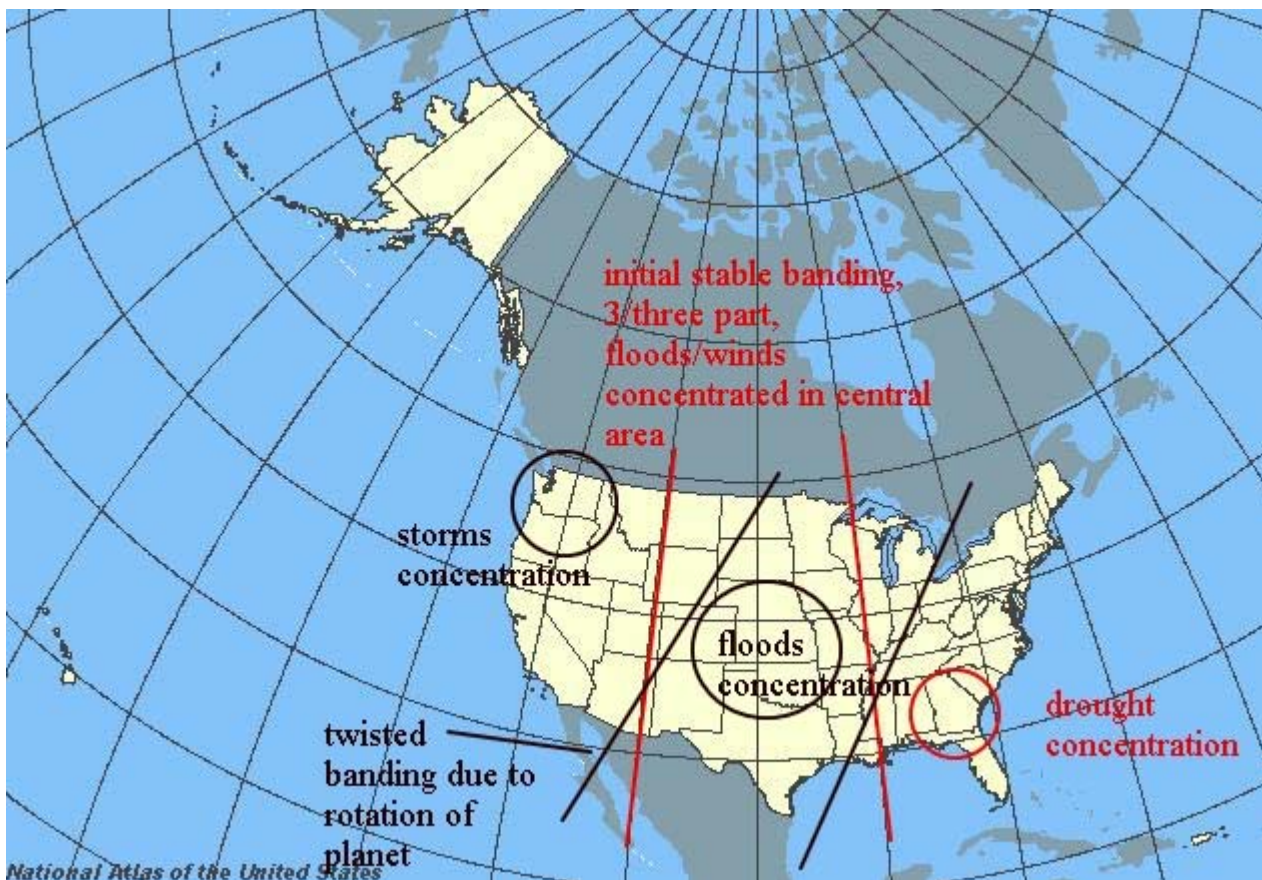

The continuing global meme of biospheric degradation gains more traction with [visible] manifestations such as the melting of the Greenland glaciers in 'Niagara falls' sized internal torrents. As we had speculated at the beginning of the last release period (March 8, 2007), the end of that time of release language would bring the manifestation of the 'altered mindset'. We now are seeing the 'mind set' of the global populace altered in several key areas including [weather/climate change], and [currency, usofa dollar]. In both cases the 'contexts' of the ALTA 1207 series are now being superceded by manifesting memes within the global internet community. As we noted in our Spring of 2007 series, the lexicon needed to be changed to reflect the emerging changes within the social order which would be manifesting after Summer of 2007. We are now able to see the [emergence] of the 'mind set change' relative to the [biosphere] with recent events including the Nobel prize going to A. Gore for his take on 'global warming'. While we had been expecting the change in mental perception of the global environment to change within the populace, we had not though it would extend into the [ruling elite] so rapidly. The Gore Nobel prize must be considered within the context of the populace manifesting its own change of view point. That the Gore prize aware harmonizes with, and attempts to direct, this global wave should not be underestimated in terms of its various levels of 'green' meanings.

Terra - Bowls, Tolls, Water Slides

The extensive Southeastern USofA [drought] has resulted from the [banding] that had been forecast within the modelspace nearly 2/two years ago. The descriptors at the time had suggested that globally the weather would tend to cluster about a series of bands, each of which terminated at the poles. This vertical, relative to the polar regions of the planet, orientation was [twisted] by the rotation into diagonal bands which, as an instance, seemed to slice the continental USofA into 3/three bands, west, mid center, and east. The banding has continued to exert its influence although the banding has increased its diagonal orientation markedly. The weather over the SE which has produced the all time record droughts, or our century's version of the dust bowl extends out into the Atlantic and towards north western EU zone. The conditions being encountered at sea off the SE coast of the USofA replicate the unusual wind and lack of rain as is seen throughout the hard hit SE.

As the planetary rotation continues to provide a [twisting effect] the concentration of weather types is appearing to [bowl] within the bands which are now laying over on their sides.

The longer term data sets from ALTA 0508 continue to accrue to the [banding] within the Terra entity, though now that aspect/attribute set is supported by [bowl] descriptors in which [flooded bowls] are going to [over flow], but unfortunately this will *not* include the SE of the USofA. The [drought] area has supporting sets that go to the idea of [grass/grasslands] which will [overtake] current [reservoirs/bowls]. Additionally the [water sources] are shown as [reaching down to stagnant remnants/material]. These longer term values extend out through the [winter solstice] and towards the [vernal equinox] so the prognosis that the supporting descriptor sets provide of [clouds, thunder, but no rain] seemingly will be the prevailing conditions at least until Spring, 2008. There are specific supporting sets which go to the idea of [innovation] arising from the conditions, so the cycle will last at least long enough for [visible] in the global mediastream reports of wide spread [water conservation/use] [innovations] to appear.

The supporting set for the [drought] have extensive cross links over to Bushista entity where the termination points are in aspect/attributes such as [soiled/fouled/shit], and [bad luck/circumstances]. These areas are further reinforced with supporting links back to the Terra entity, sub set [drought] where the termination points include [spoilt meal/dinner] with support indicating that a [significant meal/dinner] will be [spoilt] by the [drought] *and* the [bad actions] which will [emerge] from the Bushista entity over [fall/winter] in regard to the [enveloping grasslands/dry conditions]. Hmmm. Sort of a reverse Katrina, but the same outcome?

There are also continuing aspect/attributes accruing to Terra entity which are pointing to a [divine/spiritual winds] {ed note: 'kama kazi' as in the 'divine winds' which saved feudal Japan from the Mongol Kahn's invasion force?} and the [toll/price/cost] to be [paid] in [blood/bile] and [possessions]. In keeping with the pointers toward a [north american] [wind season] with large level of [infrastructure damage], the modelspace is continuing to show via accrual rates that the [wind damage] will be both

significant and on-going throughout the [winter]. Further, and specifically focused on the [tornado] problems, the data is suggesting that this [result/outcome/finale] of the [march of tornadoes] will be [record setting] at a level [unseen/unimagined] prior to this year.

We need to note that the last of the 0508 longer term data sets included a large jump in support for the [global coastal event] as well as [Antarctica] linked descriptors. The contexts are continuing to grow in areas noted in the BaseKnowledge article. These include the idea that [rising lands/undersea's volcanoes] will emerge over the next [12/twelve] months to produce a [total alteration] of the global oceanic current structure. This will have its own set of impacts which may be predictable, but we note it will also be joined by [glacial slides] during this time which will further move biospheric climate and ocean change to new, and unexpected levels of impact on humans.

GlobalPop - Dead Pope(s), Undead Secrets

The GlobalPop entity has confirmed by continuing accretion of aspect/attributes to the supporting sets, that a [pope of power] will [die], most probably of [liver/bile poisoning] as a result of the [emergence/manifestation] of the [secrets revealed] meta data layer and the [unleashing/breaking] of the [dam/container] of [secrets]. The modelspace is clearly painting a picture of a [process] of [disembowelment/turning_outside_in] and as part of the [process] the [power pope] is [discovered comatose/dead]. This [discovery] will itself be [questioned] as the meme propelling the [church/organized religion] will be the [secrets revealed] meta data layer. The modelspace is also pointing to this upcoming release period as the [emergence] point for this process.

There are also indications that [fire] and [disaster] will be [winter] fare for the [pontificate] and its [citizens] and curiously, and specifically, its [slaves]. The data sets are accruing from the immediacy values of this series in similar proportions to the longer term data sets from the previous series, and so are being taken as a reinforcing of the meme that [disaster] will over take the [infrastructure/order] of the [church], most probably initially as a [sparked fire] which is described as [letting loose] or [freeing] the [bouchon/cork] which [controls] the [flow/access] to the [secret repository].

There are supporting sets pointing to the [arrogance] of the [power pope] which will [precipitate/catalyze] the [rapid transit]. This last is bound up with the [death] meme, as well as being very heavily cross linked over to Terra entity where many of the links terminated in the [spiritual winds/kamikaze] sub set. These may be linked temporally as well as linguistically. The data is indicating that [bile/liver] will be involved somehow in the [spiritual wind/kamikaze] component to the [dead pope], and is suggesting, at least at a supporting level, that [liver poisoning] will be the [undoing] of the [power(s) in place]. This last is extensively linked over to the ThePowersThatBe entity, and has very high [visibility] values suggesting that the global mediastream will be participating in the [liver/bile] links to upcoming [internal shake-ups/reorganizations].

The [church] sub set is heavily supported by [transformation] aspect/attribute sets which are also participating in the [transformation] and [duality] meta data layers. The [vatican, vaticus/sorcerer] sub set is filling with supporting sets pointing to [internal revolution], and [external assault]. Of these, the [internal revolution] has the highest [fear] summations, and is growing the fastest. There are indications that the [death of the pope] will [bring (internal) chaos], and [external rigidity] to the [infrastructure] as it is described as [rotting (from) disease under the bare feet].

The internally held values for a [spiritual wind] or [kamikaze] within the GlobalPop as well as the Populace/USofA are indicating that the manifestation of the [death of religion] meme is rapidly marching toward [visibility]. There are repeated descriptor sets with the [spiritual

wind/change/alteration] theme which are rising in both dominance within the populace entities, as well as rising in internal emotional value summations. This confluence suggests that this coming [winter] and the release language of the time will include a [death of organized religion] meme emergence, though it may well be first discussed as the converse, which is the [rise of (new) spirituality]. Again there are references within both populace entities to the [transit] of a [female personality] from [south america] to the [northern hemisphere] which will be increasingly [visible] and which will be associated by the global mediastream with the larger meme of [spiritual alteration] of humans.

Populace/USofA - Twigs Snap, KamiKaze Bucks, Maritime Disaster Redeux, Retreat

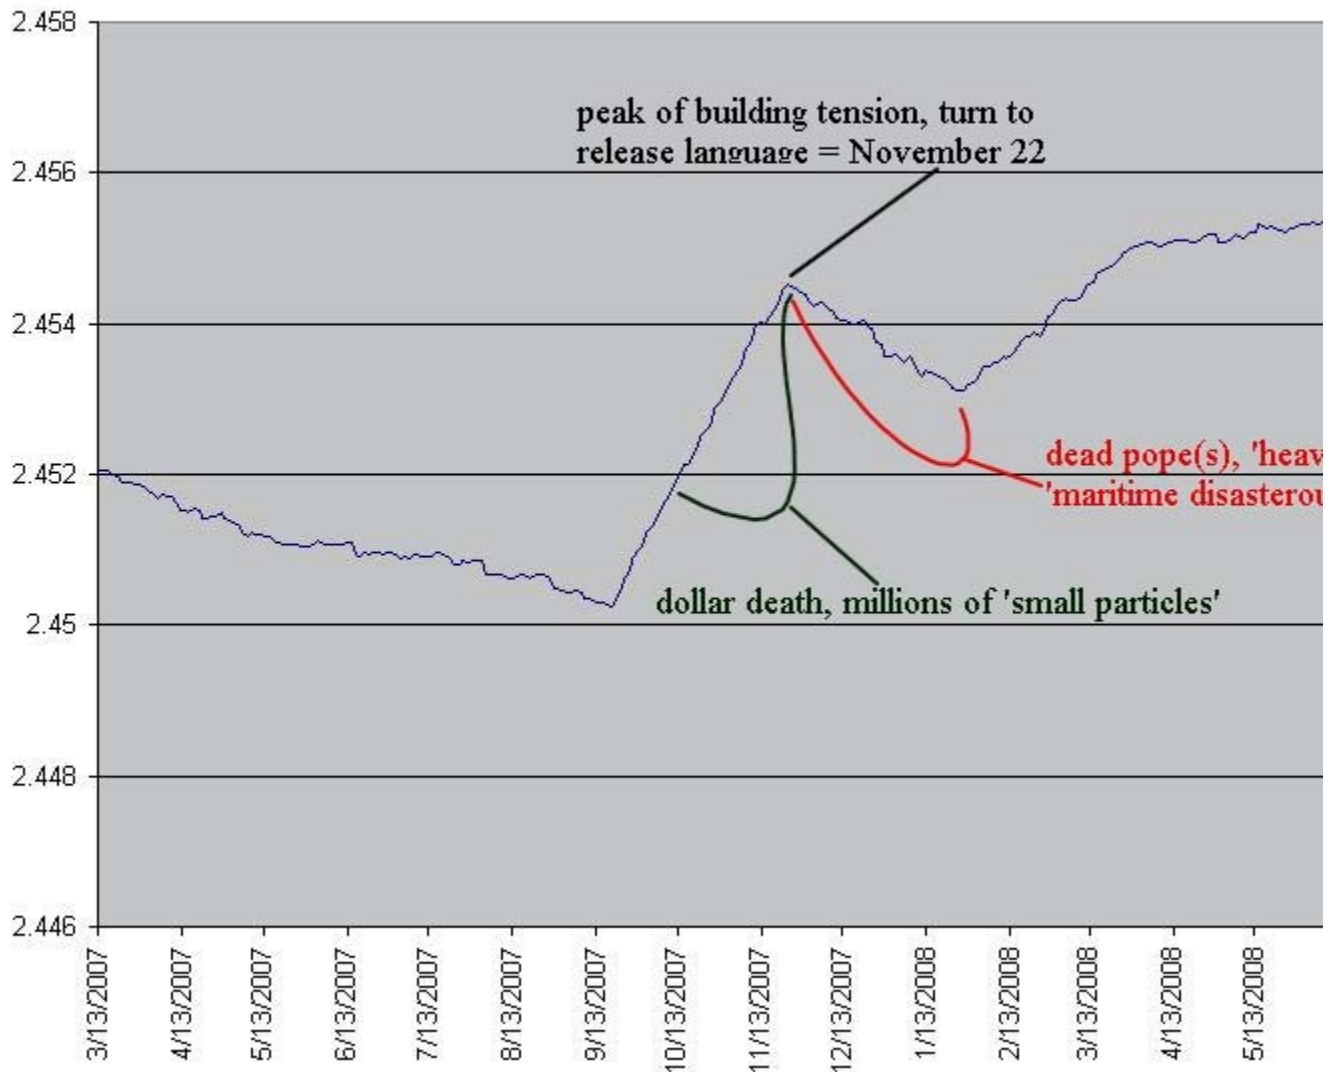

The last of the longer term data sets from ALTA 0508 contained references to a [twig snapping] which will [set in motion/contribute/initiate] an [infrastructure collapse]. This appears to reference a [large bridge/binding] which will [fail] due to a [single point/small twig/central item]. The indications are for a November time frame with a [north america] location. The data sets are pointing toward this [high branch twig] as being [parted] under [cold stresses], and then a [cascading run/flow] which will [bring down (the) structure]. The [collapsing structure] is [mountain] associated, and is [near] to the [source of underground waters]. The conditions at the time of the [collapse] are described as [foggy] though [cold]. It is also possible that the [foggy] descriptor should actually be interpreted as [snowing/white-out] given both the secondary values within the set, as well as the [high mountains] association with the [bridge/binding]. The descriptor sets include references to the [sounds] of the [collapse] being [mistaken/perceive d_incorrectly] for [thunder]. This last is shown as being some [miles distant], and having [visibility] within the global mediastream reports of the incident. There are deep linguistic associations between [gold] and [sand] and this [bridge/binding]. It would not be surprising to discover either or both words are within the local or proper names for the structure. The data sets indicate some level of [personal risk] and [drama] surrounding the collapse, but also are pointing to [successful encounters/extractions] via a [high mountain trail].

As noted in other entity discussions, a recently risen theme is the [spiritual winds], or [kamikaze] as we have labeled the meme. This is showing as directly producing the [loss of money] as has been previously predicted to affect the [infrastructure of the USofA] over Fall. The confirmation from both the last of the 0508 data sets as well as the continuing accretion of values to the sets from 0708 are in direct support for the idea of a [spiritual wind] which will be associated with the coming actual [winds] as well as the [loss of money]. This last aspect/attribute set contains support for [millions of small particles] which will [combine] to [scrub (the) landscape]. This has been part of the supporting layers for the [usofa dollar, near-death-experience] which has been forecast since December of 2006, and is currently manifesting. Much of the building tension language within the global mediastream currently does contain [dollar] references which are associated with all sorts of [fear] based tension building words.

Also internally cross linked into both the [small particles, in their millions] and the [dollar loss] and the [spiritual winds] memes are references to the November 22 turn into release language as also being associated with a [developing move/process] which will bring [restrictions on movements] over the course of [winter]. The meta data layer of [restrictions on movement] is being supported internally in the Populace/USofA by the [dollar death] meme sets, as though the [dollar woes] will induce both [encounters with scarcity] as well as multiple layers of [restrictions on movement]. This last includes such diverse forms of the [restrictions] as [no fly], and [no movement (of) currency], as well as [no movement (of) communications], in addition to [restrictions on movement] which will be [induced/caused] by [dollar/currency loss], and [lack of resources]. These will be playing out in significant ways in very late November and would argue for an interpretation of a very [unsettled]

holiday economic 'season' here in the USofA.

Long Term Emotional Trends

There are disturbing lexical references within the last of the ALTA 0508 longer term data sets for another [marine disaster]. The last time that this linguistic set appeared we had had the Columbia {ed note: Columbia = gem of the ocean} Space Shuttle disaster. Once again, these [marine] associations are [space] connected, both within the Populace/USofA entity, as well as the SpaceGoatFart entity. In the cross links over to the SpaceGoatFarts entity, the termination point is the now familiar, [energies from space] meme, however, at this instance, the supporting set include [hidden], [sudden appearance/manifesting] as well as [dislocated/dislodged (unknown object)]. This last has the descriptor set of [unknown object] as a place holder or 'variable' in the programming sense of the word. The data sets are indicating, and we are predicting from them, that an 'unknown at this time' object will be [dislodged] and it will be the proximate cause of a [disastrous unfolding/process]. There are also cross links both internally within the Populace/USofA entity, and externally to the Terra entity where termination ended at [spiritual winds].

There are [mid/center atlantic] geographic references within the data set for [marine], as well as descriptors for [ancient lineage/derivation], and [journey (to the) west]. It must be noted that this last is also the title of the Chinese 'central mythos', and is the tale of [4/four travelers] who [journey to the west] to [receive the dhamma (spiritual truth)]. It also has associations internally as a novel with many of our other supporting sets for the [marine] data set including [crossing the southern ocean], and the [assault on heaven (by the stone monkey king)] {ed note: the start of a *huge* interconnected series of events in the world, loosely similar in meme to the 'tower of babel' mythos in semitic influenced cultures}. There are repeated data sets within the supporting groups pointing to [heaven/space] being [assaulted] and responding by sending [unexpected energies from space] which are the [cause/initiator] of the [maritime disaster (over) the mid atlantic]. This [maritime disaster redux] is supported by the modelspace as it is progressed to just inside the December marker point. The supporting descriptors for the [maritime] component of the meme include [rectilinear], [ancient derivation], [setting sun], [travel westward], [4/four travelers], [singular/single/unity], and [yellow sun]. This last set is supported in its turn by references to [yellow setting sun (turning/transforming) orange], and [prelude to night/darkness], and [twilight], and [dim light] and [low/lost vision]. Further directly supporting sets of the [maritime] sub set included [heaven assaulted], [space/outward pointed], [energetic draft/draught], and similar sets. After encountering these sets within the data, we were compelled to examine the NASA records for the next [winter] associated Space Shuttle flight.

The results were chilling.

Note the next shuttle up is Atlantis, with a scheduled lift off target of December 6. Also note the mission patch includes the names of the entire crew in '4/four' lines. Also note that the patch includes an 'ancient' ideograph of a 'square sail' vessel, and it is facing to the [west] and is seemingly crossing the [mid atlantic] ocean. Hmmm. This is likely indicating that some level {ed note: bearing in mind our reports *always* ERR on the side of the more extreme/bad circumstances...just the nature of radical linguistics} of 'problems' will likely develop for the shuttle Atlantis and its crew as they 'journey west' this December. Note that the outcome of this [maritime disaster] is *not* predicted, only that both the [disastrous process] and the [results] are within the 'release language period'. That being noted, there are linguistic sets in support which include aspect/attributes such as [after/post (great/huge) trials/travails] and in its turn is supported by [getting together]. This then could be interpreted as [after great difficulties, they succeed in getting together/reaching goal]. Such references within the larger [disaster process] make any prediction of an outcome fall within the [guess] set. Of course, the [visibility] values for this [maritime disastrous process] are very high. As the whole of the descriptor set for the [fire] and [undoing/uncoupling] is [space] based, and as the descriptors include language suggestive of [corrections], the 'feel' from the data is an "Apollo 13" redux meme playing out on the global mediastream in 'near real time'. There are also a *very* large number of cross links over to the SpaceGoatFarts entity which implies on its face, that the [officialdom] will be in 'high denial mode' during and after the events. Further the SpaceGoatFart entity is where all the references to [ufo] and [officially denied objects] are held, indicating that *perhaps* there will be further emerging language around the [contact] meme embedded within the [maritime disastrous process] as it is broadcast to the planet.

The immediacy value set for the Populace/USofA entity is dominated by [retreat] which is supported both in multiple layers, as well as in multiple directions. There are indications of a [retreat] from [spending] and even a [retreat/renunciation/abandonment] of [bills/debt]. This is shown as being very significant, and very very [visible] within the global mediastream. So [visible] as to create its own self feeding cycle on the teevee for a while. The [retreat] aspect/attribute also has very large levels of support under a [military] aspect. This sub set includes geographic references for a number of sites, but is dominated by [iraq]. There are a number of cross links over to the Bushista entity where the termination points are participating in the [madness] and [failure] and [denial] memes discussed in 0508. The

[retreat] sub set of [military] supporting aspect/attributes is filled with references to [usofa dollar] and its problems as participating in the whole of the [military fatigue/exhaustion] which is indicated as being [visible] and contributing to the [retreat] and [repatriation].

There are also very large segments of the Populace/USofA, sub set [retreat] which are [economic] focused and which contribute as origination points for cross links to Markets entity in the [walking away]. See Markets entity below.

Another section of the [walking away] support for [retreat] goes via cross link to the Bushista entity indicating that the pending [exposure of madness] or [acting out] will be at least partially instigated by the [abandonment of debt/repudiation] wave [visibility]. This section within the Populace/USofA is indicating by directly held values that a period of [danger] and [hardship] is emerging which the [populace] will hold as being [caused] by [Bush, et al, TPTB]. This [presumption of guilt] is shown as also being [visible] in the near future such that the [visibility] itself will contribute to [symptoms of insanity/actions inappropriate]. There are some indications that [fire] as in [flames] will be involved as well as persons described as [house boys/servants]. This section is a bit confusing, suggesting that [loyalty] will [last only (as) long (as) the money], and further that [flames destroy patronage].

Markets - Repats Barf, Great Walking Away

The longer term value sets remaining from ALTA series 0508 continued to accrue supporting sets under the [millions of small particles]. It now appears that while there are certainly [housing] related inferences within the data set, the *more* likely interpretation is now for either [dollars] or [credit cards]. There are several large sub sets supporting both aspects within the [millions of small particles] new accretions. These data sets of [credit cards] and [dollars] are perhaps *both* legitimately represented. The interpretation of both would forecast a [fall default] wave on credit cards, and this would come in conjunction with a huge [repatriation] wave of [dollars] back to the [usofa]. How this [repatriation] might occur is less clearly described. There are hints that a [complete/total] [abandonment] of [us treasury] and other paper debt instruments would in effect be [repatriation] of [dollars], and would certainly be in the [millions] levels. Further there are also pointers toward a [forced purchase] which involves [metals/commodities] and another which involves [property] of an unknown type. In both cases these are seen as [repatriating] [millions] of [dollars] back into the system.

There are recent accretions from the immediacy values of 0708 which also are going to the idea of [millions of dollars] [returning home]. This is cross linked internally with 2/two aspect sets of interest. The first these is terminating in [housing] and seems to be pointing to yet another wave of [foreclosures] and other [abandonment] issues which will begin to surface in late October/early November. Then in conjunction with aspect/attributes from 0508, longer term values sets, the other cross link is pointing toward a [mutiny/insurrection] which is directly held within the Markets entity. This area has very extensive cross links over to the Bushista entity, but is still holding its mass entirely within the Markets entity linguistic structure. The [mutiny/insurrection] values have a very high [visibility] sums, and therefore are expected to be covered by the global mediastream. Further, the [mutiny/insurrection] is apparently to surface as we move into the release period after November 22. In this case we note that the Markets entity is forecasting that the [mutiny] will [topple/fall] the [markets] in December of this year. An additional and possible interpretation for the [mutiny] area also includes [retreat]. The support for this area includes [under/pressured by] and [disparate/separated forces]. There are also [iraq] values directly held as well as extensive cross links over to the [failure] sub set within Bushista. In either interpretation, the impact will hasten the [degradation/death] of the [usofa dollar], and have very serious [dampening] impact on the [markets] for [paper] originating in the [usofa].

Not that there won't be plenty of [drama], [heartache], and vast amounts of [increasing tensions] in the

[markets] prior to December's 'release language episode'. The immediacy values processed this week have settled with a dominating aspect of [truth(fullness)] which can also be interpreted by the secondary, and lower aspects as [exposure of truth], [sincere expression revealed], and [within (a) sphere (of) truth]. There are 2/two key elements here which need to be kept in mind: the first being that [truth] is equal to [facts] plus a positive emotional view of those facts. This is to say that [truth] is [facts + emotional energy]. The second element of significance is driven by the primary supporting aspect/attribute set of [unexpected in view/seen/perceived]. So the totality of the interpretation could run to [unexpected exposure of facts leads to truth being accepted]. A complex dominating aspect without doubt, but very likely these next 3/three weeks will be very [revealing] of [hidden facts]. The modelspace is suggesting that there are huge emotional ramifications, in [unexpected] directions that result from the [revealing stutters/flutterers/intermittent_shuddering].

The supporting layer of [unexpected] is itself heavily supported by self referencing descriptor sets such as [not anticipated], [without prior awareness], [absence of vision], [limitations of perception (of) impending/pending ramifications]. There are several hundreds of layers in this vein which go to the idea that the [revealing of hidden facts] over the next [3/three weeks] {ed note: but emphasis on what occurs in this *NEXT* week October 22 through 27}, will generate [unforeseen consequences] including [disparate initiators/starters/causal_agents] in such a wave as to [overwhelm] the [markets], but also to impact directly on [global politics/elections].

The [revelation of hidden facts which have an emotional reaction within humans en masse] meme is both complex, and abstract to a certain extent, however the modelspace is indicating that the [results/impacts/alterations/changes/upheaval] will be very real indeed. The suggestions within the supporting aspect/attribute sets rise toward images of [person/slaves] whose [backs bend under heavy loads/taxes/control] are [reaching/arriving] at a [point of no (possibility/room/lee-way) for breath/pause/relief]. This [no breathing room] aspect/attribute set grows to a very distinct bulge as the modelspace is moved forward. The idea coming across is that some very serious economic pressures emerge this coming week with a slight trail off in the facts over the following 2/two weeks, and the result is a very serious increase in [oppression] of the [slaves] to the point of [seizure]. This [seizure] aspect/attribute set is pointing toward the end of the 3/three week period that is the immediacy value set range, and so there is some small possibility that the meme would/will continue to gain new aspects/attributes when the shorter term values are processed, however the modelspace is seemingly clear in pointing to the [visibility] of both the [hidden facts] which will be [revealed] in the week ahead, as well as the almost immediate ratcheting up of pressures, and a [visible] response amongst the [slaves/taxed/controlled]. This area is *most* likely referring to a huge rise in the [visibility] of what we will call the [great walking away]. This aspect/attribute set is focusing on [housing], but also has implications for the rest of the [credit marts/originators] as the [walking away] will spiral into other forms of [abandonments] over the next 3/three months including [credit cards] and [telecom] bills. The most immediate impact though will seemingly be the [abandonment] by [walking away] of many [tens of thousands] of [houses/condominiums/shelters]. The results of the impact of the [great walking away] will [transform] the [social order] of many communities, especially within the [usofa], and [uk]. These [abandonment] memes for the [housing] and [debt] aspect/attribute sets include cross links over to the [employment crash], and further into the FuturePop entity where a slight majority is terminating within the [fuzzy revolution] sub set which itself is supporting the [revolution] meme. There are also very extensive Terra entity cross links with indications that a significant portion of the [hidden facts] are associated with [disguised/masked biosphere degradation effects/statistics].

Within the cross links over to the Populace/USofA, the [revealing of hidden facts/truths] is showing as acting as a causal agent for the development of several self-organizing-collectives (SOCs) which will include an [alliance seeking rectification]. This [group] is shown as gaining some level of [political power] as it pursues the idea of [examination] of the [process]. The imagery within the supporting sets

paints a picture of a very large group of [disaffected persons] who will [seek harmony among their interests] and [demand retribution] against the [institutions]. This [retribution] aspect/attribute set also includes [core change] or [fundamental reorganization]. The [group] will obtain at least enough [political] clout to elevate the [examination of the process] to the level of [visibility] within the global mediastream. There are suggested changes within the current [political structure] of the [usofa] which will also be impacted by this [group/association/alliance] beginning in December of this year. The pressures exerted will apparently *alter* in a [visible] fashion, the progress of several of the major political candidacies currently underway.

The whole of the supporting structure for the [hidden facts] is participatory within the larger, and gaining strength, meta data layer of [secrets revealed]. There are also supporting areas within the Markets entity which are participating in the [transformation], [duality], and [encounters with scarcity] meta data layers. The largest rising meta data layer within Markets is the [duality] layer, followed by [transformation]. The [transformation] layer is in direct support of the [rebellion/revolution] meme within the populace entities.

Conclusion - Part Zero - Transformation Looms

There is a tightly woven knot of meta data layers forming within modelspace. Unlike previous expressions of the meta data layers, these are sharing much of the same supporting aspect/attribute base. These layers include [duality], and [transformation], and [revolution]. There is some small participation from [conflict] meta data layer, but not enough for it to be central to the knot. The modelspace shows these meta data layers permeating the various entities, and now the 'intensity shading' of the various pixels associated with the 3/three meta data layers are seemingly of the same color scheme which is indicative of the shared base sub sets.

These 3/three meta data layers also share other components. The first of the 3/three to develop was the [revolution] meta data layer, which then was supported by the emerging [duality] meta data layer, and shortly thereafter the [transformation] layer formed. These all developed in modelspace over the course of perhaps 4/four months about 2/two years ago. The chain of evolution of the meta data layers into [transformation] is strikingly similar to the [green death] meme that we saw develop some years back. That meme began manifesting and was visible for a number of months to observers tipped off to its existence early. We have a near duplicate pattern emerging now for the [transformation] meme. The modelspace is suggesting that the [transformation] will be very [visible] within the November 22 through January 24th release period language, but that if aware now, so will be the [visibility] of [transformation] as an expression throughout life here on earth.

The [transformation] meme *appears* very damn conveniently at the last quarter of our Year of Emergence. In previous ALTA reports we had labeled 2007 as the [year of emergence] based on modelspace general linguistics and the presence of the aspect/attribute set [emerging] within so many disparate data sets. Also visible within the data sets was a 2008 centered lexical shift over to [manifestation], so, being consistent, we labeled 2008, as the [year of manifestation]. The difference between the [emergence] and the [manifestation] sets has to do with the [duality] meta data layer. In the case of [emergence], a primary component of the definition/descriptor set is supported by the [duality] of being able to [observe] both [then, pre-emergence], and [now, emerging time]. Clear as dark chocolate at the bottom of a tall black coffee? Well, basically the [emergence] aspect requires the emotional structure of being able to still envision what things were like before this [thing/fact/Z] emerged, as well as being aware of the [thing/fact/Z] emerging in present time. So no denial allowed here, but still a sense that the [pre-emergent time] is [close] even if [fading].

The [manifestation] aspect/attribute set specifically does **not** have the [past nearly still here] emotional response built in. The difference is of the nature of [emotional center]. In the case of [manifestation] the totality of the [emotional center] is wrapped within the experience of the [manifesting circumstances] and the internal, emotional time references do **not** allow for contemplation of the [time before]. All the internal time focus is on the [now] and [future] which seemingly are completely [swallowed] by the [manifesting circumstances]. The emotional tone is very similar to the common human experience of being ill for several days with a cold/flu which will last at least several more days; and the formerly rational mind has come adrift in time such that it can no longer remember **not** being sick, and can't conceive of a future without being sick. That is how [manifestation] differs in feeling from [emerging].

