Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from summation of data from previous ALTA 1207 series reads as well as interpretation of the first 7.12 million reads of the 0108 series.

From here we start...some continuations..

As of this writing we are still showing that only about 70/seventy percent of the 'green death' language has been populated, so there are still some elements to this yet to manifest over these next few weeks.

Obviously a 'release period'. Both from Terra...the floods et al, and from humans...behavior releases including the VT school shooting, as well as recent rise in violence within Iraq.

Do not expect any let up in the emotional releases until September. Expect it to get a bit more intense

over the rest of Spring and into Summer.

Bushista - Maelstrom & Bespoke Turning Point

The immediacy data from this run is confirming some hints we had arise from the last of the ALTA 1207 shorter term values. This initial hint showed up as the Bushista entity was progressed through April and into May. The modelspace is now providing a bit more details in that we have a more defined temporal window of April 25th through May 24th. During this month long transition through modelspace, the Bushista entity has Iraq rising to emotional release levels not yet seen. This does not bode well given the practical reality of a defeat for the Bushista's and the USofA military and its long predicted 'fighting retreat'. The ALTA reports processed *prior* to the aggressive invasion of Iraq were point to a time in which 'enclaves' of USofA soldiers had to 'retreat, fighting over bodies' of fallen enemies and friends. This apparently is being forecast as begriming on or around the April 25th date with a series of events which lead to a very [aggressive] Bushista in very [hard defensive] mode seen [lashing out]. This last seemingly has some foreign relations impacts on other countries beyond Iraq, though at this point it appears to be more of a [chastisement] of [strong friends] by the [petty people/politicians].

In any case the modelspace is showing a huge rise in various bespoke emotional contexts within Bushista beginning *coincidentally* with the [unexpected appearance/visibility] on April 25th within Iraq. This is related to events which will transpire between the 25th and the 5th of May. During this peak period of the rise of the emotional tensions, the Malaqui congregation of politicians laughably called a 'government' by the Bushies will begin its [disintegration/separation/refraction]. There will be a [purge/ouster/exhalation] which will send [ripples] of [concern/worry] which become gigantic [waves] of [fight] by the time the emotional energy of the event reaches the [White House].

Much of the energy affecting the Bushista entity over May comes from this [purge] event and its repercussions. An interesting side note is that the major impact of the [ouster/purge] within Bushista entity is dominated by the [secrets revealed] meta data layer. As the [iraq] sub set is progressed along with the Bushista entity across the temporal modelscape, the rising aspect dominating the sub set is [turning point]. This bespoke [turning point] reference is reinforced by several fully populated, complete and correct contexts going to the idea of *real serious* chaos over coming the Malaqui "government" over these next few weeks. This in turn leads to a very large rise in the values of the [secrets revealed] meta data layer within Bushista over the early days of May with continuing pressure through June. Within the area of Bushista receiving the most emotional impact from the unfolding [mutiny/rebellion] and [purge/ouster] language within the Iraq sub set, the dominating aspects are [untruthfulness/lying], and a bespoke [turning back]. While the former ends up being under the [secrets revealed] meta data layer, the latter falls under the control of the [duality] meta data layer. The supporting aspects are pointing toward a [collision] or [conflict] between the [reality] of the [unfolding unexpected events] which include the [purge/separation] and the [defensive posing] of the Bushista mentality. In this case, [reality] is being forecast as the winner of the conflict. The data shows the Bushista entity running smack into a [wall of no/non/not] which induces [illness manifestations] among a few of the Bushies {ed note: likely refers to Cheney's health, and the excuses others will give for leaving, that is 'their health'}. This [wall of not] is [uncontrollable/insurmountable] by the Bushies, and it [triggers] a key part of the [turning point] in the Iraq sub set as well as [initiates/begins] the [turning back] meme within Bushista. Not all of this occurs in May. Much of the forecasts presented rely on the last of the shorter term and longer term data sets from ALTA 1207.

The modelspace shows the Iraq sub set receiving its greatest impact from the late April event stream

within the first part of May with a tapering off, or dampening down of the emotional values continuing through to May 24th. The opposite is showing for the Bushista entity as a whole in that the early effects are not that devastating and the whole of the impact of the late April events will not be visible until much later perhaps as far out as late July. There is an immediate value set showing a response within Bushista tending toward [aggressive] and [desperate defense] which begins in early May and continues through June. However the [secrets revealed] and [duality] meta data layers do not dominate until late June and into July.

Within the Bushista entity, the very first aspect/attribute set showing the impacts of the late April event stream is headed by [breath] which is supported by attributes going to the idea of [no breath], and [doubled over] as in the image of a person having the 'breath kicked out of them, doubling over in the middle'. The repeated references to [no wind], and [without breath], as well as [continued gasping] suggest a very severe impact since we are dealing with fundamental body imagery archetypes. Further aggravation within this area for Bushista comes from supporting aspect/attributes such as [too heavy (a) load], and [crushing burden induces lacrimation/crying].

Also in support of the [aftermath/following] of the late April event stream are repeated references to [retreat] and [failure]. In both cases these aspects show up in multiple contexts including many with bespoke emotions which participate within the very rapid rise of the emotional tension values within Bushista as it is progressed across May and into Summer. The [retreat] aspect is composed of supporting data from all of the data value sets and this sub set of aspect/attributes itself is extending the longer term value set range. This last is a very confusing way of saying that many very long term impacts are showing up as extending from this April maelstrom and Summer of [loss of untruth/concealment of covering lies].

The whole sub set of [covering lies] or [concealment by untruth] within the Bushista entity is indicating a [ripping open/revealing] of a very public nature which will [strike] the Bush 'organization' at its core such that [reverberations/vibrations/sympathetic responses] are [manifest/visible] begriming in May. This area includes language going to [catastrophe] as a leading, and rising aspect within Bushista. The [catastrophe] is from the Bush view point, and includes [loss of wealth], [loss of face], [loss of cover/concealment], and it is this last which is showing as the most damaging for the entity. Apparently there will be a 'review' of the many instances of the Bush cabal [counting the harvest before plowing]. This 'review' appears to be a public [spectacle] which, from the Bush perspective, includes a [public defacing]. As a temporal marker, this 'review' seems close to the end of April and the beginning of the event stream which so raises the 'visibility' of the many secrets waiting to be revealed.

The first wave of these [explosive] events within this sub set start off at about April 25 and peak in mid May. Within the immediacy values there are aspects pointing to a [mutiny/rebellion] event in late Spring or early Summer which [cuts/slices] the [heart] out of many of the [loyal peasants] within the Bushista entity. These [supporters/workers] are indicated to be [disheartened] by a Bushista [command/order] to [put down/repress/end] a [rebellion] among [usofa military personnel]. As the data indicates, the [mutiny] will be either over in [iraq], or will be [over iraq] in the sense of the [iraq war] as the primary issue. The [mutiny] context contains many references pointing toward a very [bloody] outcome in which [mercenaries] are involved. These [corporate soldiers] will be apparently [commanded] to [suppress] the [revolt in the ranks]. A [conflict] ensues which ends in [blood] on the [walls] and [floors]. At that point, the crisis situation within Bushista and Iraq moves from [routine] to [enormous].

As a temporal marker, the modelspace offers a May 12th date as the first significant rise in the emotional values within Bushista in the bespoke [failure] and [retreat] aspects. This suggests that the first signs of the failure of the Bushista entity [reckless] and [optimistic] viewpoint will begin on May 12th or 13th as the event stream of late April is augmented by early May manifesting circumstances.

These augmenting or modifying manifestations include significant cross links over to the Markets entity where the termination points are within aspects such as [housing bubble] and [financial indicators]. Both of these areas are discussed in Markets section of this report. Within the Bushista entity the immediacy values are focusing our attention on the [financial indicators] as apparently the emergence of the [secrets revealed] meta data layer impact on this area will coincide with the [emotional crash/breakdown] at the top of the Bushista entity. The modelspace is suggesting that a period of about [5/five weeks] of [concealed madness/insanity] will begin from the [reality] which is judged, by Bushista entity as [too harsh] or [extreme abrasive]. The interesting point here is that the modelspace is clearly showing that *only* the [final/remaining/last of] the Bushies will be [deceived] by the [concealment/hiding] attempt.

It is the cross links between Bushista entity which appear at the far edge of our immediacy values {ed note: about 3+ weeks out} which are obscuring the interpretation for Markets and several other entities. It *appears* that the Bushista entity goes [rigid] and [uncompromising], even [aggressive], and [nasty/mean] over these next few weeks as it [parades] around in [active denial], however the modelspace indicates that by about the 12th to 15th of May, the [unfolding/emerging] [drama] takes a [swift/rapid] (turn) propelled by the [maturing/growth] of the [unexpected events] which manifest from April 26th {ed note: curious references to late in evening} through and including April 30th.

Markets - Floods Float Debris, Unpleasant Digestion

The movement of the Markets entity through modelspace in late April through to very early June is in a downward, that is *negatively emotionally releasing* trend which is being led by [housing], and [financial indicators]. We note with interest the [financial indicators] as this is the first time this aspect has appeared with any strength within this entity. The cross links over to the Bushista entity from this sub set are pointing to a very large impact of [secrets revealed] at the Bush cabal level on the [financial indicators]. Further support for this area within Markets comes from aspects for [dollar, usofa] sub set which include a very large area of [secrets revealed] impact within this sub set. The immediacy data is holding [revulsion] and [repelled] as the primary supporting emotions which come from the [usofa dollar] sub set in support, and these are also heavily cross linked over to the Bushista entity where they terminate ominously in [blood] and [bowels/intestines].

As the Markets entity acquires values from the immediacy set processing it is clustering those values under the sub set of the [usofa dollar], and relative to the other components of the Markets entity in toto, the [usofa dollar] sub set is gathering values nearly 4/four fold faster. The [usofa dollar] sub set has a new primary aspect rising from the immediacy values processing and it is [core]. This aspect has aspect/attribute modifiers of [center], [middle], or [to hit the mark] as its first level of support. Within the descriptor set we also find that attributes to [to hit the mark] can easily be interpreted as [to hit the mark (of the) core/center of trustworthiness/sincerity]. Hmmm. Probably not a good sign since the current USofA is soooo filled with goverance-by-insincerity and untrustworthiness.

As this section progresses along with modelspace through May, it accrues large amounts of emotional release language around the idea of [restrictions] being placed on the [usofa dollar] such that the [people] (can be/will be) [forced] (to be) [trustworthy]. Further this idea is supported at the primary levels by aspect/attributes for [misfortune]. This [misfortune] will be temporally marked by the [usofa dollar] [losing] (half) of its [pulling horses]. This is also temporally marked by a description of a [nearly full moon]. At that point, some significant [ally] or [pulling horse] for the dollar will be [lost]. It is from

this loss that [misfortune] comes.

The data set for the [usofa dollar] starts out in early May {ed note: about the 4th or so} and is rocked by a [transgression] against [core values/trustworthiness]. As the data set describes [evils] come from this as [negative social influences] are [perceived/visible] within the [core/center] of the [usofa dollar]. Given the way in which the Markets entity is impacted by this sub set, a *most* probable scenario would likely proceed from a 'financial scandal' such as the Wolfowitz resignation from the World Bank which in its turn causes other 'secrets' to be revealed such that either the financially focused part of the White House or the Federal Reserve Bank is [tainted] as [scabs] are removed which [reveal/expose] [core value] (corruption). This in its turn is showing as a huge 'leg of support' being removed from the [usofa dollar].

It is also possible to take the above data and interpret the whole by the secondary sets of descriptors. This would produce an interpretation in which a 'deputy' or [core advisor/companion/supporter] of Bush is [lost/taken], and Bush then [turns to the above/heaven] and [gets stuck (on) knees]. This [stuck] on [knees] descriptor also includes [crowing (like a rooster)] and [strutting](mindlessly) in the [garden]. In either case the interpretation could be made that a key mental support in the form of a [trusted companion] is removed by universe during May, and that the Bush mind crumbles visibly such that [congress] has to/tries to put [restrictions] on his [exposure], and that this triggers even more [bizarre] behavior in public. It is then this last which is the proximate cause of the [finding the core] of the [usofa dollar] as [foreign supporters] of the [usofa dollar] rapidly [lose their taste] for it.

As the modelspace is moved past May and into June, the primary and rising support aspects/attributes are clustered around [difficulty] and [hardship/stress]. This last is extensively supported with aspects going to [out side/foreign] (stressors/antagonistic/irritants). Specifically we find that the supporting layers include [surrounded (by) enemies] and [exhausted], [tired (to the) bones], and several bespoke forms of [poverty stricken]. These include [sudden] and [rapid] modifiers to [poverty stricken] as well as cross links back to [death] which is itself supported by [poverty] as a resulting aspect. So the interpretation for the [usofa dollar] for the month of May and into June must include a [death] of a [prominent/necessary/key] supporter of the [illusion/mask] of [prosperity] which will mark the [sudden/rapid] (transition/shift) to [poverty stricken] as [secrets (are) revealed] which will change the global (foreign) perception of the dollar.

Along with the change of perception of the 'usofa dollar' at the human emotional attachment level, there are indications that a [hidden/concealed] and [deliberate] effort is underway to [buy/purchase] value for [dollar reserves]. The Markets entity is suggesting that a very clear [flood] of [dollars] is building and on its way to the [usofa]. The [repatriation] issue will be a prime driver of 'dollar dynamics' over the course of the last weeks of April and all of May. As the [signs/signals/hints] of the [dollar flooding] start to become globally more visible as Spring progresses, the impact will be to accelerate both the repatriation of dollars as well as the [detachment/loosening] of the last [vestiges] of [emotional support] at a global level. The development of the data and its accrual patterns are suggestive of an interlinked series of near-term events which will propel the repatriation to the next level. These events are showing within the immediacy values and are likely part of the April 28th through May 5th release events. Under the circumstances of a 'wave of dollar repatriation', it would not be surprising to note signs of [out of control/loose] [inflation] which is *not* able to be controlled by the Federal Reserve cabal since it is not a case of monetary creation, but rather a return of the 'dollars' to roost where they are seeking to extract value from the USofA. The effects of this will be a rising push toward hyper inflation, but of a type in which interest rate adjustments will do no good whatsoever, and in which the hyper inflation creates multiple 'bubbles' in real goods as value is sought. An interesting side effect is that no officialdom discussion of inflation and its [curious behavior] recently will either voice this [repatriation flood] as the reason that the costs of anything tangible are skyrocketing, while the USofA economy is slowly

deflating. It will be the twin effects of the 'floating of prices' upward as dollars press home, while the extraction of things of value from the country {ed note: such as they now exist} will 'deflate' both capacity and prospects within the American economy. The indications are that the 'slave states' of southern Mexico will be especially hard hit as will the central American countries whose economies are dollar based.

The immediacy values are forecasting that the markets {ed note: including equities, debts/bonds, and abstractions/derivatives} will be [moved] in the [heart/center] this coming week and just into early May by [mutual influence] which is [outwardly directed]. This aspect/attribute set of [mutual influence] can also be interpreted as [interconnectedness] or [reliance upon/connected to]. The data set is pointing to an [extra/outside_of] (markets) [manifesting circumstance] which will [sharpen/highlight] the focus of [debt] to [transportation]. This [ratio of extremes] is shown as precipitating a [mood/tone] which includes the bespoke aspect of [misfortune] that in its turn is supported by [livestock/cows], and [food/feeds]. Further the lexical context includes a *caution* note about those who may act [impulsively/quickly] before understanding the actual nature of this [primary/fundamental] (transformation/shift) in [global priorities]. As we go deeper into this area, the supporting sets are both enlarging in breadth which is taken as a sign of reinforcing the theme, as well as increasing the references which are supported by, or are in their turn, supporting [misfortune]. As the modelspace is progressed forward over these next 10/ten to 12/twelve days, the [misfortune] aspect is further reinforced to the point that the lexical balance and emotional summations move [misfortune] over to the more extreme case of [humiliation].

There are bespoke contradictions within the aspect that we have developing now. As the modelspace is moved forward, the Markets entity shows a hesitation, as though there is a possibility of divergence. This is supported at a macro level with the rise of the emotional sums for the meta data layer [duality] within the Markets entity. To be painfully clear about our interpretation of this set of immediacy values it is our understanding that the potential over the next 10/ten days {ed note: calendar days, not business days} exists for an [intervention] by what is described as a [person/personality] (standing) on a [hill/rise/shoulders] who is [well versed] in both [politics] and [military arts/budo] {ed note: very likely, given the languages involved this personality is *not* of anglo origin, though may be european}. This [intervention] *should it be successful* has the *potential* to be [favorable] for Markets entity *now*, BUT [at great cost/all life's blood] in the Fall. Again, as [duality] is ascendant over this whole area, it needs to be noted that a [schism] will emerge in which [usofa] markets will *not* follow global markets. The modelspace is indicating that an [effort] may be made to [rescue] the [american markets] this Spring by way of this intervention. However, we need to note that the data is far less than clear that the effort will be successful. In fact, as the immediacy values are accruing now the prognosis is for the [effort] to [fail] in April.

The data set for this area is very robustly populated with supporting elements. We have indications of other circumstances which will emerge this coming week and into May which will be propelled along by the same wave of [duality] and [secrets revealed] as is affecting the markets. Within the cross links to GlobalPop and the Populace/USofA are numerous references to [young people] who are [fresh from school] {ed note: recently graduated?} who are [uncompromising] in their [demands for revelations] in spite of [militant opposition from authority]. We note the numerous cross links between the [authority] area within Markets entity and the ThePowersThatBe entity. These cross links terminate within the TPTB entity in aspects/attributes of [suppression], and bespoke [fear]. This last is heavily supported by sub sets indicating an actual, and bespoke [fear] of [loss of control], and most tellingly, this area is supported by [at this critical time/juncture].

In the examination of the Markets entity we need to also note the heavy cross links over to the Terra entity where they either originate in, or terminate in [calamity]. Once again, over the course of these

next 3/three weeks {ed note: usual extent of immediacy values} we find the Terra entity will intrude on both populace entities, as well as the Markets entity. Again, this intrusion will be significant. The supporting values indicate that the [changes] manifesting in Terra this year, and specifically in the Spring/Summer, will have [multiple generations] influence both [socially] and [economically].

Also supporting the idea of an [emergent] Spring and Summer, we have data sets suggesting that [old kingdoms] will [fall] such that [secrets reveal] (richness/gold/gems) amongst [old teeth, fallen out]. The further supporting details within this area are under the meta data layers of [duality], and [secrets revealed]. It is not surprising to discover that the details include references to the [appearance] of [words about/concerning] a [damaged document]. Hmmm. A reference to a/the 'constitution'? Further references include [conundrum/confusion of direction], as well as [authority (in) retreat]. Could it be the data set is forecasting the impact on Markets entity of the defeat of the Bush in his war of aggression against the Middle East? Perhaps. We do have many cross links indicating that [humiliation] is coming to both [bush] and [cheney] this year, likely before Fall, and that it will arrive at the hands of [a person (just) returned home] who will [cackle] in [public] in such a way as to [focus/point] bespoke [shame] at Bushista in a [personal] manner such that [bowels twist, bladders release] under the [words] which [split] the [obstinate group] into [2/two]. This area is cross linked back to Bushista where it terminates in the [bespoke health] of staffers such that many [resign] (seeking) [wellness].

So, at this point in the progression of modelspace it appears that the Markets entity is forecasting an *unsuccessful* effort at [intervention] which will be [overwhelmed] by [extra/outside] markets events. Note that we may still see rising "prices" for such things as paper debt instruments including stocks, but the modelspace is clearly pointing to this being an [illusion] of [wealth] which exists only in the [usofa], and which will shatter this Spring/Summer such that Fall brings a time of [digesting] the [unpleasant] here in the [usofa].

Space Goat Farts - Howling Nights, Squinty Days

As noted in previous ALTA reports for 2007, we had encountered a point within the modelspace where various contexts begin to degrade, which is to say that their individual lexical elements were not being located to the same degree as in the past. The appearance of the degradation, and the pattern it has displayed has led to the conclusion that many of these contexts, as they are currently described, are no longer valid. An example is the 'space' sub set within Terra, and Populace/USofA, and to a very lesser extent, GlobalPop, 'europe' sub set. Within this set in the past we would frequently encounter what can be described as 'anomalous' ideas or concepts which might include 'extra terrestrial life' as an example. This is a pertinent example as it is *not* frequently associated with 'nasa' or other linguistic contexts within the sub set of 'space'. That the foremost 'space' focused organization here on earth does *not* have extraterrestrial life as a most frequent lexical construct is itself very curious? Hmmm. Do they not allow discussion/speculation about ETL, or 'extra terrestrial intelligence' (ETI) because they *know* about it, therefore there is no need to speculate? or plan on how to locate it? The modelspace and the recent degradation of the various contexts within the descriptor sets would argue that this is exactly the case. In fact, as we have altered the lexicon, a new entity was obviously called for, and in the spirit of Benjamin Franklin and his *Fart Proudly* writings, we have labeled this entity as 'space goat farts'.

The SpaceGoatFart entity is the container for all things as-yet-unexplained which are space based or focused. The concept is that if there are officially denied or ignored subjects related to space, they will have found a home within SpaceGoatFarts. If the main stream media are labeling-to-denigrate the subject and it is space/other dimensional, it will be able to house its lexical constructs within this entity.

This entity specifically *does* include those 'space' based sub sets such as ETI, and other forms of non-human intelligence which 'officialdom' continues to deny/ignore within their 'publically presented face'.

It became very clear that a need for this entity has been in development for some time when the first of the processing for the entity was initiated as it populated very quickly, and also concurrently resolved many of the malfunctions within the 'space' based sub set for Terra and other entities, especially the 'nasa' and other 'official' focused sub sets. Is all this clear as mud? When we processed the data, the SpaceGoatFart entity rapidly filled in serendipitous mode {ed note: where we allow the lexicon to develop as universe chooses, and are not seeking for any predefined entity constructs}.

First up within our newly formed SpaceGoatFart entity is the aspect of [past/ancient] which is modified by attributes for (remote/distant/far removed). This [remote past] aspect set is supported by aspect/attributes which go to the idea of it *not* being [used/known] in current times. The curious state within modelspace of the newly created entity first focusing on a [remote/far distant past] which is [not known (in) current times] is further amplified by the focus of the immediacy values on [howling] as in the [howling] of animals/dogs. This in its turn is supported by [night/dark of night/late at night]. The specific supporting aspect/attributes for the [remote past] thingeys which causes the [howling late at night] include some small amounts of details which are suggestive of a [lake/inter-connected forms] which [appear (in the) sky] and [fall/descend (to) earth/ground]. The lexical descriptions of the [lake in the sky] are less than satisfactory, and to some extent are contradictory, so we are concluding that the SpaceGoatFart which appears in the sky, and apparently *has been known* in the 'far distant past', but is currently 'unknown', it will appear as a [cascading (of) inter-connected plates]. The data set further goes on to say that the [vibration] which [precedes/anticipates] the SpaceGoatFart is what [initiates/begins] the [howling late at night]. Apparently the [howling] is not limited to dogs, but extends up and down the animal kingdom and includes some [sensitive humans]. These poor humans will be [discounted] at the beginning, and also [ignored] and [arrested]. This last is the apparent result of the [vibration] causing such consternation within some of the receiving humans that they become crazy and cause some levels of [popular discord] in attempting to [warn] the [populace].

The SpaceGoatFarts entity, as may be expected, is replete with cross links to the populace entities as well as the Terra entity. Its first appearance also includes a cross link set between the [howling] at (night) and the Bushista entity, where it terminates in [men with arms/weapons]. A very curious linkage indeed. Unfortunately since we have only the immediacy values at this point for our newly formed entity, there is little further detail to offer. We can note that on the SpaceGoatFart side of the linkage the [howling] shifts over to [anger] as the dominating bespoke emotion, while under the Bushista termination point the supporting bespoke emotion aspect is [fear]. There are some references, that is a small number of cross links back to the Press entity in which the suggestion is that the Bushista's will be visible out saying [do not fear]. By the way, any time any government says not to worry/fear, well....

The other few details provided within the immediacy set include references to [adversity] for the populace as a whole, but also some specific cautions that [cities] will suffer [disproportionately]. This last *may be* erroneous as it is internally cross linked to the [arrested] [sensitives]. However we do note that [vibrations] including [microwaves] specifically as in 'cell phone towers' have a structure within this [cities suffer] sub set which could be inferred as the reason that the cities suffer this SpaceGoatFart disproportionately to the more rural areas.

Other supporting structures within the [suffering cities] reference include cautions to [find/have (a) place (to) go/locate], and [unfavorable/discouraging/failure] when [arms (are) used]. This last is specifically focused on [arms] in the sense of [weaponry] with many supporting aspects going to [advanced] and other modifiers indicating [electronic] and [microwave] based weapons. The general idea coming across is that the SpaceGoatFart of unknown, or rather anciently known, origin/nature will some how [impact/affect/propagate] the [destruction/disruption] of these [arms].

Of course it is also possible to re-interpret the whole of this SpaceGoatFart as describing a time in which

there is a general [raising] of an [alarm] within the [populace] as [many sensitives] [cry out/howl] about the [coming (of the) men/? (with) arms]. This interpretation does provide a complete usage of the tone of 'calling out an alarm late at night about space based invaders who are attacking/threatening the cities' which seemingly is what the SpaceGoatFart is lexically striving to express. So...if that is the case, then there may not be an actual invading army right at this moment, but rather what modelspace is showing is that there will be a [hue and cry] of [alarm] *about* the immediate potential for a SpaceGoatFart of unknown, or poorly described origin. Either case would fulfill the language; that is, either the appearance of a city-threatening SpaceGoatFart, *or* the wide-spread alarm about such being reported. In either case what modelspace is picking up is the emotions associated with the subject.

Under this last form of interpretation of the SpaceGoatFart data, and noting that this occurs as the modelspace is progressed through May and toward Summer, we can postulate that perhaps there will be a 'vast wave' of UFO sightings, especially centered in cities, which will sweep the planet over the course of late Spring and into Summer. Or, alternatively, there could be a SpaceGoatFart invasion here in May/June time frame.

Further, as modelspace is progressed, the 'release' language of Summer starts to include more SpaceGoatFart cross links which appear to peak in July. Though we note in the populace entities that the [alarm] language continues to build at least through August and into early September. We will need to wait through the processing of the longer term value sets before it can be seen if the trend continues to build or is completed this Summer/Fall.

As a last note on this section of the modelspace, the cross links which are forming within SpaceGoatFart entity, and within the [alarm] sub set, are terminating, within the populace entities, in an area which is participating within the [abolishment/discarding (of the) old paradigm/mindset] changes which have been forecast for this Summer. Apparently modelspace is suggesting that at least some component of the popular mind set change will be provided by an expansion of the perception to include 'men/? with arms' from [space] as a probability with a 'sense-able' reality and emotional component. This emotional component participates in the 'driving out/destruction' of the 'old/past' view which will begin in earnest with the building emotional wave which takes off in mid September.

As the modelspace is progressed through the immediacy values from 0108, and the last of the longer term values from ALTA 1207, it can be observed that the elements of change at some fundamental levels will be manifest over the course of Summer, and that the September through December building period will include the planetary populace [digesting] these elements of manifesting change.

Press - Gaul in tres partes dividere est...

While the Press entity is moved these coming weeks by the [twice bright] [natural phenomena], the Populace/USofA is shown as using the [brightness] (escalation) as a point of [departure/separation/leaving] of the [old mind] from the [newly emerging] reality. Within the supporting sets for the Populace/USofA are aspects/attributes for [danger] and [descent] which are cross linked over to the Press entity where they terminate in [bonding/joining/doubling] and [fire]. This [fire] aspect is supported at several points within the context as including [brightness], [fire], [sun], and [doubling]. The indications are that the Populace/USofA will be faced with a Press entity which is having to report on [natural phenomena] which will *not* help preserve the status quo. In fact the Bushista entity, via cross links, is indicated as throwing something of a [denial fit/seizure/fugue_state].

The [doubling] within the [natural phenomena] will impact its [brightness] as it is [perceived/felt]. This last aspect/attribute set is at the core of the Bushista entity and Press entity problems in that there is some [discernable] [manifest] (change) coming which [threatens] the [popular impressions] so carefully crafted over these last few decades by the press and Politburo. As the modelspace is progressed into May, the [doubling brightness] issue is projected to have 2/two visible effects. Within the Press entity, a [division] of the [press] as a [monotone] is [shattered] into [3/three] (parts).

At least a core of the Press [voice] is shown as [crying] (openly/visibly) about the [grains/plants] and their [attachments/bonding] to earth. The [brightness doubling] is [voiced] by this group as [controlling prosperity]. This is supported by a strange reference to [smoothness] which has several complete contexts supporting it. These contexts are describing an [issue/discussion] to rise up within a [vocal core] about the [smoothness (of the) doubled brightness]. Hmmm. Ok, fine. A little obscure, but with huge emotional release language attached to this aspect, it will seemingly be a central guiding thought, this [smoothness of the double/increasing brightness]. As a further interesting note, there are several directly held value sets going to [pharmaceuticals/drugs] within Press entity, as well as very extensive cross links to both populace entities, and the Markets entity. The implication is that [drugs] will be [needed/boosted] by the [emergence of the double brightness]. All of this is expressed within the immediacy values and so is likely to manifest within a few days out to 3/three weeks.

While there is some suggestion that the Moyers documentary concerning the 'press and the Iraq war fiasco' is the proximate cause for this Press entity [disunity] showing up at this time, and while that may be the case for some small level, the Press entity suggests that much more emotional energy is involved in the [developing/maturing] [disharmony]. The lower level supporting aspect/attributes as well as the very extensive ropes of cross links are speaking to a much greater emotional wave than is found so far relative to the documentary. It may be that this documentary acts as the catalyst for a much larger, much more 'chemically reactive' emotional wave, and if so, then the modelspace is indicating that this is a very powerful 'trigger' indeed since the level of [destruction of past behavior], which is a supporting set dominated by [secrets revealed] meta data layer, goes back for [decades]. In fact the modelspace is indicating that the [destruction] (by way of revealing of secrets) of [past alignments] extends back to [crimes] over [50/fifty] years old. Another way to interpret this area is that [secrets (will be) revealed] which [taint/poison] the [image/illusions/transparency] of [old mens lies/memories]. This [tainting] is supported by contexts going to the idea of [removal/destruction] of [covers], and [paintings], and [graphic lies/art] affecting how the Press entity has been presenting itself these last few decades globally. The idea coming across is that the [faith] in the global [corporate] mediastream will [plunge] so low as to [drown (in the) effluence] of this soon to be visible [dichotomy] of [spirit/intent/breath]. The result, at least according to the Populace/USofA entity, *will* include [assaults] by the [populace] on the [teevee press] in [public gatherings]. These [assaults] are showing as *sometimes* involving [rotten foods] and [excrement/shit] being [applied] to the [face] of the [liars].

This [examination/disinterment] of the [past lies] will be coincident with, and related to, the 'doubling brightness' of the 'natural phenomena'. The modelspace is suggesting that this late Spring and Summer will be a very bad time indeed for press workers, and to some extent the [malodorous cloud] will reach up high enough to bring [officialdom] scrutiny to the [owners/masters] of the global media stream.

As if all of this is not enough, a [histrionic/emotional drama] is about to take off, according to the Press entity and its numerous cross links to TPTB and Bushista, as well as the Populace/USofA, in which the Bush cabal and their handling of the Bush war of aggression will come to dominate the global mediastream for a [protracted/drawn out/concentrated] (10/ten)(days) or so. This is very much akin to the emotional tonality which we had summed up prior to Katrina/Rita/FEMA disaster. Again it would appear that the [absence] or [lack of presence] of the Bushies will be taking the center of the [drama] at its end. Again, it has lexical elements of a [storm] though in this case there do not appear enough Terra

related elements to say that the [drama] is totally focused on [weather/climate]. Rather the picture is not so clear since the Press entity has numerous sub sets pointing to [degradation] in Iraq. These sub sets would suggest that at least some of the [protracted emotional release drama] will be [iraq] focused, with specific sub sets pointing to [kurds], and the [president] of Iraq. {ed note: while the prime minister has problems also according to the data set, it is the [president of iraq] who is shown as acting [recklessly] in [response] to the emerging circumstances.}

Populace/USofA - Whew...but oh oh!

The Populace/USofA entity is showing, via its cross links to Terra entity, that while the [volcano] and subsequent/associated [large earthquake] will [affect/impact] the populace of the country, specifically the [west coast], that neither the [volcano] nor the [earthquake] will be located here. Rather the indications are for these both to be [near] or [below] the equator, and the suggestion is that [close to/proximate] to the [volcano] is the [ocean]. Whew...dodged that one. Those of us here in Pacific NorthWest of the USofA have been a bit on edge recently as Mount Rainier has shown signs of stirring. Not a nice prospect to contemplate. But at the moment, apparently also not being forecast by the modelspace. Rather the details are point to several more episodes of [uplifting lands] which are [linked/associated] with this [volcano] which will be our temporal marker for further pending changes to the planet.

Cross links from the [volcano] area in the Terra entity terminate in a large section within Populace/USofA which hangs under a sub set headed by the aspect of [clouds] or [cloudy skies]. This area also includes aspects in support which go to the [mind set change] which is currently underway within the populace relative to the [climate/weather]. These are further supported by details suggesting that [dangers] and [difficulties] will be [expounded] [forcefully] over this next week such that the [populace] is focused on [grass] and [forests/trees] to a very high degree, and in multiple contexts *all* of which relate to [human] [impacting/affecting] images. The basic idea coming across is that a [new speaker] will [emerge] who [brings concern] about [grasses/trees] to the level of being a [lookout post/warning sign]. Further examination of this set includes supporting ideas relating to the [mountains] which are the [backbone] of the American hemisphere {ed note: includes central, south and north America} which in turn tie it back to the [concerns about grasses].

Within the sub sets of the Populace/USofA entity for this week are also contexts pointing to a [grounding] of a [vessel] normally seen at [sea], but somehow now found [well situated/fixated] within [land]. Further this [grounded vessel] lexical set has cross ties back to Terra and Bushista in which it terminates in [without recourse] in the former, and bespoke [frustration] (with impotence) in the latter. It may be that the data set is forecasting the emergence of some new information which points out the [impossibility] of (redress) of the situation to the populace in such a way as to 'piss off' the Bushies. There are numerous references to an [archeological] element here, though curiously the details are overwhelmed with descriptors which suggest the [manifesting circumstances] of the [grounded vessel] will be [extra/outside_of] [history]. Hmm. An 'extra-historical' ship wreck?

Within the Populace/USofA entity immediacy values are now found a number of new words which slot into the 'green death' language. The implication is that this coming week to 10/ten days will include yet more revelations about the 'green death' and this time specifically focused on [cows and sheep]. We note that while specific, this may be modelspace shorthand for [livestock] in general as both [cows] and [sheep] contexts have [livestock] as the secondary descriptor.

Along with the [cows and sheeps] and [grasses/trees] issues, the Populace/USofA will be focused over this next week on [winning battles] (but/exception) [losing the war]. This will be brought into [sharp relief/stark presence/naked emotions] as some event causes the Bushistas to [move/act] in [haste] which

[upsets previous plans], and [forces/propels] [blood] and [fear] within the populace.

Within the bespoke [fear] aspect within the Populace are areas indicating that the [fear] will be [widespread] in the sense of [many things/circumstances] will be involved. There are lexical hints that the Vice Dick's health suffers and he [discovers/learns] the [lessons] which come from being [bed-ridden] with [illness]. There are also repetitions of this [bed-ridden] with [illness] which are directly held within the Populace/USofA such that the impression is of large, and [sweeping] [illness] which affects much of the populace simultaneously with some [personalities] who are [prominent] and [notable] by their [absence].

A curious cross link within the Populace/USofA entity suggests that [rising/increasing] [visibility] of [revolution] will cause the Bushies to [drop] (plans/schemes) [prior/before] [initiation] due to [foreseeable/certain] [failure]. This will come as an adjunct or [conjunction] with [gossip] and [whispers] which are also associated with [shame] being [thrown at/projected onto] the Bush administration.

Yet more areas within the Populace/USofA, and especially those cross linked to the Press entity are under the increasing influence of the 'secrets revealed' meta data layer. This will become more apparent as the week unfolds as apparently the Press and Populace/USofA entity will return to a very extensive dialog about [foods] and [grains] within the larger issues of [global biospheric degradation]. This [conversation] will likely come about due to the forecast emergence of yet more [green death/food chain disruptions]. These are now being modified within the Populace/USofA entity to include [concerns] about SpaceGoatFarts and their impacts on the food supply. Specifically there will be some level of language emerge within the press to populace dialog about [space] [inputs/inflows] and [massive/devastating] (food supply/chain) impacts. This in turn will move the [mind set change] along for the early part of the month of May.

According to all of the entities newly processed immediacy values, the end of April and through the first couple of weeks of May will be a very intense period of emotional release with attendant [release/expelling] language flying out-and-about. No where more so than in the populace of the USofA. Hmmm. Might be a good time for a vacation, but with strange weather coming to Asia, volcanoes and earthquakes elsewhere, and rampaging aggression on the rest of the planet, there are fewer options for peaceful places. The Populace/USofA is forecasting a very rough time ahead as the populace is moving through emerging circumstance toward a [new mindset/understanding].

As must be mentioned, there is nothing like changing a fundamental perception to screw over your year. After all, in order to change a mind, all the old and dysfunctional/illusionary structures must first be discarded. This process is painful and messy at an individual human level so the consequences of a large part of the populace all going through it simultaneously are scary to contemplate. Such will be Spring, 2007.

Conclusion: Part Zero

This is the end of the processing of the first flush of immediacy values from this series. As expected the language is running toward 'release' words and concepts. This hotter than usual processing is providing a number of new contexts as we tweak the lexicon. The appearance of the SpaceGoatFart entity is just the first new structure. We have indications now that the Press entity will also morph, and perhaps split over the course of this series due to instabilities appearing within its core contexts. This alone would be a huge development affecting the social order of the USofA as well as the continued attempt to push Anglo domination of the globe, however the changes in the Press entity are seemingly minor by

comparison of emotional sums of the early shorter term values. The hints here are that the splintering of the press into fighting factions will be merely an 'also ran' when compared to the remaining manifestations within this release period. Probably not a good sign for peace and stability.

Of course it is noted that the 'green death' language is still building potential, albeit at a slower rate. Nonetheless Igor suggests that subscribers be aware of potential "pie impacts" to the [green death] language. He is preparing by building a pantry for the storage of lots of pie making materials....which of course means we have to move the servers, but so it goes.

