## Meta Arts - Bespoke

When we use the word 'bespoke' to describe language being encountered, we mean that the software used for reading up the data has run into that actual word being used within a context where it is not within the 'normal' range, \*and\* also that the word being used has supporting language around it to lift it up to the archetype level. An example might be running into the word 'fear' used in a garden discussion forum. If the word has supporting linguistics which identify the object of the fear as something \*not\* usually associated with gardening, then the processing would send this snippet up for possible inclusion as a 'bespoke archetype'. In the case of the gardening forum (and any other), if the bespoke word, fear in this example, were to be used relative to the context, it is unlikely that it would even be passed up the chain of processing, and more probably would be chunked into the 'aggregation' processing for some gnawing. An example of an expected use of the bespoke word 'fear' within the gardening forum might be its associations with normal context material as in the phrase "I am afraid that the deer will get the roses again this year and I will

have no blooms". A normal use of the word within the context. An example of an abnormal use could be such as "I am afraid that the stupid administration will succumb to Israeli pressure and attack Iran and a nuclear war will result." A bit of language that probably *\*should not\** be found in a gardening forum, and therefore something sent along for processing in the 'developing archetype/bespoke separation stream' processing. Make sense? So the discrimination for bespoke words is not really all that sophisticated, however, as crude as it is, the results can be enlightening. As a side note, it is the 'discontinuous/out\_of\_place' references for geography such as the 'Israel' showing up in the gardening forum with emotive words attached which attracts the spyders in their data searches. These sorts of 'place' and 'emotion' word groupings within our parameters, *\*and\** also associated with 'discontinuity of subject matter' are the only location references that we process. In a similar way, if we were to find 'numbers/numerals' being used with emotional language in a out-of-context manner, those get swept up by the spyders for further processing.

## Markets - Out of Time, Out of Money, Energy Sucks, Red Popes Dead

It is clear from the [visibility] rise of the [recession/depression] linguistics within global mediastream that the general rise in [fear] context words has manifested. However we note that the [fear] levels are still both rising, and being [denied]. The supporting sets are indicating that by Fall, the [denial] of the reality shifts which have brought out the [fear] context will be minor, and the [consensus] view will have changed. This means in turn that it will be over [spring/summer] that this consensus emerges.

While there will be some predictable increases in general mood with the coming of [spring], this will be a very unusual year, both for the [public consciousness], and the [markets behavior]. In the past, certain

[seasonal] indicators for general [markets behavior] have been promulgated. These have been accurate, in a general sense for so many years that they have become institutionalized and are now 'common expressions'. The progression of the modelspace through [spring] and [summer] is indicating that this year will mark the [turning point] after which those expressions will no longer be within general use. In fact, the linguistics are now 'tagging' these sorts of [seasonal forecasts of market behavior] as [anachronisms], or 'things of the past/out-of-time'.

Further problems will beset [markets] in the form of the forecast [millions of small particles] meme. This meme is indicated to start a many-months-long manifestation shortly after the [spring equinox]. The ramifications from the [millions of small particles] as well as the diversity of the expression of this meme will [bedazzle] the unprepared minds of the [populace]. The aware observer, sensing the emergence of the meme, will be able to focus on other than the [losses] and [devastation] of the moment to take in the wider, [social order changes] which will be manifesting \*just\* under the surface of the [millions of small particles] as they fan out through universe.

The [millions of small particles] supporting sub sets are indicating that something akin to an [atm failure], or perhaps an [electronic/digidollars failure] will occur which will be both the first [visible] manifestation of the meme, as well as the [definitive] temporal marker of the end of [business as usual]. The [failures] of the [millions of small particles] will bring the [social order] within the [markets controlled/dominated] parts of the planet to a temporary [standstill] or [seizure] or [lock up].

There are several trends affecting the [prices] as well as the [values] of things. These trends are forecasting the continued [rise] in the [prices] of [real things] in dollar terms. This will be supported both by the [dollar death] meme, as well as the [global demand] pressure. However the [dollar death] meme has several significant [episodes/events] ahead this [spring/summer] which will make [dollar prices] within the commodities continue to rise. However, we need to note that a part of

these [rising prices] reflects the [dollar death] and so no new 'wealth' is being created, rather merely a real world acknowledgement of the [falling purchasing power/desirability] of the [usofa dollar].