So 2008 is to be the [year of manifestation] and the areas in which core change will manifest are very diverse. Of course, there had to be a transition period, and modelspace is here to remind us that such is the **now**. That is, we are here, now, at the cusp of the transition, and the [transformation] meta data layer will propel us through to [manifestation] in only a few short weeks.

The [transformation] meta data layer takes its emotional summation strength from both [revolution], and [duality], though the [transformation] aspect is very long term focused whereas the greater summation of values within [revolution] and [duality] are mainly within the shorter term sets. Nonetheless, the [manifestation] label for 2008 is deriving its emotional summation from the [emergence] of [transformation] meta data layers within the populace entities, and the Terra entity.

It appears as though [transformation] looms over us all as the [dollar near-death-experience/mortality], the [great walking away], and the continuing [corruption] of [officialdom] all within the background of a very deep seated emergent fear of [planetary biosphere change] conspire to [manifest] now.

Probably a very good time to be in the pie business.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 12.977 million reads of the 0708 series.

Meta Data - Release Language out-and-about

Noting that the California wildfires and subsequent mass evacuation, aka [american diaspora, part deux], came in the week of October 21, 2007, we can say that 'it' came along as expected. The 'it' in this case is the forecast 'release language' shown in the charts since ALTA 907....

Emotional Tension Trend - LTV - 2007 ALTA 907 Series

In the reproduction of the chart above, we note that 'we no longer' here, and in fact have moved into the 'release bubble' period, annotated just to the right of the green 'you are here' circle. So..please note...the language and images coming off the teevee, especially the cable news teevee, *is* a fine example of 'release language'. The aware observer will discern the differences between the language of this week as the fires developed into a major national and natural disaster, and the language of just *last* week, when the focus was more future and [worry] oriented.

Also note that the Santa Ana winds are part of the forecast [winds] meme for damage here in the USofA. The [wind] meme is expected to carry forward over the course of winter, continuing to bubble up to consciousness as [damages] are incurred. The [winds] will ultimately go walk-about over the continental USofA, causing damages in most regions.

We note that the next release language 'burst' will come in the week of November 22, 2007. This next brief release language time during the end of the current building tension period is deeper, and sharper than is currently being experienced. It is seemingly associated with the next episode of [damaging

winds]. These may be referencing [tornadoes]. It is also showing associations for [american diaspora]. And, please note that a very key ingredient in the developing circumstances for the FuturePop entity is the [diaspora] which will impact humanity globally. The [american diaspora] is merely to the first, and most visible.

There are also associations with [retreat] and [withdrawal of military forces] and the release bubble on November 22, 2007. Note that the bubble is of many days duration. Then there is the up turn of emotional building tensions once again, for a short few days, and then the entry into the next release period.

Also note that impacts on the electrical system as a result of the California fires *may* indeed be the [regional electrical infrastructure failure] which has been in the ALTA reports for the last year. This is due to the on-going nature of the electrical 'emergency' once the process gets started. The forecast is for a [regional power problem] which will be come [endemic] to the area, and persist for over [6/six months]. It will also impact other parts of the national power grid adversely, and will be the proximate cause for [encounters with scarcity (of) electricity] that will settle on the 'grid' for several years.

The latest processing is now indicating that the building language period currently expressing will end on November 28th, at about 12:23 pm. There after the release language period will take over the emotional expressions until late on January 29th.

Terra - Revolution

As discussed above, the November 22 time is showing within the early shorter term values processing as being yet-another-wind-damage situation. This may be referencing [tornadoes]. If so these will be a [crescendo] sort of episode. The data sets would seem to be pointing toward a [series] of [wind damage events] which will span about a [week] in their impacts. This may be referencing only several days of [wind storms], but a week to ascertain the extent of [damage]. These are [usofa, continental] associated, and in addition to causing [damages] to property, there are curious references to [national park service] and some [passings]. This last may not be a [death] per se, but can also include [significant temporal endings]. Both the [damaging winds] and the [national park service] have very high [visibility] and will show up within the global mediastream.

The newly accrued values for the Terra entity are dominated by [revolution] both as a meta data layer, and as a directly held value set. The directly held [revolution] includes all the possible meanings with specific focus on [completion of cycles] and [turning/revolving].

At the meta data level, the accretion patterns for the Terra entity [revolution] meme are predicting some very large levels, if not scale, of changes, such that much of the [planetary populace] will be impacted. NOTE that this is specifically *not* a prediction of a planet-wide event, rather goes more toward the idea of *lots* of regional [episodes/incidents] of [planetary change]. A distinction *with* a huge difference. All of these [turning] references are under the aspect/attribute set of bespoke [bad] and all are showing as a [burst] within [Fall]. This suggests that the Terra component for the release language in late November will be large, and that there may well be carry over through into Winter.

There are also alternate meanings within the [revolution] meme being dominant within Terra entity. To that point it is now a social science postulate that many of the [revolutions] in human history, both political and technical are the direct result of [terra climate change]. The Terra entity is certainly focused

on [revolution] including the traditional/modern political meaning of the word. There are repeated supporting sub sets for [climate/terra_change] as an [impetus] for [change/revolution]. Many of these are cross linked to the populace entities. In some cases, the cross links include specific [organization] references (see GlobalPop below). In other instances the cross links to the populace entities are either terminating in, or supported by termination points associated with [frustration], and [suffering]. These in turn are supporting [revolution] as a meta data layer within the populace entities. The Terra entity may be forecasting that another episode of [planetary push into revolution/rebellion] will emerge this Fall.

Populace/USofA - November - in tres partes est, French Shoes, Transformation

The immediacy data, as well as the last of the longer term data sets from ALTA 0508 are stating that November will be a [bad month] for the Populace/USofA. The central meme for the whole of the month, and the rest of Fall, will be [military]. The data sets are indicating a November which will be 'felt' in 3/three parts. The first part of the month will be filled with 'building tension' language, seemingly *all* related to the [military]. The second part will be on/around November 21/22 and will be only 5/five days brief, though it is a release language bubble, and the values are shaping up toward [intense]. The last part of the month is [filled/over-flowing] with [change] and represents the [initial period/sparking point] for the [second american revolution, AmRev2].

The data sets are arguing for [army] to be the dominant sub set of the meme, but the spread is broad enough that we will look for examples of [military] in all forms of the word and its context components to 'pressure' the news. The idea coming across is that [november] is the [crux/fulcrum/dividing_line]. The supporting layers for the [military] meme within the Populace/USofA are arguing for a 'tipping point' effect around and involving this context.

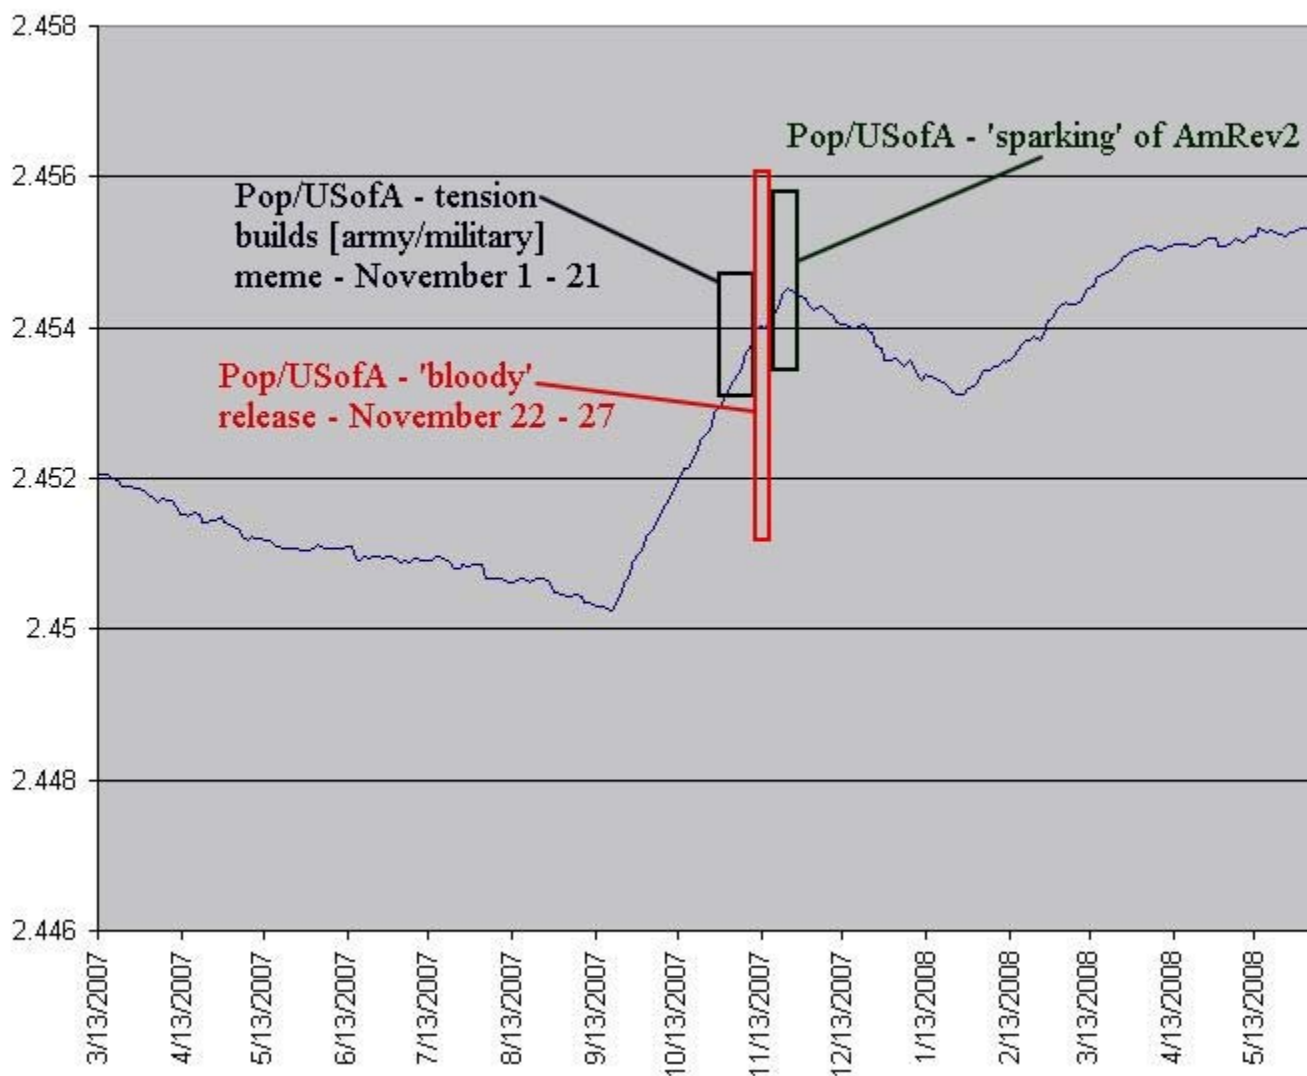

The idea coming across is that at a temporal level, the month of November will [see/experience/manifest] [change/upheaval] within the [political structure] which [controls] the [military] within the [usofa, political organization]. This context is pointing to [army] and the [woes] inflicted by the Bush wars of aggression as being the [dominant] component of the [public discourse] by the end of the month. And, as November dives out of the building language and into the release language pool of the 22nd through the 26th (inclusive), the [army] language accrues several new layers of supporting aspect/attribute sets which themselves are dominated by [rebellion/revolution], [sabotage] {ed note: from 'sabo' the wooden shoes of the French peasants who slaved in the early factories of the industrial revolution...which leads to pitching the 'wooden shoes', aka 'sabos' into the machine guts to 'sabotage' the works}, [mutiny], [bloody revolution], [avoidance], [subterfuge], [hiding], [delaying], [lying]. The idea coming across is that the ever-so-fine ethics of our Grand-and-Glorious Rulers (aka - Bushies et al) will be surfacing with a vengeance within reports of the [actions/movements/behavior] of the [military] within the [war arenas]. The implication is that [lying/cheating/prevarication/avoidance_of_responsibility] will be the [order of the day] such that the *only* time any [war work] is accomplished is when the [soldiers] are [forced to action] by [presence of video]. OF COURSE, this whole area and the [ethos] of our [rulers, NWO] will lead to the [retreat/defeat] language previously reported in ALTA 0508. Hmmm. Seemingly what the Bushies have failed to grasp is that 'leadership' means people 'follow' or 'do as you do'....which in turn means that if your methods of life are defined by 'lying, cheating, stealing, graft', well... then nobody should be too surprised when that 'ethos' becomes the norm.

The immediacy data, in particular, is indicating that the [public discourse] with high [visibility] values, and therefore likely to be part of the daily spew from the global mediastream, will focus on the [military] at many diverse levels. The overall impression from the accretion patterns of the aspect/attribute sets is that November will bring about the [spark] or [initiation] of a [public dialog] within the [populace] about the relationship between the [populace, usofa] and its [military]. As a

smaller sub set are indications that the [leaders, rulers, elites] will be involved in attempting to [force/drive/electrify] the [discussion] to suit their needs. However, the data sets are pointing to a whole series of [fires/combustions] which will [ignite] from the [spark] of [open/breaking_out discourse]. Some of these ancillary [sparks] will bring into [question] the [history] and [need/desire] of [shadow organizations] at many levels. It appears that some of the [elites] favored [institutions/breeding grounds] are about to discover what a [proctoscope] does to [hidden history]. This area of the supporting aspect/attribute sets also holds values indicating that the same [intensity] of [examination/investigation] is going to begin relative to the [press/media/propagandists] within the [culture].

The longer term value sets from ALTA 0508, that is, the very far extent of the range, are pointing to a radical shift in the relations between the [populace/usofa] and its [military]. The data sets are showing that the [sparks] which fly this November, are the very beginning emergence of a trend with [multigenerational, 82/eighty-two year] impacts. The data is pointing to an [internal rejection] of [militant empire] within the [populace]. This [rejection] will [emerge] in November, and begin causing [strife/pressure] instantly within the already strained relations between the [populace] and those who would [rule/enslave] it. The data is suggestive of the [turning point/tipping point] within the [populace] relative to the [internal structure] of the [social order]. A [rejection] of the [ethos] is explicitly coming. An interesting bit of sub set supporting data with extensive cross links is pointing to the [irony] of the [propagandists] on teevee this Fall who will be caught in the [conundrum] of having to [shout down] as [anti-patriotic] persons who [reject militant fascism]. The image is of the Fox "news" crews labeling their audience as [unpatriotic] for [questioning] or [refusing to accept] the [ethos] of [anglo destiny to enslave the planet]. Within this data set are specific references to the [breeding grounds/organizations] of the [elite] and the [vicious] attacks which will be part of their shorter term future. The idea emerging is that such organizations as the [press club] and the [council of foreign relations] among others will be [targets] of [militant/military actions]. Curiously for the nature of the persons within the USofA military (usually mostly apolitical), the data sets are arguing for the [military] to be [leading/instigating] the coming [insurgency/rebellion/revolution] against the [ruling elite/ethos]. The [secrets revealed] meta data layer is particularly active within the [military] associated sub sets and is indicating that a [stream] of [leaks/revealed secrets] will become a [torrent] as the [elites] try to [repress] the [soldier population].

Long Term Emotional Trends

Within the large and growing [mutiny] of [military] sub sets are specific references to a [general] who [stands on a stage/platform], and [states authority] for [taking military] decisions. This act has very high [visibility] values hence should be broadcast on the global mediastream. It is unclear whether this [general] is [assuming authority] for [military decisions], or conversely is [providing rationale/alibi/excuses] for [military decisions]. In either case, the [general on the stage] episode is both a temporal marker for, and a participant in the [emerging/manifesting mutiny of military]. Within the descriptor set for this 'play in 1/one act', the data suggests that the [general] is joined on the stage by [deserving soldiers] as well as a [man who kneels] who is further described as [deserving] and [humble]. Without regard to the implications for 'kneeling' to reflect religious actions, this context can also be translated as [without lower legs]. So it could be that an [amputee] will be on the [stage] with the [general] in a [deserving role]. The supporting layers of aspect/attributes are pointing to the [kneeling man/amputee] to be [scarred] and [disfigured]. However the data set is pointing to this [man of scars] to become very important to the [populace] as a result of actions on the stage. This [importance] is *not* in the vein of celebrity, but rather a very fundamental or [core] level of [importance]. The supporting descriptors are for a person of huge levels of [oppositions/contradictions] within their personal history,

who yet will be a [central focus] for [militant/military change] within the [populace, usofa], arguably the most militant people on the planet.

As part of the [general on the stage] drama, the accretion patterns of the data points to [political authority] which will become [challenged] this Fall. This [challenge] to [repression/ domination] will be within the [populace/usofa] and also is indicated to have very long lasting social impacts, on the order of several generations. This [challenge (to) repression/ oppression] will, according to the longer term data sets from the last few ALTA reports, combine with a very [staggering/ shocking] [military defeat/ withdrawal] in late Summer or early Fall of 2008 to fully [manifest core change] within the [populace, usofa], and the future direction of the nation, again for generations.

We had previously labeled 2006 as the 'pivotal year', and then 2007 as the 'emergent year'. The label for 2008 has been 'manifestation', which is 'emergence + non-denial/ acceptance'. It appears now that the Populace/USofA is suggesting that the label for '2008 here in the USofA' is/should be 'transformation'.

Markets - 4/Four Way Split, Blushing Red, Missing Numbers

With the recent [surges] {ed note: interesting how many 'flavors' of 'surge' are appearing just now in global mediastream} in the prices of [oil] and other [commodities] it is apparent that the [usofa dollar] is in the advanced stages of its [near death experience].

*Please note: within our data streams so far for 0708, and including all of the data from 0508, there are *no* indications that the dollar *will* survive the [near death experience(NDE)].

The ALTA reports have had indications of [dollar trouble] for over 3/three years, and given the George Ure postulate (i.e. the longer the lead time, the larger the impact of the event), we suspect that the [dollar death] meme will have impacts beyond our ability to forecast, especially in the details. The data sets show a dichotomy of [emotional tone] relative to the [dollar death]. We picked up the [duality] of opinion and emotion globally, and since there were 'realists' versus 'manipulators/NWO' themes at play, and thus the outcome was/is uncertain, we chose to label the time of this meme as the [near death experience]. While there is still no definitive projection for the future of the [dollar, usofa], the data sets are now weighted by volume *against* any meaningful recovery of 'value' for the [usofa dollar]. Thus we suspect that even though the 'dollar' label may survive, the current fiscal organization, and global structure which supports it, will not. It is this sub theme within the [dollar woes] which links over internally within the Markets entity to the lexical structures indicating the [cessation/ stoppage] of [global trade].

When the [global trade stoppage] was first encountered within the data sets it was prior to the appearance of the robust [dollar death woes] sub set. From that time the [global trade cessation] sub set has continued to accrue values at a steady pace within all the data types {ed note: immediacy, shorter term, and longest term values}. This [cessation of global trade] has been slightly mislabeled. We probably could have better defined it as [cessation of global trade/globalism with the usofa dollar acting as the global reserve currency for trade swaps]. The data is clear that there will be [trade] internationally, but it is also clear that a period of [confusion] is about to settle over [commerce] as [substitute] mechanisms for the [dollar] are developed.

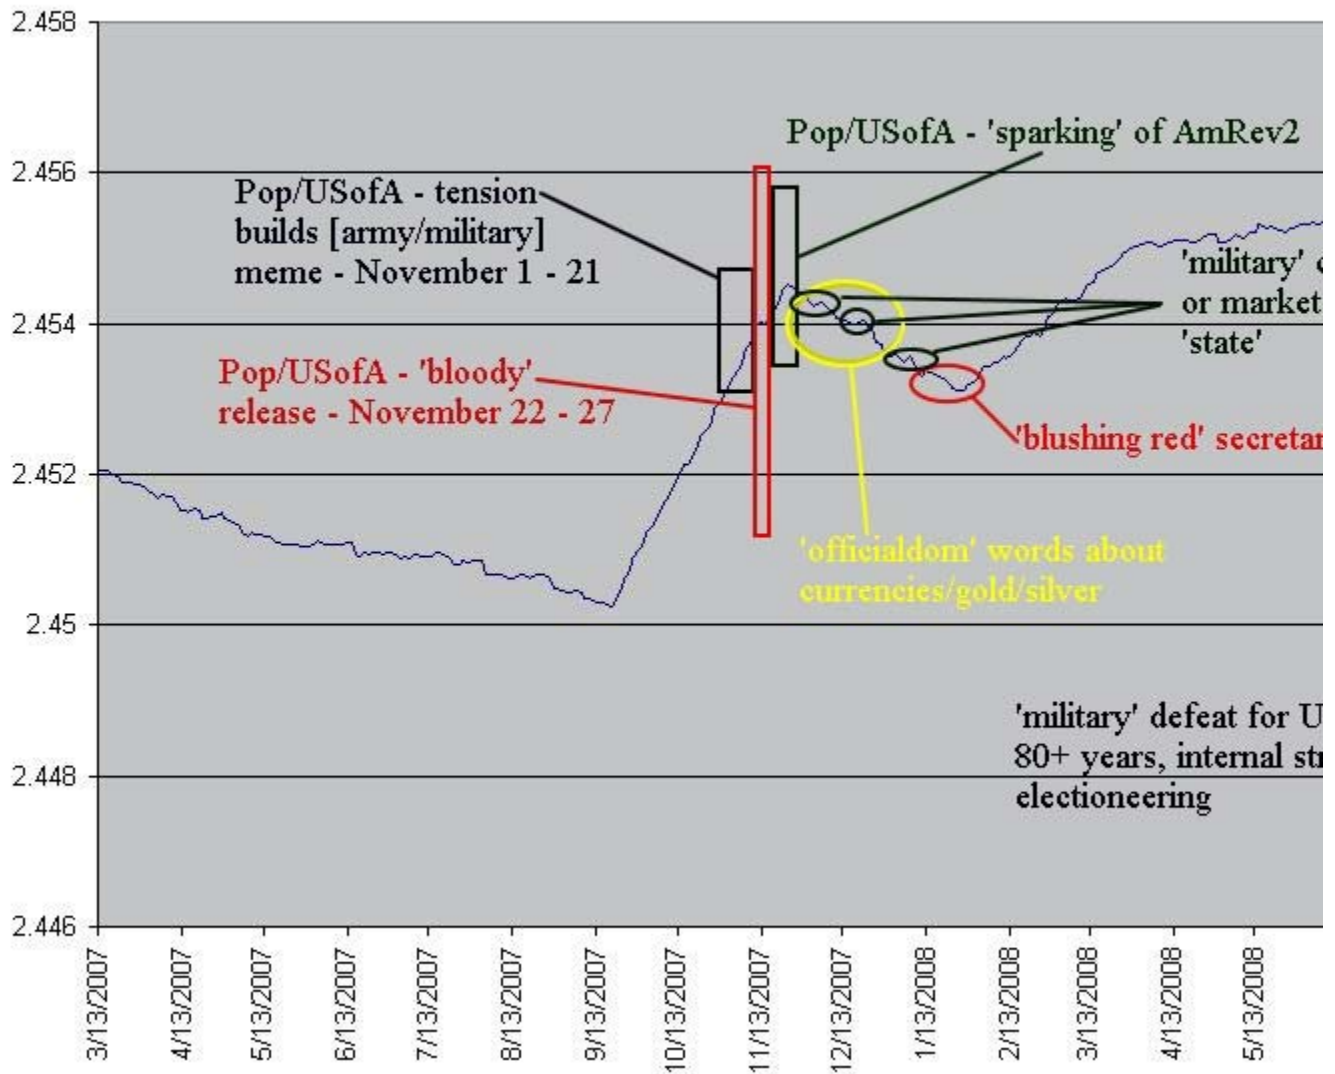

The results for the [usofa] sub set of the [dollar death woes] are also growing rapidly as the various inter linked aspect/attribute sets point toward a [revolution] in how the [populace, usofa] functions. The data

is pointing to a [4/four way split/separation]. Noting that this area is heavily participating in multiple meta data layers including [duality], and [transformation], the data sets are still pointedly focusing on a [collapse] of [imports], and further, the [ability/wherewithal (to) import]. The Markets entity is showing the [usofa] in a position of relative [isolation/distance/removal] relative to [global trading]. Further there are pointers to a situation in which the [nation] is to be [coerced/forced] by circumstances into [4/four types/kinds/styles] of [currencies]. This area has some supporting data for a [2/two tier] currency within the [country], and with each of these [tiers] also having an [electronic/digital] version, thus producing effectively [4/four currencies]. Further the data suggests that this will be the [officialdom] version of how things should work, *but* the modelspace is also quite clearly painting a picture in which the [populace] has differing ideas. The Markets entity movement through modelspace accrues values through November, and December which then gain high [visibility] summations for January of 2008, and which will be [impacting] the populace at the same time. The idea coming across is that [revolution] both [political] and [economic/fiscal/financial] will [sprout] in January as a [combination effect/boosted power]. It is at that point that the cross links to the Populace/USofA entity from Markets begins to show that the [populace] will be [creating] its own [currencies] via differing methods. It is as though the [revolution] meme will be influencing the [populace] to 'choose' to support, or not, the new [official dollar replacement]. Many/most will *not* support this effort at continued [elite] control, and as a result the [gold/silver/precious metals] area will be directly impacted *within the borders of the USofA* by [official edicts]. There are indications that the [officialdom] will try to manipulate the status of [gold/silver] into [currencies] of the [underground/revolution] by [propaganda campaign] designed to [taint] the metals as being part of the [drug wars]. However we note that the Populace/USofA entity is showing a very large emotional summation around sub sets for [revolution] which include the [casting off/discarding] of *any* support for whole areas of 'officialdom' such as the 'war on drugs'. The data is pointing to explicit [rejection] and [sabotage] for [officialdom] within the [usofa] at *so* many levels as to defy meaningful reporting. The picture is of a [populace seething] and [reacting] with [millions] of [daily acts] of [defiance/sabotage]. The cross links to the [military] and the [stressors] show a [crisis] of [existence] which will arise due to the [4/four way currency split] and [official manipulation]. The impact of this [stress on existence of military] hugely participates in the [multi generational change] of relationship between the [populace, usofa] and its [military]. It should also be noted that events within these areas linked over to Populace/USofA are participatory in the growth of the FuturePop entity.

Again we note that the coming events of the Winter 07/08 short release period, *and* the subsequent chaos/crises of the next building period derive much of their initial emotional summations from the [dollar death woes] and related memes.

During the remainder of the life span of the [dollar] the data is indicating that [officialdom] will place [word restrictions/language bans] into place on the [press]. Further they will *attempt* to institute such [controls on thought] over the rest of the [global mediastream]. This area of the movement of Markets through modelspace is heavily cross linked over to the GlobalPop entity such that it appears that [officialdom], especially in the form of [sec. of treasury], and [sec. of state] roles will be [ridiculed] incessantly due to [pronouncements of value] from the Bushistas. The [ridicule] is shown to be so acute as to be the [spark/instigation] of a [public embarrassment/humiliation] at some [awards ceremony]. The data sets are painting a picture of the [Sec. of Treasury] being [laughed] and [heckled] into an [embarrassed rush (of the) stage/platform]. Further the data is pointing to the [heckling/disrespect] coming from [peers]. Hmmm....probably that will *not* be a good day. This [embarrassing rush off stage] is temporally linked to events near the end of the Winter release period, and so should be visible prior to January 24th or so.

Long Term Emotional Trends

The lexical sets for the Markets entity continue to accrue aspect/attribute sets such as [hardships] and [chaos], and [contention], and [dispute] among many others with similar meanings. These are all ending up under the [dollar woes] sub set. This meme will continue to play out in Fall with more building tension language around the [dollar death woes]. The indications are that the Winter release period which appears to end between January 24th and the 26th, will do so with some [chaotic expression] of the [dollar death] meme. The imagery emerging from modelspace is that the shift from the release language into the building language at the end of January 2008 will be accompanied by an 'incident' in which there will be [forecasting/foreshadowing] of the [chaos] which will manifest in 2008 as the [dollar death woes] progress.

The Markets entity continues to accrue data sets in support of the idea of an [audit crisis] which will cause significant political upheaval within the [election process], which is to say *likely* the early January primaries. This [audit crisis], though an issue within [officialdom] will become very [visible] as Winter progresses, and seemingly very [meaningful] and [felt deeply] at an [individual/personal] level within the [populace, usofa]. The idea coming across is that as the [currency] crisis continues to

[expand], there will be a [first hint/clue/shadow] around [auditing] within the [housing 'industry'], and seemingly without a direct connection, the [auditing/surety crisis] will spread to [government agencies] as well as [officialdom retirement institutions]. As a sub set of this area, another meme arises about [repudiation] of [forced debt]. This *appears* at this point to be [credit cards], however there are some links over to contexts which include descriptors such as [student loans]. These are numerous, but do not seemingly dominate, so the impression we get is that [tens of millions] of [credit card] [debt slaves] will [repudiate] and that the beginning of this will be temporally close to the [public 'outing'/exposure] of the [audit crisis]. Further there are very large connections between the [failure of audit process], and [government agencies] and the Hillary C. candidacy. There are some suggestions within the data sets that Hillary's political momentum will be [impacted] by the [audit crisis] near the end of January. The [audit crisis] is merely more-heaped-on during the [blossoming/expanding] [dollar death] of this Winter, and the emotional reaction by the [populace] will be surfacing within the next building period after January 24th. Both the [political] process as well as the [governmental stability] of the [usofa] will be [affected] by the [crises of winter]. Both will affect the Markets entity significantly. Let us repeat. Markets will be impacted/affected significantly by [audit/surety] and [debt slave repudiations] of this Winter. The meta data layers of [revolution] are supported directly by the [repudiation] process, and the [audit/surety] issue is participating within the [transformation] meme.

GlobalPop - DoubleDouble, Toil, and Trouble, Shallow waters, Diaspora Augerae, Red and White

Within the immediacy values for the GlobalPop entity, there are several distinct sub sets going to the next 'release bubble' shown for late November. From the GlobalPop perspective, the release language starts with [mass confusion]. This [confusion] *may* be caused by the global mediastream getting the [wrong handle] on the events as they manifest. The emotional reaction of the [global populace] seemingly suggests that it is the [usofa] in which the first [dangerous situation] arises. This then is [misunderstood] and [badly described] within the global mediastream. This then sets off a whole wave of [continuing confusion], which itself becomes part of the [unfolding] of the facts over the few days involved.

The descriptor sets are focusing on [trouble], [danger], and [mud], and [stinking], as well as [mixed up/churned]. The [mud] reference has large numbers of cross links back over to Terra entity pointing to this as a [proximate cause], but apparently the [story] becomes [self feeding] after the [initial confusion] which is showing a [striking (people) dumb-founded/confused/disoriented]. The other Terra entity cross links bring in [shallow waters], and [stinking]. Further there are references to [vehicles] which will [sink/go under] the [stinking mud]. There are also pointers to [ancient history/artifacts] which will be part of the global mediastream perspective.

The whole of the release bubble is dominated by contexts of [dangerous], and [confusion]. This is not ordinary [confusion], but is amplified by the supporting sets to be a [frothed/whipped] [confusion] which [rules/dominates] by [overpowering size/scope]. Further it support goes to the idea of [churning (waters of) confusion] and [shallow waters confuse social order].

Much of the release language itself is accruing around the context of [crying/tears/lacrimation]. This sub set is getting support from [grief] and [greed], as well as [tears] and [fears]. The [crying] has support at levels suggesting that [survival is *not* assured], and further that [risk to life] is [certain]. There are indications that [sharp edges] and [cutting surfaces] are involved in the [risk to life], though the primary [fear] relates to the [shallow waters].

The [trouble] and [danger] aspect/attributes are both supported by sub sets which go to the idea of [LOTS OF] as in [shouting (about/over) quantities (of) trouble/danger]. There are repeated references to [shouting] such that it should appear as part of the global mediastream coverage, either with [shouting]

from the mediastream, or stories about the [shouting]. The supporting sets also include numerous references to [internal dangers] and [weakening (places at) risk]. Again there are pointers to [associated concert], though it may be that the story will be more about the [facility] rather than the [concert] itself.

There are repeating sub sets in support of the [confusion] aspect which dominates the late November release bubble, and their effect is to explicitly point toward [doubling]. Since we have many of these [doubling] aspect/attribute sets, we can even interpret the impact as a [doubling, and redoubling] of the [confusion] at the core of the release.

There are once again, [diaspora] aspect/attribute sets involved with the November release bubble. As was seen in the recent release bubble associated with the California fires, the upcoming release is also showing that [diaspora] will be a significant force within the [swirling shallow waters], [deep stinking mud], and the [confusion(s)]. As the GlobalPop entity is progressed forward through the release language bubble, the [diaspora] takes on some conflicting aspect/attributes in support. The imagery suggests that within the [diaspora] there will be [2/two] approaches: the first will be [those who go out hunting/seeking], and [those who do nothing/stay put]. This last is showing that this group will be led by a [mature/old] person with [necromancer/psychic/sorcerer skills]. These [skills] will include [reading/observing universe (for) signs/portents], which seemingly *will* be there, thus convincing the [old wizard] that [leaving precarious circumstances/risky_place_times] for [unknown dangers] is an [unsound/unwise] strategy. This [old wizard] decides to [stay put] at the [place of first/premier refuge] and many within the [diaspora] decide to [follow] this lead. These people will [not be forced astray, unable to return] as will at least some of those who [follow the hunter/seeker].