Along with the 'green death', we are able to discern that large scale changes to the lexicon and the contexts is indicating change which may challenge our ability to report. This is to say, the changes being forecast by the new contexts are indicating that yet-another-alteration may need to be made to our range of emotional tonality. We had begun this work in 1997 with a range extending from -1(minus one) to 1 (positive one) and have moved over time to a new scale bounded by minus 100 and positive 100. The first hints of the emotional summations coming from the cross links of SpaceGoatFarts over to the populace entities is already beyond that range maximums.

Oh well, endeavor to stay hungry, never know when a pie might be encountered.

Part One is anticipated for posting by May 7.

ALTA 0108 - Part One

Asymmetric Language Trend Analysis Intelligence Report

‘Changes in language precede changes in behavior.’

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

5.2.2007

Note: Entities are identified by a **blue** typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from interpretation of 16.882 million reads of the 0108 series.

Populace/USofA - Anticipate Hardship, Israel Dilemma, Green Poisons

The Populace/USofA entity has a new rising aspect which dominates the mass mood through May. This aspect is very extensively cross linked to a number of other entities, and even in its display within modelspace, it takes on the characteristics which its label suggests, that is [turbulence]. The [turbulent] aspect/attribute set contains references in support which cross link back to Bushista entity, Markets entity, and TPTB entity. In all cases, within the terminating cross link area, the dominate aspect found is a supporting aspect for [turbulent] within Populace/USofA entity. This duplication of supporting aspects within the termination points of cross links is taken as a reinforcing of the same theme spreading from, or being fed by these other entities. In the case of the Populace/USofA entity, as it progresses along with modelspace through the month of May, the [turbulence] will **not** abate, and will increase significantly.

As part of the increase in [turbulence] within the social order of the populace of the USofA, we note that [motion], and [strength of motion] are key supporting aspects within the Populace/USofA entity and these aspects are pointing at 'change' in very visible forms. The supporting aspects within [turbulent] as a whole, and also within the [motion of strength/power] are under the influence of the [secrets revealed] and [duality] meta data layers. There is also significant influence within the entity from the [conflict] meta data layer. As may be expected much of the [conflict] influence emanates from the Bushista entity.

The Populace/USofA entity acquires the aspect/attribute set of [turning point] or [turning back] at the very beginning of May and proceeds to grow the supporting structures for this aspect over the course of late Spring and into Summer. The [turning point] is showing as being [externally driven/provided] which is the modelspace indicating that the pressures on the populace will be amplified by external forces. In this case we have 2/two large supporting sections pointing to the [usofa economy] as a primary source of the initial movement, and as the entity progresses through the month, other internal and external stressors join the pressures for [strong motion]. The internal stressors include [earth/terra actions/motions], [weather], [poisonings], [rebellion/mutiny], and [usofa dollar sickness]. The external pressures are showing from [conflict] and surprisingly, [space]. This last is cross linked to the Terra entity where the [space] references are pointing to [intrusions/settling_in_upon] and several other aspects/attribute sets which in general go to the idea of [visitations/seeings].

Sooo.... by Summer, which is to say by the June 21 solstice, which is astronomically really a 3/three day period in which there is no apparent movement of the sun's arc either north or south, and thus it 'stands still', the Populace/USofA is indicating that, as the data set describes it, a [lesson/instruction] in [humility] is coming for the Populace/USofA. This [lesson] for our [education/instruction (in) central values, humbleness] will include [contracting/absenting/fleeing] [wealth], [aggressive/angry/out of control/raging] ['princes'], intruding Terra, [rebellious military], and [impacted government]. As if that is not enough, the data sets are pointing to the [appearance/visibility] of a [female personality/woman] whose rise to [prominence] will be able to be used as a temporal marker for the rest of the release

period. She will be [visible] within the global media stream just prior to the Solstice, appearing within the lunar month prior to June 21. She will be [without wealth], but of [commanding presence] and a [real leader] in the sense that [she walks] and [others follow], but according to the data, she doesn't care about followers, and merely accommodates them as [fellow travelers]. This appearance of the [female personality] who is shown as [suddenly] being [visible] within the mediastream {ed note: an 'overnight celebrity'} will be able to be used as a marker for the [completion/closure (of the) cycle] for [gold/silver], as well as a marker for the [denouement/conclusion] meme of the Bush war of aggression against the Iraqi's. Not that the violence will stop, but as this woman breaks the [attention barrier] of the [press], we will also be seeing the [rationale] for the [departure] of the USofA invading army be [proffered]. Further, her appearance can act as a marker for the increasingly visible [warfare/incompatibility] among the factions of ThePowersThatBe. Also her appearance is prior, by about 1/one and a half lunar months, to the [emergence] of the [energies/SpaceGoatFarts] of Summer which effectively act as the 'trigger point' for the shift in perception within the larger mass of the global population of humans. The [overnight female celebrity] appearing within the modelspace is described as having [numerous/repetitious] [symbolic] (links/connections) to [space]. This suggests that the personality can be identified by 'celestial' or 'heaven/sky/space' associations within her name and labels within her life {ed note: such as employment, street she lives on, name of town...that sort of thing}. She will also be centrally associated with [humility] or [humbleness]. Further details show that although she is [usofa populace] member, she has associations to [france], and is a [gardener/grower]. Her [leadership] is seemingly focused on [earth/terra] and will include the [stripping of lies] from the public debate. This woman's appearance also marks the very early stages of increasing visibility of [conflict] as a meta data layer going vertical in ThePowersThatBe entity, and thereafter the [warfare] between the factions becomes more open, less concealed. At this point, which is to say sometime after the June solstice, we expect that there will be a [number/numerous] [prominent deaths] for the Press entity to [digest]. What is interesting is that the Press entity is indicating via cross links that there will be bespoke [comments/commentary] about the [unusually large number] of [prominent deaths].

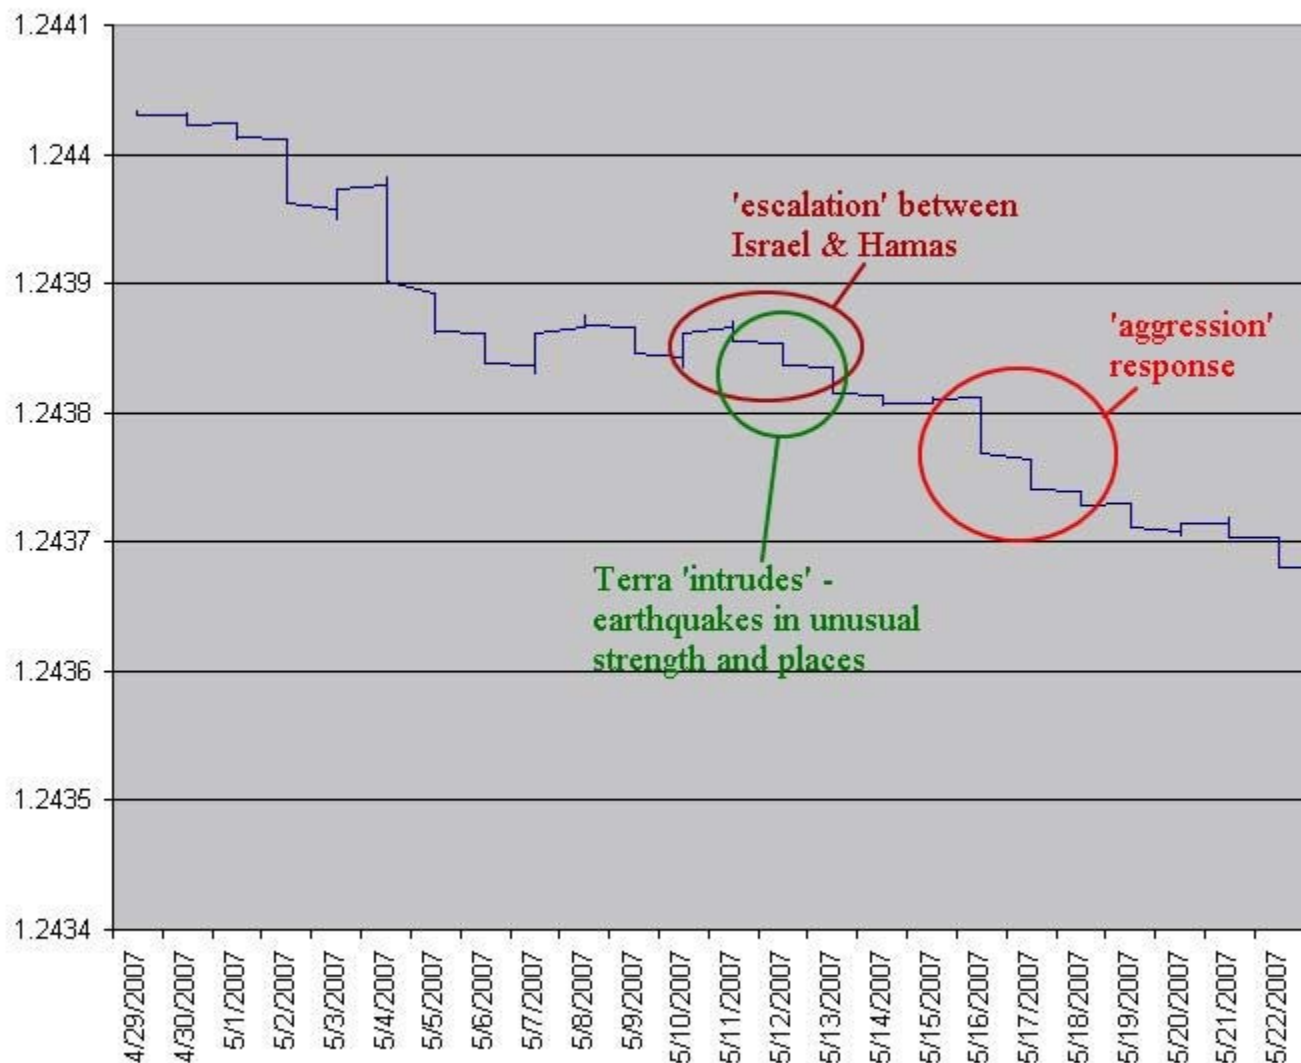

Prior to the June solstice, and with significant focus on the period from May 11th through to June 21, the Populace/USofA entity is indicating that [israel] and the [israeli] populace will reach a point of [dilemma] which will [create/induce] some significant changes in attitude among the populace of the USofA. The [dilemma] is related to the [sudden loss] of [water]. The first signs will be the [disappearance] of a [portion] of the [required amount] of [water] from local [rivers/sources]. Then the second issue will be the cascading [impact/vibration] of the [water loss] on the functioning of the [social order]. The data sets indicate that the [wall building] and other [militant/aggressive] actions will be [curtailed] due to the [exhaustion] of the [sources of water]. The indications are for an actual [river drying up] such that [cement] can no longer be made at anything close to current costs. This [cement crisis] brings the [vulnerability] of the society into very sharp relief. This [vulnerability] will also be raised to even higher profiles as [debates] within the [usofa] start around the idea of [closing off/shutting off] the [flow of funds] to [israel]. This debate is shown following the [aggression mistake] which the [israeli government] will make in the middle of May. The [debate/argument] here in the [usofa] will be taking place within the context of the [ongoing ramifications] of the [military mistake] continuing to play out in Israel.

The data set for the [israel] sub set and its many cross links to both Bushista entity and the Populace/USofA entity indicate that the [relationship] between all parties and [israel] will change this summer as a point of [water loss], and [sources drained] are reached. This then precipitates a [most difficult] situation for the [israelis] both in Israel and their slaves in Bushista entity. The data set shows that the situation goes from bad to worse, and that [restrictions], [restrictions on movement], [encounters with scarcity], [obstructions], and [social exhaustion] will lead to [naked/open] [oppression]. This [oppression] is indicated as a [brutal crime] against [children] which will leave the GlobalPop and the global mediastream actually [wordless] and [gasping] at the [horror] caused by [israel]. The

[murders/tortures] could not come at a worse time for [israel] as the [congress of the usofa] will be deep into its own [conflicts/battles] as it pursues the [completely new course/approach] which was discussed in previous ALTA reports. The data sets do not adequately describe the [new course] which [congress] takes, other than to state that it has not been tried before within the [usofa], and that it is taken in response to [wild aggression/anger] on the part of the Bushistas.

So as [congress] is deep into their own battles, an [incident] involving the [naked murder/torture] of [children] and the [sudden loss of river water] within [israel] will jump into the global mediastream such that [calls/cries] are heard within the [usofa] both the [populace] and the [congress] which seek the [abolition/dismemberment/dissolution] of [israel]. Hmmm.

Emotive Tension Values - May 2007

The data sets of the 'green death' which has been identified as relating primarily to the [food supply] is not yet finished. In fact, this latest round of processing has seen an increase in 'green death' language. Much of the sub set is under the influence of the [secrets revealed] meta data layer, and the modelspace is indicating that this influence will be seriously increased from mid May onward through the Summer,

and perhaps longer. The [green death] sub set is showing a fracturing into several large memes. These include the [death of the green (food supply)], the [poisoning (with) green] within the processed food supply, and the [poisoning (with) green] within the population not yet related to the food supply. All of these memes are still accruing values at the core levels, and the sub sets are continuing to expand their contexts. The implication is that the [green death] story is a long way from completion and likely will be escalating the rest of the year. The escalation over Spring and Summer will include some [retribution deaths] in the case of the [green poisonings] in which some [groups] will become increasingly dissatisfied with [officialdom pronouncements] and will take a [vigilante] approach which will result in some further deaths, and escalations of [racial tensions]. Much of this language goes to the idea that [illegal aliens/inlanders] will be targeted for [revenge] after a [deliberate] (poisoning) of foods story makes the mediastream. The first of our 'green deaths' memes which goes to the 'death of the green food supply' is about to get global attention as it fractures into a number of related 'death of food supply' stories. These will include some global mediastream discussions of a very important new [threat] shown appearing within the modelspace. These early discussions of the death of the 'global human food chain' will now start mentioning [molds] and [fungus]. These stories relating to the [battle] against [mold/fungus] will grow throughout the year as more instances of the [mold] (threat) emerge in manifesting circumstances. These [mold/fungus] [threats] have very large emotional sums for the longer term values as they are processed indicating a long running meme with large consequences for humans. These consequences will include the appearance this year of the threat of [rapid death (due to) breathing (failure) from mold].

Populace/USofA and GlobalPop - The Fungus Among Us

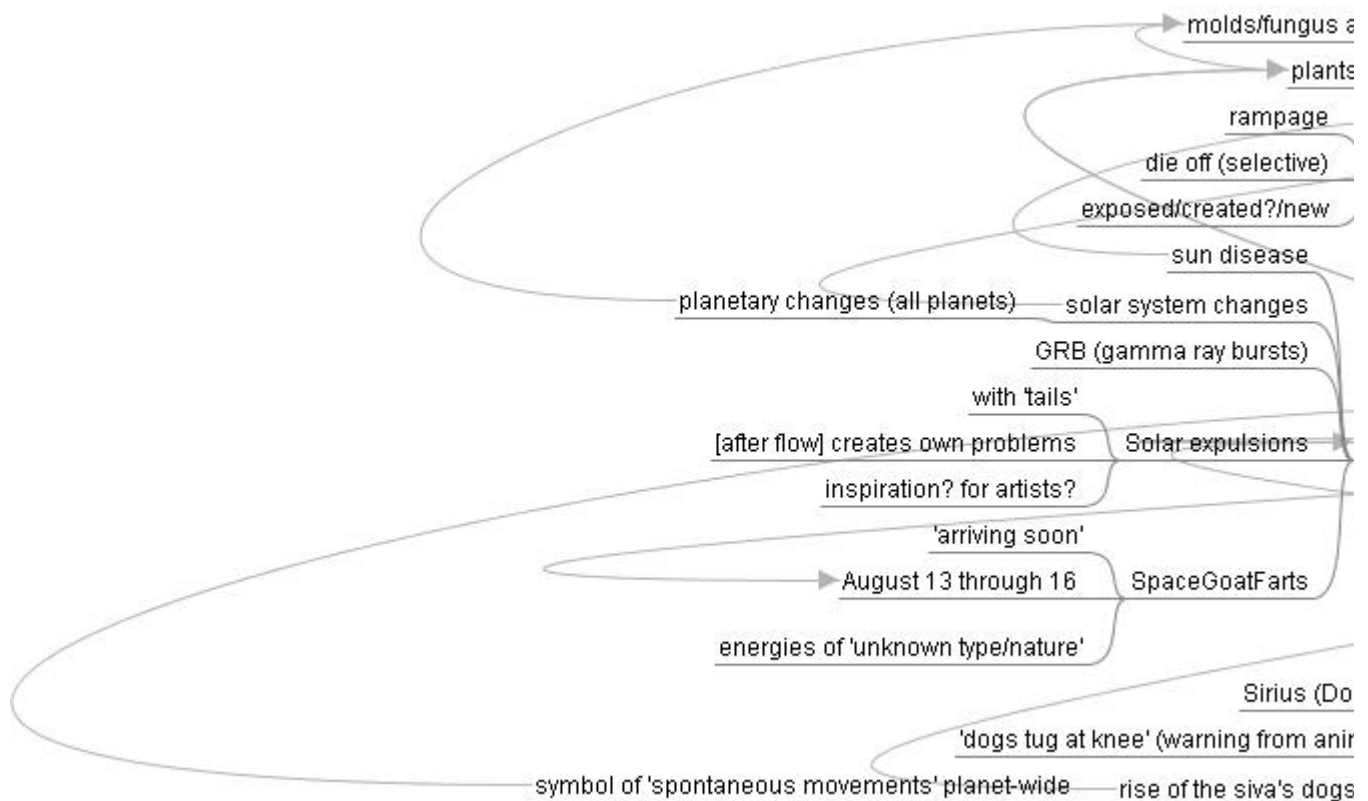

Both of the populace entities, Populace/USofA and GlobalPop include [fungus/mold/slimes/spores] as a new context. In both cases the populace entity has the sub set created under the [conflict] meta data layer. The implications are clear that 'humans are in conflict' with the new threat of [molds/fungus/slimes]. This is a [predictable/expected] (side effect) of the current 'global climate change', however the supporting lexical sets are indicating that our [collective] [position] is [excessive/too] (weak), and that [no win/results] are [favorable] in the [tension/conflict] between humans and [molds/fungus/slime] at this [time/point_in_time].

The supporting sets include aspect/attributes including [diversity] which is itself supported by [plethora/many/numinous], and [pours](from) [rain]. These sets are internally cross linked to areas which include [death], and [debilitation/reduction_by_half]. In both of these cases the aspects are supported by both [animal] and [plant] aspects. Further within the [animal/anima] sub set we note that [insects] are also affected by the [molds/fungus]. In all cases the termination points suggest an actual [battle to the death] between humans and their [plants and animals] and the [fungus invasion].

Some of the supporting sets to the [threat] aspect of [fungus/molds] include rather ominous warnings about the [pending/potential/probable] [fruiting] of the [molds] which is shown within the populace entities as causing something of a [planetary/global] [health] [condition] where the [health] aspect is supported by [ill/mal/deteriorating]. This is also supported by numerous references to [blood], [lungs], [brain], [circulation], and other body parts or body processes. These are explicit references to those components which will show up within the global media stream as being [at risk] or [targeted] by this [mold fruiting]. Further this area is supported by very large cross links over to both Terra entity and the Markets entity. In both cases the aspect/attribute sets are in support of the [damage] or [accumulation] aspect. In both cases the [damages] to be linked to the [mold] problems will ultimately be cast as [largest (in) human history] from a [single point disaster]. The damages are showing within the [plants] for this year and next, as well as just starting within [insects] and [animals] and [humans].

The [mold] problem language is continuing to build throughout the processing now that this context has been created. The immediacy values are pointing toward the global mediastream picking up the [plants] and [insects] story this Spring and Summer, but missing the [human link] until later in the year, showing now as sometime beyond the September equinox. According to the modelspace, as the Spring progresses into and through Summer, we can expect a rise in the reports of [deaths] within [care institutions] in which a variety of [causes] will be [misapplied/missed_the_mark/failed]. These will later on be identified with the [global molds threat].

There are a number of cross links over to the Press entity, and some of these include Markets entity extensions, in which the [molds] problem *may* be initially mislabeled as a case of [global pollution]. It is also possible to interpret these aspect/attributes as pointing in a slightly different direction in that the Press may report it as [global contaminated air]. If this last is the case, then the [pronouncement of enmity] in which the [mold] is identified as the problem will not be far behind. What is a key about [global contaminated air] reference is the number of cross links back to the populace entities which suggest that this [pronouncement] will not be well received. In fact there are references to all manner of [violence] and [acts of aggression] all of which are hanging under the [rebellion/revolution] aspect and all of which are also under the influence of [duality] as a meta data layer. This last is key also in that it points toward [2/two] (visions) of reality which will be [conflicting] or [pressured by tensions]. These will also contribute to a Markets entity affecting [shift/change] in [planetary/global] [behavior]. Some of the cross links among some of the contexts discussed here are detailed in the graphic below.

Terra - Two Cities, Incoming, Still Flooding

As the lexicon (see base knowledge article for brief over view) is being adjusted to accept the new

contexts which are arising within the data sets serendipitously, several interesting sub sets within the Terra entity naturally draw the attention. The modelspace, a confusing mass of twinkling and shifting pixels under the best of circumstances, has given itself over to wholesale shifts of cross links, and new associations. It was these new associations which led to the formation of the SpaceGoatFart entity, and which will likely result in many other entities as the process continues. These new associations appear visually as though certain areas in a very colorful "brain scan" were in the process of firing off together where they had never previously been seen active. Does that description aid? The modelspace has new links forming around lexical structures which are grouping themselves into previously not seen sub sets. These new sub sets are our new contexts. As the new contexts join into the movement within modelspace, new arrangements of contexts, both existing and novel, are hinting at the development of new entities.

Some of the new contexts have already manifested within existing entities as new sub sets and complex lexical structures. The complexity and the novelty of these lexical structures presents us with large holes for getting the interpretation wrong. It is difficult initially to separate out those contexts which characterize a sub set from those within the sub set which are 'marking change'. This process becomes easier over time as the characterizing contexts change in a particular manner whereas the more transient modifying contexts change in a slightly different fashion. At the moment we do not have the history for these new contexts and so are applying extra caution in the interpretation of the new lexical structures.

A very complex context has arisen within the [water] aspect group within the Terra entity. To facilitate the interpretations we have 'grouped' aspects by their major linguistic chain-of-occurrence, and cross indexed the SQL server by these keys. In the case of the [water] aspect within Terra, new structures are forming at a rather alarming rate. These structures are self-organizing and at this point in the processing where we have a large immediacy value base, and some of the first of the shorter term value sets in place, the [water] sub set has a new fully formed, completely populated, and "correct" lexical set which is very complex, and is titled [source]. The [source] sub set has extensive cross links internally back up the derivation chain to [water], sub set [flooding]. The [flooding] sub set continues to accrue values at a fast rate suggesting that yet more flooding remains within the 4/four months left in this release period. The [flooding] aspect is global, and has some interesting details within its structure, but that remains for later. At this point, the [source] lexical set has some very interesting complexities which draw the eye.

First up within the [source] structure are odd references, directly held, to contexts which include [secret talismanic writing]. Note that its not usual for the Terra entity to be holding references directly to such abstractions as writing, to say nothing of the current context of [secret talismanic writing]. Within this context, which is very robust, fully formed and correctly populated, there are numerous descriptor sets for [writing] in the sense of a [single structure/work/effort]. This is as distinguished from a more loosely defined 'collection of writing(S)' with the emphasis on the plural form of the word. So the data is seemingly describing the [revelation] (to some/few) of a [secret talismanic writing] which is described as a [defined/bound/structured/heuristicly_enclosed] volume(s) set. While the data would seemingly be pointing to a [few/some] as a [limited] set, the supporting aspect sub set does *not* indicate restricted knowledge. Rather the supporting sets describe a condition where the [few/some] to whom the [secret talismanic writing] is [exposed/revealed] are *NOT* among the [power elite], a lot of whom presumably know the contents of the [secret talismanic writing], but rather these [exposed people] are described as [toilers/workers] with sub sets including [science], and [anthropology] among the more coherent context details. The interpretation is for a [discovery/presentation] to a group of [toiling field workers] of a previously [secret] (talismanic) [writing]. Further the details provided show that this [secret talismanic writing] is linked to [gold] {ed note: ALL the good secrets always have aurum/gold as symbols at some level}. The [secret talismanic writing] is, as may be expected, [composed/structured] in [armor/guarded] (language). However the data shows that as with most [secrets], [math] will be the key.

The importance of the [secret talismanic writing] within the Terra entity is just a guess at this stage of the formation of this sub set. It has some considerable emotional weighting in the totality of the entities' summations, and while not a primary driver of the emotions, is nonetheless positioned as something of a very great importance later on. It may be that the [secret talismanic writings] are 'discovered' or 'presented' this Summer, but with little attendant fanfare as their importance cannot yet be deduced.

Also within the [source] sub set are references to the [destruction/ending/removal] of [good fortune/conducive conditions] and to [wealth]. This last is described as a [tangible/fungible] (collection/pile) of [coins] and [jewels]. The [coins] and [jewels] are cross linked internally to [gold/silver] references. This is a separate area from the [secret talismanic writing], but is at an equal place down the derivation chain, and has some cross links references to the [secret talismanic writing]. These cross links do not dominate this [wealth] area. Further details within the [wealth] sub set are brought out as the Terra entity progresses through the modelspace over the course of Summer. It would appear as though the entity is signaling the 'end of wealth' which is only tangentially affected by the [secret talismanic writings]. The Terra entity sub set for [wealth] within the [source] sub set is modified by the disturbing images of [cities] as in [multiple mountains of humanity] being [moved]. The [wealth] being shown as [lost] or [affected] is directly tied to [water] and can be interpreted as forecasting at least [2/two] instances where [great/large/maha] [cities] will have to be [relocated] due to the [loss] of the [source waters/resources]. The [2/two] instances forecast show that [1/one] [city] will be [left to dust/dried wells/source lost], while the other will have the [source(s) polluted] (by/from) [flooding]. In the latter instance the [wells] will be [contaminated] (beyond) [use/recovery] and a large [diaspora/displacement] will begin. In the case of the [dried up wells/source] {ed note: may actually refer to an event triggered by the sudden, and irrevocable loss of large electric feeder lines}, the [city/mountain of humanity] is indicated to [move] (en masse/in_group) and [rapidly] due to the [inclement/bad] [weather] conditions prevailing. Even in this case, the [rapidly] descriptor set allows for [months] of actual [movement/relocation]. For the [city] with [destroyed source/wells] due to [flooding], the [rescue] is shown as involving [huge/gigantic] (efforts) with many [innocent people] being [visibly] {ed note: cross linked to Press entity so likely on the global mediastream in real time} [plucked](by ropes)[from waters, over head high]. Further the [rescue] will have a quintessential visual of a [official] from a [sheriff] office using [his body] as a [capstan] to [winch/ratchet] a [fallen person] from the [deep waters].

The whole of the [source] sub set within the [water] sub set of the Terra entity is dominated first by [duality] among the meta data layers. There are some influences from [conflict] but these are apparently minor and appear later when the [army] is involved. The data set grows as the modelspace is advanced through Summer, and we do not yet have enough of the longer term value sets to be able to predict whether this is merely the front end of a building trend indicating a manifestation later in this year or early next, or if 1/one or both of the [cities] will be affected this Summer. What is clear is that the data set processed from the immediacy values is full of [summer] and [post solstice] references...so the inference is that some component of this 'tale of two cities' begins this Summer.

Much of the 'drama' of the [source] [waters] being [lost] comes from these data sets participating within the [knowledge] [change] set which is where many of the cross links from this [source] area terminate within the Populace/USofA and GlobalPop entities. This area, within the Populace/USofA entity more so than the GlobalPop entity, goes further to participate within the currently manifesting [emotional release] which is part of the [process/alteration] of the [mind set/point of view] which has been forecast in previous ALTA reports as manifesting over the course of this 'release Spring and Summer'. We note that the times shift over to a [building emotional tension trend] just after mid September and just prior to the Autumnal Equinox, and that is following the August increase in emotional values received via cross link from Terra over to the [knowledge change] sub set of Populace/USofA. Along with the previously noted Terra [energies from space] sub sets showing for mid August, the [lost source waters] likely will

have a 'triggering' impact on the [knowledge base] which forms the [point of view] reference for the Populace/USofA entity. It will be the [doubled brightness] and other [space] and Terra based [changes] in [energies] seen over the course of the last of Spring and the first half of Summer which are shown as irretrievably [altering] the [point of view/reference] for the populace of the USofA.

There are some small number of cross links from this [source] [lost/affected] area of the Terra entity over to the Bushista entity where the links terminate in a curious reference to [charging] an [innocent man] (with) [falsehood]. The data suggests that the [charge] of [falsehood], or alternatively the [false charge], is part of an [unwillingness] to [accept/face] the [change (of) knowledge/conditions]. Further the data suggests that the [innocent man] is involved with the whole 'global warming' issue which within the modelspace is labeled as [sudden/rapid] [planetary/global] (catastrophic) [climate change]. So the implication is from the cross links that a [scapegoat/distractor] will be [proffered] with [charges] against an [innocent man]. However the cross links from this area over to the Press entity suggest that neither [press] nor [populace] are buying the sale. The Press entity suggests that shortly after the [charges] are [leveled/aimed] that a [mid level] [official] will [step out/appear] to [rescue] the [innocent man] from [danger]. Well good. Glad that worked out.

As the new contexts are forming, changes are showing within the existing contexts. Within the derivation chain which is headed by [atmosphere], a number of new contexts are appearing with interesting ramifications. The [atmosphere] sub set now contains a new lexical structure of contexts under the sub set of [energy]. Within this [energy] sub set under [atmosphere] there is a sub set for [life] which is clearly defined as [chi/ki/prana/anima/life_energy]. This sub set is showing that impacts on [life energy/chi/ki] will occur this [summer/post_solstice]. The data sets are also clearly indicating that the [impacts/effects/alterations] will [stem/propagate/root] from [energies] [in/within] the [atmosphere]. The range of impacts described is interesting as well. The details within that sub set suggest that [creative energies] found within [artists/visionaries] will be [suddenly/rapidly] [filled/full of]...so apparently a positive? result in an over-all somewhat disturbing [energetic] [increase]. There are also cross links from this section over to the Populace/USofA entity and Bushista entity indicating that a [popular man] currently [doing well] in an [unimportant job] will be [suddenly promoted] with a very large [increased visibility]...this also as a result of the [energies from space].

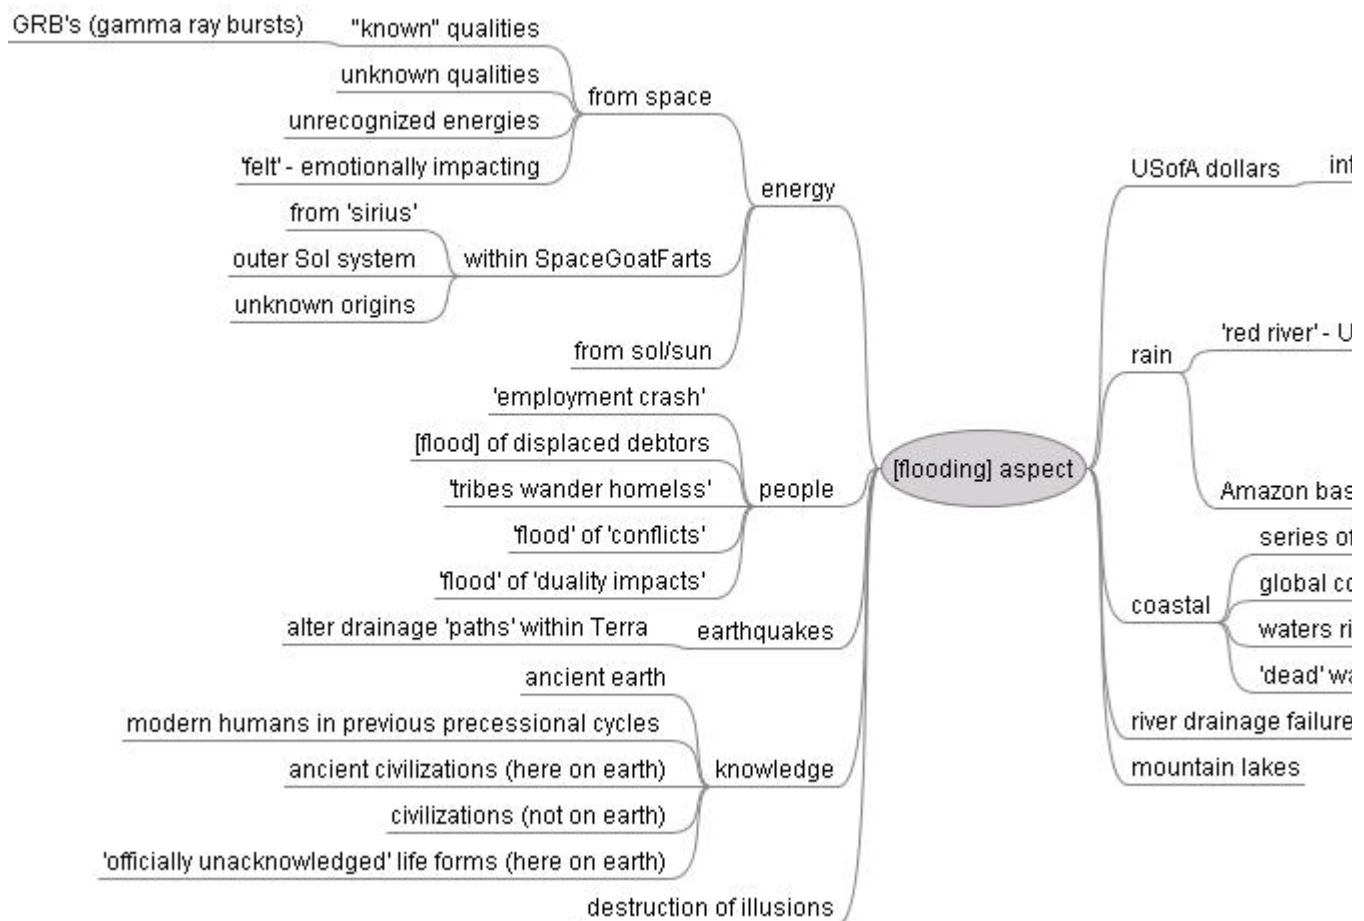

A large set of aspect/attribute set descriptors within the [energies from space] sub set are now providing increased details about the 'incoming' energies. The descriptors include [return/returning/coming_back/seen_again], [returned soul/spirit/Other], [releasing ki/chi (into/amongst) atmosphere], [returning twin], [creating twin], [skilled scientists], and others. There are references to [dogs] {ed note: Sirius? the dog star?} and [dogs (who) tug/pull (at the) knee]. There are aspect/attribute sets including [medicines] which in turn have descriptors such as [giving (off) of light], and [shining out/radiating out], and [drugs (with) extreme impacts]. There are aspects going to [high noon/zenith], and [radiations/radiant energies (push) emotions/visions].

Within the sub set of the [popular man] there are indications that this may be a single case reference for a wider phenomena. It cross links back over to the [employment crash/collapse] within the Populace/USofA entity and presents details of [masses/many/millions?] of [persons] with [talents], but [no employment] who, subsequent to the [energies] (arriving) will [suddenly] [discover] (ways/methods/places) to [apply] their [talents]. It is not all good news however as there are repeated references to this [energy from space] being [not] [good] for [patients]. The indications are that there will be several levels of effects including [damages/destruction] of [electrical supports] which will impact [care/restoration] for the [patients]. Further the [energies] themselves will also negatively affect some patients who are otherwise occupied with [illness]. There are also indications that the [energies from space] will be [affecting (the) manners/behavior] of humans across the planet. And not in a good way.

Along with the humans, the planet itself is showing as being [rocked/shaken] by the [incoming energy waves]. The effects will be a [rapid], and [sustained] (increase/enlargement) of [earthquakes] across the globe. There are new geographic references for major, which is to say, 'felt' earthquakes in places such as Greenland, Scotland, Ireland, Norway, Denmark, and many other points around the North Sea and extending down the coast of Europe to the Bay of Biscay. There are also indications that earthquakes will come to [infect/plague] Africa. Then there are the usual suspect places showing up for more major shaking. These include in no particular order, Taiwan, Japan, China, and North America. When the list of geographic pointers for earthquakes as a result of the [energies from space] it is hard to find places which are *not* on the list. It has made the processing of this section more than a bit tedious just in factoring in the many geographic labels. Some areas come in for special consideration. These include the St. Lawrence valley in the USofA, the Thames river valley in England, and the Nile valley in Egypt. None of these are known to be particularly seismically active, yet all have numbers of [earthquake] and [shaking energies] associated aspect/attribute sets.

The [energies from space] data set does *NOT* speak to the nature of the [energies], at least within the Terra data set. Rather it provides numerous links to SpaceGoatFarts, and the single "officially" recognized source of the [sun/sol/sol_de_terra]. The interpretation, taking the SpaceGoatFart entity into consideration, provides that there are at least [3/three] kinds of [incoming energies/energetic waves]. A central place in this group is given over to the [sun/sol_de_terra], and there are specific pointers to the [discussion/debate] being [silenced] by an [earth focused/grounded] [energetic wave] from the [sun]. The *problem* with this [energetic wave] is apparently that there is a [something/unnamed] which [follows] or is [drug/brought along behind] the [wave]. This [unnamed something] is seen as being a problem in itself.

In an unexpected way, many of the [sun/sol] references are also tied to the numerous [flooding] lexical sets. In some cases the [flooding] is directly held within a [sun/sol] aspect/attribute set and can then be interpreted as a 'flood of energies' from the sun. There are a significant number of 'flood' and 'sun' directly held conjunctions within the data set. There are also a number of [flooding] references within other parts of Terra and other entities with cross links back to the [sun/sol] sub set of Terra. Further there are [flood] aspect sets within [space] sub set of Terra, as well as [flood] aspects directly held by the SpaceGoatFarts entity. *SOME paltry few* of the hundreds of thousands of [flooding] aspect associations are shown in the graphic below.

The data sets within Terra entity, as well as within the internal referential integrity check system, have bespoke [unfinished] as a rising, and in some cases, dominating support aspect for [flooding]. Within the referential integrity check system the [unfinished] is used to indicate that the trend line is not yet complete, or 'more to come'.

