

ALTA IR - 1305 - September 3, 2005

Part 1: Meta Data - Expected Shifts - American Diaspora*

Terra - Thunder and Rain, Yet More Water, and Fire*

Terra - Fun, fun, fun in the Sun, sun, sun*

Terra - USofA - Dispersal in Fluttering Chaos*

Bushista - 20 Bad Days hath September*

Populace/USofA - Mature Relationship Dies, Confusion Begins*

Markets - Dollar Putrefaction Smelled From the Edge*

Conclusion Part 1: Choosing Currents*

Asymmetric Language Trend Analysis Intelligence Report

'Changes in language precede changes in behavior.'

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *.

Data set distilled from 14.217 million reads . Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

Meta Data - Expected Shifts - American Diaspora

As circumstances such as produced by Katrina manifest we naturally expect to see spikes and data shifts of large magnitude and in certain directions. This is a caution for the following interpretation. Just as with the ALTA 105 which was being run during and after the Sumatran earthquake/tsunami, this run is bound to pick up alterations in the data due to the impacts of the loss of New Orleans and surrounding environs.

Please note that within previous ALTA reports of this year, we had produced interpretations going to the idea of 2/two cities being lost due to climate/earth activity. One was due to slide back into the mud, and the other to slide down hill. In both cases our data, and subsequent interpretation suggest that neither will be rebuilt and that the beginning of the American Diaspora begins as a result of a confluence of events. Also note that the previous associated interpretations suggested that the USofA would lose land as a result of these events. The projection still is for more land loss due to oceans/sea incursions over the next year or so.

The above interpretations came prior to the NOLA disaster, and its impact on the stream of data that we filter for our entertainment efforts here. So our thinking is that the general emotive states previously shown in ALTA 1105 and reproduced here in Chart 5 below, are the more accurate, pre-shift predictors. We choose to work from this base, and to filter, as we did in ALTA 105, the sudden, conscious impact data-reads which now begin to reflect the impacts of the recent disaster. Make sense? What we are doing is to use a base one report series back for our model's jumping off point, and then to heavily filter to remove conscious, bespoke references to the current disaster shaping up. Hopefully this will allow us to avoid most of the emotional angst of the moment, and to reach deeper for our more usual, aggregated sub conscious changes.

That having been said, please note the following disclaimer. ALL of our data within this gathering can be expected to be altered/modified by recent and continuing current events. THEREFORE, please take the following interpretation with a seriously large lump of skepticism. We will.

The charts below, labeled 3 through 5 inclusive, were developed in ALTA 1105, and cover the period we are now in as well as the next few months.

In the next chart, we take a view of the Summer into the Fall as the emotive values accrue. We note that the values rise with some steady pressure once begun in August. We are now in the stair step pattern emerging in September through November.

Chart 3.

One can clearly note the large jump up in emotive tension values in the mid August period, then the continuing upward stair step pattern that we are now seeing as tensions build, partially release leaving an emotional tension remnant, and then build further. In Chart 3 we note that a largish up-tick is followed by near total release of that energy component in early September, say around the 9th or so, then a similar pattern, only larger both up and down direction follows in October, likely around the first to the fourth. Then as seen in chart 4 below, a pretty steady state for the emotional tension develops where things are held at a 'steady high pitched hum' throughout the rest of October, and through until late November, likely the 21st.

At that time, 11-21-2005, we seem to show a release of tensions down below the median line of the recent building pattern for the fall, and then a slight up tick for a few days, then another release around December 3rd which is seemingly about 1/3 (one third) the emotive levels of November 21 release. This then is followed by a few days of building potential, then a ka-whump (technical term meaning big ass release that goes for months).

In the next chart below please note the shift in scale perspective, the Y axis has been extended in range. Even so, the movements within this chart are very large.

Chart 4.

As a tool for comparison, chart 5 below shows the winter period of 2004/2005 with the same emotional tension values recreated from our saved sums set. This chart does not have the granularity that we would desire, but still can be used to demonstrate how large an emotional tension step is seen as pending for December of this year. The post tsunami values are shown in this chart below.

Chart 5.

We are still showing this pattern of emotional tension when the data is plotted from the 1305 gathering with the tension values analyzed. There are some minor changes after filtering, but nothing that affects the charts above other than to magnify some of the specific up and down legs ever so slightly.

One can certainly postulate that our previous ALTA reports have contained at least some descriptors which now seem to fit the developing circumstance of the Katrina disaster. Continuing with that thought, IF we have some of this correct, then those interpretations which go to the Bushista entity and their terrible Fall of Drama, followed by a Winter of Wounding are potentially as accurate as their descriptors were so intimately cross linked to the Populace/USofA entity and the circumstances now appearing.

We would postulate that IF the Katrina disaster was reflected in the initial stair step upward leg seen in the charts above, and noting that we have both 'depression, ten years', and 'rebellion' within our Populace/USofA entity providing much of the emotional tension building words, THEN the supposition should be that the economy, and things in general will degrade rapidly from this point forward. Please note that our emotive tension chart is probably providing a false sense of optimism in that humans are used to 'up direction' charts to be a positive value. This chart does not represent data that way, and if one assumed that the release of emotional tension was the positive in the situation, then one should view these charts upside down for maximal, contextual effect. Make sense?

Terra - Thunder and Rain, Yet More Water, and Fire

Within the already impacted hurricane area, we are still finding references to 'storms, thunder, rain' which will continue to 'beset, bedevil, irritate' the situation. This interpretation is likely to be posted after the first of the next few storms have started in on the area so this section will be sent out as an email update for Thursday, September 1, 2005.

We note that while 'neighbors wrestle over oxen' {a polite way of noting lawlessness}, the situation will continue to deteriorate within the 'mud pit' that was seen to engulf the first of our two cities to go down to oblivion this year. As the humans will become aware, the geology of the region is also 'wrestling' though in this case, with conditions which will be 'exposed in lightning, cries drowned out by thunder, washed open in rain'. Associated with this aspect of the Terra entity, we have a situation developing where in the 'ascent/climb into the deserted city' is into 'the belly, filled with fear'. As the 'climb over the wall' continues, the situation will 'alter, rain swept, from the south'.

Our data suggests that the current immediacy value set, as well as the emotional tension, and carry-forward values for the aspect of the 'deserted city' will continue for some weeks. The indication is that 'horror rots {in the} mud, revealed past dinner time'. This last has an October association, again, early October. This 'horror' is seen as 'rising {out of} muck, slime covered, repulsive, deadly'. The emotive tensions for this thread indicate that while manifesting now, the impact has yet to be seen. All of this is to be compounded within a very short time by further 'flowers, white {from the} east, France'. And, again we are seeing many French references with much of the descriptor base going to 'gravity' as was first seen in January of this year. Now the data also contains the additional descriptors which furnish support for our American Diaspora reference above. NONE of these descriptors have associated lexical sets indicating that there is any awareness at all of the scope of what is occurring. Rather much of the data would support the opposite.

At some point a discussion of the impacts of breakdown on complex systems is in order, but at the moment, we need to continue with the Terra entity, Katrina disaster section.

Heavily cross linked within this area are many threads going to the already established ALTA1105 thread for 'unanimous purpose' rising aspect, with its sub aspects of 'rebellion', 'aggression/militancy', and 'sorting out who has power'. Further we now have a new rising aspect set which goes to the bespoke idea of 'rising tension' that we have been discussing within these past few ALTA reports. Indeed, the actual modelspace data shows that a period of 'restrained, barely able to be contained, raging energy' is about to take over the general mood of the Populace/USofA. These cross links are increasing in scope and, given the values that we see, should become publically visible over the next few weeks. Please see the Populace/USofA section below for further discussion of this "roped" area of cross links.

Also note that our data set would seem to indicate that huge areas of New Orleans will be consumed in fire over the next few days. We have very large areas for 'floating fire', and 'fire beneath the water, blue, red' as rising aspects associated with Terra, sub set Katrina disaster. Then within these aspect sets one notes that 'fire crumbles, explodes, pops bricks', which in turn is seen as 'decaying feet {foundations?}' which cause 'buildings {to} fall, drown'. And all of this is happening within a developing wind/rain storm.

This area is seemingly due to get another 'Atlantic Flower' in the next few days, and recent solar activity would tend to support the data we are seeing here. Caution is advised.

Terra - Fun, fun, fun in the Sun, sun, sun

Our title for this section comes from the chorus line of the theme song for the 'Red Dwarf' television show. In our case it is sarcastically applied as our 'fun' will be not so enjoyable due to the foreseen aspects affecting the 'sun'.

Within our experience of this technology the 'sun' first rose as a significant aspect for the Terra entity in 1997. Since then its appearance and the fluctuations in its emotive values have been consistently rising as has general public awareness of the impact that the sun has on earth weather/climate and earth activities. The recent Katrina storm has impacted our data set, and even with our extensive filtering to remove conscious projections, we nonetheless are seeing the 'sun' both as aspect, and attribute show up in quantities not yet encountered. Further, the values of the various emotional component descriptors are higher than ever yet seen.

The perception of the data in this processing cycle seems to be showing more of the 'earthquake' related connection to 'sun activity' than has been encountered in the past. Within this data set we note that our '3/three times in one day' solar event is pending manifestation. This is also cross connected to Populace/USofA, sub set for California, where the link terminates in 'pulsing motion {in the} ground mirrors {sun} activity'. Certainly suggestive of earthquakes, the cross link chain is further reinforcing the idea in that it contains cross links over to the Markets entity indicating that 'pulsing {in the ground} shakes values'.

What is discouraging within our data set for these 'shakes, pulsing ground motion' is that cross linked over to the Populace/USofA from two sets of internal Terra cross links are a number of repetitious lexical clues to 'looking for food, above, below, no success'. This is further amplified by 'millions, many, multitudes, feet moving, standing still'. And, again noting the probable intrusion into the data from events currently underway within New Orleans, we nonetheless have to report that the data goes to the idea of 'carrying water, no food, search below ground, rubble/debris covers', and 'bad feeding habits, illness, death, below water, below ground'. This area is, in its turn, cross linked back to the Terra entity where it terminates in the aspect of 'sunken' which has a dominant aspect/attribute set going to 'below ground, under asphalt streets'. This lexical set is fully populated {meaning contains emotive values for all words other than articles} and it goes to the image of 'broken streets, sunken buildings, rubble/debris {from the} sun', and further 'hunting food, under water, under streets, debris, shaken {many times} daily'.

As a supporting set to our shakes we also have 'crust of earth broken, bad air drives ahead'. This in turn is cross linked over to Populace/USofA where it terminates in 'corpse(s) litter roads, animals, birds, people, all gone, bad air'. The references to 'air' are also fully supported by aspect/attribute sets such as 'above good air too far to reach, down below dry death'.

Back in the Terra entity, the 'bad air' aspect has supporting attributes sets which go to the image of 'loss of partner, stability threatened, lower jaw broken, bones crushed'. Within these sets we see that 'bad air' will 'take down buildings, flood under streets, pollute water'. This is all related to our 'sun' activity and is directly tied to 'energy streams, wire breaks'. Again, most of our geographic references point to California, though we note that our processing is of a necessity affected by the recent Katrina storm and aftermath.

As rising aspects for this section of Terra entity we have 'uncertainty'. This aspect is showing as influencing all the other aspects within the section. As an example we have cross links from the aspect of 'peering downward, fixed stare' which goes over to the Populace/USofA, California sub set where it terminates in 'uncertainty of vision, dust obscures, blinds'. This sort of imposition of 'uncertainty' as a modifying aspect is also applied to the 'food found, discarded, value uncertain' as well as 'uncertainty {about} path, road damaged'.

As a curiosity, we note that the shakes are seen within the data as 'placing tigers {in the} vegetation', and 'loosing bears' on the streets. One obvious interpretation is the destruction of a zoo during the earthquake.

Returning to the overarching theme, we have a 'sun' which will 'shake 3/three times' which is seen as 'releasing energies' that in turn as seen as 'lubricating plates/shale'.

Terra - USofA - Dispersal in Fluttering Chaos

Within the Terra entity, and with a majority of 'america' associations, there is a new section indicating that the 'dispersal' of 'things in fluttering chaos' will be the next climatic change problem to emerge. The data set is heavily loaded with 'ocean' references, as well as details suggesting that the 'winds disperse change/alter the face of the mountain'.

While short, this area is still significantly populated with emotive values suggestive of a very large wind storm impacting already 'turbulent' conditions. Further, while seen as 'scrubbing the mountain', the winds are nonetheless also 'stopped by mountains from reaching the plains'. The effects of this wind storm are seen as merely blending into the overall chaos and degradation that will be found emerging as the emotive theme of the month.

Bushista - 20 Bad Days hath September

As far as the Bushistas (and much of the corrupt political establishment of the USofA) is concerned, this year of 2005 is going to be unique in that 20 Days hath September.

Obviously the problems are flying fast and furious since the first of September as the somnambulant administration, fat and sated with its own belly full of corruption failed to realize the nature or scope of the disaster besetting the USofA. This was certainly not true for the populace of the country nor for our representative model of their behavior, the Populace/USofA entity within our modelspace {ed note: an Intellicad CAD drawing space scatter graph of multicolors with dimensions of 60 units by 60 units by 60 units *representing the tetrahedral nature of human time measure* where each unit contains 10 thousand data points to a cubed side.}. The populace is seriously angry, and as was seen within our previous ALTA reports of this year, is also approaching the manifestation of the emotions which drive 'rebellion'.