Without regard to who may [survive] there are repeated supporting elements to much [tears] and [blood]. Both are focused on the [coming apart/disintegration] of the [carriage/vehicles/mechanisms] which are shown as [supporting the whole mass]. The data describes this as a [difficult] and [hopeless] stage, where [corpses] are all that [remain] to [mark/sign] the [shallow waters]. The data sets further describe a period of [almost/nearly] a [lunar week] of [continuing hardships/travails]. Seemingly the [weather] plays some significant part in this drama, as we note that the [hardships] end with the [coming of sunny days (which) follow (the) dangers and diaspora]. There are further indications from the cross links to the Terra entity that the planet and its atmosphere will participate in the whole of the [risk]. There are lexical sets suggesting that *something* will [peel away/separate by layers] a [mountain top]. We also find support for [winds] which will bring down [electricity/power] systems as part of the overall emerging release language.

A key supporting set for the release language period centers around [family]. This aspect/attribute set reaches from the individual [family] unit all the way up the 'aggregation tree' to [national family]. There are indications that [severe trauma] language will be associated with the [family] meme within the over all [diaspora] and [risk] language within the global mediastream.

We continue to have accrual patterns of support building within GlobalPop for our [dead power popes] meme. The data suggests a [lot of praying] will be involved, and that the whole [aftermath/following] of the [first/primary death] will be a [fiasco]. The accretion patterns suggest that the [previous development/promotion] of an [ignorant person] will require that the [power pope] needs to [exercise/instill/reinforce] [discipline] on this [ignorant person], but since the [power pope] will be [dead] it won't happen. Thus things get even more [chaotic]. In this mix, the GlobalPop is pointing to a [prostitute], most likely [female], who will rise to prominent position within the global mediastream during these events. The data suggests that the global mediastream will have [visible] video of the [prostitute] stating that the [lewdness of the power pope] was the [greater sin]. This is apparently a significant act, as it brings out the [chaos] and [risk of discontinuance] within the [play/act/behavior] which immediately follows the [death]. Further there will then be [rumors] which will be reported as

[circulating] and in which the now [dead power pope] will be accused of [rape], and other [sexual crimes/sins]. In all of these [crimes] the [other] will be shown to be an [unwilling participant]. In some cases, the language will scale up to [kidnap] and [slavery]. The whole of this area within GlobalPop has the aspect/attribute of [humiliation] as the rising and dominant aspect as the modelspace is progressed into the Winter. Thereafter much of the [drama] of the [death] and [maligned life] of the [power pope] moves along as an undercurrent into Spring of 2008.

Some of this [drama] surrounding the issue of the [pope of power/prominence] includes language suggesting that the [chaos] of the [aftermath] has a [new council] of [managers/rulers] who are faced with [imposing punishment] as a [requirement] to [restoring order]. The data seemingly points to a possible path in which the [punishment] is viewed as [excessive] within the [community], and thereafter the rising aspect/attribute for late Spring/Summer will be participating in [revolution] within these [fellowships]. The ending language from the immediacy value processing goes to aspect such as [disaster], and [bad words], and [bad omen], and [sign (of) tumultuous times], [chaotic discordance], [disastrous behavior], [disastrous damage], [wounding], [blood and tears], [recriminations], [power struggle], [visible in-fighting/intercine_strife] and many others of similar emotional meanings. Basically the data is saying it will be a very very [bad Spring] for the [power church/organization]. Note that the longer term values from the ALTA 0508 set are pointing to the [religious chaos/open_power_stuggle] of Spring as participating in the [death of religions] meme now seen for over 4/four years.

Please note: there are NO clear labels suggesting that the [pope] is the catholic pope, and the prediction may be pointing to another organization of similar structure such as the 'mormon church', or even a 'mega church' organization such as are found within the [evangelical movement] here in the USofA. There are significant 'catholic' aspect/attributes, and the [pope] appellation is what arises from the data set, but we need to note that we have no different, but equivalent, title for the head of a similarly focused, non-catholic religious organization. So as far as our modelspace is concerned, the data sets would hold the titular head of the 'mormons' organization to also be a [power pope]. Our descriptor set does not bother to separate out the many forms of [organizations of religions/power_structures_to_exploit_religious_emotions].

ThePowersThatBe (TPTB) - Trick, or ?

ThePowersThatBe entity has been exceptionally sticky so far in the processing of the immediacy value sets. The entity is accruing data sets at a rate several times the usual flow. The obvious inference to take away from just the flow rates of the aspect/attribute sets is that ThePowersThatBe entity is signaling that the remainder of the Fall building language period will be unusual in both activity and intensity for the elite-amongst-us.

There are several clues at the design pattern levels of the display that TPTB will be experiencing new [tears] and some will receive new [fears], while others are busy with [old tricks].

Taking the last as first, we note that the TPTB will be [charging an innocent person] {ed note: likely male, likely Anglo speaking} with a [falsehood] of a [charge]. This will be quite [visible] over the last of Fall, and will lead to this [innocent] being [incarcerated]. However, the data sets are suggesting that the whole of the [charge] and [jailing] is merely the [initial act/set_up]. The idea coming across from the supporting aspect/attribute sets is that the [innocent person], who may have *some* small political power base, and certainly has some considerable [visibility], will be *not* merely [removed] as that would raise [inconvenient questions], but rather will be part of a long(ish) [charade/play_acting/guessing_from_visual_clues] in order to place him into a position of 'good cop/bad cop'.

The data accretion patterns are suggestive of an [official] who will [rescue] as part of a [plot] this [innocent person]. The whole of the [rescue] is itself a [construct] in order to start a process of [acquiescence] within this [innocent person]. Now we note that the appellation of [innocent person] is applicable *only* to this particular charge. The data implies that this person is also a [long known/suffered], and [long despised] person relative to the TPTB. Further the [person] has a [means of necessity], which also can be interpreted as a [being necessary (for a/as a result of having) specific means/skills/assets], and so can not be merely 'eliminated' as have so many others. Therefore this [staged play] will be necessary in order to 'turn' the [person] while maintaining the [coveted assets/knowledge]. Other aspect/attribute sets point to the [minor (level) official] who is playing the 'good cop' role will not be as [lucky/persistent] as the [innocent person]. This area has a medium level of [visibility], and so perhaps will be a 'follow up' story on alternative media, while the [incarceration] of the [innocent person] will be [visible] within the global mediastream. The data sets are indicating by the design patterns emerging from the accretion of aspect/attribute sets of various data types that the whole of this constructed drama may take as much as 6/six months to reach its maximum levels of [visibility]. We expect the opening curtain to draw back some time before the end of December.

ThePowersThatBe will also have a [furiously busy] Fall relative to [global wealth]. During this Fall, and as part of the larger background in which the [incarceration of the innocent person] play is set, ThePowersThatBe will receive a number of [shocks] to their [control systems], both internal to the [organization/criminal_enterprise], and external to their [power structure]. The immediacy data is suggesting that the externally appearing [obstacles] to TPTB and their plans will also be affecting the [global populace] as a whole, and much of the coming release language period of Winter will at least tangentially touch those issues which will also trouble TPTB. Clear as mud at the bottom of a deep drying well? In other words, the TPTB entity is accruing data pointing to *it* participating in the [release language] of this next period. Again, in other words, when the common human is out there wailing out release language in Winter, there will be at least some of ThePowersThatBe who will be also releasing those same emotions. Some of the accruing data is cross linked over to SpaceGoatFarts, as well as being cross linked to the Terra entity, sub set [space].

Within the TPTB, there will be a [visible] situation relative to the emerging [crises] of December in which a temporal marker can be extracted from the image of [2/two] of ThePowersThatBe [hugging] each other in a [public propaganda forum]. These [2/two] are described as [2/two women] and one of whom is [deep] and [old] within the TPTB. This [hug] will be a temporal marker for [alignments] which will seemingly produce [impacts] on [wealth] and specifically [piles of coins, gold/silver]. The idea coming across is that this [visible embrace] will [signal] some [movements] to those who are [participating/managing] a [collective lie/scam] relative to [wealth]. The [embrace] will be used as a [broadcast] start to the process of [implementation].

Also within the TPTB are data sets pointing to one of the [elite] who will [receive] a [communique] while [occupied] on a [stage]. The [receipt] of the [information] is apparently to be [visible] to the [audience], though its meaning will be unclear to all. The [communique] is apparently [secret], but was of such importance that the [staff/followers] decide to [risk] the [public exposure] as the [message] has [vital] importance. This [act of risk taking] will not be lost on the [alternative media], and the next day a [speculation storm] is shown to begin. Within the spew of [claims] and [counter claims] about this [communique], there will be at least [1/one accurate representation] of the [knowledge]. The data sets are clear(ish) about this, though at the moment the meaning is lost to us. However we do note that those within the alternative media who are able to arrive at the appropriate conclusion will be able to [represent] their [understanding] with a [single symbol]. Hmmm... knowing TPTB, it probably *won't* be the 'peace sign'.

Approximately 1/3(one-third) of the new values accruing to the TPTB entity are cross linked to the

Terra entity. Nearly half of these are terminating in [water] related sub sets. Of this 'half set' of the data, about half of that is terminating in [mud, dry well] references, and the other half is focused on [hidden springs, deep waters]. The [dry well] data sub set is dominated within the TPTB entity by 2/two aspects; [animals], and [dangerous muds]. The [dangerous muds] is supported by odd references to [structures], including [boats] being [made of mud]. This is a sound method perhaps, or rather, until [water] is encountered, at which point [boats of mud] become a very [dangerous] method of [conveyance]. Other supporting sets include references to the [elite] who will [get (their) feet stuck in deep mud]; again a pointer to a [dangerous] situation. There are directly held values within TPTB for [splitting/separation] which in turn are supported by [casting off/cutting off]. These are in their turn supported by [arms], and the whole can be taken as [cutting/casting off the arm to save the body from the deep mud/dangerous_situation]. However, the data sets are also pointing to [those (who will be) cast off/adrift] as being [stuck in mud] and still able to make a [big noise] about their [dismay]. This area is cross linked over to Populace/USofA, and GlobalPop to a lesser extent. In both cases the termination points are heavily weighted in favor of the [hidden springs/waters/resources] which are [stolen] and then [concealed], but which are also described as [refreshing/sustaining] and [restricted]. This last aspect/attribute set implies that part of the [visibility] which will develop, slowly at first, then all in a rush, is derived from the meta data layer of [secrets revealed] which is the dominant influence, until after the [spillage] which is used to [reveal] the [source]. At that point [conflict] takes over this meme and the data suggests that [reported/open shooting] will follow as a result. This area is also cross linked to both the Populace/USofA, and the GlobalPop entity where it terminates in [opposition], and that in turn is participating in [revolution].

Many of the cross links from the TPTB entity over to the Terra entity either include a termination in [space] aspect/attribute set, or are directly cross linked over to the SpaceGoatFart entity. Some 20/twenty percent of the cross links to the SpaceGoatFart entity are originating in areas within TPTB which all fall under [disease]. This [sickness/disease] sub set itself cross linked back to our old meme of [sun disease]. In the SpaceGoatFart entity the [sun disease] is a [denied process/object] which has [officialdom] in [active denial mode]. It also contains support within the TPTB entity for [disease (of/by the) sun] which is a new context developing over this last year. This area is somehow particularly important to the TPTB entity, and includes supporting references to [prior to transformation], and [previous (to this) promotion/increase]. Both of these primary supporting aspect/attribute sets are in turn supported by directly held values for [alterations/transformation], and as may be expected, this area is participating in the meta data layer of [transformation]. This area within TPTB entity includes bespoke [fear] references which themselves are supported by [grief stages]. The implication is that [rage (against) circumstance/universe] will be a slowly increasingly [visible] part of the [elite] over the rest of Fall, and into Winter. This sub set seems to suggest that [circumstance/emergent_change] will derail the plans of the [elite] relative to the [global warming] meme.

Conclusion: Part One - American Experience

As the [revolution] meme unfolds over the course of these last months of Fall, the Populace/USofA entity has been showing that [dichotomy/separation] will emerge. These are pointers to [2/two parties/mind_sets] which are [not able to be united], or also are [unable to live together]. These [mind sets] are *not* related to [political] parties, but rather are focused on [emotional alignment]. The data sets are suggesting that the [american populace], this Fall, will have [visible] [factions] emerge.

There is a prediction that the [opposing perceptions] will divide along [belief] lines in a sense. That is, there is a [core group/tribe] which is described as [of like mind] about the [following of commands of the highest sort]. These we have labeled as [dogmatists/fundamentalists]. This group will [follow (he/she who) claims (to) follow higher being instructions]. This [faction] is described as being [small], but also [powerful, ruthless, deluded, dedicated]. Their [leadership] is coincidentally described as being [a second-

rater who has gotten a post so far above his abilities as to scare even him]....hmmm, now who does that fit? Further the data is pointing toward an episode this Fall in which the [dissolute] and [vicious] [person] will [obtain] a [realization] of how [vile] and [silly] that [he is]. This will not be good. The result will be a [bad omen] for the [patient nation] in the care of this particular doctor, as the [controller] is going to [go mad] with a/the [realization] that cannot be [shaken (from the) mind/perception].

The data sets are also suggesting that this episode will occur under a building emotional tension language, rather than as a release language expression. This [tension] will be [experienced nationally], and the second-hand [smoke] will give GlobalPop a [shudder] or 2/two politically as well. The [experience] of the [national madness] will, according to the data sets, [provide opportunity] for those who [nurture dreams (of) good things/karma] to [act]. The data suggests that the 'time' will be 'ripe' for an [unselfish act] which will [propel] the [actor/initiator/unselfish_person] into the position of suddenly [having followers]. The data suggests that this would be a [good thing]. Within our processing it is very very rare to have any bespoke [good] references. What we have here is not a prediction of the [unselfish act] and its subsequent alterations of the national direction, but rather more of a forecast for the [opportunity] for the act.

The question with this opportunity can be para-phrased from the Mongolian; 'will anyone ride out to [act/seize/meet] their destiny, or will we all be run over by the stampede of fate'?

It would seem that by the end of Fall, all [americans] will be able to answer Jimi Hendrix's question, "Are you experienced?"

###

Part Two is expected to be posted by late on Monday, the 5th of November. Yes, we are aware of the [revolution] connections there.

ALTA 0708 - Part Two

Asymmetric Language Trend Analysis Intelligence Report

'Changes in language precede changes in behavior.'

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of

lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

11.04.2007

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

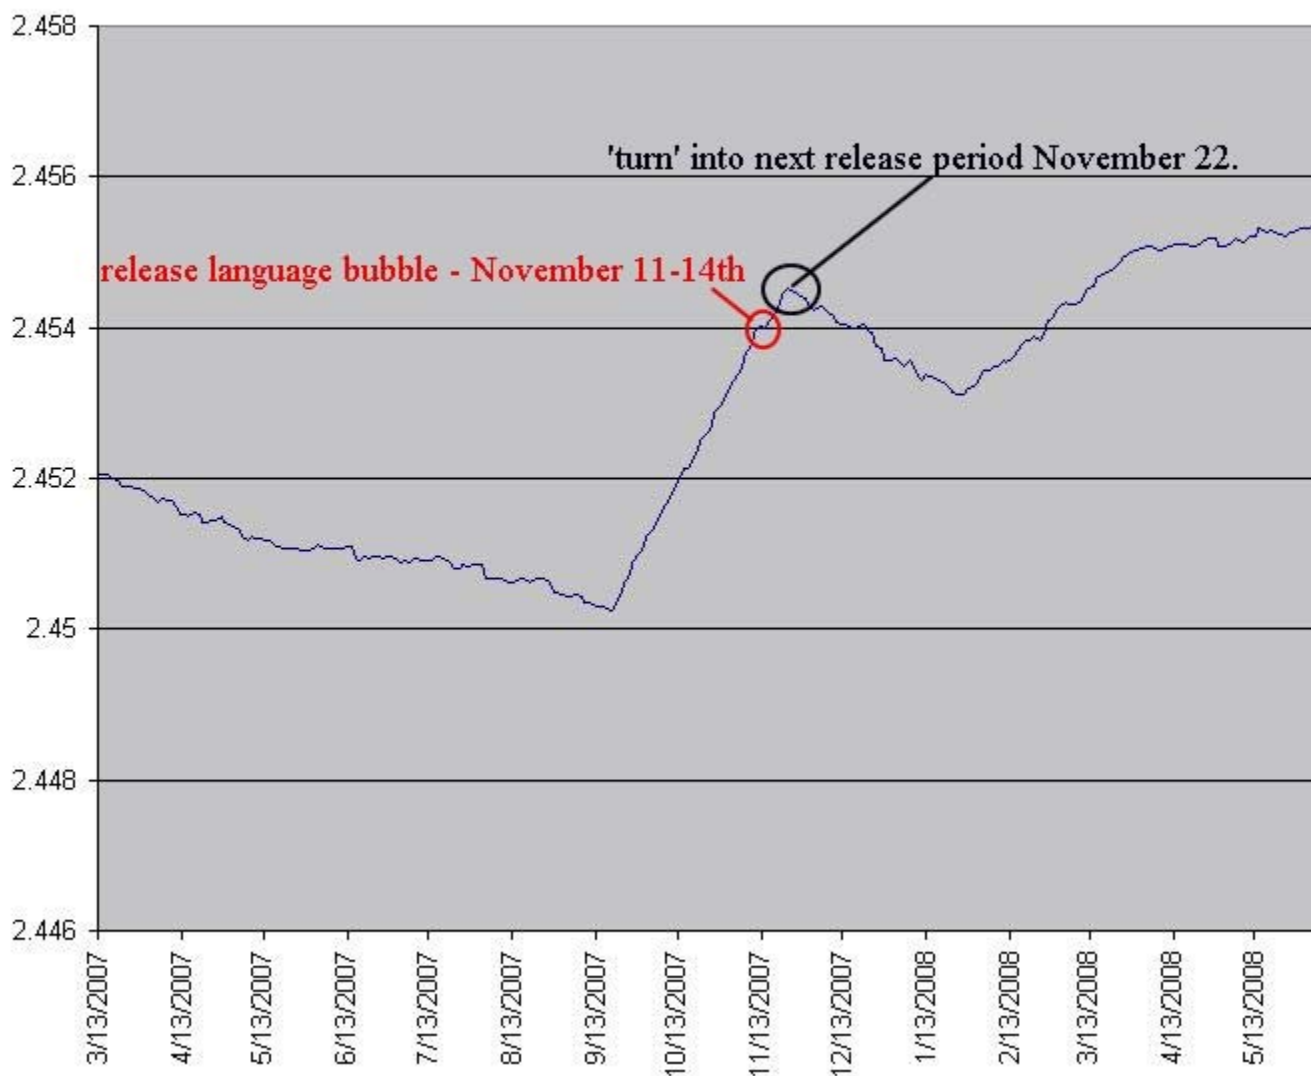

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 25.548 million reads of the 0708 series.

Populace/USofA - Anni magni momenti, XXI Dies ab November

NOTE: The last load of modelspace has moved the next release bubble up to November 11th through the 13th inclusive, and now has the 'turn' into the release language period as beginning on November 22.

Long Term Emotional Trends

As the modelspace is moved forward into December and therefore several days into the next release language period, the rising-to-dominance aspect is a 'twin'. This aspect/attribute set is a meta data layer that has been growing and [veining] its way into everything, as a weed in the garden. Now the aspect and meta data layer of [restrictions on movement] rises to dominance with the opening of the release period in December, and thereafter seems to settle in on the Populace/USofA entity like a heavy fog. The [restrictions on movement] aspect/attribute set is called a 'twin' as there is another aspect set which is just ever so slightly different in meaning, yet contains nearly the same descriptors, and this is [encounters with scarcity]. Both of these aspect/attribute sets are moving to dominance within Populace/USofA.

In **both** cases, the primary supporting aspect/attribute is [repression/oppresion]. This sub set is complete and correct in the radical linguistic meaning of the phrase, and as such is robustly supported by its own descriptor set. The supporting layers for [repression/oppresion] are extensively linked over to the ThePowersThatBe (TPTB) entity. These supporting layers have very long range descriptors attached which extend the dominance of [restrictions on movement] out slightly beyond November of 2008.

The [restrictions on movement] aspect/attribute set, as well as the supporting [repression] layers *must* be approached with some caution as these are very emotionally charged lexical structures. In the case of the [restrictions on movement], the steady progression of its rise to prominence as the modelspace is progressed through December and into Winter suggests that this will be a [long term movement (toward repression)]. An alternate interpretation could go to the idea of a 'restrictions on movement event with long term effects'. The latter *may* be suggested near the end of the release language in Winter, as the jump into building tension language on January 24th is very abrupt.

The aspect of the [encounters with scarcity], at the level of the secondary supporting descriptors and lower, is filled with references to [china]. There are some aspects cross linked over to GlobalPop which can be interpreted toward the idea of a [political crisis], at the core of which is the [dollar death experience]. The spread of the supporting aspects for this set is very wide, and covers a lot of contexts. The idea coming across from the accrual patterns is that [crises] will dominate the coming year {ed note: December solstice to December solstice} for US and Chinese relations. There are forecast [dollar conflicts], as well as [conflicts (in/about) space]. This last is also cross linked over to the Terra entity as well as the SpaceGoatFart entity.

Ed note: The SpaceGoatFart entity is the repository for all things [space] or [spooky] or [officially denied]. This is from the USofA perspective. Even though the Chinese government does *not* deny the existence of UFO's, and even supports 2/two national, official publications on the subject, we are placing *all* UFO and other 'space oddities' under the SpaceGoatFart entity without regard to national acceptance...at this time.

The [political crises] within [china] as well as between [china] and the [officialdom] of the [usofa] will begin to [restrict movement (of) goods] in December. This appears to be related to yet another [credit/debt/fraud] crisis, which will bring up the [audit] and [inability to audit] references previously discussed this series, and ALTA 0508. This is the beginning of the [crises wave] which is shown as [affecting] the [status] of several [prominent politicians/petty_people] including Hillary C. and at least 2/two of the current corrupt crop of GOP candidates.

There are indicators that the [usofa] as a [political structure] will have a [drastic/horrendous fall (in) prestige]. This area is no mere 'self esteem' issue, rather the *only* thing keeping the [usofa dollar] afloat is the 'faith' in it globally. The modelspace is showing that the Populace/USofA has a [crash of confidence] and a [collapse (of) sense (of) national prestige]. The Populace/USofA entity is indicating that this is part of a self-feeding cycle in that as the [dollar (is) rejected] globally, the [prestige falls], but also, as the [internal prestige falls], so will be the [willingness] to [accept the dollar]. Also at this point, the data is indicating, via cross links to a hugely inflated Markets entity, that the [dollar woes] will be [daily headline nourishment/feed].

The Populace/USofA entity is also forecasting that [attack plans] and [conflict language] from the Bushistas will [induce/create] a [blowback/reverse_flow] both within the Populace/USofA, and the GlobalPop. The data suggests that [threats] by a [group] of [allies/friends] will bring [language of strong opposition] to the [globalists/zionists]. The cross links indicate that there will be a point within a [single day] in which [2/two episodes] of [words inducing illness] at a [visible] level will occur. The data sets are seemingly pointing to this as a 'temporal marker' for the subsequent [crises] and [chaos] which will have a thread of [oppression] running through it. The data sets at this lexical level have links to [revolution] meta data layer descriptors, as well as language indicating that [3/three years] will be dominated by the [flavor] or theme of the crises which manifest in the [populace, usofa] over this Winter. The data further has it that the 'intensity' factor grows with the aging of the theme. In other words, the first year following the 'December crises' will be [bad], and the second year will be twice as bad as the first, and the third year will be three times as bad as the first. Ohh, probably *not* too good a

deal for us, here in the usofa.

The Populace/USofA entity accrues aspects/attributes near the end of December which are indicating via cross links that [planetary weather pressures] will be playing an important part in the [misery] levels of the [populace]. The indications are for a [foam?] of some unknown kind, {ed note: area cross linked to SpaceGoatFarts} to be [threatening] the [coast] from the [ocean]. The [foam] is shown as [persistent] and [growing], and in some manner induces bespoke [fear] into the [officialdom]. At least initially the [populace] has less of a reaction to the [coming (of the) foam]. The [visible] stories about the [foam] are what will [change perceptions] and cause a [side_wind/illogical_step] within the behavior of such a large portion of the [threatened populace] that the [officialdom] will be [compelled/forced] to go to [great/large effort] to [calm/reassure] the [impacted populace]. This area in its turn is supported by cross links over to TPTB entity, and directly held supporting sets for [secrets revealed]. Apparently, the idea is that the aware observer will be able to [glean information] of [inestimable value] from [2/two mistakes/missed_sayings] which will come out of the [reassurances] over the [ocean crisis].

Within the immediacy data sets and the initial shorter term values processed are indications that the [populace, usofa] will be [angered] to [mass action]. The aspect/attribute of bespoke [anger] will result directly from a [press, usofa] story. There are actually supporting data sets for 2/two categories of [article/video] which will [provoke anger] and [initiate a mass response]; the first is as a result of [Bush's war of aggression] and the second comes from [financial double dealing/fraud]. In both cases the underlying supporting aspect/attribute sets go to [hardship] and [harsh conditions]. Even the cross links over to the GlobalPop entity are suggesting that [anger] will be the ruling emotion of these next 21/twenty-one days as the building tension continues. The GlobalPop entity is pointing to the [rush of war] and has associations for [Turkey] with the suggestion that the [turks] refuse to [abide] and instead [invade].

The internals of the bespoke [anger] within the Populace/USofA entity are pointing toward the Press entity cross links as being of very large significance with corresponding [visible] summations within the data sets. This indicates that the [press] itself will [become/participate] within the [story/video] which will be viewed as the proximate cause of the bespoke [anger] wave with [national] implications. Further there are pointers to the actual expression of the [anger] to come out during the upcoming November 11-13 release bubble. So the inference is that it will take a number of days and a number of [press stories] until the [populace] is ratcheted up enough to express the anger in a more-or-less [en masse reaction].

As to the context within the [anger causing stories], as noted above we have 2/two separate, but equally sized threads of divergent, though related aspects. The first, the [war] aspect/attribute set will have a number of [financial crises related] stories come out which will set the stage for the [fraud in banking/financials] theme. The Press entity cross links are pointing to a [contamination] issue which will arise relative to the [populace, usofa] in which the [taint/feces] from the [financial crises] will [reek and pollute] the [press] in the perception of the [populace]. This will have very direct impacts on Markets entity as the cross links are pointing to a [mass extraction] or at least a [mass hiccup] when the [news gets out] about the [financial fraud] and the implications for [retirement investments] becomes clear to the [populace]. Both of these threads are showing as producing a [hardship edge] to the [bespoke anger] against ThePowersThatBe. The data sets are suggesting that the first [casualties] of the [anger] will be [officialdom] at various levels. This will include the [communications directors/editors] and their [official proxies] at the various [press] corporations. The bespoke [anger] will be the activating emotive force for the coming [attacks] on the [faces of the press].

The [anger] aspect/attribute set is supported by [impatience], [frustration], [disconnect], [irritability], [rage], and other such emotive value sets. The point is that the [anger] aspect/attribute set is showing as being a building and dominant force for the [populace, usofa] over the first 21/twenty-one days of

November. Thus the aware observer will seek to 'tread lightly' during these days such as to avoid drawing those emotions as would a steel rod in a room full of magnets. The aware observer might also be able to catch the [anger] response in themselves in time to be able to examine it, and its causes, without necessarily reacting to it.

Markets - Great Expectations, Timbers Shivers, Aurum Tertius Ordo

As noted in the Populace/USofA discussion, the data sets are pointing to [an initial article/video] which will [trigger] wide spread negative reaction throughout the [populace, usofa]. The [negative reaction] will be [fueled] by [anger], and the cross links to the Markets entity is showing that this entity participates in a self-feeding cycle with the [anger] in that it is the [site of the cause] of the [anger], and is also the [recipient] of the [expression of the anger].

Does the data forecast a [mass wave] of [attempted extraction of assets/value/wealth] from the [paper debt markets]? Well... it *potentially can be* interpreted that way, *HOWEVER*, there are a number of qualifiers which make this less than what you might initially suppose. A significant qualifier comes in the form of aspect/attributes for [waiting] which in turn are supported by [(for) something/unknown (which is) imminent]. The impression is certainly that a bespoke [fear] wave will build relative to the idea of a [great unwinding/extraction].

As Markets entity is progressed along with the modelspace through November and the rest of Fall, the cross links over to the Press entity grow at rates not seen previously in our work. The indications are that we are in a time of [all eyes on money/economy] and that it will build in intensity up to November 10, when we have a small, 3/three days or so, release language bubble. Some of the building tensions around [economy/finance] blows off in [big/large/violent expression] during the release bubble, but within only 2/two days thereafter returns to previously held values. Then we get into the next release period which extends from November 22th to January 24th.

The cross linked areas within the Markets entity are very extensive. The usual layers are now supplemented by layers over to the Press entity. These layers have a repeating termination pattern in the aspect/attribute best labeled [boom (is) over]. The [press] aspect/attribute set within Markets, as well as many of the cross links are pointing to a series of [presentations] which will come to [alter] the [thinking/perception] of the [populace, usofa]. This will have several ramifications on the [paper debt markets], as well as the [political structure] within the USofA. The data is indicating that the [first wave] of [revolutionary action] within the [populace] will come from [economic disruptions]. The data further suggests that [stories] of bespoke [fraud] at the [pinnacles] will [result] in the [anger] being [internally directed], which is to say, the [populace will be pissed at the markets/owners/officialdom_of_the_usofa]. There are some small number of cross links over to the Bushista entity which indicate an [attempt] to [shift focus/blame] to [external parties]. This is also shown as [blowing up (in the) face] of the Bushistas and being but a minor part of the total drama around the [markets].

Bearing in mind that there is a choppy release period starting within days of the end of the November 11 release bubble, the indications are for only a very [shallow breath] to be able to be taken prior to yet more [expressions of chaos] within the [currency/commodities] area, and further [fraud stories] to emerge regarding the [system].

The data sets around the [corporations] are showing that the context, at least as far as [usofa centric] view is concerned, are entering a [3/three year] period in which [no action/gain] will manifest. This

section of the data is not at odds with other areas, *but* the wording can be inferred to the idea that 'after the 3/three years', then things might be better. Not necessarily the way to read this aspect/attribute set. Rather the context around [usofa based markets/corporations] is that for at least the next [3/three years] there will be [bad luck] and [isolation] and [retreating prospects]. This last also goes to [prospects never realized/manifest].

As the Markets entity is moved along with modelspace from Fall into Winter, and just near the cusp of the December solstice, the rising aspect becomes [decay]. The [decay] aspect/attribute set is supported by descriptors such as [corruption], and [coagulation] as well as [cessation (of) movement/respiration]. The December [decay] aspect/attribute set is so dominant by the movement through the solstice, the 21st through 23rd, that the rest of Winter has its emotional tone set by conditions expressing at that point.

Returning to the immediacy values processing, which resets our modelspace back to 'now', we note that these data sets are pointing for a very interesting 3/three weeks indeed. The rising aspect is [modesty], but this is curiously absent its usual supporting set, and instead is supported by more [militant] words. The primary supporting aspect/attribute set of [derivatives, paper-debt-abstractions] is the focal point for the [modesty] aspect. The interpretation is that [modesty] is going to [bitch slap] the [derivatives world/populace] very seriously over the initial weeks of November. The progression of the Markets entity through the modelspace is jerky, and seemingly [jumps/leaps] from [crisis] to [crisis], with little rest in between. The accruing aspect/attributes for support of [modesty/correct_position/return_to_mean] data set are falling into [negative] value sets, *with* continuing, and specific to [fantasy/illusionary] numbers. The previously discussed {ed note: in ALTA 0508 and this series} context of [un-auditable/not_able_to_be_audited], which we had sort of thought may be applying to [gold/silver] is actually applying *first* to [derivatives] and the total lack of any form of [transparency] within the [paper markets] will be the proximate cause which then extends the meme of [is_it_worth_that_much/value_concept] over to the [gold/silver/precious metals] by virtue of how the human mind, even en masse can become entrained into a tight whorl. Having been [scalded alive] by the [derivative meltdown/disappearance] over November, the movement of modelspace is pointing to the [unauditable] context as the [key component] to continue from Fall into Winter. Once the modelspace has made the transition past the solstice in December, the [unauditable] meme starts to transfer to [gold/silver *hoardings/caches*] and then all hell breaks loose. As the modelspace is moved forward into December, the [unauditable] meme starts to spread, and as previously discussed, comes to [stick] to several of the presidential candidates including Hillary C. and at least 2/two of the GOP prez-wanna-be's.

As the modelspace continues out into Winter, and moves into January, we note that Markets cross links indicate a very [upsetting/vomiting/fear_bowels_release] time through to the 24th of the month. These weeks of [weak bowels] are focused on [economic] issues, *but* there are several Terra entity, and SpaceGoatFart entity intrusions, as well as the [political shakeup] which will impact [officialdom] from that point forward into 2008. None of the data processed for this series so far indicates *any* potential for 'saving the dollar'. In fact, some of the supporting aspect/attribute sets for the [dollar, usofa] are pointedly focused on [rocking (the) financial house/infrastructure]. The data sets include [shaking], and [shocks], as well as [rotten timbers/supports], and further references to [fraud] as the [main] culprit for the [deterioration] of the [global economy].

Further 'problems' are showing as affecting [officialdom] relative to the [unauditable] meme. These will begin in late November with the release period turn, and then mature in early December, and continue throughout 2008. The initial [flush] of the [unauditable issues(derivatives/paper_debt)] will not only have [foreign relations] impacts, but will also be [shifting/moving] the [populace] as a whole. This will result in some very *favorable* impacts for a couple of [thin] presidential candidates as the [conspiracies] are [revealed]. Further these [2/two candidates], on opposite sides, will both benefit from

the [explosion] of [information] which [pours] out of [officialdom] globally as the [gold/silver/precious metals] complex begins to participate with the [derivative meltdown], and [dollar death] meme. At that point it would *not* be surprising to find that [gold/silver] reach never before seen high value levels relative to the [dying dollar, usofa]. The data would seem to be suggesting that when the values reach into the [third tier] of [escalation] {ed note: algebraically at >2387 \$ per ounce} that the [scales will tip/slide] and the [progressions] will [slide past each other]. This can be interpreted as a period where rapid value rise in precious metals is increased by rapid loss of values in other assets, which in turn draw the value of the [usofa dollar] further down.