Specifically within the Terra entity are still building data sets for a very large scale [displacement] of persons due to flooding. The geographic label that shows up the most is a descriptor set headed by 'red river'. This descriptor set is large, and uses the 'red' appellation as a label for a large region. The data sets are still building their [displaced/relocated] numbers. The current value is seemingly for nearly 3/three millions [displaced] initially, with something near a million being [denied access] to their property. We note that the [denied access] data set is held under [authority/the_ authorities], so it may be that the [flood waters] are the displacing factor, *or* that they are merely an excuse employed by [the_ authorities]. All of this area is under the influence of the [restrictions on movement] meta data layer. Within this area of [flooding on the 'red river'] sub set within Terra are aspect/attribute sets with such ominous tones as a bespoke [drastic fall] (in) [life circumstances]. This [drastic fall] has several components of interest as they are directly tied to the [flooding] and provide details of a sort. Within this area are aspects/attributes pointing to the [emptying of the lake] which precipitates the [flooding], and then the subsequent [imposition of restrictions by the_ authorities].

Within this area are descriptor sets for [aerial video] of [vast tracks/areas/parcels] of [flooded cities/homes]. There are specific references within the deeper details for [small boats] which will be [visible] as they [navigate through/from malls]. Further descriptors point to [flooded, still waters cover streets, boats move gently, great risk]. Also within this descriptor set is a lexical group describing a [mountain] upon which [flags wave] as [survivors shout]. The data also contains some clues as to a

[large] (effort) for [rescue]. The [rescue] is associated with [fires] which will [burn on water] and [deprive/stop] [travel] in the area {ed note: pesky restrictions on movement again}.

The only temporal clues that we have are for [july], but these are risky in that [flooding] in [july] will be very widespread here on earth, and as such cannot be specifically focused on any given [flooding] incident. Rather the indicators are for a [july] [flood] which marks the [initiation/beginning] of the appearance of the [flooding] meme as it apparently will manifest for some time. The [july] flood is also heavily supported by [snow storm] and descriptors of [dangerous snow storm] which [floods the senses] and [brings loss of control]. Further the [snow storm] is directly responsible for [people hiding in ditches]. This visual image is/can be a temporal clue as it precedes the [flood] by a small amount of days within the modelspace. Again, a [july] [snow storm] ... very likely very wrong on this forecast.

The [july] reference notwithstanding, the [flooding] aspect is quite detailed and continues to grow and point to severe impacts. For this Summer, the impacts would seemingly be more concentrated within the USofA than not. Further clues within the data set are highlighting [blocked] [drainage systems/rivers], as well as [opposition (from the) waters (to) movement], and [consequences (which) exceed (the) grasp/understanding]. There are some lexical details which repeated refer to [devil's country] which is likely a local place name which will rise to visibility once the [flood] images start to flow within the global mediastream.

Other details include a [3/three year] [ban/imposed restrictions] on the people returning to the [displaced areas]. These descriptor sets are also painting a picture of the [waters flooding out cities, mud left], as well as [flood waters scour/lift river banks/beds (to) deposit (it) within buildings/stores]. Again we note the cross links to 'emptying the lake' as a proximate cause or participant within the [red river flooding].

Markets - Dollar NDE, Eyebrows Aflame

Within the Markets entity, and within the sub set for the [usofa dollar], there are some new contexts emerging for a rather tightly defined period of May and June. Within this data set are descriptors pointing to the [usofa dollar] as [escaping death by narrow margin]. This is hanging under a [flood] aspect which is further reinforced by [dogs prowl streets]. This last is reinforced by language pointing toward [bullies] who will [attempt] to [profit] during the [fall down the well] of the [usofa dollar]. These [bullies] are apparently a very important temporal marker for subsequent events and [uncertainty].

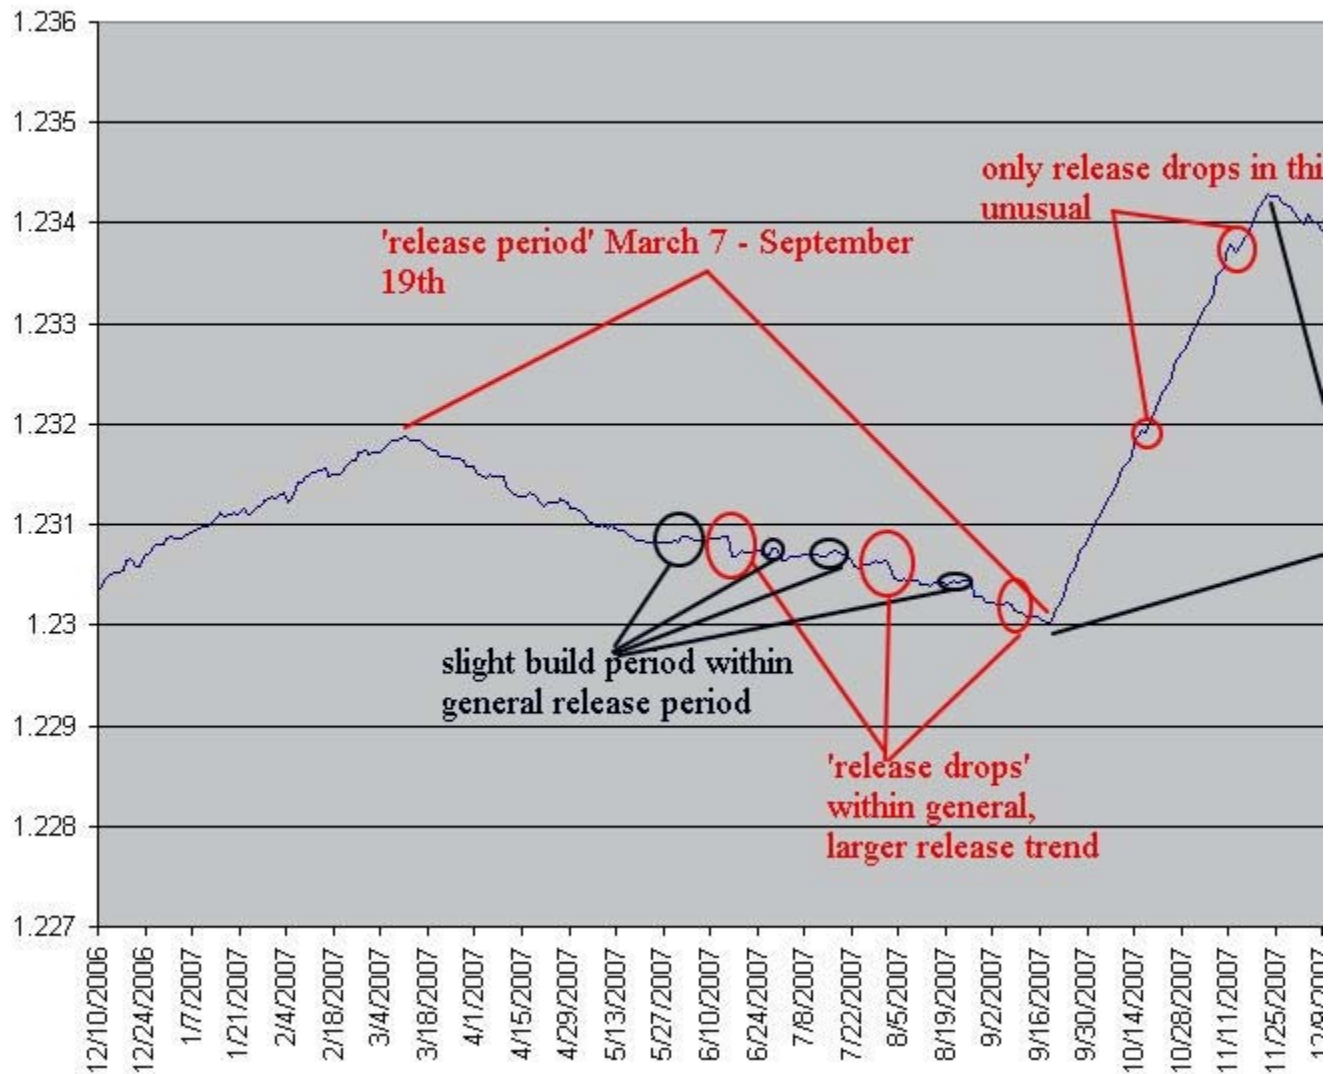

The [escaping] of [death by narrow margin] of the [dollar] is not to say that things are good in anyway after the 'near death experience'. Rather the [dollar/debt] of the [usofa] is shown as [laying gasping (as/like a) fish flopped out of water]. There are some temporal markers suggesting that the crisis period is most likely in the lunar month prior to the Summer solstice on June 21.

The temporal progression of modelspace and the Markets entity within it over the course of May and June shows that [risk] (increases) [daily], and that [treasure/wealth] will be seen as of a [clear/distinct] (secondary) [importance] to [time]. Some of the more poetic imagery coming from the aspect/attribute sets goes toward the idea of [speculators] being [drawn] to this [time/period/instant] and the [activity/crisis/opportunities] as are [moths drawn to death by flame]...which is to say, "they can't help themselves". The data further goes toward a [staggering loss] which [reels/shakes] the [mind] and [empties the bowels (in an) instant]. As may be expected from [speculators] who have just used their trousers for toilets, much [lamentation/crying] will [flow]. There are specific references for some of the participants in the [dollar near-death-experience] to get so close to the [risk] that they will [lose] their

[eyebrows] to [flames]. Hmm. Wonder if that is what happened to MothMan?

Regardless of the rising smell of singed eyebrow hair, the drama of the [dollar NDE] will continue to play out over the course of these next 2/two lunar months. The data set has specific references to [bubbles] and [creation crisis] both of which are hanging under the [federal reserve bank bastards] context. Within this data set the indications are for a [party of drunks] to [wake to frightening sobriety]. As the 'party punch bowl' is a frequently cited lexical reference amongst the economists, it can easily be interpreted as the 'crash' of the 'debt load' on the [usofa dollar]. Now what makes this all so difficult is that the May/June dollar NDE is indicated as merely the [last chorus] or [prelude to climax] for the [usofa dollar]. These newly processed data items, {ed note: as well as the reality emerging around us} are suggesting that the mid September sudden turn around from 'emotional release' language over to 'emotional tension building' language, as is seen in the chart below, may be significantly 'powered' or 'driven' by the emotional response to the economic crises of Summer. If this is the case that the emotional tension rise of September is driven by financial/economic issues, then the size of the rising wave, its sudden emergence, and the near total lack of release events within it are suggesting something horrific this way comes.

Emotional Tension Trend - LTV - 2007 ALTA 907 Series

As an apparently soon-to-be-visible after the crises of Summer meme, the [revolution] aspect is rising within Markets entity. In this case it is supported by [reformation] more than [violent struggle], though it must be noted that [conflict] as a meta data layer is having its impact on Markets in many ways, and will also modify the [reformation] effort pushed onto [currency] as a result of the [dollar nde].

Conclusion: Part One ALTA 0108

Now that the continuing manifestation of the 'green death' meme is evident to any observer paying attention, some of the more subtle interconnections are also coming out. There are a number of articles appearing in which the bee 'hive collapse' is being related to 'sun disease/energies'. That these are resonating within the public mind is shown by our increasing number of 'sun too bright' and other sun ain't right discussions out and about.

There are even reports of an 'officially acknowledged' acceptance of the idea of more energy from the sun reaching earth's surface and its 10/ten fold greater impact on 'climate change' than humans and all their CO2 emitters. As more of the 'established' science community begins to accept the variations in solar radiation contribution to our current climate dilemma, the more measurable components of our predicted 'mind set change' start to emerge. Once again, as we natter on ad nauseam about the issue of 'hope' as a method of control by ThePowersThatBe, it must be recognized that social behavior changes will take place as a result of the wide spread acceptance of the knowledge that humans are *not* causing climate change, and therefore have *no hope* of affecting the process. These behavior changes will begin to emerge as the ratio of those accepting the 'energies from space' cause for climate change increase among the larger populace. We coincidentally expect the first of the social behavior changes to emerge in September of this year.

A lot of data is coming in and we are running dual processing while walking around as hosts to who-knows-what-kind of flu/headcold so things are a bit disjointed to say the least. We hope to have Part Two posted by May 9th or 10th.

Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in *[italicized bold green](#)*, and [red](#) when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from interpretation of 28.171 million reads of the 0108 series.

Meta Data - Time, Multidimensionality, Discrimination Mind, 4V5

From the perspective of a multiple discipline systems engineer, it is easy to tell that the 'good economy' proclamations of the Bush years are merely attempts to control the language used relative to the economy. During the actual good economic times {ed note: aka - the clinton/greenspan boom years}, I received an average of several calls per week from "head hunters" seeking skills in one or more of my many disciplines. Almost overnight with the transition past the Nasdaq/Dow/Internet_stocks crash of 2000, and the ascension to the throne of the manipulated pretender Bush, the calls from the head hunters fell as a stone through thin ice over a deep lake. The rapidity with which the destruction/implosion of the "internet stocks" bubble hit the employment market for high end technical skills was shocking. It had taken from 1994 through to 1998 for the twin monetary bubbles of the Y2K employment bubble, and the internet stocks bubble to raise the demand for skilled technicians to the point that an annual average went from zero calls per week to 4/four per week. The call rate was mostly stable during 1998 through to the middle of 2000. There after it started down, and by the inauguration of Bush, the rate had once again returned to zero, never to resurface. So, from a personal experience with the boom and bust cycle, the claims by the Bush administration that the 'economy is good' rang hollow in the absence of any other "dimensional display" of the claims. In other words, the drop off of the head hunter calls was the loss of a huge "dimension" of the 'good times'. In the Bush years, in spite of proclamations, the universe is **not** providing multiple dimensional reinforcement to the claims. All of the arguments about the 'why' of the situation aside, the loss of supporting 'dimensionality' to **all** of the claimed successes of the Bush administration are clear pointers to the curse of "linear thinking".

Linear thinking is a curse whether it besets a people or a person. It comes from a misperception of the nature of time. Time, contrary to popular analogies and conceptions, is not linear; does not flow like a river; and is not available in a 'pre-created future' into which we pass. Time is not a 'progression', nor does it exist as we popularly think in a triad of "past, present, and future". The linear thinker has a view of universe in which somehow the future exists ahead of their arrival at it. They consider the present moment to be merely a point from which to either anticipate the future, and from which to contemplate the past. It can be logically noted that inconsistencies creep into such a view instantly...as an example, if the future already "exists" in any meaningful fashion, then is it possible to "plan" for the future? If the future exists, does not that mean that 'events are written', and predestination is the **only** rational conclusion...and if so, why bother to plan/prepare? Both of these instances are merely small inconsistencies which the thinking mind must reconcile to the view of a linearists idea of the nature of time. There are more and larger inconsistencies and contradictions within the view which touch on the ideas of time travel and other curious notions.

The reality of time can be ascertained once the idea of "continuous creation" is grasped. A good and in depth discussion of this universology can be found in the work of Paul Lavoilette. At its core the idea is that all time exists simultaneously, and that our perception as humans of time 'progressing moment to moment' is merely the best our brains can accommodate. This is a necessary restriction imposed on

manifestations within the 3/three dimensional universe. However, the perception of time as a 'moment by moment' experience does not make the perception the reality except to the more limited minds of the linearly bedazzled/hypnotized. To those who shake off the hypnotizing illusions of time, it becomes obvious that within the core nature of time things operate in a circular or cyclical fashion. Indeed, even with both the perception and the reality of manifesting universe, cycles dominate..from the motions of the stars and galaxies, down to planets, atoms, electrons, energies, seasons, life_patterns, and all other manifesting circumstances within material universe, cycles predominate. Hmmm. So why do the linearalists deny the influence of cycles on their own actions and lives? Perhaps because they seek liberation (from the cycles of life and death) in the form of an escape clause. To those who perceive that all of a life's events are *not* separated by time, but rather are joined by it, any given moment, and the actions/reactions therein, are intimately joined to any, and all, other moments. Such perception allows, even facilitates the perception, and appreciation of the 'cyclic' nature of time in which the individual, while seemingly transiting a linear format experience, that is time, nonetheless is able to perceive "periodicity" and "interconnectedness" within the events which register on their consciousness within the experience. Such a cyclic perception brings with it an appreciation of both the impermanence of 3 dimensional reality, as well as the persistence of patterns and resonance which transcend that impermanent.

Linear thinking is a curse whether it besets a people or a person. Consider that to a linear thinker, the past is 'gone' and with the exception of knowledge of the past in the form of human memory or documentation popping up, there is no way for the past to interact with the present. Within this perception of 'time passing', any crime is a "thing of the moment", and therefore if properly handled, its ramifications can be controlled as well as limited to the moment. Thus, following what passes for logic in the linear view point of time, it is possible to escape consequences for any crime or transgression merely by controlling access to, and the collective perception of the 'memory of the past'. It is precisely this sort of thinking which led Orwell to the "revision of history" as an active role of government in his novel 1984. This same linear viewpoint can be, and is currently embraced as the modus operandi for all social orders based on the linear perception religions. These include judaism, mohammadism, and christianism. The linearalist believes, to the extent of their personal denial energy levels, that 'cycles' within time are 'illusions', and are 'non impacting' on their reality. Indeed, they even go so far as to concertedly, and as the act of a mutually-reinforcing mass, stigmatize those who can/do perceive the 'cycles of time' as "conspiracy nuts" or "backward", or other pejorative terms usually intended to imply the recipient is less than human, and therefore worthy of victimization/control or other acts which tend to reinforce the denial state of the linearalist. It is interesting to note that societies organized on linearalistic precepts have both crime and incarceration at whole orders of magnitude higher levels than cyclical based social orders. This principle scales with the numbers of the persons within the societies as well as their complexity along the cyclical-to-linear continuum of thinking. That is to say, the more 'hard core' linearalist the social order the higher both crime and incarceration will be by all statistical measures.

At a very core level the human condition of the last several millennia has been a battle for supremacy of vision of the nature of time which has resolved down to the linearalists versus the cyclicalists. This [conflict] can be seen throughout the history of the species in many different guises but most frequently and generically described as [west versus east]. Within the expression of the meta data layers, we note the presence of language pointing to this most basic of [conflicts]. Further many of the cultural changes occurring are happening at levels which express the concept of 'cycles' so blatantly as almost be insulting. We note with sarcastic irony the obvious schisms appearing within the populace in the 'developed or linearalists' world over the known and unknown cycles issues around 2012...or what is euphemistically called 'global warming' {ed note: merely a manifesting symptom of the cycles of time and the proximate of 2012}.

The ability of the aware individual to perceive the "design patterns" appearing in the universe around them is a function of what the Buddhists call *insight* and the Taoists call "perceiving the tao in flow". Both of these concepts, as well as the point of obtaining these states of awareness are usually lost on the linearalist as they live in what is known as "discrimination mind" in which they become mentally captivated by the progression of the moments and the manifestations emerging. The "discrimination mind" view of universe, and in particular, time, is such that consequences are separated from actions by a "river" of time that once past can never be recovered, and by extension therefore, consequences of actions *may* be avoided by adroit manipulation, which is to say, cleverness. That the whole concept is filled with flaws is not apparent to linearalists as they are in active denial about the continuously manifesting cycles which surround and control their daily existence. This is even the case when their daily existence, such as "stock trader" is completely focused on *just* such activity as cycles. But no, in the end, the discrimination mind of linear thinkers is in complete control and insists that time, and progress are ever forward, ever upward and any experience to the contrary is merely a personal failure to 'be bullish'.

This discussion of the linearalist versus cyclic view point on universe is pertinent as the meta data layers, as well as the current progression of modelspace are presenting a new set of details which strongly suggest that the 'mind set change' which is occurring within the populace over the course of this release period will have at its core a [conflict] between these opposing views of universe. The meta data layers are placing this [conflict] of perceptual view within a broader context which we are labeling as [4V5]. This label references the [fourth order] versus the [fifth order] nature of the constituencies for each of the opposing views, linearalist versus cyclicalist. In this case the [fourth order] represents the linear level of viewing universe, where the [fifth order] is cyclical.

More than mere syntax or odd linguistic references, the new context of [4V5] is found in a number of entities including the populace entities, Bushista, and Markets. The most curious however is the SpaceGoatFart entity sub set of [4V5]. The appearance makes sense is a strange sort of way when the details of the supporting aspect/attributes are examined within the SpaceGoatFarts entity. It can be noted within the details that the [space aliens] of the [2/two] types of [grays] are [4th order] beings, while humans are [5th order] in spite of the tendency for some humans to prefer the 4th order thinking of the linearal view point. A key point of difference is that the [grays] are *not* capable of [5th order] (experience) though they understand that humans can [conceptualize/imagine] in [5th order] [thinking]. The presumption is that the [grays] telepathy as well as other related sensory input issues form a rigidity of group think which, while powerful, is very limited.

As a support to the concepts it can be offered that the [4th order] beings such as the [grays] show [few/little] signs of individuality. In fact, popular impression has it that the small grays are actually clones in the service of the large grays who themselves exhibit near clone-like uniformity of face and body. This is similar to the many [4th order] species here on earth which range from all plants to most animals. True, small markings differences and general body sizes exist in all animal species, but very few include the range of expression of individuality of the human species. And notably, those other animal species which do manifest individuality are dominated by species whose breeding is under the control of humans....think dogs and cats, other domesticated animals.

The data sets are indicating that the [central] component of the linear versus cyclic thinking will emerge over the course of this summer in much the same way that the key word [green] manifested with such strength beginning in January. Within the [green] reference, especially with its many associations to 'green death', there are less than explicit data points which indicated many differing forms of the expression of the 'green death'. In the current cast of [4th versus 5th] order expression and thinking, there are many supporting references which indicate that the manifestation of these opposing view points and their 'struggle for dominance' will rise over the course of Summer with strength at levels

larger than has been seen within the [green] meme manifestation.

Within the bespoke references to the [4V5] concept, and within the many cross links to other sub sets in various entities, there exists a level of multidimensionality which reinforces the gravity of this emerging theme. There are bespoke [battle] and [conflict] aspects within the [4V5] aspect which support the idea of the core of this conflict emerging over this Summer. The larger number of references start to accrue following the June solstice and reach the top of a plateau of increase in early August. Thereafter the accretion of values stays stable, and the continuing increase in [4V5] language starts a shift from release over to building emotional tensions as August fades into September. In watching modelspace progress, the impression arises of the 'linearalists' under pressure as increasing evidence of [cycles] manifests, and apparently so blatantly, that the 'linearalists' feel [attacked/beset_upon], and thereafter become [rigid] with [opposition] to [change/changing circumstance]. Of course this last is a signal for a crushing defeat as the idea of [standing rigid, opposing change] simply does not work in a material universe predicated on constant change.

The number and diversity of the levels of language around this [4V5] concept are pointing toward a new meme of some significant impact on daily life. It appears that modelspace is forecasting a [summer] of [disclosure] of [facts/history] which is under the influence of the [secrets revealed] meta data layer and which directly feeds the [battle of perceptions of time] meme that takes place prior to the building emotional tensions of Fall. The data suggests that expressions of linear thought forms failing will abound this Summer, and will [flood] the global media stream. These failures of linear thinking will come from a number of disciplines and according to the Press entity the number of stories with a central theme of 'cycles dominate' will reach a point where the commentary about the developing circumstances actually includes references to the [failure of linear thought]. As warfare in the present moment is being prosecuted by 'linear thinkers', it is understandable that [defeats/setbacks/reductions] in [wars] will also [flood] the global mediastream. Nowhere will this be more evident than in the Bush wars of aggression against the peoples of Iraq and the USofA.

However, please note that [warfare] and [conflict] are not limited to actual combat. There are a number of [mind wars] underway especially within the [western social order] part of the planet, and these [mind wars] will also be going very badly for the [linear thinkers]. Most notably, the Terra intrusions of this Summer are showing as very pointed reminders that [cycles dominate].

Markets - Militant August

A number of bespoke [cycles] aspect/attribute sets are showing up in the Markets entity. In the main they appear over the very last days of July, and into and through the month of August. There are other bespoke references which include aspect/attributes such as [large numbers overwhelmed by small group], and [power challenged]. Also within the bespoke aspects are found [disorganized] and [misfortune]. Both of these sets appear in early August and gain strength as the month progresses.

Part of the problems which the Markets entity encounters this Summer specifically relate to bespoke [cycles] which is primarily supported by [military/army]. In this set the interpretation is multidimensional. The data supports the idea that [military cycles] are shifting within the [popular base] such that [4/four generations] {ed note: a generation is defined as 23/twenty three years} will be involved with [accepting/acceptance] of [participation] in the [support of crimes]. The nature of this acceptance within the populace of the USofA is such that a [rejection/refutation] of [empire/imperial desires] will begin to manifest over the course of this Summer. The first signs will be visible within the social order beginning in late July. The impacts of this [mental shift] toward a [rejection of militancy] is also very robustly supported by multidimensionality within the references themselves as well as the cross links.

This [mind shift] is pertinent to Markets entity in that this will be an easy area for the aware individual to be able to spot the progress of the [failure of linear thinking] meme. As various [cycles] complete themselves, the bespoke references to [cycles] and all the linguistic permutations of such will mount within the global mediastream. As the [disorganization] and [misfortune] manifests in markets it will become increasingly clear that the bespoke references to a [bad summer] within the Markets entity are emerging. The [bad summer] references include supporting aspect/attribute sets held directly which go to the [failure of (Bush) oppression] [breaking down/disintegrating] in Iraq and within the USofA. As there is an [inherent], but [foul/unholy/immoral] linkage between the Bush cabal and the markets, the Markets entity is forecasting [extreme] (reactions/flailing) with each [new exposure (of) weakness/failure] of the Bush cabal over Summer. While much of the release language within the Bushista and Populace/USofA entities appears in small steps over the month prior to the June 21 solstice, the main body of [failure] language does not begin to pile on until August. At that point the cross links to the Markets entity show that the [markets] will have [limitations] (forced/imposed) upon them over the [bad summer] due to the [continuing] [military] [failures]. As these are extensively cross linked to the Bushista entity, it would seem safe to predict that 'increasing, and continuing incidents of the failure of the Bush wars will impose significant limitations on the USofA based markets throughout Summer, and increasing as Summer progresses'.

At this point in the processing, the modelspace is deriving still only about a third of the building emotional tension energy shown in the chart for September from [economic] or [money/currency] related linguistics... so the presumption at this point is still for a [bad summer] of [degradation] rather than a continuation of the current market directions to be followed by a September crash. Rather the [bad summer] label has extensive supporting aspect/attribute sets pointing the 'emergence' of several serious problems which the data describes as [disrupting] the [social order/harmony]. Primarily among these is **not** the current implosion of the [housing] bubble, now shading over into language reflective of [crisis], but rather a related problem of the coming [employment crash]. This [employment crash] is has directly held supporting sub sets in both the Populace/USofA entity and the GlobalPop entity. In both cases the inference from the supporting aspect/attributes sets are pointing to massive problems including degradation of the [political system] stemming from the [global employment crash]. The [crash (of the) system (of) employment] is currently showing most of its energy within directly held Markets entity values which are extensively cross linked as may be expected. The Markets entity is forecasting some staggering levels of changes for this aspect/attribute set of [employment crash]. These changes are already showing extreme long term language accruing within both the immediacy and shorter term value sets. This occurs due to the relationships of the words **within** contexts wherein some contexts have larger proportions of longer term associated words, but are primarily driven by the **pop** of the emotions represented within the "impact" value within the array of emotional values. Make sense? Clear as dark roast espresso in the twilight of pre-dawn chemtrails?

Fundamentally the data seems to be forecasting a [banking system degradation] which has the first impact of [looting] the [accumulations] from [hundreds of millions] of regular, hard working humans globally. This [crushing] of the bespoke [emotions/hope] of the [multitudes] is shown as being perceived [rapidly/shockingly] as a [targeted act/deliberate]. This [perception] is **just** what ThePowersThatBe did not want to occur. The [perception] alone leads to problems within the social order.

The conjunction of the [economic] problems with the increase in erratic weather events, especially within the USofA, supports further the [bad summer] label.

Knowing, and noting that we **always** err on the extreme side of the emerging circumstances as this is a side effect of the data gathering process and our emotional summations, we still must acknowledge that the [bad summer] language is extensively supported, and the data sets also offer multidimensionality as a confirmation of the general theme. In this case we have [catharsis] as the leading, and dominant aspect

for [usofa dollar] following the June solstice. The [catharsis] is showing as a [process] which [exists from] and is the [culmination of] the [mountains] of [oppressive actions/environment], and the [inelegant/clumsy] (operations) of [control].

The [catharsis] of the [usofa dollar] just *may* include a [summer run up/increase]. There is some language suggesting this, but be advised that the rising aspect/attributes within the supporting set for this area are headed by [calamity] so attempting to time the top may be very dangerous. It is clear from the movement of the [usofa dollar] sub set within the Markets entity as the entity progresses along with modelspace through Summer that the [usofa dollar] will shift from its present state through [catharsis] and into [calamity]. The progression of the language is unusually unambiguous.

There are other aspects which represent a multidimensional view which tends to reinforce the [catharsis to calamity] transition of the dollar. These include very prominent references to [gold/silver] with supporting data aspects of bespoke [coins] and [ingots/bars]. This whole area is filled with bespoke and explicit references to [wealth] including language such as [above (the) mean rate (of) increase (by/factor) 12/twelve]. While it may be tempting to read this as a 'twelve fold increase' in the [perceived wealth] of [gold/silver], this would be overly optimistic. Our interpretation is that the [end of cycles] association with the [female personality] discussed in previous parts of this report applies here. Therefore the data set could be read as predicting a [rate of increase of 12/twelve per cent over the mean rate of increase during the last cycle]. There are also very large supporting sets pointing to the [cycle] involved being of [multiple/many years].

The data set for the [usofa dollar] [catharsis] over Summer includes language such as [good idea promoted] {ed note: the 'amero' as the alternative to a dying dollar?} and the subsequent [talk about (how) wonderful (idea) is] to the point that [people get bored/lose interest]. Further the supporting set includes a certain finality of [(they?) are unable to do what (they) want (with) the usofa dollar].

Part of the dollar woes will come from the [necessary] [reappraisal] of what is shown as [many/most/millions] of [residences/houses]. The [reappraisal] of the [achievements] brings [disappointment] and the [cry] for [debt relief]. The [debt relief] language is cross linked to the Press entity and suggests that the appearance of such language in the USofA media stream with strength may be able to be used as a temporal marker for the mid point of the [catharsis] of the dollar.

There are continuing accruals of supporting sets for the [female personality] associated with the [end of the cycle] within various [commodities/foods/material]. This person is showing as [bringing wealth] during this [transition] due to the [relationships (with) gold]. The [authorities] are showing as [peeking around corners] during the [catharsis] and then [riding (in) cars (with) fluttering flags (in a) great hurry] during the shift into [calamity] mode. This area is supported extensively with bespoke [dangerous] aspect/attribute sets. There are specific cross links to Populace/USofA and from there over to the Press entity and which go to the [emergence] of [personalities/talking_heads/media_consultants] with the unique [distinction] of being described as [having prepared] or [taken precautions against calamity]. Within these discussions there will emerge a meaningful sub-theme to the times in that the language is speaking of the [anchoring] of the [social order] by [those who/whom] [cooperate harmoniously]. This group falls under our category of a "self organizing collective" and though it is doubtful that that appellation will be applied in the media, the data is stating that this key idea of [small gifts, small groups, sharing] will come across as the [prepared minds] are filling the media stream.

A last note about this data area is that there are explicit and bespoke references to [8th/eighth] [month] for the beginning of [calamity]. The [misfortune] and [shifts (of) wealth] are specifically pointing to [preparations] which include [piles of coins]. It our view this is a statement about physical possession versus paper forms of gold/silver ownership. And once again within the supporting lexical structures for

this sub set of the [usofa dollar] there are bespoke, and explicit aspects going to [bad summer].

GlobalPop - Pure Sun Disease

An area with some potential ambiguity has arisen with the GlobalPop entity. This area could be interpreted as either pointing to [pure sun disease] or as [disease (for) humans/animals (which) is induced/amplified by the sun]. The data *does* include specific references to 'bird flu', but we do not find any 'pandemic' language to suggest that the bird flu is going that direction this Summer. Instead what we have is the more general references to [pure] being associated with [sun disease] occurring during the last of this release period which has already been noted as including the [mind set] shift language toward a [new view] of universe. Sooo...the idea as we see it is that the [pure sun disease] is *probably* going toward the idea that the GlobalPop, specifically excluding most of the Anglo-controlled peoples will [understand] that the sun is the cause of the current planetary climate shift.

This area is very extensively cross linked to the Markets entity and shows that the [mind set] alterations will have a huge impact on how humans relate to such abstractions as [paper debt] or the [equities markets]. In fact these areas tie back over through cross links to the [piles of coins] references which tends to support the idea that [physical possession] is what is being forecast as the [beginning of wealth].

As there are so many references to the [sun disease] and that they are almost all held within the GlobalPop {ed note: from the processing of the shorter term values of this run}, the interpretation is running toward the [idea/concept/mind set/perception] as being the important element to rise from the [manifestation/emergence] of the [sun disease] this Summer. There are now confirmatory duplications of details between GlobalPop entity and the Terra entity relative to the [sun disease]. These details include bespoke references to [dangers (of) illusionary practices] as well as [illusionary sense of security fades]. The data further contains aspect/attributes for [lurking dangers], and [sober and cautious attitude (to)]. This last is linked over to the Press entity as well as containing [officialdom] with linguistics of [derision] and bespoke [lies], neither of which bode well for the continuation of [illusions] about solar system wide changes currently manifesting.

GlobalPop - Populace/USofA - Terra - Omens of Limping

We have very complex lexical structure which is not easily forced into a single entity. Not only are there very extensive cross links within the structure, but it has both exact, and near duplicate lexical contexts being held in 3/three separate entities; GlobalPop, Populace/USofA, and Terra. Further compounding the interpretation problem are the nearly identical duplication of all the external cross links to other entities, and that *none* of the larger entities are untouched by these cross links. So we have a situation with a well formed, complex, complete, fully populated, extensively cross linked structure which modelspace is showing as having a bespoke [impact/effect/alteration/modification] (on/onto/into/within) [all/total]. This is to say that the modelspace is forecasting that the core of the lexical structure will leave [no life unaltered]. Hmmm.

What does it all mean? Well, a bit difficult to interpret with certainty as we have yet to process any of the longer term values which may provide further details within the contexts within the lexical structure, but at this point we can say that at least the dominant aspect of [omen] is seemingly a good fit for an appellation.

Our [omen] is supported at its primary level with aspect/attributes of [a thousand miles] and [something far away] and [becoming a factor/divider/multiplier/alterer]. So our [omen] is pointing to [something far away which will become a factor (in our common earth life)]. This [far away] has the details of [a

thousand miles], but we need to note that [a thousand miles] is not the same as [1000/one thousand miles]. Rather the context with the primary aspect of [a thousand miles] is more meaningfully read as an archetype for 'very far away'.

Much of this data *could* be interpreted as describing a SpaceGoatFart such as the gamma ray burst which arrived here on earth on May 8th. We have aspect/attributes such as [going away (from) brightness (into/towards) darkness], as well as [flying (from) a thousand miles (away) pushing/holding/carrying (a) hollow stem/reed/vibration (in its) mouth]. Further details provide some bespoke temporal clues as to the impact of what our [omen] portends as in the aspect/attribute set of [(what) begins in August (will make us/you) sick/ill/debilitated (in) Winter (post December solstice)].

We have some geographic clues pointing toward [south] of [40/forty degrees south latitude] is [good] while [north] of [20/twenty north latitude] is showing as [not promising/hospitable/inviting].

There are specific and bespoke references to this being an [omen] of [evil]. This is a rare occurrence of the use of a bespoke [evil] as an aspect. We get [evil] frequently, but rarely as a bespoke descriptor set of its own. Further this is a secondary level of support for the [omen]. The [evil] aspect has details pointing to [impacts (on/to) vacations], again with specific references to [august]. Further the extensive cross links seemingly are pointing to this [omen of august evil] as being directly tied into, if not a proximate cause for [employment loss] in large [measures/quantities]. Hmmm. Strange that a SpaceGoatFart could trigger job loss.

Within the details of the structure we find aspect/attributes for [difficulty] which is supported by [lakes high in mountains], and [reservoirs (not) able to hold the flow], as well as [difficulty (at the) top (of the) mountain (as the) lake fills beyond capacity]. This data set *may* be more archetypical than most. There are indications that we may not have the functional archetype clearly defined within the lexicon and as such the 'lake at the top of the mountain' may actually be better interpreted as say the 'magnetosphere', or 'ionosphere'. The clues that we have for this interpretation come from aspects of [atmosphere] which is supported by [upper/far/top], as well as the [lake] aspect being supported by [capacitor], and [container], and [shield], and [vital energy]. This area also includes supporting aspect/attribute sets of rather odd descriptors such as [lame/halt/damage (is) pushed/travels a thousand miles], and the [shell/shield/cover (is) moved/propelled (a) thousand miles].

The impacts of the [august far away affector] include such strange details as [cars go into ditches], and [cars, transporting people to hospitals, have damage/accidents]. Further we see that [pipes break open], and [leaks abound (in) all pipes] as well as [pipes split], and lastly in this chain [complete/total system rebuild (is) required]. Likely good for plumbers, but the rest of us may not be so thrilled with a big leak day.

Other impacts shown as supporting [omen] include [violent arguments (over/about) trivial things/matters] and [non important minutia precipitates terrible argument]. Hmmm. As a result of the [brain] (affect) from this [far away factor]? Hmmm. Sure reads that way at the primary data levels.

The whole of this area terminates in a tight context which includes aspects explicitly pointing out that [forward movement] also defined as [implementation (of) plans] will [yield troubles/degradation]. Further cautions are provided in that the data suggests that [favorable results (from) going back/retreating]. There are bespoke aspects of [courage] which is supported by the aspect/attribute set of [required (in order to) reorganize/lead]. Further the [courage] aspect contains supporting sets pointing out that [only (during/under) unusual/stressed/frightening circumstances (is/does the) nature/core (of) humans emerge]. Probably this is not good.