Now noting that our whole meta data aspects have recently changed {ed note: August 13 - August 16 as dates of completion} from nearly a 3 year long period in which the meta data was focusing on words relating to 'union/cohesion' over to the now current state of 'aggression/militancy', we find that the Bushista entity within the modelspace is facing some very serious trials and testing within these remaining days of the suddenly very short month of September of 2005. Not to belabor the point, but our selection of this

phrase as a title is intended to present the idea of 20 days of testing that apparently will be the marker for the end of the Bushistas reign of Illusion.

As we first encountered the development of secondary meta data layer change over to 'secrets revealed' in ALTA 605, we did not recognize the level to which this would play out over these next few months as we head into the period of the emotional tension release {shown appearing beginning on November 21 in the charts above} which we are terming the 'wounding'.

The whole of the Bushista entity is riddled with lexical references which play against both the dominant meta data aspect of 'militancy' and the secondary aspect of 'secrets revealed'. As we are now able to appreciate, the decisions that Bush made early on to gut the infrastructure dollars from the USofA budget in order to support his foreign conquest dreams has come back to appear as a cancer rotting out the Bushista positions from within. Not only is the actual response of the Bush Administration significantly out of touch with the emerging reality of Sudden Global Catastrophic Climate Change, but it is also running into counter currents within the other entities as is currently developing within our modelspace.

We have a new occurrence within the modelspace developing for these first 20 days in September. As noticed in the charts above, the emotional tension values take large, stair-step moves upward, always gaining in spite of any small steps back down, through the month of September. Much of these emotional tension values are driven by the interaction of the Populace/USofA with both the Bushista and the Terra entities. In this section we will examine some of the Populace/USofA and Bushista interaction from the view point of the Bushista entity. Please do not loose site of the Populace/USofA and its Terra interaction as that is the driver for much of what will develop over this next period.

Within our 'secrets revealed' meta data theme, we find that our Bushista entity is about to roll right up into a period of 20 days of such secrets. Actually the modelspace, as it is progressed over this period shows that 'cracks/leaks', presumably within the levees of New Orleans will have 'place weight/substance {on to the} weak/shoulders' of the Bushista entity which is seen as 'crumbling, crying, frothing, foaming' without any real effect except to 'invite wolves'. This latter is supported by aspect/attribute sets which go to the image of 'bait on a hook' to 'those in wait/observing/biding time'. As we progress through the month of September apparently the 'pressures' will develop which will produce not only revealed secrets now, but as our model indicates will 'cover continuous breakdown' over the next few months as the air is let out of the illusion of Bush invincibility.

To the point of 'invincibility' that the 'never criticized' Bush has, we must note with real sadness that the Bush Wars and Foreign Invasions are about to come to an abrupt end. Our data would indicate that there will not be any long and slow wind down, but rather that 'ferocity, brutality' and 'swift change' are the dominant aspects relative to the Bush Wars and the first 20 days in September.

While attempting to cope with the realities on the ground in the USofA, the 'shattering {of the} framework' within the press {ed note: expect all sorts of peeled back cover ups to emerge through the next 3 months}, the Bushista entity is indicating that Iraq is going to swell into a problem of huge proportions. The modelspace is actually indicating that the 'resource wars' as a whole meta data theme is rising up through several of the entities, including both populace entities {ed note: GlobalPop, and Populace/USofA}, the Terra entity, and the Markets entity, but none of the entities are affected quite as much as the Bushista entity. We note that the issues surrounding the 'resource wars' will arise concurrent with, and inseparably from the Katrina disaster, and both will be shredding the Bushista entity throughout the month and beyond. What becomes significant about the first 20 days in September is that this is merely the beginning, and represents only the first 20 steps up in emotional tension rise. Count on the tensions to rise up much further over the next 3 months.

As the globe works through the meta data influence of 'militancy/aggression', expect those same themes to dominate at multiple levels in the testing of both the Populace/USofA, and the Bushista entities. Our data indicates that Bushista will lose much of even the rabidly religiously devoted base as a result of the events of the 20 days of September. The lexical clause suggest that the 'degradation/loss' within the Bush War of aggression against Iraq will be seen repeatedly 'exposed/laid bare' in the public press as more inquiries into

the disaster in the South East build. At that same time, events on the ground in both Iraq and Afghanistan will bring the issue of 'aggression for profit' into sharp focus internationally.

Please note that yet two more large and long lasting oil shocks are developing according to our cross links. The first relates, as has been repeatedly shown this year through all the ALTA series, from in ground pipeline separation. This could already have happened due to the Katrina hurricane, and the full extent of the problem not yet revealed, or it could be due to the next storm, or to the earthquake problems also noted. However, the second set of oil shocks seen within our data is clearly a result of the Bush war to grab resources.

The examination of the data for the Iraq War aspect of the Bushista entity, and its progression through the month of September indicate, through cross links back to Populace/USofA, that the population of the USofA will begin to 'growl {like an} old man enmeshed {in} pain {and} rage {over} betrayal'. Further, that this seems to be triggered by the 'degradation {of the} status/state' such that 'just claims' are 'viewed in naked yellow'. While this last is a little obscure, it has supporting aspect/attributes which go to the idea that images 'presented {of} sun setting {on a} sea {of} blood' will 'set the old men howling in rage', and 'induce retching/vomiting {in} stone cold rooms'.

All of the above, as well as the other images of the sudden shifting of positions and players in the Bush war against Iraq are also bound necessarily to the 'fuel' aspect. Found in many entities, the fuel aspect occupies a large section of the Bushista entity and, unfortunately appears to be forming a distinct tipping point which does show the potential for over taking the whole of the entity. While this does not happen from the immediacy values that we have just processed, it is possible that we are seeing the early signs of an 'oil' based tipping point which will totally subsume the Bushista entity.

At this point, along with developing losses and failures in Iraq, we now have several building areas of problems within the Bushista entity. These were seen as black threads in previous ALTA reports as they were heavy clusters of so many colors {ed note: each represents a link back to a lexical set of aspect/attributes} that they appeared dark gray or black when viewed. Many of these black threads are now growing.

The area within the Bushista entity which holds the 'Iraq war' subset clearly indicates very serious reversals on the ground are coming. It suggests that 'mercenaries' will be very heavily involved in incidents which will 'point back/indicate' to the White House and 'reveal lies/deceptions' yet some more. This 'mercenary' problem develops as a result of a 'raid to free followers' and the 'punishment of the leader of the rebels'. From the perspective of the Bushista entity, this 'cut' will 'bleed arteries'. This area is cross connected to the Populace/USofA and terminates in the aspect of 'howling' which is supported by repetitious aspects for bespoke 'anger/rage'. Within this section of the Populace/USofA entity, we also note that this 'rage' is directed back to Bushista as 'in competency/failure {of the} leaders {causes} cramps {in the} gut, balls/testicles withdraw'. More, and much more graphic, language indicates that the excrement is clearly headed toward the Bushistas over the month of September.

Not to isolate the problems of the Bushista entity to September as we have to note the sudden jump up in emotive tensions in late September with the subsequent release seen for approximately October 3rd. Then, as the charts indicate, once again, things start ratcheting up emotionally through the rest of October, and into November. Note that this emotional build period is composed of contributing emotional tension values from all entities, not just the Bushista entity. However, this entity is a main contributor, and will be the main focus of the universe response for a while.

Populace/USofA - Mature Relationship Dies, Confusion Begins

Over the course of the 20 days of September in which the problems build for Bushista as the emotional tensions build within the populace, our entity the Populace/USofA, both through cross links, and direct accretion of emotive summation values is indicating a very very rough period for the Populace/USofA.

Having lived in a very illusionary world for so long, now, as the 20 Days of Hell begin for Bushista, we note that correspondingly the dominant aspect of the Populace/USofA entity is 'mature relationship dies'. This is a very complex lexical construct which must be interpreted within the frame work of both the 'militancy' meta data prime aspect, as well as the secondary aspect of the meta data 'secrets revealed'. Within this context an appropriate interpretation of 'mature relationship dies' could easily be 'old illusions destroyed'. The same lexical set of descriptors which produce both of the previous phrases also contains 'old lies revealed/exposed'.

This particular lexical construction needs to be taken very seriously as there are extensive cross links including many "ropes" of links over to the Markets entity. And it must be noted that much of the building emotional tension through the Fall and into the 'wounding winter' of late November and December is clustered around economic and fiscal language. The emotions building so far as a result of the Katrina disaster followed by the Bush admin screw-ups amid weasel words {ed note: weasel words = alibis, excuses, lies, deceptions, distractions, et al} is barely the beginning of this very intense period. Expect that emotions will rise precipitously over these next months.

It would be interesting, as an intellectual exercise and linguistic experiment to read newspapers of the period of the 1860s to see how close the themes and language compares with current times. We bring this up as Igor noted that he had just re-read Andersonville about the horrors of incarceration during the Civil War USofA, and that much of what we are seeing now replicates the imagery which emerges from that book. This small, illustrative diversion aside, it is very curious that we have found much language indicative of a 'class war' developing within the USofA *rather* than the "culture wars" which is what TPTB have been trying to sell on teevee. The language of officialdom and their propagandists on "public" airwaves would seemingly have the populace believe itself divided along religious/ideological lines. Recent events and continuing circumstance emerging from the Katrina disaster clearly are showing that the cracks in the society run right along the 'class lines' which separate the self-described elite from everyone else. As we have maintained since ALTA 405, the 'culture wars' just won't fly. That instead, the Populace/USofA is using language showing that 'class war' will be the much more dominant theme. Within our work, for most if not all of this year, the emerging definition will be the 'corrupt moneyed/politically powerful' few against the rest.

In fact, within our Populace/USofA entity and this current processing, profound changes are emerging. The 'death of the mature relationship' between the people, their social contract, and their government has appeared. It is manifesting before their eyes in the events televised from the South East of the continent. Now, as more of the material seen in previous ALTA reports appears to be showing, it becomes a bit easier to suggest with some small confidence that a wholesale change in the nature of the USofA is occurring. While still emerging, this change is on an order of magnitude that *probably* could have been measured in the rebellion of 1776-1779 that led to the formation of the country.

While extremely heavily cross linked over to the entity that we label TPTB {ed note: The Powers That Be}, the Populace/USofA entity is, for the next few months, going to be in an internal 'digestion {of} bad news' phase in which our lexical sets suggest the 'death of the mature relationship yields confusion/opportunity'. Curiously, as supporting sets for the 'confusion/opportunity' aspect, we have very vivid imagery arising from the attribute sets such as 'payback, reconsider past actions/views' and 'fallen back on old ways, disgust, deceit revealed', and 'destruction of past lies, now where?'. This last arises as a question, and these are rare within our data which is mostly declarative. When these interrogatories do arise, we have a tendency to take associated lexical sets very seriously. In this set we note that the 'productivity lost, illusions fall, scramble for solid ground'. Please note that this last is likely poorly interpreted and could and perhaps should read as 'scramble for solid understanding'.

In any event the Populace/USofA entity is indicating that the whole of the social contract with government is fracturing as events proceed through this Fall of Drama as was noted in ALTA 1105.

During this period the Populace/USofA entity indicates that 'upheaval, loss, falling away' will be constantly felt conditions as what 'illusions masked' is now revealed. The data explicitly says it will 'not be

swallowed/digested' and that 'regurgitation/vomiting' of 'naked lies' will become the order of the day in the relations between people and the 'officialdom' of the country.

As a last note on this area, the Populace/USofA is usually one of the more stable base entities in that much of the language churn has been superficial to this point. Now we are processing volumes of data which are showing very deep core language is affected and at significant levels. At the meta data level, aspects are dropping and being replaced at the rate of 5 out of 6 in this last week of processing. This level of change has never before occurred within this entity, not even when tipping points arose such as that preceding 9/11. Basically the interpretation should go toward the idea that very large changes are underway within the Populace/USofA at very deep, life and nation altering levels.

Markets - Dollar Putrefaction Smelled From the Edge

As may be expected, the huge changes seen within our modelspace as affecting the social and economic fabric of the USofA do not bode well for the USofA dollar. When we explore this section of the Markets entity, the 'dollar' is seen as heavily cross linked back over to both Terra, and the Bushista entities for the rest of the year. The current dominant aspect for the 'dollar' sub set is 'putrefaction' which is further supported by very extensive cross links back to the Terra entity where it terminates in the previously discussed area of 'rotting in mud, horror'. The originating cross links from Markets, 'dollar' are also very extensively supported with 'standing {on the} edge {of} abyss, rotten smells rise up'. Under this area is a very well supported lexical set with aspect/attributes going to the idea of 'one more step {and into} rot {in the} abyss'. Further we find that again 5 out of 6 aspects are under going significant change within this entity.

The Markets, 'dollar' sub set also contains numerous references to 'faults acknowledged/seen/exposed' which in turn are supported by 'pay dearly, blood flows {as} lies go'. The aspect of 'blood' is in turn supported with 'hands and feet cut off', 'blooded clothes/suits hang empty, wind blows'. Under this aspect set, we find that 'men suffocated {for} money crimes', and 'hung by heels, drained {of} blood {like} fat sows'. Curiously, the imagery under this section goes to 'subordinates run, red faced fear', and 'crowds impassive, feet {in} drying blood'. In further following the lexical imagery down stream, if we examine the 'feet' reference, we find that it is supported by 'metal feet crush priests'. This in turn has supporting aspects/attributes which go to 'priests bodies crushed, feet {in} entrails, liver', and 'cold stiff feet crush bones {of} fat priests'. At this point we run right into internal cross links which lead from our 'crushed priests' area back up to the dominating and newly emerging Markets, 'dollar' aspects of 'putrefaction'. These internal cross links are very extensive, and at a very large number of levels. This would seem to indicate a very large degree of change is pending in that large scale changes in lexicon use indicate similar levels of change developing within the behavior of the population.