There are supporting sets for the [millions of small particles] aspect set which include aspect/attributes for the [particles] to [go bad]. These areas are supporting the 'walk away' meme, as well as the [diaspora] sub set. Many of these areas of support are also participating in the [rebellion/revolution] memes. Many of these areas are in support of [food shortages], and [health care (system) strains] over the late [spring] and into [summer]. The [alterations] made to the [usofa populace] including the [social infrastructure] will be [visible] by late [summer]. There appears to be a [markets] related component to the [rebellion] meme as it is expressed within the [populace/usofa], and specifically focused on [repudiation] and the tie-in to the forecast [veterans rebellion].

The Markets entity continues to forecast a [decrease] in [deliverable] goods of all kinds at all levels. The forecast includes the basest levels of commodities and foods, and also now includes [products] further up the processing chain. A real impact of the manifesting (and forecast in ALTA 508/708) [employment crash] will be the establishment of the [visible] part of the feedback loop of [employment] and [manufacturing]. It would appear that in this century, the feedback loop will be global, and will cause very large problems for the [chinese] both as a [populace] and as a [government]. The expression of the feedback loop within the American [markets] includes further [employment decreases], and significantly a forecast [crash] in [service work] over the [spring/summer] such that the [mobs/crowds] of the [unemployed] become a very [visible] part of both the global mediastream and [public life].

The [employment crash] sub set of the Markets entity continues to support the [rebellion] and [fuzzy revolution] memes within the [populace]. These memes will now be coming up to [displace/haunt/

disturb/overwhelm] the [markets] as the [social infrastructure] and [social consensus] begin to change this year. The [consensus view] is a very powerful sub set with extreme levels of building emotional tension summations. It is indicating that such formerly 'outcast/outlawed' actions such as [squatting] will now be shifting within the public view into the [acceptable] category.

As the [dollar death] meme continues to play out over [spring], and as the [banks/banking system] continues to flounder and [gasp] for life globally, the Markets entity is suggesting that [energy] will undergo a [reorganization] within the 'developed world'. This area is extensively cross linked over to the Terra entity where the indications are for major Terra intrusions into the [oil] business this Summer and Fall. Further areas are suggesting that [energy theft] of all kinds will be emerging within the global mediastream, but with specific focus on the USofA, and greater Britain. Many of these [thefts] are shown as having very tragic consequences. They will be able to be used as a temporal marker for the acceleration toward the [millions of small particles going bad] part of Summer.

As the modelspace is progressed past the [equinox], the Markets entity gains supporting lexical sets suggesting that the [red pope dies], and along with that [prominent death] will come the [crack in the armor/shield] which is all that is needed to start the [secrets revealed] meme off on a tear though the TPTB and the [popular social order]. These [secrets revealed] are forecast as causing actual [deaths] in the form of [reactions to shock/horror] within the lower levels of the [establishment] as many persons discover their [lives] have been [diverted/hijacked] and that they are [complicit] within a larger [plot/scheme] which is now [unraveling/coming to light]. There are indications for [swinging men] as in [hanged men], though the data is less precise about 'who hangs who'.

## Populace/USofA - Gimme, Crazy, Corked, Hu's on first, Modesty Blazes

The levels of bespoke [fear] rise daily within the word use patterns of the [populace/usofa]. As modelspace is progressed forward through the [equinox] the summations for the bespoke [fear] use rise to a minor peak in late April with a trailing down of that value set through to September, within our current processing. As the longer term data sets are added during this series, the summations are expected to change. At the moment the Populace/USofA entity finds its [spring] dominated first by a brief [economic chaos] flurry of news, then as March fades into April, the beginning of the rising of bespoke [fear] set until our peak in late April, early May. Much of this bespoke [fear] is directly supported by [military] within the Populace/USofA and that in turn is supported by [external] lexical sets which are suggesting that the events causing the [concern/fear over the military] are external to the [usofa] as a continent/nation. This is *\*not\** so indicated within the October through to January bespoke [fear] set which emerged beginning in ALTA series 0508. That bespoke [fear] set has continued to accrue values which indicate that the emotional release language of that time will be expressed directly about the [usofa nation/continent] *\*and\** will be focused on [core] of the [country]. Please note that [core] does not represent the center of the land, but rather is more toward the [emotional core] of the nation. This area is also supported by repetitious aspect/attribute sets going to [personal experience] such that the interpretation is the bespoke [fear] which is shown for Fall of 2008 though to February of 2009 will be 'personally felt' by all who live here in the USofA.