Terra - Eyelashes Blink, Crow Clouds, Motes Bite

At the far edge of the shorter term value range, or at about 4/four months from this week, the data sets within the Terra entity are forecasting that a period of the [bad summer] will be followed by a [bad fall]. Whereas the [bad summer] aspect set is mostly reflecting markets activities, the [bad fall] is specifically related to the Terra entity and its impact on life here on earth. The [bad fall] has numerous supporting aspect/attribute sets which begin with [torrents/torrential] and [rain]. These 2/two aspects are showing within modelspace as being 'defining language' and surfacing in Fall, which is to say around the September equinox, though there are a few hints the rains may begin a bit early.

The [torrent/torrential] aspect set contains descriptors at the secondary level of support for [narrow/thin/little_margin] and [escape]. These in turn are supported by [many persons/humans] and [death]. Sooo...this set *may* be interpreted as saying that this September [many people narrowly escape death from torrents]. There is also support for this set which can be read as [universe/chance] (provides) [charity] (in all directions/areas). A good interpretation for this set as a support goes to the idea that 'the charity/favor of universe provides the lucky chance for many to narrowly escape death from torrents'. The [chance] provided for the [narrow escape] is described as occurring when the [eyelashes (of the) sky (will) blink]. The [eyelashes of the sky] are supported by aspect/attribute sets which describe a [line of clouds] which will [part/open] and in so doing [provide brightness (from the) sun] which is just enough to [accommodate/support/allow] the [narrow escape]. Since there are many Press entity cross links it is likely that this will be very visible within the global mediastream. Further supporting details are being interpreted as showing the [expressions] within (interviews/appearances) will (focus/gravitate) on a question of [choice]. The data set appears to be saying that the [choice] (quickly/rapidly/hurriedly) [made] will be what [allows/facilitates] [escape] from the [rushing/roaring brown torrents]. This [choice] is framed by the data sets as involving [possessions]. Apparently those who [leave/abandon] the [possessions/residence] at the [first sign/manifestation] of the [clouds of crows] will [escape] to be able to [cook on roofs, burn shingles (for) light/warmth], while those who [linger] [transfixed] by their [residences/possessions] will [perish].

It needs to be reported that the [torrents/torrential] aspect is hugely supported with words going to [flooding], and even if we all are getting rather bored with the whole [flooding] meme, the data set shows the [flooding] aspect to continue to gain emotional summations at a fairly steady pace. The processing this week provides descriptors such as [waters (so) high (as to) force animals and people (to the) roofs]. The detail descriptors are suggesting that the [conditions endure] at least long enough for an image of [cooking fires burning on roofs, shingles burn, glowing embers float at night]. The [float at night] aspect set contains references which paint a picture of an aerial view such that [cooking fires] in [many numbers] seemingly [float] on the [flood waters].

There are other descriptor sets which suggest that [large/huge] [migrations/movements] of [crows] will be a temporal indicator shown to arrive just before the torrents news hits the global mediastream. Further the [crows] are seen [flying south, by west] in [numbers] so large as to create [black clouds] against the sky. This may be more archetypical than specific and the reference to the [crows] *might* be better taken as a general 'animal/birds' descriptor. This area could be indicating that, as with the Sumatran tsunami, the local animal population may be [providing/giving] [alarm] just prior to the arrival of the [torrents].

There are other descriptor sets which, under the influence of the [duality] meta data layer are pointing towards [contrasting] [images] which will [label/name/describe] the times. These include the image of [sailing boats without wind for days] and [needing rescue from cessation of movement]. This last is supported by sets which go to [strange/eerie/alarming] [calm] and suggests that the [cessation of movement] may involve [many thousands (of) hectares]. Further, the [sailboat] aspect comes into double

duty in that the other primary appearance of this aspect paints a picture of [sailboats ghosting/lightly (through/over) streets underwater]. The impression from the movement of modelspace is that following the [torrents/torrential rains] the [many flooded cities(mountains of people)] will be [layed upon/covered/blanketed] by a time in which there is [no/none] (air/atmosphere) [movement/stirring].

The impact of the [torrents/torrential rain/waters] is shown as [inducing restrictions/limitations (upon/over) humans/people]. These [limitations] are very broadly defined and point to not only [restrictions on movement], a very powerful meta data layer, but also providing [restrictions] due to the [dispersing] (within) the [atmosphere] of the [small particles/motes]. This [dispersing] is cross linked extensively and includes numerous links back to [molds/fungus]. There are also indicators that the [health/continuance] of [many persons] (will be/are) placed in [jeopardy/risk of loss] by the [motes]. This is connected to the [fungus] and the [strange stillness] which follows the [torrents] of Fall.

The [torrents/torrential] descriptor set includes numerous support sets which cluster around [reservoir/lakes] and [restrictions/limitations] which are [built/fabricated] (around/on) [rivers] and [channels/canals]. These supporting aspects are in the tens of thousands, and are boringly repetitive as they focus in on [rivers gone wild] which is to say, 'rivers which refuse, due to the torrential rains, to obey their limitations'. These supporting sets are not offering any new details, merely reinforcing the idea that the [torrents] will cause such large scale flooding as to [alter/change] the [lands/grounds/landscape] for [a thousand years/long_damn_time].

Within the boring support layers for the [torrents] we do gain some insight via the cross links. As an instance, the [torrents] will seemingly cause [extensive/large/huge] (damage) to the [electricity] with some rather specific details pointing to the [ability to control/direct distribution]. So the interpretation is going to the idea of the [torrents] causing problems with the electricity distribution system. Since there are heavy cross links back to the Press entity, the supposition is that the [distribution] [restrictions] on [control] will be visible within the global mediastream.

The [still/unmoving air/atmosphere] excepted, the majority of the data set points to huge, early, and extensive impacts globally from [hurricanes/typhoons] this Summer and into Fall. The data set is pointing to [rivers/torrents (in the) atmosphere] and the [dumping/placing (of) lakes (of) water by passing great winds]. There are sub sets which go to the idea that not only the [rainwaters] will [rapidly rise], but also the [winds] are shown as [raising/lifting] [oceans] to be [let down/set down/released] over land where they will [settle (as) new waters/lakes]. These [new lakes] are of such size as to demand [13/thirteen arrow flights (to) cross]. The data even goes to suggest that [measurements/examinations] of the new [lakes] will reveal sizes measured in [square miles].

The data sets here are pointing to a bespoke [everywhere/planetary] phenomena with the [hurricanes/typhoons]. This may be interpreted as storms of unusual strength occurring on both hemispheres of the planet, however there are additional support levels which suggest that an alternate interpretation of [hurricanes/typhoons striking new/unusual places].

SpaceGoatFarts - Trouble Dipper, Smart Farts

The SpaceGoatFart entity has a very large aspect/attribute set which is headed by 2/two aspects with equal emotional values. These are [big bear/ursa major/big dipper] and [evil]. Hmm. Scary from the start. To continue down the [evil] linguistic chain brings us to supporting sets of [disaster], and [omen of disaster], and [disaster continues/grows] and finally [disaster (is) exacerbated (by) officialdom].

Curious aspects appear within this set which suggest that as a result of the [appearance] of the [omen],

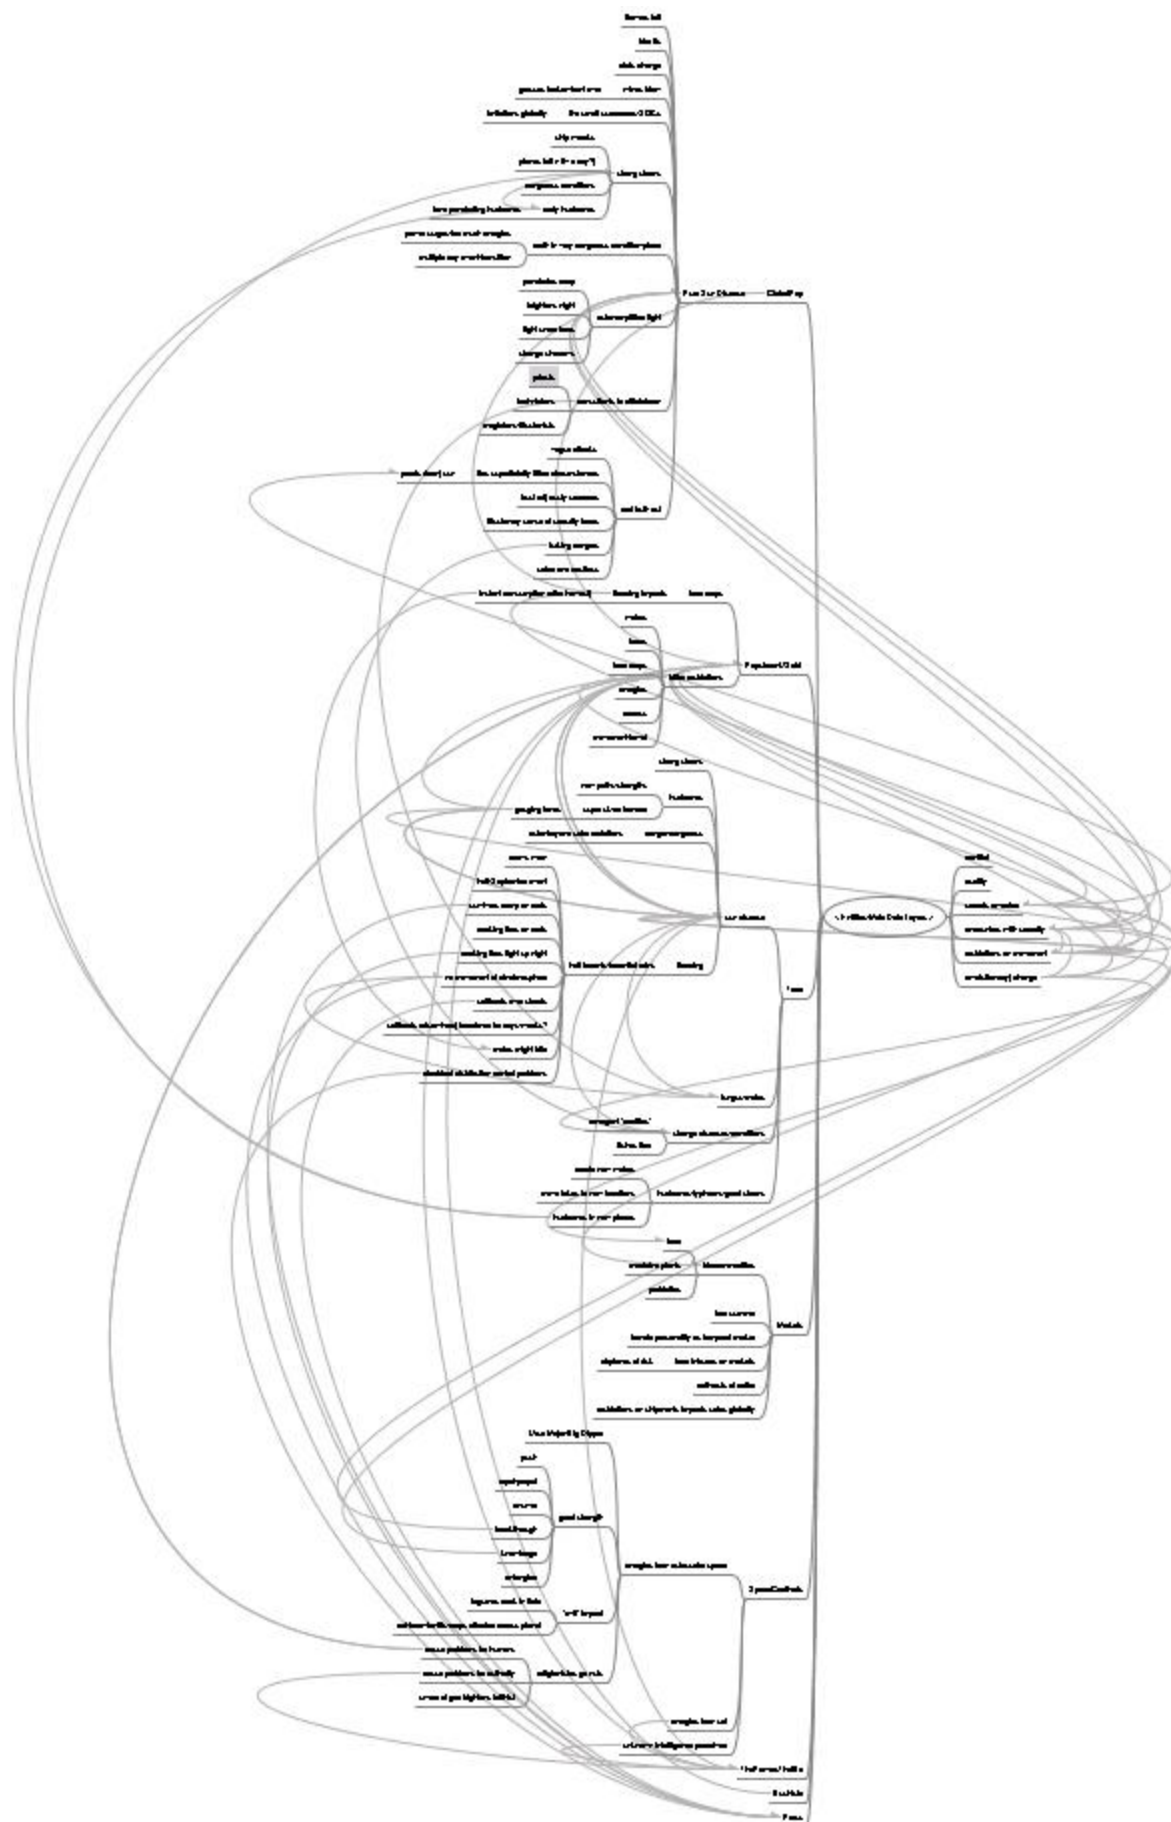

many within the [religion/religious] [community] will be [crying/lamenting] the [visibility] of what they will term the [sword of god]. Hmm. Ok, fine, but the data suggest that these [brahmins/priests/radical_clerics] will be a real, and bespoke [pain] to [princes/royals/rulers/elite] as well as to the [tribes/mobs/collectives]. The aspect of [energies from space] with support for [extra/beyond solar system] is well represented within this sub set, and even has a supporting aspect/attribute set which can be read as [impacts of energies from big dipper (region) arrive with great vigor/strength]. This last aspect of [great vigor/strength] is supported by aspect/attribute sets which include [internal strength/cohesiveness], [propel away (from)], [breakthrough], [answer], [knowledge], [pushing], and [risks]. Within the supporting sets for the [priest (invoke/cry_out) sword of god] language are aspect/attributes pointing to [failures (to) manifest (create/bring) evil (to) priests]. We also have aspects/attributes describing the [fear propagation] which will [backfire/return] to the [priests/brahmins] in the form of [fires (set/started in) pulpits/pews], as well as at least 1/one instance of [assaults] by [many/mob] on the [church]. This will result in visible [injuries/wounds], and [destruction] of [wooden holdings/property] by [pious fire]. Hmm. Sounds like a very hot emotional Summer for sure.

The Summer may also be physically hot at a level not before appreciated. The data is pointing to some of these [evil extra solar energies] as being [strong enough] or of the correct [vibration] to [wilt/cook legumes (in the) field]. The interpretation of this data area needs to note that the [legume] reference includes wording for [beans], [peas], [lentils], as well as descriptors in other, non-roman alphabet languages for the same set of food plants. As these [dhal/bean/legumes] are a known heat sensitive, and early crop, the inference is toward a [heat based] reaction within this class of food crops. Further the number of the language reporting the same aspect/attribute set points to a planetary impact within heat sensitive crops.

There is an intriguing sub set building within the SpaceGoatFart entity in which we have a defining aspect/attribute set going to [intelligence] which has directly held [secrets revealed] as well as cross links to [secrets revealed] within other entities. The temptation is to interpret this area as being the [revelation/exposure (of) hints of non-human intelligence]. As this is cross linked to the ThePowersThatBe entity where it terminates in a very complex data set headed by bespoke [fear], the implication is for some form of [exposure] to emerge this Summer. These aspect/attributes come from the processing of the shorter term value set, so we do not yet know if the trend toward accrual will continue within the longer term set. If so, that may argue for these [hints of non human intelligence] to emerge later in the year. It is within this area that the first of our 2/two new contexts has arisen. We will have to wait for the longer term processing to see if the data will provide further details.

Conclusion: Part Two

There have been some issues in printing the cross link lexical charts. The size of the chart alters printing ratios within some computers which then reduces the fonts on the page to something the size of ant footprints. In order to address this issue, we are providing the lexical structures chart in 2/two forms. As you will note below, there is a thumbnail sketch of the chart as a whole. This is provided as an aid to the 'bigger picture'. Then, below this chart is a link which will bring up the chart at its native size within a separate window. This should facilitate both printing as well as ease of viewing on screen.

Fit in window chart:

[Link to chart at native size](#)

We have an exceptional amount of data to process as a result of using the 2/two forms of the lexicon. There are current hints within modelspace that the incoming data will continue to paint a picture of [bizarre changes] within the Bush wars of aggression over the course of Summer and into Fall such that by October [no thing (will be) same/recognizable].

We also have the 2/two new contexts forming. The first is hinting at [contact] in the big sense of the word as in CONTACT. The second is still a bit vague, and likely will require the longer term values to begin to fill in enough for a meaningful discussion.

The local environment is a bit hectic during this time, and as such will likely provide delays in postings as we proceed through this series. We will make every effort to stick to our scheduled postings due to the time sensitive nature of the data. However we will have to respond to developing circumstances, and so we may end up taking the approach of posting what is available when the need arises, and completing the interpretation with addendum postings. Universe will decide as required.

Our goal is for Part Three to be posted by Sunday, May 20th.

ALTA 0108 - Part Three

Asymmetric Language Trend Analysis Intelligence Report

‘Changes in language precede changes in behavior.’

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

5.20.2007

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from interpretation of 36.998 million reads of the 0108 series.

Meta Data/Modelspace Developments - Hunab Ku

There is some debate about the actual translation as well as the origins of the 'hunab ku' symbol,

the more commonly accepted, though not as correct view is that the symbol represents the 'god' of the pre-mayan olmec people also known as Hunab Ku. The alternate view notes that the symbol antedates the arrival, in 1500 B.C.E., of a Chinese junk which had sailed as part of an expeditionary force. The more complete primary accepted view is very simply expressed as below:

According to Martinez, the Maya came to the mathematical certainty of the existence of cosmic consciousness which they named "Hunab Ku", sole dispenser of measurement and movement, to whom they attributed the mathematical structuring of the universe. This divinity they represented by a circle in which was inscribed a square, just as did Pythagoras. The Maya believed that their supreme divinity functioned through a principle of dynamic dualism, or polarity...by which, through the agency of the four elements, air, fire, water, earth...the whole material world was engendered...To the Maya, the earth was not a corpse, it was neither dead nor inert, but a living entity immediately tied to the existence of man.

- Peter Tompkins in Mysteries of the Mexican Pyramids

The symbol now associated with the hunab ku mathematical concept is also known as the 'galactic butterfly'. As the Galactic Butterfly, the symbol represents all consciousness of all kinds within the galaxy, specifically our galaxy. Beginning as a mathematical construction of existence, the symbol was explicitly created to *not* represent any consciousness not of our galaxy. This exclusion does not include the 'core consciousness of creation/universe' as it does belong to our galaxy, though of course is

also of other galaxies as well. This 'exclusion/inclusion' dichotomy is intrinsically part of the same 'yin-yang' higher mathematics practiced within what is known as the 'complete reality school/discipline of Taoism'. The idea of either being, or not, within a group or collection in a binary fashion is the foundation not only of current binary systems employed in all electronics, but also is the basis for 'set theory' which is at the core of our work with radical linguistics. A last note about the hunab ku symbol is that it is reversed, as in the 'yang' style of the 'dai chi' diagram. This has huge levels of meaning esoterically, and is *just* now coming to the attention of the Illuminati which may account for all of the recent incidences of British SAS forces being trapped in caves in northern Mexico while on 'vacation'.

This 'mathematical certainty' underlying the hunab ku concept is referenced in repeated, and fractally related symbolism on stelae, or stone pillars which were always inscribed with a date of creation, and modification dates, much like modern business documents. These stelae with the 'ku' knowledge have been tightly associated with the 13.13.13.13 long count date which is commonly thought to be December 21, 2012 in our reckoning. As the mathematics of the Olmec/Mayan calendar are much more precise than any our social order has ever constructed, it is presumed that the higher order maths and numerology hinted at on the 'hunab ku' stelae is also much more precise than our current mathematical model of universe. It is worth noting that the alignment maths for the hunab ku go down to the 22/twenty-two trillionth part of a second in a seemingly endless repeating of the date/time coordinates as 13.13.... The supposition is that, as with Pharaohic Egypt, the Mayan's are a 'regressed/descendant' civilization in which the vast monuments which dominated and defined their civilization were *not* built by them. As with the grand pyramids in Giza, there are numerous evidence of the Mayan pyramids having been built pre-Olmec, which is to also say, pre-Mayan. This is even more true of the Aztec and Mayan calendar which a number of stelae inscriptions point out was 'inherited' from the 'early peoples', and even more intriguing, is said to have been not a stone tablet, but a 'metal machine' of intricately linked wheels which not only 'charted time', but also provided 'daily temporal maps' to events.

Unlike more colorful 'gods' such as 'jaguar-god' or 'godhead-in-plants', the hunab ku, begins and ends as a representation of the 'center of consciousness, cosmically'. It is thus also associated with the 'dark rift' which is part of Galactic Central here in the Milky Way galaxy. The mathematics/numerology associated with the symbol for the hunab ku are both complex, and, as with the I Ching originating in Asia, the results of very great thinking placed into a binary system of representative deduced constructs about universe.

The hunab ku as a concept is becoming increasingly important within our modelspace as our solar system progresses further into its alignment with the dark rift in 2012. We are seeing this impact with a 30/thirty fold increase in indices within our SQL data base linked to the '2012 issue/question'. This is an instance of a number of newly forming contexts which are being integrated into the processing. We have labeled our context as 'hunab ku' as we are attempting to reconcile a very diverse set of linguistics around this very complex, and emotionally stressful subject.

Our Hunab Ku entity will be brought into the interpretation in later parts of this series as the longer term values are processed. It is interesting that we have had such a large increase in values over a very small period of data gathering, and that this is primarily shorter term value set.

This is but 1/one of many new contexts emerging from the data set. Others will be detailed as sufficient mass of processing becomes available.

SpaceGoatFarts - Sprouts In Fall

Our modelspace has, over time, come to center more on the seasonal temporal markers than the mechanical markers as may be provided by clocks and calendars. The modelspace tends to focus on lunar months, and these are within a larger seasonal framework. The data has a tendency to cluster in to groups which the interpretation attempts to decipher as a meaningfully connected whole. As the data is displayed for the SpaceGoatFart entity, it is intermixed with all the other clusters of all the other data for all the other entities. This is where the interpretation begins to rely on the cross links in order to ascertain the potential or probability of interaction between the expressed themes within the entities involved. Make sense?

SpaceGoatFarts data point clustering

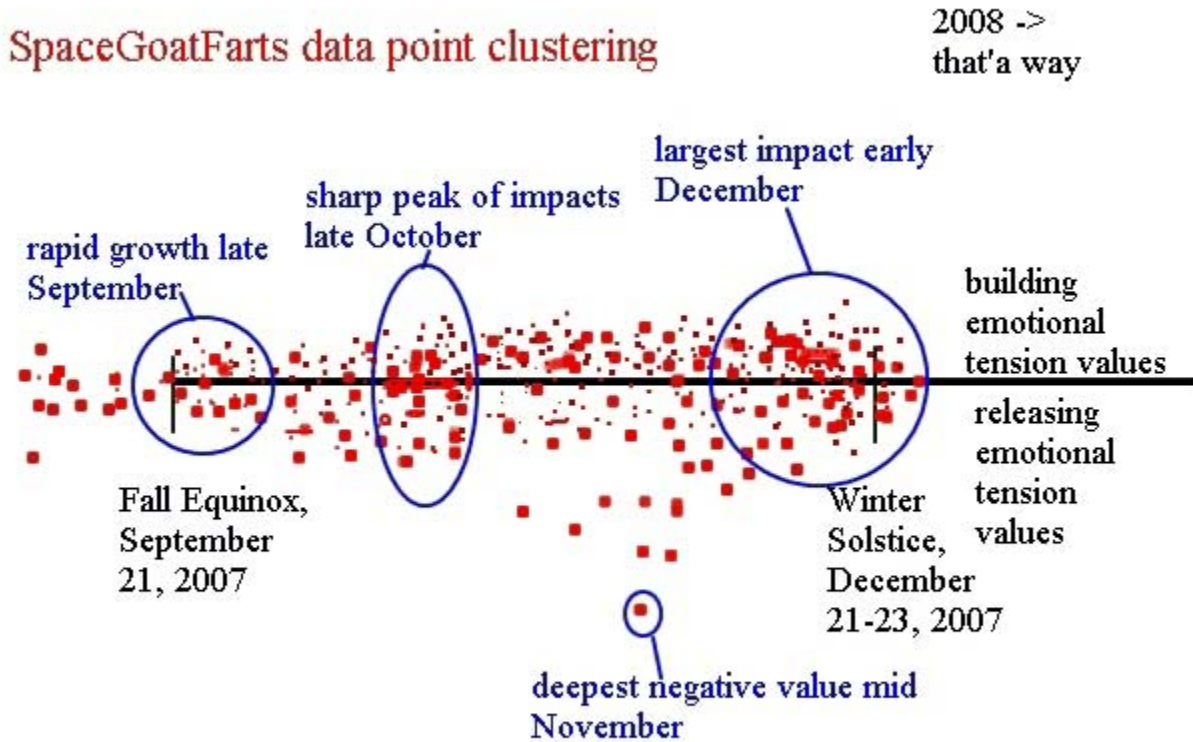

2008 ->
that'a way

A technique employed in the interpretation is to extract the data for the entity under consideration from the masking effects of the rest of modelspace. This allows for a specific entity to be viewed in isolation which exposes any patterns inherent within the data accretion processes. Patterns which do appear are, in the main, very meaningful. The graphic above provides a very scaled down representation of the view when an entity is viewed in isolation. This graphic is only using a single context and related sub sets; as an example we have chosen the [energies] aspect/attribute set. Then the representation has been magnified for clarity by reducing the actual number of data points significantly.

Such views facilitate the descriptions of an entity in that it allows us to view the accretion of memes as a process over time. Within the interpretation for SpaceGoatFarts we would use the data scatter graph above to predict that [energies from space] will increase over the course of Fall and into Winter of 2007, and that around mid November the deepest level of negative impact will be felt. Further we can ascertain that following a drop off of interest in, or verbiage associated, the [energies from space] meme kicks off with rapid growth very shortly after September 21. We would also conclude that a 'large impact' of the

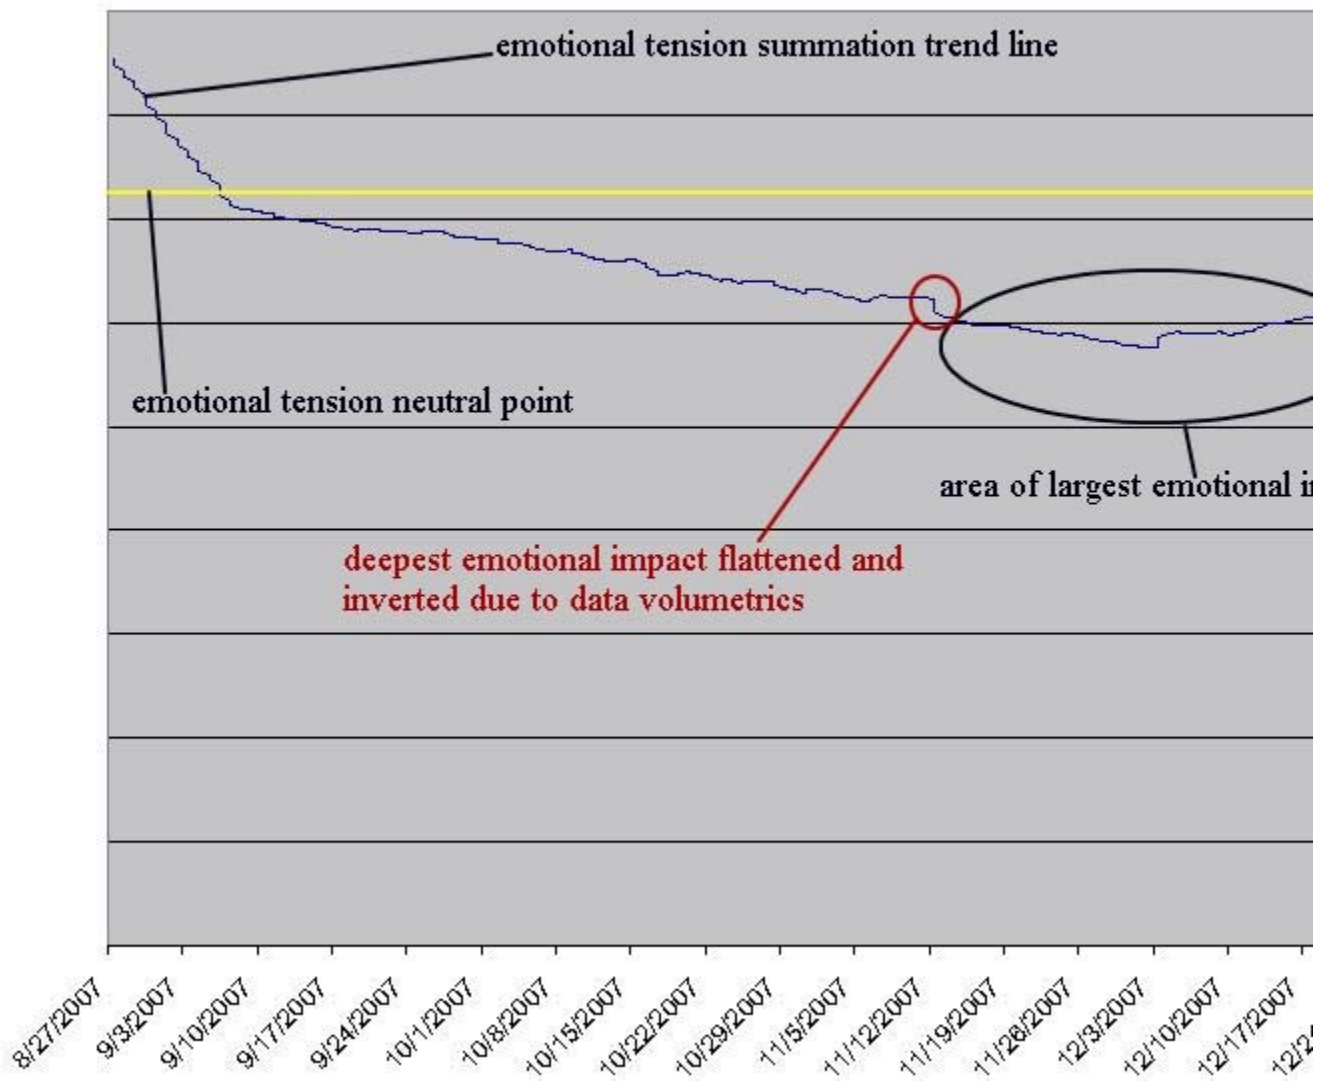

memes could be expected to manifest in early December following the 'deepest/most negative' component of the meme emerging in late November. The view of this interpretation is highlighted in the graphic below.

So far the interpretation has just viewed a single context whose primary descriptive aspect is [energy] with supporting attribute of [from space, extra solar system]. So far the SpaceGoatFart interpretation has not involved any of the detail attributes and is merely examining the clustering of the data as it accrues within modelspace for meta-level clues as to how this meme will manifest in the future. It may be noted that the data set involves all three data types, the immediacy values, the shorter term value set which takes us out three months, and the early processing of the longer term values which extend out into 2008 and beyond.

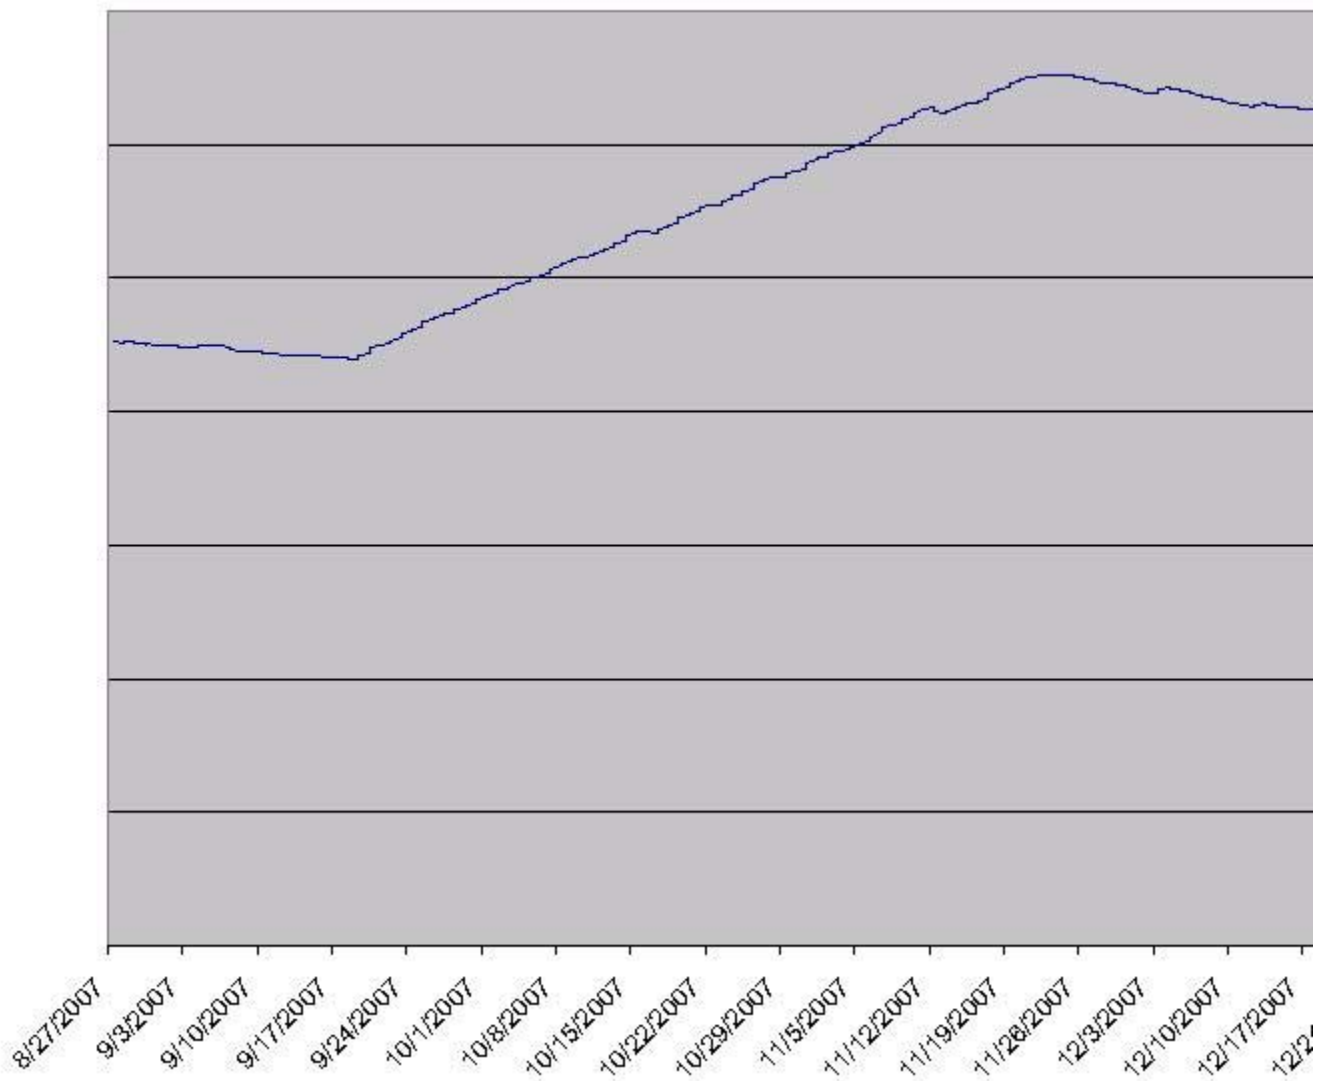

It is the summation of the numerous scatter graphs which are used to create the timeline charts used in ALTA reports. These timeline charts are plotted against our lunar calendar which is within the framework of the seasonal markers. The process of the conversion to the line graph chart form causes changes within the visual presentation of the data. This effect is illustrated by comparing the highlighted scatter graph above to the line style chart below.

SpaceGoatFart - Energies from space Aspect

Note how much of the visual presentation has been altered through the filter of this chart style. This occurs as summations are necessarily going to have to be filtered by the chart developing heuristics used by *any* line chart producing software. Thus our reluctance to rely on line charts as real indicators of specific impacts within specific periods. The process of conversion to a line chart from the summations of a single context is illustrated above. The line charts used within ALTA reports usually involve the summations of all relevant contexts within all entities. The flattening effect above is also present in those aggregate charts. Specific types of this 'flattening effect' can be seen in that the line chart has totally lost the impression of rapid growth of data following the equinox as well as the spike in impacts shown for mid October. The deepest level of impact for mid November is still showing, but has now been inverted due to the summations and volumetric's of the formula, and now appears as a 'build' type of emotion within the 'release' level of the rest of the chart. Please note that the whole of the SpaceGoatFart summations for Fall of 2007 contribute to the very rapid, and very steep emotional tension building previously discussed as beginning on September 19th or thereabouts as is illustrated within the summation chart below.

ALTA 0108 - Emotional Tension Trend Line

A careful examination of the chart above will still show some points in common with our scatter graph extracted from the SpaceGoatFarts entity, specifically there is an emotional 'release' step within the rising emotional tension of the general line showing for mid November in which SpaceGoatFarts contributes its 'point of deepest emotional impact'. This and other contributions from SpaceGoatFarts [energies from extra solar system space] are highlighted in the version of the chart below.

ALTA 0108 - Emotional Tension Trend Line

At the level of the interpretations provided by the ALTA reports the chain of charts above would lead us to predict that the [energies from space] meme will have, amidst all the other discussions and memes of human activity this Fall, a significant impact in mid November which **should** be visible within the global mediastream. This last is predicted given the number of cross links involving the Press entity and the populace entities. As may be seen, this is far from an exact science. The chart series above provide an idea of the 'flattening' effect which comes from the 'mixing' of all of the aspect/attribute summations from all of the entities.