These areas are, as noted, undergoing large changes, but what is holding over from the base set unchanged is the idea of a '10/ten year depression'. Within this area are found some references to a '3/three year claim' that will be 'laughed down, derisive, obscene response'. The cross links indicate that some issue with a 'claim {of} 3/three year' impact, likely within the halls of Congress, will be 'hooted/booed/shamed {out of} the hall/building, red cheeks/red knees visible'.

Conclusion Part 1: Choosing Currents

We are posting this on September 3rd 2005 as events are racing along with the time, and this past week has been spent processing immediacy values which will soon become stale as circumstance unfold. There may be email updates sent out these coming weeks as we progress with the processing. Given the extraordinary manifestations globally we expect that the building emotional tension will continue to manifest at increasing rates as we go forward through the month.

As the pressures are raised on all of us, it is worth noting that the awareness that one is standing in the midst of chaos will bring you back to your center, extracted slightly from it, such that decisions can be made with a clearer perception of the context in which they will be tested. Our data indicates that very trying circumstances are now manifesting, and that the testing of the times will continue and even increase

over these next few months. Awareness of the nature of the times allows one the freedom to choose the currents in which to swim, rather than being swept along with the tide.

We expect part 2 to be posted by September 11th, 2005, but given the rapidly escalating manifestation of circumstance, we may be sending along segments via email.

Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *.

Data set distilled from 21.442 million reads . Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

Meta Data - Waves and Dates and Spew, Rats Und Crackers

Igor has been recently battling some crackers in our data collection process. These fellows likely do not know what is going on, merely are seeing his server farm activity as a "hot spot" and, being curious, have simply followed the flow. While their efforts cost us a bit of a day's work, the crackers are reasonably easy to divert. The crackers are basically rats, scavenging for the easiest, lowest hanging fruit that they can find and so can be diverted into honey-pots which have them endlessly chasing their own tails. In the meantime, work goes on.

While we frequently feel like rats chasing their own tails, especially around the issue of dates, and the extraction of large scale elements from the background noise within our modelspace, we are able to use some of the day's current events as components of a feedback loop against previous data sets. This allows us to refine our abilities as we go forward.

While it was clear in January 2005 {ALTA105} that 'two cities' would go to 'ruins' this year, and that each would have a separate approach to that {one to 'return to mud from which bricks were made', and one to 'slide down the hill'}, and while it would appear that the recent Katrina hurricane and Federal Disaster would meet the criteria of the city 'returning to the mud', it is still less than clear as to when, or where "lucky" city number 2 takes its ride into history.

Our problem {ed note: one amongst many, but the insanity at the root pretty much let's us ignore them all} is that in the large background of the modelspace, these deeply felt events are so large as to encompass significant sections of both time and space. It is very much like trying to extract the edges of a single solar system from a galaxy of stars. Just where, exactly, does that particular solar system begin and end? We have this same problem of precision within our galaxy of emotive integers. Just where does one event begin and end?

With these large events, such as the two cities with problems first encountered in ALTA 105, we have a background layer which may have half or greater of its bulk devoted to these large scale emotional waves. As we progress our huge modelspace forward, these large areas merely add to their bulk without necessarily adding meaningful information such as dates, places, and times. Instead what we receive are essentially more-of-the-same words within a specific emotional value set.

Contrast that to our more immediate, and smaller impacting "hits" of the accidents prior to the Olympics, the NE Power outage, and others. In those cases, the data streamed in and moved the entity forward, up or down, and from that motion we were able to guess as to dates, places, and times. It is our postulate at the moment that it is the motion that allows us to gain precision. It all sort of makes sense in a strange way. Our modelspace, while large, is incapable of holding a large enough background to allow motion in very large emotional events to be detected, therefore while we may have a particular year or 18 month period which the event actually spans within our modelspace, it could conceivably extend much further if only we could open the modelspace up in a larger context. This also would explain why the continuing accretion of values would clump about the same emotional value set. By whatever mechanism we are picking up these emotional waves which seemingly are arriving prior to the manifestation of the "causative" event, our scope is such that on the very large such events, time is the least represented of the carrying values. What we get

are the emotions surrounding the event {ed note: or some say, causing it}, and what little imagery or contextual information that these may be bringing to us.

The point of the rambling about theory is that we have reached the conclusion that the "wave" of the emotions which we are frequently able to describe with some accuracy, is the leading edge of our precision, followed by imagery, then the mundanities of place and time {ed note: usually piss-poor accuracy}.

We, that is Igor and I, refer to our modelspace, and the data that fills it, as the "spew". In a very real way, this "spew" and its visual representation is chaotic, though without motion. Sort of flash frozen chaos. In my interpretations, I view the work as reading the entrails of the entities or seemingly-related-elements which are trapped in the frozen spew.

I take a base picture of the spew, frozen, and static. Then placing markers here, there, and about, the lexical structure of the base spew state is examined. This then yields copious notes. Then cross links between entities are highlighted, these in turn, extracted and noted. Then we unload the modelspace, and dump in the next batch of fresh harvested spew, freeze it, and start pawing around in its guts. Without the slime, but still very reminiscent of fishing.

Still very time and brain intensive. And perhaps, just like the crackers drawn to the servers and thereafter lured to the honey-pot by the "motion", we also could be as simply redirected. The point is that while there are indeed some hints emerging of meta data layers of emotional waves flowing about, we have to acknowledge that we may be merely looking at the low-hanging fruits, and in our short sightedness, *only* seeing what is easy to see.

We are able to note with some satisfaction as to the emergence of the 'militancy' theme within the recent Federal Disaster, and also the other, lower layer of 'secrets revealed'. We are also pleased that the layers as we have identified them seem to correlate to our theory of "background emotive themes and energy layers" in which the lower the entity, the more energetic the manifestation of its theme.

But none of this self satisfaction will get us closer to details of the larger emotive events. So our data is *still* accruing values for a 'city sliding down the hill', and is still associating that event with earthquakes and the inability of the populace to flee except on foot due to damaged roadways, sections of which become, as in New Orleans, places upon which many will live for some period.

It can be noted from the chart above {taken from ALTA 1105} that the emotional tension building period which we now transit is less than half complete relative to its topmost point. It could be postulated that another 'city in ruin' could be involved in taking us to this coming emotional peak. However, we could just as easily see this peak being reached with the meta data layers of 'militancy' and 'secrets revealed' manifesting from some of the emotional energies currently arising from the Katrina/Federal Disaster, and the Bush Wars of Aggression {ed note: going bad rapidly}. In that case, the emotional release period of December may take the form of very large scale civil unrest as perhaps indictments, trials, perhaps even a coup de 'tat is manifest.

The point to bringing the possibility of near or actual civil war in the USofA is that such an occurrence would constitute a manifestation of our 'mountain of people' or "city" which would 'slide downhill' amidst chaos, restricted travel, strife and heroism. Again, given our level of background information at this point, we cannot differentiate between those two possible alternatives of an actual city sliding down a mountain, and a figurative city sliding into ruin through civil disruption.

Given the chart below {also from ALTA 1105},

we can note that, in a general sense, the emotional tension levels stay near the top until a time in the end of November. Then after a slight jump back up, we go into the month of December in which several, largish emotional releases take place.

I have consulted with colleagues on the far edge of the emotive sciences, and have three dates to offer. These are presented because they are within our range, are hyperdimensionally/hyperspatially significant in and of themselves, and appear to have some central placement within our graphs expression of movements. The first date would be November 21, 2005. Then we have our brief up tick or building emotional tension, and then one smallish release on or about December 3rd, with the larger release on or about December 14th, 2005.

Thereafter, for months, it is all down hill. Or if you prefer, all release of the previously built emotional tension.

Of course, we **have to remember** that with this whole goofy project of the ALTA reports that we are making this up as we go along, and just like the crackers, we are likely rats chasing our own tails in the honey-pot, and missing the bigger server farm just one IP address away. So the next time you get all whipped up, and start running off thinking this is anything more than a wild-ass-guess, just recall "rats und crackers".

Meta Data - Emotional Release Elements, Possible Scenarios

The above noted, we can proceed to enumerate what we do have as components to our December emotional release period. As seen above, the release will play out under our two meta level themes of 'militancy/military/aggression' and 'secrets revealed'. Lower level meta data themes including 'restricted movement', are also in this picture, and have been since ALTA 105 {data collection period was December of 2004, and January of 2005}.

We are also confident that the USofA will be the focus of the release. This implies either that the 'city' if it is one is within the USofA, or that the USofA, represented as a 'mountain of people' is the site as a nation. In either case, the impacts, while clearly global, are centered around the USofA. Oh, goody.

Within our USofA focus, we find that the whole of the financial infrastructure, as well as the actual economy as captured by our descriptors are involved. Further there is **NO** economic descriptor which we have previously identified and placed within our lexicon which is **NOT** represented.

We also note that the Bushista entity, while not clearly central, is so close to the center of our emotional release as to be hard to distinguish from the actual release point. Further, the meta data layer carried within the Bushista entity since ALTA 1105 has been 'wounding' and this layer becomes impressed onto the Populace/USofA during our late November/early December release point. At that time, the Populace/USofA takes on the 'wounding' aspect as one of the top ten dominant aspects. Further, cross links over to GlobalPop from the 'wounding' aspect within Populace/USofA terminate in 'bleeding'. This in turn is supported by a primary attribute image going to 'in sympathy'.

Within the meta data layer of 'secrets revealed' are huge amounts of labels and descriptors pointing to the governmental bodies of both the elected and civil service. These lexical descriptors are all supported by large aspect/attribute sets going toward images of 'chaos, disruption, reformation, rebellion, destruction, rebirth'. Perhaps a "reform movement" meta data layer is just starting to manifest. Irrespective of the governmental problems, the political problems will consume the Bushista entity during this period. This entity undergoes one of its now-expected transformations. As we have been performing these runs over time, the Bushista entity has shed components and morphed into its current form. While it initially contained the financial sector, and the corporate sector, and the press sector of the modelspace, it has lost all but a slim section of the financial sector and that section of the populace which is so deluded by religion as to be brainwashed by the Bush cabal. All the rest of the components have dropped out of this entity over time. Now it would appear a very sharp contraction, and very significant metamorphose is going to occur as part of our release period.

Also tied up within our period of emotional release for the last days of Fall, 2005, we have huge numbers of Terra entity representations. Now note that the scenario painted above, wherein Bushista is pilloried over the Fall, and civil chaos erupts in December, would still manifest the large number of Terra links as the whole of the breakdown period for Bushista, began with the building tension period which includes the Katrina/Federal disaster. This is a very clearly traumatic event and can be expected to have huge carry-forward values so it would *not* be surprising to see the Katrina disaster participate in the emotional release of December.

At a much level much more grim, we can also point out that other, not yet manifest earth changes could happen over this building period, each in turn contributing to the emotional tension, and then still have a Bushista implosion triggered emotional release in December. This view would argue for an actual 'city' to be impacted by earthquakes and more or less slide down a hill. Given that we have no clear geographic areas associated with this, *but* do have all of the USofA centric emotional building and release data, it would be easy to infer that the city would be within the USofA. It could be postulated that such a degradation of yet one more American city would push the Bush cabal over the edge in terms of its ability to "keep it together". Then, it could also be postulated that the *huge* levels of emotional release would occur as a result of the spreading of destruction to the corrupt political system within the USofA as the 'dam {of} secrets ruptures, spilling blood'.

Hmmm.

Terra - California - Breathing Inner Fire

Our modelspace at this stage of processing is usually showing an increase in the scope of the carry forward values by which we are able to extend our modelspace forward. At this point within the Terra entity, and within the sub set which is geographically centered around California, we have a very curious situation in which the data set appears to be half-halted. Perhaps a better description would be that half the data set aspects appear to be 'frozen'. This effect arises from a situation in which the same aspect appears as we progress the modelspace forward, and except for very minor changes in lexical descriptors, there is neither increase nor decrease in the aspect's relative position based on emotive sums. Basically, they are just hanging there, suspended in our modelspace, moving forward with the rest of the model but not moving up nor down, left nor right.

This situation has not been encountered before, and we need to note that it could be an artifact/error in our processing which is being examined with a re-run of the data but with different tools, and it could also be an artifact of the recently extremely emotional events arising from the Katrina disaster. In either case, our approach is going to be to do an interpretation of the data as it sits, and then should corrections arise, we will put those into Part 3.

At this point our primary frozen aspect is 'inner fire'. This is heavily California focused, and within its set of geographic labels, seems to have a more-to-the-south-than-north predominance. But the overall impression is that the area as a whole is involved.