Long before we can arrive at the Fall [downward] period with its very large drop off from building tension language into what appears to be a multiple year swim about in release language, the Populace/USofA entity is suggesting that yet [many trials/challenges] will have to be met. Some of the [challenges] are described with a singular focusing aspect such as [military]. Others are more general and appear to apply

to the [populace/usofa] more or less as a whole. As the modelspace is moved through the later part of March and into [spring] proper, several of the [challenges] can be observed in their 'set up' stage. Many of the [challenges] will mature over [spring] and will be 'ripe' and have high [visibility] sums by mid [summer]. Many of these [challenges] will also coalesce around interwoven 'themes' which modelspace is indicating will provide the aware observer with an excellent example of the cohesive cogent verbiage of 'universe speak'. We can expect that a central theme running through the [spring challenges] which will initially affect the [military, usofa], and then later the [populace/usofa] more broadly will be the [ambition(s) (for things/results) not presently obtainable]. This linguistic set also can be interpreted as [mental aberration/denial of reality] as both of these are secondary supporting aspects. The [mental illness] component rises as the [denial of reality] and [pining/desiring] for the [impossible outcome] are strengthened by the incoming immediacy and shorter term value sets {ed note: immediacy = 3/three days out through 3/three weeks; shorter term = 3/three weeks through 3/three months; longer term = 4/four months through > 19/nineteen months}.

The modelspace may be indicating that a [collective mental illness] emerges in [spring] within the [populace/usofa] over the [strong emotional desire] for a set of [unobtainable circumstances] to manifest. This form of [spring madness] will have a direct impact on the [fading (mental/emotional) health] of the [populace] as [summer] is reached. The data set \*is\* indicating that the [summer mental illness] will be [masked] by a rise in [positive emotional attitude], albeit a small [uplift]. We have noted this [increased mental/emotional energy] being forecast in modelspace for the last 2/two ALTA series, or over 4/four months now. It would appear that the [summer lightening/lifting] of the [popular mood] can be viewed as the [last party] prior to a very very very long period of [emotional release/agitation/outpouring].

As part of the support for the linguistic set of [collective mental illness], a large and very improbable block of aspect/attributes goes to the idea

of [college] and [long term/multiple year/decade] and [problems]. The support for these linguistics comes primarily from economic related aspects. Further into the supporting layers, we find that a reasonable, albeit strange interpretation, is that a very large part of the [collective mental illness] will come from the [meltdown of the higher education system]. This last is probably related to the descriptors for [twin excesses/extreme conditions]. The first of these is the [coagulation] of the [funding system], and then the subsequent [return] en masse it would seem, of the [college students] to the [parental nest(s)]. Hmmm. This \*does\* sound like the beginnings of mental collapse, at least for the parents.

Further problems which are noted in the supporting details for the [collective mental illness] rise from emotional tensions around the aspect/attributes of [damaged/harmed tendons]. These are specifically described as [tendons] related to [transport/movement-of-the-legs]. The cross links over to the Terra entity suggest that [conditions] over [1000/one-thousand miles away] will become a [factor] in the [developing collective disconnect/behavior problems]. This [far away influence] is shown participating in the plethora of problems of [spring] here in the USofA. The [far away influence] may well be referring to [china] as the data sets are piling on references to [very large] and [very swift] changes within the [social order/geopolitical stance] of [china] over [spring] and into [summer].