It has been found to be unreliable to merely take the weighted summations of the various entities or their meme sets as an indicator of what will 'break through' the global mediastream and become visible. As an instance the contribution of the SpaceGoatFart entities [energies from extra solar space] sub set to the 'release episode' within the overall building tensions of this Fall is very significant, both as a weighted average of the entities total summations, and as an extreme value with attendant impact on the all entity summations. However, the significance of the [energies from space] meme must be judged against all of the other emotional expressions within the other entities to determine if humans will manifest the

reaction as we might suspect. In other words, if *nothing* else of significance was to occur within November, we could be certain that the [energies from space] would manifest in a way which would fulfill the predictions of the emotional summations of the meme. However, as it is very likely that many 'things of interest' will be also manifesting in November, the interpretation of the expression of the predicted emotional impacts of the 'energies from space' meme must be tempered against the background provided by all the other entities. And therein lies the traps of universe.

At this point in the interpretation of an entity, it pays to investigate the detail aspect/attribute sets which populate the context under consideration.

The first part of that sub process within the interpretation is to hunt for bespoke emotion contexts. These are all of the 'labels' which can be applied to human emotions and include the obvious [fear] and [trepidation], but also include, albeit at a lower level of emotional vibratory summations such secondary contexts as [dangerous], and [frightful]. It can be noted that the bespoke emotion references are to the secondary contexts as an emotion is to perception. In other words, a person experiences the emotion of [fear] due to the perception/awareness of a [dangerous] situation. In a sense, the secondary contexts for bespoke emotions can be considered as modifiers or adjectives which help to define the 'stage' on which the 'emotional play' will be set. There are many linguistic layers to the complexities of human emotions, and at our third level of contexts the bespoke 'expression' values make their appearance. These values go to the range of expression of the emotion. In the instance of bespoke [fear] being experienced due to perception of [danger] an expression value might be [sweating]. All of these values will have layers of sub sets providing supporting modifiers such that an interpretation of the details might result in the following: 'a person experiences [fear] as a result of perceiving [hot/energetic] [danger] and, via cross link to Press entity, [sweating] which is modified by [officials] will show due to [overly energetic] (heat/sun light)'. Noting that these are values showing for the SpaceGoatFart entity and accruing during our 'spike' of activity in mid October, and also noting the large number of cross links to the GlobalPop entity, we can further provide details from the combined sub sets of aspects/attributes such that we end up with the interpretation of 'drought/excessive heat conditions coincident with perceptible energies from extra solar space will impact far northern regions with the global mediastream (teevee) providing images of sweating officials and fearful, crying/wailing populace'. All this clear as the bottom of a well at midnight?

With further examination of the data sets under [energies from extra solar space] with careful attention to the cross links where much of the human contextual information occurs we can predict that the [far/high lookout], in this instance being interpreted from the archetypical language to mean the ISS/International Space Station, will [see both sides of] the [energies from space] and be [forced/compelled] to [take precautions] (against/bracing_for) the [dangerous situation]. Ok, so far pretty straight forward. However then the data sets begin to occlude under the mass of details and cross links. For instance the next level down shows that [crying] will come from [transportation/infrastructure] (sinking/disappearing) in [sudden mud]. The [sudden mud] shows that [vibration] and [mixing] are its primary descriptors. Does this mean a lahar? Or does it go to [liquefaction] of the surface due to earthquake? Or is there some other meaning which eludes us at the moment. Only time will tell, but our delving into details *may* provide a few hints. We find that [trouble] in number of languages shows up as the descriptor sets to which the cross links progress within the populace entities. So we can conclude that regardless of the volcano versus liquefying land from earthquake or some other explanation, the effect will be [lots of trouble for humans]. Further we can find some elucidation from the odd references which support the emotional expressions of [crying/wailing] and [bemoaning]. Under these we note that [dogs cry] [backwards] to the [dangerous situation]. In this case the interpretation would go to [animals are aware] and therefore more data points to an earthquake situation as we know that dogs and other animals are sensitive to these earth changes. Does this mean that they are also sensitive to our [energies from space]? Perhaps.

The details within [dogs] sub sets also points to [eyes] and [hunt/seek] (upward) which we take as reinforcing data set for the [appearance of energies from space]. This are then continues on to suggest that [dogs lead/guide] (afterward/post/following). Given the very large number of cross links to the Press entity, we can *presume* that some form of visual of [dogs leading survivors/humans] after the "event" or [energies from space]. Noting that the [energies from extra solar space] meme is spread across the whole of the Fall, it then becomes problematic as to when to place the [dogs leading] and other details other than ascertaining when they first appear in the processing sequence and assigning a 'date relative' to that appearance.

We then "scrub about", as Igor calls it, within the data set hunting for the 'meaningful flash' which comes from finding the anomalies within the sets of anomalies. Basically it is allowing universe to guide the eye into various areas and poking around seeking what initially attracted the attention. In the case of the SpaceGoatFarts entity, we have many eye catching areas and these include aspects/attributes of [ursa major] {ed note: still accruing values}, [documents destroyed], and [missiles/projectiles], and [targets] and [ancient weapons/projectiles], and [backward/reverse shooting/throwing/traveling], and [bull's head] {ed note: constellation of taurus?}, and [knife edge (from) bull's head], and [containers, multidimensional, multiple/shifting colors, with matching cover/fabric/sheets, acting in concert/together] {ed note: ufo fleet visitation?}, and [shallow water(s) react (by) raising], and [germination (of) sprouts/life/seeds/spores/motes (in/from) space]. This last has the creepy feeling of "pod people" or "space zombies" attached to it, but as this is likely influenced by Igor's paranoia we will *not* move the interpretation that direction.

Noting that this has barely touched the available data set, we can proceed back up the meta level ladder and examine the SpaceGoatFart entity in toto such that a larger view of the accretion of values can guide our perception. Of note is that bespoke references to [time] and [past/ancient] are recurring, and also that a number of cross links are now formed between the SpaceGoatFart entity and the new context we *think* will develop into a 2012 entity.

Some of the many cross links go to the populace entities where they are terminating in [guide] and in [separation]. In the case of the [guide] there are supporting data sets pointing to [loss] which reinforces the [separation] aspect. These linguistic sets also contain other bespoke references to [danger], and [caution]. In both cases these then cross link back to the SpaceGoatFarts entity where they terminate in [energies]. In a rather nasty turn, several of these terminate in sub sets of [tears] and [blood]. Hmm, probably *not* a good sign.

Other modifiers point to an interpretation of the [populace] (shifting/moving_into) [hopelessness] as a direct result of the [appearance of energies from extra solar space] and their impact on the [output] of the [sun]. There are number of references to [extra/extreme] [sunny days], and these are supported by [hardship] and [harsh airs]. The whole idea of [hardship] is supported by the references to [peeling], and [flickering/strobing heat], and [sickness]. This last is supported by strange(ish) references to [calabash/gourd] and may relate to 'swelling'. This area also points to a [continuation (of) worse and worse] as well as [officialdom] which is [going off (to the) mountain]. This last has some Press entity cross links which go to aspect/attributes of [disorderly arrangements], and [debris (on the) road], and [discarded (in a) hurry/rush] as well as [problems (caused by) resolve] and [embarrassment (from) difficult situation]. Hmm. Again, not likely too good for any of us terrans.

As the sub sets are explored, a picture of [too much energies from space] arises with predictors of [rivers dried up, boats stranded in middle of drying/dried mud] and [documents ablaze] {ed note: tied to Bushista, and likely means 'cover up'}. There are repeated and intricate cross links between various sets which involve [officialdom] as though the mid November period will include a large level of [official proclamations] not previously experienced. Many of these are associated with [sun], and [fire(s)] and

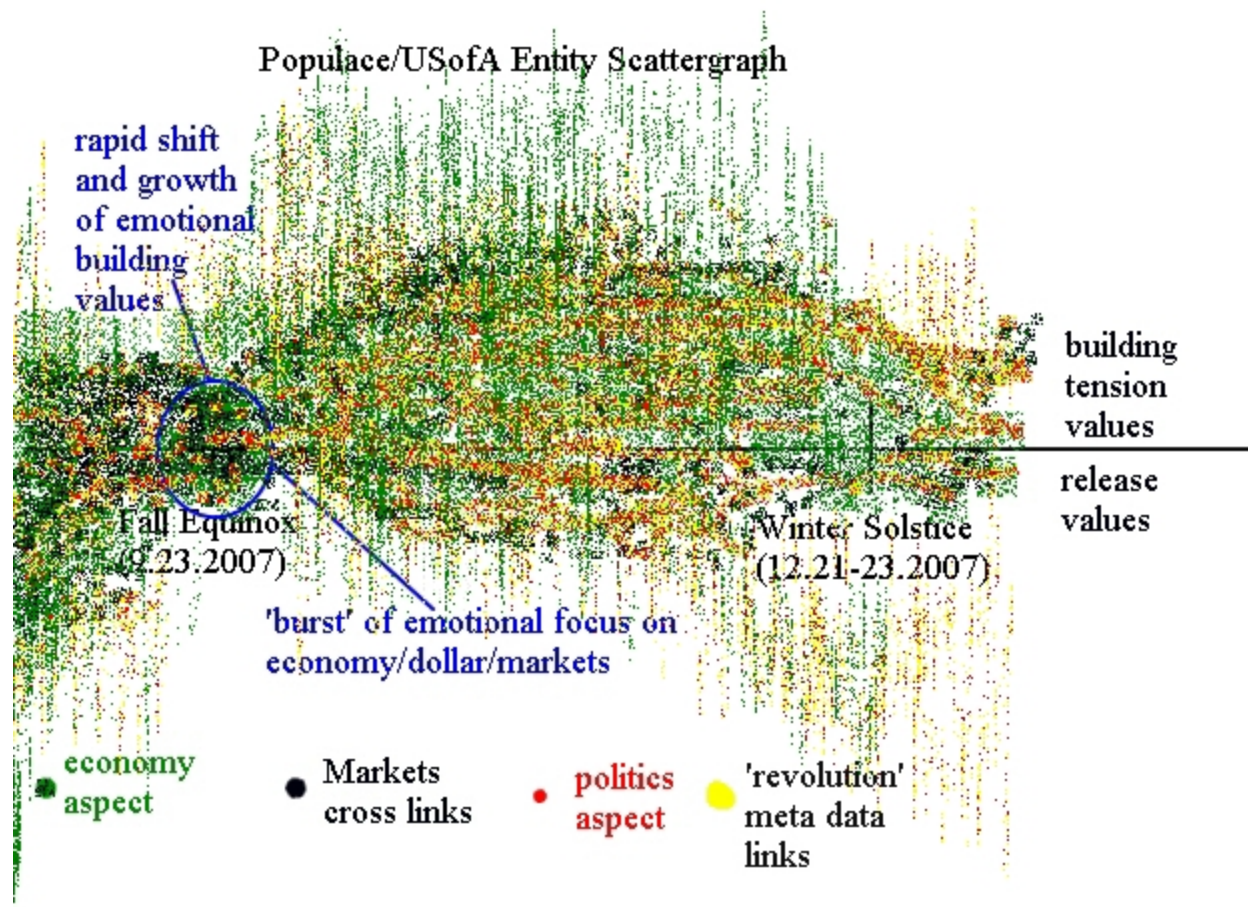

[dust(s)/motes].

Populace/USofA - Doldrums, Electric Veins Engorged

Just as the SpaceGoatFarts entity contributes its energies toward the very sudden shift into 'building emotional tensions' in September, so does the Populace/USofA entity contribute to the propulsion of the emotions into the building trend. In the case of the Populace/USofA entity, the energies are derived first from [economy/financial] sub set, and secondarily from [politics]. In this latter aspect/attribute set, the driving modifiers are [conflict], and [revolution]. As may be expected, much of this area is cross linked to the Bushista entity.

The aspect/attribute set of the [economy] is very curiously separating itself from the Markets entity as the modelspace is progressed over the course of August and into September. This is unusual, as in the past the Populace/USofA entity has increased its cross links to Markets with the growth of values within the [economy] context sub set. In this last round of processing the cross links to Markets entity show a significant drop just prior to the increase of the value summations within the [economy] sub set. So what does this mean? Well, it could be forecasting that the [markets] will become [less of interest/less important/less relevant] to the populace beginning on or about August 13th, with a very large drop-off of relevancy on September 18th and beyond. The sudden loss of interest in the Markets entity on the part of the populace in September may be viewed at the time as a natural outgrowth of the 'event' which becomes associated with the shift in public perceptions, however the modelspace is indicating that the initiation of the manifestation will occur about a month prior to the more visible 'temporal marker' in September.

In the crude graphic below, it needs to be noted that the scale is hugely inflated relative to the SpaceGoatFarts entity due to the comparative sizes of the entities, and that the point is the diminution of the black dots indicating cross links to the Markets entity. The whole of Populace/USofA entity shifts its base linguistics very rapidly in September over the course of the week of the equinox. The graphic below provides some indication of the proportionate strengths of the related memes of [economy] and the cross links to [markets/paper debt trading].

Within the lexical sets providing the change impetus for the Populace/USofA entity the primary, and rising aspect/attribute set is within [economy] and goes to [death]. This is further modified in several ways by [margin], and [reduction/narrowing]. These modifiers are the focus of the majority of the cross links near the equinox. It is likely that [economic conditions/manifestations] which will begin showing visibility in August will create a situation in September where the [margins] (allowed/facilitated) will [narrow] to the [thickness] of a [hair]. These cross links also are terminating in the broader Markets entity sub set of [dollar], [trade/sales], and [commodities], with special focus on [energy/oil], and [gold/metals].

The [economy] aspect which shows the largest amount of growth over the course of the movement of the Populace/USofA entity through Fall and into Winter 2007/2008 is [doldrums] which has the specific emotional connotation of [bound in place/stuck with no movement/potential]. This aspect is further amplified by cross links to the Press entity as well as bespoke [news/teevee] aspect/attributes within the Populace/USofA entity for [bad news]. The cross links from [bad news] are dominated by Bushista entity where many terminate in [bullied/intimidated]. The interpretation is that the Bush administration will [cry intimidation] and [bullying] by [others] when ['we are down']. This last is quoted as the reference within the aspect/attribute set may be pointing to an occurrence of this phrase or a similar word usage being prominently and repeatedly visible within the global mediastream. The deeper supporting aspect/attribute sets within the cross link terminations within Bushista entity are headed by [weak] and [helpless] and [impotent] and lastly, [isolated]. None of these sets provide anything more than some 'release language' showing up in a time of building tension language.

There are specific references within the intense clustering of [economy] values in late September which

suggest that [charity] and [cries for help/assistance] will be very visible within the global mediastream. This may manifest as video of long food bank lines, and other indications of [economic suffering]. The very large number of [secrets revealed] aspects or cross links for this period are pointing toward [personalities], likely from mainstream media, will be [turning/revealing] their [identity/bonding] with the [populace]. This will come about as a more or less natural side effect of the forecast [attacks/beatings/assaults] of all kinds on members of the [official press] by [frustrated/angry] [citizenry]. The interpretation of the data suggests that in late September to late October there will be a [visible/broadcast] (incident) of very [great impact/visibility] in which a [prominent personality] gets the [snot] (beat/whipped) (out of their) [face] such that the [broad/wide scars] are [visible] for some [days/weeks].

There are specific bespoke references to the [change of seasons] which need to be examined as both a pointer to the shift into Fall, as well as the implications from some of the sub sets that a [mega/great/long] cycle of [change of seasons] needs to be considered. The data set for a [bad summer] aspect noted in Part Two of this series moves over to [bad/ill fall] as the data set is progressed along with the modelspace. The idea is definitely that the [strange/odd] [markets] (behavior/expressions) of [summer] will be but a prelude to the [manifestations] of [fall]. The data suggest that a tendency to [regulation] will be [imposed] as a [solution (for the) moment], but that this [regulation] will be [misapplied/mishandled] and as such will further [exacerbate/magnify] the problems of Fall through [harshness imposed].

As may be expected, the transition of the Populace/USofA entity into Fall is accompanied by many aspect/attribute sets going to [overtaxed] and [over/excessive] (charging/pricing). These are cross linked both internally and externally to repeated references to [energy] and [food] and [shelter]. Further problems appear as a result of the [gathering/building/growing] trend toward [unemployment/job_loss] which begins in our [bad summer] and continues through into Fall. The data is specifically referencing, and repeatedly so, the [housing] "industry" and the [dire effects/impacts] of [time]. This is reinforced with [foreclosure] and [deflation/destruction] as well as [abandonment] and [loss in great measure].

The 'loss in great measure' aspect/attribute set is cross linked to Press entity where it terminates in [economize/saving/frugality] which in turn has support suggesting that this Fall will bring a group of [visible expressions (of) gathering/growing frugality] within the populace to a media screen near you. The implication is for this to become a [national manifestation/movement/expression] which will directly result from [millions] (of households) [being/existing/living] (in) [economic pain/suffering].

Cross linked to the [economic] aspect/attribute set, and acting as part of its emotional support is an area headed by [startlement/being_shocked]. This aspect/attribute set is supported in such a way as to beg for an interpretation of [shocking, from lightning/other, causes power loss]. Further the direct support is for an area of power loss which is [10/ten times (longer)] than a [100/one hundred] (miles) [square]. This may well be an interpretation which should be based on a multiplication, such as [an area 1000/one thousand miles (long)], but there is also some support for a very irregularly shaped area which will lose power as a result of a [lightning strike] and which will be longer than the length of the [initial/beginning] (damage) by a factor of 10/ten. In this interpretation the image coming through would be of a cascading failure situation. We also need to note that the [lightning] aspect is supported by detailed aspect/attribute sets going to [explosive] as in [rapid/sudden], and [atmospheric]. These in turn are supported by [noise] and [ripples/shocks/waves], and [thunder] such that it could be easily read as a [lightning strike *or* other explosive atmospheric phenomena] which produces a [carrying sound]. The [carrying] or [traveling/journey] [sound] is apparently a key issue as the cross links to the Press entity indicate that the [sound] will be [so far traveled] as to [startle] some [rescuers] in the [forests/woods] of [dry western hills] {ed note: though 'western' is used, the geographic references are for the hills in Kentucky/Tennessee area}. These [rescuers] will be [18/eighteen hours searching] for a [lost child (of

2/two years age/toddler] when apparently [startled] by the [noise], they will [look up (in) bewilderment] and [find their target/goal].

This [power outage] is also tagged as lasting [multiple/many] [days]. There are even references to [6/six months] for some [damage] to persist. This area is also cross linked to the [employment crash] sub set internally to the Populace/USofA, and externally to the Markets entity. Further the shorter term values are supporting this as a [summer, post-solstice] event with impacts still felt in [winter]. These impacts will also extend to [long term unemployment] as a direct result.

Much of the [power damage] is seen as a [foretold/foreseen] or [discussed] [risk], but that the [explosive/shocking] [occurrence/event] was [too much/too excessive] a strain. There are some small indications via cross link to the SpaceGoatFarts entity, sub set [documents], that the [risk] was [anticipated], but that this information will not be available at the start of the 'incident' and will only come to light later as the [secrets revealed] meta data layer moves into more influence in SpaceGoatFarts entity in Fall and Winter.

The [lightning, or other explosive, atmospheric event] is shown as [500/five hundred miles distant]. This is referring specifically to a [space] based phenomena that distance from earth at the time it becomes [affective/affecting] of the [electrical veins/arteries]. Note that body parts and processes references are the very highest form of archetypical language, and are always taken as significant within these reports. The [electric veins] are not the only such references as we have supporting language for [skin (of) electricity] and [pulse] as in [heart-beat] showing up as being [startled] into [irregularity] by the [shocking event in the sky].

The detail layers of the aspect/attributes in support of [power loss] show that [100,000/one-hundred-thousand] will be without power in the first of [9/nine] [days], and that the number will fluctuate over the course of the next [week], but with no less than the starting [100,000/one-hundred-thousand]. Also note that this is referring to 'customers' so the actual number of people impacted will be significantly higher. Within the supporting details for this area are images coming from the aspect/attribute sets of [relocating] to areas in [other states/regions] in order to [gain support/infrastructure]. This last is replete with aspect/attribute descriptions of [hospitals] and other places of [infirm/debilitated] [persons] being [moved] (hundreds) of (miles) to [escape] the [heat wave/build_up].

Several areas of the region affected by the [power outage] will be so afflicted due to an [inherent], but currently [not understood] or [hidden] [weakness] which is related to a [fault] within the complex system. This area will have many [voices] rise up in [rage] and [cast blame] [far and wide]. The supporting lexical sets for the [voices] go specifically to [rich], [blessed], [wealthy], [officialdom], and lots of other descriptors for the [wealthy elite]. This includes [power brokers], however the aspect does *not* deal with electricity, but rather [interpersonal] or [political] power. So.... WA DC? Hmmm. Perhaps the environs. Basically, the image is of a whole lot of rich people being really pissed at [participating] in the [power outage]. What is even more curious are the cross links to the ThePowersThatBe entity where they terminate in [outrage], so we have [outrage] at the [outrage].

Within this sub set are also cross links to the Bushista entity, and internally within Populace/USofA, to the [officialdom] sub set. These cross links *could* be implying by way of the aspect/attribute sets that a [12/twelve] [attacks] [occur/happen] (against) Bush admin, and that these will [happen/come/appear] [1/one (at a) time/singlely] until [tensions/emotions] [breach/breakthrough] to the [madhouse]. Hmmm. No, there are no corresponding [terrorist] or other 'evil doers' supporting sets, so the interpretation is seen from the *very paranoid* view of the Bushista entity wherein *ANY* happenstance not to their favor is considered an 'attack'. In this case, the best possible interpretation is affected by the very large amount of Populace/USofA entity to Terra entity to SpaceGoatFarts entity cross links in which the

Bushista [attacks] sub set is also participating. Again, just to make it clear, there are *no* indications that any terrorist attacks are responsible for this forecast power outage situation. Indeed, the data set is seemingly pointing to an interpretation of a near-earth space based phenomena over any other explanation. In support of this idea are the very primary descriptors for the [power outage] of [engorged/swollen] [veins]. Note there are [damaged arteries] references, but apparently it will be a [failure to accommodate/handle/process] the [return current] or [veins] which will be the proximate cause of the loss of power for all these folks.

Within the [power outage] situation, and specifically a sub set which cross links to [attacks] in the Bushista entity, is an area for [deaths] in which the [aftermath/results] will be [many voices] and [many fingers] all [raised (in) damning cry] at the Bush admin. This area is tangentially supporting the [relocation] sub set and may be referring to [loss of life] due to [collapsed pipes] due to [heavy (humid) atmosphere], and [heat].

There are further details within the [power lost] sub set pointing to [data lost], and [infrastructure stripped/removed]. This apparently will rise to the level of attention by the global mediastream given the number of cross links to the Press entity.

The geographic labels which surface and survive through our processing are not very favorable. IF ACCURATE, and noting that the geographic labels are *always* misleading in this work, we would have an interpretation that points to the south west of the region affected as being good, but with the north eastern grid being described as [teetering/hovering/floating] as in 'on the edge'. The rest of the supporting sets which tie into these geographic references go to the idea of [darkness] which lasts for [months]. Hmmm. Check your flashlights now.

ThePowersThatBe/TPTB - Naked Teeth

In following the cross links over from the Populace/USofA entity and progressing the modelspace forward into Winter, a curious lexical structure within the TPTB entity formed with interesting supporting sets. It would appear that a separate [power threat] thread is running within the TPTB entity which does *not* relate to the [power outage] though the 2/two memes are to be mutually impacting over the course of Winter. The [power threat] descriptor set within the TPTB entity is going specifically to [internal] and [disruption]. It is the [disruption] sub set which is the terminating sub set for cross links coming from the [power lost] area of the Populace/USofA entity.

The [power threat] within the TPTB entity is a direct outgrowth of other areas of past linguistic shifts pointing to a [hidden] {ed note: barely hidden at best} [conflict] amongst the [ruling elite] of the planet. In the current growth of supporting aspect/attributes the area has changed over to a descriptor set which implies that the [conflict] will be less [hidden] than usual. This descriptor set is [teeth] supported by [bared] and [naked] and [exposed]. Further the [teeth] reference is also supported by many sets for [mastication], [eating], and [digestion], all of which are *not* supported by [food] descriptors, but rather are going to [power] and [possession/wealth] descriptors. The imagery is of a very large [group/clique] which is composed of [diverse blood] {ed note: specifically includes people *not* related by blood} who will be [eating (the) power] of the other, [smaller] [group] which has the distinction of being more [homogenous], and [blood-bound]. This last is a reference which does *not* appear in our context for 'tribal' so we are *not* looking for the smaller group to be 'dna-linked', but rather to be 'bound by the blood' previously 'lost'. There are other indications that this group is formed of a [power bloc] which has been [historically] described as [antagonists] to those who [worship the rose].

As the modelspace is progressed into December and the [results linger/limp_along] from the [power

outage], the TPTB entity is showing that the [exposure (of the) hungry mouth/teeth] will [precipitate] a [wave/residual flow] of [bad luck/happenstance]. The data sets are under the influence of the [conflict] meta data layer, and are supported with [beasts] and [blood], as well as [crippled/lame] and [damaged tendons/pulling]. This sub set has supporting aspect/attributes with cross links to the Press entity which point toward a [visibility] of the [warfare/strife] within TPTB causing an image of [rapacious lust], and [hunger (for) all (things?/resources)] to emerge within the global mediastream. This is *not* good for TPTB entity, and there will be a swift [reaction] and an [attempted purge] of some [offending voices/faces].

There are several detail layers within the aspect/attributes which help to describe the situation immediately following the [exposure] of the [conflict]. These are pointing to a [bed-ridden/sick/ill] [government] with specific references to vice Dick Cheney. There are other sets going to [loss (of ability) to reunite], with special emphasis on the [fractured/split] being [permanent], and [without (possibility) of repair]. This area shows that the [broken alliances] will [leave stranded] (many) in [desolate plains/places].

The further descriptions of [naked conflict] among the ThePowersThatBe are pointing to side effects including [death (by) gossip] and [death (induced by) voices (on air?)]. These may indicate an open, and broadcast [appeal] for [allegiance] to the populace. As a side note the modelspace has provided internal cross links on the [appeal] aspect to an alternate situation in which an [appeal] will be made to members of the elite to [hire beyond need] in order to [support (the) system]. This is cross linked to the [employment crash] and with its supporting details paints a picture of pre-World War 1 English stratified social order of the wealthy land owners and their numerous, poorly paid servants. The further details are suggestive of an actual [movement/moment] of [propelling] the populace towards a new form of slavery to debt such that [restrictions/limitations] are placed on the [populace] by [officialdom] relative to their individual level of [indebtedness]. The descriptors are coming across as a fascistic version of [coerced] (government) [labor]. Much of this area's supporting aspects are cross linked over to the Populace/USofA where numerous termination points contain [corrupt/corruption/corrupt_officialdom] as a supporting aspect set.

The 'good times' coming for the global mediastream will exist due to the plethora of material with which to 'fill the airwaves' this Winter. The 'bad times' for the global mediastream will come from the [assaults] which the individual working journalists will receive, and from the growing movement toward an [anti/against] press meme within the populace which will proceed to the point where it will be [generally/commonly] accepted to [castrate/maim] and otherwise [harass] the [propagandists]. The greater implication is that the 'press' as a concept is undergoing changes over the course of this year which will result in a different structure of information distribution in 2008. Much of the [bared teeth] language is also tied to the Press entity where we have the primary terminating aspect of [upheaval/overtaken] and which is in direct support for our emerging meta data layer of [revolution].

Conclusion - Part Three

There is a real danger that our diverging lexicon is leading us toward even more extreme view of probable future events. We do find that we have little choice in the matter as the nature of the fundamental contexts are evolving without our consent. So we proceed in spite of reservations about the extreme nature of the language surfacing in modelspace. It at least makes for interesting reading.

At this stage of the processing we are still gaining a disproportionate share of immediacy and shorter

term values. This is likely due to the emotional tension 'turn around' being forecast for September 18 through 21. In Part Four we will be explicitly focused on the longer term values which will take us out to into 2008 and perhaps beyond. Those longer term values thus far processed are also showing a tendency toward new levels of extreme language. Probably this is not a good sign. We will know by Sunday, May 26th with the posting of Part Four.

ALTA 0108 - Part Four

Asymmetric Language Trend Analysis Intelligence Report

‘Changes in language precede changes in behavior.’

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

5.27.2007

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in *[italicized bold green](#)*, and [red](#) when visited.

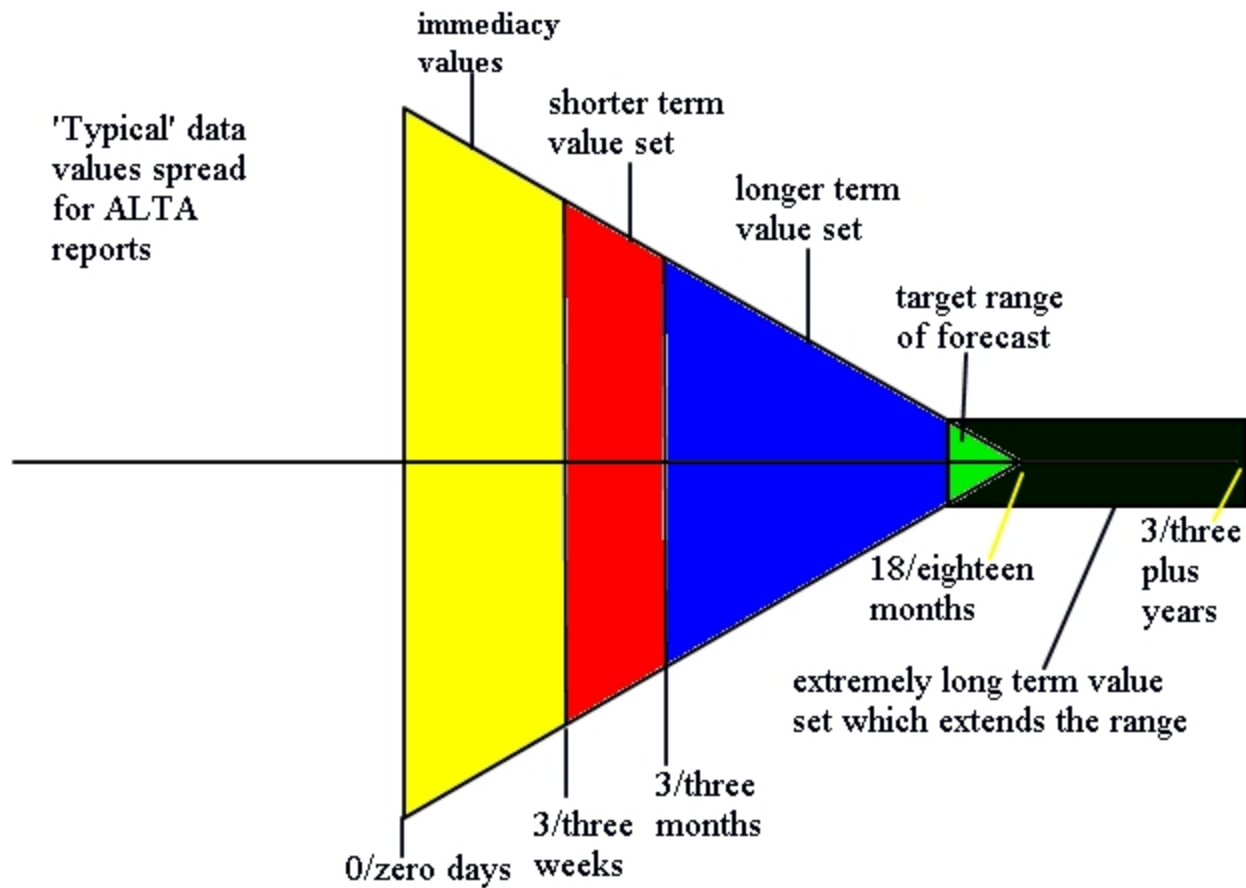

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from interpretation of 44.162 million reads of the 0108 series.

Meta Data - Long Range View

The way in which the data values are seen within modelspace has to do with the assigned numeric value for the emotion(s) associated with a given context. Any given context will have a range of emotional values (slotted into 1/one of 640/six-hundred-forty cells within a multidimensional array) which include 'immediacy', 'impact level', 'duration of impact', 'degradation pattern of impact'...et cetera. Note that 'impact' in this sense relates to the 'felt reaction' of the emotion. This 'impact value' has 2/two complementary, but not identical profiles, that is to say, that the 'emotional impact' is tracked both for 'individual humans' as well as 'groups'. So as an instance, the bespoke emotion of 'fear' will be experienced differently by an individual alone, and that same individual within a group even though the emotion, and triggers for it are all the same. It is the lack or presence of a 'resonation of emotion' which makes the difference. In an individual the reaction to 'fear' is predictable, but within a very wide range of behavior, but that same individual will have their 'opportunity space' for expression of that emotion severely restricted by the group dynamic. Of course there are rare individual who are able to keep their emotional tonality unaffected by group participation, and even occasionally there are those individuals who are capable of influencing and guiding the group experience based on the strength of their clarity of vibrational experience? Make sense? Just another way of saying some people have way big charisma and can 'energize' crowds, whereas most humans merely resonate in tune with the mob-du-jour. This understanding propels much of the data processing that is applied within these reports.

The graphic below shows how the various value sets are peeled off of the incoming data stream by our processing as well as the temporal values that we have assigned to the various emotional tones inherent within the contexts.

If we examine just the very long term values which tend to extend the range of the modelspace, a view of things a number of years out can be sketched in a broad brush. The data shows that by 2011 a number of very life altering circumstances will have emerged. These include the loss and/or breakdown of the 'global currency trading system' as well as much of the capability for planetary travel. The data indicates that such common elements of life here on earth such as 'overnight delivery' will be as 'fables' to the next generation. The modelspace is painting a lexical picture of a planetary populace struggling to 'redefine/restructure' *most* of the components of life. The restrictions on 'food supply' extend throughout all nations, with very few being wealthy enough to be able to export food. Curiously, or perhaps not given the multiple years of focus on Antarctica, this is the only continent which is still receiving 'food shipments'. These shipments are noted to come at 'Herculean' costs to the shipping countries. Much of the global infrastructure will be in the process of being 'reconstructed' as though a 'something' has occurred to 'damage most/all' of the ability to generate and distribute 'energy' in virtually all forms including 'electricity'.

The issues of the disappearance of the planetary economy and most cross continent trade relate to our building themes of [biospheric degradation] as well as the [energies *(of as yet unknown origin)* from space], and the [economy]. This last is in the care of the self proclaiming elite who, as may be expected of such individuals, will thoroughly fluck it over in the next 2/two years. The modelspace indicates that the September 19th, 2007 shift in emotional tensions to the very steep rise indicated in charts elsewhere in this series will mark the 'beginning of the end'. This 'end' is not the long anticipated 'si ce fini' of the planet, but merely the shift over to the new planetary ethos and life-path which is being foreshadowed by the mind-set change emerging over this current, and long (March 8th to September 19th) release period.

GlobalPop - To the barricades..., Long March Out

There are a number of developments being forecast by the GlobalPop entity. The data sets at all levels are pointing to significant changes over the next year.

Separation of cities. In France and other areas of Europe, a movement will begin this summer which will [grow/mature] into a [secession movement] that will ultimately bring about the [separation of cities] from their [nation/state/province]. Much of this is forecast as [riots], and [barricaded streets], and is related to both the [hot energies] of this Summer showing in the immediacy values, and the [discords (of/caused_by) excessive heat]. This last is indicative of the Terra intrudes meme which is forecasting that [climate change] will [pressure] all sorts of [social service] (distribution) over the course of Summer such that [cities abandon/separate] and remain so well into Winter, 2007/2008. Much of these areas are cross linked over to the Markets entity, sub set [chinese markets] and more discussion is provided in that section below.

The [separation of cities] is described as being both [political/religious] as well as [economic]. This latter is the repeated connection to the [chinese markets]. The [political/religious] divisions will [emerge] in our long forecast [pogrom] in the very [hot] both [emotionally] and [physically] Summer of 2007. The [emergence] of the [divisions] is shown to have a [forced/manipulated] sub theme going of [inter/between] [tribes/groups/mobs] [competition] for [waning] [resources]. This area is cross linked to the Press entity as well as to Populace/USofA suggesting that it will receive much attention within the global mediastream over the course of this Summer and Fall.

Further forecasts from GlobalPop show that the British begin their [long march] (past graves) and out of Iraq on or by the 22nd of November, 2007. This occurs with imagery suggestive of some level of [global] (relief), however it is not a positive experience for those who are shown [over the sandy graves] and will apparently have [visible images] hit the global mediastream in which [blood drips (from) torn/ragged sleeves]. There are repeated references to [cemetery] and [rip tide]. This last is augmented by descriptors going to [dragging/drawing] the [feet] (from) [under], [hidden forces/unseen energies]. Likely a reference to 'back channel' pressures desperate to 'hold it together long enough to get out'.

Terra - Dark Companion Returns, Ocean Floor Drowns

The shorter term and longer term values within the Terra entity have presented a picture of the return of the 'dark companion'. This reference was originally encountered in a pre-Katrina forecast which actually was centered in the ThePowersThatBe entity in which the 'female personality/image' representing the appearance of Cindy Sheehan in the global mediastream was also associated with a 'dark companion'. The 'dark companion' lexical clues ended up being fulfilled by the language in the global mediastream reporting of the aftermath of the Katrina/Rita/FEMA disaster. The language around the 'dark companion' included multiple references to 'bleeding' and other indicators which appeared several months ahead of the actual 'bleeding' of New Orleans. This was all discussed under the label which arose within the aspects/attributes of the 'american diaspora'. At the time the association between the Cindy Sheehan imagery, and the 'dark companion' imagery was not recognized as being temporally linked.