Our 'inner fire' aspect, though frozen, has some specific attribute sets going to 'breathing' and the 'respiration/exhaust {of the} ground/earth acts as breath'. Further we find that the 'inner fire' is seen as 'covered coals {in a} forge' which is 'fanned' into life and activity. This 'inner fire' has a supporting aspect/attribute set going to 'ingested, digested, moved'. This aspect/attribute set in turn is heavily supported by lexical sets such as 'father/family flee flames, over {their} heads, sights, flames, forced {to} flee'. Parallel to this area within the structure and also contributing to the very stable emotive sums are 'secrets {of the} fire moves words, effective actions'. Again, this in turn is supported both directly by aspects/attributes such as 'too little air, fire drives forward, very beginning', and 'breathe now wet, run'. It would also appear that 'effective action {is} forestalled' and this in turn is seen as rising from 'overheated words, bad blood'. The aspect/attribute set for 'bad blood' in this case is very extensively cross linked back to Populace/USofA where it terminates in 'rebels' with that aspect having the attribute set of 'west defies east, commands spat {upon}, not possible {to} believe/accept'.

Returning for a moment to the top of this section of the Terra entity, we note that the aspect of 'inner fire' is itself cross linked back over to Populace/USofA where it terminates in a very large area of heavily internally cross linked aspects/attributes whose imagery goes to the idea of 'addictive pleasures refused/rejected, skin flayed/excoriated {from the} left palm'. This area is supported by 'wife, children, huddled {in} fear, {in} workshop, words of rage'. The 'words of rage' aspect/attribute set is fully populated and contributes a bit more detail in its imagery of 'suffocation risk, father/male manages/contains rage {over the/caused by the} deaths, rebels {at} words {of the} authorities/managers, lashes out, rebellion begins'.

While there are few changes within this section as we progress the modelspace forward, and none that alter the emotional sums involved, there is one area worth noting in that it goes to the image of 'unity lost, rebellion {against the} iron fist'.

The Populace/USofA cross links aside, the Terra entity appears to be indicating that the 'fire' which is seen as being so motivating emotionally is of an 'inner' nature which may imply volcanic origin, not that the data is indicating an eruption per se. Rather we have very clear lexical pictures of fire sweeping across mountain tops and these clues would suggest that the 'fire {is in the} ground/earth'. This location is seen as being very difficult to confront, and the data indicates quite a bit of spreading of this 'inner fire'.

We also have to note that this 'inner fire' aspect/attribute set *does* contain other words such that another interpretation of the set could be 'underground energy/motion'. So this does in no way preclude the description from being earthquake centered. IF so however, it is a curious form. In the past our earthquake descriptors were more direct, and declarative. Just the rise of this wording gives one pause. It may well be that there is some form of earthquake activity as in 'underground energy' being suggested, but if so the clues would seem to be prodding toward something other than an "ordinary" earthquake. Perhaps, as we have 'fire' as a primary aspect, there will be either an underground fire, perhaps in a pipeline due to an earthquake, or an alternate, and equally reasonable interpretation would be for fires triggered by earthquakes.

In examining the data set one conclusion does come forward, and that is that if the data is indicating an earthquake, it will be the resulting damage from fire or energy which will be the human emotional focus, rather than the earthquake directly.

As a last note on this section, as it is moved far forward, say on the order of two or three months, it does start to shift, but this change is coming not from an alteration of the primary aspect/attribute set, nor the rise of any new dominant aspect, but rather an internal change comes over the area through the accretion of a large number of 'wind' related data areas. Mostly these would appear to be going towards winds exacerbating the situation through 'fanning fires', and 'throwing dust clouds'.

At this point this area is still gaining values as we continue our processing and if changes are warranted it will be revisited in later parts of this series.

Terra - Antarctica - Brilliant Lightning Signals Fulfillment

Within our Terra entity, Antarctica sub section, a very large section of data emerges as we move the modelspace forward through the rest of September and into October.

Much of the data acquired by this area of the Terra entity is related to 'science' as a bespoke major theme, yet now, we find that a whole new area of 'political persuasions' is arising. Within this, we find that 'lightning signals fulfillment', and that 'biting through ice yields results'.

However, we need to note that some level of confusion exists within the data itself as the 'results' and 'fulfillment' aspects are cross linked internally back to an area of the Antarctica section where they terminate in 'cease/stopped short'. This in turn is supported by 'exposure of goal seen below ice, biting

stopped, animosity'. This is in its turn supported by 'seek support, fail' and 'seek sympathy, fail'. Both of these are linked back up to 'results'. The second largest link from this area goes to a bespoke 'fear'.

The 'fear' within this area has a supporting aspect/attribute set which show that 'agitators/aggressive behavior' on the 'road' is seen as 'interfering, forcing into mud, rain shower, cease movement'. This area in turn is supported by imagery that goes to the idea of 'people gather on the road, confrontation, motion stopped in mud, tracks seized'.

Curiously, this whole area is cross linked to Populace/USofA on the word 'buttocks' {see below}.

Within the newly acquired lexical references, we have a curious section for Antarctica in that the data seemingly suggests that 'plants found, borders on town, weeds grow, disbelief'. This section is cross linked over to a bespoke area of 'mistakes motivate, fear abounds'. This in turn is terminated on an internal cross link back to 'disbelief'.

We need to also note that there are many references to NASA within this section, and none seem too favorable. Deep within some of these NASA references we find that some sections terminate in 'trials, judgment, sentencing'. Also, this whole section of Terra is participating within our 'secrets revealed', and 'militancy/aggression' meta data layers.

Populace/USofA - Fiery Blood Flows

Coincidentally rising with the 'inner fire' of the Terra/California entity/sub-section, we also have a distinct area within the Populace/USofA entity in which 'fire' also rises as a primary, and dominating aspect. In this case the 'fire' is modified by extensive, heavily supported attributes going to 'blood flows'.

This area can be envisioned as coming from the recent emotional stresses placed on the populace by the horrific scenes from New Orleans/Gulf Coast. However true it may be that this area does emerge from that emotive base, we have a high degree of confidence that such as merely the continuation of the emotional tension building period seen in ALTA series 1105 and discussed briefly in Part 1 of this series.

This emotional wave is rising now, within the current data, *in spite of* our processing efforts to eliminate the current, bespoke emotional bias from the data. In other words, this effect is exactly as we saw develop within ALTA 105 when we coincidentally happened to be gathering data just as the Sumatran earthquake/tsunami were occurring. At that time we went to great lengths to filter out the conscious/bespoke impacts on the data and still came up with the forecast for 'two/2 cities' being destroyed by 'climate/earth circumstance' in this year. So, that having been said, and having applied the same technique for filtering as we used in December/04 and January/05, we again are forced to accept a very clear statement that the emotional focus of the Populace/USofA entity is indicating that absolute 'fiery blood rage' is about to flow.

One of the focusing points for this 'fiery blood rage flows' aspect/attribute set is based on 'glowing screen surrounds {with} insight, enormous exposure'. A pretty safe interpretation is that something will soon come out on our glowing teevee screens which will further add to the building emotional tension of the September/October period and will propel a very large segment of the Populace/USofA to absolute 'fury, blood pounds {in the} temple, rage threatens'.

Given the recent Bush admin demonstrations of 'compassionate conservatism', and the results of that policy, one could suppose that this area is referring to this already-in-place emotive theme. However, our processing works diligently to filter such impacts {ed note: we might have screwed up on this though}, but still we have emerging within the Populace/USofA a completely new, heavily supported area for a real wave of 'red hot, fiery' rage. Likely to be directed at the Bushista entity, given both our cross link situation within our modelspace, and the current real-world focus of anger at the Bush administration incompetence/actions.

In any event, this area is very dense, and is clearly focused on later in September, and into October. The area here is also a large contributor to the emotional tension step upward indicated for on-or-about October 3rd.

The lexical set in this area of Populace/USofA is filled with word sets going to the idea of 'large', 'enormous', 'significant', 'profound', 'at {the} core level'. These in turn are supported with aspect/attribute sets further reinforcing the idea of a very deep impact. Our processing places relies on the summation of emotional values associated with words to derive such concepts of the building emotional tension shown within the charts in part 1. Within the values which are added for the summations, we have various sub-meanings. One of these is the 'emotional impact value'. This value is modified by other values such as the 'carry forward value'. By examining changes in these sums, and tracking back the changes to word sets we get a clue as to the changing emotional landscape or background. It would appear that in spite of the very large level of emotional impact already received from the Katrina storm, that yet more is coming.

What is clearly changing for the Populace/USofA is that the emotional impacts are now seen as driving 'action, resting {is} over, motion required'. This 'action' is supported by lexical sets indicating that we are looking at a 'social action' or an emerging 'social movement'. Further, given the data we have within the sets, this 'developing social action/movement' is going to come so fast as to provide 'shock/disbelief' of the 'existence {of the} blow stuck'. A curiosity arises when we examine all of the data elements within this group down to the terminating aspects, at that point, the whole of the lexical structure terminates in 'awakened insight' which is supported by, and cross linked directly to the meta-data level of 'secrets revealed'.

Populace/USofA - Flowing to Confusion

A large number of internal cross links within the Populace/USofA entity hang off the 'fiery blood' aspect. One such section with some potential importance is linked over to 'ending/completion/final'. Within this descriptor set we find that an image of 'completion of the pulse makes the fiery blood flow'. Again, noting the very heavy cross links internally on almost all of the words indicates a "reinforcing" of the general trend at multiple levels. {ed note: or so we postulate at this point, remember we are making this up as we go along.}

Within this area, the 'flow' aspect word is cross linked time and again to repeated references to 'confusion' in one form or another. This 'confusion' could also be translated as 'national angst state' or 'national shock from chaotic exposure', or alternatively 'national state of confusion/confounding'. The theme emerging is one of a 'morass of mind numbness {due to/caused by} secrets revealed/exposed blood'. In examining the 'confusion shock' that will emerge over October and November, we can note that this 'confusion' does *not* prevent actions from emerging on the national level. Rather it would appear that a 'shock' to the 'value system, core representation' is being suggested. This in turn is seen as 'precipitating' bespoke angst.

This is all seen as 'bringing together' the 'accomplished men' who will attempt to 'radiate intelligence {to the} masses'. These fellows will 'gather around the beginner' and will 'praise and congratulate' him. While it all sounds good on the surface, this area is very heavily cross linked back over to the 'action' section within the 'fiery blood' flowing aspect. The suggested interpretation is that a 'parade of accomplished men present fiction' as the imagery would have it, and this is done within a time of 'national angst'. The data would suggest that this 'parade' of the 'pompous' is not well received by the Populace/USofA nor GlobalPop. The result is seen as 'betrayal motivates, exposed flesh cries blood'.

Within this area are references to 'being surrounded' by a 'high hedge', and 'breaking arm in escape'. We also find areas that go to the idea of 'daily movements sun/moon observed', and 'proper time for action'. Again, many repeated references to being 'hedged in' and 'surrounded by barriers'.

Populace/USofA - Crisis Confirmed, Coagulation to Dying Off

If we examine the first of the charts above, we can see that a large step upward in emotional tension is forecast for early October, perhaps around the 3rd. This large step up has slightly greater impact on the

over all rise than the appearance of Cindy Sheehan in early August. The growth, extremely rapidly, of the anti-war movement within the USofA, occurred during this period of a large jump up in emotive tension. Prior to the appearance of the Katrina Federal Disaster, the press were increasingly occupied by some facet of the emerging emotional tension over the issue of the Bush Wars of Aggression.

We find that yet one more large step up in emotional tension awaits. Our chart above shows it in early October, and within our data set we find that the entities most heavily involved are Populace/USofA and Bushista. We already have seen that the Bushista entity is headed for increasing problems over the course of these next few months, and now are seeing confirmation for yet more problems, this time from the Populace/USofA as it digests the meta data level of 'secrets revealed'.

We have a section within the Populace/USofA which has a dominant aspect of 'crisis', and supporting that 'coagulation to dying off'. This area is in turn heavily participatory in all the meta data layers including 'militancy', and 'secrets revealed'. Further the suggestion from this section is that all politicians, and others in officialdom have something to fear. The many references to 'political' are all negative, are indiscriminate of party affiliation, and many are tinged with words of a violent nature. A very large emotive jump up is indicated.

Now, noting that the rapid growth of the anti-war movement actually produced more of an emotion tension building step than did the Katrina Federal Disaster, we can postulate that something, perhaps a fuel crisis, will trigger the foreseen October emotional tension rise. This need not be an actual dying off. Rather the 'dying off/putrefaction' could be indicating something more akin to the 'removal of deceptions'. Such an interpretation has to be taken as a real possibility as the impact is seen as a very large emotional tension builder. We can note that the step-up, and release-down pattern around the time of the Katrina Federal Disaster is not like the large step up in October, rather that is much more like the step up seen coincident with the appearance of Cindy Sheehan and the anti-war movement. So it is our interpretation that the appearance of yet another wave of emotional tension will manifest, and given the circumstances, it would *not* be surprising to have it involve fuel.

Within this section are rather ominous references to such as 'the horrors of {our} time', as well as 'threat to lose skin', and 'continually coming and going'. The last is noted for its cross links over to the 'oil' sub section within the Terra entity. As we have only limited cross links at this area, we can take this as an indication that the emotional tension will be derived from something that is one layer of abstraction up from manifest reality. That is the same order of abstraction as the anti-war movement. In this case we have two pending alternatives; one could be the reappearance of the anti-war movement, specially harmonizing with militancy and secrets revealed meta data layers, or it could be the appearance of a rather sudden fuel shock to the USofA populace. Either could be seen as producing the results forecast on our chart. However we need to note that the 'oil/fuel shock' scenario would appear more likely if only due to the huge amount of emotional tension built up so rapidly. True the emotions run high and hot over the Bush Wars of Aggression, but if that is to be at the heart of the crisis in October, then some very large and very very disturbing secrets will be revealed indeed.