As the American experience moves through [spring], the modelspace is indicating further [breakdowns] within the [civil service] as a result of [cognitive dissonance] within the [ruling elite]. The aspect/attributes at the detail levels are painting a picture of the [civil service] being [thinned/pruned] by the emerging [conditions], especially those involving the Terra entity. This [thinning/pruning] is showing as a [natural reaction] to the [madness] of the [system] and its [current ruling elite]. The impact of the [thinning] of the [civil service] will be that no matter where [government] goes this [spring/summer], there will be [difficulty] piled upon [disaster] all being blocked by

[governmental obstructions]. Not a good time at all for either [citizen] or [civil servant]. This area provides support for the longer term [revolution] meta data layer.

The newly processed shorter term value sets are growing around a theme which developed last year, that is, the idea of [cars in ditches]. This lexical set has been persistent in its growth, although erratic in the volumes of supporting values which have been added over the last year. It now appears that the linguistic set is focusing on this [spring], perhaps close to the Summer solstice, for an appearance of the [cars in ditches]. The supporting sets show [damages] to both the [vehicles] and the [occupants] such that [injured persons] are taken to [hospitals]. This area is associated with the Terra entity in 2/two streams of cross links of about equal weight in emotional sums. The termination points are [traumatic winds], and [earthquake swarms]. In the supporting sets for the [cars in ditches] from the Populace/USofA entity side, there are repeated supporting areas for [damage] to [pipelines] and [large plumbing complex]. These include [running rips] down the [length] of [ground fastened pipes], as well as [ruptures] of [complex manifolds]. This last is extensively cross linked over to the [winds] sub set.

As the modelspace is progressed, and takes the Populace/USofA entity along through [spring], the [cars in ditches] sub set is joined by [illness], and [communicable disease] sub sets which are rising in emotional values as the [cars in ditches] begins to fall. The implication is that the [visibility] of the [cars in ditches] will be lowering/finishing just as a large rise in the emotional building tensions around [disease] and a subsequent rise in [visibility] summations. The [disease] meme will apparently shift over into a more [persistent] thread in the background of the news as [summer] is reached. Further complications are apparently to be expected as a result of the [disease] meme getting a boost from the [natural disaster] sub set within the Populace/USofA. The implication is that the [natural disaster] manifestation later in the year will be accompanied by the rise in [manifesting disease].

In a separate track, but also rising at the same impact levels as the [natural disaster] is a sub set which is headed by [bad luck/karma/joss]. This sub set is very extensively supported by [military] aspect/attributes including specific [army], and [navy] sub sets. These are in support of the [bad luck/karma] set and its rising [impact] and [duration] values. The primary line of aspect/attribute support includes direct references to [defeat], and this is supported by [complete/total/crushing], and includes layers of cross links in the supporting sets. These cross links include Markets entity, Bushista entity, GlobalPop entity and also contain explicit references to the [humiliation] of the [ruler] as the [complete defeat] emerges from a [bad decision/policy]. This is shown as manifesting in [summer], and includes explicit longer term references to a [defeat] so [total/crushing] as to be \*still\* [visible] within the global mediastream [10/ten years on]. Further support for this last include the idea that for a [decade/or longer] the [military/army] will \*not\* be able to [attack] anything, as it is mired under a [mountain] of [debris/waste]. The [mountains of problems] include the [sorting/ordering] of the [stream (of ) hidden crimes/orders/policies]. This last supporting set is participating in the [secrets revealed] meta data layer as well as being extensively cross linked over to the SpaceGoatFarts entity. Within those cross links are hints of [damages] which will be [inflicted] on the [reputation] of the [pope/catholic], and the Bushistas such that both are [tied], and [exposed naked] to the Populace/USofA. Further, from the [defeat] of the [military] will also emerge a [pressure] to [observe/discover] a [peace] within the [populace] as a [common oppressor] is [revealed (in the) face]. As a last note on this sub set, the cross links over to the Bushista entity terminate in [disastrous], and [fatal errors]. Further there are references to [suicide], however we note how often the TPTB opt to have lower level functionaries do the actual [suicide] for them.