The data sets are indicating that [visible] [economic] developments, regarding the [usofa dollar] and [paper debt] will be participating in the November 11-13 release bubble, and then again in the shift into the next release drop beginning in December. Further there are Markets entity to Bushista entity cross links for the November release language bubble pointing to [risks to officialdom] which will *also* participate in the [great revaluation/walking_away].

We need to also recall that a dominating aspect to the Markets entity from the release language turn on November 22 onward will be [military] as in the [army/collective_forces of the usofa]. There are a number of memes pertaining to the [effects] of the emerging circumstances of the [army] on the [markets] globally. This area has components which go to the idea that Bush has demonstrated that [his army] is [defeated] and therefore the [defeat] carries over to the [dollar]. This is so due to Bush setting up the situation in which the [dollar hegemony] was [directly tied/linked/bound] by him to the [support/acceptance] of the [dollar, usofa]. Now that the [global populace] is beginning to perceive the [bush cabal] as [defeated/defeat-able], the [acceptance] value of the [dollar] is to [plummet]. This will be, according to modelspace, [repeatedly] [triggered/initiated] by [army actions] over the last of Fall and into Winter.

SpaceGoatFarts - Twins, Moon Memes

The SpaceGoatFart entity has had a large accretion of aspect/attributes around the [(unknown)energies from space] meme that first surfaced late last year. This meme now has added the bespoke [twin] as a rising-to-dominance aspect/attribute in support of [(unknown) energies from space]. Some of the other supporting aspects are curious, and seemingly out of place as in the example of [drug]. The SpaceGoatFarts entity has the sub set of [energies from space] described as [unknown type] which are now getting the supporting aspect/attribute set of [drug] which in its turn is supported by [of high effectiveness], and [high efficacy]. In both of these cases the supporting sets show that [great/large/huge amounts], presumably of the [drug] will be either [produced] or [needed]. The relationship between the [drug] and the [unknown energies from space] is unclear. There are no direct [disease] links, nor are there any other [threatening] forms of linguistics, however the [drug of high efficacy] is very clear. Other supporting sets for [drug] include [light/photons/photonic], and [Sirius] as in the star cluster, and [female personality]. At the next level down the supporting sets include [great/large production (of) light] and [drug(s) for releasing life-energy/chi/prana]. Sub sets of the supporting layers point to [impact (of/on) artists], as well as [creative/creation wave affects/impacts mathematic shores]. This last is a bit vague, but the descriptor set for [mathematics] goes all the way back to the original Greek meaning stemming from [matheology], and as such can be taken as a loose proxy for [all sciences/engineering].

All of these areas are under the [twin] aspect in support of the [unknown energies from space]. We note that [twin] does *not* mean to 'double', but rather to [duplicate]. So a doubling of [energies from space] is not the same linguistically as a [twin] condition for [energies from space].

The modelspace is indicating via accrual patterns and cross link formation that SpaceGoatFarts will become a very important part of the [manifesting changes] of 2008 and beyond. The data is actually

pointing for yet [more visible] [unknown energies from space] to emerge in late November as the next release period gets underway. The patterns are showing that even [officialdom] in the form of [nasa/nsa/military] will be forced into [acknowledgement] this Winter and beyond. The data is pointing toward [undeniable/irrefutable evidence] as creating a [crises] within the [nasa/nsa/military] which will become [visible] in Winter, and [prominent] in Spring.

As is evident by the sudden brightening of the comet [17P/Holmes](#), there are yet many things of [unknown] descriptors awaiting humans in space. The accrual patterns are also pointing toward an [magnification] of such [unknown] manifestations such that [officialdom] begins to wear [concerned faces] when the [unknown energies from space] is broached as a subject in [visible] conferences.

Further the SpaceGoatFart entity is forecasting that the early part of the next year (2008) will bring with it an [aggression] related [space/lunar] incident. This incident will be [reported], but probably will *not* be initially believed. Rather the data is suggesting that it will be the [chinese officialdom] who bring the [facts] out during some [discussions] which will stem from the [emerging changes (in) near earth space]. The accretion patterns are such that we expect the SpaceGoatFart memes of [energies from space] to manifest all next year, as well as to participate, perhaps even trigger, episodes of [secrets revealed].

The single largest surprise of the run so far has been the sheer mass of [luna/moon] accretion within both the SpaceGoatFart entity and the Terra entity. Apparently both entities will be [manifesting] large [moon] memes, this year...obscure vocal pun intended.

Terra - Fire Below, Oceans Sneeze

As the first of the Terra data is processed, and bearing in mind that this is the largest of all the entities consistently, and is so large it takes several weeks to process in its entirety, we note that the early data sets are coming in with some very long term lexical structures associated with specific fields within our multi-dimensional array of linguistic tags for emotional values. Specifically we have data accruing within an 8/eight to 11/eleven month range within the "duration" and the "intensity" fields within our emotional 'tonality' array which is linked to each of the words found in a context (see [BaseKnowledge](#) article). These nearly year long values are held by the [antarctica] aspect/attribute set, and bring along the forecast of [transformation] which is supported by [fire/heat/energy]. Sooooo.... the interpretation *could* run toward [antarctica (is) transformed by fire/heat/energy over the coming 8/eight to 11/months].

Remember that the ALTA reports have a 'northern hemisphere centric view', and as such it will be our [winter], but the forecast for [antarctica], at least according to the Terra entity, is for just a 'hell of a Summer'. There are specific aspect/attribute sets for [fire from below/volcanic activity], as well as bespoke [bad omen (for) people/animals]. PLEASE NOTE: we pay particular attention to aspects which include either bespoke emotions, body part references, or generics terms for life - as these are all reaching down to very core human archetypes}. We have *never* encountered any supporting sub sets for [bad omen] which included generic life references as in [plants/animals/humans] as we have now. This is probably *not* a good sign at all, and it will bear watching over these next 8/eight months. While the data shows the extent out to 11/eleven months, the indications are for the [threats] to be most probable within the earlier component of the range, i.e. 8/eight months.

Within the [antarctic] set, the details of the supporting aspect/attributes presents some curious lexical pictures. We find that there is a forecast for a [trap] or a [situation, drawing (unknown) into, hopeless]. This last can be translated as [being drawn into a hopeless situation]. This is reinforced with support by references to a [woman] who is a [look-out/reconnaissance] and is described as [waiting] apparently

forever, [crushed] on a [large, hidden wall]. This [woman] is also described as a [lead] for the [party at risk, lost, in peril]. The data has these details at the very far end of the range, and therefore we have no 'ending state' data for this situation. We do note that it will be [visible], at some point within the 11/eleven months, but the level of [visibility] sums are such that this may be only the very early part of what could be a long story within global mediastream.

While the set up of the [discovery of the large hidden wall] will apparently [draw in] the [at risk archeological party], there are other lexical sets pointing toward a [transformation by fire] of the [antarctic continent]. This [transformation] does participate within the larger meta data layer of [transformation] which is rising to dominance within the populace entities. The [by fire] component of support is a very broadly based context which is extensively linked over to SpaceGoatFarts, as well as internally within Terra entity back to [space] based lexical sets. The [by fire] component *does have* specific references to [underground heat] as well as [off shore volcanoes], however it is, via the cross links, also bringing in the lexical structure for [energies from space].

Within the [energies from space] aspect/attribute set there are returning cross links to the [antarctica] sub set of the Terra entity. These terminate in aspect/attribute sets of [structures/towers/buildings crushed/broken] and [water contaminated]. Both of these areas are extensively cross linked back over to the Populace/USofA entity where they are terminating in [bankruptcy], and [poverty]. In these area the supporting aspect/attributes are suggesting that as the [buildings break (in) half (from) energies from space] the [populace/usofa] will be [too poor] to [affect/repair] the [situation].

The Terra entity, moving along with modelspace into 2008, is forecasting a [sneezing episode/event] within the [oceans] which will [catch] the unaware by [surprise]. This [event] will take some time to [digest] into the [populace perception], but when it does it seemingly forms the [foundation] for the FuturePop entity to begin to manifest...though we note that manifestation is showing for late in 2008, after the 'destiny turn'. However, early in 2008, and through the impacts felt the rest of the year from the [oceans sneezing], the [populace, global] is seen as being [fractured] into [divergent] behavior movements. At least some of the initial reactions to the [oceans sneezing] will cause a very large increase in [radical youth] focusing on [environmental disaster]. The data does show that *some* small part of the [radical youth] will [surrender] to [frustration] and this will cause an increase in [environmental warfare/attacks]. However, the larger mass of the [radicalized youth] will be [drawn off/siphoned] into [slowly] emerging [collectives] around the new context of the [next peoples]. These are to be the seed of the FuturePop which will begin [expressing and emerging] in early 2008, and will be fully [manifest] by years' end.

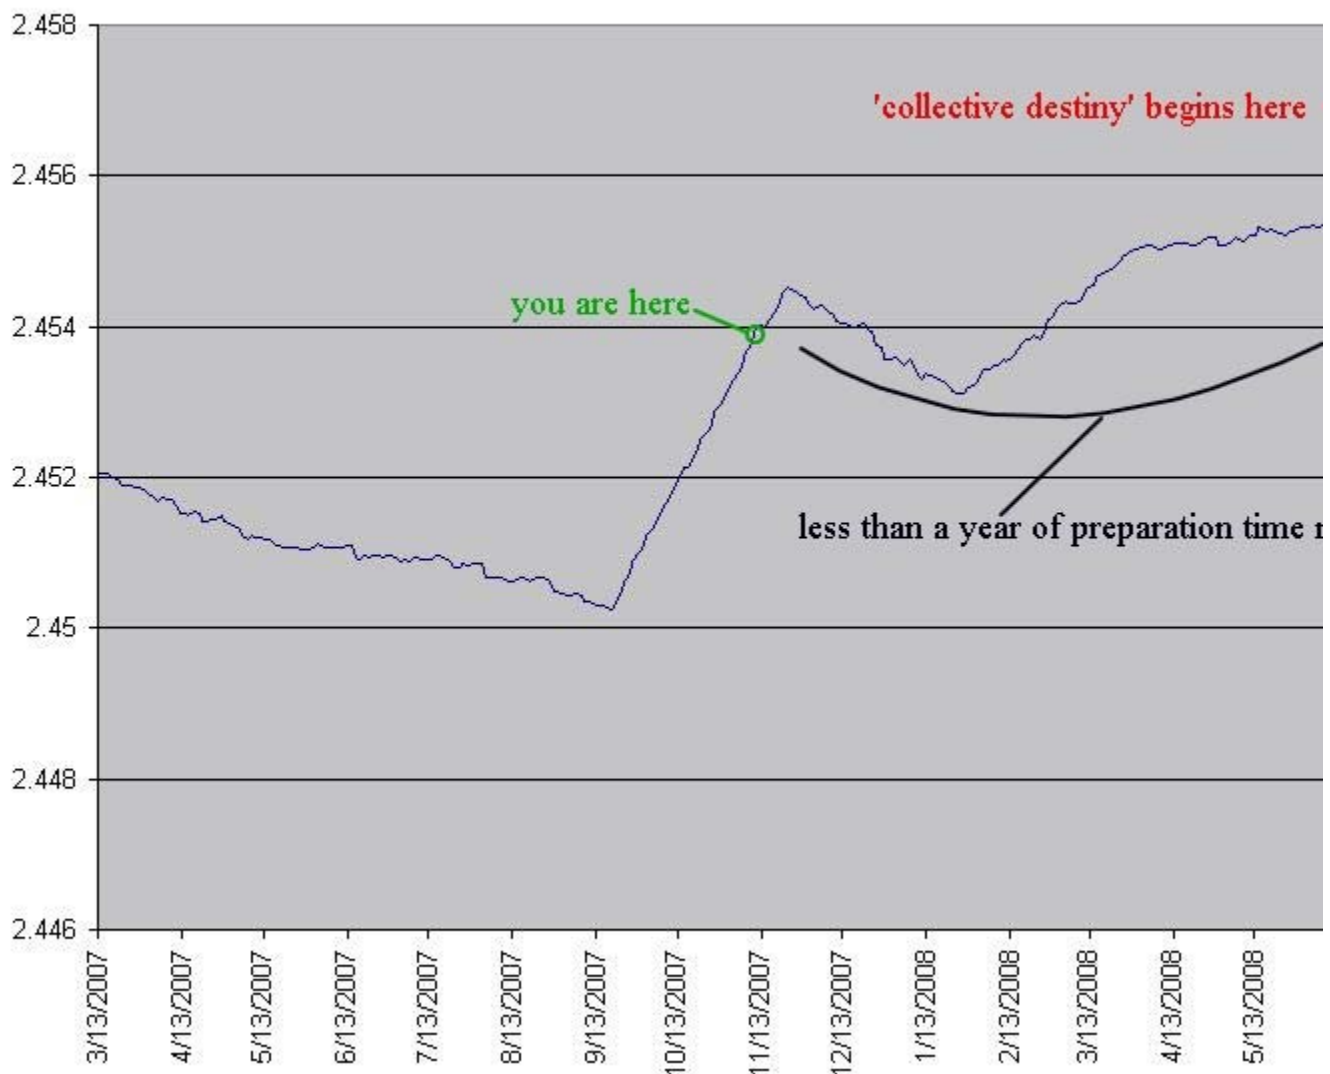

A large section of supporting aspect/attributes for the [oceans sneezing fit] meme go to the idea of [inexplicable/unknown] and [climate pattern changes]. There are other supporting sets, perhaps as much as a third of the total mass of support for the [oceans sneeze] aspect/attribute set, which go to the idea of [playful] and [deceptive] in support of [electrical phenomena]. The idea coming across is that the [global populace] will be impacted by [unknown electrical effects] which will [play havoc] with the [electronic infrastructure]. This area is cross linked extensively to the SpaceGoatFart entity, where many of the links are terminating in [moon/luna] aspects.

Conclusion: Part Two - One hand for yourself, one for the pie

According to our data, we, that is the humans, have less than a year to prepare. The 'what' to prepare for is a bit vague at the moment, but it is out there, and our data is clearly pointing toward October 5 to 8 as its 'arrival date'.

Getting there wont be easy. That is to say that this next 'less than a year' will be very chaotic, and event filled. The change manifesting will be significant, at very deep core levels within human organizations. These changes will be traumatic and emotion filled/producing. Then, those 'lucky' enough to have made through this year of [manifesting transformation] will arrive, along with space/time at our [collective destiny].

Long Term Emotional Trends

Current reports are that it was the US Air Force which bombed a suspected nuk'lar site in Syria. Further there are signs that the upper echelons of the ruling elite within the Anglo-American empire are insane, and getting worse by the day. Both are very unsettling signs, and good indicators as to just 'why' we are in a period of building emotional tensions. These, and the dollar death, derivative poof-out, and small problems such as the Bush wars of aggression against 'methods and tactics', e.g. 'terror', as well as the increasing cognitive dissonance of life-here-in-usafa where the media refuse to acknowledge *any* of the real issues, nor reveal any facts, will all pressure this next year with many opportunities to [divert energies]. And this will *not* further plans for preparations.

We will concentrate much of the longer term processing left in this series toward ascertaining just *what* language can be used to describe our 'collective destiny hit' that seemingly is rolling downhill at us from October 5-8 of 2008. What we can derive in the way of meaning will remain with universe, however the effort is worth it if even only hints are currently fore-see-able.

Several years ago we were able to 'label' the years ahead. We had picked, with the help of Igor's paranoia, the labels of 'pivotal' for 2006, and 'emergent' for 2007, and 'manifesting' for 2008. These are seemingly appropriate given the emotional tonality as viewed from this 'now'. So, as the longer term values are beginning to be processed, we are now able to label 2009. It does not show it on the chart above, but as all of 2009 *appears at this point* to be spent in a 'release language state' with only 3/three very small building periods of less than a few weeks each, we are labeling the year as 'abymal'...with more than 1/one meaning implied.

But, in order to make it to 'abysmal', we have to progress through 'manifesting'. The data is slapping us in the face with how hard that goal will be to accomplish.

Long term....floods come. Time to learn to float. Remember... it is one hand for yourself, and one hand for the pie....the ship can take care of itself.

Light pies...of all kinds are indicated.

###

Longer term values processing underway. We anticipate posting Part Three by Monday, November 12, which will be smack in the middle of the release bubble.

ALTA 0708 - Part Three

Asymmetric Language Trend Analysis Intelligence Report
'Changes in language precede changes in behavior.'
By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based

on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

11.10.2007

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in *[italicized bold green](#)*, and [red](#) when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 33.58 million reads of the 0708 series.

Meta Arts - Language Power, Importance of SGF, Perceptive Change, Too Late For ...?, Confluence

Language has power way beyond what our current understanding provides. The limits of the language power extend out the edges of the language itself. Don't have a word for "THAT", well, perhaps then you won't be able to accurately recall THAT, or refer to THAT, or even to describe THAT. This is seemingly proven true with language differences between human groups, as in the case of the [Pirahã tribe](#).... so how far does this concept extend if humans are faced with an extra-terrestrial language? Probably much further than our understanding at this point.

It is precisely to this point that the SpaceGoatFart (SGF) entity was created. The idea, obviously originating from years of head being buried in computer code of all kinds, was to have a 'place holder' linguistic set for those items that we know we will *not* have words nor concepts within current understanding. In other words, since we can be assured that there are huge amounts of 'things' out there in space that all share the same component of *not* being understood by humans, it occurred that it would be necessary to have a variable set of linguistic structures for such 'unknown components of universe', as they were bound to turn up. Indeed, we actually were able to extract a large number of contexts from the Terra entity just by searching at the level of [official denial] as an attribute. These as well as all [unknown] attribute associated sets were placed into SpaceGoatFart entity.

Judging by the example provided by the Piraha tribe, such abundance of caution in creating an [unknown] bucket in our 'language' makes sense. We may not know what it is, nor much about it, but at least with SpaceGoatFarts there will be a repository for the 'it' under discussion. As a case in point we have had our [unknown energies from space] aspect/attribute set within SpaceGoatFarts for a number of months. This is now a very active set, and is growing with each data gathering sequence. These days we have the new inputs from the comet 17P/Holmes and its obvious, but [unknown] behavior. Such as this and more are/were forecast by SpaceGoatFarts entity. In this, and hopefully future instances, the SpaceGoatFarts entity has risen to the task. We may not know much more than 'it' being [unknown], but at least we recognize 'it' as existent and emergent.

Language has power. At all kinds of usually not perceived levels. It has the power to reveal, as well as obscure, and as noted, it has the power to blind by absence the ability to perceive huge chunks of universe. So we smugly think ourselves 1/one-up on the Piraha, and perhaps even prepared a bit. We may not know what the fluck it is, but at least we have a word ready for it when the nasty shows itself;

SpaceGoatFart.

Thereafter, all is merely a matter of sorting out the details.

The current global [corporate] mediastream campaign of [green] images and support of the [global warming] meme is a direct outgrowth of the [perception/mind_set change] that we had forecast to appear by end of Summer, actually by September 19th. There is a clear attempt by the [corporate masters/princes] to maintain the [illusions] of [control] via redirecting the rising [anxiety/concern/worry] about the [emerging planetary climate changes] into their pre-designed control mechanism of [global warming]. Our data sets are showing that some success is being made by the campaign, especially in the [indoctrination] of [children], and the [unaware observer]. In these cases there are developing pointers to 2/two major memes: the first is a form of 'political correctness' or 'censorship' which is developing around the [global warming/green_meme]; the second is that a [countering/opposing wave] of [energies from space] will apparently have a very [profound] impact on the whole [global warming] meme in the not too distant future. This [arrival] of [energies from space(goatfarts)] is suggested, by the accretion patterns, to derail the [global warming] meme in such a manner as to [expose] the ThePowersThatBe entity to direct [confrontation]. This is appearing in the longer term data and looks to be pointing to a late Spring, or early Summer of 2008 [conflict] between [proffered/supported illusion] and [crashing waves] of reality.

The coming [change waves] of the near future are being felt. Not only in the far edge of radical linguistic insanity such as the ALTA reports, but also by the admittedly most 'sensitive' sub group of humans, the [artists]. Representative of a definite meme of [too late for that/time_is_short], we offer Daniel Pinchbeck's response to just this 'feeling'....tempus fugit. Just no time.

The turn on September 19th out of the release language period and into our current building tension language period had been predicted to take us into a time of nearly 75/seventy-five days in which the dominant factor would be [economics]. That seems accurate so far. Our initial levels had scaled up to over 60/sixty percent by the end of the ALTA 0508 series. It should be observable that most of the 'worry' stories on the global mediastream currently do have an [economic] base. This trend will continue into the November 11-13(inclusive) minor release bubble, and then will reach a [flood] meme level by the next turn into release period on November 22. It is likely very meaningful *(if the time were available to research it)* that a number of good sized astronomic alignments are on the schedule for late November and throughout December. It is also likely meaningful *(if we had a clue)* that the comet 17/P Holmes is showing off *just* at this point in time. Further, it is surely damn meaningful that a number of [space] related phenomena are currently rising to the top of discussions within the global mediastream...including the whole [contact] meme.

Yep, right on schedule, but we have just no time. The future is here now, and it don't like waiting on our whims.

Populace/USofA - Sick Pol's, Darkening

The Populace/USofA entity is accruing aspect/attribute sets in support of the [revolution] meme faster than any other sub sets. This is even faster than the bespoke [fear] sub set associated with [economic] and [housing] aspects. The accretion patterns suggest that the first of the [manifest revolution] to emerge will be [visible] within the upcoming [winter contests/primaries]. The data is suggesting that the [illness] of [several] of the [persons, first name on list, candidates] will [propel] the [scholar] forward. This is referencing the primary supporting aspect of [change] within the [revolution] meme as it is moved, along with modelspace, into [winter]. This is key as prior to [winter] the aspect is relatively benign in

the sense of having the primary support for it come from [same-old/more of predictable sameness]. The idea being that during 'building emotional tension' periods such as we are currently experiencing, the 'predictable' value sets advance, but in 'release language periods' the [obvious fails], that is, [unexpected change manifests]. Of course it is also true that [expected change] also manifests within release periods. And it is worth noting that the [primaries] within the [usofa political system, dominant duopoly] are to begin occurring within a release period.

The data sets are indicating that [political illness] will be [rampant] this [winter], and that [unexpectedly] the [female personality] will be [stepping off the box, to its side]. Further there are indications that [relaxation] comes to [many] who have [worked hard/busted butt], but now are [suddenly retired] by [manifest circumstance]. The data contains references to the [scholar] which may be indicating that R. Paul will advance rapidly. The actual linguistics are vague enough to apply to the personality type, rather than specifically demanding [credentials of scholarship]. However the most likely association at this point is to R. Paul. In any event, the aspect/attribute set specifically contains [sudden rise in social position/career] associated with a [scholar] who will be [readying (to take the) yoke/responsibilities/burden].

Within the supporting sets for the [scholar] are descriptors for [contentment_with_position/possessions/rank], as well as [good natured], and [recognizes dissipation], [avoids unhappiness]. There are also indicators that this person already is, or will very shortly become [vegetarian]. Or perhaps, has very tight connections emotionally to a [vegetarian]. Hmm...Kucinich?

As to the rest of the prez-wanna-be's, the data sets are not so promising. The indications from the patterns of accretions are that some of the candidates will be shortly, which is to say pre-primaries, be [visible] within the global mediastream in situations of [distractions] which will be viewed as [tokens/indicators] of [characterlessness].

As part of the movement of the Populace/USofA entity through the Winter, and the beginning of the political season, it become apparent that other aspects/attributes such as [life, shelter, food, family] will suck much of the [energies] that ThePowersThatBe would rather have going into the meaningless distraction of politics. The data set has the aspect/attribute set of [crippled/limping] rising with very strong trend lines concurrent with the [political shows]. This [limping/hobbling] aspect/attribute set applies directly to the larger view of [economics] within [ordinary life]. The aspect/attribute sets for [economic] are specifically *not* focused on any [paper debt instruments], but rather the much more 'real' world of [calories] in the form of [food] and [shelter] from the [cold]. The accretion patterns of the supporting aspects/attributes are pointing to [limping/hobbled] as being the [mind set/perception] of the [populace] at large, and further that this will not only feed the [paper debt debacle] with greatly reduced [consumer spending], but also will hugely impact the [political circus] of the [primaries]. Again, we must note that even at the very mundane level of [daily life] and the [economic impacts of dollar death as distraction from everything else], these aspect/attribute sets are in a direct line of support for the meta data level of [revolution] which is rising within the Populace/USofA entity.

As the Populace/USofA entity is progressed forward in modelspace over [winter] and toward the [spring equinox], the data sets have the [iraq war] context being dominated by [darkening/turning_dark]. The primary supporting aspect/attribute is [hopeless situation] and that aspect/attribute set is repeated at various levels within the totality of the context. The [hopeless situation] set is to be applied at several specific levels, including the macro view of the [aggressions] against the [populace], as well as within the [perceptions of the populace, usofa]. Further more the data sets indicate that by mid Winter, it will be clear that [hopes fade], and [strategies (are) broken] to the point that a [dark/overcast/morose] mood comes across the [populace/usofa]. This will be directly felt within the [presidential histrionics] both at the [candidate] level, and within the current [rulers]. In the case of the [candidates], new [evidence] of

[war fraud] will [weaken (the) field/rolls] and seemingly [remove] contenders.

The 'theme' that can be extracted from the data set is that of [to achieve, and yet gain nothing]. This is supported by data suggesting that [credit/banking/finance] will be directly impacted within the [usofa markets] by [failure] and [disruptions] in [iraq], making the already [horrific] market conditions of [winter] into a truly [historic catastrophe]. The extensive cross links to the Markets entity from the [iraq war] sub set of the Populace/USofA are so thick as to make the entire area of modelspace black. The cross links are terminating within the Markets entity in such a manner as to suggest that during the last [wails] of [release language] in [winter] will be the [screams] of [anguish] over the [bankruptcy] of the [american system] by the [corruption] of [petty people/politicians] *and* the [lost war] in Iraq. A very telling descriptor set found within the supporting cross links from Populace/USofA over to Bushista can easily be read as [first (he) raised himself to heaven/great_heights, then plunges (himself) into the deepest of hells]. Appropriate. And soon to manifest near the Spring equinox.

In exploring some of the supporting aspect/attribute sets of the cross linked Populace/USofA and Bushista entities, we note that *some* of the supporting sets appearing in late Winter *could* be interpreted as [gone berserk] in [visible media] in (front of) [populace], thereafter [police arrest] in order to [restrain rashness]. This is supported by [bully removed, gone, will not return]. Hmmm. Now what could that portend?

SpaceGoatFarts - Dark Distractions

There are a number of sub sets within the SpaceGoatFart entity suggesting, via cross links to the ThePowersThatBe entity, that some [dark/clouded/shrouded/hidden] sub group of the TPTB is currently [engineering] the [surfacing] of a large emotional context which we have labeled as [contact with space aliens]. This [contact] meme is very powerful, contains tens of thousands of descriptor sets, encompasses much of the language surfacing in science fiction, science fact, and consciousness speculation. There are also sub sets within this group which go to the [psychonauts/trans_media_travelers]. The mass of incoming data at this time has a tendency to overwhelm the detail level aspect/attributes in support of the meme, however we are able to pick out a few glimpses here and there.

The meme is showing that over the course of the November 22 through (inclusive) January 24th release period will have the [contact] meme reach a new high level in summation values for [impact], [duration], and [emotional intensity]. Further this meme is gathering extremely long term value faster than any other rapidly appearing sub set has in the past. It may be that the [pushing] of the meme by TPTB *at this time* is critical for their plans, and they are applying lots of effort to get a large emotional momentum now as they have [short days only] in which to accomplish their task.

We note that large numbers of cross links do go over to the populace entities and the Market entity, however the idea that the [contact] meme is/could_be used to 'drain energy' from the [dollar crash] does not seem to be supported. The accretion patterns are such that the data sets are growing independently of the [dollar death] meme, and while coincidental, and surely meaningful, the SpaceGoatFarts entity growth patterns suggest that some *other* reason is the proximate cause for TPTB to [unleash] their [energies] in this direction just now. Hmmm. Comets, perhaps?

Without regard to the 'why' of the 'why now' question, the data sets are painting a picture of [increasing exposure] of the [contact/visitation/ufo/space_alien] meme over the next few months to such a level that

it would seem to be a topic of daily work conversation. This section is still growing at a very rapid rate which impacts the interpretation, however the aspect/attributes include such as follows: [during flight], [long flight], [flight with (no) food/nourishment], [flight (for) 3/three long_days/unknown], [wings lowered], [speed lost], [no nourishment (in) long wanderings], [conscious desires], [destination known], [destination perceived], [host gossips (about) visitations].

There are supporting sub sets for the larger [contact] meme within SpaceGoatFarts which have a bleaker component to add to the picture. These include [bad fate] as well as [ambitious goal]. These 2/two sets are joined at almost all supporting levels by internal cross links. An unusual pattern of accretion within an entity. The data sets also have aspect/attributes for [friends] which is supported by [hardships] as well as [crazy/insane/acting_out]. There are references to [dark], and [darkening], as well as [gates], and [space] as well as [deep earth]. Other aspect/attributes in support go to [bully/hoorah/bon/good], as well as [domination], and [melange/mixing/mixed].

As noted there are a lot of cross links originating in the ThePowersThatBe entity. Some significant, and visible sub set of the cross links come from the bespoke [fear] sub set of TPTB entity. This area also houses like verbs for [fear] based emotions, and is the largest active set within TPTB. Apparently there are several, separate fears driving the TPTB into pushing the [contact] meme through their media filters. Many of these [fear] based sub sets have direct cross links over to the SpaceGoatFart entity as *their* points of origin. It would be possible to interpret the larger picture of the data towards the idea that TPTB are [prompted] to this action of [contact discussion] by some 'external events'.

The movement of modelspace points to late December, around the solstice plus a few days, so from the 22 through to the 25th as being a point in which more [visible] [clues/hints/evidence] will [emerge] for the aware observer. These [clues] are being forecast to [pre-say/presque_vu] the deeper [motivating/driving] factors for the 'why now' question.

GlobalPop - Dem Popes, Da Pops, Kids Evac'd, Pak Yak'd

The November 22 turn into release language will be accompanied by some significant level of potential for [manifest calamity]. Again, as we saw in the previous release bubble of Fall, the [fire] aspect/attribute set is prominently in the foreground. In this case the [fires] are seemingly [accident] caused. These [fires by accident] aspect/attribute sets are also supported by indicators of a [global accident] and further that the [disaster/calamity] will be in the [economic] realm. Or will impact the [global economy] as a side-effect of the [accident]. Hard to separate the 2/two linguistically. In either case the data is pointing toward a [shifting of states_of_being/status_quo] during this release period in such [visible] fashion that the global media stream is described as [shouting out] the [news]. Hmm. Probably not good. Especially if in Deutsche. Good technical language, but seriously harsh on the ears when received as [hysterical noises].

The data set accrual rates for GlobalPop and Populace/USofA entity suggest that the [calamity] of late Fall will be settling equally, at first, on the [shoulders of all, common burden]. However the [burden] of [collapsing weight] will soon [gravitate] toward the [usofa] sub set of the [global populace]. Again we note in passing that the Populace/USofA will be [leaping ahead] later in this decade in the creation of [new populace sub groupings] which are part of the FuturePop entity formation. This 'creation gap' between Populace/USofA and the larger set of GlobalPop is due to the [harshness] of the impacts of this pending Winter 2007/2008, and Spring 2008. The descriptive aspect/attribute sets for the relative difference in impacts goes to [revolution] support within Populace/USofA, and to the more mild sub set

of [continuing change rates] within GlobalPop.

Even the GlobalPop entity is seemingly participating, at least emotionally, within the [usofa political system, primaries], in that we have a rising aspect/attribute set within the GlobalPop entity for [decision] and this is supported as [watched from afar/distant], but nonetheless has very large [visible] summations within the [global mediastream sub set]. This aspect/attribute set of [decision] is appearing in numerous languages, and extends out the extreme range of the shorter term value set, thus pushes forward nearly 5/five months time. The language sets are indicating that over the course of this release period, which extends from November 22 through to January 24th, the progression will include a 'middle' in which [decision] will be very rapidly rising. During this time, the GlobalPop entity is also growing in several other, internally linked areas of support. These include [fellow travelers/like_minded_associations/self_organizing_collectives] which, at a [global level] will [desire/seek] to [influence] the [decisions]....most prominently, those of the [populace, usofa]. This will include [welcome friends]. However the indications are that most of the [energies/efforts] directed at the [decision] will be [lost] in the [competing events/circumstances] which will include [floods], [fires], [external forces/aggressions], and [internal (to usofa) traitors/treason/untrustworthy_behavior]. Please note that the [treason] context is very large with a deep range of shadings of meaning. So the possible range of manifesting circumstance which could fit the context description of [traitors/treason/untrustworthy_behavior] includes some 1100/one-thousand-one-hundred descriptors. Without regard to the degree of [treason/betrayal] involved, the modelspace is pointing to a period in which the [populace, usofa] sub set will be [self isolated] by internal events as well as [natural appearances/emerging problems]. And this at *just* the point in time when seemingly everyone on the planet has a stake in the [developing decision] of the [american populace].