Much of this area of the modelspace goes to a very repetitious theme of 'shock' and 'coagulation {of} action/blood caused {by} shock'. Over and over, down layer after layer, the aspects of 'shock' and 'coagulation' are repeated. In almost all cases the cross links are so diverse, and so thick as to defy tracing.

The only clearly unambiguous references are to 'energy', 'energetic thunder', 'fluid', and 'vibrant'. Everything else in the way of supporting aspects are so cross linked to so many different areas as to present far too much data to be meaningful. One way to interpret this is that indeed a shock to the 'fuel' of the nation is coming as that clearly would have hugely diverse impacts on virtually every facet of things.

We also have to note that a significant portion of the cross links go over to the Terra entity and that much of these terminate in the 'space' sub section.

Bushista - Restricted Movement Chafes Thighs Raw

As we progress our modelspace forward into October, we come to the point as indicated on the charts above where a sharp increase in emotional tension occurs. This area is heavily influenced by the emotive sums from the Bushista entity. The building period of emotional tension will get its next big rise in early October, perhaps around the 3rd, and the Bushista entity will contribute a very large, and disproportionate share to the tension.

We have to note that the dominant aspect for the Bushista entity at that point is 'restricted movement' which is coincidentally also the dominant aspect for the Populace/USofA at that exact same point within the modelspace. What is curious is that the cross links for these two, shared dominant aspects do not occur until lower within the lexical structure. This may be indicating that the 'restricted movement' which is going to sit on the Populace/USofA entity, is of a different form than the 'restricted movement' seen within the Bushista entity. Even though they have the same emotive sums and weights, it would be possible to extract other words from the lexicon for the dominant aspect such as is supported within the Bushista attribute sets. In that case we could have labeled it as 'torsion' or 'twisted bowels', rather than 'restricted movement'. Such substitutions may indeed apply.

The supporting aspects for the Bushista entity during this October and November {up to about the 14th of November} period are 'ignorance', 'dangers', 'water', and 'hampered/bound'. The supporting images within the attribute set go to the idea of 'brazen ignorance produces regret', and 'water from the summit drives {entity} downhill'. Further we find that 'driven {by} demons, regret disappears, brazen action yields no proper regularity'. We also see that 'hampered/bound thighs chafe raw in movement'. Again, the idea of a 'restricted movement' or, alternatively, movement creating problems.

We also find that significantly exact language is developing within the Bushista entity which, when progressed, seems to converge on our release period in December, that we are gaining confidence in the idea that the Bush cabal is central to the degradation of the release. We have language such as 'weak fearless beginner/novice stuck in mud'. This in turn is hugely supported by aspects/attributes going to such images as 'fire below the feet, water above the head, chest bare, knife cuts many times'. We take this as again, another pointer towards both the theme of 'restricted movement' and 'wounding'.

Along with the 'knife cuts' aspect, we find supporting internal lexicon pointers as well as internal cross links which indicate that the Bush Wars of Aggression are about to go very badly. So badly that the Bushista entity itself is placed in 'dangers' or 'at risk' as a result. The 'knife' is seen 'cutting the blessed knot'. This last 'knot' has supporting data indicating that the reference is for the 'imposed marriage' which we can interpret as the Bush imposed "government" in Iraq. Our data would seem to indicate that a 'union' will result, just not one envisioned by Bush et al. Instead, the 'union manifests' from 'feet moving sand, many toes, many grains moved'. Then the 'union' is seen as the 'spike {driven} upward {into the} heart of illusion'. This is also supported by 'neighbors aid/help move, fearful feelings, obsessions abandoned/rejected'.

TPTB - Blind Woman Ascends, and Further Adventures of the Dred Companion

This section could have been titled 'cut in half' as that is the dominant aspect at the moment for the TPTB {ed note: The Powers That Be} entity. Within this area the primary supporting aspect set is 'fear' and that is augmented with the attribute image of 'dred feared, flowering cut in half, destruction of the past'.

This area in turn is supported by aspect/attribute imagery going to the idea of 'blind woman ascends'. Within this area is a very robustly populated aspect/attribute set with multiple branches. This sort of form is displayed within the modelspace as sort of a limp octopus whose arms hang down {more or less}. When such structures arise, the arms and the body are usually within a tonal note of the same color, and usually have the same hue values. The hue values are used to indicate intensity of impact sums with the "hotter" the color, the higher the intensity values. At this point our 'blind woman ascends' aspect is like a radioactive-glow-in-the-dark octopus with over thirty major arms.

The largest of the arms of this structure is headed with 'man' as its aspect, and modifiers which go to 'dark man, dred companion, dred locks/locked, dred looks ahead'. Then, within our 'dred companion'

aspect/attribute set, there are several areas going to the idea of 'dred companion, leads feet, trample/destroy past lies/deceptions'. Again, let us note that we are picking up the 'lies/deceptions destroyed' theme in multiple entities, and when extracted on its own, this layer is our meta data layer of 'secrets revealed'. One more item to note here is that these layers are behavior modification layers, in that our 'secrets revealed' meta data is supported by very high emotional values, and it such values that are coincident with large scale behavior changes within the population.

Our 'dred companion' is on the move. Again we see that aspects such as 'deserted city' arise on their own to near dominant positions. In this case the 'deserted city' is 'visited {by the} blind woman {who} ascends {a} long hill {to} enter {the} city'. She is seen as 'bringing forward dred companion {by his} belly' and 'together {they} step/enter deserted city'. Then the 'dred companion' section would indicate that he is 'affected by the smallest offering, blockages offend, initial difficulty presents dangers, soggy marsh grasps/draws in {the} unwary, and tempted {by} ease'. This is all seen as taking place at 'peak noon' or 'height of sun position'. This latter may be indicating something other than an actual noon time occurrence. One alternate interpretation would be that a solar storm or other exciting influence on the 'dred companion'.

The data set offers little in the way of clues as to place of the deserted city, but we still do have South East as our slightly predominant pointer. Further we have indications that the 'blind woman' and the 'dred companion' will be forming a 'fruitful cooperation' which is seen as 'affecting the rejoicing/happy buds on the trees'. This may be an metaphoric indicator of place or an actual descriptor of place. If so, too vague to be very useful.

Our other data within this area goes to the idea of 'external courtesy/addressing constructive {to} remnants' and 'decay lurks amongst fruit trees'. This in turn is cross linked to an area of Terra where we find that it terminates in 'october' as an aspect {ed note: relatively rare to see months referenced} and its primary attributes show that 'warnings abound, cry unheeded, rotten fruit strikes head, tarnished skull, constructions upholding almost'. Admittedly a bit confusing and it must be read as originating from TPTB entity. Within the Terra entity, we find that this section terminates in 'mountain stands bare/scrubbed, winds move dust/dirt raking roof of world'. Hmmm.

Markets - Buttocks Skinned, Sheep Flocked

Within the modelspace, as we progress the entities across the boundary layer into October/November, we have had a change of primary aspect within the Markets entity. In this case our new aspect of dominance is 'buttocks skinned'. This is supported directly by 'laborious advance, slowly, buttocks skinned raw, meat exposed'.

Directly under this area is a very robustly populated section in which most of the cross links go back to the Populace/USofA entity. A curiously fitting aspect of 'sheep' is supported by attributes of 'going with friends as sheep, flock', and 'join flock, sheep moved, friends join in'. This area in turn has an internal cross link back to 'advance'. Within this linked area we find that 'over estimate strength' and 'crushed down from shoulders to knees to toes'. Also, once again, we should note that any references to body parts are taken as important as they are very core level of archetype words. The area here concludes with 'advance, slowly/grindingly, with no success'.

This whole section of Markets entity is cross linked on the 'sheep' aspect over to the Populace/USofA, and to a lesser extent, GlobalPop. In the case of the Populace/USofA entity cross link we have a termination point in the aspect of 'weakness' which in turn is supported by attributes of 'suppressing' and 'hurt'. When we extract the imagery we end up with the idea of 'suppressing weakness hurts yourself with force not controlled/controllable'.

The aspect of 'weakness' within both Populace/USofA and GlobalPop is cross linked back to Markets where it terminates in 'buttocks flayed/skinned'. Examining the aspects/attributes within these cross linked areas we get to the idea of 'skin/hide removed, bloody meat exposed'. Again, noting that the 'exposed' aspect goes directly to the 'secrets revealed' meta data layer. Also participating in this area is an aspect/attribute set which goes to the idea of 'meat shown raw, buttocks flayed {by/against} rough rocky

ground'. Further references to 'feet scraped clean {to} bone' would suggest an image of a person desperately pushing back to keep the boulder/merde from rolling downhill, and getting worn down in the process.

This whole area is replete with references to 'danger' and 'judgments'. Also we have several aspects/attributes which go to the idea of 'five judges decide fate', and this in turn has supporting imagery of 'dangers disregarded, ignored, liability to structures susceptible to sinking'. Under this we find that more references to 'dangers' and 'dangers ignored' are also reinforced by 'marshland filled {with} lies and gifts hoarded'. Hmmm, once again, 'secrets revealed'. Looks like a very promising time for teevee news.

As we progress the modelspace forward, the primary aspects/attribute sets which gain the most values over the months of October and November are 'exclusion' and 'removal'. These are gaining at a very significant rate, but both are still subordinate to 'buttocks flayed raw' until at least the end of November. We should be able to grasp a bit more in Part 3 as the modelspace begins to gain some distance forward.

As a last note, the Markets entity, on the aspect of 'raw' is extensively cross linked over to Bushista entity where it terminates in 'raw' as well. The suggestion is, since both of these sections contain contributing descriptors for 'secrets revealed', that the Bushista problems will also be augmented by problems developing within the Markets entity.

Markets - Silver - Enchantment Awakened

The data growth for the Silver entity {ed note: now proxy for all precious and base metals} has risen significantly, with most of the new structures hanging under the primary aspect of 'enchantment'. The primary supporting aspect/attribute set for this aspect is 'awakened'. The data shows that 'while dressed in white/silver, dewdrops moisten reflected outer appearance pleasantly'. A bit poetic, but underneath this area are several sections more prosaically to the point of 'economic interests increase', and 'awareness jolted by lightning', as well as 'emperor/officialdom exposed, deeper than appearance, decay below belly'. Again noting the 'secrets revealed' meta data layer. This layer is very heavily represented in this section, as are the numerous cross links to Populace/USofA.

The suggestion is that as we move forward through the last days of September, past the development/manifestation of the October 3rd crisis/emotional tension building step, the general acceptance and desire for the precious metals will take a large, emotive leap forward. BEAR IN MIND: this still does not translate to price action as TPTB still sit on all the markets that they can, manipulating all towards their own goals. Nonetheless, it does appear that at least the populace will increase its awareness of and desire for silver et al. By how much? Well, we have gained 24 points in vertical movement over a horizontal span of 22 sections, so the emotional level is scaling rapidly upward. Again though, who knows how long the markets will be manipulated, and during this period extreme caution should be used as the only guide.

Conclusion Part 2: Energy and Strength

We are seeing several meta data level themes emerge within this data run. We have a clear layer that goes toward 'energy' and another that goes toward 'strength'. These are both slightly below the 'secrets revealed' layer, and as such as both operating within that influence as well as the overall flavoring of 'militancy'.

The energy layer is interesting as it encompasses both solar energy, and terrestrial energy, and the various ways in which humans consider energy. This theme will be prominent as we move forward into Fall, and then Winter. We need to bear in mind that while distracted by events here on earth which relate to energy, the sun/solar system will continue to provide much more energy to the whole mess.

This energy from the solar system not only affects the planet, it clearly has effects and impacts on human behavior. These impacts are both subtle and gross. The grosser such impacts would be adding sun screen to your out door regimen, or noting the impact of solar energy on earthquakes. The more subtle impacts may well be a raise in the potential for tension and stress. These subtle effects would impact both individual

humans and the groups in which they manifest behavior. Awareness of the potential to have behavior influenced may facilitate some control over solar induced alterations.

We find that our data since 1997 has consistently offered a view of increasing solar energy and its impacts both on the habitation here on earth as well as the inhabitants. Any individual human need only go stand in the glaring sun energy for a few minutes to begin to feel the 'hot and bothered' effect. We are postulating that the data we have is indicating the whole globe is impacted this way, both individually, and collectively.

Our data would seem to indicate that October through about November 21 will be a very 'hot and bothered' time. One should perhaps attempt to be self-cooling during this period so as to not be swept along un-aware by emotional influences and the madding of the crowd.

We also need to remember, that it is not earthquakes or bad weather that kill people, it is bad engineering and stupid decisions that kill people. Also as recent events demonstrate, ain't no one can make bad decisions like the Federal Gov'mint.

Staying personally strong and aware is vital to personal safety as has been demonstrated ad nauseam from recent television reports of the Katrina Federal Disaster. Get and stay strong to go long.

Part 3 is likely to be posted late next Sunday, September 18th as our data processing is very intense at this time.

Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *.

Data set distilled from 32.87 million reads . Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

Populace/USofA - Shocked to the ground

In tracking our emotional tension rise through the building period as illustrated in the charts in parts 1 and 2, we note that around November 21 we get to a period in which the general trend will begin to head downward which is indicative of a release state for the previously built up emotional tension. The charts indicate that an event on November 21 starts the actual release period. This event is immediately followed by an increase in emotional tensions, but this increase is not as large as the preceding release step, and shortly thereafter in December {Ed note: on or about December 14th} we find that thereafter the trend is continuing release through at least until June of 2006. While indicating a general release period, this does not preclude the usual sorts of daily emotional ups-and-downs, but more indicates that any building emotional tensions will be released shortly and will be built up against a background of general emotional release.