There are a number of cross links from the SpaceGoatFart entity over to the Populace/USofA entity where the termination points are within the [space] sub set. This area supports the [science] and other [official gnosis] components of the Populace/USofA. The [unofficial], and the

[unknown], and the [officially denied] subjects are to be found in the SpaceGoatFarts entity. The cross links are suggesting that a [challenge] will be [waiting] for the [populace/usofa] with the next [space shuttle launch]. This [launch event] and subsequent [dance into space] will be setting the [populace/usofa] up for the [summer challenge] relative to [facing reality] about some part of the [space adventure]. It is true, that NASA has managed, in the past, to engineer \*any\* excitement/participation for the average citizen \*out of\* the [space adventure], however, the processing for both the immediacy values, as well as the shorter term value sets covering [summer] are indicating that the [space race] is on again, only this time, the [race] is not \*merely\*, or \*only\* about 'us versus them', or [who's on first]. Given the large number of cross links over to the GlobalPop from the [space] sub set of the Populace/USofA entity, we can be forgiven for our rewording of the expression into "hu's on first".

The data sets are pointing to a [chinese discovery] which is shown as [forcing] the [administration/officialdom (of) Bush and NASA] to [disclose] some very long held [secrets]. This area is a supporting set for the [secrets revealed] meta data layer, and is also indicating that a [bubble/burst] of [secrets] relative to [space] and what has been [found/discovered] over the [summer]. This is a supporting set for the [facing challenges (to) authority] relative to [space]. The latter, [summer] events are indicate to be temporally linked to the [veterans rebellion].

The immediacy sets are showing that the [administration], presumably of either NASA or the Bush's will have to [face] having [dragged (the country) through mud] as a result of the [chinese] and their pending [announcements] relative to [space exploration]. Further the [officialdom] is also shown to be [presenting] a very difficult [situation] to the [bush administration], and demanding a [decision]. The problem will apparently come from the [administration] \*not\* being able to [decide]. This then is shown as allowing a [small gap/distance] of [time] to intrude into the [flow] of the [challenging circumstances]. In turn that is when the [visibility] factor begins to rise and the [populace]

is indicated to become first aware of the [space crisis]. The [implications] for the [officialdom] are \*not\* good. The [populace] will be really really [pissed] and will be in the mood to [eat (the officials) livers] over the [situation]. It is this emotional rise which is shown as [igniting a fire] within the [populace] for [knowledge/participation], \*and\* which also is shown to [light/combust] the [rebellion] meme into [action] within the [nasa infrastructure]. This in its turn provides support for yet another wave of [secrets revealed] which modelspace is indicating will carry us through Fall.

A sub set of the [space challenges] for Populace/USofA for this Summer shows that a [group] of non-officials, or [ordinary citizens/regular humans] will be able to overcome their own internal problems as a group to present a [private/personal science/scientist] view, which will emerge over the course of [summer]. This is an important occurrence in several ways, and not merely due to the actual information presented. The existence of the [private science group] is also important in that it will provide the aware observer with a very good example of how a [self-organizing collective (SOC)] can function even with internal divisions, and how important such SOC's can be in leveraging the larger social mindset in new directions. It is this last component, which is to say the [small personal collective] versus the [behemoth government agency] which the data is suggesting is the most pointedly important part of this soon to unfold story. The [collective] component of the story is also showing as acting as a supporting set for the [veterans rebellion] in that it gives courage to 'fellow travelers'.

The data sets are also indicating that the aware observer will wish to pay attention to just which [official] is to [accept the document] from the [private science SOC]. The [visibility] summations are indicating that the [ceremony] itself will be very revealing within the [nuance] of [how the official] receives the [document]. There are some hints that a [female] will be chosen by the [administration] for this purpose. The cross links over to the TPTB are pointing out that their thinking is that a [female] being chosen as the recipient will allow them to both direct the

immediate future, and to later claim [diversions] around the [gender] issue somehow. But the data sets are arguing that a very key ritual within the [ceremony] will be [disrupted] by [tacit agreement] between the [SOC] and the [recipient] much to the [consternation] and [gross upset] of TPTB. The data suggests that the whole of the [emotional stew/upset/frothing] which will percolate to [visibility] in the days following the ceremony will \*all\* hinge on less than [1/one second] of actual activity between the [document presenter] and the [official recipient]. The other supporting sets include [temper flares], and [giddy collapses]. This last is associated with [high altitude] and [low oxygen] as well as with [displaced/altered states of consciousness].