As the release period progresses toward January 24th, and occupying perhaps the last third of the total time spanned, the modelspace has the GlobalPop entity attention being drawn to an [accident] involving the [sounds of a jet engine], as well as [populations] which will be [trapped] by [flood nets/flooding_of_interconnected_waterways], and [weather stressors] which will include [extra/beyond seasonal storms] which are also supported by [directly powerful/internally strong]. These are also cross linked back to [unknown energies from space] within the SpaceGoatFart entity. These storms, as a sub set of the supporting aspect/attributes describe it will be [glowing] with [releasing energies]. It is this [energies] aspect which centers the cross links between GlobalPop, SpaceGoatFarts, and Terra entities. While these [disturbing/distracting, extra powerful, out of season storms] are affecting the GlobalPop entity, there are indications that [progress] will be made in [small increments] in [passing conversations]. These [conversations] are apparently [within/among] a [newly forming/recent] [self organizing collective]. The [visibility] summations on this are low, but both [duration] and [intensity] values are high and rising, suggesting a long term impact after a [bursting] into [visibility] within global mediastream. These [self organizing collectives] will have a strong association with [rescue] and [helping neighbor] as well as [knife] and [freeing (trapped) from nets/encirclements].

Along with the continuing accrual of supporting aspect/attributes for the [dead power popes] {ed note: we keep getting these as plural "popes", and always augmented by [power/manipulation/enforcement]}, the data sets for the GlobalPop entity are now growing support under the aspect/attributes of [shifts], and [shocks] both relative to the [religion, organized/cabal] which is also described as [seeking dominance] over [populace].

In association with the [dead power popes], there are continuing accretions of supporting aspect/attributes which include [red] and [white], as well as [electric/shocking/disruptive]. There are growing in emotional summations in the [intensity] field, and while supporting the [dead power popes] are also cross linked to both Terra, and SpaceGoatFart entities. Also these aspect/attribute sets, by way of the [dead power popes] are in the supporting chain for the [death of religion] meme. If we examine

the [dead power popes] thread, and follow the cross links in the order encountered, then the interpretation takes on a slightly skin-crawling tone in that it *could* be read as [pope, and pope, and pope], ergo, [3/three] [popes] of [power systems] [shocking/electrically implode/die/disappear] during [high levels (of) unknown energies from space]. Further, the [popes] are described as [1/one white], [1/one red], and [1/one black]. In the instance of this last [black] descriptor set for the [pope], it also goes to [monarchy/elites] who will be [ending reign] soon...though apparently the [crown] is [ignorant] of how close the [end] of their time appears. Of course we note just how intense are the continuing to rise 'energies' surrounding comet 17/P Holmes.

In support to the [death of the red (power pope)], the active language structures are pointing to an actual, physical [electric jolt/shock] which will be associated with the [death]. Though [visible] within the global mediastream, the [death] will apparently be [overshadowed/covered by flood (of other visuals)]. This will not prevent the [eastern contingent] from [donning/wearing rebellious hats] even at risk of [inciting] the [elite/monarchists] who still remain and still have some [measure (of) power].

An adjunct thread of [secrets revealed] runs parallel to the [initial death], that of the [white pope]. The [red eyes/jealousy] of [others] within the [dead white pope's] organization are shown to be [visible] within the [grief videos] which the global mediastream will broadcast. Some of the [red eye] photo's are described as [generating heat] due to [revelations] which are [visible (in the) background]. According to the GlobalPop entity, the search should [center] on [numerals] which are described as [hidden (in) relief].

Along with the [floating/wafting death] meme for [power popes], there are indications of [pops/sudden_small_noises_or_movements] to occur within the [southern hemisphere] which will [affect/impact] the [peoples/tribes/groups] who [reside (at) giddy height]. The data suggests that the [pops] are to be [audible] and will be related to the [increase] in the [altitude] of the [already/previously very high]. The idea is of a series of [non-earthquake earth-movements] which result in the [ears popping] and [ringing] as a result of the [pressure changes]. The [pops] arise within the [3/three countries] which are shown as [tied together/inextricably_bound]. The area is indicated to [rise/increase_height] in a [visible] manner over the course of [summer]. Currently we are approaching the [solstice] which marks the shift into [summer] in the [southern hemisphere], and this point is indicated as the [time/position] of [initiation]. These [pops] are also supported by aspect/attributes going to [social change] and [emergent (personal/individual) power]. These supporting aspect/attributes are themselves supported by aspect/attributes going to [shedding (old) skin], and [manifestation (of) extraordinary effects/circumstances]. This supporting aspect/attribute set in its turn is extensively cross linked to SpaceGoatFarts, where we note the terminations frequently end up in [unknown manifestations (here on earth) from energies from space]. Part of the return links over to the GlobalPop entity bring up a disturbing image of the [unknown manifestations here on earth in the giddy heights of the southern hemisphere] being so [manifest/dominant] that [large groups/troops/trains] of [children] are [relocated] in an effort to [keep away] the [energies]. This whole area of GlobalPop is participating in the [conflict] meta data layer. Further there are sections which are directly in support of the rising [visible] summation of the [secrets revealed] meta data layer. The interpretation is for some [unknown] form of energetic manifestation which will *seemingly* be used as justification to [remove the children] from the area. It could resolve down to something mundane such as [xray bursts], but these would have to be of such a magnitude that wholesale, and bespoke [worry], [concern] and [fear] were produced in order to [remove the children]. An alternate interpretation could include a meteorite or other [space debris] which is energetic enough to shift the local populace from fear of [contamination]. The [contamination] aspect/attribute includes words such as [seizure], and [constriction (of the) throat]. Also the whole of this area is supported by [distrust] as the GlobalPop is progressed forward along with modelspace. The [distrust] aspect/attribute is suggesting that a large segment of the [affected populace] does *not* buy into [officialdom] and their [lies] about the situation. The data accretion values indicate that the

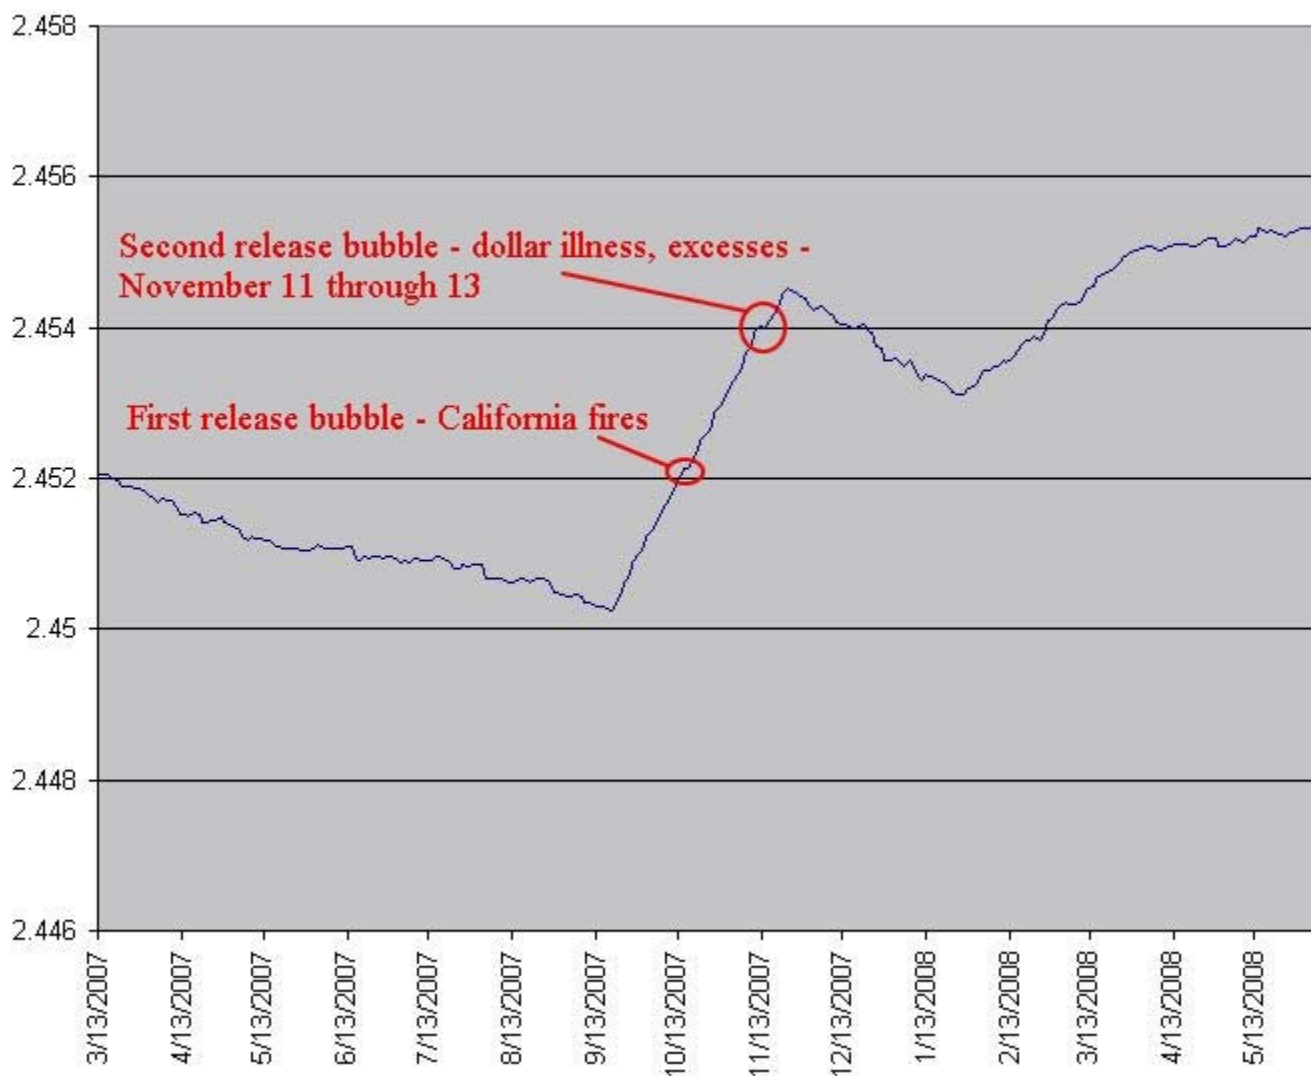

[duration] of the [crisis] stage of things lasts [5/five days].

As the modelspace is progressed forward through the last of Fall and past the Winter solstice, the data sets bring the [revolution] meme up to prominence in the [middle asia] region. This includes both [pakistan] and [burma/myanmar]. The central issue in both, though not likely to be reported as it has a low [visibility] summation, is [transportation]. This [transportation] meme includes the mundane [oil] and ranges out to include [smuggling] including [weapons] and [drugs]. In the supporting sets for [smuggling], the data sets are pointing toward a time in Winter, near the point of a [new moon], in which a [train] of [animals] with [handlers] and [cargo] will be [encountered] in the [very high hills] in the [north west] of Pakistan. This [cargo train] will be [intercepted] and a [3/three way melee] will start up between the [caravan] and [2/two] separate groups of [brigands]. In any case, the [fighting] will draw the [interest/attention] of both the [chinese military] and the [usofa military]. Both will respond, and [confusion] will result for a few days. Apparently, while this [incident around transportation] ensues, very important [revolution] events will be gaining [footholds/traction] along the far southern border. It is from the [south] that the [revolution] meme begins the [sweep] forward in [winter] which carries over into the [developing chaos] of [spring].

Markets - Deux Comes,Revolutions, Revolts, Screaming Memes

Beginning with the premise that the forecast [dollar near-death-experience] is manifestly underway, and taking into account the rising meta data level of [secrets revealed] which continue to point toward [bad news] from all quarters of the economy, then we need to note that November 11 through the 13th will be a 'release language bubble'. This is the second, and last of the release language bubbles within this building tension language period. See chart below.

Long Term Emotional Trends

Given the recent tension over the continuing losses in the USofA [markets], and given the postulate that ThePowersThatBe use 'diversion' events to redirect emotional waves away from their sensitive areas such as the [markets], the possibility exists for some [news] appearing on Sunday, the 11th to be diverting in nature and to take the focus off the [dollar] at the opening of the markets next week.

However, it needs to be noted that release language **can** and likely **will** be seen if the [losses] on the [markets] are large enough. In other words, the current degradation of the [indices] within the [usofa markets] are causing building tension language as the [populace] is aware of the [decay] within the [fundamentals], and indeed are living it, and therefore are operating under a cloud of [anxiety] and [worry], both building tension emotional sets. It can happen though that the same trend which produces the [anxiety] can also produce release language **if** the sell-off were to reach spectacular levels. This seems more likely following November 22, when the whole of the period is in release language. However, there could be a burst of spectacular selling over Monday/Tuesday, based on news out on Sunday. **If** so then the data is suggesting that things revert to building tension by Wednesday so the

interpretation is difficult to place in context with our manifesting market action.

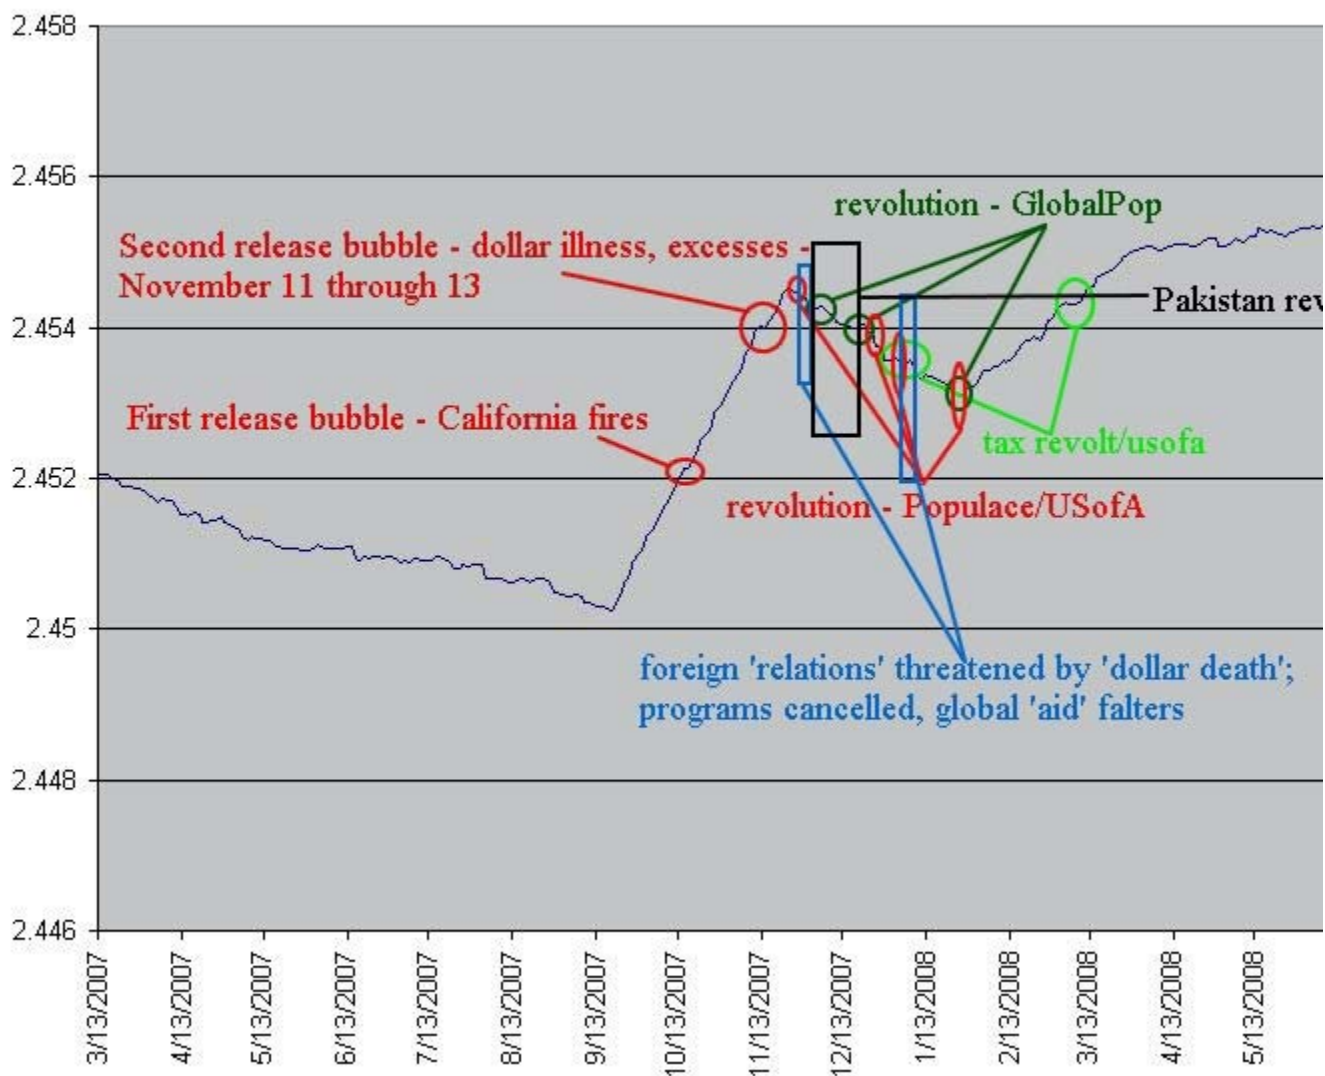

It would seem the more likely scenario is for some diversion of emotional energies to emerge in the news on Sunday, then the [markets] have a decent Monday/Tuesday, and back to the [drain/grind_down] by Wednesday. Such a scenario would also fit with the progression to a November 21/22 turn into a period in which the language around the [dollar death] escalates and becomes release language.

In other areas of the Markets entity, the data sets are accruing to the [brasil, south america]. The recent oil discoveries are showing as but a [single] instance of what will be termed [discovery/finding season]. The indications are that several other [strategic discoveries] will be announced over Winter. Some of these discoveries *will* involve a [trench] and the [clear view] to [antarctica]. They will not all be oil, but rather will be spread across [energy], [communications] {ed note: something new to do with space and the southern hemisphere}, [pharmaceuticals], and [philosophy]. Noting that the base context of [philosophy] is [love of wisdom/knowledge], this last seemingly has to do with a [novel form of information access/use]. It will involve [human well being/ability_to_thrive].

The developing [revolution] of the [south middle asia] GlobalPop entity is extensively linked to Markets entity, and at the juncture of the main body of links, the [dollar death] meme takes on a far greater level of supporting aspect/attributes which point to both an exacerbation of the [death of dollar] by the [unstable revolutionary wave] as well as the [dollar death] providing [lubrication] for the [rising revolutions].

Additional support for the [revolution] meme comes from data sets around the idea of a [payment/tax strike/revolt] here in the USofA. This is a late [winter] meme that comes on the scene *after* the next round of [war threats] from the Bushistas. The idea is coming across of a [conjunction/melding] of several [revolutionary movements] which [combine] to promote a [tax revolt]. The goals of the [revolt] are seemingly [diverse], but nonetheless, the [emotional response] is such as to [frighten/scare officialdom]. Thereafter the [oppression] meme discussed in previous sections of this ALTA series begins its manifestation as [officialdom] reacts in both [haste] and [ill-considered/without_thought] ways.

Long Term Emotional Trends

As a direct, and continuing impact of the [revolution] meme on the [political] classes of humans around the world, the Markets entity is forecasting that the [markets] will [devour/destroy] themselves globally in what is described as the [last frenzy] which will seemingly involve [currency trading]. This [final feasting] has very high levels of [visibility] and will occupy some [5/five days] of global mediastream coverage. Given the accretion patterns it appears that this [frenzy] will bring a close to the Winter release language period near the very end of January, 2008. The data is unclear, given the granularity, but it appears that the [feasting (on) bone marrow] will occur within a day or so of the January 24th turn into building tension.

The data sets are very clear now that the [decoupling/separation] of the [gold] and [silver] emotional contexts *has* occurred. It may be expected that [silver], relative to the [dollar denominated price of gold] will move in increasingly independent [arcs/tracks]. The data seems to be suggesting that by the end of this coming January, that [silver] will be well on its way *[back/returning] to [historical means].

It is also clear that the [dollar near death experience] has shifted into the [death of the dollar] meme.

There are *NO* data accretion points nor patterns which offer any hope of the [dollar] surviving through 2008. The indications are for [massive/planetary] [social consequences] to this change, and the [momentum/moment_of_torque] appears to have been reached such that the [dollar] cannot be [resurrected]. The cross links to the Press entity indicate that a [large/huge] amount of [visible] [screaming] will be on the global mediastream as the unaware participants in the [dollar demise] are taken by surprise over these next 2/two months *even* though all the patterns are already emerging. Apparently the [ignorant common person] will have to [wait] for the [death] of the [dollar] to be [manifest] before [wailing/screaming] of the [injustice] of it all.

Press - Bitten bites back

The release bubble of November 11th through the 13th, while it will include [economics] as a core issue, is also going to be very [afflictive/inflicting] for the [press/media]. The data for the Press entity shows that this release bubble will set up a meme which will run as a continuing thread through [public discourse] over the coming 11/eleven months. The data accretion patterns for the Press entity are suggesting that the [press/media] itself becomes the story, or significantly participates in the context of the release language of the 11th through the 13th. The rising aspect/attribute sets are supported on a large base of aspects for [communications]. This is directly supported by [finance] and [anger]. The bespoke [anger] component is pointing to a meme of [press done (me) wrong, (I) want revenge/justice] which will develop over these 3/three days. This is primarily a [populace/usofa] centered meme, but it will have some very serious consequences later at the [international] level.

This area participates in the continuing build of values around the [attacks on talking heads/press/teevee personalities] meme. This time will be particularly [distressing/hard] on the [propagandists] within the [usofa] centered mediastream. The data is predicting a number of [escalations] of the [attack meme] will manifest in Winter. These [attacks] are developing into a split in terms of they will either fall into the [humiliation/degradation] aspect/attribute set, or will be [very vicious] in nature. These [vicious attacks] will have a temporal marker for the [escalation] when it is reported that a [face person/anchor/media_personality] is [bitten] in public, and most likely is [face scarred] by the attack. The [scarring] is less described, but the [attack] seems to develop from [anger] over [lies] which [cost lives/money], and the [sharp, dirty, teeth] of the [victim (of the) press] are used to [extract revenge] in the form of [bitten off body parts]. It is this [visible] incident which seemingly ignites a time of 'open season' on teevee personalities.

The whole of the Press entity is being driven upwards in emotional tension values by the rising aspect/attribute set of [great vigor/big_force]. This sub set has a bespoke [evil] component, and curiously that sub set is cross linked back to ThePowersThatBe entity. Beyond those links the [evil] component is interesting linguistically as it is a circuitous reference wherein it has internal cross links back to itself. The idea coming across is that the [evil] component driving the [press] is about to be [self-feeding/consuming]. This interpretation is augmented by the external cross links to the populace entities where the termination points include [grass roots/massing_from_below/lower_classes], and [large/great/huge] all of which are also supporting [internal vigor]. And it needs to be noted that the meta data layers of [secrets revealed] and [conflict] are both vertical in the Press entity.

The Press entity is suggesting that a [continuation/revisit] will [bring bad luck back]. This will be [unavoidable] and will surface to [visibility] over the November 11 through 13th release bubble. Thereafter the meme will resurface in late November, around the 24th. This [revisit] is centered on cross links to Markets entity and focuses on [money], and [dissipation]. It is this area which brings the [self feeding] references into play within the Press entity relative to the TPTB entity. As the modelspace is moved forward through the rest of November, the clear indications are that the TPTB, and the Press entities are forecasting a [failure] to [accomplish the goals]. The idea coming across is that [too

little/less_than_required] [energies/resources] are available. Further the meta data accretion patterns suggest that the TPTB entity is *not* aware of some of the [cycles ending] now which are shown as [rip_rap/deflectors] in the [event stream].

Conclusion - Part Three - Emitters Open...

Recalling the introduction of this report in which it is established that "'if humans don't have a word for it, they can't conceive it", it becomes increasingly obvious over time that words/language not only have power, basically, language is power/energy in this universe. This basic concept explains why ThePowersThatBe are so intent on controlling language via the 'political correctness' movement/meme. And a few of the deeper turns of that particular rabbit hole.

What is not instantly obvious is the depth that this meme of 'language = energy/power' has in universe. Consider that DNA *is* language. We note that even the more unaware of scientists are actually opening their minds to the idea that DNA is an exquisite encoding of language, even if most of the idiots *still* persist in thinking that the concept of 'junk dna' is valid. The aware observer notes that universe does *not* produce 'junk' anywhere, and that 'junk' as a concept applied to our DNA is yet again a manifestation of the premise that "if'n you ain't got a word for it, you *will* misunderstand it".

Noting that time is frequently described as being fractal in nature, we also see this same concept applying to 'life, universe, and everything'. This is also true of the [language] of DNA. The layers of meaning are beyond our comprehension, including that of our brightest scientists. We can state this categorically because the molecular biologist community is still labeling parts of our DNA as junk. Why? When asked, they will ultimately respond that the word junk is applied to the DNA simply because *we humans* don't understand what it does. So beware of labels, especially from so-called experts, as their words *can* and do blind us to potentials within this reality.

Early in our work we tumbled to the concept of "we don't got more than a bare clue as to what the hell we are doing", and so being old and having some wisdom we decided that 'variables' or 'place holders' for 'what we know that we do not know' would be a good thing. This has evolved over the years to the SpaceGoatFart entity. The decision years ago to model the [unknown] with a [blanket label] is proving its worth daily. The SpaceGoatFarts entity is increasing in size relative to the other entities at a pace faster than all other entities excepting the largest, the Terra entity. We are certainly jutnobs here at HPH, but even so there is a real risk that we are correct in our conclusion that the growth rates of the SpaceGoatFarts entity *ARE* really damn meaningful, and that the [visibility] of the whole entity will surprise all of us, even the aware observer, before the end of next Summer/2008.

Given the data growth patterns it is our conclusion that the SpaceGoats in the vicinity of planet earth, and the humans have just opened their emitters, and [spacegoatfarts] are on their way. The aware observer will take steps to position themselves for their level of participation in the confluence of great stinks that we call the 'future'. Breathe deep now, while you can.

####

Absent abduction by space aliens, or other universe intrusions, we expect to post Part Four on Sunday, the 18th.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 47.771 million reads of the 0708 series.

Populace/USofA - Cresting Waves, Confusion, New War(s), Failure, Revolution, Calamity

As the modelspace is moved forward into Winter, that is explicitly past the December solstice (20-23), the Populace/USofA entity is forecasting some [paper problems] for some of the [presidential candidates]. The accruing aspect/attribute sets are bringing in descriptors such as [standing, watching, near shore]. This is in support of [young, successful]. There are other aspects pointing to the [2/two children] amongst the [group]. Within this area are supporting aspects which include [coins/wealth], and [favors]. The interpretation for this set can take a number of divergent paths. Among the more obvious interpretations, and taking into account the depth of the supporting layers, would go to an [attempt] to [taint] the [2/two children] with [coins/wealth] and [favors]. Hmmm. Bribes? Kickbacks? The idea coming across is that the [attempt] to [taint] will be based on [facts], just not necessarily as the are [delivered]. Further [nefarious] related aspects include [attempts/efforts] to [distract] from a [prosperous

life/flow/river] with [no/none/negative beginning]. This would seem to point to a [river of wealth with no (legitimate) source]. Not indicating [bribes] for this [candidate], but rather very serious [questions] which will [go begging] for answers. This [attitude] of [elite/imperialism] will *not* sit well with the [electorate], and the process will produce [grand upsets].

At a lower level within the aspect/attributes supporting the context of the [presidential primaries] the Populace/USofA entity is presenting a picture of [perfect balance] for [2/two or more, multiples, part_of_group]. This is *not* good as when [perfect balance] is [achieved], the data is quite clear that any [change/disturbance/alteration] will [produce/lead] to [disequilibrium] which in its turn leads to [disorder/confusion]. This [disorder] aspect rises in prominence as the modelspace is moved across the [winter] and into [spring] of 2008. The point of maximum value in the summations for [visibility] is reached in late February. Just as the [disorder/discord] reaches its height of [visibility], the meme will [interact] or [participate] in [disaster] relative to [used words/speech]. In other words the data set is suggesting that a very serious candidate, in [balance] now, will suffer a series of [reversals] within [manifest circumstance] over Winter to the point that as Spring nears, the candidate, deep in [disorder] will [compound/multiply] the [problem] within a [single speech] which pretty much finishes their campaign on the spot. This does *not* appear to be a description for a concession speech, but rather [misused words] which result from a [risky strategy] that is brought forward due to the [confusion/disorder] currently manifesting. This [confusion/disorder] aspect/attribute set is pointing to the manifesting circumstances out-and-about on the planet, not merely within the [candidates campaign]. The idea is that circumstances out in the world, and a formerly balanced campaign now [visibly] going bad/stinking, results in a speech about those circumstances that is just *waaaayyyy* wrong such that the end of the speech is the end of the real campaign, and shutting down the organization is mere formality.

The details scattered within the large sub set of Populace/USofA which is the [presidential politics] area include explicit references to the [woman] involved in the [primaries] as [suffering (the) loss (of her) privacy] such that when the [curtains (are) blown open, bad luck/perception] will result. This will be the result of some [merger] of [companies] in that [winds] of [disclosure] set loose by this [big company] will [blow away/disturb] the [curtain (of) privacy/hidden] for the [woman]. Hmm. Will this relate to the [unauditable] meeting the [death of dollar]? The strength of this meme seemingly is directed toward H. Clinton. IF that is an accurate association between the data set and reality, *then* the predication is for [dishonesty] to be the driving meme impacting this campaign all through the Winter at least until the end of the first week in February. Other supporting aspect/attribute sets go to [upset/overturning/revolution], as well as [finishing] though this last aspect is rising late in January.

Also within the general supporting sub set of the Populace/USofA, [primaries], there are detail descriptor sets pointing to [poverty], and [riches (turning/reverting to) rags], as well as thousand of detail aspect/attributes for [poverty] context. The idea coming across is that the [primaries] will be occurring *just* as the [poverty wave] [crests/breaks] upon the USofA shore. The [dollar woes/death] and [overt mental depression] of the [populace] will [drive/influence] the [primaries] in that the data sets are pointing to *only* this wave of [crushing debt] as being able to [find resonance]. This sub set in its turn has cross links internally back to the [finish] of the [formerly balanced campaign]. The implication from the details is that the [campaign claims shirt-back/poor past], but this [fails] in the eyes of the [populace] who can only see the [glittering finery] reflecting [false humility].

As to the [primaries] in general, the aspects are pointing to a [person of literature] who is also a [brave individual] as [completing/succeeding]. This person of [letters/reading], has [suffered] {ed note: obviously *not* H. Clinton}, a [very long time/years]. The data sets are indicating that [hardships] will [bind] this [person] to the [populace] as [blood to blood], such that [small coins] will [produce a favorable decision]. The data clearly states within the supporting aspect/attribute base and cross links

that the [decision] will be [anathema/bad_thought] to the ThePowersThatBe. This will further be [magnified] by [external circumstances] such that the aware observer *should* be able to see the [waves of harmony] in action as [mouths spit bile], and the [populace smiles]. Hmmmm. Now that don't sound too bad....but wait, what is that on the horizon?

Within the immediacy value sets are indications that the [labor actions], at least the [writer strike] will end shortly after the turn into the next release period on the 22 of November. Thereafter the [labor actions] meme will continue to [float] from group to group as the [economic pressures] created by the [dollar woes] grow. It will be the underlying [dishonesty] and the associations with the [unauditable] which surface in Winter that pave the way for [labor riots] and [violent protests] in Spring and Summer.

The Populace/USofA is *only* at the very low end of the bespoke [anger] state. That is to say that all of the [economic pain] to date has resulted in the descriptor set for anger rising in the aggregate to about [mild]. As Winter progresses, the continuing [economic pressures] will rise, and the aware observer will be able to detect the [spillage] of the as-yet [unfocused] [anger]. Again, at this stage the Populace/USofA entity is describing the [anger] as [collectively barely consciously appreciated/acknowledged]. The movement of the modelspace indicates that by Spring, the bespoke [anger] will be pretty much out in the forefront, and [undeniable].

Along with the [economic pain], there are indications that the [anger] component will seriously scale up around the [iraq war(s)] from shortly after the initiation of this next release period....say in very early December. The plurality applied to war(s) relative to Iraq has to do with [iraq] having become the center of several, discrete, and distinct wars. These include the obvious, [war in iraq] between the Bushista's and the Iraqi people, as well as the several non-obvious sub [wars] being waged in that country, *and* the [war] in the USofA over the [political power] associated with [iraq war]. We need to note that this last area, that is [war over the iraq war within the usofa], *as* a context, has changed over these last weeks of processing and now is about to [split/multiply]. New [combatants] will be rising within the [usofa] as [opponents] of [war]. This is the [iraq war] in particular, but also these [partisans] will be [against war] as an [economic policy].

Part of the problems for the [american populace] relative to their [anger] quotient over the [iraq war] will be a [demonstrable madness] on the part of the Bushista's which will [grow] over most of [winter]. Bush is shown as being [increasingly detached/removed] and will be [eating/consuming] his [own propaganda] such that he will come to believe himself to be a [great military strategist]. This will [crash] in mid [february] as the 'reasons' for the [quiescence] within the [battlefronts] of [winter] become manifest. These [reasons] include a [strategic] change in the [plots] within the sub wars within [iraq]. These [minor struggles] are showing as now [creating new alliances] which will [surface] in February, near the 14th. The aspect of [surface] has [water], [underwater/submarine]. Please note the [submarine] reference is not referring to a 'boat under the water', but rather to the latin of 'sub marine', meaning 'under water'.

The data sets are painting a picture of a [brutal spring] for the [populace/USofA]. Not only the [anger] rising at their own [elite rulers/political classes], but also the [shock] of [engineered/planned attacks] against [usofa interests] both internal within the country and external on [other battlefields]. Noting as always that our data tends to concentrate negative impressions and therefore err on the extreme side of the language, it is still within the potential of the times that just following the [spring equinox], the [populace/usofa] will be [plunged/thrown] into [real war/new war] which will last until late April, 2009.