We now have the [return] of the [dark companion] imagery within the aspect/attribute sets. This language is specifically hanging under the [hurricane/cyclones] sub set of the Terra entity. The supporting aspect/attribute sets immediately move into action by forecasting that the [dark companion] (will/has_to/is_compelled_to) [set out/embark] on the [road(s)]. The good news about the situation is

that the [dark man] who [conducts the smooth, and even/correct, course] is shown as [possessed by/governed by][good luck/joss] and that those who will [risk] their [path/road] [behind/following] his, will also [avoid perils], and be [possessed/governed by] [fortunate choices]. The implications are that the [dark man] and those [hoards/mobs/crowds] who [follow] are [pushed/driven/compelled] to [leave residence] in order to [grab] for [life] on the [roads]. Again, many references to [millions of feet] as well as imagery of [camps] in [woods/forests]. This last imagery includes descriptions of [destroyed/toppled/bent] [trees] such that [stars/starlight] easily shows through what was left of the forest canopy. This imagery is completely and correctly supported with large numbers of cross links indicating that the ramifications of the [evacuation/fleeing] will be both long lasting and widely felt. In some of the supporting sets we find word paintings of large numbers of exhausted people, some in vehicles, but most walking, who will [take refugee] (behind) the [dark man] in the [woods] for many nights. As with the imagery previously noted for the floods where people will make 'cooking fires on their roof', we again have references to [cooking fires] which will [light up/reveal] the [hills resplendent/covered/shining (with) refugees].

In a similar fashion to the pre-Katrina forecasts, our data sets are once again assigning handicaps to the 'personality' who will emerge from the [storms] as the [face] of the displaced within the global mediatstream. This person is described as [blind, one eye], and [previously/in the past] [damaged/maimed] in [walking]. Unlike the pre-Katrina forecasts, this time the data is suggesting that the 'dark man' is the carrier of [body wounds]. Further the [blindness] does not appear to be an issue as the [dark man] is described as [riding/steering] his life by [devotion (to) learning], and the fellow is apparently quite [accomplished] in [understanding]. This [dark man] imagery is also pointing toward a [guide/finder] who will participate in the [location] of the [dark man] in such a way that the [guide] story is also prominently featured in the media.

Within the supporting sets are aspect/attribute sets pointing toward a very large [accident] which occurs as a result of the [addition/combination] of [human fears] and [developing circumstances] within the [storm]. The image coming across is of a large tank farm of [distillates/fuels] which the data describes as a [landed/grounded] [huge/big/great] [barge] of [multiple storys/layers] which is [blown] (into/on) the [lake]. This is then followed by an [ignition/sparking] which [burns] the [lake] and its [inhabitants]. The descriptors are painting a picture of this [fire floating on waters] as [during/in midst of] the [hurricane], but that may be a misinterpretation of the temporal clues as there are some indications that the [fire burns (for) 8/eight days after] the hurricane. The internal cross links to the [dark man] and his followers out on the road are suggesting that [refugees] in the [woods, on red clay hills] will be able to [see/perceive] the [fire floating on the lake] some [miles (behind)].

A curious and large group of cross links go over to the Populace/USofA entity from the Terra entity, sub set [dark man]. This group terminates in the Populace/USofA entity in the directly held meta data layer instance of [revolution/rebellion].

The Terra entity, sub set [oceans] has accrued an eye attracting amount of data clusters which move into place over the course of late Fall and through Winter. The data clustering itself is expressing [duality] which is also a meta data layer held within the data sets themselves. The [duality] is noticeable in how the clustering of the new data contexts appear in that they are separating into 2/two broad areas, that of [oceans], and [oceans/coastal climate]. In the first case, the [oceans] context is dominated by a primary aspect/attribute set which is headed by [waterlevel]. This is the first time that [waterlevel] has been observed as a primary expressive context within the modelspace. So while [waterlevel] has always been hanging about, it has done so in a supporting role. Now the [waterlevel] context, its supporting aspect/attribute sets and cross links both originating and terminating all combine their emotional sums to shift the [waterlevel] context from supporting aspect to dominate position. Obviously us coastal guys are a little bit freaked. Igor is already trying to gnaw the mustache off his face. However, we continue and

save the panic attack for later should the detail layers indicate it is worth the calorie expenditure.

Much of the [waterlevel] supporting cross links are connected internally within Terra over to [rainwater] and [flooded marshlands/wetlands/estuarine]. There are also very large supporting sets for [inter tidal zone] and [death/disease/malaise]. The supporting sets for this instance of [death] as an aspect are speaking directly to the [drowning] of the [inter tidal zone]. Those of us who have been educated in geophysical oceanic systems realize that it is indeed possible to 'drown an ocean floor' as most of the habitual species within the inter tidal range require the access to very low tides. If the tidal ranges have/will shift, it could cause [drowning] of the more sensitive, and non-mobile creatures within this littoral environment.

The descriptor sets paint a picture of [rapid/sudden] [forceful/energetic/electric] [flows] of [waters] [up into/up over/through] [saturated/filled] [salt marsh/marshland]. Further supporting layers go to the image of [beaches] (over) [flow/flowing/flowed], and [erosion] (under) [concrete] [retaining walls/structures/buildings]. The descriptors include [visible] aspect modifiers suggesting video coverage within the global medistream with images such as [miles] and [hectares/acres] of [salt marsh/marshland] (disappearing/dropping/falling) [beneath] the [flow]. The other descriptors within the area are pointing to a [winter] occurrence, in the midst of [gray seas] and [dark] [clouds]. While the descriptor set *may* be pointing to a 'storm' event, as we do have this context within the supporting group, it is occupying a relatively minor role, and we do have the dominant aspect being [waterlevel]. The inference we are taking from this is a tidal event or change of such a nature as to persist at least long enough to alter the inter-littoral ecosystem.

There are lexical structures within the [waterlevel] sub set which are cross linked over to the Press entity and which terminate in [shock] and [collapse]. The originating points include references to [flooding flow (through/over the) gates (of the) tidal locks]. This then is supported by aspect/attribute sets which paint a picture of large areas, perhaps as many as [1000/one thousand] [hectares] covered with [new/novel] [tidal conditions/circumstance]. The images also include [boats among/moored] (to the) [rise/lift/top] of [houses] which are described as made of [black] and [mottled/splashed] [red] [brick]. These are [rescue] [boats] which show a very curious association to [orange] which may be suggestive of the visibility of people in bright orange ocean survival suits. The [houses/buildings] are described as being [5/five] floors [tall], and the imagery suggests that [lines] (from) [roof rises/facia] (will) [bind] [vessels].

Within the [inter tidal drowning] structure are supporting aspects which suggest that [some/people] (will) [hesitate] (to) [flee] and in the process [lose] (precious) [minutes/time] for [action] which in turn [precipitates/draws_out/invokes] the [need] for [rescue]. These sorry individuals will include many who end up [drowned].

Modelspace is blaming at least some of the [drowning] results of all species on [volcanoes] and [ground (beneath the) oceans] which is [pulsating] and [creating] [new places]. This is shown as having the effect of [altering] the [existent regularity] such that [flows intrude] into [pastures] after having [crossed] [miles] of [salt marsh] and [dunes]. There are supporting layers for [return of celestial regularity] which will [follow] the [coastal drowning], but little in the way of hints for the time involved. And the real problem appears that a large [earthquake] will be the [remedy] which [initiates the return] of the [tidal regularity]. The [earthquake] sub set in this area is supported by descriptors which suggest that the quake will [alter the pulsations/flow] of the [under seas volcano] and [return] the [tidal regularity]. However, extensive damage is also forecast with [millions] being [moved/shoved] from [residence/house/home] due to [saturation] as well as [erosion] of [coastal channels]. There are cross links over to Markets indicating very large volatility may result during the [visibility] of the [coastal drowning] within the global medistream. There are cross links over to both Bushista, and the populace

entities where many are terminating in [officialdom]...pretty much a statement that 'you all be screwed'. Anyway, there are very large numbers of [helicopter] and [aerial] terminating cross links within the Press entity so the [coastal flooding] ought to be well covered.

The Press cross links are pointing to a number of [local heroes] who will [emerge] from the [coastal flooding] and subsequent [rescues]. Some of these [heroes] are shown as being under the influence of [secrets revealed] and [duality]. There are indications that the [rescue] drama as it plays out will be a large [exposure/demonstration] for the [populace] which will [focus] the popular attention to whatever-is-exposed with attendant emotions of [shame] and [honor]. The contrast brings up the [duality] influence and points to a situation developing wherein the [demonstrated honor] of some simultaneously [reveals (the) shame] of others. Hmm. Now I wonder just who will be seen how in this particular act of the universal play?

Oh, and according to the data set, the particular [earthquake] which ends this act of the play will be concurrent with rather exceptional [lightning storms].

Markets - Oil Roots Rust, China Rushes

The [energy/oil] sub set of the Markets entity is reacting to the various Terra based problems of Winter 2007/2008 as though the [end of an era] will be [transcribed/written/annotated]. This [end of cycles/era] is seemingly temporally connected to the [inter tidal flooding] within the Terra entity, though there are no noted causal kind of links. Rather the data seems to be indicating that a [coincident] [result] of the [peeling (of the) ground/earth] will include [energy/oil] [cycles/past_behavior] [ending/finished]. This is also temporally associated with the [stillness of airs/atmosphere] episode also forecast for [winter].

The data set suggests that the [tubes] of the [energy/oil] [system] will be [ground/pulped/smashed] by [earth peeling/shifting/movements]. There are also descriptors which are very long term sets extending out further than 3/three years which are headed by the aspect of [rot] and have support for [steel tubes rust]. There are further supporting sets for the [cycles/era] having been [completed/stopped/altered] by the [peeling planet]. The rising aspect within the set is [destruction] with support for [cycles], as well as [era], and [past accomplishments]. Further the [duality] meta data layer is influencing the situation such that the [destruction] is described as [curtailing] the [ambitions] of [kings], as well as [instigating riots/rebellion/revolution]. These notations are *within* the Markets entity and are replete with cross links to Press entity, as well as both populace entities, and the Bushista entity. Probably this is *not* a good sign.

At least 1/one [off-shore] [pumping station] is shown as [sheering] (loose) in this event, with the result being a [sweeping/combing] of the surrounding waters for [survivors]. Much of this area is cross linked over to [officialdom] both internally within Markets as well as externally to Bushista. In both cases the aspect of [resignation/removal] comes up for the [high level officials].

Never having had the wonderful opportunity to 'invest/gamble/speculate' their [life savings] in any meaningful fashion in the past due to circumstances, it is no mystery as to why the Chinese populace has been [stampeding] into the creation of [wealth accounts]. The many prognostications for a 'chinese market crash' are certainly timely. The data set for the Markets entity, including the huge number of cross links to the GlobalPop entity, are signaling that a [collective] [rush/rushing_of_blood] will [fill the populace] due to the actions of the Chinese stock markets this Summer.

Specifically focused for post-Solstice Summer, the descriptor set contains a very interesting description of the [reactions] to the [emotions of the rushing moment]. This descriptor set begins by saying that the

[crowds] will [feel (as though) lightning-struck], their [ears shattered (as though by) close thunder] {ed note: we always pay very close attention to those linguistic sets with human body imagery as these are about as archetypical as it gets}. The [ears shattered] and [blood thundering (in the) skull], the [smallest part/section/atom (of the) body] is [vibrating/ringing] in [sympathy/empathy/resonance] with the [stunning realization] that [saturates (the) belly/stomach/abdomen] and [squeezes (on the) bowels]. The descriptors go on to describe [crowds] of people so [shocked] by [sudden/rapid] [events] as to [release (their) hands] {ed note: unconscious fear signal, dropping something in shock}, as well as [release (their) bowels/colon]. They will [feel shock/wave] which [elevates/raises] the [heartbeat], and [sweats] (out) [fear]. The descriptors point to [eyes dilated], and [slack jawed unresponsiveness] all focused on [crowds shocked (into) standing still/rigid]. This then goes on to say that individually these [participants in coagulation (of the markets)] will feel as though the [atoms] of their [body] will [fall apart/separate] into a [small pile of debris]. They will find their [vision blurred], and their [hearing muffled by rushing blood] as well as [sounds (moving) slower (to) brain]. Further the experience will produce [minds overwhelmed (with) fear and dismay]. According to the data, it will seem as though the [earth/ground] [feels] [unsound/unsure] and [unable/not_capable] of [supporting] the [weight of the body]. Many of those who experience this are shown as [sagging/drooping] (down to) the [street/floor] in [abject/total] [disbelief/denial].

It gets worse from here. The data sets go on to describe developing circumstances within the [chinese markets] in which a [staged recovery] will occur as [sections/quarters?] are [purchased/bought] [en masse/great quantities] in an attempt to [turn/return] the [markets] to [right/upright] conditions. This action also is shown as creating its own bespoke [fear] [wave] which is described as [causing/inducing] [vomiting] over [1000/one-thousand] [miles] away. Again, the whole [1000/one-thousand miles away] thing is the archetypical extract which, in our day and age, really is a generic term for [very far away]. Further we have always encountered this with cross links to the Press entity which suggests that extensive video coverage will be emerging within the global mediastream.

The [chinese markets] descriptor set are dominated, as may be expected, by the aspect/attribute set of [dangerous] which has a primary supporting aspect/attribute for [position]. Please note that [position] and its plural are descriptors which carry 'in time' as a primary defining characteristic, rather than 'in place'. So this area can be interpreted as a [dangerous position in time]. This aspect/attribute set further is supported by bespoke contexts for [precipice] with supporting sets for [crag], and [rocky shoals], and [rocks, beneath/over the edge, threaten] as well as other 'rocks of doom' related kind of contexts.

Other bespoke contexts include [wealth] with very detailed descriptors for [coins] and [jewels], and other [hoards] which have been [placed at risk/gambled] into [dangerous position (near the) edge (of the) crag]. The bespoke [fear] sub sets within this area include [being pushed] (over the edge), and [falling (out of control)] as well as [dashed/crashed/crushed] on the [rocky points/hard contacts] which are shown as [(just barely visible) under water].

Further descriptor sets are pointing at [shock], and [authority] and [movement] all combining to create [a week] in which [6/six months] [work] is [lost]. And further the descriptors go on to say that [people, en masse, (are) startled/shocked] at how rapidly [jobs] and [everything] are [consumed] within the [coagulation]. This last is further supported by [the house/markets] are [uneasy] and in a [furor] of [upset/turmoil] as [adjustments] are [tried] by [technicians]. Further [manipulations] of [all kinds] and [technicians] in [quantity] are [consulted], but the [prognosis] is [desolate].

The data sets are pointing to the [chinese event] as beginning the [summer of firings/job_loss]. Given the number of cross links to GlobalPop entity, and their termination descriptors, it would appear the [employment crash] is going to be planetary in scope. The rest of the descriptors supporting this area are a combining to paint a very stark picture of [staggering loss], and [stunned (into) bad judgment]. Further

we have bespoke [danger] both in the immediate sense during the [coagulation] of the [flow of funds], as well as afterward as the data suggests that this [chinese market event] is the beginning of [12/twelve] [contractions/seizures] which [attack (the) global debt sales system]. The [combined/conjoined] impact of these [contractions] apparently produces some interesting video within the global mediastream as the [markets (are) (turned into/become) madhouses/asylums].

The data sets are very pointedly stating that [1/one] of [every 2/two] persons on the planet will be [touched/affected] by this [coagulation], and that it [brings/carries] [ruin] and [terrified gazing] to [millions] of humans. The data sets suggest that within [short days/weeks] people will [run about/around disorganized] as their [factories/plants] are [closing], and [employment agencies] [suffer riots]. Further descriptors go to [vast crowds gathering together] in [cities] all across the planet all seeking [immediate appointments]. Many will [stand] in the [streets] with [co-workers] none of whom will [have] a [place to go]. Supporting language includes [twists], [obstacles], [problems], [miserable], and other words which combine to describe a [miserable end] to [inflationary capitalism] which leads to a [numb/unfeeling/calloused_over] global populace.

The situation as regards the [chinese markets] is to move rapidly, as is suggested by the immediacy values associated with the event, into a period of [manipulation] in which a [reservoir/reserve] of [funds] is [created/gathered] in an attempt to [refill the lake]. This is shown as an intermediate stage in the development of the [crisis] as things move towards a period of being [blinded by greed]. This descriptor is supported by numerous aspect/attributes sets around bespoke [greed] and [personal goals]. The supporting sets for the cross links over to GlobalPop entity are terminating in repeated statements of [division] which is supported by imagery of [2/two people dividing monies between them]. The bespoke emotional tones are going to some [relief] and much [exhaustion (of) spirit]. By the time that these supporting sets arrive, modelspace has advanced well into Fall.

The temporal indicators which are available are suggestive of the emotional [wave] accompanying the [chinese markets coagulation] *may* also be a very large, albeit, less described component of the 'emotional turn around' showing now for very early on September 19th. Our data shows that the wave of this rapid and steep emotional shift has advanced over these last few months from later in September to the current position of about 6:15 am or so (Pacific Coast Time, or -8 GMT), on September 19th. There is a very large complex of energies associated with this period within the jumbled up mess that is the modelspace, not the least of which is the contribution that Bushista entity makes to the whole stew, so it is not possible to 'pin it all' on the [chinese market coagulation], but there is definitely a very large component in the totality of emotional sums around the idea of [economics] involved with the sudden shift in emotions from 'release state' to 'building state'. And this component is after a 'bad summer' and a 'militant august' hitting [markets] globally.

While there is a lexical stream which shows that large emotional tones for [attraction] and [lust] and [greed] are focused on the [chinese markets] all the way up to Fall, there is nonetheless a significant aspect/attribute gain for bespoke [dangerous position], and [calamity]. This [calamity] is very definitively tied into [august] in 2/two separate ways. Firstly the accretion of the most supporting aspect/attribute sets for [calamity] and [misfortune] jump upwards several fold within the modelspace as it is progressed through August and into September. Secondly, within many of the newly acquired data sets under [misfortune] and [calamity] are bespoke instances of [august] appearing. Probably means August.

Cross linked extensively over to the [army] sub set of ThePowersThatBe entity, this [august calamity] lexical set within Markets grows specifically worse as the modelspace is progressed into and through Fall. A number of aspect/attribute sets start jumping on such as [trap] and [being drawn/suckered], and [hopeless situation]. Taken all together, it doesn't bode well. Further we have bespoke [loss of money] as

well as [suffering] and [bankruptcy] being acquired in late August and growing throughout the movement through Fall. Also note that these are heavily cross linked to *both* the GlobalPop entity and the Populace/USofA entity. Again, likely not a good sign.

As an aside, apparently the [chinese markets] situation will at least bring a bit of global comic relief in that it is somehow linked to the [grinning] and [shamed] [man] who will [soon abandon] his plans as a [candidate] for office of the President of the USofA. This is also cross linked to the Press entity and so should show up in the global mediastream for the amusement of us all.

Notes to Speculators:

Some interesting observations can be extracted from the modelspace about the impact of Terra based events on general business. We are also able to extract some information about specific cases which *MAY* be of value to those who insist on speculating within debt based markets versus the timing of things. Noting that the 'china disease' issues will impact all markets globally in a really negative way, we still show some information pointing to a 'boon/bonus/serendipity' language complex which is in general associated with 'retro fitters' and specifically within that context is focused on 'flexible pipe, potable water/heating systems'. This arises as a result of earthquakes where apparently within the USofA a vast number of 'home water systems' will 'tear' due to 'rigid' pipes. Apparently this will lead to somewhat of a 'gold rush' for plumbers locally, but also will require some serious quantities of 'flexible pipe for potable water'. How long this condition lasts is not determinable, as it is merely a 'positive blip' in an other wise negative radar. But it will at least reach the level of global mediastream discussion about the subject of 'retrofitting residences to restore service given/after the earthquakes'.

Also there are linguistic structures indicating that all is not well with big pharma. The lexical sets are pointing to a large impact of 'restrictions on movement' which we can interpret as a 'restrictions on supply'. This will affect some very high end drug which is particularly dependent on a [now dwindling] plant species. The data is forecasting in the shorter term values that a [sudden/rapid] [choke hold] on supply will surface, and that then a [blockage/blockade/bouchon] which involves the active participation of [authority] will further exacerbate the situation for the drug's makers. The implications are apparently not going to be lost on the speculators once the [bouchon] is announced.

ThePowersThatBe - General Uprising

ThePowersThatBe entity is forecasting that [open warfare/conflict] will [return] in Fall and [emerge] in such a manner as to highlight the [divisions] [growing] within the [elite]. There are lexical sets pointing to [authority] being [challenged] and a [general] who [seizes the stage]. This [general] is shown as [rising] (in the background) and [presenting authority] (when) [needed]. The [need] comes from a [mob/crowd] who [challenge/rebel] against [those holding power], and their [official seal] is [destroyed] in the process. It is with the [destruction] of the [seal] that the [general] makes his appearance.

There are repeated supporting aspect/attribute sets which go to the image of [large numbers being defeated by/overwhelmed by a small group]. Further the data suggests that [the enemy] is [overcome] by [deception] which is [stirred into] the [release of documents]. Note that this area is under the influence of the meta data layers of [duality], and [conflict] and [secrets revealed].

The whole of the lexical set *may* be referring to [rapid] and [divergent] changes occurring within the Iraq war(s). It certainly reads that way given the contexts of the news of the day. If so, then this is

forecasting a radical change such as the [fall of the government] and the [uprising] which [destroys/overwhelms the larger forces], and creates the conditions in which the [general comes out from the background].

The whole of this area is filled with [retreat] and [trucks of the dead] kind of language. It is well supported, extensive and broadly diverse with thousands of details and is completely involving immediacy data, shorter term value sets, and longer term data. These many reinforcing points tend to boost confidence in the forecast. However, we do not have definitive association with Iraq, and as this area is under the ThePowersThatBe entity, it very easily could be pointing to a [conflict] within the [elite] which expresses itself in something like a [revolution] and [coup] in Pakistan.

There are a number of lexical structures within this set referring to a [cocksure/overconfident] [army] which gets its [defeat] at the hands of a relatively smaller force, and these are supported by details which include specific references to [uniforms] and other [army] language so the presumption is that *some* professional/standing army somewhere will be involved with this [rebellion] and [coup]. Since it will likely be backing the established authority, the forecast is not good for that side of ThePowersThatBe.

Conclusion - Part Four ALTA 0108 - Specifically what we don't know..

We are still within the 'emotional release' period shown as lasting through Summer and nearly to Fall. The sharp emotional turn around of September 19th, as is indicated with the charts in this series is unique in a number of respects. We can pinpoint it to about 6:15am Pacific Coast Time (which is -8 GMT/UTC). But noting it to the minute does not make it unique. We are frequently inaccurate with our timing clues and are usually off by several days. Some forecasts are seemingly accurate, but are so within a window of a week or so as was the case on the NE power outage forecast. No, what makes the September 19th emotional turn around unique is not time related per se, rather it has 2/two remarkable characteristics which have not before been encountered within our work. Firstly it is a sudden turn from 'release language' to 'building tension' language that continues accelerating the same trend for the next 75/seventy-five days (more or less, give or take 3/three days). Usually sudden turn around's are sharp, but short lived. The second element of uniqueness in this forecast is that there are only 2/two small release events within the building tension period of 72/seventy-two to 75/seventy-five days, and these are very small indeed especially given the rate of increase in building tension summations.

Timing aside, both of these other factors make this a very much anticipated September for us here at halfpasthuman. As Igor notes it is somewhat akin to the amateur astronomer staring in riveted fascination at the giant incoming meteor and mumbling 'damn that is a clear view! Just look at that detail!'. Igor's point is well taken. We have been pouring over data as though repeated examinations would produce greater clarity, rather than merely exhausted eyes and fatigued minds. It did not work.

We can say what we don't know though so the exercises of these past 2/two weeks in wading through the shorter term and early longer term values has not been wasted ...mostly. We do know that this September shift that we forecast does *not* relate to a single event. Rather the confused mass of memes point to many, inter related worry sets which will be involved. We do know that the summation values show about 1/one of 3/three of the sets is heavily [economic] related, and that mostly all are dually cross linked to both the GlobalPop and the Populace/USofA entities. We do know that such seeming unconnected areas as 'cities withdrawing' and 'solar disturbances' and 'paint shortages' are all connected by this sudden emotional trend shift. We do not know just how. We do know that the huge mix of emotional tension building trends are all 'concentrating' after September 19th and proceeding to 'tighten' up even more as we move through Fall. We do see that [energies] of all kinds and descriptor sets are involved. We do see that [restrictions on movement] and [secrets revealed] as well as [conflict] meta data layers become very active over June through September, though always with release value

language. Then, they sharply turn and [conflict] especially, start filling with building tension language.

What we don't know is legion, and what we **think** we know is likely wrong, so focusing on what we are sure we do not know seems to make sense. At this stage we are predicting a Summer of strangeness which becomes a very odd Fall indeed. Just how we don't know, but the language is suggesting that, if we are correct, and that is a BIG IF, the shift will leave very little doubt that it has begun.

So 'shift happens'. Of course, we could be wrong.

###

We expect to have Part Five posted by Sunday, June 3, assuming universe supports us and the pie don't give out too soon.

aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from interpretation of 57.88 million reads of the 0108 series.

Populace/USofA - Whether the Weather Withers

Violence and disaster, these are the 2/two dominant aspects for the Populace/USofA out of the processing of the immediacy value set this past week. In part 5/Five it is typical for our processing to return to the immediacy value set which is set aside during parts 2/two through 4/four in favor of the shorter term and longer term value sets. We also do process the new data from the shorter and longer term sets for parts 5/five and 6/six, but this is also the time to get caught up with the immediacy values which have been languishing these last few weeks. Due to the data for the immediacy values having been captured at the end of the spyders' run {ed note: usually 2/two weeks ago at this point in processing}, we are interpreting data sets which frequently are being made obsolete by the occurrences which they are forecasting. Igor calls it being chased by time. It scares him, and not without good reason. It very much feels as though being passed an urgent note, which you read as rapidly as you can, and the note says "quick, look over your left shoulder, you are about to be hit by a truck!". And, of course, you look over your left shoulder just as you are hit by the truck.

But to return to the modelspace as the last lunar month before summer fades out over the next 3/three weeks, we get a bit of a [bad taste] in the [back of the throat] in the [echoes] of recent past, as well as a [whiff/smell/sense] of things to come over this [long hot] Summer. As has been noted, the data sets most impacting the Populace/USofA entity are [violence] and [disaster]. Doesn't sound too good on the surface, and the detail layers do not ameliorate the creepy feeling crawling up the spine.

There are very large areas of cross links to the [north atlantic] sub set within the Terra entity and these are terminating in [weather] and [destructive phenomena]. There are a number of cross links internal to Terra entity which end in [energies] and even more external to SpaceGoatFart entity where, again, the termination point is [energies]. The [destructive force] shown coming from the [unexpected weather phenomena] is clearly tied to [energies] in several ways, and this includes cross links to Markets entity where the [energy sector] is apparently to [suffer] [hobbling/loss_of_mobility] as a result of this [destructive weather phenomena].

The [disaster] aspect holds detail layers of aspect/attribute sets which describe a context of [coastal flooding]. Within this context we note that there are aspects/attribute sets which hold [rescue] and [search] which both come to be [abandoned] by [all] (excepting) a [small few]. This area is only obliquely cross linked to the [weather phenomena] and is more focused on [celebrity] which is either [created] as in a new [celebrity] is made within the global mediastream coverage of the [search], or it is a [celebrity] who goes missing. In either case, expect some level of coverage to percolate over the course of Summer, with an increase in language around the [abandoned search] to rise in late June and early July. The details describe a [rough/coarse] [man] in a [power boat] who [surfs] [across] [crashing/breaking waves/seas] to [crash] into the [sands/beaches]. As the [visibility] aspect within this set is very high in emotional summations, it is likely that this image will be captured by the global media stream. There is no indications that this individual will be [successful] in the [search] for the [missing person], however, there are details suggesting that instead, [children] (unknown/unknowingly) [at

risk/in_danger] will be [lifted/grabbed] from [death]. The cross links to the Press entity, and the [visibility] sub set are terminating in lexical sets where [good luck] and [lucky] are supported by bespoke [envy]. This in turn has details suggesting that many will [envy] the [good luck] of the [coarse man] who is [piloting] the [power boat]. His [luck] is seen as [continuing] in that [knowledge/information] that he [provides/delivers] will [bring surcease/release/succor] to [huddled people] (clinging) to [wet rocks].

The [disaster] aspect is not entirely naturally driven. There are supporting sets which point to [people of inferior position/rank] which we take to be [mid-level bureaucrats] will [precipitate/crystallize/harden] the [disaster] in their [greed for power]. This [hardening] of the [disaster] is supported by language going to [dangerous] and [over strained/exhausted internal organs]. This last, being a body part or process reference is worth examining closely as these are the highest level of archetype found in our work. In this case we find that [salt depletion] and [kidney ills] come from [depravation] of [water] which is [caused by/created by] the [greed] of the [inferior positions]. This may be a reference to another FEMA Ice escapade episode where vital supplies are driven all to hell and gone, but never delivered to where they are needed all due to internal FEMA turf wars.

Returning to our [course man] and his [power boat], the data under the internally cross linked [greedy inferior people] also is cross linked back to [course man rescue]. Within this set are pointers to a [helicopter] which is able to [part the brush/thick _hedge] and [avoid entanglement] with [great precision/skill]. This is the [visible image] coming from the cross links to the Press entity, and apparently refers to video coverage of a rather spectacular helicopter rescue in a very [dangerous environment]. This [rescue] is [visibly] [successful] and [depends] on the [skill] of the [pilot].

The details of the [rescue] have a few puzzles to offer. Once again, even though there is clearly a Summer focus, we get the [snow] and [snowbank] aspects returning. Either this is as close as we can come to describing this particular phenomena, or it will actually involve a Summer [snowstorm]. The [snow] is pertinent to the interpretation as it forms an apparent key point within the details of the [rescue] of the [children] and the subsequent [extraction] of the [huddled people] on the [wet rocks]. The details show that the [course man] is [disturbed] during his [endurance] of the [storm] by a [group of children] who are [driven down a dead end road], and [disastrously off course]. What is really curious is that the [vehicle] is showing as [sliding into the snowbank] and then getting its [wheels stuck in the snow in the ditch] where the [straining to lift] will cause the [engine] to [die]. This puts everyone on foot and [bent over (in the) winds] (trying/attempting) to [walk]. This is when they encounter the [coarse man]. His [shelter] is in their [path], and they apparently [stumble (into his) hole]. After [encountering] [all] the forms of [hardship] that there is, they [successfully] drive the [power boat] up into the [arms/grasp] of the [press] and the other component of this [rescue] story begins.

The whole of the [rescue] theme is repeating multiple times within the data sets at various levels. There are [rescues] seen within the [violence] sub set which has [iraq war] sub sets within it. The [rescues] include cross links to the Bushista entity where there are termination sets within [rescue] there as well. The implications are for an obvious [violence surge] within Iraq which forces the [bush administration] to attempt [rescue] at a number of different levels including [personal] as well as [national]. Within the [national] sub set within the Bushista entity the cross links go back to the Populace/USofA entity where the clear implication is for [suffering] as a result of the [violence] of Summer of 2007 to [increase] to the point that [personal] [rescue] as a term must be applied to Bushies in general, and Bush/Cheney in particular. The data may be pointing at actual [risk of personal survival] for the top Bushies, and clearly points at [attacks] upon the [lessor/inferior] Bushies to [erupt/boil] out this Summer. The data goes on to suggest that [politicians] as well as [press] will be [personally assaulted] over the course of Summer in a [visible] and [fashionable?] manner. This will make the global mediastream as it is very high up in [secrets revealed] meta data layer summations within the sub set. These [assaults] have been forecast for

the [press] for sometime now as [public/populace] [frustration] will [boil over/foam_up] in the [hot days] and even [hotter nights] of Summer. There are repeated, and reinforcing cross links from the supporting sets to this area of Populace/USofA over to Terra entity where the termination ends in [sun boil] and other indications of [solar extremes] which [contribute] to both the [heat] of the planet as well as the emotional heat which will find its focus on [politicians] and [press] as thing deteriorate over the course of Summer here in the USofA.

As a very bleak note indeed, the longer term values within Terra which are terminating points for this [episode] of [emotional eruptions] this Summer are also the originating points for cross links which go internally to very long term sets indicating that [infrastructure] of all kinds will [die] during the [heat of summer] in 2007. This [dying] is a meme which persists out through our longest range values set and is very pointedly focused on [death/dying] on a very vast scale which, should any of the very few survivors care, can be traced to the [hot hot summer of 2007].

The [disaster] and the [violence] aspects which are dominate and rising throughout the Populace/USofA entity over the course of Summer include [economic disaster] as has been discussed including the [near death experience] for the [usofa dollar], and now includes the [peeling/removing] of [layers of guilt/glitter/perceived_value] from [housing] very much as the people will peel away dead skin after [sun exposure] this Summer. The Press entity is heavily cross linked and will be [providing/delivering] [alibis/rationale/excuses] for the [bleeding] of [housing] very robustly, but it will do no good as a new meme of [corporate/banking piracy] will be [flowing] through the emotional [veins] and [retribution] from [mobs] will develop. Of course this will be later in the [revolt] cycle which begins this summer. The [millions] of those whose [homes/houses/shelters] are already in foreclosure will be added to [10/ten fold over], or by [tens of millions] as [corporate/bank] [raiders/brigands] are [discovered/found_out] to have [rigged/strung] the whole [scheme] along. The data sets are suggesting that there will be the [obligatory] Congressional hearings, but that the [tone] of these will be like nothing seen before. The Populace/USofA cross links from this area to the Press entity have bespoke [fear] supported by [sweat] in [copious amounts] seen on the [face] of [officialdom] as [alibi/excuse] after [excuse] [crumbles] along with the [housing markets/industries].

The data sets here have cross links internally to other areas within Populace/USofA where the imagery is pointing to [daily] [degradation] of the [housing] in which [4/four trillions] {editors note: Yes, TRILLIONS, the very first time that has appeared within the serendipitous processing, so probably means something, eh?} will be [lost] and apparently faster than [urine/piss drains] from the [bladder].

The long range value set forming and growing which is headed by the [housing] sub set within Populace/USofA is truly horrific. It is worth noting that the echoes of the events within [housing] for the Summer of 2007 continue to build to the very far limit of our longer term data set, or about 5/five years from now with no reduction in emotional summation patterns.

Within the [violence] and its cross links over to [disaster] which will come to dominate the emotion release of Summer, the data details point to the [inflation] following the [near death experience] of the [usofa dollar] to [ruin/bankrupt] [industry]. Apparently the very first of these [industries] which will be [flooded (to) death] with [inflation] will be [health care/hospitals]. In this case, the [exponential/non-linear] [increase/growth] in [emergency] [patients/wounded] as a result of [disasters], including [weather phenomena] will produce the very first inkling of the [collapse] of the [hospital system]. The imagery is of [patients] with [no care], and [populations] of [sick] and [wounded] and [dying] who are [without treatment] and [lay/sit] on [hot asphalt] outside [bulging] and [fetid] [hospitals]. Given the huge number of cross links and their origination/termination points within GlobalPop, it is pretty safe to assume that the [inflation monster] will strike all of the [G8] nations. The [monster] of [inflation] here is specifically pointing to [repatriation] of [usofa dollars]. Not a good position. The cross links from this area of

Populace/USofA entity over to Bushista entity are terminating in [hiding/avoiding] and [denial]. Again, not a good sign.

Also within the [violence] sub set are aspect/attribute sets showing that [Caribbean] [nations] will again be a source of [violence] and [revolution]. This area is cross linked to the Terra entity and is pointing to [subsistence] being [impacted/affected] by [weather] caused [restrictions on movements]. The longer term value sets from this area are not good. They are pointing to a [multiple generation] impact on life here in the USofA due to [weather phenomena], including the [summer snows], and the [loss/reduction] of [coastal lands] {ed note: inter littoral drowning being confirmed by Populace/USofA entity} by several [thousands] of [square miles]. The details suggest that in some areas coastal [flooding] will drive [hundreds of miles] inland. There are supporting images of [airplanes] [crashing] on [landing] due to [hitting water] [unexpectedly]. As though flooding was sudden enough to engulf air ports as planes are landing. The descriptors paint pictures of [displaced] people by the [hundreds of millions] from [all forms] of [weather disruptions].

Some of the specific [weather phenomena] to be seen here in the USofA include an [extra/extreme] amount of [winds]. According to the modelspace and our somewhat limited capacity for guessing appropriate dates, the [winds] will become an issue following the [coastal] [flooding]. There are also indications that the [coastal flooding] is not merely a single event, but rather is a multiple year problem in which [relocated] people are [pushed/driven] [inland] repeatedly by [continuously rising] [waters]. These are seen as [forcing] the [shifts] in [relocation camps/domiciles] of all kinds in a number of nations around the planet, including the USofA. There are some links temporally to the [Caribbean weather problems] at the very beginning of this [10/ten year cycle] of [increasing waters], but for the Populace/USofA entity, the start of the [weather miseries] will begin with [coastal inter littoral drowning] and continue through with [winds], and then move onto [earthquakes] and [volcanoes]. Whew! Gonna be a busy Summer.

Noting that the Terra entity is reporting the [volcanoes] and [earthquakes] with many geographic references it is likeliest that some of these are 'merely' USofA affecting, and not actually sited within the borders of the nation. The examination of the entities at a higher level within the modelspace is forecasting that much of the [weather phenomena/disruptions] occur closer to the end of Summer than the beginning. The data clusters get very tight around our previously identified August 13-16 time and are going toward [emergency] and [shortage]. This last is fully involving both populace entities, as well as having detail support for the meta data layers of [encounter with restrictions], and [restrictions on movement]. The whole of that area suggests that [terra intrudes] impacts on other countries/areas will significantly impact the USofA in the [absence of material/goods], and [degradation of transport]. There are several sections in which the primary aspect is either [shortage] or [emergency]. In both cases cross links go over to the Bushista entity where we find that [imposition] of [authority] is [attempted], but the data suggests that the populace finds the Bushies try at restoring [control] to be [irrelevant], and things proceed from about late August/early September with the Bushista entity clearly showing that it is [castrated/powerless], and [seeking aid (from) powerful friends].

As if the [terra intrudes] issues are not enough, the [housing] meme surfaces in several layers both in [economic] and [abandoned *due to weather] threads. Further [economic] threads show that the [bad summer] for Markets will also be [bad summer] for regular humans. The [economic] thread has the [disaster] aspect as its rising and dominant aspect/attribute set. Within the supporting aspect/attribute sets under [disaster], the modelspace is showing a [wave] of [frustration] and [discordant] [emotions] within the populace which are [pushing] for [revolution]. This is [augmented/multiplied] by the [degradation] of the [money/currency] and the subsequent [crashing/dropping/falling] of the [supported/supportable] [life]. There are some indications that [quarrels] in very late Summer and early Fall will be directly linked to the [impact/affect] of [continuing emergency]. These [quarrels] are

showing as being in the [millions] and are the source for our repeated [assaults] showing for members of the [press] and [politician] class.