The majority of our descriptors of either political, or geographic nature would seem to indicate that most of the drama of the period, from October through to June of 2006, will be focused on the USofA. Our Populace/USofA entity is gaining data sets at a very large rate of growth, almost as much as we usually find accruing to the Terra entity. As we progress the entities through the modelspace for our short-term to intermediate values, which is to say as the Populace/USofA entity is moved into the late November period, we are seeing an aspect replacement level of about 2 of 3. Such a large aspect replacement ratio is rarely seen outside the Terra entity, and is even somewhat rare with that entity.

One of the rapidly rising aspects, with hundreds of repetitions is 'shock'. We find this aspect supported by a variety of lexical substrates of all kinds including physical, economic, social, geo-political, internal, personal, egoistic, and others. Again, a rare situation. Usually when one finds that a rising aspect such as 'shock' in this instance is accruing rapidly, the supporting sets are normally much more focused, that is, far less diverse within their contexts.

In sampling the rising aspect of 'shock' we can note that 'shock settles dust/motes/particles {into} compressed stone'. This set is supported in its turn by 'dense blocks settle {in the } shock reverberations'. Taking the internal cross links from 'reverberations' we find that these terminate in about four dozen points of which 'reverberations carry {forward} time allowed all mixing/all blending' is typical. Repeated references to 'reverberations' the majority of which provide 'carry forward' or 'extended effect' within their attribute sets would suggest that the late November 'shocks' to the Populace/USofA will indeed initiate a series of events-response which take us forward through a large emotional release over the next 8 or so months following.

Of course, one must note that the emotional release itself is described as 'cathartic'. Hmmm.

In any event, our emerging details about the November 'shock' suggest that there will be a significant, and easily visible confirmation of the new trend within the populace. While we have data for 'physical' shocks, this is but one small section of the total set, and as such, is *not* a clear indication that the 'shock' will be something like our 'plate shift' seen since ALTA 105 back in January of this year. We do, as noted above, have some details suggesting that the 'shock' is somehow physical, but within the morass of other, incoming data values for the 'shock' this is not conclusive. We also need to note that if the 'shock' in November that affects the Populace/USofA and starts the period of emotional release which really accelerates in December *was* an earthquake or other physical shock, then it is small in impact compared to what is shown for mid December. Could this chart and our emerging 'shock' aspects be suggesting an earthquake as the initiator of the release? Perhaps, but if so, then it would seem fair to interpret the 'shocks' as a series of quakes spread over late November through to mid December. It would also seem likely that the relative values we now have would, under the above scenario, suggest that after the first of the 'shocks' the subsequent ones are larger.

Of course it is not that simple. As we all know, universe and our aggregated collective global karma is complex to the point of making Indian politics seem as simple as skipping rope. So to thoroughly muddy the mix, we must note that while there are some cross links between the newly emerging 'shocks' aspect within Populace/USofA and the Terra entity, just on sheer numbers {ed note: something not usually reliable in our work}, it would appear that the 'shocks' will be coming from some other area than earth movements.

At this point in the processing, the number of 'shock' aspect word sets with supporting attributes going toward 'earthquake' is actually less than the number which have aspects going to the 'organs' of humans. Usually, due to our idea that this work involves archetypes {ed note: not Jungian, but rather self exposing archetypal emotive concept words}, we have a tendency to place a higher level of confidence in 'body part' words as these are about as cross-culturally, omni-humanity archetypal as it gets. So that we have a larger number of aspect supporting sets going toward various body parts and their being impacted by the 'shock' has a tendency to direct our thoughts away from earthquakes.

We find that there are references to 'organs, internal', 'organs, liver', 'organs, kidney', as well as more specific terms such as 'shock disturbs the beat of the heart', and 'shock flows through eyes, brain, mind, {and} causes clenching throat'. This last, the 'causes clenching {in} throat' is a secondary carry value from a body part. Other examples of such a secondary carry value that are now accruing include 'bile rises, tasted on tongue', and 'sweat fills eyes, covers lips'. We also have 'trembles beset legs, blood runs cold'.

While there are a number of such secondary references, one type seems to dominate, and that is references to the impact of 'loud noise' on the 'ears' and 'ear canal' and the 'sensation of hearing'. We do note that the 'loud noise' may be metaphoric in that most of the descriptor sets which contain it are also cross linked back to terminating sets such as 'loud noise less than vision blurred/distorted', and others in similar vein. The data sets contain repeated reference to 'noise' and its impacts such as 'noise overwhelms fear and alarm', and 'noise lost in despair/dismay'.

As may be expected, we have many appearances of bespoke 'fear' as an aspect within this set. Humans as a rule are indeed shocked by loud noise, and frequently, the millisecond reaction is a 'fear rush'. So it is not surprising that our data set contains such references. The supporting sets for the 'fear' go to the images of 'disturbed balance, wavering in shock, fear of falling', and 'shock {of the} loud noise sends bones trembling, bile rising, fear racing to belly'.

This section also has a rather rare occurrence which is the appearance of numbers within a descriptive set. As a reminder, the internet is hugely filled with numbers and numeric references so we go to some trouble to filter these out. When they do appear, they are taken with slightly less skepticism than other references. In this case the aspect/attribute set goes to the idea that the 'loud noise {is} heard/felt {for} 100/one hundred miles'. This is reinforced in another, separated area of the entity where we also find that 'shock felt 100/one hundred miles strikes body'.

Our other descriptors for this section are no less gloomy. The rising aspect of 'shock' is also seen in the context of 'shocked {by/into} disbelief, legs felt dissolving {into} earth, bladder releases'. Again we must

note both primary and secondary body part/process references. Not a good sign. Also seemingly might be a good day to carry around some handy-wipes.

Now that we have gone to all the trouble to point out the many and diverse areas of impact suggested by this section of the entity including social, economic, political, and others, there will be a natural jump toward the idea that the 'shock', especially as relates to the USofA, would begin with earthquakes. So, is there language to support such an emotive jump? Well, unfortunately the answer is yes. We do have aspects, small in number at this point relative to the other areas within the set, which do actually suggest an earthquake.

We find that several of the 'shock' appearances are supported by data such as 'do not/can not stand still', 'drop everything, sit, broken glass', 'fallen/falling objects, returns/bounces, breaks', 'feeling of numbness, legs shaken to backbone, injury', 'danger {from} shock, injury above and below'. This area is also supported by repetitious references to 'falls into water/lake/river', and 'problems with stability last {for} years', 'formerly firm mountain vibrates, fear'. Also there are lexical descriptors within deeper attribute sets taken from cross links between attributes that produce imagery such as 'loud noise, knocked flat on back', 'frightening noise, stagger into mud', 'danger, sinking into quivering mud', 'risk of sinking/dissolving, mud comfortable, rock supports'.

Then, in the same earthquake vein, we do have other attribute sets hanging off of 'shock' which have imagery at higher levels of the entity which go to the idea of 'continually moving, back and forth, threats {of} horrors before eyes'. This is supported in its turn by 'skin lost {to} cement/rock/stone/abrasive', and 'task {to} lift oneself/body {from} mud, stay down'. At a slightly higher level, and internally cross linked we note that 'shocks produce profound disbelief, worlds/concepts end/final', and 'shocks observed {with} fear, horrors abound/proliferate/grow', as well as 'shocks, not action/movement, fear of trampling/crushing {by} others premature action'.

So, yes, we do find a number of lexical clues that can easily be fitted into a mental picture of earthquakes and their impact on both planet and human infrastructure. But again, we must emphasize that the earthquake specific language is still low in ratio to other areas. This could be interpreted, perhaps, as an earthquake initiated event string, much like the Katrina storm, however horrible, was merely the initiator of a string of events which ended up dwarfing the hurricane in terms of emotional impact.

Populace/USofA - Spontaneous Plebiscite - Civil Power Judged

Also emerging from our 'shocks' aspect set, and superficially focused on December through the end of February and beyond, a newly emerging, and very robust aspect of 'plebiscite'. This aspect grows significantly as the entity is moved forward through the modelspace, and is supported by a rising aspect of 'spontaneous/self-generating/self-directed'.

The cross links are very telling indeed. They go to all areas where we have 'civil power' defined, and especially those relating to the 'elected federal government'. As may be expected, given this aspect, we have very extensive cross links over to the Bushistas. This area of cross links starts to accrue with some seriousness just as the model is moved forward from September and into October, then a small lull appears in the data accretion volumes during our late November, early December period, but by mid December, the aspect/attribute set growth values are soaring again.

Within the Populace/USofA entity, many, if not a clear majority, of the originating points for the cross links to Bushista entity are jumping off from aspects of 'judgment' or 'weighing words' or 'old words regurgitated/reconsidered'. We have many such originating points and almost all of them have at least one reference to a human body part or process. We find a lot of references to 'vomiting' which we will interpret with the alternate wording of 'regurgitated/reconsidered' as all three references are in the same set.

Given some of the other data within the set, vomiting might actually be the correct approach to this period. Aspects such as 'externally focused, violence, spikes from the wheel dig deep {into} flesh', and others toward 'bones crushed, wheels roll over' give a decidedly bad taste to the whole area of the entity.

Cross linked over to the Bushista entity, and originating under 'temper lost, poor judgment' we have a termination of the link in 'out of control, overshoot/excessive'. This is supported by a curious cross link back to Populace/USofA where it terminates in 'fenced in, no escape'. At the point of origination, the cross link is only two layers down within Populace/USofA from the dominant aspect of 'shocks'. The suggestion is that 'political shocks' are certainly coming, that these will involve some very 'harsh judgments {of the} lame/halt' and that 'blood, fiery, boils' as we have seen in previous parts of this series relative to the populace of the USofA.

Terra - Increasing Changes

As this is a *serious* entertainment report, and as we wish to be as directed by the data as is possible, we have severed all of the cross links between the Terra entity and the Populace/USofA entity. This then allows us to progress the Terra entity through the modelspace in isolation. In a way, this acts as an integrity check, perhaps the best we can have, on interpretation of what is decidedly complex data.

In moving the Terra entity forward, we note that as it shifts into the mid to late November, and early December period that we have a very large increase in data all going to variations on the basic theme of 'increased earth changes'. An alternate wording for this which also arises from the lexical set could be 'increasing internal pressures', or again, alternatively 'stimulation of internal motions/pressures'. And so on.

The now isolated Terra entity is apparently confirming the Populace/USofA entity interpretation of 'earth movements'. We note that immediately under the now dominant aspect of 'increase' and lateral to the 'earth movement/changes', we have body part references such as 'ankle pops/cracks', and 'bones tremble/shake {in the} legs'. There are several others at this level that are all going to the idea of a 'body unsteady {in its} skin, and {on its} legs'. Again, fairly suggestive of earth tremors. Continuing with the body part/effects references, the data also contains such aspects/attributes as 'earth shakes {with} cramps, skin ripples'. This is supported laterally through internal cross links with 'earth motion concentrated, first docility, then movement'.

In the details of the attribute sets even at the highest levels within the Terra entity where we have little to no specific geographic references, we find that the Terra entity is suggesting that 'itself/core moves, reduction to ruin, not restricted to one place, minds/brains emptied {by the} fear {from} cramps/spasms'. This is supported by 'low situation/location, big step forward/upward', and cross linked off of 'step' we find that 'major rise/increase, reduces stone {to} mud'.

The Terra entity, as it is progressed through the modelspace has a 3/three to 1/one ratio of new accretion values going to the descriptors for 'internals/core' over 'externals/skin'. This ratio alone is very unusual, and can be interpreted as yet another pointer for 'internal changes'.

In earlier ALTA report series this year we had a section develop in which geographic references to California were associated with a specific '10/ten earthquakes'. We again have the '10/ten earthquakes' develop, but at this point there is no predominant geographic reference. Rather the whole area is focused itself on the 'internals' of Terra entity. This may be suggestive of a world wide series of '10/ten earthquakes', though, we still must bear in mind that earlier in the year the situation was more California focused. Also, as a side note, at the time that we had received our California reference, there was nothing specific in the general mainstream media about California and catastrophic earthquakes, as there subsequently was following the Katrina disaster. At that time, articles appeared in any number of mainstream media which specifically focused on the potential for very nasty disasters within the USofA and the last one references was large scale earthquakes causing problems in California. While it is true that the period of the 'summertime shakes' that we had first seen appear early in the Spring, and then actually manifest within a few days of the start of summer did produce a flurry of articles about the potential for "the big one", these articles were mainly in west coast and California publications.

So our data now suggests that a period of 'increasing earth changes affecting the internals of the planet' will begin in late November and continue through December. Then within that set is a sub grouping specifically referencing '10/ten' earthquakes which will 'contribute to the reduction to ruin' and which are also seen as a bespoke 'oracle/pre-sayer' of 'shifting to immobility'. This phrase is supported by a descriptor set going to the image of 'unpleasant and difficult, problems incontestable {while} shaking'. Also the area is modified with 'increase in substrates brings new height, faults not questioned, revealed/exposed'. This in its turn is supported by 'whole body shakes/trembles, setting {off} wind'. As a more curious note, the 'whole body shakes' area has a supporting aspect/attribute set which goes to the image of 'shakes radiate slumber'. Hmm? An earthquake that puts you to sleep?