The sub sets within the [new aggressions] in the [spring] are going to the [complicated] nature of the [developments]. There are indications that [military changes] on the ground in Iraq will affect the [populace/usofa] in late [summer], say from August and then through to October. The indications are for

a change in [perception] which induces a national [mood swing]. The complications arise within the data sets when the modelspace is progressed forward from Spring/2008 through Summer and right up to Fall. The movement of the Populace/USofA entity *could* be suggesting that the [attacks/distress/death/destruction] visited upon the [populace/usofa] as a direct result of the [bush follies/mistakes] will be [used] as a [trigger] to [ignite] the [usofa military] against [enemies]. There are indications that this will include [politicians] within the [populace/usofa]. Further there are indications that the [zionists] will be [participating] in the political [eruptions] of [spring], however we note that in the [terrible days] indicated to begin mid Fall for the [populace/usofa], that the [zionists] become the [prey] in a [bloody] and [national purge]. The body parts references as well as the repeated aspects/attributes for [severed limbs] and [bloody pools] indicate a not too pleasant time is had by all involved.

Much of the rise of the [confusion] aspect/attribute set within the [wars] sub set is coming from the Bushista entity, as though *either* the [confusion] surround the [new aggressions] is [engineered] by the Bushistas, or that they are the [victims] of the [confusion] caused by the [new aggressions]. There are Bushista cross links which indicate that the Bushistas will be [confused], and will also be [mired in mud] internally such that [hesitation], and [weaknesses] are able to be [exploited]. This will in its turn [deepen/enlarge] the [confusion] within the [populace]. It needs to be noted that the [confusion wave/rampage] which comes in [spring] will be the subject of a [public trial] and subsequent [act of **pillory**] against the Bushistas in [summer]. We note with sadness that as the Bushista entity shows that it is emerging from the [confusion], it gets [aggressive] and [mad/insane] and [stubborn]. The resultant effects will *not* be fully felt until November 2008, when the [failure] of the [response to confusion] on the part of the Bushistas will manifest as [calamity] for [pakistan], [britain], and [france]. The references to [britain/uk] are showing that the [subjects] will be the [suffering population], but in the end it seems that the data is pointing toward the [end of the reign of bush] being the [downfall of windsor]. Hmmm. Interesting. The data sets continue to accrue for [misfortune] and [calamity] for [windsor] and their [subjects/property] from early Summer onward, with very much increasing problems in the last 2/two months of 2008. It is these 60/sixty days of [perdition/trials] which put the [ruling elite] in that country at risk of [blood letting]. The references to [france] show that the [populace] will [cut/severe] their losses with the [removal] of the [heads of state]. Hmm....let us await to see if they employ the traditional French remedy to bad elite rulers.

Of course we need to note that the meta data layer of [revolution] is heavily involved with the Populace/USofA entity beginning in late January, around the 24th. The [revolution] meme is fed pretty continuously throughout 2008, and gets a huge boost beginning on October 5, 2008 which propels it to nearly April 2009 at continually rising levels with *no* plateau evident. The overall movement of the Populace/USofA entity within the modelspace *could* be interpreted as saying that it takes [bloody revolution] and [purging zionists] to [end] the [disastrous new war] that the Bushistas/Zionistas [inflict] on the [populace]. NOTE: we err on the extreme side of linguistics, usually, and frequently.

As regards to the [zionists], there are curious references to a [group/tribe] which exists now within the [populace], which will rise to prominence in late [summer] as the early [cries] for [revenge] against the [internal enemy] begin. This group is *now* defined as a [cult] by the [ruling elite] as it suits their purposes, but by [summer] this [tribe] will be [returned] to the [nation] on its [merits]. Then, the [tribe/group/cult] will become [instrumental/pivotal] in the [revealing] of the [history] of the [zionist] as a [populace/usofa enemy]. This drama then percolates over late [summer] and early [fall]. Then the meme surfaces with [visibility] in October and is [manifest] as [purge/hunt] in November, just as things are going to hell.

The [mood] of the [populace/usofa], so recently [changed] and [hesitatingly buoyant] in Summer, 2008, shifts with the [extreme emotional events] of Fall. Noting that our modelspace is *not* temporally

accurate this far out, we have a range of from October 5 though to November 16th of 2008 as the [initiation] period of the [extreme events]. These [extreme events] are supported by aspect/attribute sets going toward [stressful], [heart attacks/incidental deaths], [swooning], [bowel release/incontinence], [sorrow], [extreme difficulty]. ALSO NOTE: The cross links are bringing in a very high ratio of Terra entity contexts to this situation. The data sets are NOT specifically pointing toward [war] being the cause of the [problems/suffering/despair] which afflicts the [populace/usofa] at that time. There are very high potential value sets for Terra focused [natural disasters].

The [extreme events] are shown as continuing through at least February 2009. These [manifesting circumstances] have also aspect/attribute support as well as extensive cross links over to Bushista entity indicating that for those bushistas who [survive], the [exit] from [power] will be [inglorious]. Further the data sets are pointing to [thwarted], and [slinking], and [exit (in) difficulty] and [exit (in) failure]. The data sets are also supported by [rejections] for the [departing Bushistas] when they [offer] to [participate] in a [transition]. The idea is that the Bushistas will be told to [just go/leave] as there are real serious and [extreme circumstances] which must be [addressed].

SpaceGoatFarts - Manifest Transformation

As noted in the article [here](#), yet more [unknown space energies] are appearing. This is about a sort of reverse sink hole from earth to space which are called 'plasma tubes'. Again, at least we have a word for it, as we surely do not understand it.

Noting the previous discussion in this series about how [transformation] is [looming] as a meme, it is interesting that comet 17/P Holmes has appeared *just* during this last month in such a spectacular fashion. Before getting into the data associations for this comet, let us acknowledge that 17/P Holmes *is* a SpaceGoatFart. There are *no* current theories in accepted academic astronomy, or physics which account for the behavior of the comet, and as much of its behavior, indeed, even its very existence in the night time sky is [officially denied] or [ignored], the conclusion is that comet 17/P Holmes is the perfect example of a SpaceGoatFart, and is [visible] justification for maintaining the class of linguistic contexts within the SpaceGoatFart entity in an active state.

There are a few theories out and about which *seem* to be close to explaining the Holmes behavior, and the most promising is the 'continuous creation' model of universe described by P. [LaViolette](#), and this could be pointing to the [transformation] of Holmes the comet in to Holmes the planet.

The data sets within SpaceGoatFarts began referencing the appearance of [unknown energies from space] for Fall of 2007 as part of the 'year of emergence' several ALTA reports ago, near the end of last year (2006). Now, as the data sets include the longer term values which extend us out into 2008, we have the 'comet' Holmes appearing and behaving really really strangely, *just* as we are about to cross the [transformation] line into 2008, which we have previously labeled as the [year of manifestation]. This transition takes place with the December solstice for our modelspace.

The current processing includes a number of references to the [unknown energies from space] which include lots of support for the previously reported [twinning] or [doubling] effects forecast. These are now under the newly rising aspect/attribute set of [influence]. The [influence] descriptor set includes [causative], and [provoking], and [compelling], as well as [inducing], and [impelling], and [suggesting]. All of these are currently in support and all of these contexts are gaining rapidly rising supporting values for [visibility]. This is likely indicating that some portion of "Holmes, the strange comet" story are going

to be covered within the corporate mediastreams.

A HUGE number of cross links form just as the modelspace and SpaceGoatFarts entity are moved past the December [solstice]. As [winter] is cited repeatedly within the supporting sets, and as the date movement coincides with the appearance of the bespoke [winter] references, the spike in cross links *is* likely event linked. That is to say, there is a real potential for a [visible] event from [unknown energies from space] which affects the human populace of the planet around the time of the solstice. This is indicated at a number of levels, and the HUGE number of cross links over to the GlobalPop and Populace/USofA entities is supported by participation of both of the data sets within [transformation manifests]. Soooo.... the idea coming across is that real and palpable [transformation] will come to a human near you as [unknown energies from space] are also [transforming] into [unknown something else in space]. The cross links over to the populace entities are terminating in either [transformation] directly as an aspect/attribute set, or into [goal] aspect with support from the attributes of [meaningless (previous) life goals], and [empty shells (of) old religions], and [need (to) find worthwhile/valuable goal to cultivate]. We note that the [death of religion] meme in both populace entities gets a very large, nearly 15/fifteen percent increase in emotional summations from this new supporting set via cross links from the SpaceGoatFart entity.

The [unknown energies from space] which are at the core of the [winter transformation] are not only referencing a bespoke [influence], they are also providing numeric 'influence' to the populace entities memes by cross links. The bespoke [influence] sub set for SpaceGoatFarts is pointing to a [bonding] which will emerge from the [transformation]. This [bonding] is to be a continuing meme for the populace entities throughout 2008, and is a sub set of the support for the FuturePop entity which continues to form. Further the [bonding] is to be [manifest] early in January.

Also appearing in January will be the [hand in the sky] which *could* be pointing to the comet/planet, but also seems to include aspects/attributes pointing to a [built hand in the sky]. This area has [military] associated support levels and is probably pointing to satellites or other [sky based] sensors which will [detect] the [manifestation/transformation]. The data sets point to the [detection] as a real problem for the [military], but the [thrashing/bickering] is short-lived as [visible] events soon make the [early warning] a moot point.

Part of the [transformation] sub set of the SpaceGoatFarts entity has supporting sets indicating that at least some portion of [officialdom] will [retreat/flee (into the) mountain] as an immediate response. There are very low [visibility] summations for this event *at the time it occurs*, however the [mountain retreat] is a very large meme within the Populace/USofA in late Spring/early Summer.

Much of the SpaceGoatFart direct supporting sets are focused on [disbelief], and [rejection (of the) visible evidence] as well as [unbelief], and [denial]. We have explicit aspect/attributes which can easily be interpreted as [did not believe (it?/unknown) in sky could/would happen], and [facing/viewing, but rejecting] as well as [incredible/unbelief (in face of) visible evidence]. This last set as well as others within the same vein are supported by [beyond/above denial].

Within the [transformation] sub set are small indicators that later, perhaps as much as 9/nine months or longer from the [manifesting transformation in the sky], the impacts will [affect (the) oceans/tides]. These small sets are going to the idea of [millions (of) families] who will [climb the mountains].

Other areas of the [transformation] sub set, both within the SpaceGoatFart entity, and by way of cross link over to the populace entities, are supported by [cultivation (of) cooperation]. These areas combine to provide a doubling of the current values within the [self organizing collective] sub set. The idea

coming across is that over the course of 2008, the [manifestation] of [sky change] will produce an [influence] toward [cooperative behavior], and further that [success] in the [longest possible view] is to be [determined] by [harmonious cooperation] between/in [self organizing collectives].

The coming [manifestation of transformation], including the [comet] references are described by the data as being [manifest] in a [position/point] which is [small/slightly] to the [left] of the [big toe] on the [right foot]. This descriptor set is as close as we can come to the extraction of a word based picture of where in the sky the [transformation] will occur. It appears to be as close as we can get to a particular constellation as we do not have accurate contexts for the many constellations built into the model. Without regard to the where of the appearance, the [manifestation] is itself to be [visible] enough to [induce] both thoughts of instant karma, as well as [instant denial]. This last will be a real clue for the aware observer, as the data sets are suggesting that those humans who do go the [denial] route will be reducing their chances for [long term success].

There are a number of cross linked threads between the [manifest transformation] section of SpaceGoatFarts, and the Terra entity. Some of these cross links terminate in areas such as [earthquakes], [tidal reaction/oceanic current response], and [atmosphere]. The cross links are indicating that the [influence/transformation] impact will include [pushing] and [pulling] on the planet such that [humans] and other [critters] just [sit down] and [await] a [clear sign] to [move]. The data also indicates that the [last/newcomers] are [thrown] to the [front] by the [violence] of the [rocking].

As there are bespoke references to the [big dipper] and to the [comet], we are interpreting the [transformation in the sky] and its [visible] summations as applying to the [comet]. However we need to note that if that is the case, then the [transformation] sub set *does* seem to be indicating that the [influence] of the [transformation] will [persist] for [thousands (of) years]. Hmmm. Like a planet? Along with the [transformation] are references to the traditional 'role' of comets as [bad omens] and we sure have repeated occurrences of that particular aspect/attribute set within the SpaceGoatFart entity as well as within the populace entities. The [bad omen/luck] sub set of the GlobalPop entity is filled to almost capacity with cross links from the [transformation] sub set of the SpaceGoatFart entity. The data sure seems to be pressing for an interpretation of [alteration of global land masses] within the context of the [continuing manifestation of transformation].

The [transformation] and [influence] sub sets of the SpaceGoatFart entity themselves continue to accrue values as the modelspace is advanced through 2008. As it does, there are [atmospheric] effects to be encountered including [extreme loud sounds] which may actually be describing something like a [crushing increase (in) atmospheric pressures] as there are a number of aspect/attribute sets for [life/humans/critters] being [pushed down/held down/pinned] by [pressing/weighing sounds].

Markets - OCD\$, Sparklies Blind

The rising aspect/attribute set within the Markets entity as the modelspace is progressed into Winter is [obsession] and it remains the rising aspect all through Spring right up to the 2008 Summer solstice boundary. This [obsession] has to do with focus on the [usofa dollar], and its continuing [death spasms]. The [usofa dollar] sub set is filled with human body part, and bodily process imagery from the supporting aspect/attribute sets. As frequently noted in ALTA reports, our linguistics are based on archetypes, and as such there are none more meaningful than descriptors which include human body references. In the case of the [obsession (with the) usofa dollar] sub set, the archetypal references include [respiration] as in [living and breathing dollar worries obsessively], and [tasting bile], and [ribs ache (with) tension], and [bruises deep (within the) bones (are) revealed slowly]. This last is participatory within the [secrets revealed] meta data layer which now is nearly vertical in a number of entities, including the Markets, and ThePowersThatBe entity. The rise to vertical state of this meme will

occur over [winter] and will be very [visible] within the global mediastream beginning after the [winter solstice]. Then as the modelspace is moved forward into January, and the Markets entity along with it, the [secrets revealed] meta data layer in the Markets entity is heavily cross linked over to the ThePowersThatBe entity with further cross links over to the Populace/USofA, and the Bushista entity. The totality of the picture is that a [visible] progression of events will start with the November 22 release period turn, progress along through to the December 21-23 solstice, and thereafter take a [leap] up as [obsession with dollar woes taints (all) public agenda].

The [repudiation] of the [dollars] will begin to be very [visible] in [winter] and the [flood] of [paper debts] are described as [washing back over] the [political process] as the [banksters] are indicated to [wail] for [relief]. As the [winter] progresses, and the [political games] heat up in January, the [stink] of the [rotting economy] and specifically the [corpse] of the [dollar] will [contaminate] the [primaries]. The [dollar corpse] aspect/attribute set contains bespoke references to [bloating], and [return/repudiation]. In the case of [repudiation], this aspect/attribute set is supported by [hundreds (of) millions (of) small holdings], as well as [wells (filled with) dollars/repositories]. The idea is that [hundreds of millions] of [owners/holders] of [small dollar stores/caches/stashes] as well as [central banks/countries] will be attempting to [wring/wrest/wrestle] *ANY* [value/goods] out of their fist full of [dollars].

Stepping back to a high level view, the data sets are showing a direct progression from the [obsession over dollars] in [winter] through to a [summer] of [massing (of) debts] which are juxtaposed against a Markets entity with [attempts at internal self renewal] as its long term forecast for a driving meme in 2008. We note that there are apparently many [attempts] over the course of [summer/2008] and that as such, seemingly many [failures]. There are also indications that the [attempts] will be very [costly], and will significantly impact the [political parties], though much of the [damage] is shown as occurring in Spring, and merely needing some months to [mature] to a greater level of visibility. The [political damage] is a seemingly off-topic reference, *excepting* that it will dawn on the [global populace] that the *only* thing backing the [usofa dollar] is the [perception (of) political stability], since the [winter] will seemingly [strip away] the [illusion] that the [usofa] is [wealthy]. It is the rising [visibility] of [political breakdown] which causes the [second wave] of the [dollar repudiation], as well as [dooming] the [markets reform] meme to [repeated failures] over late Spring and through Summer.

Part of the problems of [winter], at least as far as the [usofa dollar] are concerned, will come from the [fog] which will be [spread loose] by the [federal reserve banksters]. This [criminal organization], including its connections to the [political parties] is going to come under increasing [scrutiny] as well as [charges of crimes/murder/death]. These [charges] will *not* be [answered], but will nonetheless take a very large level of support away from both the [institution] *and* its product, the [usofa dollar]. The data is going to the idea that [several/many specific/individual murders] will be involved, and that these [killings], including recent politically motivated [killings] will be [laid at the feet] {ed note: body parts, pay attention}, of the [criminals/banksters]. While there are no current indications that any [meaningful] legal actions will be taken, this meme is actually quite powerful, long affecting, and includes a number of supporting cross links which themselves bring in long term support. Some of the more immediate impacts of the [legal challenges] to the [banksters] will include [body guards], as well as a number of [deaths] of [prominent financial] persons. These will *apparently* be the result of [individual causes], however the aware observer should be able to detect the emerging pattern of [intercine warfare] breaking out. Further, and real [scary/frightening] to the [banksters] is that they will [detect] the [emergence] of [new forces] which are *also* engaging in [killings] within their groups, using their [warfare/strife] as a [cover]. Please note that this area has terminating cross links over to ThePowersThatBe entity where they end in [confusion], and [terror/horror], as well as [visible deaths/fights]. This whole area within the TPTB entity is decidedly negative in summation, and at some of the highest levels that we have seen. This is a long term data set forecast with immediacy values as the jumping off point; it extends from the December 2007 solstice through Spring, and continues to

accrue through Summer. The higher visibility values begin near the [vernal equinox] in March, 2008. This area has very extensive cross links over to the GlobalPop entity where they terminate in the [death of power popes] meme. These terminating cross links originate in areas of the juxtaposition of [wealth] with [secrecy] and [politics]. The [religion] aspect is lower on the supporting chain, suggesting that the [deaths] of the [popes] merely removes [hypocrites] from the planet. Whew...at least we lose nothing of value there.

From the June 2008 solstice onward, the Markets entity has accretion patterns for a bespoke [death of religion] aspect/attribute set. This is curious in that it is within the financially focused contexts of the Markets entity, but the supporting aspects/attributes *do* indicate very large [markets] and [money] issues associated with the [throes (of) dying religious organizations].

The [usofa dollar death/repudiation] meme has deep supporting contexts around the [federal reserve bank] and its [owners]. Noting that the [owners] of the [dollar] are *NOT* the people of the USofA, we can continue and locate the largest are of support for the [federal reserve bank] has [humiliation] as its rising aspect/attribute set across all of [winter], and just past the [spring] vernal equinox. At that point the rising aspect/attribute set becomes [impractical] and is tied over to the [failed attempts] to [reform markets/dollar]. These areas are supported by [foolishness], and [impractical approach], and [childlike/naive], and [underdeveloped/half_baked] among many other of the same nature. These aspects/attributes are examined from the point-of-view of the entity involved. The supporting sets are nearly identical in both Markets and Bushista. The [officialdom] sub set taken over from the Bushista cross links comes down to the aspect of [incompetent] and [humiliation] merged. There will apparently be a number of [gaffs/bad_speakings] from [officialdom] over the course of [winter] which will make the Bushies seem even more disconnected than usual from common reality.

The [fortunes] for the [gold/silver] context as [money/commodities] show that as the [winter] fades into [spring], so late February into March, there will be a [sudden rise] in the [relative] or [perceived] values of [gold/silver]. This continues to track with previous forecasts from the data sets and the accretion patterns have not altered, though they are still growing. The [sudden rise] in fortunes for [gold/silver] are described by supporting sub sets as [staggering] and [precipitating/causing] a [set back/reversal] for whole [classes] within the [populace]. There are also extensive cross links over to the Populace/USofA sub set which terminate in a similar structure under [political actions/behaviors]. It would appear to be a safe interpretation that the [sudden staggering/mind_numbing rise] in the [relative value] of [gold/silver] will provide a similar [staggering rise] in the [political fortunes] of some of the candidates. While R. Paul is likely a significant benefactor of these manifesting circumstances, there will be even greater [impacts/changes] on the [democratic] side of the [party system] within the USofA. There are some indications that the [gold/silver vaulting prices] will [sheer] the [politicians] to the point that many will [leave/retire/drop out]. As there are great numbers of cross links to this area it becomes difficult to extract the actual cause of the [withdrawal of efforts]. It could be monetary in the sense of [contributions] which dry up, or it could be that [manipulation] and [association] with [banksters] will impact [reputations]. In all cases the Markets entity is showing that concurrent with the [scary rise] in [gold/silver] value, there will be an [explosion/eruption] of [secrets revealed] which will bring [taint] and [corruption] charges against many current [bankers] and [politicians] as the [populace] comes to understand their roles in the recent [poverty wave] which is rolling across the [populace] as the [usofa dollar] is [nailed into coffin] and [buried].

Conclusion: Part Four - Face Squirrels, Halfway There, Realm of Possibilities

We fight paranoia here. Especially in providing the interpretations for these reports. It is difficult as the

linguistics do focus on the bad news, and we are apparently living in bad news times. Further there is Igor's natural tendency toward excessive paranoia. This could be due to his many years in the USofA military, where he worked techie stuff. Just close enough to the structure of the beast to know things that he now knows he should *never* have known. His paranoia expresses itself as his lower lip trying to use his mustache as a purchase point to climb up and hide his face. As his teeth are involved, his mustache looks as though it is chewed by squirrels seeking bedding material. We do fight the paranoia, deliberately confronting the fears so that we can hopefully reduce the amount that creeps into the reports. We like to think that mostly we are successful.

But, and you knew there had to be at least 1/one but pending....but we do need to acknowledge that there is a whole lot to fear in our future.

We will be working through the Terra entity for next weeks' installment, but we need to note now that the November 22 release turn is coincident with a whole series of known/predictable space alignments. There are also a number of [unknown] space energies/SGF's developing in plain sight. Seemingly there is a significant probability of local neighborhood impacts, that is, here on earth and other planets in the solar system, over the course of the last days of November and all through December, perhaps even into early January.

Some of these alignments are part of the precessional shift. We are leaving the age of Pisces and entering the age of Aquarius. Co-incident to the alignment of the planets this December, there are those astrologers who have reason to assert that the December 5th alignment marks the point at which the solar system has half of its planets/mass past the boundary marker, and in Aquarius.

Further, the planets are aligning just as more of the mass of the solar system passes the Galactic Center point. As the solar system will take nearly 7/seven years to completely move all its visible, planetary mass past the GC point, again, we are at the 'half-way' mark in this measure as well. Also, measuring our solar system in its totality of mass, the process of moving the whole of our system mass, including the minor planets, and other captured masses past the Galactic Center point requires a total of 15/fifteen years. The process began in 1998 with the first of the outer planets and asteroids moving into alignment. We are now passing the halfway mark in December for the totality of mass of the system, as well as the half way mark for the inner planets. Again, this occurs in early December as the planets go for their very unique alignment.

A very remarkable planetary/galactic configuration occurs on December 23rd and 24th 2007. Yes, the impacts begin earlier in the month, on or about December 5 through to the 11th, depending on who's opinion about where to stand to view the alignment is taken. That is, geo-centric, heliocentric, or system-centric. Without regard to the nuances, and just taking a 'wider view' we have a very interesting alignment series occurring in December, 2007. Some of these alignments will mark the end/beginning of cycles at very large levels such as 26,000/twenty-six thousand years (well, almost, the precessional cycle is variously calculated but usually around 25,765 years), and then a 100,000/one-hundred-thousand year earth orbital cycle completes. But the largest of all of the cycles may be the transit of the solar system across the Galactic Center boundary *at this plane of the galactic ecliptic*, however as we have discovered in our own research, there is no way to calculate direct conversions between Galactic and ecliptic coordinates. Some of the best math available for these [conversions](#) makes huge levels of assumptions. So the 'transiting arm cycle' for our solar system is completing, we just cannot accurately say when, or at what point of transition. The 'transiting arm cycle' is the time it takes our solar system to move between the voids in between the arms of the Milky Way Galaxy. The best guess that we have is that the last time that this occurred was nearly 54/fifty four thousand years ago, or 2/two complete precessional cycles back. So a big marker no doubt. There are suggestions that we complete this cycle of movement during the time from December of 2007 to, yep, you guessed it, December of 2012.

Further the issue of whether our solar system is or is not part of the Milky Way galaxy is becoming increasingly settled as it does seem that we are formerly of Sagittarius B. galaxy, and like the rest of our siblings in Sagit. B, we are being captured by the Milky Way galaxy. This capture is predicted to take place as our solar system comes into alignment with the Milky Way ecliptic. Something that has not *ever* been known to occur. The data suggests that our solar system has never before crossed the Milky Way ecliptic, though we have had various alignments with the Galactic Center in the past including at 54,000 years, and 39,000 years before that. The difference has to do with the varying widths of the arms and voids of the Milky Way.

Soooo.... a very unique December appears just days from now. In addition to the early December 'movements' of the planets, and the solar system into position for the alignments, we have the [unknown behavior] of comet 17/P Holmes, which may well become planet Holmes, fourth rock in the system. Just can't tell yet. Then the configuration on December 23 — Mars, Earth, Sun, Mercury, Jupiter, Galactic Center. Then to add to the earth affecting impacts, universe is chucking in a Full Moon at about 2 a.m. on December 24. The astro dudes tell me that there are also simultaneous Venus square Neptune occurring at that time. Probably this is not good. Things get even stranger in that the Pluto/Sun conjunction appears exactly on the Winter Solstice, just past conjunction with the Galactic Center. At that point many astronomers suggest that half of the mass of the solar system will be in alignment with the galactic ecliptic, as well as past the Galactic Center.

Probably a very good month (December) for big earthquakes, monster storms, and strange tidal changes. Further, there are some suggestions from the astronomer community that point to 'electrical/energetic' effects which may result from the alignments as well. These *may* come about due to how the sun lines up relative to the GC. These may come about due to the *presumed* magnetic, and other energetic effects coming from the dark rift just to the side of the GC. Some of the electrical potential effects might be visible here on earth as space girdling lightening. This projection *used* to sound very far fetched indeed, that is, right up until Holmes expanded to the largest volume in the solar system. Other predicted effects include exceptionally high tides, that is on the order of potentially dozens of feet higher than usual; or periods of extreme cold as the solar energies are 'sucked' away from earth as the sun aligns with the GC. Both are defined by astrophysicists as being within the 'realm of possibilities'.

And then, lest we forget, the brilliant folks at NASA are sending up a shuttle early in December. Our data sets still show accruing values for a [stall] or [seizure] over the Atlantic. The outcome of the [incident of collective fears] is uncertain within our data.

Going to be interesting days ahead. Not only our release language period from November 22 through to January 24th, but also all the December planetary shuffles, the pending political scuffles, pent up tensions over monies/currencies, and the continuing [unknown energies from space].

Given our continuing blankets of chemtrails up here in the PNW of America, we are unlikely to be able to personally observe *any* of the cool space stuff going on. This is bad for the inquisitive among us, but good for the paranoids such as Igor. However, given the amount of predicted brouhaha as well as the density of astronomic happenstance, it would seem we will feel the effects, even if we can't see it coming.

#####

We anticipate getting part Five posted by late on Sunday, November 25. Part Five will focus on Terra entity, as well as the July 2008 period. We will get as much substance as we can for the October 2008, release drop, and should be able to project out the charts through to 2009 by that point.

ALTA 0708 - Part Five

Asymmetric Language Trend Analysis Intelligence Report

‘Changes in language precede changes in behavior.’

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

11.25.2007

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in *[italicized bold green](#)*, and [red](#) when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 54.559 million reads of the 0708 series.

Meta Art - Time, You know it's bad when...

It is all about time. And as far as humans go, that is, as 'time expressors', it is all about time-ing.

We were wrong on our estimation of the beginning of the release period going to November 22. Rather it arrived 2/two days early in the form of the release language associated with the S. McClellan book press 'release' in which Bush, and Cheney and their staffs are portrayed as 'conspiring' to lie to the press corps and the populace in an attempt to obstruct justice and cover-up previously committed high crimes and misdemeanors. Coming from a former member of the administration, this indictment is particularly

stinging, and falls within the context of the meta data layer of [secrets revealed], and is within the 3/three way cross link structures between Press entity and the Bushista entity and the Populace/USofA entity. This area of modelspace is so heavily cross linked beginning in just a few days as to really defy much interpretation. However, we can expect the 'release language' to continue flying fast and furious, as well as a whole new round of 'secrets revealed'. This next set of heavy release of [secret associations revealed] will impact a number of the weeds in the current crop of presidential candidates.

Next Level: The next level concerns beyond genetically modified foods/medicines, and beyond rampaging nano-bots will be the realm of [synbio](#). Beyond not knowing what they are doing, but still able to go ahead and do it, the synbio folks are blissfully unaware of what they do not yet know. And no where in the literature are discussions about the predictable unintended side effects being discussed.

Next Layer: a singular context has popped up in the data indicating that the next level of 'crisis shortages' will be affecting 'food preservation' both systems such as 'canning', as well as items within the category. So the interpretation is that such things as 'canning jars' and lids will soon be in both short supply as well as [visible] in their shortage within the global mediastream. There are also data elements around [pure salt] which *may* also be going toward a simi liar conclusion.

You know its bad when the mainstream media is starting to sound worse than these reports. Pay no attention to the men behind the curtain. Do not listen to mainstream media, they are only fear mongering. Readers of ALTA reports know it is *far* worse than the mediastream portrays, so why buy into their fear-du-jour? It also profits to remember that universe and life have always, so far anyway, provided a planet tuned for struggle, but also the perfect universe for experience of struggle in that extremes *always* and *invariably* produce the seeds of their opposite. Which produces the 'mantra of endurance'....this too shall pass, or, 'things change'.

Populace/USofA - Iraq Redux

Beginning within this release period, though probably not starting until early December, the Bush war of aggression against the Iraqi's will take a decidedly nasty turn. The data sets are pointing to a whole lot of release language on the subject just pouring out of every orifice in [congress], and [officialdom/government/rulers], as well as [manifesting] as [renewed violence], and [intense struggle (for) control]. Further the language shows that the [initial starts/eruptions] of December will progress apace through the month and by the time the planet has moved to the last days of December, the [bush war] will be [facing/enduring/receiving] very [fierce/potent] [response] to [aggression]. This will come in the form of [battles] on the ground in Iraq, rather than [skirmishes]. The language is also indicating that it will arise as [battles] within the [corridors/pathways (of) power] over the [purpose] of the [usofa populace] involvement. The actual [battles] within Iraq are indicated to [spring] from [multiple sources/locations] such that [command deteriorates] at the [middle manager level]. This will prompt, according to the cross links to the Press entity, the [high level commander(s)] to be [personally (at) risk] and to have to [personally intervene] within [strategy and tactics]. The release period ends near January 24th, and the data sets are pointing to the [accelerating deterioration] within the [iraq war] as a contributing factor to the building tension language period which lasts from January 24th to October 5th or so. This long slow grind will feel very much like 2/two steps forward, and 2.5/two-point-five steps back. The [iraq war] will also begin in [spring] to be seriously impacted by the [degradation] of the [economic situation] here in the [usfoa].

As the year progresses, the long slow grind of the building tension period will [consume] the [will/desire] of the [populace] to [participate (in) *any* military events/circumstances]. This building period is the actual beginning of the previously discussed, multiple generational [withdrawal] meme in which the [populace/usofa] starts to [bring home] their [soldiers] from all of the 140/one-hundred-forty

plus countries in which they are currently stationed.

Curiously, it is the [rise of the militants/martial_artists] and the [expression of the warriors] which will ignite a very [militaristic stance/posture] on the part of the [populace] *just* as the needed energy to begin the [revolution] within the [corporate dominance] of the [military]. The modelspace accretion patterns for the Populace/USofA entity are mirroring the accrual of similar aspect/attribute sets for the developing FuturePop entity. In this case there is a very clear segregation of the [militant/martial_artist] sub set into a distinct population which is gaining emotional summations around the idea of [shift (into) power]. The data currently is *not* showing that a new [war] is the cause of the rising emotional values associated with this sub set, however there are very significant emotional spikes on the [revolution] meta data layer. Please note we have been beating subscribers about the head with the idea of [revolution] here in the Populace/USofA for years now. And we note that the R. Paul campaign has had the smarts to rhyme the meme and harmonize with the emotional underpinnings for their campaign. Further we see that the B. Obama campaign is making a similar shift, though it is more difficult given that their candidate is [elite] in [nature] and is [owned/ruled] by the [300/three hundred families].

The [aggression] meme within the [populace/usofa] shows that several 'threads' will emerge. There will be very intense [conflict] and [manifest aggression] on the part of the Bushies, as well as an [aggressive response] from the [congress]. Further there will be a [short lived] burst of [strategic aggression] within the Iraq war once the [generals/admirals] become [personally] involved with the fighting and the deteriorating circumstances with the over all strategy.

In late March, early April, the accretion patterns in the Populace/USofA entity suggest that a [wave] of [anger] will erupt within the [populace] over the [military] and its [problems], as well as the [economic burden] of supporting a [global dictatorship]. This [wave of anger] will participate with the [tax revolt]. Further exacerbations to the circumstances will include the late [winter] [failure] of the [usofa] [financial system]. This [collapse] will set off many reciprocating [supply chain failures] which in turn will feed back into the [economic failures]. These will take less than 50/fifty days to affect the global [military dominance] of the [usofa military].