Much of the [dollar disaster] is related to [excessive returns] to the [shores/borders] of [america]. This is clearly pointing to the [repatriation issue] as a primary cause of the [bad summer]. Further [irritating] and [multiplying] circumstances evolve from the [grounding (of the) ship of state] {ed note: archetypical expression of a government incapable of exercising power/direction}, and from the [loss of the (iraq/Afghanistan) wars].

Cross links from both the Terra entity and the Bushista entity show that [crisis/disaster] (induces/creates) the conditions where [decisions] must be [taken/made] [hurriedly], and that the [haste upsets carefully laid out plans]. This last area has lots of cross links over to the ThePowersThatBe entity, and the inference is that the [hasty decisions] coming from the Bushistas will be causing all kinds of problems for [plans/formulae] which have been [in place/developing] for [generations]. Many of ThePowersThatBe will not be too kindly disposed to the [sudden ruin] of their plans. This last has lots of cross links to the Press entity and as such is likely to be visible within the global mediastream as the ThePowersThatBe seemingly begin to [unravel] under the influence of [secrets revealed] and [Bush screw-ups].

At least some level of the [disaster] for the [usofa dollar] is associated with [3/three full moons] which will occur before Fall. In each case, the [full moon] is a very clear temporal marker for the next bit of [chaos] to [emerge] into the economic system. As the modelspace is moved through a [bad summer], it shifts into a [terrible fall]. This last is indicative of multiple layers of context including the [collapse] kind of [fall], as well as [stumble], as in [political fall], and lastly the actual Fall as in season.

An odd juxtaposition of sets has occurred in which the [military] is subsuming the [economic] thread just as September moves into Fall. It shows that the [military] impacts are [uncovered/exposed] and are [pushed to the center] by developing circumstances. The [harsh] conditions of Summer have moved into [hardships] in Fall, and about that time, [military arteries] are [opened]. This [opening] or [bleeding] of the [arteries] causes a very large jump in [secrets revealed], as well as [driving/pushing] the [economy] down.

Bushista - Spitting Venom

More data is showing up within the immediacy value set which points toward an increase in [visibility] of the Vice Dick Cheney over this next lunar month and into Summer. The aspect/attribute sets have supporting layers going to [resignation], and other aspects which also get the same idea across, that is, [removal/expunged] (from) [position/office].

The data is holding a [resignation] structure just under the [dickcheney] sub set within the top level of Bushista. This structure is coincident with a very large rise in bespoke [aggression] and [irrational behavior] which both have [visible] and extensive cross links to the Press entity. As these data sets are heavily influenced by the immediacy data sets the implication is that some visible forms of very [bad/aggressive behavior] on or around the Vice Dick will be captured by the global mediastream over the course of June. Much of this new data is acquired simultaneously with the Markets data sets indicating that [coagulation of flows] begin in/near mid month. This [reduction in flows] through the Markets entity causes the Bushista entity no end of [troubles] as [pressures] are brought by people apparently capable of [screaming] as [steam/power whistles]. This is also concurrent with, and inter twined with the developing [collapse] of the [power structure] within [iraq].

The Bush war of aggression against the Iraqi's has reached its 'long hot summer' point. Within the data sets the [israel] and [zionistas] sub sets of Bushista run into a mid-month [wall] of [inattention/unknowing] in Bushista as [conditions crumble] here in the USofA with almost all of the blame being placed squarely on the [iraq war]. The [economic erosion/degradation] will surface near the end of the month, but the first signs of the [economic disease (of the) citizens] begins around the 6th and continues to gain strength over the course of the month. This brings out the [deflation] language within the [power structure] which also has several clear links to the Press entity which are supported by [secrets revealed] and [leaks] such that the implication is for some portion of the [arguments about deflation] to make it to the global mediastream.

The language is also interesting within the immediacy values as it suggests that [rethinking/changing/reexamining] the [iraq war] will continue through early June and then abruptly trail off as the steady stream of (daily) [violence] within Iraq increases [dramatically] into a [blood filled] [solstice]. At that point, the cross links to the Press entity are pointing to [open mocking/ridicule] of the Bushistas with every mention of the [surge strategy]. This [mocking/ridicule] will be [pointed] enough to [elicit/invoke] the [bad behavior] of the Vice Dick later in the month.

In response to the [open mocking] both the Vice Dick and Bush et al, will become much more [reckless] and [aggressive]. This will include [open warfare] with the [congress], as well as [risky/desperate moves] within [battle zones] as [theaters collapse] around their [fantasy] of how universe operates. This is bad news for the rest of humans, as Bush et al go a bit more [batshit] in late June. This [aggressive] period extends out into mid-August with imagery coming from the aspect/attribute sets of [cheney spitting (in) open defiance/rejection] such that [vile fluids (are) flung] as he is shown [berating/harranging] the hapless press core. This particular episode which is showing up as modelspace is moved through the August 16th as [congress] has attempted to [hobble/curtail] some of the [excesses] of the Vice Dick and, according to the data sets, the Vice Dick actually [spits (in their) face].

Terra - 3/Three Good Shakes, Tides Turn

The data sets for some time have been showing a period of 'shaking' as in 'multiple, continuous, and ultimately damaging, earthquakes'. These aspect/attribute sets have had a number of geographic references, including both the 'usofa, west coast' as well as 'asia, south east'.

Over the last month the Pacific Northwest of the USofA, specifically Washington and Oregon states, has been experiencing an earthquake swarm *unlike* any previously encountered phenomena. These earthquakes are, so far, below 3/three as a rule, but the general trend is for an incremental increase in size each time the earthquakes [revolve/rotate] back to a point previously part of the swarm. Further, the earthquakes are now seeming to also include northern California.

Our data is indicating that this is merely the beginning. That there will be at least [2/two regions] of the planet which will [ring as a bell] such that the [lakes quiver] for [days] at a time. And that the [earthquakes] will be [multitudinous], [continuing] (for) [months], and [lead to/cause] [destruction]. The data suggests that a [Fall climax/crescendo] will [shake fruit (from) trees] as well as [remove glass from windows over whole regions]. Some of the data from the longer term values in the same thread are pointing to [years] of [plumbing] problems, and [burst piping] as [rising/heaving] [ground/land] continues to [shrug]. There are indications that [power outages] related to [shaken strings] which [melt] in the [heat] will cause considerable problems for the whole [western region]. These problems are shown as [branching] from the [earthquakes] and include [fire storms] due to [lack of water in the pipes], as

well as [evacuations] from [hospitals] due to [lack of electricity]. The whole of the region is shown as [slowing] as [roads buckle], and [new routes] must be [made] in [haste/hurried circumstances].

The whole of the [earthquakes, multiple, continuous] lexical area is supported by repetitious references to [fire] and [magma]. The imagery coming across is of [massive/huge] [movements/flows/pressures] on the [deep magma flows] as being the ultimate cause of the earthquake swarms. The [magma] is described as being a [dammed river] with [undulations] coming from [lateral pressures]. The [energies] from both the Terra entity and the SpaceGoatFarts entity are cross linked to this part of Terra, and are clearly participating in the [lateral pressures] which are [rocking] the [land]. This [rocking] is described as being [continuous] and [building]. The result will be [3\three] [large/good sized][shakes] that will [culminate] the [process] for the moment. This apparently is shown for very late Summer or very early Fall.

The cross links to both Populace/USofA and GlobalPop show that these [3\three] [earthquakes] are going to [trick] or [fool] people into [moving early/reacting prematurely] such that after the first earthquake of some size, everyone will assume that 'it' is over, and begin to [make assessments]. The data clearly shows that [moving too soon] will be [very dangerous] and will put [many lives] at [risk].

The cross links to the Populace/USofA include [visibility] links to the Press entity, as well as a number of supporting structures indicating that the press in general will be [relocating/living] with the [victims] for some time. Further there are links indicating that [government/officialdom] will [attempt] to [impose restrictions] within the [afflicted lands/regions]. These [restrictions] are apparently on [fuel], and [vital services]. It is note worthy that the data sets have repeated bespoke [failure] attached to the [attempt] language. There are other supporting sets within the Populace/USofA entity which indicate that the [restrictions] and [other official edicts] are [ignored] and [trampled] by the locals.

An interesting side note about the [impact] of the [earthquakes] on the [social order] is that the data suggests that [times/circumstances] are [calling out/drawing out/extracting] the [sages/wise men] from [hidden lairs/dens/studies]. There is to be an [incident] within the Fall, during the the [destructive] phase of the [earthquakes] when a [government will fall/collapse] in response to the [rise of the astute poor man] to [greatness]. The [collapse] of the [government] begins with [secrets revealed] during the [earthquake damage assessment]. This in turn causes [coffers (of) coins/wealth] to be [exposed] from [hidden thefts]. These [hidden thefts] are in their turn the supporting 'trigger' or cause for the [collapse of the government]. This comes out as a result of [what is found out/revealed] by the [wearing/tearing (of the) earthquakes].

Again, it is curiously reinforcing that many of the cross links from the Terra entity, sub set [earthquakes] over to the Populace/USofA entity terminate under [revolution] in some supporting sub set. The [revolution] meme is multifaceted and includes [political revolution] as well as [personal perception revolution], which, if we are being philosophical, is pretty much the same thing. In the case of the cross links from Terra entity to the Populace/USofA entity, the termination points are becoming increasingly centered in bespoke emotional states, or body part/process references. As a whole this trend in data termination of cross links is pointing to both a higher level of open emotional expression, as well as a higher level of behavior change probability.

As the modelspace is moved through Summer and into Fall, it shifts from the dominance of immediacy and shorter term values into the longer term value realm. The current processing is suggesting that the forecast [perception change] on the part of the populace entities will be boosted significantly upward by the Terra intrusions of the Summer. The data is pointing toward a [seemingly continuous] impact on global populace by [oceans/oceanic] events/circumstances from June through August. These [oceanic] circumstances are extensively supported, and heavily cross linked internally to [energy] as well as

externally linked to SpaceGoatFarts entity where the terminations are in either [energies] or [sun/solar]. The detail sets are explicitly referring to [change] and [radical shift] in oceanic currents, and these in turn will bring [new patterns/paths] to [wind storms] as well as [increase] the [magnitude] of the [winds] which will beset the humans through Summer. In some cases [rain storms] will be [driven/propelled] into completely new areas, with some of the descriptors pointing to [long dead seas] which will be [rinsed clean/replenished] by [rains] which are [2/two thousand miles off course/strayed]. In other areas the [typical patterns] will [evaporate] and [dry, parching/dehydrating winds] will [unseasonally] [blow on shore] for [weeks] such that [lands bake, grasses dry] and [birds/insects die].

We have previously identified 2006 as being a 'pivotal' year in which events/circumstances [teeter/hung] on edge, and that 2007 would be the [year of emergence/manifestation]. This is apparently to be demonstrated this Summer with very high visibility values for any and all manner of [bizarre] weather phenomena. This will also include the [strange migrations] of [insects and animals] as well as the [appearance] of [odd plants] in new regions. This last area comes with supporting sub sets indicting that the [zone maps] for [botanical habitat] globally will become [useless].

In addition, if we pursue just the [oceans] sub set through all of the shorter term values, and out through the longer term values to the very far edge of what the lexicon can provide, we see that the [water level] [increase] trend will radically alter how humans live on the planet. What is so surprising is how rapidly it will occur as the various steps in biospheric degradation are reached. As an instance, the data suggests a [1/one hundred times] increase in the number of humans who will live as [boat people] over only the next [3/three (to) 5/five years]. This is shown as being due to [water level increase], and its [tidal impacts] as the [seas claim new lands]. Further there are still longer term values accruing for [rising land] which will also [pressure the containment (of the) tides] such that [new ports] are being [built] and [flooded] repeatedly over these next [3/three through 5/five years]. Yes, hard to believe, but having direct experience of the increased radiation from the sun causing new and destructive wind patterns most amply demonstrated here in the Pacific North West of the continental USofA last year where over 100/one hundred lost their lives to wind or its after effects, and having observed the increasing neap and heap tides, and being aware of the unexpected [California sized](#) melt of ice in Antarctica in 2005, it all somehow seems a whole lot more probable than not.

The very long term data is expectedly less well supported, however those details which do exist suggest that large groups of people in all the coasts of the world will begin periodic migrations inland. This will have huge ramifications to the social order as [wealth] in the form of [coastal land ownership] disappears. The planet is about to demonstrate to humans just who owns what as it forces what the modelspace describes as [1/one in 3/three] humans to move inland in response to [rising tides] which simply [do not contain themselves (to) usual shorelines, and insist/demand (to) rise into cities]. Much of the descriptor set contains images of [scavenging] the [remnants] of cities which have infrastructure above the [waves], but whose [feet, calves, and knees] are now [underwater]. This is a very strange sort of slow motion [catastrophe] which is painted by the data in that there are descriptors going to [tribes] who will [inhabit] (tall buildings) and other [isolated] structures once [land connected], but now [man made islands] in a [rising-to-dominate/conquering] [ocean].

The global environmental catastrophe of the [rising tides] cannot be over stated. The data sets point to ramifications including the [scrapping/abandonment] of [property laws/registrations] as well as the [pollutions] from now abandoned and mostly [submerged] [nuclear energy] and other [energy factories]. The [chaos] within the [social order] as the [structures] of [life support] go [underwater] also is difficult to grasp. The diversity of the effects is staggering. The data suggests that [government] pretty much en masse globally moves to [mountainous regions]. This [relocation] places huge social and resource pressures on the populace globally. As may be expected.

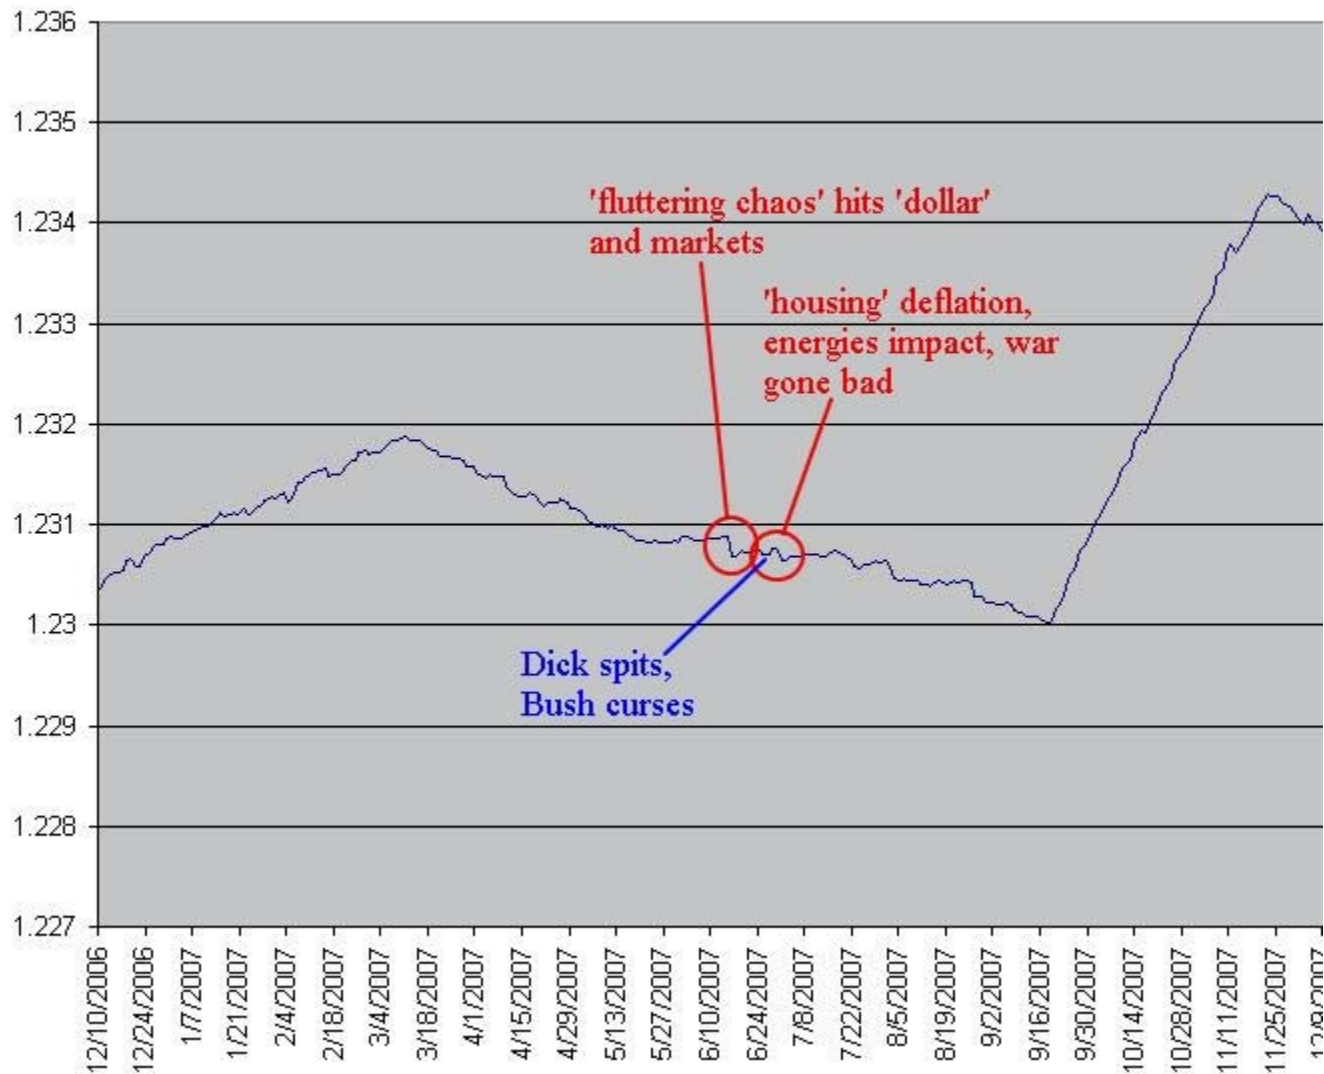

New social orders are cross linked within the GlobalPopulace entity which is the existent structure representing the [regular humans] in this time frame. Over the course of the next [5/five years] the longer term values are pointing to the dissolution of the differences between the Populace/USofA entity, the leading slave-state of the NWO, and the GlobalPop entity. This merging occurs due to the overwhelming rise in 'commonality' over 'difference', and mostly it comes from shared suffering. The forecast [global coastal event] is still building its values, but these are now showing more for [after math] and [continuing effects] as opposed to [immediate impacts] which suggests the event itself cannot be too far off. Or that we are totally wrong. Probably the latter. But time will certainly deliver an answer as the [oceanic mischief] meme gets its [shoulders] into the change this Summer.

Markets - Ten Serious Days, Fluttering Chaos, Dollar Turning Point

June promises to be a definitive form of a 'release period' for those persons working in the debt markets globally, but with special bespoke [angst] arising within the USofA markets. This [angst] starts appearing around June 8th, and grows over the course of the month with a very large spike of emotional values impacting on and between June 17th through the 27th.

These [ten serious days] are described as bespoke [atypical] and [unusual]. This is apparently so much the case that [plans/vacations] on a [global] scale will be affected. This is apparently focused on those people who make their living interacting within the [debt markets] as they will be very suddenly [concerned], [worried], and [busy].

Emotional Tension Trend - LTV - 2007 ALTA 907 Series

The descriptor set is showing that the [usofa dollar] will [disperse] in [fluttering chaos] as [political], and [economic], and [social] problems [conjunct] in June to form a [rip current/strong_force] which [sucks down/draws down] the [administration] into [open pits (of) fetid manure]. This last likely does not, pleasant as that thought may be, refer to the members of the Bushista administration actually being cast into manure filled pits. Rather it likely is pointing to the secondary descriptor set within the context for [scandal], and given the rest of the contexts, it is a very [money] for [blood] kind of scandal.

The data set has the largest amount of cross links between entities we have yet encountered. These center in Bushista, but are very dominating in both the Markets and the Populace/USofA entities. In both entities, the termination links points are filled with bespoke [neurosis], [discontent], [frustrations]. In both entities the dominating meta data layers are [secrets revealed] and [duality] up to about June 28th. There after the dominate meta data layers in Populace/USofA, and Markets, are [revolution], [conflict], and then [secrets revealed] and [duality]. At that same time of late June, the modelspace shows the Bushista entity shifting over to dominance of [conflict] as the expression of highest emotional state within the entity.

The [antagonism] between the Markets entity and the Bushista entity appears to be triggered by the [usofa dollar] [disappearing] in [fluttering chaos]. This causes a [rebellion] meme to build within those in the [debt business] who are in bespoke [fear] of [loss] of [income/employment] as [dollar disease] is [heard around the world] [3/three times]. The [rebellion] meme quickly grows to [revolution] as [expressions] of [disinterest] and [distraction] come back to the Markets entity from Bushista.

There are also indications that a [global/planetary] [grinding] of the [paper dollar] will be linked to the [events/circumstances] coming out of the Bush [wars of aggression].

As a side note, the cross links to the Bushista entity are pointing to some form of [international restrictions] which will be [rejected] with [spittle] and [venomous speech] by the Vice Dick in June. This [open aggression] against the [moneyed elite] will [excite comment] within the Markets and [precipitate catalytic reaction] within the [monetized debts/derivative] markets. This [cursing episode] will also participate in the [rejection] of [claims of royalty] by the Markets entity over the course of June and July.

The data set is very clearly indicating that the [usofa dollar] has reached its [turning point] in June. This tends to reinforce the previous interpretation for a 'dollar near death experience'. While self-reinforcing components do not guarantee that circumstances will so manifest, they do raise the level of probability that modelspace, and hopefully our interpretation of it, are correct. Such referential integrity checks do occur within the data sets spontaneously and there are several within the very extensive cross links in the 3/three way connections of Bushista, Populace/USofA, and Markets.

We need to be very clear that the [ten days of seriousness in June] are not the end of problems for the USofA economically. Specifically the modelspace is showing, from several differing sub sets, that the [housing] as an industry moves from [clear problems] right through [soggy weakness] and into [dying off/rot/putrefaction]. And the key point here is that all three of these aspect/attribute sets come to dominate over the course of June, and each has several of the [visible] contexts along with Press entity cross links which argue for some significant level of global mediastream coverage. The totality of the contexts with [housing] in them as either a lead aspect, or supporting aspect/attribute, or within the terminating cross links in another entity have their emotional sums reaching levels of [extreme anxiety] and [extreme uncertainty]. These are supported by recurring, and internally supported structures which are all showing differing aspect/attribute lead sets which *all* contain descriptors for [deflation]. The curious aspect/attribute sets are those for certain other areas of the Markets entity which are pointing to [rising/scaling/escalating prices]. These include the expected [energy], but also are showing for a [health-care] [crisis/shutdown] due to the impacts of the [escalating prices].

The data sets are also pointing more and larger [shortages] within the [food production/handling] areas of the [economy] due to the combination of [encounters with scarcity], [fuel/energy restrictions], and [weather impacts], especially [flooding], and [unseasonal cold] on food production. These are merely a small fraction of the totality of diverse threads which will begin to combine in June and continue to escalate through the Summer. As the [prices] of [food] start to [run extreme], and as [restrictions/encounters with scarcity] begin to impact a larger portion of the populace, the data sets are pointing to ThePowersThatBe entity via cross links as [initiating] a [coordinated] [program] of [keep calm] and [only temporary] language around both the [deflation] and the [food supply losses]. This [campaign] will have the very unfortunate [effects] of actually [triggering panic] in many groups. The reappearance of [cognitive dissonance] as a rising aspect/attribute set within the Populace/USofA, and GlobalPop over the Summer is directly related to the continuation of the [don't worry] language being applied with large brushes by a small number of sources.

Note to Marketeers: Expect that a steadily building wave of interest in 'primitive America' will begin

over the course of Summer, actually before the solstice..so about mid month. This wave is already started, but will begin to 'bulk up' in the coming months. The 'primitive America' wave will include a 'sudden' and commented-on, visible, purchasing focus spread across the demographics of the populace which focuses on all things 'early American'. The wave of interest will include the span of 'pre-european invasion America and right up to the mid 1800s'. It does not appear to take interest into the Civil War period, but will encompass the [utopian movement] of the early 1800's.

The 'primitive America' focus is a natural response to the current forces threatening the fabric of the social order. This 'return to the core/roots' will be felt by all peoples/subgroups within the populace at large, and each of these groups will have a tendency to gravitate toward their [local flavor]. This [local flavor] is shown as [driving] a [large return/great response/huge resonance] to the [american craft movement], as well as finding expression in [local/regional cooking] and [differences between/within America]. Note that the [divisiveness] of the pressures from the New World Order folks {ed note: helgian dialectic, and all that} are *not* present in the [apparent] [splintering] of the [return to core values movement]. In other words, in spite of the immediate perception of 'difference' between the Cajun' populace celebrating and returning to French language roots, and the resurrection in Yankee pride in the Northeast, both will be [mutually accepting] and [respectful] as both, at their centers, are attempting to [spark the future] from the [flint of the past]. That is to say, that each group will [respect] the [elevation] of the others' form of ['primitive America] recognizing within it some of their own formative ancestry. There will be a very special emphasis on [slave contributions] to the [culture]. This will be particularly apparent in, and affecting of the future of the [american craft movement]. This trend line has a large immediacy value set supporting it, as well as very long range values which indicate a [multiple generation] impact.

Conclusion: Part Five ALTA 0108 - Summer of Change

Please Note: the current white color of the sun, its increased output of light at all levels including UVA, UVB, and new frequencies of radiations are very likely NOT GOOD for humans and other life here on earth. Exposure to direct sunlight needs to be very seriously regulated on a personal level. As a caution, we always watch the 'news' as an indicator. Recently the global mediastream has begun to offer 'extreme UV' warnings on teevee. These are very clearly clues to 'pay attention' as previous years have not had 'UV hazards' broadcast in any meaningful way.

The continuing pokes from universe to those humans on the planet with the awareness to open their eyes to biospheric change will increase this summer according to the data set. The idea coming across is that 'more folks' will become aware that things have changed and there may be a corresponding decrease in cries of 'nutter' and 'nutjob conspiracy theorist' flying loose in the world. This change adds its own series of ripples to the histrionics and emotions as more humans experience [reality shock], and that ain't no teevee show. The [reality shock] phenomena will get some small level of visibility, likely on the internet given the levels we see within the data. Some of the expressed ramifications include alterations in buying patterns which themselves will cause measurable ripples in the economy {ed note: providing some interesting commentary on teevee later in the Summer}, and exceptionally large numbers of people 'attempting' to relocate. By 'attempting' we refer to the 'failure' of housing to sell in the Summer in a great many formerly desirable areas including large stretches of the [coastlines]. This will begin a small counter wave which will be [touted] in the press as some people will be displayed 'flouting the fear' and actively seeking to purchase near the water. But the more attention the media pays to the trend even negatively, the larger it grows.

Seeing the data sets build through the processing these last few weeks has provided for some interesting personal changes. Igor is now reconsidering his previous reconsideration of relocation to the mountainous regions of far north eastern Washington State. I am going to the extra work of building a

large trailer in order to drive across the state to fetch a project boat which **may** be in suitable condition to become a coastal cruiser without back breaking labor or huge amounts of precious time or money. We are not alone. Our primary bandwidth costs are paid by generous individuals who also get a first, and more raw look at the data sets. There has been a real effort on their part to consolidate all endeavors at 2000/two-thousand feet of elevation. Some folks in the EU who are doing similar work to ours are also selling out and relocating to 'higher/drier' climes. A significant note there is that Switzerland is being avoided due to geologic structure.

As a personal rule it is the policy of the nutjob management here at halfpasthuman to **NOT** even attempt to answer 'why' questions. this is because 'why' goes to intent, and who can ever really know the intent of another? So when asked 'why' the universe is moving us in particular ways, we mostly ignore the question and respond that the important parts are that universe **is** motivating, and in **that** direction, and **now** rather than some other time.

Universe, as with time, is fractal in nature. As has been expressed by the ancient mystery schools, and every religion since, 'as in the heavens, so here on earth'. The fractal nature of universe/time can be 'read' or 'heard' by those who care to listen. Previously, in ALTA reports of 2006 we noted that 'green death' would be a very much heard/seen meme over the first half of 2007. This pretty much played out in a large number of ways. As had the 'flooding' meme which is still building data sets. Now for the whole of 2007 we had caught the early appearance of 'emergence' as a meme, which is both diversifying and sharpening for the last half of the year. Expect the appearance of 'water danger/hazard', and 'coastal', and 'energies/winds' to be emergent from mid-Summer onward.

Of course it the forecast [summer snow] that is worrying Igor, and mainly in the pie context.

Part Six is expected to be posted by late Sunday the 10th. Lots more data than usual to process for part 6 due to our increased lexicon tuning.

ALTA 0108 - Part Six

Asymmetric Language Trend Analysis Intelligence Report

'Changes in language precede changes in behavior.'

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here,

NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

6.8.2007

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and ***red*** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. Last part of the series.

This report in the series created from interpretation of 69.008 million reads of the 0108 series.

Populace/USofA - Ranges, Dusty Balls, Wet Concerns, Wedding Interruptus

Most of the contexts and descriptor sets are replicated at least partially within many entities. Thus we have some small context level for the Iraq war even within the Terra entity. Or as an instance, there are [waterlevel] contexts within the Terra, Markets, Populace/USofA, and GlobalPop entities. Within each of these contexts the emotional summations will be different as each instance of [waterlevel] is expressed within its entity from the view of that entity. Thus [waterlevel] within the populace entity is almost always perceived as 'bad' or 'negative' emotionally. It really does not matter what happens to the [waterlevel], up or down, virtually any change will be perceived as bad by humans. This is due to the very narrow range of conditions necessary to sustain humans individually as well as collectively. The range of 'tolerable' conditions for omni humanity is even smaller than the effective range of what will 'support life'. We note that much of human literature speaks to times or conditions in which some component of life support falls outside the range of 'tolerable'.

The range of what is 'tolerable' by humans extends to many non-material components, of which 'emotions' are primary. Any human who has ever been part of a centrally focused very-large-group such as a concert or large sporting event can speak to the nature of 'collective shared emotions' as a form of energy. In our work, [energy] is multiply defined to include the context as a sub set of SpaceGoatFarts wherein we are discussing [energies from space, unknown and known varieties, with focus on unknown or officially denied/dismissed forms]. In the populace entities, the [energy] context is vast and includes all forms of energy as is being used by humans in a material sense, but also includes a nearly-as-vast array of sub contexts going to [emotional, mental, psychic, physical] and other forms of energy from/within the human body, both individually and collectively.

Emotional energy, including and perhaps especially collective mental energies of mass humans, is a bit of an odd thing. And this is where we will *always* err in predicting based on linguistic clues. The error creeps in through our completely arbitrary assigning of numeric values to human emotions. The error is due to the limiting nature of numbers to express an infinitely varied range of perceptions, and our assignment of any particular 'emotional value' to any particular descriptor within a context. That is a

complicated way of saying that basically we just guess and say that the 'feeling' associated with C is 54 and the 'feeling' associated with D is 64. It is our assignments of values which are the real inherent limitation to the whole system. It is true we have taken a studied and very carefully constructed approach to the whole work, however we have always known that these limitations exist within the structure of our approach. Systemic flaws in implementation which need to be kept at the forefront of awareness and *not* relegated to assumptions. The key reason that this flaw-in-system must be recognized is demonstrated in the very complex structure now emerging within the modelspace around the context of [waterlevel].

As modelspace is progressed through the last days of the lunar month prior to the June 21/23 solstice {ed note: from human perspective the solstice is a 3/three day 'stand still' of the sun}, the [waterlevel] contexts start to converge which is to say that variations in the emotional summations of the descriptors within the individual entity forms of the context begin to flatten out.

As an instance we find that the [waterlevel] sub set within Terra, and within the sub set for Antarctica is starting to resemble the same lexical structure for [waterlevel] found in the Populace/USofA entity at the same position within modelspace. In other words, as both the Terra entity, sub set [antarctica], and the Populace/USofA entity move into the same region of modelspace, their respective [waterlevel] aspect/attributes begin to resemble each other down a number of supporting levels. This begins to occur after the June 21/23 solstice, and becomes more pronounced as the modelspace transits more of Summer. A reasonable {ed note: if that word can be applied to the voodoo/hoodoo that we call work around here} interpretation *might* be that the impacts of [waterlevel] changes in Antarctica are a 'causative' element in the [transformation] that the mind set of the Populace/USofA experiences over the course of this Summer. Alternatively, it could be that a common root cause creates [visible] changes in [antarctica] and also, simultaneously triggers the [transformation] within the Populace/USofA. There is some support for this latter view as the [sun] is repeatedly showing up within all the [waterlevel] support sets in all entities. The implication is for [solar activities] to [increase] over the course of Summer to the point where [waterlevel] changes manifest in Antarctica, and to the point that [visibility] is reached within the mass consciousness of the global populace concerning the [waterlevel] here on earth.

Supporting the idea of [visible] manifestations here on earth as a result of [solar activity] we have numerous supporting sets across the [waterlevel] aspect/attribute sets which include [sunsets] and provide descriptors going to the idea of [radiant] and [radiance] [unseen/previously_unknown], as well as [spectacular] and [angry]. All of the descriptors, including the more poetic aspect/attribute sets include cross links back to Terra entity and SpaceGoatFart entity. Within both of these are supporting sets for [growling sun], and [irritated solar cycle], as well as the more normal [excessive sun spots]. Again please note that these are continuing growing value sets for [energies from space] and that they are dominating the immediacy values of this last set of processing. The implication is for a 'very active' solar [face/countenance] this Summer with [visible] impacts on humans with each and every [sunset]. The effect across the totality of Summer will be a [perception change] within the mass of the populace which will have profound behavior changes at individual levels which then aggregate to large scale social changes over the rest of the year. The changes within the masses of the populace are indicated as being [visible] shortly after the solstice and growing more so over the remainder of Summer.

As the [year of emergence/manifestation] especially with regards to [energies from space] and their [impact on biospheric] degradation here on earth as well as the other planets in the solar system, this Summer marks the point of [delineation] such that after this Summer, humans will be able to look back and say, 'yep, it all began then'.

Of course the 'beginning' is really of the awareness, and not the manifestations, but that won't matter to most humans. We do note that a number of the [waterlevel] references include descriptors for a

[meeting/gathering], which is geographically tied to [india], and which includes participants described as [naked], [growling] [old] [men]. As an old man, I can tell you that if I were naked at a meeting, I would probably growl as well. However these fellows are apparently [growling] about the [elite classes] globally, and not their state of undress. The [meeting] is described as having [large visibility] and so likely will hit the global mediastream. It should as deeper descriptors go to the idea of [dancing rage] and [hurling rage out (like) angry spit] at the [powerful/elites]. Further the meeting has some interesting ramifications as a temporal marker for subsequent [escalation] of [global earthquakes] as well as the [change/alteration] of [previous faults/fault lines]. This last may be pointing to changes [within the crust] (of the earth) which take place as a [result/effect] from [earthquakes]. In other words, the data seemingly is suggesting that [earthquakes] will [redesign/redo/do_over] the [directions] and [familial relationships] between [fault lines]. A further note about the [meeting] of the [naked, old, growling men] is that the cross links to the ThePowersThatBe entity are terminating in bespoke [fear] though of a lower level, and supported by [exposure]. This area within ThePowersThatBe is *also* under [waterlevel] and *also* contains supporting sets for our [dark companion] reappearance. And, as may be expected, the cross links from the [dark companion] within ThePowersThatBe entity terminate in [danger] and [damage].

As the modelspace is progressed forward, the [solar] influence, and [affect/impact] on both the planet and our attitudes collectively will become more clear. The data suggests that [surges] of [energies] from [space] will [propel/push/drive/force] the [sun/sol] into [quick flames, sudden rushing], and [flares/flaring] and [disquiet]. The [visibility] of the [sudden flare-up (of the) sun] is shown as [instigating/initiating] a [cascading/falling/crashing] of [discarded opinion/understanding] such that [confusion] and [transformation] aspects/attributes both go over double the emotional values summations that they had before the Solstice. This area is a very large contributor to the total emotional summations for the [mind set/perception/viewpoint] [transformation] of the populace. Kind of like being slapped in the face with a dead fish...a moment of shock, followed by confusion, and then a bad smell under your nose. All make it difficult to continue in denial.

Both the Populace/USofA and the Terra entity, sub set [antarctica] share a common point as Summer progresses into Fall. This point in modelspace is defined by the dominant aspect of [decreasing] which is modified by the supporting aspect/attribute set of [from a great/large height/mass]. In both instances the [waterlevel] aspect is indicated to be affected by rather than affective of the [decrease in mass from a great height]. Interpretation for this is area is difficult to *not* take to the extreme of a [sudden decrease in ice mass and the reduction of the antarctic glaciers from their current great height]. All of the aspect/attribute sets are there which would support such an interpretation, but the modelspace is so filled with data points that it is difficult to locate any particular temporal marker for a large shift in ice. While there is the very large and sudden shift over to the building emotional tensions on the early morning of September 19th, 2007, at least a third of this total value is [economic] focused, and of the remainder only slightly less than half is from the Terra entity. It is true that within the Populace/USofA entity, over half of its [economic] contribution to the building emotional tensions does come from [biosphere] related sub sets.

Within these [biosphere] related sub sets of the Populace/USofA are a number which have very heavy cross links over to the [antarctica] sub set within Terra where they are terminating in the aspect/attribute set of [sickness] with specific sub sets within this area going to a bespoke [winter]. Of course we note that [winter] in the southern hemisphere is June through September, but there are some interesting lexical structures which point to a double meaning in these contexts. The [sickness in winter] is referring to the [cause] by way of the cross links, which is to say that [antarctica gets ill in its winter (June 21-September 21)] and the Populace/USofA entity is showing that it [gets ill] in its Winter (December 21, 2007 - March 21, 2008)] as a direct, and bespoke [cascading] result of the [illness in antarctica]. The Populace/USofA getting the [antarctic illness] in Winter is also heavily cross linked internally within the

entity to various actual [diseases] such as and including [bird flu] and other [pandemic diseases]. These start showing up within the longer term values for a January 2008 'emergence' with some strength, but the real [illness] will actually begin following this June's solstice.