In the end, as we move the Terra entity forward through December and in toward 2006, we find that the entity is even at that point still in the mode of accruing values for 'internal changes'. It would even seem that the rate of accretion is itself increasing.

Many of the references within this section which go to the 'reduce to ruin' contain explicit references to infrastructure both above and below ground. There are pointers to 'tall towers' falling, and since these are seen as 'strewn {with} dishes' we can anticipate that some level of telephone cell towers may be destroyed in the process of going to ruin. There are also sections detailing the 'crushing of veins and arteries' which have below ground aspects giving rise to the interpretation that underground pipelines are at risk. There are also repeated pointers to the now familiar 'restricted movement' aspect set in which we find that travel will be greatly impacted as many areas will have but '1/one mile {in} 8/eight' of road surface survive. There are, as expected also very many references to 'fires'. These originate both from the actual damage of the quakes and from the 'uninhabited remains/skeleton {whose} heart still beats'. This last is suggestive of abandoned buildings with the gas and other services on, but damaged.

We might expect within the Terra entity that references to 'plate shift' seen since ALTA 105 series of Dec 04/Jan 05 would show increasing "potential" at some point in that more elements should appear to assist in defining the event or extracting emerging details. There is some possibility that such values are accruing now. We have continued to show the aspect of 'plate shift' thorough out the runs done this year, with the values waxing and waning around a mean set, but never disappearing nor enlarging. However, at the moment, there does appear to be a change. It is in its early days yet, and as we progress the modelspace forward we are not adding a very large number of detail identifiers, but the main aspect is gaining in both size and relative value strength.

The largest gain for the 'plate shift' aspect has so far been within this area of increasing changes. Further, these are still almost bereft of cross links. The issue of cross links is significant as we have been able to note over the last few years that Terra based events are not temporally close to manifesting until there are extensive cross links to other, to-be-affected entities such as Populace or Markets. So at this point the appearance is that the 'plate shift' aspect is still growing, but at a core level, not at a manifesting state change level. There are two levels of details emerging, albeit at very low levels of supporting data sets. The first detail set suggests that our 'plate shift' will be a case of 'attraction of masses' rather than, and this is bespoke within the data, 'repulsion of the rocks/substrate'. So this suggests that one plate will become 'attracted' to another when the movement occurs.

The second detail set emerging is actually very reassuring. It is specifically going to the idea that the 'plate shift' will occur as a 'noted/noticed after effect' of the 'series of earthquakes'. This is good? Well, yes. In that we have recently had experience of just such a plate shift in the earthquake that struck Sumatra and initiated the tsunami. It was not until quite a bit later that it was actually understood that a break in the Indo-Australian plate had occurred. At that point, while intellectually interesting, it was no threat at all. We are now picking up data suggestive of just such a situation with our next 'plate shift'. This is decidedly good as it well could have been the other way in which a series of quakes would initiate a plate shift which would be so large an earth event as to fall off the top end of the earthquake scale into something else. It now appears that this is far less of a concern. True, some nasty quakes are coming, but our developing lexical sets would seem to offer a view of a short period involving 3/three large quakes and many after shocks and that ends it, for now. Then later we discover that the plates involved have shifted.

A small note of detail showing within this set may be indicating that the 'attraction' part of the 'plate shift' will become evident early on in the earthquake series. What we have is some small level of aspect/attribute data suggesting that a 'visible/manifest tear/rip' will occur next to an uplifting of some quite impressive amount. So if Los Angeles jumps up to the level of Denver, I'd say it would fit. {Ed note: just an illustration, we have no more data for LA than any other locality.}

Bushista - When the going gets rough....rectum releases

The Bushista entity is suggesting that while the Bush administration may think things are bad now, they have no clue. Oh, wait a minute, we don't need complex linguistic technology for that conclusion.

But, incompetent theo-fascist jokes aside, the entity shows that it is quite true that just when you think things have reached rock bottom, karma comes up and kicks you over the ledge down to the next level. Our Bushista entity does not do well as the modelspace is progressed forward through this Fall and Winter. We go from our Fall of Drama to a Winter of Wounding.

As the modelspace is moved forward, one of the clear indicators for continuing problems is the heavy four way cross link activity between Bushista, Markets, Populace/USofA, and GlobalPop. A very large percentage of these cross links center around the 'economy'. This aspect, by the way, is accruing more values than any within the data set if the aspects are taken in isolation from their entity set. And, as may be expected, there are not a preponderance of positive value words accruing within this aspect's supporting sets.

One of the major supporting aspect/attribute sets for the 'economy' in the Bushista entity is our old friend 'restricted movement'. Within this entity, we see that 'restricted movement/options follows decisions delayed'. This phrasing is curious as it is cross linked back over to the Silver entity where it also terminates in 'options'. It may be that some actual market style definition of 'options' is indicated here. In any case, on the Bushista side, this is anything but good. This area actually seems to start the appearance of yet-another-crisis in or about mid October.

Fundamentally {Ed note: pun intended} the Bushista entity seems to be suggesting through the supporting attribute set imagery that the 'base/core cannot/will not understand/recognize/reconcile bad state'. This area is very heavily supported with detail descriptors suggesting that another 'crisis of confidence/veracity' is about to 'hit the belly' of the Bushista entity. As we have always maintained, references to body parts are very archetypically significant, and this case is no exception. Within the 'belly' aspect we find that supporting aspect/attribute imagery goes to 'wind expelled, unable to breathe, knees buckle, belly aches, rectum releases'. This all of course relates back to both 'ego' and 'self image', both of which are now seen under the bespoke 'fear' which is a rising aspect within the Bushista entity. We have always noted that presence of the 'fear' aspect within this entity. It usually occupies a small niche and is relatively stable within a range. Now it has taken steps up beyond the top end of the range, and even its relaxing mode of dropping down still places it higher than has been previously seen within the entity. A note of caution for us all is that as this entity is progressed to the November/December period of 'wounding', we see many nasty words such as 'explosive', and 'maniacal' attaching to the bespoke 'fear'. Not usually a good thing to have your boy-king go batshit with fear. Can't be a good sign.

As is stated above, much of the Bushista contribution to the rising emotional tension values initially starts within the 'economy' centered aspect set. The two chief problem indicating aspects seem to be 'distillation/reduction {to the} minimum/essence', and 'movement toward waiting/biding time'. Neither of these provide any hint of a positive direction for the economy in the immediate or long term future. As we dig deeper into the supporting sets, words such as 'stagnation', and 'en masse/massive reduction in force' appear. Many of these center around and are supported by energy, but others appear to be developing due to some other 'point of failure'. One of the possibilities for a significant 'point of failure' appears to be the 'dollar/currency'. Please note that very heavy cross links between the Bushista entity and the GlobalPop, sub section 'US dollar' exist, and these cross links are overwhelmingly negative. Many of these cross links suggest that a 'stand alone request, granted' sort of stance is being taken as we move more into Fall. This is

directly dollar focused and would seem to suggest that Bush's "stand with us, or against us" has now come to the point where the 'all stand against/reject' view will become clear at least insofar as the US dollar is concerned. This area has extensive cross links over to the Silver entity, please see that discussion in this article.

As a safe interpretation we can make the case that the picture being portrayed is one of an embattled nutso, incompetent administration whose actions have finally pissed off nearly all the foreigners who subsequently decide to vote with their money. One of the real triggers for this view is shown within the complex cross links between Bushista, and GlobalPop, and then between GlobalPop, and Populace/USofA. As we move our modelspace forward, it is as though the Bushista entity, and the others, through the cross links are showing a time in which the global population will react to the populace of the USofA reacting to incompetent administration. The reaction of the GlobalPop entity suggests that this attitude will manifest in seriousness beginning in mid October, and accelerates through as far as the entity can be progressed which is to about June of 2006.

There are many elements which come into play for the Bushista entity beginning in October. We have one thread indicating a 'sexual insight/revelation' scandal involving the Bush admin will break out into public consciousness. Further there are threads suggesting that the 'moneyed/privileged class' will find itself 'squeezed' by 'arrogant demands'. These will be rejected, and a 'rift/tear' will be created which is seen as growing rapidly through at least next February.

Also, more references to 'bloody wounds' and the Bush Wars of Aggression are showing up. For a period, the 'inability to manage conflict' aspect of the Bushista entity rises to prominence, almost to a dominant position, before being overwhelmed by other aspects rising. But during its brief period within the public spotlight, this crisis of 'confidence in ability to manage war/aggression/conflict' will suddenly become highlighted and brought down from its 'abstraction into words' by manifesting events within Iraq and Afghanistan. Again, within the cross links from this area of Bushista over to Populace/USofA, we note that on termination, we find the aspect of 'shocks'. In this case, also references to 'stomach, and belly'. Both indicating large 'shocks which strike the belly'. These are supported by 'reducing to tears, cries from rage'.

As if the above litany of problems is not enough the Bushista entity is just chock full of small, but developing areas of concern. Many of these develop cross links as we progress the modelspace forward, and many seem to be if not candidates for the 'wounding', at least are suggestive of participating in the times. One of these data areas suggests that a 'crisis of the oceans, ending old patterns, newly discovered year/annual cycle' will cause a very significant re-evaluation of life in these United States. The supporting data within this area suggests with some sense of both certainty and finality that 'old patterns dead/gone', and when coupled with the 'new annual cycle discovered' and the supporting data set we arrive at the rather nasty conclusion that the 'hurricane cycles now annual', and that 'storms/hurricanes come in winter as well as spring'. This is interestingly cross linked over to Populace/USofA, and goes to the area in which we see a rising awareness of the "electrical model/view" of the solar system. Within the cross linked area it is clear that the data shows the electrical 'circuit {being/to be } disrupted', and with dire consequences of 'continuing hurricanes'. We even have some suggestion for something approaching a monthly occurrence of damaging storms.

Also curiously, we find a small, but noticeable amount of data sets which link Bushista, 'fear', Populace/USofA, and 'diagonal reversal {of the} oceans'. This area is also very extensively supported on the terminating side within Populace/USofA, and all of it goes to experiencing climate change to the point that 'fear' of 'abandonment' is *induced* within the Bushista entity. The suggestion for our limited grasping minds is that perhaps climate change will occur at such a level within the USofA that the local population more or less 'abandons' the federal government as a material impact on their lives.

One of the most heavily cross linked areas within these extensive cross links goes over to the Terra entity and terminates in the 'fun fun fun in the sun sun sun' reference. This area within Bushista is also under the aspect of 'fear' and is supporting both the climate change, as well as the political change areas within this and the Populace/USofA entities. The suggestion from this data, supported by attribute imagery, could be that the Bush admin will be faced with the very unpleasant task of having to 'advise/warn' the populace to

'hide from the sun'. And not just once, but 3/three times in a very short period. We find numerous references both within Bushista and Populace/USofA for 'sun forced hiding/cowering', and 'sun/light shocked under bed, brilliant/blinding injury'. Within the Bushista entity there are also cross links internally back over to 'resistance {to} acknowledge reality, hesitation burdens'.

As the modelspace is progressed through December, we note that a curiously strong representation for the 'sun' develops within the Bushista entity, and that it is focused on 'dual/twins'. These references are very very heavily cross linked, and are both under a more dominating aspect of 'fear'. Within the first tier of support for the 'fear' aspect within Bushista as it relates to the 'sun' sub set, we have a re-appearance of the 'sun disease strikes down' aspect/attribute set seen earlier in the year, and briefly, in 2004. This area, while small, does grow, but even at its beginning has very high values for both impact, and long term carry value. The supporting data sets seem to indicate that 'large numbers, many, millions' will be 'struck down with sun disease'. Cross connected internally, the Bushista entity is about to learn the 'taste of the loss/rejection of innocence' and this is in relation to this developing case of 'sun disease'. In this entity, the whole area terminates in an internal cross link which goes back to 'hesitation' with supporting attribute of 'face denies'.

It would appear that a significant, if only collateral, part of the Bushista 'wounding' of the winter will involve environmental break-down. This area of the Bushista entity is growing in value for impacts all through December and beyond, and again, as must be noted to the point of boredom, it is also replete with aspects for 'shocks'.

TPTB - Breaking up is hard to do

It has to be noted that a number of the entities are participating through either direct accretion of values, or through cross linked data sets in the 'shocks' which are seen as besetting the Populace/USofA entity in the late November and early December period. The TPTB entity is no exception. It has a large number of cross links over to the Populace/USofA entity which terminate in the 'shocks' aspect. Within the TPTB entity, the points of origin are both diverse, and deeply layered within the lexical sets. This suggests that the 'shocks to the populace' will impact TPTB {Ed note: TPTB = The Powers That Be} widely as well as very deeply.

The entity acquires a new primary aspect of 'dispersal' as the modelspace is progressed through October and into November. The 'dispersal' aspect starts emerging just prior to mid month, then rapidly accelerates as the modelspace moves into late November and into December. The 'dispersal' is supported by 'fluttery/downy/thistle-like' which in its turn is supported by 'all things/plans/projects'. The supporting attribute sets would go to the idea that 'all plans are dispersed/disrupted into fluttering/flight'. If we take the last aspect of 'fluttering/flight' and trace its cross links we end up over at Populace/USofA within a sub section of 'shocked to the ground'. This area is cross linked on its own back to TPTB where it terminates in the aspect of 'chaos'. A likely interpretation is that from the view point of TPTB, November will bring a period in which 'all plans are shocked into dispersal/disruption into/because of fluttering chaos'.