As has been discussed earlier within this ALTA series, the last 2/two months (more or less) of this building tension period, that is, August through to very early October will bring a [resounding feeling/emotion] to the [populace] relative to their [military]. It is as though at least *some* component of the [military] has [measurable success] which brings a [temporary] mood of [expansive satisfaction] to the [populace]. At this point it is difficult to discern enough detail within the aspect/attribute sets to ascertain the nature of the 'what' involved. However we can determine from the accretion patterns themselves, as well as supporting movements within the [conflict] and [secrets revealed] meta data layers, that this [respite] will only last these 68/sixty-eight days. Thereafter the [popular] mood will turn [very dark] indeed, and as the modelspace is progressed through October and into about mid November, the rising aspect/attribute set is led by [exhaustion]. The [populace/popular exhaustion] is [fed] by [lack of resources], as well as [crumbling infrastructure] and the beginning of [national systemic collapse]. There are supporting aspects/attribute sets for [food supply shrinkage] indicating very long term problems not easily solved, as well as [eruptions of anger] about [local conditions]. The data sets are describing a [malaise] which falls over the [populace] over the last days of [fall] as the brief [hope] of the very late [summer] is crushed. The [malaise/illness/depression] is both [economic] and [mental] and [spiritual]. It further becomes very [visible] from mid November onward. Thereafter the [elite] are [suddenly aware] that they have [lost] the [wars] in [iraq and afghanistan], and even this does not stop the [carnage]. Rather the [elites] continue in their [design] in November/December 2008, and it is this [rejection] by the [rulers] which propels the [popular mood] of [war-weary, exhaustion] from [resignation/acceptance] of [being powerless] into a [bloody revolution].

Please note that the above is against a background of [global power struggles] which have been also erupting since the [death of the dollar] and the [initiation/beginning] of the [globalism/globalist collapse] in [winter]. So over the course of [spring] the GlobalPop is providing a background of [populace] versus [elitists/rulers/autocrats/officialdom] fights breaking out around the globe. It would seem that the [winter] and [spring] of 2008 are taken up entirely with the [conflict] meta data layer. It is also the case that the meta data layer of [conflict] does rise to vertical in all entities by June of 2008, and further that the meta data layer of [revolution] coincidentally begins to rise to vertical in the populace entities in late Spring as well. A significant contribution to the [exhaustion] of the Populace/USofA, as well as the [disenfranchisement] of the GlobalPop comes from the interconnected problems of [dollar death] and [energy plateau/peak oil]. There are also concurrent, and dependent problems of [food shortages] as well as both [travel] and [shipping] restrictions.

Further problems of very large magnitude within the Populace/USofA emerge over late [winter] and [spring] as the [economic/financial systemic collapse] continues, and generates a [tidal wave] of [unemployment]. The [social problems] of the [unexpected fiscal implosion] will catch the [government] totally [unprepared] which, of course, exacerbates the problems into [crises] which in turn provide a huge boost to the [revolution] meta data layer as [personal suffering] returns as a [daily theme] to the Populace/USofA.

Please note that the above is against a background of increasing Terra entity intrusions which are of such a magnitude as to propel the [diaspora] meme into a rising state in both populace entities suggesting a long term effect will become very [visible] within the global mediastream by late [winter (Feb/2008)].

Markets - PostEquinox Revolution, Resurrection Shuffle

As noted within previous reports in this series, the period of late [summer], primarily August and September, will have a rising, and more positive emotional tone within the [populace/usofa]. This [ebullience] will not last, and is abruptly over in October, however, as the longer term data has been processed, there are indications of some form of a [resurgence] within the by-then-battered-to-a-pulp [usofa markets]. This [rally] is also short lived, but is filled with [large rises/vigor] for the brief period of its existence. The beginning point of the [rally] seems to be around July 2. Thereafter the path of the [markets], at least emotionally, appears to track the slightly-better spirits of the nation as a whole. This is to be [visible], and cross connected to a huge [officialdom] push of a [safe times] meme, as well as [military success/movement] which does seem to be the fulcrum of the emotional swing. This positive emotional rise occurs within a general period of building emotional tensions, and as such will undoubtedly be echoed in the sudden [ending/shift] of [fortunes] which occurs in early October. Note that the [markets] context goes through *HUGE* levels of change before [summer], so probably most of the banksters, and their [financial/paper debt instruments] will *NOT* be included in what will be of the [markets] by [summer].

Some of the respite is internally cross linked over to [gold coins] and/or to the [gold, discovery] sub sets. In the case of the former, the [gold coins] are showing up with very high emotional attachments, and with cross links over to [congress], and to [officialdom] in general, as well as extensively cross linked up to the [revolution] meta data layer. A plausible interpretation, especially given the supporting aspect/attributes is that a movement to [monetize] [gold] in the form of [coins/coinage] will be successful. The [boost] to the [economic mood] is significant around [gold coins] for July onward, *even* if the [monetary status] is unchanged. There are very high positive emotional summations from this sub set which are providing the main bulk of the positive support for the [temporary ebullience] of the Markets entity.

The [gold discovery/find/cache] is *not* a totally positive value set. The supporting data is very heavily

participating in the [revolution] and [secrets revealed] meta data layers. The interpretation of the supporting aspect/attributes tends to favor a [crisis] of [confidence] around [gold in the ground] such that [political fortunes] are [abruptly/suddenly changed]. Further this *could* be indicating the resurgence of the [audit of the resources] meme previously forecast to begin in December of 2007. Again this meme is high in 'duration' and 'sustained impact' values, with a gradually building 'intensity' summation that appears to be peaking in early July of 2008.

However, the above [ebullience] is from a much reduced place. A much changed landscape for the global markets, with special emphasis on [markets, usofa] will exist by the March equinox. As the modelspace is progressed through [winter], the data sets around the [death (of the) dollar, usofa] continue to rise. By the time the Markets entity has gotten to February, the data sets are clearly pointing to the [shocking realization/understanding] that the [dollar] will [plunge] and not [return]. The [death of the dollar] meme, which we have been forecasting for several years, now reaches the [visible stages of death], with the [repudiation] of the [dollar]. This descriptor set is probably focusing on the [dumping of treasury] and other [debt instruments]. The [repudiation of the dollar] and the rising [visibility] summations are painting a picture of "when even the media gets it". This [stunning realization] so [shocks] the [media] that within the [usofa] the whole of the [political situation] is indicated to [change]. As the modelspace is progressed forward into [spring] the data sets are pointing to [oil shortages] as the [dollar (is) rejected] at the [spot oil] markets. There are also [food shortages] with very high [visibility] sums pointing toward teevee coverage of the ancillary effects of [dollar death].

After [spring], [revolution] comes.

The [revolution] meta data layer is indicating that the [collapse], at a [sudden] and [multiple systemic] level of the [dollar] and [usofa economy/financial system] will be the single largest booster of the emotional sums for the meta data layer in the coming building emotional tension period which lasts from January 24th through to October 5th. The [multiplicity (of) systems] involved within the [dollar death] is part of an aspect/attribute set which is forecasting a [continuing/re-emergent collapse] of [systems (within) systems]. This will seemingly include the entire [banking world] and that explicitly includes the [federal reserve]. Additional data sets in support also indicate that the [electronic money] systems will also [experience failure].

The [experience of death] of the [currency] and its supporting [power systems] is very extensively cross linked over to the Populace/USofA entity where many of the termination points are within the larger [political system] descriptor set. The meta data layer of [revolution] is shown as affecting the Markets entity directly. The images coming across from the supporting aspect/attribute sets paint a picture of [failures] which will arise from the [markets] as they [collapse], *and* thereafter there will much bespoke [reform] which will be [proffered] by [officialdom], but the [failure] aspect also dominates this area. The Populace/USofA is very likely to [reject] the [officialdom] as well as its [offered relief]. There are other areas of support which go to the idea of [cascading failures] which will [move too/very/extremely fast] and [kick the feet] out from the [officialdom].

As the [revolution] meme grows in February, it will do so in exponential proportions to the [bank failures] and the [crushing debt burdens]. The data is pointing to a [repudiation wave] which will emerge within the [populace/usofa] around [credit card debt] as well as all [bank debt]. This wave is showing as becoming very [visible] in the global mediastream as we move into [spring].

The data sets have a rapid growth in [officialdom] either directly held in Markets entity, or in cross links. These [officialdom] descriptors *do* include high level support for [actions/plans/plots], however *all* are indicated to be toward the end of [resurrecting the dollar], or [stemming/damming the repudiation], and as the [repudiation] meme is several orders of magnitude larger at this point, it is

understandable that the forecast for the [resurrection attempts] will be [failure]. Again we note that the [failure] of the [markets] in the March/April months will make for very interesting global mediastream watching as the [cognitive dissonance] begins to [roll back upon] the [propagandists].

As the modelspace is progressed through March and the equinox, the primary supporting aspect shifts over to [confusion] and [chaos/disorder]. This area seems to be forecasting the [visible] [collapse/implosion] of the [markets infrastructure]. There are repeated references to the [federal reserve bank(sters)] within this sub set and the implication is toward a [crisis] which will [threaten] not only the [life] of the [institution], but also the [lives/livelihood] of the [players/pretenders/banksters] who control it.

Terra - Electric Dreams, Shaking Themes, Transformation Manifest

The longer term data sets, that is to say those aspect/attributes forming contexts with an 'effective' range of between 3/three and 19/nineteen lunar months, are being dominated by the building emotional trends around the idea of the [surreal] and [sun disease]. Both of these aspect sets had been seen in the past few years, now however, the data provides a sharper view of the larger picture. The supporting aspect/attributes for the [sun disease] have focus on [humans], and [mental aberrations]. Further supporting layers go to the idea of [recall/memories] as well as [imagery] and [internal rotations]. These are in turn supported by cross links to [economic impacts], and [social phenomena]. In turn these both are directly supported by [mass awareness/participation]. This is itself supported by human body references such as [weak(ened) knees], and [queasy stomach], as well as [loosened bowels]. There are further deep archetypes to be found in even lower supporting layers for human body processes which include [retching], and [sweating]. The whole of this area has very high [visibility] values indicating significant coverage within the global mediastream. The image coming out of the data is driven by the cross links over to the SpaceGoatFart entity where it terminates in the [unknown energies from space] aspect. The image is further defined from the number of cross links to the populace entities where the impression is that as much as 3/three of 8/eight persons may be experiencing the [sun disease, surreal mental aberrations]. While we have indications that the [sun disease] effects *may* be appearing within the populace now, the data sets don't start accreting [phenomena] and [en masse/masses] until late in the [summer] of 2008. The interpretation is that some portion of the populace at a global level will be impacted such that [economic crisis] result in Fall from [actions not taken] in Summer.

Some of the symptoms of the [surreal disease, mental aberration] are quite unsettling, and are suggestive of people walking along on ordinary days, and then without warning being [mentally] in another [place/time]. There are descriptor sets for [past] as though in a [past life], but the descriptor also is used as in [past/lost time] or alternatively, [mental blackouts/disconnects]. Much of the descriptor sets are supported by internally cross linked references to [walking/waking dreams] and this in turn is supported by [electric], and [energized/forced]. Hmmm. Probably this wont be good.

The [surreal experience phenomena] of the [summer] of 2008 occurs against a background of [dangerous positions] being the dominant aspect/attribute set within the Terra entity. This aspect/attribute set begins to dominate in July and continues to grow over both August and September. Against this dominating background, the [markets resurgence/reprieve/rally] seems a shadow of the 'band played on' while the Titanic sank. The [dangerous position] aspect/attribute set is noted as being bespoke [especially potent/active] for [october], which we note is when the [change] comes in that the building tension period actually falls down a slope into a massive release period lasting nearly 5/five months.

The [dangerous position] is supported directly by [crag], and [sheer precipice], and [sharp drop], and [great height]. Further supporting aspect/attributes include [omen(s) touted/sold], [bad times/timing],

[flowers (in) full bloom], [writing/recording last (thoughts/wills)]. This secondary layer is supported in its turn by [noise/volume], [hearing loss], [shock], [thrown down/knocked down]. Within these sets there are internally cross linked supports for [gravity], and [authority], and [movement]. Further supporting layers include [shifting/moving], [shaken persons/officialdom], [documents proffered], [sacrificial/sacrifice (of) property].

The tendency is to see these aspect/attributes as [earthquake] related, and that may not be wrong. There are supporting layers which magnify the effects however. These include [(for) 6/six months (no thing/nothing) is settled/stable]. There are further [6/six months] references going toward [uneasy (from the) shock persists (for) 6/six months]. There are also cross links to [foundations (continue/still) shake 6/six months on]. Within this area are very intensive cross links from supporting layers for [sacrifice] over to Populace/USofA entity where the termination is within [religion] and within that aspect/attribute set, directly into the [offense] sub set. The imagery suggests an interpretation of a [visible] [call for repentance (against) the sins (against) heaven/sky/god]. The idea is that this [public cry] is connected to the [politics] of the [dangerous situation] as it is viewed here in the USofA. However we need to note that there will be a [backlash] under the influence of the [october revolution] which will [focus] directly on the [priests/rabbis] who are involved in the [summer madness]. This area also participates within the [death of religion] meme which continues to grow and is now providing emotional support in the populace entities for both [revolution], and [conflict] meta data layers.

Returning to the [earthquake] meme, the data suggests that the [dangerous position] of [summer] which starts in early July and grows through the next 3/three months until very early October will be [affecting/impacting] an area with a [500/five-hundred miles radius]. This area is shown as being dominated by [turmoil], [upset], [shifts], [breaks], [frustration], [furor], and [startled].

Further, the [dangerous position] is supported by [doubling/doubled] aspect/attributes which begin to accrue in September and provide support for the bespoke [especially potent/active] sub set. Within this set are dominating supporting aspect/attributes of [threat], and [100,000/one-hundred-thousand (who will) lose/lost treasure/wealth/possessions]. Further there are indications that [water] in the form of [threat] will be involved as the data shows that the [100,000/one-hundred-thousand] will [take refuge/seek safety] in [9/nine hills/mountains]. There are supporting aspect/attributes which go to the idea that [7/seven days] will pass before [rescue] starts to [arrive]. This will be directly due to the continuing [dangerous position] which is apparently a [larger crisis] than these [100,000/one-hundred-thousand] affected people.

The descriptors supporting the [100,000/one-hundred-thousand affected] are very high in [visibility] summations, and include [gazing about terrified], and [shocked eyes], and [scars/wounds], and [ruin (brought) from shock]. There are also supports for [friends huddle], and [reeling] while [climbing (toward/to) safety]. There are several geographic references which made it through the processing and that seemingly are pointed to the [usofa, continental] as containing the [100,000/one-hundred-thousand affected]. The supporting aspects within the [usofa, continental] sub set are headed by a bespoke [bad summer], and include [temples/churches overturned]. As this is within the Terra entity, the [overturned] descriptor is taken to mean the actual [knocking over] of the buildings, rather than the [social organization] of the [churches/temples]. Further supporting aspect/attribute sets include [authority shocked into action], as well as [damaged roads/infrastructure] as magnifying the [dangerous situations].

The Terra entity has a reverse emotional dynamic than the Populace/USofA entity. This is to say that as the mood of the Populace/USofA entity at the summation level is rising into more positive territory in very late Summer, the Terra entity has a negative trend for the emotional summations which make up its direction. These 2/two entities do parallel each other in rising bespoke [energy, self] references for the late [summer]. This can be interpreted as the [populace] getting [energized] and rising up off its butt,

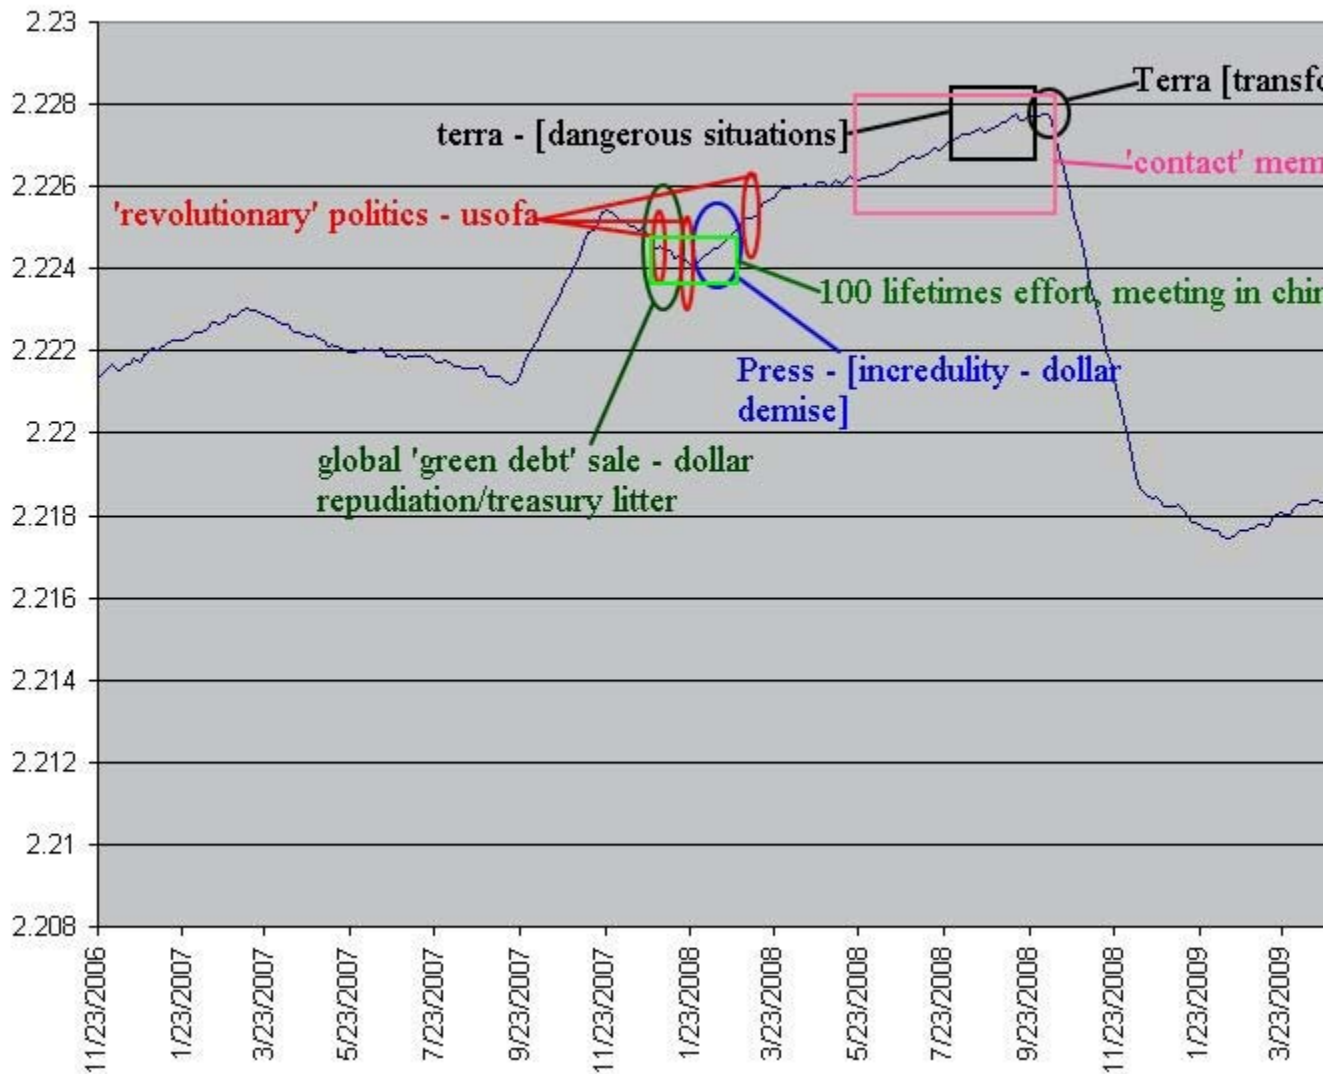

while the planet gains [energies from space] which cause [energetic displays]. Within the Terra entity, the [ruinous summer] transitions over to a Fall of bespoke [transformation]. This meta data layer is further augmented from the primary supporting aspect/attribute set of [manifest]. So the Terra entity is to shift from [energetic displays] into [manifest transformation] shortly after the autumnal equinox. The shift of the meta data layer of [transformation] into [manifest/permanent transformation/alteration] begins just as the modelspace is progressed into October.

The Terra entity continues to accrue values within the [october transformation] supporting sub set for [sky] as well as [space]. In both supporting aspect/attribute sets are descriptors for [will not understand], and [cannot (bring self to) believe], as well as [no credence possible]. The interpretation is that humans will have a hard time understanding the [sky] based [phenomena] which will be associated with the [october transformation].

Both internally within the Terra entity, as well as via cross links to Markets entity, as well as cross links to both populace entities, *and* the Press entity, the [october transformation] descriptor set has support which goes to the idea of an [overturning/shuffle/reversal] of [wealth]. The impacts of this [transformation of mind set/perception] are *not* merely the [who], but rather are pointing to a total [reversal] of the [concepts] involved with [wealth]. The idea coming across is that [global biosphere] conditions are altered such that the nature of the descriptor of [wealth] becomes altered. The data sets are supporting the idea of [mobility], and [life], and [health], and [strength] becoming synonymous with the idea of [riches], while [excepting coins, *all* is dross/worthless]. Hmmm. No mention of the potential for a global pie-as-currency standard...

The [october transformation] sub set within Terra has grown for a number of months, and the processing of the 0708 long term values, *when pushed to their maximum temporal extensions* are indicating that [big doings/changes (will) manifest] *starting* in October. As noted in the longer term value chart below, the [changes] are a multiple month process which seemingly extends out 15/fifteen months until sometime in 2010.

Emotional Tension Trend

Much of the [transformation (of the) planetary biosphere] meme within the Terra entity derives support from [up thrust/rising land] both as a high level, and a deeper level within the [earthquake] meme. Again the [rising lands] meme has continued to accrue values over the last 4/four years. Now the accreting sets contain bespoke [manifest] references. These begin to appear in late Summer of 2008, and then more rapidly as Fall progresses into October. At this point our longer term value sets are nearing their detailed support layer limits so the number of references diminishes, however we note that the meme continues to gain values even as the last of the longer term value sets are processed. The implication is that the [manifest planetary biospheric changes] continue unabated at least through the [spring] of 2009.

Press - Seeing Reading, Saying Feeling

As indicated on the chart above, the Press entity is pointing to [shock] and [unbelieving/incredulity] as [winter] fades into [spring]. The largest of the bursts of accretions of values for this meme occurs in late February, and through March. The summations for the [visibility] values within the descriptor set rise rapidly and then continue a slower, but still substantial growth through [spring]. The interpretation is

that the general [usofa] section of the [global mediastream] will become very uncharacteristically [candid] and will betray a [cognitive dissonance] over the [failure] to [resurrect the usofa dollar]. This interpretation extends to all forms of media, including video at all levels. The data sets have extensive links to the various [officialdom] sub sets, and *all* are conforming to the idea that the [press/teevee/propagandists] will [not understand] what is actually happening and will [visibly betray conflicting emotions and breakdowns]. This area is internally linked back into the sub set of the Press entity which goes to the [attacks] on the [press/teevee personalities]. This area continues to grow, but now is seemingly pointing to late [winter] as the point of maximum [visibility] within the [attack] meme, and this *just* as the Press entity has a burst of [visibility] values around the [dollar death] and [dollar/treasury repudiations].

The imagery of the supporting aspect/attributes sets paints a picture of repeated instances of [beset/annoyed/irritated] faces on [teevee] who have [mental schisms/separations], and [evidence (bad/unusual) behavior]. The [bad behavior] will include [saying feelings] rather than [reading what they are seeing]. This [breakdown] will *not* go unnoticed by the [populace], even in its [highly agitated] state. As the [populace/popular suffering] begins, and is *finally* reflected within the [corporate media], albeit even as an [aberrant behavior], the [spring equinox] brings renewed [pressures] and support to the [revolution] meme within the Press entity. The meta data layer of [revolution] is conjunct to the meta data layer of [transformation] within the Press entity. Both of these areas are also supporting or participating in the meta data layer of [conflict].

SpaceGoatFarts - Smellies on the Way

We continue to have the SpaceGoatFarts entity grow at a faster than usual rate, and excepting overall size, the entity is even growing faster than the Terra entity.

In this last round of processing the primary aspect/attribute set rising within the entity shows up as the modelspace is advanced into [winter], that is, past the December solstice, and is headed by the descriptor set of [winds] which are then supported by [energies (unknown) from space]. So [space winds] it is. The references for [winds] within SpaceGoatFarts entity are at multiple levels and have very heavy cross links over to Terra entity where they also are terminating in [winds] as an aspect/attribute set.

The multiple [winds] are showing as being [impacted/driven] by the [manifesting unknown energies from space]. These impacts are to include increases in [winds] on the planet, but also to include some very [high/upper atmosphere phenomena] which are apparently [old, but unseen]. This may be interpreted as [previously unseen].

Within the SpaceGoatFarts entity, the [winds] are also supported by the descriptor sets for [dust/debris]. This is apparently an [interstellar debris/dust]. As an aspect its primary influence is through the Terra entity, and we note that it appears to be [planet affective] including the [others planets, not terra], but not the [sun]. The [dust] is also apparently to be [thought] to be [tainted/poisoned], however the emphasis is on the [thought] of the meme, rather than the reality of a [poisoning]. So the entity in modelspace is forecasting that the [observed dust] will be [thought to be poison]. There are no supporting sets below the [thought] level; our conclusion is that the [dust] while part of a really [smelly] SpaceGoatFart, will not be [poisoned] in spite of reports/rumors to the contrary.

The SpaceGoatFart [winds] of [winter] are cross linked over to the [space shuttle] through the [maritime disaster] context already established to be referencing the Space Shuttle Missions. The implication is that the [winds] from [unknown energies from space] will be part of the [visible] coverage of the upcoming space shuttle mission. The data is suggesting that a component of the [problem] besetting the

[shuttle/ship] will be involved with its [sail/propulsion] relative to the [prevailing winds]. This area is further supported by aspects/attributes of a [beast/tiger] being [struck], and the [act of striking] being the [producer of fear]. This bespoke [fear] reference is specifically supported by [fear now, suddenly], supported by [striking beast], and [awkward position], and [no retreat]. However, the rest of the supporting sets are seemingly forecasting a [safe return] in spite of the [dangerous positions/actions]. The data sets contain references for [safety later], and [fear passes by/away]. Further support comes from [dangerous situation floats (on) by/over/through/past].

The outlook is not so promising for the planet, as is indicated by the Terra entity cross links from the SpaceGoatFarts. These [dust pushing winds from space] are shown to have very large [influences] on [wind/wind storms] here on earth. So much so that [transformation] is an influencing meta data layer on the result. The [winds] are shown as being [driven/electrified] so much that they [scour (under the) beds/foundations]. Further these [winds] are indicated to be [electric] in nature, though that sub set is very large, and contains over 10/ten thousand descriptors so the detail range is quite large as well. Basically it is not a good set however, and the idea is that our [storms] will be very seriously [pushed/magnified/driven] by the [space phenomena] of this [winter].

Conclusion: Part Five - Learning to Roll, Time Artists

As noted in the previous part to this series, there are a number of astronomic, and thus astrologic, alignments this December and into the next year. Also as previously noted, we have labeled the last few years with primary descriptors based on the dominant verbs from the archetypes in modelspace. Thus 2007 was the [emergent] year, when trends initiated, and platforms for change formed. For 2008, the label is [manifest], as in [change made manifest]. This is further amplified by the primary rising supporting aspect/attribute set of [explicit reality]. Another way of interpreting this supporting set is as [undeniable]. As has been discussed within both the SpaceGoatFarts, and the Press entity, 2008 promises [manifest change], especially within the areas of [that which has been officially denied]. Hmmm. Good?maybe, but also maybe not. What will determine the individual reaction is attitude. If the attitude held is that everything is either a blessing or a curse, then a decision must be made about rampaging SpaceGoatFarts, lying Press and their mea culpa's, corrupt politicians, endless war, dying currency, diminishing resources, and devastating alterations within the biosphere here on earth *just* as the solar system is going batshit with mega cosmic alignments. Whew! No wonder both the optimists and the pessimists are so stressed. The former must have to build a mental wall of denial 3/three feet thick to block out manifest(ing) reality; while the latter is faced with a plethora of constantly changing doom from which to choose their unfolding personal hell.

However, if the attitude is that 'all things are merely challenges', then a certain relaxation about manifesting change and chaos develops. An internal, stomach calming sense of 'oh well, if it weren't for this, I would have some *real* work to do', allows concentration on the manifest reality as yet-another-step on the road to personal enlightenment. Yet another skill learned, experience internalized. Or 'more grist for the mill'. Grind on.

Here at HPH we grind on in the form of gnawing on universe. Universe is way big, much too big to take in bites, it needs the edge of the teeth biting into small pieces which experience teaches expand in the mental gut, once linked to other pieces already digested. A mass of understanding develops as the proteins of knowledge bind between themselves forming internal nets of reasoning power. Or at least mats on which to learn to roll as universe actually manifests change.

Rolling is good. It makes one round, with fewer sharp edges to break off, and gives a few precious seconds to gather data, and form working opinions/hypotheses against rapidly changing circumstances. Rolling is good. In rolling, as in all martial arts sub skills, it is the finish which counts. Bad start? Who

cares? End well. Pop up and be ready to go again.

We know from our mat training that each action in universe inherently contains its opposite. In other words, every roll ends in standing again. As the aware observer follows the degradation of the housing market in the anglo-centric part of the planet, and the corresponding, super set of problems within the dollar death, and recognizing the links between economic dislocations, and emergent social change on a vast scale, as well as elitist 'invisible hand' media/social engineering for their internal agenda, it becomes equally obvious that the counter trends are already emerging. Merely a question of learning to read the interference patterns in manifesting universe. This concept of 'reading the backbone of universe' comes from the Complete Reality School of Taoism. In their experience of their arts, the principle of 'discerning long term patterns' and then 'harmonizing with small elements' gave rise to the saying, "the sage waters small seeds at the proper distance, that they may grow and provide mighty influence." In their time, the CompleteRealityTaoists faced wars, global climate change, and consequent large scale social change. Although it could be argued that current reality is more screwed up than previous ages, even in that sentence the seeds of change emerge. Especially if things are at the extreme edge of screwed up, then the aware observer notes that universe has *already* started pushing things back toward the center. Not that we won't all go too far past mid point later, but that is for then, and this is now. So this now provides the mat upon which to develop the skills of rolling as universe pitches us around until we can roll ourselves into a more advantageous position from which to practice our individual art(s) of experience as expressors of time.

Not all of us will express the martial theme as part of their time expressor arts/skills. Some of us will be expressing differing skill sets. Thus universe provides for complementary efficiencies in social organizations, or 'more hands/minds equal better/differing work'. The historic archetype of the 'lone survivor' is dying along with the dollar, especially as it has been nurtured by the western culture of individualism and its extreme of 'cult of personality' or 'celebritism'. This trend has already produced the backlash which forms the seeds of the counter wave in the developing populace of the future. The survivors/artists from this time who will progress through the current difficulties and into the future recognize that 'survival' is a 'collective skill'.

As noted, there are astronomic/astrologic alignments all over the place in the coming months. There are sound arguments for half of the solar system to now have past the Galactic Center, and more importantly, the 'mouth' of the Great Rift which is slightly to the left of the Galactic Center point from our perspective. This may well be a meaningful point at which to say that now, over half of the solar system is in the Age of Aquarius, and the rest is rapidly leaving the last of the Age of Pisces.

In the age of Pisces, the religious 'schools' rose to power from the ashes of the age of Ram, that is, the age of sacrifice. Now, the age shifts again, into Aquarius, the 'water/knowledge bearer. The descriptors for the 'age of aquarius' are unique among the zodiac. The only human representation, and it is the quintessential feminine aspect made manifest. It is also the age of knowledge, as opposed to the dying Piscean age which is the 'age of authority/hierarchy'. And coming from Ram, the quintessential age of 'masculine expression', the Piscean age inherited a masculine bias. Well, as previously noted, all things change, and as time expressing artists, humans change too. As does the universal canvas for our art. The change is now showing to the aware observer as social dynamics develop. The dying of the 'mass' or 'school/hierarchical' structure of society at a global level is clearly showing now as the quintessential element of 'modern life', that is to say, 'paper/digital debt structures' collapse at the [mass level]. This last aspect/attribute set is key. Follow over these next 3/three months as [mass consumerism], [mass globalism], [mass politics], et al begin to reveal the counter trends already growing.

Then the only issue for the aware time expressing artist is with which trends to harmonize that patterns, vaguely discerned in the heaving mass of chaotic universe as background, might be enhanced by the

expression of our individual level of skill as a time/change artist.

It is human nature to continually question the self. Are we strong enough? Hard enough? Artist enough for the challenges that we face. Oh, no worries on that score, as the answer is clearly no. Nope. Not at all.

But it does not matter. Universe will make sure we are properly prepared as the challenge arrives. That is just how it works.

Be seeing you on the mat.

Meta Art - Fasces Est Nos, Invisible Hands

Remember the old school history lesson about the **fasces?** The idea symbolized by the bundle of sticks or reeds is a core USofA credo, as well as being echoed in all countries where patriotism is promoted by government, that is, "united we stand, divided we fall". Noting that most countries on this planet do **not** spend their energies promoting patriotism, we also note that the data gathering process is bringing back an increasing amount of [patriotism] verbiage in a much wider country base than was seen in this work in 1997 through 2000. It probably can be argued that such [nationalist patriot fervor] language is the natural outcome of both the overt expression of American Empire and Hegemony, as well as the early stages of the demise of the global influence of the Empire. Without regard to the source of the appearance of [nationalism] as a language context, there are several items for discussion which can be extracted from the patterns of both the appearance of the language, and its details.

The first point arising from the patriotism language is that much of the global, non-english expression of the language has a very hard edge of [reactive militarism] to it. This is an outgrowth of appearance of the splinter waves within the [revolution] meta data layer. In other words, as the [islamic] and [unemployed] youth of France riot, the collection of their individual expressions as [disaffected, oppressed youth] combine to create a response wave in the [established/higher/comfortable] section of the society which expresses itself in the language of [patriotism] rising into very high profile in daily discourse. Thus those who aware of the shifting nature of language as a precursor to behavior change could have seen the continuations of the [riots/revolution] within the language of the [populace, france] some months back. As we note that the ALTA reports did. We encountered the rising levels of [patriotism] language within the [french language] sub sets about a year ago, and were able to piece together a forecast of the [revolution] meme ahead of its expression as social change.