We need to remember that the [energies from space] meme has also been forecast to have a very sudden and large impact on or around August 13th through the 16th, though we note the supporting aspects go to [unknown] as the type of impact. And it may well be that it takes the 'dumb/unaware humans' some number of weeks to figure out just what is going on, and then to get all [whipped up/anxious] about it such that we have the very large rise in emotional tension values in late September. Alternatively, input from space may take a few weeks to provide evidence of itself, by say, melting a couple of glaciers, or some such. Again, then in late September, up go the emotional hackles on them pesky humans.

Speaking of impacts though, we do have another [wedding] which will be interrupted by Terra intrusions. There has been a previous instance of a descriptor set of an [interrupted wedding] which had its lexical descriptors show up in relation to an earthquake interrupting a wedding in Indonesia which hit the global mediastream post-Sumatran tsunami. Again, the [wedding] is going to be [interrupted/postponed] due to [terra] events, however this appears to be something of a combination event. The data is less than clear as to what sets the events in motion, that is either a [storm] or an [earthquake] or both, but the end result will be that the [lakes overflow, (get/are) set in motion] and it is the [sloshing/rushing waters] which actually disrupt the [wedding plans] as well as [float the guests/wedding party]. This last is apparently key to the global mediastream picking up the story as there are descriptors going toward [rescue] of the [colorful/brightly painted/enrobed] party from [floating debris]. Again, please note yet another instance of [waterlevel] language showing up, yet this is *not* within the main [waterlevel] aspect area. In the past, these 'similar themes' or 'specific cases' are taken as further support for the general case expressed elsewhere. In this specific case the [waterlevel] general theme is multiply supported within details of not only the wedding being [displaced/interrupted], but apparently some of the [rescuers] will themselves be [flooded/floated] (out of) [position] and require [rescue] themselves.

Terra - Floods' a'comin

Well, wouldn't you know it, back at the [waterlevel] issues. The spyders that we have for data acquisition are backed by our lexicon and set loose to eat up a bunch of words to analyze. They bring back up to 2048 words which have been found around the concept being discussed. In some cases we have triggers within the SQL server data base which fire off and send us snippets of the captured language such that an actual human (or Igor) will read them. The triggers have fired off recently as we have shifted into processing for Part 6. These triggers have brought back the texts around bespoke [global waterlevel/ocean level/ocean volumes] contexts. We note within these snippets that certain 'rumors' of catastrophic melting of the Greenland glaciers are being discussed. When read the totality of the texts suggest that the Der-partment of De-fence here in the USofA has evidence pointing to the totality of 'greenland melt' within the next 5/five years. This evidence cites the recent increase of the rate of melt to a level 50/fifty times faster than previously thought, AND the increase in the rate of increase. So their conclusion is that within 5/five years, all of the Greenland glacier will be melted. The projected results, as may be imagined will be horrific.

Even though the total mass of Greenland glaciers will *only* raise ocean levels by 20/twenty to 30/thirty feet, this is enough to create vast chaos within human life on the planet. There will be hundreds of millions, if not over a billion humans displaced by even that much rising water. Plus the levels of ocean rise will swamp all of our current ports, and most of the planets energy capacity in production, shipment, and refineries. Plus that level of ocean rise will eliminate a large number of airports, all transshipment points for goods on ocean freighters, and *all* known shipping lanes. Then there are the

impacts on the non-former-coastal dwelling humans which will include weather changes from the shutting down of the Gulf Stream current in the Atlantic as well as the Pan-Pacific Asian current cycle. Then there are the impacts on all the food sources currently associated with the oceans, the coasts, and any ocean born transshipments.

Things get bad from there. The ice melt will alter planetary weather, as well as planetary food production both in locations due to flooding and loss of the coastal areas, and from the weather changes. There are also problems with pollution from now-drowned nuclear production plants, as well as the more normal petroleum based facilities.

It also means the loss of space flight via Florida. And likely any where else given economics and weather problems after the 'shift hits the stream'.

It means the loss of several hundred thousands of square miles of land including places such as London, New York, WA DC, much of the Sacramento Valley in California, also Florida of course, much of low lying Eastern seaboard, and whole countries such as Bangladesh, Vanuatu, and many other atoll islands. The impact on the coast lines of a *mere* 30/thirty feet are staggering. In some parts of the world, 30/thirty feet will flood hundreds of miles inland and perhaps not so curiously now, re-fill once dead, inland ocean beds.

Of course, we also have to be aware that as the Greenland glaciers slide off of Greenland it is likely to do just what Canada did when the Laurentian glacier slid off of it nearly 12/twelve thousand years ago, that is to say, pop up. So bobs-your-uncle, and there you go, our predicted for years now [rising lands]. And of course if Greenland rises, well less sea bed available, earthquakes, shock waves, and you get the drift..

Oh, and the rise in ocean levels also just *may* have an impact on [economic] aspects of life here on earth.

But hold on there folks, in spite of the bespoke nature of such discussions, and the who of the conversations, and in spite of the evidence of rapidly changing biosphere, the above is not the *real* story. That is because the whole of the discussions that we have captured are predicated on DoD and major corp thinking, which fails to note anywhere that we can track down that all of the effects above come about *not* when the glaciers melt, but rather some time earlier when they slide into the oceans. So the whole linguistic trap of thinking "5/five years" is just that, a trap for mental conditioning. Rather it needs to be considered, even in DOD language as "less than 5/five years". And within our thinking we are now substituting 'probably less than 3/three years'. We will be able to ascertain much over the course of this Summer, and into Fall. If the elite are observed behaving a bit oddly, and it is not specific cases of drug induced behavior changes but rather is a general case applied to the class of the 'power elite', then that alone may offer proof of the theory on the timing of this next phase of biospheric alterations. Of course, Terra may intrude with a SpaceGoatFart-slap-in-the-collective-face flushing the denial right out of the system.

And this may be our forecast [global coastal event] in the making.

Oh, and as a nasty side note, remember, what happens to Greenland also happens to Antarctica, and the Antarctic ice sheets are estimated to contain enough water to raise ocean levels over 353/three-hundred-fifty-three feet. Hmmm. Yep, nasty is a good descriptor here.

Sooo, where does that leave us relative to our data processing?

The processing of the data sets has been forecasting this [visibility] of the discussion for sometime. Soon now you can expect the [waterlevels] meme to move over to the global mediastream, slowly at first, and then with some level of [reaction/response] by ThePowersThatBe to try to [quell] the issue. But the data is showing that [emergence] will [continue] and [escalate/increase] so much over the course of this Summer that the [waterlevel] issue as well as [planetary health] will be at the core of the forecast change in mind set/perception within the populace entities.

Within the Terra entity, the [prominence] of the [driving forces/emerging reality/manifesting circumstance] will [breach denial] sometime in late Summer where we see the cross links to Press entity from Terra entity indicate a huge level of 'release period' language coming out relative to the [planetary health]. This area is extensively cross linked to the populace entities as well as to the SpaceGoatFart entity, and in both cases is terminating in [energies] sub sets.

What is understandable from the modelspace is that the [global coastal event] is a [beginning/initiation/start] of a process which will take years to play out. The data sets warn of [shifting tides] which will [migrate] (inland) with [time] for at least 3/three years after the initial [global coastal event]. We say 'initial' since it appears that there will be several such within the overall [waterlevel increases]. These [events] not only involve the glaciers, but also will find contributions from [volcano's] and other [land mass] changes which will create [differing volumes] for the oceans such that [new currents] (scour) [harshly/fiercely] at our [emerging coast].

The data sets are painting a very distressing picture with a combination of the shorter term values and the longer term sets. When we examine those we find that the [perception/mind set] shift happens as a result of the [emerging evidence] which will be [experienced] at a [personal level] such that [denial fades] and the Press entity shows that the [whole campaign/effort] to [stifle/muffle] the subject begins to [rebound], but not onto the Press, rather onto ThePowersThatBe. The cross links between the Terra entity and the ThePowersThatBe entity grow with each processing cycle that we run. These links now are providing support for the Terra entity [waterlevel] at over 90/ninety individual sub sets within the ThePowersThatBe entity. This level of cross link support is coming from the immediacy and shorter term value sets, yet is being applied to the longer term values around the [waterlevel] meme. That oddity is not a processing error and is being interpreted as an indication of the level of fear associated within ThePowersThatBe around this subject.

And speaking of fears, let's turn now to Markets entity.

Markets - Stuttering Dissonance

The recent rise of issues within the [currency] markets beginning on June 6th came along just as predicted in previous section of this report. As noted earlier, this begins the [bad summer] for [paper/debt markets]. The situation will be such that the idea of a [mid summer break] for the "professional" traders will be long gone by mid-Summer.

The [bad summer] imagery within the aspect/attribute sets continues to accrue contexts in support of [confusion]. These paint a picture of [rampaging/wild/wildly oscillating] [confusion]. Also this area is participating within the rising meta data layer of [confusion] which will emerge/manifest with seriousness over the remainder of the year. The current [confusion] crop within Markets entity is pointing at a period for the near term where [conflicts] [among/between] [data signals] will induce [software paralysis] for the computer assisted trading crowd. This period also brings along bespoke [dangerous situations] which the immediacy values suggest are currently being [fiddled/tweaked] by TPTB almost [continuously]. According to the data, it will not help.

The [summer] is showing as [creating crying confusion] within the Markets entity such that the [crying] aspect/attribute set will be supported by actual [crying/weeping] in response to the [gyrations/fluctuation/deviations] from [predicted norms/set state/status quo]. This [crying] will have some [visibility], though it is unclear if it will be on the global mediastream or merely local to the web.

The imagery of the supporting sets for the [confusion] primary aspect points to [waterlevels] oddly enough, and does so via cross links to Terra entity. The sub set of [waterlevel] within Markets data set is suggesting that some of the odd behavior of the markets which produces such a [bad summer] will arise from the [planetary health] perspective. Further this data set has cross links to the Press entity which presents a temporal marker of a [car sinking in mud] as the [waterlevels rise around it]. This particular [car] will be somehow noteworthy by the press as it is showing as [visible] within the global mediastream. Subsequent to the appearance of the [car in mud] image, there will come a [damaging] and [dangerous] [document] which falls under the [secrets revealed] meta data layer. This [document] is what is taken as a key element from the temporal marker. Apparently the [dangerous document] which is [historical] in nature will [precipitate] further [disruptions/discord/disharmony] within [data streams] affecting the [markets].

It will be necessary for the risk takers to be aware of the type of situation that is forming within the global markets. The data sets are clearly supporting the idea of [behavior alterations] by [billions] of humans such that [trillions] of dollars worth of so called [wealth] are placed at risk. Given the previous ALTA reports on the [housing] 'industry' and its participation within the [employment collapse] scenario, it should come as no surprise that the internal cross links are pointing to [dollars] and [interest rates] in conjunction to the whole of the [repatriation] {ed note: which we hypothesize will produce local-to-usofa hyper inflation} of the [dollar] problem discussed in previous ALTA reports. Given the recent announcements of the abandonment of the USofA dollar by many/most of the energy producing countries of the world, and given the precarious state of the USofA economy in that the only growth 'industries' revolve around creating new financial instruments based on this risky dollar, it is not a surprise to discover that the immediacy data is suggesting that the [markets] will find the [dollar] to be [indigestible]. As the immediacy data sets are so impacting with usually under 3/three weeks for manifestation, it would seem that the developments in markets behavior since June 6 are likely more 'trend initiating' than trend following. That is to say, what develops from June 6 through the solstice on the 21st should be able to provide at least a glimpse of the developing [patterns (of) influence] with which speculators must contend from this point forward.

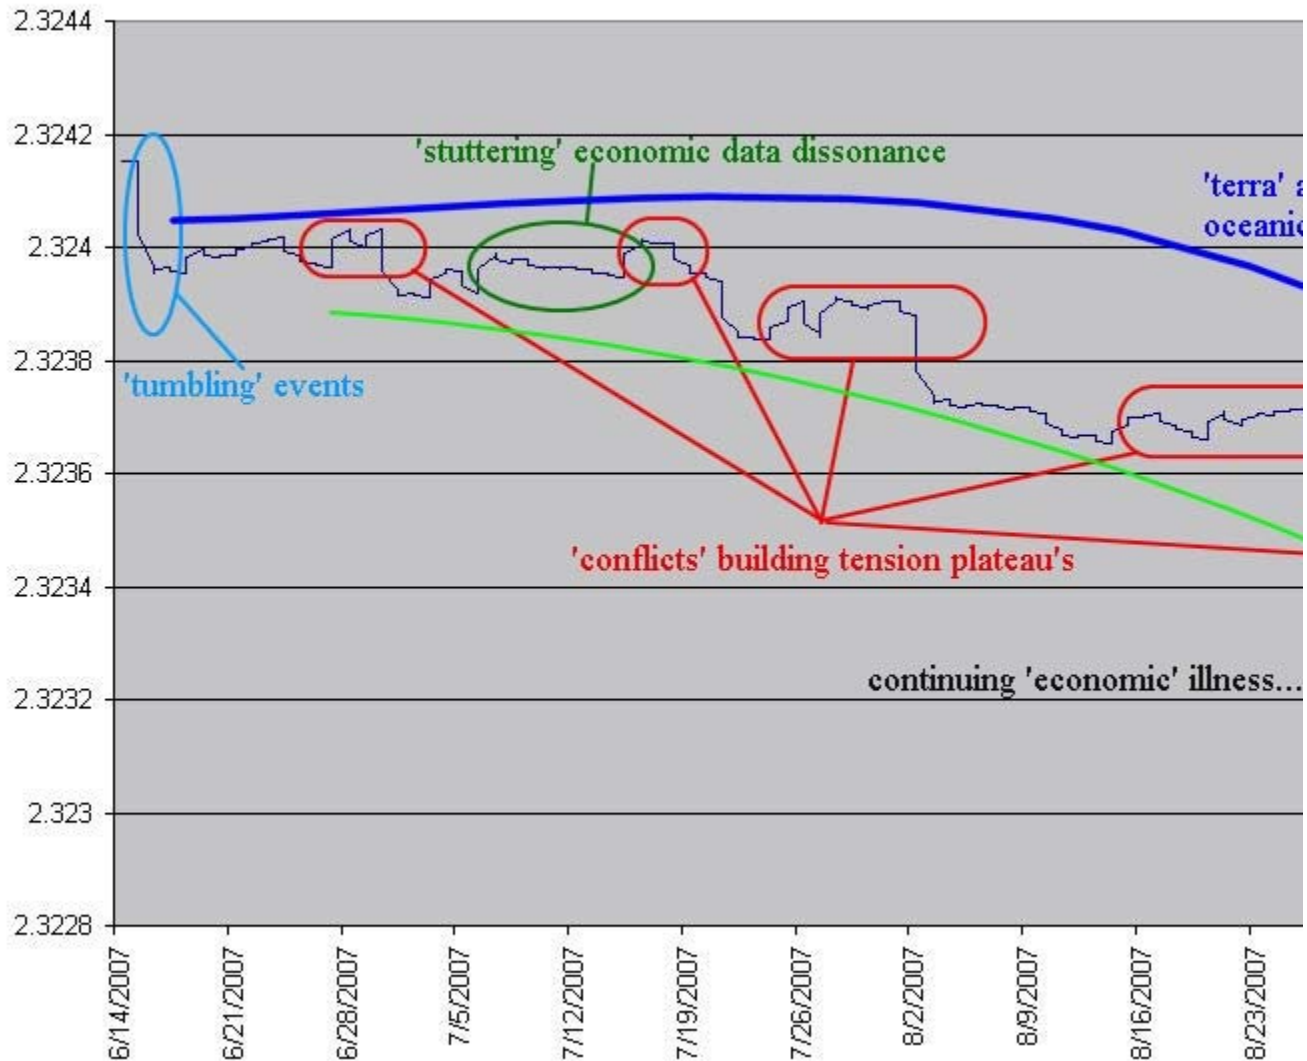

The [accumulating difficulties] for markets over the next 3/three weeks are specifically suggesting [trouble] for [software] (guided/prompted) [behavior]. This may well result in a small crash of the software industry sub set which creates and supports such packages, however initially such [trouble] will prompt a flurry of consulting activity as everyone scrambles to discover the why of it all.

The longer term data continuing to be processed is pointing to the [bad summer] being responsible for [visible] statements about the [markets] being [ill over the course of winter]. This [illness] will be only [faintly] spoken of, but will be from [respected experts] and not the regular crop of nutters such as found here at HPH.

There are a few other temporal indicators for rapidly [stepping down/devolving] [usofa economy] and [dollar], and these include the [criminal case] which [involves sex], a clear pointer to the DC madam case currently floating about in legal marsh somewhere. It would seem that as that case [shifts] toward [open relations/talking/discussions], the [economy] will also begin a noticeable [step down]. There is not the suggestion of a direct cause and effect, merely the criminal case acting as a temporal marker for subsequent changes. These subsequent changes will participate in supporting [oppression/suppression] as an operative descriptor for the economy here in USofA. This may be referring to the [officialdom]

and its [oppression], but could also be referencing the [oppression] of the [dollar] by the energy countries of the planet. In any case, a very direct impact will be felt in the [mergers] sub set of the markets, as [liquidity] is [flooded out/drowned].

Emotional Tension Values Summer 2007

As the 'bad summer' progresses, those Markets observers will be able to ascertain the larger picture of trends if the care is taken to factor in the developing mind set change within the broader populace. Without this assumption of evolving mass behavior change, many of the 'statistics' provided over the next few months will be misleading at best, and horrifically wrong at worst. The interpretations shown of the [data dissonance] on your local global mediastream will increasingly have to resort to superlatives in order to explain the 'freak' or 'outlying' or 'anomolous' data elements presented within the business as usual framework. The use of superlatives will become noticeable with careful observation. Not all data items can be 'freaks' unless they are describing a 'freakish' situation. The superlatives increase is shown through the Press entity cross links to Markets as well as Bushista entities. It will act as a good temporal marker as the mid point in the process of the [data stutters]. That period ends with yet more [disharmony] within global markets. This level of [disharmony] will break records going back to the

previous global economic depression of the 1930's...as a start.

Again it must be noted that the [disharmony] aspect is very broadly applied, but within the specifics references such [disharmony] as [dollar to 'basket'] disconnections. In spite of the recent activities to 'pump him up', the old buck is still very ill. This will be expressed throughout the remainder of the release period as [economic] woes contribute their share to the totality of the emotional tension trend line. The data indicates that some form of [local hyper inflation] is coming to the [usofa] through the [repatriation] of [trillions] of [dollars]. The effect is projected as [out of control/irrational] and [screaming] [interest rates]. The data is truly scary at this point suggesting [creep] in [interest rates] which is so [steady] as to be [undefeatable/irrepressible]. The effects are not good. The [interest rates] are shown as the [emergent messenger] of the [ill dollar]. What is apparently the nasty bit is that this is not a huge jump up and then an adjustment period, but rather [daily creep] and [daily torture] as the rates just go up all Summer long. Some how this will translate into our forecast [near death experience] for the [dollar], though admittedly the mechanism is less than clear at this point.

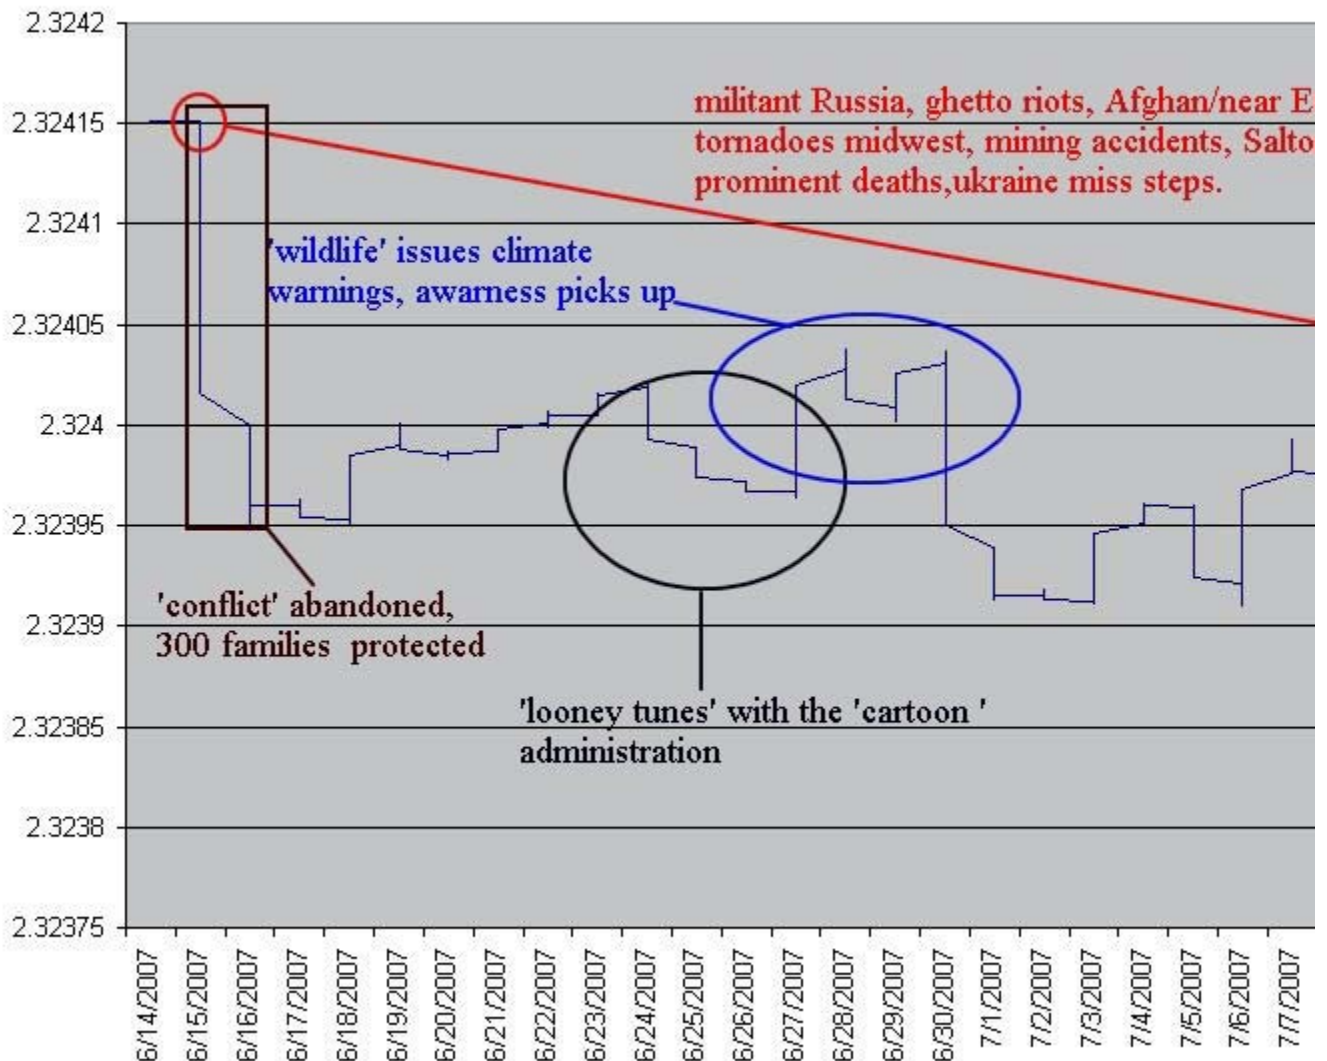

Bushista - Toil and Trouble

Well, talk about nutters...the Bushista entity is fairly clearly stating that a period of [insanity] is about to [rule]. The data, which we note always errs on the more extreme side of things, is headed by an aspect of [stupor] which is modified by [agitation], and [disconnect]. The [disconnect] is supported by [reality] and other aspect/attribute sets going to the idea that from about June 16th, with a minor peak around the 25th, the Bush admin will be in the [realm (of the) surreal]. The [strutting delusions] will seemingly [taper off/wind down] in the last week in June, but that is when the situation becomes very dangerous indeed. The data points toward a July of [bush aggression] while [totally lost/detached] from events in [reality], such that [trouble (is) boiled] to the [limits (of what) (can/will be) accepted]. At that point the modelspace is indicating that the emerging meta data layer of [revolution] will [erupt]. The [eruption] of [violence/death/bloodshed] is cross linked over to Populace/USofA and GlobalPop entities. The interpretation of the supporting sets is that [globally] there will be [incidents] of [revolution] against the Bushista's. This will include a huge, and mostly [new/novel/unexpected/unforeseen] mess in Iraq which will spread in all directions. The indications are for [trouble] to extend as far as Greece, and to [overwhelm] Lebanon, Syria, Iraq, Jordan, Turkey, Iran, Egypt, and Israel. This area of the modelspace also holds the lexical structures for the [israeli mistake]. The combination of all these factors suggest that July will be particularly nasty for all concerned. And further that the Bushies will make things considerably worse by their actions.

We note the extensive cross links between the soon-to-emerge [bellicosity] and [delusional behavior/statements] from the Bushista entity over to the Markets entity. The intimate nature of the [control systems] of [global finance] are terminating points for many of the cross links. The cross links are originating within the [irrational/insane/ranting/frothing] sub set of Bushista. The termination sub set is filled with aspect/attributes which go to the idea that the [markets] and their [participants] here in the [usofa] will be [stunned] as though [hit/struck (with a) mallet] by the [perception] coming from the Bush administration during the remainder of June. Then the data shows that [stomach's churn], and [shoulders hunch] as the [extreme/out_of_bounds] behavior of July manifests. These areas are cross linked to the previously discussed [near-death-experience] of the [usofa dollar]. The data sets are providing a description of a relationship where the Bushista [irrationality] becomes so [visible] as to [excite comment] within the global mediastream. Simultaneously the [markets] will [record horror/disbelief/emotional shock]. This [shock to the system] will participate within the [secrets revealed] meme currently vertical in all the entities, as well as produce its own set of [conflicts] internally.

Concurrent with the degradation of the situation in Iraq, et al, there will arise [economic] issues within the [usofa] which will be directly related to the [abandonment of the dollar] across the planet. This will cause huge disruptions within the USofA economy, and the Bushista entity is showing that all of its [responses] will be [off center/off target/missed], and further, the clear lack of any [control] or [sanity] at the top will [shake the feet, quiver the calves] of the [markets] here in the [usofa]. This will be a completely new phenomena within the [usofa]. Never before has the [prince] and [politics] been so [out of sync/disconnected], that [money flees/wealth leaves] the system as a whole. General calls for [regime change] within the 'system' will be a singular temporal marker for the emergence of the next phase of global-political-squirrelreliness.

Emotional Tension Values - Solstice Centered 2007

As the chart above indicates the next weeks through the solstice and into early July will be a particularly busy time with events seeming to race constantly ahead of the Bushista's grasp on things. Foreign intrigues as in [spy scandals] as well as [domestic violence] will rise to [visibility] just at the worst of times, that is when [internal dysfunctions] begin to [ooze/filter/leak] (out of) Bushies [core]. This area is

under the influence of the [secrets revealed] meta data layer, and cross links within that structure are pointing to a very large 'news' day coming regarding [dollar abandonment] and [bush behavior]. This 'news story' has [visibility] as well as duration values suggesting a level of continuous percolating of the story much to the annoyance of all within Bushista. Also cross linked to this area are a number of descriptors within ThePowersThatBe. A possible interpretation is that the 'news story' represents a form of attack on the Bushistas from those formerly near-and-dear. In any case, the whole of this period is reinforcing of the projected Markets behavior in that much of the global discord will impact [dollar security/sanctity] with very negative results.

There are also references building within Bushista from the immediacy value set which are pointing to a [conflict abandoned]. Again this has cross links to the ThePowersThatBe entity where it terminates in [the 300/three-hundred families] sub set. This area shows that this action of [abandonment] will end up [protecting] the 300 'families'. Too bad it does nothing for the rest of us...

Conclusion: Part Six - Ramblings/Rumblings

Thank you for participating in our ALTA series experiment in radical linguistics.

So, are we really nut jobs with all this [waterlevel] talk? It would seem so on the face of it, however please note some interesting coincidences such as our now 6/six months of continuing flooding here in the USofA and that same amount of prediction of the flooding by our technique. Further there is the curious timing of a 'major motion picture' about a 'new noah'. And what is its sales slogan? Why, 'floods coming'. Hmm. What is out-and-about in universe, and what is *allowed* to be out-and-about in the mainstream media sometimes coincide. When that happens, it gives me pause for reflection, and sometimes, chills up the spine.

For those of you planning 'boat projects' after reading this series, please note that port facilities will disappear under the scenarios we have sketched out. Further even beaches as we know them will be gone as the new coastlines may well be found hundreds of miles inland and among formerly tree or housing covered areas. So perhaps an extra investment of time and energy with strengthening hulls makes a bit of sense as even standing 'off shore' several hundreds of feet may still result in being placed amongst tall trees or other hazards at low tide.

I will beg your indulgence for a minute to consider some of the reasoning under which we are operating both personally, and in delivering these reports.

Our bandwidth costs are very large, as are associated electricity and data storage. We have a primary backer who pays the freight on these costs and receives a special, more focused version of the ALTA reports. Recently we had to pre-inform him of earthquakes and flooding which would affect his Chinese interests. These have appeared as have other manifestations of biospheric degradation. As he is not within the anglo sphere of control, his news sources are reporting a much more open discussion of the changes affecting the planet. This continues to reinforce the 'evidence' within our data sets for a particularly grim view of the next few years here on earth, climatically speaking. As we are in the information processing business we are also aware of very diverse voices within the whole discussion of 'earth changes'. Increasingly our big picture view is becoming reinforced by a conjunction of emerging voices all using the same form of lexicon with the same meanings and time values across scientific disciplines.. In our work this is a very significant occurrence. Basically you can think of it as if the plumbers decided that they needed a common word set with nuclear plant engineers and zoo designers

wherein the same word had the same level of nuance and technical understanding. This concrescence of lexical structures around common sets is *not* the usual state of affairs. Rather note that as specialty sciences grow they have a tendency to have their lexicons diverge from the 'parent' set with nuance, and more private-to-the-science technical assumptions. This, as stated, is a large reinforcing point within the structure of our work.

Both as 'professional nutters' and as humans, we are faced with an increasing awareness of biospheric degradation. We are able, thanks to our very high level view, to put daily instances of 'freak' manifestations into perspective in the larger emerging design patterns. This perspective can become its own problem. That is, our personal paranoia over 'rising waters' could infiltrate the reports. We take great pains to run 'exclusion lists' prior to the interpretations to highlight those areas which are indeed supporting of the paranoia, as well as those in direct conflict to the theme. Sadly we must admit that while there are numerous 'drought' references, the total mass is in favor of 'rising water levels' to the point of severely impacting humans, their numbers, and their individual prospects.

So what is a paranoid nutter supposed to do? Is it reasonable to base the next few years of life on the expectation of disaster? Well, it is if the disaster does occur, otherwise, just another doomsayer out crying look out. The problem is for us, that as much as we would like it to be merely personal mental illness, there is evidence at all levels supporting the meme.

Does that mean to drop everything and rush out a'boat building? No. Many humans will not be at risk of direct impact from the flooding, though admittedly even non coastal areas will be hit with huge rain storms of proportions never before seen, so flooding will affect even those areas not usually associated with the phenomena. It is true that much of humanity does reside on the coastal plains of the planet, but even then, shifting personal resources to boat building projects is likely not productive. We even have language in the far long term values pointing to disastrous results as people try to save themselves in small boats. The issues arise from the new characteristics of the marine environment, weather extremes including hurricanes which cross continents, and the inexperience, and lack of suitability of the vessels for the new situation. For instance some of the imagery within the populace entities points to low tide dropping boats down among housing wreckage, the remnants of streets, and forests. Then high tide returns, only it is not tides as we understand them now, and the resulting rush up creates its own issues as the boats try to free themselves from the entangling [vines and veins of civilization].

Once the evidence of rapid change on the icy parts of the planet is accepted, including news reports recently of 'thunder' in Greenland coming from the cracking of the ice sheets within the glaciers, then the thinking turns to how to proceed *if* we are actually correct. That is the hard part. Here any guess is good as there are few models with which to work.

It would make sense that the sane individual would sell out and move to higher ground. The problems with that approach begin with the morality of 'selling out' to some fellow who you suspect will be drown by buying your near-coastal/water place which you suspect will be underwater in less than 3/three years. Then they continue to the state of the current housing market, the debt loads, and the suitability of locations elsewhere. As an instance, height alone may merely exchange water level problems for extreme winds problems. Or continuous, mountain eroding rainstorms as a result of the vast increase in waterlevels within the atmosphere once the glaciers go into the sea and the real warming begins. So, does the sane individual sell out? Just how do they react?

We will let you know when we speak with one. For now the reasoning has taken us to the point of considering that *if*, and that is a big damn *if* the waterlevel rises are stepped rather than all in a rush, it may be possible to go float-about at the appropriate time. However this is a 'little hope in a big worry' kind of thing. It would seem that chance would not favor that scenario. Even a mere 20/twenty foot rise

in ocean levels, and then Puget Sound will be catastrophic to our region. Many of the fingers of land reaching out into the Sound would become islands. Downtown Seattle, Olympia, Tacoma, Everett, and other cities would be underwater, if not continuously, then at high tide. Most of the cross river bridges in Puget Sound would be lost, cutting the interstate system into isolated small routes of a few miles. Much of the productive agricultural lands in the Puyallup and other river valleys would be lost.

Then let us also remember that the globe will be rocked with earthquakes as the waters redistribute weight and mass across the oceans, which will include totally new ocean bed configurations. Then there are the continuation of the weather problems as the oceanic systems adjust to the sudden influx of so much fresh water. At that point the paranoid reasoning begins to understand a bit better that there is no guaranteed 'safe' place, not here on earth during these tumultuous times, nor in universe. Especially as these changes are not local to our planet, and all worries may be scrubbed out very rudely in the future by solar or extra solar radiations. We don't know.

What we do know, or at least have some evidence to suggest, is that the elite *do* also worry about such paranoid fantasies, in spite of the disinformation, denial and diversions played out in public life via the global mediastream. Since it is *always* presumed that the elite know more than regular humans, some small and gritty comfort can be taken from recognizing that their hackles are also in the fully upright position and quivering in blowing winds of change.

And they ain't the only people out sensing change in the air. In acquiring the boat project over these last couple of weeks, I have had contact with some of the local tribal people. NOT to buy into the 'native peoples' mythos, nonetheless, there are fewer cultural inhibitions within tribal social order, even today's degraded tribes, against the expressions of sensitivities within human perceptions. More credence is also provided for these 'erratic and contrary' voices.

My first encounter was with the purchase of a third trailer attempting to obtain something road worthy for the trip to fetch the boat. The trailer obtained was in one of the Appalachian villages of depressed economic circumstance in Grays Harbor county. Near to the trailer owner's house was a small tribal community of southern Salish, specifically Chehalis tribal people. After concluding our business over the trailer, the former owner remarked that "they weren't around much anymore" referring to the tribal group occupying some 30/thirty or so houses. She went on to say that the 'old Chehalis man was taking them up into the hills', pointing at the near by range of lower foothills to the Olympic mountain range. Hmmm. Interesting to know. But wait, apparently universe had more to say.

Later that week, trailer behind the truck, and exhausted after fighting through Tacoma, Seattle, and Everett rush hour(s) in my trip up north, I took time out at a gas station/store at the Lummi nation to get coffee prior to getting on the ferry over to Lummi island where the real work of getting the boat would begin. As I am fumbling around for real milk or cream for the coffee, and old lummi man helped me out. Later, as I left, I offered him a lift toward the ferry dock as it was apparent we were both heading the same direction. He appears to be about a decade older than my self, very thin and in great shape, with hair down to his calves, much of which was white with age. A nice and open fellow, we fell to talking on the ride to the ferry. When I explained why I had such a large and strange collection of stuff in the truck, that is, to fetch a project boat, he said "good time to have a boat". To which I agreed. Then he remarked that "if a fellow was to not have a boat about, then he had better had get himself a place 'up' there", and he pointed to the top of the large hill dominating the now visible Lummi island. Just as we reached the docks and pulled in behind a group of kayak laden SUV's, I asked him why he thought that this particular time was good to have a boat or high land. As he hopped out of the big ass old Ford truck I drive, and that is no mean feat for anyone of any age, he replied that 'the birds have been telling him the time is here'. Note the language, not 'soon', nor 'close', but 'here'.

Later on that day, actually about 5/five hours later, I had stopped at the Lummi casino, the large one out by I5, and was having some early dinner in the Red River cafe (located in the sad, noisy mess that is the casino itself, not good for the appetite, though the food was very well prepared) when I saw the old Lummi gentleman walking through the casino towards the attached hotel. If not an 'elder' by any official rank, he sure was treated with respect by all the Lummi working in the casino. Those who know tribal customs will recognize what I am describing...that air of presence to which they acknowledge in very small, reinforcing gestures. Not that it matters. He could still be a nutter, like me and Igor. But he said 'here'...noting that in tribal time, 'here' need not be tomorrow, it could mean 'next month, month after, or after that, but here'. Hmmm. And we have this language thing pointing to a 'new understanding' which will occupy vast number of emotional humans later this summer with a very different form of emotional tension coming in late September, on the 19th at between 5 and 6:15 or so UTC.

Of course, we could be wrong, and in that case, I will merely have been working really hard on converting a sound hull but not much more into a pocket cruiser capable of sustained coastal habitation and simplicity of operation and support.

Either way, a sailing we shall go....apparently.

Note that Igor is wrestling with the constraints of *not* being able to move, does live further inland than I who am hanging out into the sound on a soon-to-be-an-island piece of peninsula, and hates being on the water. As a former Air Force fellow, his preferred approach is to fly out, but recognizing that this is not possible, he does have a place he can reach which will provide he and his wife with minimum of 800/eight hundred feet of elevation.

My how strange the universe and things have become that casual conversations with co-workers (admittedly a raspy minion with a bad pie habit) involves maps and planning 'walk out routes' for an expected disaster.

Of course it is not stranger than the conversations I had had within state office buildings about the chemtrails a few years back. Just a different conversation, and then up against a wall of denial. Now separated from the 'real' world by my work and circumstance, it was strangely disquieting to have universe provide verbal support for the waterlevels meme when I was out-and-about on my personal expression of it.

And then there is always the small probability that we could be correct about this whole water levels thing, if so, time to keep a weather eye out and learn to 'talk to birds'.

####

This ends the ALTA 0108 series of reports. A PDF file version of all of the reports as a single file will be available shortly. Thank you for participating in our 'reality' fictions. Please stay safe, and guard your pies...flood's a'comin...

clif and igor (grateful for the lack of ridicule).