Along with this area of [space] based sub themes within the Populace/USofA are diverse sub sets which are accruing support for a [shift] or [turn] in the [conscious directions] of [american science] as a whole. Some of these sets are pointing toward a period of [rebirth] or [renaissance] for [science] due to the shifts in conscious attitudes across the American landscape. The [science] being referenced is \*not\* [academia], but rather is shown as being [personal/private]. Perhaps a better descriptor is the [free scientist] which is found at the tertiary level of support.

A large component of support within the Populace/USofA entity is going to the idea of a [reversal] of a number of very large social trends. The [reversal] sub set is a supporting set for the [rebellion/revolution] meme, but is also involving a large measure of the Populace/USofA entity within the [social order] sub set. The idea presenting is that over the course of the next year to 3/three, a major reversal of the social mindset will occur. This [reversal] is suggesting that a [conservative political oppression] in a society with a [liberal/celebrity culture] will reverse such that a [liberal political stance] will be emerging \*just\* as the [populace] starts to [cultivate modesty] and to [reject/renounce] the [celebrity/extreme/excess] culture. In several years the trend will be very established, and given the longer term values still accruing, the projection is for the new status-quo to continue for a number of

generations. The idea of a [conservative religious political agenda] will fade away as the rise in [personal spiritual cultivation] continues in the midst of the [abandonment] of [organized religion]. This [death of religion/death of popes] meme rises just as the [religious domination] of [politics] drops, \*and\* the [personal modesty/conservatives] begins to take root in the [populace]. The conjunction of both of these trends meets the [military mutinies] during this [summer], and each participate within the [emotional crises] of October and Fall. Please note that the [modesty] and [conservatism] are both 'small letter' versions. The data is \*not\* indicating a dictatorship of the masses as regards the [appearance] or [behavior]. The data sets are actually showing that the [modesty] sub set supports the [tolerance] rise in the social order. This is \*not\* going to be a fun time for any of the [fundamentalists] as the form of [modesty], and [conservatism] will lead directly to a [rejection] of [religion] and, even more prominently, the [rejection (of the) papal authority]. There are a number of smaller supporting aspect/attribute sets going to the idea of many of the [fundamentalists] ending up as [suicides] in that their [actions], especially their [violent reactions (to their own) frustrations] will bring them into [conflict] with the [masses]. They will lose. The tide has turned.

## Terra - Wet Feet, Dry Terraces, Fired Up

Once again the Terra entity is suggesting that [cars (will end up) in ditches]. This meme has several extensive cross link groups over to the Populace/USofA and the GlobalPop entities. These cross links terminate in [natural disasters]. Within the Terra entity, the cross links originate in [floods], [traumatic winds], and [dangerous snowstorms]. These are all indicated to be rising in [visibility] as the [spring equinox] is past. So the implication is for yet-another-round of [severe weather] beginning after March 20th. These [dangerous snowstorms] are particularly troubling in that the supporting sets are filled with very unusual geographic references.

Some of the [strange spring weather] is also tied into the [private

science] meme within the Populace/USofA entity. As a minor note, the [spring storms] will apparently bring about the [removal] or [retirement in disgrace] of a very prominent [establishmentarian scientist]. It will also provide a very significant [fall from grace] for a [petty person/politician].

There are data sets for the [antarctic continent] which continue to accrue very sharply emotional values within many parts of the descriptor set. These values are part of a growth pattern which extends back several years, and which may now becoming visible over late Spring, and early Summer (northern hemisphere time). The data suggests that as [summer] is encountered here in the northern hemisphere, that [antarctica] will experience a [phenomenal rise]. This [rise] is very short, and \*may\* be referring to [energy] and not [land mass]. The idea coming across is that some form of [local effect] on [antarctica] comes from [unknown energies from space] via cross links to the SpaceGoatFart entity. This [local effect] is a very significant episode in the fabric of climate for the remainder of the year. The data sets are filled with [flooded fields], and [dry terraces] which appear, and then grow as supporting sets \*following\* the [local energetic phenomena] occurrence in [antarctica]. This area does participate in the [global coastal event] data stream, and may represent a significant growth point for that meme once the longer term values are processed. For now we note that [water levels] globally \*will\* be affected this [summer, northern hemisphere] by the [local energetic phenomena] within [antarctica]. Further they will be affected in at least 2/two surprising ways. These will include [hot water] which is a supporting set for the [hot foot] discussion in Part Zero.