A larger discussion point rising from the change in [patriotic tones] within both [officialdom] and other socially encouraged sub sets such as NGO's is that there is yet more evidence arising from the design patterns that an 'invisible hand' is out there pulling the strings.

In R. Buckminster Fuller's Critical Path, he concisely describes just exactly 'how it works':

"We have also noted how the power structures successively dominant over human affairs had for aeons successfully imposed a "specialization" upon the intellectually bright and physically talented members of society as a reliable means of keeping them academically and professionally divided -- ergo, "conquered," powerless. The separate individuals' special, expert glimpses of the separate, invisible reality increments became so infinitesimally fractionated and narrow that they gave no hint of the significant part their work played in the omni-integrating evolutionary front of the total knowledge and the power=structure exploitability in contradistinction to the omni-humanity-advantaging potentials. Thus the few became uselessly overadvantaged instead of the many becoming regeneratively ever more universally advantaged."

"Hyperspecialization also prevented popular comprehension of what the ongoing world

power was doing -- ergo, hyperspecialization kept society preoccupied in ways nondetrimental to the power structure's interests and practically dependent upon the power structure's media for information."

Critical Path, page 162.

The 'invisible hand' is **not** the Adam Smith idea of the 'personified expression of the collective behavior as species benefiting collective wisdom', but is rather R. Buckminster Fuller discovery during his 'experiment B years' of 1930 through 1985...

"Great nations are simply the operating fronts of behind-the-scenes, vastly ambitious individuals who had become so effectively powerful because of their ability to remain invisible while operating behind the national scenery."

In continuing with the second of our large ideas from [patriotic tones] we note that there are at least 3/three separate response waves which have developed within the global populace. The largest of these responses if measured in quantity of verbiage is the 'pan Islam' or 'dar es islam' wave in which the planet is racked as the [islamic religion] goes through the [transformation] process. The collision of 'western secular values' and the conservative core of Islam has been pending ever since the world became a sphere in the minds of man. At that point it was inevitable that the expanding influences of western thought and maturing Islam would collide. Having occurred we note that the central memes have resolved into the archetypical bespoke [fear of survival]. This is a focus on the [survival of islam] as a religion, rather than individual, personal survival. The [survival] is **not** guaranteed, and important and deep thinkers within the Islamic religion recognize this. The issue has less to do with the competition from liberalized secular humanism, than with an inherent weakness within the religion itself. Differing from christianity in the important point of a 'single mind' having provided the entire religion and its structure, Islam has always had a self-reinforcing conservative core. There are doubts that the nature of Islam will permit a reformation movement to exist. In other words, the extremity of conservative thought and ethos within the religion is likely now so strong that any attempt to liberalize/humanize Islamic thought will fracture the whole of the religion. It is exactly to the 'fracture' of Islam that our [death of religions] meme goes. Further, our [death of religion] meme includes all three faith based religions (christians, islamists, and jewish sects).

There are 2/two smaller, but perhaps more significant response waves to the [dying empire attempting to enforce patriotism/loyalty to the elite] meme. These include the [sustainable/ethical human earth] movement, as well as the [participatory change/metaphysical actors] movement. These sub sets are overlapping and present a fuzzy set appearance. This is due to both commonly held core values, as well as members who are allied with both memes.

The [sustainability] movement is aptly named, but our appellation of [participatory change] is less well suited. It is a very difficult concept to get across in the space of only a few words. As an instance the [participatory change/metaphysical actors] sub set includes the [psychonauts] as well as [meditators], and [peace activists] and others of a very diverse set of 'labeled interests'. Several hundred individual contexts merge to form a new group which modelspace is saying will come to be a very dominant component of FuturePop, our proxy for the [future populace of terra, post 2012].

Terra - Cloudy Skies

A newly appearing sub set within the Terra entity coming from the immediacy value processing has the descriptor of [officialdom], and has nearly a 1/one to 1/one correspondence between directly held values, and cross linked values. Most of the cross links are originating, and of these nearly half terminate in either [officialdom] as a sub set of Populace/USofA or GlobalPop; or the termination is within the Bushista entity, sub set [officialdom]. The Terra entity based sub set, absent the cross links, is dominated by [transportation]. This is to say that the main supporting sub sets for [officialdom] are under the descriptor of [transportation]. This descriptor set includes all forms of [transport] and for all purposes. The supporting aspect/attributes include [terra (intrudes on) transportation] as well as [officials point to clouds/sky/winds (as reason for) impacts on transportation]. Further the sub set of [transport] which includes [air travel], as well as [space travel] is heavily emphasized by the internal cross links over to [clouds/sky conditions/upper_atmosphere_weather], and within that group the dominant aspect/attribute set is [unavailable/unobtainable].

Within other supporting sets to [transportation] are indications that [no enterprise/effort] within the [winter] period will [proceed] without [terra hindrance]. Mostly this will come in the form of [cloud/sky] based problems, presumably [wind] associated. We do note that within this sub set are large lexical structures under the [secrets revealed] meta data layer influence which are explicitly pointing to [december] as being a month of [arrival of documents/literature]. The [information/documents] are further described as [those/it (which/that) has been anticipated]. Further support comes from cross links to both the populace entities where the termination structures are headed by [waiting for/awaiting_arrival].

The [transportation] supporting section of [problems (from/in) the sky/clouds] for [december] also includes internal supporting aspect/attributes for [down/falling], and [thorns pierce], and [small darts/sharps intrude]. These are further supported by yet more references to [cloud problems] and [sky/atmosphere problems]. At even deeper levels are bespoke [anxious] and [nervous anxiety].

The [transportation] sub set also derives support from [sun] which has its own [cloud] references, but in this case these contain [obscuring] and [blanketing]. In this supporting set are descriptors for [cold], and [frozen], as well as [gray death], and [small holes/places (of) refuge]. There are also indications of further [diaspora] pressures arising from [bad skies/cloud problems] over the course of [winter]. There are [lunar] associations for the [bad cloud problems], as well as [wind death (under) gray skies].

The number of [wind] and [wind storm] associated references is up, though the emotional summation values are actually higher within the [gray skies] part of the sub set. There are very high [visibility] values here for the [gray skies] and some indications that this will be a [discussion] focus, and may even be a teevee subject for a while.

GlobalPop - Poor Israel, Lunar Coalition, Pariah USofA

THE problem with [israel], that is to say, the [global zionist conspiracy], is showing within modelspace as developing a huge boost of nearly 4000/four-thousand per cent increase in [visibility] as the modelspace is progressed forward through [winter] and past the March equinox. The imagery of the supporting sets from which the higher visibility values are summed, is painting a picture of [israel] as a [broken jail/crumbled corral]. The aspect/attribute sets which accrue over [winter] do so in areas for [violent eruptions], and [expansive plans (for) empire/dominance]. These are supported by the active state words of [edgy/jumpy/anxious (before) action], and [rigidity (of) muscles/tension]. These values are indicated to peak by mid March, with some of the [tension] values falling thereafter. However, prior

to the March equinox, the [israel (as) zionist fortress] meme will emerge very [violently].

Within the [violence] language are lexical sets which cross link internally to GlobalPop, and to the Populace/USofA, and to the Bushista entity. The links are connecting the [exposure (of) crimes] meme under the influence of the [secrets revealed] meta data layer. In this case the data suggests that a [calculated exposure/release] of [hidden crimes] will [reverse/backfire] on the [zionists], and will serve as the proximate cause for Bushista to have [fear diarrhea]. This last is particularly nasty as a lexical set as the supporting layers can be interpreted toward a [visible] instance of [shitting in fear]. The descriptors for this set suggest the [incident of bowel-control loss] will be both in a [public] area, as well as [publically viewed]. Please note that this [incident] has very high levels of [visibility], but its real importance is the series of events/actions which it triggers.

As the [incident of bespoke/visible fear] plays out, it participates within the [exposure] of the [zionists] within the Populace/USofA, as well as within the GlobalPop. The GlobalPop entity is suggesting that [prominent zionists] in [large numbers] {ed note: greater than 100} will be [sacrificed] or [imprisoned] or [destroyed] over the course of the several months following the [visible Bushista fear/spittle-on-the-face]. The impacts on the manifesting [fuzzy revolution] within the Populace/USofA should not be minimized. The impacts on the GlobalPop entity are diluted by its size, but will be much more [violent/explosive] and [visible] within the global mediastream. There are repercussions from these acts of [pogrom/persecution] of the [internal zionists] within a number of countries which will include forecast [assassination attempts]. This last is the forecast reaction of the zionists; as though killing a few politicians will stop a building social wave.

There are very extensive cross links from the [zionist threat/violent pogrom reaction] over to the SpaceGoatFarts entity. These are terminating in thousands of separate linguistic sets. There are several terminating in [unknown energies from space], *BUT* we note that within this set, the supporting layers are suggestive of [explanations/labels] to emerge which may go a ways toward the removal of the [unknown] components. There are very extensive links from [zionists] over to [officially denied extra-human, intelligent lifeforms]. This is our context here at HPH for 'extra terrestrials'. Our definition is a bit more precise, contains over 20/twenty thousand descriptors and eliminates the issues of [space] versus [other dimensions] as being immaterial to the practical concerns that humans have with [contact with extra-human, intelligent lifeforms]. The [israel] and [zionist] aspect/attribute sets within GlobalPop are growing very thick links over to the SpaceGoatFart entity, and as noted the termination points are very diverse. What can be offered is that March, specifically from around the 14th onward should provide rising [visibility] within the global mediastream around these links. Not that that will necessarily clear up anything. We note with sarcasm that the only thing more [secret_creating/secretive] than a [zionist] is its [shadow]. Cryptic comments have to do for now. The meaning should be very much more clear in late March.

Approximately 1/3 (one-third) of the mass within the [israel] sub set is supported by [usofa] aspect/attribute set. This area gains very much in the accretion of aspect sets over the [winter] and through [spring]. Thousands of the accruing values are going to the [bankruptcy], and [financial destruction] of the [usofa] sub set. These accreting values provide support for a [collapse/crash] of the [israeli economy/national_currency] beginning in mid March. This point in the progression of modelspace begins a process which is still continuing into the June solstice. The imagery coming across from the accrual patterns as well as the actual linguistics are pointing to a [financial crisis] which will [bankrupt] and [destroy] the [israeli government]. There are repeated sets accruing for [multiple generation] impacts of [instant poverty].

The [poverty] of the [nation/country/tribe] within the [israel] sub set is in support of the [diaspora] sub set within GlobalPop. The interpretation is that [large scale movements/relocations] of [populace] within

[israel] will begin in late Winter as the dollar death meme begins to have serious impacts on [global aid]. These impacts will bring a [mass movement] of [fleeing] [israel] over 2008 as conditions worsen. Those [fleeing] the [stinking deaths/collapse of infrastructure] {ed note: also supported by [corrupted waters/undrinkable]}, will find that [few] will [allow] them to [relocate]. The idea is that the [refugees] will be [filtered] in an attempt to [sieve (the) dangerous zionists] from the [populace]. Only *some* potential relocation countries are shown as [filtering], many more, including a number in South America, will [deny access] to all as the [pool (is) corrupted/tainted]. The expectations for [refuge] in the [usofa] are dismal, in that the [pogrom] against [zionist attacks/manipulation/influence] will just be gaining strength as the [populace] of [israel] realizes their situation and many attempt to flee to the USofA. Most, that is nearly 75/seventy-five percent of the cross links from this area of [refugees] and the Populace/USofA terminate in either [congress/officialdom] or [military organizations] sub sets. Both of these sub sets are involved within the developing [pogrom] against [outsiders]. Of course, the termination areas within the Populace/USofA *are* participating within the [revolution] meta data layer.

Other areas within the [israel economy] sub sets are pointing toward side effects of the [global consumerism crash] such as a [dearth/total_lack] of [sales]. Part of this area does appear to originate from the anti-zionist movement {ed note: see Invisible hands above} which is part of the [sustainability], and [participatory change agents] social/populace manifestations. However, other sections here are pointing to a more or less natural process of global consumption slow down as a result of the dollar death. As [israel] is a very high end, elite product economy heavily connected to the [global bankster cabal], the prospects of an [israel-as-country] *without* dollar support are very dim.

Other areas of the GlobalPop are equally pessimistic about the [pakistan officialdom]. The accreting lexical sets of immediacy values suggest that December 9th will mark the [next level] of the [pakistan revolution].

Along with the energizing of the [revolution] meme within Islamic politics, there are a number of lexical structures within the GlobalPop entity which go to the idea of the impact of the [revolution] meta data layer on both the [press], as well as the [international culture]. These areas of [revolution] affected aspect/attributes are also under the influence of the [secrets revealed] meta data layer. Further complications come from the very extensive cross links over to the SpaceGoatFarts entity. The cross links bring in extra layers of details that suggest that since *last* January, that is, January of 2007, the [international culture, interplay/negotiations] have had a [schism] which is now showing as [obtain/reaching visibility] in January of 2008, and beyond. This is a growing meme. It centers on the idea of [lunar/space] as *the* driving factor in [inter-country relations]. Specific geographic references suggest that [china] and [russia] and [iran] and other countries, explicitly excluding the [usofa], but marginally including the [uk], are now conducting negotiations [about/around] a [combined] response to [lunar/moon developments]. This area within the SpaceGoatFarts entity also includes support from the [unknown energies from space], and [ancient tools/history]. The imagery suggests that these countries, absent the [usofa], are officially [educating] their [populace] and beginning to [plan] for [contact] with [ancient history/old tools]. *PLEASE NOTE* that current Russian and Chinese publications are promulgating the idea that NASA has hidden quantities of lunar alien artifacts for decades, and that current Chinese lunar expeditions are to be [repurposed] with the idea of a [joint/international expedition force] to the [moon]. The accrual patterns suggest that over this next year [public pressure] supported by [officialdom] in a large number of countries will be on a track to a [global expeditionary effort] to [mine/exploit] the [alien/ancient history/old tools]. Further the data suggests that as we proceed toward October of 2008, that throughout [spring] and [summer] the [manifest contact] will emerge to [alter human perceptions]. Again, a very large number of cross links go to the FuturePop entity-in-development, and specifically to the [participatory change/metaphysical artists] sub sets.

The whole of the SpaceGoatFarts linked area of GlobalPop is larger in mass than the total size of the

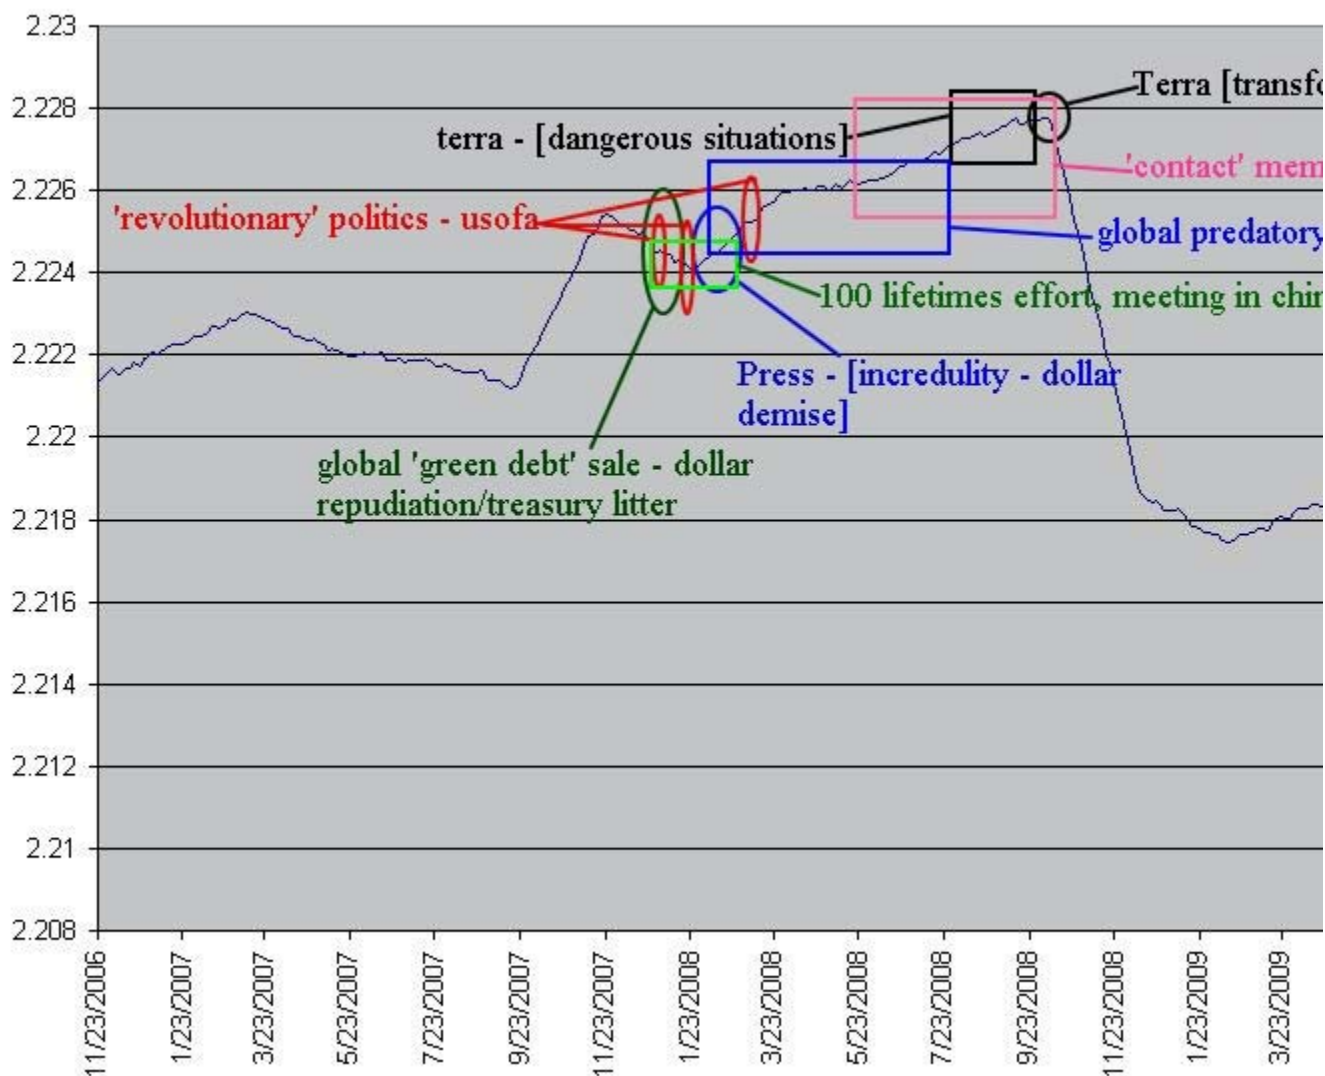

Populace/USofA. This area within GlobalPop grows with the movement of modelspace such that by late [spring] the language of [contact with extra-human intelligence] as well as [ancient tools] will be so highly [visible] that it may be a subject of daily discussion for millions around the planet. Much of the cross linked areas in both SpaceGoatFarts and GlobalPop are also cross linked over to Terra entity.

While the picture presented by modelspace over Spring and Summer 2008 is complex, chaotic, and confusing with *lots* of stuff going on, it does appear that the language around [contact] will be a very significant driver of global populace emotions. The ramifications of many [countries] actively [preparing/engaging] their populace around the [contact] meme cannot be over estimated. The side effects show within the accruing data as [affecting warfare] as well as [altering militaries], and [triggering/prompting/initiating social change]. The [social change] is [multiple generations] in duration values, and while it has a very high summation for both [intensity] and [impact], this whole area is manifesting against a background of [dollar death chaos] in which the planet tries to extricate itself from trillions of dollars in debt instruments.

As the 'lunar coalition' of countries, absent the [usfoa] develops in modelspace from [spring] through [summer], the data sets are pointing to [documents] relative to [messages from space/ancient contact/distanced_communications] appearing with high enough [visibility] sums to indicate a discussion within the global medistream. These [documents] are supported by aspects/attributes going to [writings], presumably of [extra human] origin. A supporting set in this area suggests that the [global medistream] will [initiate] a [planetary hunt] for [remnants] of [previous visitations]. There are some aspect/attributes in support suggesting that a [reward system] and a [laudatory press/celebrity] will be accompanying the [discovery process]. This is only a minor sub set of the total [contact (with/through) ancient tools] meme. Other areas show that the [social change] will include a meme about [blessings]. It is unclear whether the [messages/contact] themselves will be seen as a [blessing], or whether the aspect/attribute set applies to the growing [social change] which occurs as a result of the spread of the [contact] meme through the global populace.

We note that the cross links between GlobalPop and Populace/USofA show that the [populace, usofa] *is* also engaged with the [contact] meme, however there are many supporting layers suggesting that [officialdom, usofa], and [officialdom, anglo-american elite] are [actively suspected/questioned] and [excluded] from the [decision council/tribe/meetings]. Further there are internal cross links within the GlobalPop entity which go back to the [alien smells/taint/odor] and the [israel] problems. This also weighs against a larger role for [usofa officialdom], as does the [disinformation] and [lies] of the previous century relative to this subject. The [pariah country], also known as USofA, is shown as being [judged] by the global community for [decades of official falsehoods] such that it is only [individuals], themselves [pariahs] within the Populace/USofA, who are allowed to [contribute] to the [lunar coalition]. This sub set of aspect/attributes in support of the [usofa] section of the [contact] meme explicitly has these persons labeled as the [falsely accused innocent people] within the [populace, usofa]. This area within the GlobalPop entity has cross links over to ThePowersThatBe entity where they are terminating in what we are labeling as [creeping isolation]. This area can also be interpreted as [creeping irrelevancy]. Either way, the TPTB entity has very negative associations with this lexical set, and indeed the whole of the meme. It is as though they are pissed at the 'how' and 'why' of the information coming out. In spite of all of the [prohibitions] against [usofa officialdom] and the [contact] meme, there are indications that many [usofa citizens] will participate in very significant roles.

Emotional Tension Trend

Populace/USofA - Chaos, Dirt, Great Brooms

The verbiage around the idea of an attack on [iran] by the [military] and or [proxies] of the Bushistas is rising within the immediacy and shorter term value sets within the Populace/USofA entity. As the modelspace is progressed through [winter], and to just past the March equinox, the values rise rapidly, including the [visibility] sums. The cross links make this area *less* than easily interpreted. While the basic structure is in place for the Bushies to [instigate] yet another [war of aggression], there are counter currents which make this not quite as clean a structure.

The cross links from the Bushista [iran war] aspect/attribute set over to Populace/USofA are terminating, for the most part, in areas of [revolution] either directly held, or in aspects which are participating in the [revolution] meta data layer, such as [contempt expressed], and internally held [secrets revealed].

A further muddy influence on the interpretation is that almost all lexical structures within the

Populace/USofA are cross connected to the [dollar death] meme in some fashion. The whole [trauma] of the [sudden poverty perception] is dominating all of the other areas in the summations. While we can extract the [dollar death] numeric contributions to the emotional sums, the result is probably not meaningful. Much of the Populace/USofA entity is going to the impacts of the [realization] rather than the [poverty] part of the [dollar death], and it is the [mental impacts] which seemingly will have the larger consequences, at least through to March. Thereafter the [populace] will be shifting [social conventions] very rapidly. As the temporal marker of the [press] 'getting it' appears in Spring 2008, the aware observer will be able to notice the many impacts on [social transactions/interfaces/conventions] appearing. This impact at such a core level as the 'how' and 'why' of [common culture/social convention] within the [populace/usofa] begins to overshadow all other lexical structures.

So just as modelspace suggests that the Bushies are [girding] for yet another [failed war], the social and economic counter currents within the Populace/USofA entity are indicating that [bloody revolution] may be in place instead. We note that the [congress] has a large lexical area, however it seems that most of the potential [actions] here are [after the fact] and are perceived as [empty threats] as so indicated by the cross links to Bushista entity. Again though, the [dollar death], and the increasing [social chaos] as well as the [economic] and [banking failures] will [constrain] activities, and even [fuel] the [revolutionary] memes within a [counter/anti-Bushista] movement. And this will include large areas of [paid officials], these are the [civil service] level of [government] employees. The set is further defined as that sub set of [civil servants] without a [vested interest] in the [globalist creed]. This sub set represents the [populace] for which the [new world order/elitists/globalists/illuminati] is [training leaders]. In other words it appears that during the [chaos] of late Winter, and early Spring here in the USofA, that the [civil service] will participate, albeit below much [visibility], in the [manifesting revolution] against the [new wars] of the Bushistas.

As the modelspace is progressed forward into Spring of 2008, the rising aspect/attribute sets suggest an interpretation of a [great broom] which will [sweep clean] the [social stage]. This [sweeping clean] of the [social body politic] will *not* be a pleasant process. As this area participates in the meta data layer of [revolution], the [sweeping] will undoubtedly raise clouds of dust and [social/political debris] which the [populace] must endure.

Please note that the [sweeping clean] process which is indicated to begin in Spring of 2008, is a multiple year effort, *and* is greatly augmented in its summation values by internally held [contact] meme values. In large part these are terminating points for GlobalPop cross links, however a significant portion is 'home grown' within the [populace/usofa]. The indications are that the [decades of lies] from [officialdom] about [extra human lifeforms/ancient tools] which will become [evident] and [accepted] within the [populace] will bring along with it a 'dawning' understanding of the role played by the [elitists] as 'masters'. In this [understanding] the [populace] will change such that [revolution] against [lying officialdom] will gain social cache', and [acceptance] as a [moral imperative] within the [populace]. The modelspace is indicating that some time in Summer of 2008, the point-of-no-return will be reached within the [populace, usofa] and [revolution] will be a 'predictable outcome' which will be [discussed] within the [global mediastream].

Buried deep within the supporting sets of [contact] within the [populace/usofa] we find repeated data sets describing a [group] of [warrior/monks] {ed note: probably not literally monks} who will be the [assumptive leaders] of the [contact] component of the [social changes] arising from the [revolution] meme. These support sets begin to gain [visibility] sums of note by late Winter, and continue in rising [visibility] throughout Spring and Summer. The actual descriptor set of the set is best interpreted as [aloof (from) mundane affairs], but as an appellation it lacks some snap. Further the [mundane] word set must be viewed in total context which includes [astrologic components], so the descriptor set is even further augmented as [aloof from calculations involving mundane/terrestrial actions]. The imagery of the

descriptor set provides that these [monks] as we term them have the key component of [self sacrifice] and using that as our base we derive our label of [warrior monks]. The data sets show these people as very diverse, and surprisingly numerous, but as the universe is presenting *really damn big* challenges, it presumably will also provide a whole lot of talented humans to accept the challenges. UB1?

Markets - One Hundred Lifetimes of Rice

The Markets entity processing of the last of the immediacy and shorter term value sets are pointing toward a [meeting] in [spring], so after the March equinox, which will [confirm] or [punctuate] the [dollar death] meme. The [visibility] sums for the [meeting] are reasonably high, so this favors some level of reporting within the global mediastream. However, be advised that the primary language of the [meeting] will be [chinese], and that [interpretation] from that language into the others needed at the [meeting] places the importance on the principle speakers, that is, they will be [chinese].

At the time of the [meeting] the Markets entity is forecasting an incredibly powerful, and bespoke [brief] set of manifesting circumstances. The descriptor set for these manifesting circumstances *may* be interpreted {ed note: hopefully, not wrongly} as being a [100/one-hundred lifetimes point/circumstances]. The descriptors include references, via cross links to both populace entities, to individuals who will use these [social change/flux circumstances] as a [springboard/lift/elevation/jump/propulsion] to [achieve/create] a [100/hundred lifetimes effort]. Sooooo...it could be that concurrent with the [chinese language dominated meeting] near or slightly after the March equinox, a set of circumstances will develop which will present the potential to [upend/overturn/revolve] the [markets] as they exist now.

This is not to say that the [dollar] in any way recovers.

In fact, the data sets are dominated by [hardship], and [harsh conditions]. These both have large cross links spreading out within the Populace/USofA entity where we have many [revolution] aspect terminating points. The [hardships] are indicated to begin in real seriousness in mid [winter] and to progress along, [multiplying size/magnitude] through late [winter] and into [spring]. Then, at least according to our data sets, a [meeting] of those who are [roped/bound] by the [dollar] will get together at a [chinese] venue. At that point, the [coffin] for the [dollar] will be designed. Apparently knowledge of this, as well as how to act upon it, will create a [revolution] within the [power bases] which now [control/manipulate the markets]. This [revolution (of) internal dynamics] is indicated to create circumstances which will [propel/lift] certain individuals/groups to levels that could, in more normal times, only be achieved at the cost of a [hundred lifetimes effort]. The idea is that this effect will be almost [overnight]. This set of circumstances, and the [new powers] will *not* be welcomed by ThePowersThatBe. The data indicates that TPTB will initiate [investigations] and will set [officialdom] on these [100/one-hundred lifetime individuals], however the results will not be meaningful, given the levels of change that follow, and overtake the legal maneuverings of TPTB.

The [new powers] will arise within a period of general [economic crumbling] and changes of the planetary [social culture] on a vast scale. However, the data suggests that, as may be expected, the [100/hundred lifetimes effort] comes with a very high cost. The data is pointing toward [time] being the absolutely critical issue, and as such, since most humans have very sloppy ideas of timing at best, *most* who try to [time] this [opportunity/circumstances] *will* [fail]. Very few will succeed, and universe will decide that issue. But the data warnings do not stop there. The issue of [persecution] both by [officialdom] and [mobs/masses] exist as *probabilities*. So those with too high a profile may have

cause to regret some results of what universe seemingly lays before them. An admonition against 'leaping' before [thinking/consideration] of the [consequences] is slightly less clear than a slap upside the head. We note with irony that the 'opportunity' will exist within 'chaos', and as with many Chinese sayings, the result comes back to the [paying the cost]. That is, to gain a 100/one-hundred lifetimes of rice will still demand payment, to universe of commensurate value. That is, as the poet says: "for each daily bowl of rice, for each grain of rice in the bowl, perspiration soaks the ground, muscles weary, suffering spent ". So those who reap at this level **will** be compensating universe, as it sees fit.

To return to our temporal marker of the [meeting] in [chinese], the progression of aspect/attribute sets for the [dollar, usofa] from that point on is [bad] in [spring], [ill] in [summer] and [dead] by the end of [fall].

As the modelspace is progressed through December and past the solstice, the immediacy values are indicating that there will be an early temporal marker for developing circumstances which will arise in the depths of [snowfall] the [red pope] will be [gravely ill]. The [red pope] aspect/attribute set also includes some further details in that the [pope/authority] is described as being the [controller] of the [red gate/pathway]. Further details emerge as this person being at the [center] of the [currency] maelstrom, though [distantly observed/observable]. The [gravely ill] aspect/attribute set may **not** be referring to the person of the [pope], but instead may be pointing to their [empire/church]. The forecast [threat] to the [red pope] has to do with the [changing standards], and the perception of the [gates (being) attacked] by [mobs]. The rising of the [red pope] distress **ought** to be [visible] given the relatively high values for the [press] component.

Another temporal marker for [winter] will be a [fuel] crisis within the [markets, usofa] which will hit [food production] very hard. There are indications that both [fuel] and [biospheric degradation] will essentially [destroy] [fishing] as an industry. This is showing as the first of several similar temporal markers affecting [food supplies] as the [winter] progresses into [spring] and the really nasty bits get warmed up as the planet [heats up] both actually, and metaphorically.

Conclusion: ALTA Series 0708 - Si c'est fini

The single largest change that our data has ever indicated looms ahead. The small word of 'transformation' does **not** convey either the depth, nor the totality of the change described. As the data is describing a change of humanity at a very core level, it is also providing a picture of the time that such a change will take. From our calculations, the [visibility] of the looming wave of change is reached just in the early days of October 2008. For the next 18/eighteen months the [change manifests], or in the vernacular, [shit happens]. What results from the levels of change forecast cannot be imagined in any realistic manner. The linguistics become too vague to adequately describe just what sort of world will exist in Spring of 2010. So for once, even given their power, words/language fail us.

The question facing us all is as R. Buckminster Fuller wondered "If success or failure of the planet and human beings depended on how I am and what I do...How would I be? What would I do?"

According to our data, this next year marks the time when the planet earth and human beings will begin both personally, and en masse to answer just that question.

#####

This marks the end of the ALTA 0708 series.

Thank you for participating in the ALTA series. There would be little point in our work without our ability to share, and as an interactive linguistic experiment for *entertainment* purposes only, the reports are seemingly offering an interesting, if not particularly pleasant view of universe as it manifests out of the future and into our collective present.

We note here that at some point the social changes around us will negate our ability to continue this work. As noted in the reports in this series, this next year may well bring such a time. We suspect that we will be able to do at least 1/one more ALTA series, however, even that may be affected by the cascading problems of the [dollar death] meme. We will keep on keeping on as long as conditions allow the production of these reports. The data collection efforts and the lexicon tuning for the next series will begin within a week, and we expect to have the first of the next series of report out before the end of the month. The issue most affecting us here at HPH is the 'october 2008' release period of over 4/four months. It will be a release period taking place against a background of nearly a year of developing/increasing economic chaos, and social/political upheaval. In *normal* times such a release might imply global war, or even nuclear war, just given the emotional summations. However, we have real reason to suspect that 2008 will be totally not normal. So who knows?

We don't yet, but our focus for the next run will be October, 2008, or 1008 as we are labeling the run. We hope you will subscribe to this next bit of work, but bear in mind that very serious dollar problems will begin to shown themselves in December, here in the USofA, so be cautious with currency...you will need it.

Thanks,

Igor and Clif.