The [dry terraces] references within the Terra entity are cross linked over to the populace entities where they are participating in the [restrictions on movement] as well as the [encounters with scarcity]. The latter is part of the [shortages] meme, and so the [dry terraces] could easily be interpreted to be [rice terraces] and thus indicate a continuation in the [grains shortage] meme. The [restrictions on

movement] participation appears to be linked to [water] as a [transport] method within [inland areas]. This is indicating such severe [water level changes] that [locks] and other [water conveyances] will [cease] to be [accessible/floodable]. These will have a corresponding affect on [grains] in the form of [delivery], and thus further exacerbate the [shortages] meme.

Further increases in both [restrictions on movement] and [encounters with scarcity] will emerge from the [fires] in the northern hemisphere on many continents over the [summer]. These [fires] are shown as also involving [energy plants] and [energy storages] such that several [power outages] can be attributed to the [fires] and [traumatic winds]. These [energy shortages] are cross linked over to [ports], and [transportation] within the GlobalPop, and Populace/USofA entities where in both they terminate in [encounters with scarcity] and [restrictions on movement] supporting sub sets. We also have [storms of ash] and [storms of fire/smoke] which are indicated to have an [ocean spanning impact].

## Conclusion: Part One - Bigger than elephants, Creeping Awareness

Both the largest organism and the oldest organism on the planet are mushrooms. The visible part of the mushroom organism is the fruiting bodies, or what the humans see as the 'whole mushroom'. In fact, the mushroom really exists as a giant [ring](#) in the subsurface soils of the planet. Vast numbers of such organisms exist. Bigger than elephants, or whales, yet totally uncounted in our current, number crazy human world. Some mycelium rings are thought to be larger than countries. And nearly as old as dirt. Yet unknown to the vast majority of humans walking mere inches away. Probably some kind of spooky sci-fi movie there....'the mycelia ring that ate Berlin'.

Bigger than elephants, yet totally hidden. Of course, universe always reveals the hidden. It is the nature of nature, cycles and all. What humans would think they control, universe will provide proof of the not. It would appear from the data that the universe is about to reveal several things within the human world which are also 'bigger than elephants', and while seemingly 'impossible to hide', these very large conspiracies have been hidden mere inches away for decades.

The TPTB attempt to corral the 'mainstream media' into fewer hands for easier control \*has\* succeeded these past few decades, and that will be its undoing. Universe responded with the 'opening' of the internet, and now the proliferation of 'news sources' cannot be contained. And each of these newly sprouted 'news sources' represents yet another pain-in-the-control-system problem potential for TPTB. These [pains] are indicate to come to the surface in the form of [secrets revealed] fruiting bodies this [summer]. A most interesting prospect, as the aware observer \*should\* be able to distinguish the [consternation/constipation] of TPTB just as the [secrets revealed] start to emerge in a [steady stream] after the death of the [red pope]. The descriptor sets for the [red pope] also include support for [aristocracy] and [elites] which are themselves supported by [humiliation], and [defeat] and most telling of all [naked (before) men/universe].

All things in universe are connected to all other things in universe, but for the self-absorbed humans, many observing the events of Spring, 2008, will only see that which directly is within their view, never really even noticing that giant organism beneath their feet. It will be an interesting exercise in [creeping awareness] to observe just when the [revealing] starts to sink into humans near you.

Remember to be 'kind' to the newly aware. Do not bombard them with incessant, reinforcing views of all that has remained hidden from them for so long. Rather let universe introduce them to awareness in its own way, and stand by with a bit of pie to counter the shock of it all. And listen with attention as they try to verbalize just how it feels to become

aware of the giants under the feet.

It was scary, and difficult, remember?

####

Part Two data is being processed now. We expect to have speculator slices from Part One posted by late Sunday. Part Two is expected to be posted by March 16.