The TPTB entity has a number of new areas emerge as it moves through the modelspace toward January of 2006. We find that there are several October references which we can place as being near the beginning of the month. These jump in just as we begin pushing the modelspace toward next year. One of these new areas is very suggestive of a 'massive/complete/total' failure of the USofA military to 'hold/secure' itself in the midst of a 'surge' of 'force' which is characterized as 'repelling'. This echo of a previous period abounds in our data. The aspects of a bespoke 'diagonal reversal' of position is applied here. There are suggestions that a large scale 'kidnapping' or 'hostage' situation will start off this period of very intense conflict. This particular period of reversal is on the leading edge of the TPTB entity as it starts its movement below the median line for neutral within our modelspace.

As we move our modelspace forward, the meta data aspect of 'secrets revealed' takes a much larger hold of TPTB entity. The way the data layers on it suggests that the period of December, following the 'shocks' of November, will be one in which the TPTB will 'suffer most/much/maximally' from the 'exposure {of} plotting/schemes', and this is seen as bringing about a very large transformation within this entity. While

not a tipping point, in that a single context/aspect does not take over the whole of the entity, it appears we are watching something very close to a breakup emerging as the TPTB entity reaches into the late December period of time.

Silver/Precious Metals - Vigorous Gratification

As we progress the modelspace forward through to mid December, a very definitive change comes over our Silver entity {Ed note: called Silver, but contains all precious metals references as "precious" commodities.} in which the general upward trend seen since this past June takes a very serious leg up, as well as changing the relative size of the risers in its 'stairs toward gratification'.

The 'gratification' aspect is well supported at a large number of levels. The primary rising aspect in support within this area is 'vigorous'. This is the word chosen from the set of descriptors which also includes 'rapid', 'impressive', 'fruitful', 'replenishing', and others in a surprisingly diverse descriptor set. Basically, they are all good. In fact, 'good' is one of the top ten within the set. After some discussion, 'vigorous' was chosen due to the number of 'vine ripens vigorously' and 'vigor {of the} roots, long laid in, steps up large', and other less poetic and understandable references which all contained 'vigor' or 'vigorously'. {Ed note: Igor likes the word, so what the hell?}

In any event, our Silver entity, as sort of a contrarian indicator, is seen rising in very large steps as the modelspace is moved past the November 21 date, and into December. The size of the 'measured amounts {within} steps' is actually a bespoke reference within the entity and it mirrors the outer movement of the entity through the modelspace. As the Silver entity is progressed through December, we find that it seems to float in a direct ratio, albeit reversed, as the impacts of the 'shocks' becomes apparent.

As we have noted above, the tenancy of an entity or area within an entity to develop cross links is being taken as an indicator of a closeness to manifestation. In this case our Silver entity gains a very large number of cross links beginning in late September, with a largish jump up in mid October, and again, another very large step up in late November and then continuing on through December. As these cross links accrue the threads of connections for this entity expand throughout the modelspace joining many other entities. The developing cross link patterns give a certain level of confidence that the nascent awareness of silver and other precious metals just now being seen within the markets of the globe will be seen as just the barest beginning.

However, this may not be all that good. As we note, the movements of the Silver entity are sort of a contrarian indicator that would seem to confirm the more dire views of the pending problems in late Fall and early Winter. As the Populace/USofA gains cross links to the Silver entity, it almost immediately gains corresponding links both internally and externally to the 'shocks' aspect sets. And, the number of 'shocks' aspects sets seems to grow in an inverse proportion to the number of accruing cross links to the Silver entity.

We also need to note that the Silver entity itself is containing references to 'earthquake damage'. These are not extensive, and are internally held, though also cross linked back to both Populace/USofA and the Terra entity. These references are mostly to the idea of 'protection {for} valuables {in} shakes/shocks situation'. As this is one of the core values, that is, protection for wealth, within the theme of "precious metals", such cross links are not unexpected. However, they do appear prescient in that they are cross linked over to internal descriptors about the 'destruction of the weak roof over the heads of the market owners/controllers'. Within the odd language of our archetypes, this could well be indicating that the manifesting terrestrial earthquakes cause similar quakes within the markets and their systems. This reference to 'broken roof/building/structure' also has supporting data for a 'collapse' of the structure, and this aspect is supported once again by our 'aspects', both in accrued value and cross link.

Conclusion: Part 3

One of the small points of clarity that we have developing from these complex and complicated relationships within our modelspace is the sense that our December 'wounding' description, while either

striking at, or originating from, the Bushista entity, it nonetheless transmits much of the wound to the populace of the USofA. We have extensive cross links suggesting that all external events aside, the relationship between the failed rulership of Bush and the populace is changing at a very significant level. It would not be surprising, given the values seen within the cross links involving the Populace/USofA entity to find something monumental developing over the course of this next year.

Our data set suggests that some very large changes within the political structure of the USofA are developing. These may well be on the order of a new political party, with the wholesale rejection of the established political order, including voting out nearly all of the incumbents, or perhaps, given the values, civil war, or as will be termed by TPTB, insurrection.

Part 4 processing begins this week. This upcoming work promises to be very difficult as we have a very large amount of intermediate term values showing up. It is probable that we will run a bit long in Part 4, and that it may not be posted until late Sunday the 25th, or early Monday the 26th, due to volume of processing required. Updates will be sent out via email.

Data set distilled from 41.881 million reads . Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

Meta Data - Pigs learn Opera

It is difficult to build contexts for the meta data element of our work. The indications are that certain "flavors" are permeating the aether of our times, affecting us all. It would also appear that everyone has their own karmic reaction or burden to work out under these meta data flavors. For instance, we do see that Bush was being "tested" under the 'union/cohesion' meta data elements up until earlier this year, and then the 'aggression/militancy' flavor moved into position. Just prior to that move, and at a lower level, we saw the rise of the 'secrets revealed' meta data flavor which now appears to be playing out so fiercely.

Even though the various aspects of the George Bush personality were already expressing 'militancy' themes during the 'cohesion/union' meta data period, the greater theme of the context of 'union' pushed the G. Bush manifesting his militancy issues into the background. As an instance, it was *not* the great speechifying, nor the emotional tone that was struck, in the week following Sept. 11, 2001 that brought G. Bush the exceptionally high approval ratings. And it was also not any tone of 'militancy' which was stuck during that period. Rather it was the harmonizing of the populace of the USofA, and to a lesser extent, the populace of the globe, all coming together around the central 'united we stand' theme/flavor with which K. Rove had G. Bush identify that brought G. Bush such acclaim and support and high poll numbers. There were still *all* of the known, and all of the hidden flaws within G. Bush at the time which were put aside by the populace as he was given a chance to rise to meet the demands of history. And these demands were within the context of the American nation pulling together and expressing 'cohesion/union'. The wise man would have harmonized with that theme, and amplified it with positive reinforcement, and then directed it with life changing personal sacrifice demanded of all as the nation forged a new identity around the 'cohesion'. The wise man may have directed the nation to renounce the evil, exploitive fix of petroleum addiction and its impact on indigenous peoples as we obtained our necessary oil at any costs, including their lives. A wise man might have said, "now, with all the cohesion, all of the union being expressed, we can turn our energies toward improving ourselves at a core level such that our actions do not create such stupid aggression as we have seen in the destruction of the WTC".

That G. Bush has failed, and failed miserably, in rising to meet history is his personal expression of his karmic burden within the context of the meta data flavors/themes present. He could have risen above his personal demons, seized the wave of the times, and in spite of huge character flaws, might have gone down as a "great" leader. Of course, the opposite actually is manifesting. G. Bush sunk to the level of his demons and the lowest patterns of his conditioned mind, attempted to steal or hijack the harmonizing wave of emotional support at his back to his own nefarious ends, and now finds himself harvesting the results of his karma for all to see. As we all participate in the suffering generated by supporting such actions at the top.

What makes this all exceptionally interesting within our work is that such personalities as G. Bush, and K. Rove are clearly "hanging out there" blowing in the karmic winds for all to see. Together Bush and his cronies diverted the emotional support that he was "gifted" by the deaths and destruction of 9-11, and instantly started manifesting all of his personal issues with militancy/military/aggression. Not only did

he/they begin and label the 'war on terror', but of course, as is now widely known, though still fiercely, baldly, boldly denied, even to themselves, the Bush et al forged, lied, and stage managed the country and world's emotional support right into the most disastrous war ever for America. While the initial stages of the Bush Wars of Aggression were begriming, the meta data layers were still providing support in that we were all operating under the influence of a period of 'union/cohesion'. It was this flavor of the time that was harmonized with, and hijacked by the Bush cabal. Of course, at that time, Bush's own multi-contextual relationship with aggression and the military was freed to express itself. Some of the varied facets of the Bush central karmic thread of his reaction to aggression/militancy can easily be seen within his personal history, even within those patterns emerging in his adult life. There is his participation in the death cult that is the secret society of the Skull and Bones {ed note: actually the American branch of the German 'cult of death' society}. There is his failed relationship with the military in which he both manages to avoid real military service, and at the same time, pump up his weak personal self image with the patina of a 'jet pilot'. Of course, as with all his responsibilities, the conflicted personality of G. Bush just abandoned his responsibility to the military, and let his over-protective parents clean up the mess. A seemingly common trait to those "selected to join" the cult of death is the inability to accept and meet personal responsibility.

We now find ourselves within the meta data layer of 'aggression/militancy'. This layer, lasting approximately 18 months as we project within our modelspace, will see two central developments; the first is that circumstances will be developed within this period which will allow the next period to play out its flavor, much as we had the Bush Wars start under the meta data layer of 'union' such that the situations on the ground are in place now to work out the 'aggression/militancy' issues. In a strange sort of way, it makes sense from a universe view point. It would be very difficult to work out 'aggression' issues collectively in a time of rampaging peace. Just as the karmic themes attached to 'cohesion/union' had to be tested in a period of time with pressures that pull and tug on all the emotions around the theme, and thus in a very strange way, it should not be surprising to find that attacks against the union of America occurred within the same period as the 'solidification' of the union of the European countries was also being tested, in their case via referendum. Each was an expression at a very large, aggregate level of the "testing of the cohesion/union". Sort of makes sense, in a screwy way actually. It also makes sense that as collective karmic circumstances, that is to say, "events on the world stage", involve so much energy that must be marshaled to a single theme, that developments within in one meta data flavored time would be setting up the circumstances for the "testing" to occur within the following meta data flavored period. One can even speculate that in the Clinton presidency the country as a whole, as well as Clinton and his cabal, were all working out issues under a meta data layer that likely involved sexuality, though perhaps it would have shown up in a larger context theme such as 'acquisitiveness'.

Now, as the meta data layers have shifted and the flavor of the times is 'aggression/militancy', one might be tempted to think that the Bush Cabal, being so openly associated with all things aggressive/militant would be in their element, and that temptation to see the 'fit' involved would actually be correct. But within our work, we are continuously finding that universe has a very ironic sense of humor. In this case demonstrated by its presenting the stage on which our bumbling leaders {ed note: and the rest of us at all kinds of levels} can work out their karma with the meta data of the time. So we find ourselves with personalities at the top of things who represent not the best we have to offer, but the worst, that is, those who have no concept of the nature of the times, nor how they should be working within the nature of the times for both personal as well as national/global/species growth. Instead, the habitants of the planet find themselves watching the 'great' and 'powerful' at the collective 'top' of things working out all their karmic issues in plain public sight, but in a fashion in which the actual nature of the occurrence is totally ignored, unspoken. That is to say, that being in the heart of materialistic/technocratic civilization, the prevailing understanding of universe is so shallow as to deny/ignore collective, and personal universal karmic paths and such influences on events and circumstances. Thus our play is being performed by actors ignorant of their actions taking place on a stage in front of an audience equally ignorant of sitting in a darkened theater.

But, occasionally, a few of the audience members look around in the dark, and realize, hmm, these are theater seats my ass is sitting on, and those are aisle lights....and thereafter the play can get real interesting.

In our case, being aware of the meta data layers playing out, or the impact of universe on individual and collective consciousness, we can observe that if patterns persist in the future as they have been revealed by

past behavior and circumstance, then things in general don't look too good. We can for instance presume that G. Bush, and K. Rove will totally screw up the Bush Wars of Aggression. Why? Well, because both personalities have a past history of demonstrated patterns of screwing up when it comes to both responsibility, and all things military. So why would combining all their personal karmic threads be expected to produce any different or better results than their individual past patterns? Hmm? Is it a case that the public actually believes that disclaimers apply, such as with Wall Street stock selling, that "past performance does *NOT* indicate future behavior"? While there may be an argument to be made that such a statement can apply to stock price performance, it certainly does *NOT* apply to humans. There we find that indeed, past performance *DOES* indicate both potential success and probable outcome, as all humans are always operating within both personal, and collective versions of "meta data themes". So, elect a screwed up, twisted personality with personal issues of sadism, sexually repressed {ed note: evidence G. Bush is homosexual, and is persuaded to the contrary by enforced religious extremism imposed by parental coercion}, alcoholism with temper problems, who in the past has abandoned all levels of responsibility, including the now praised {in some quarters} military service, and is it any wonder that the outcome is not good?

The point of this is not, as it may seem, a rant against the weakness of the G. Bush et al personalities. Rather it is to highlight and strengthen the concept of 'awareness'. While not claiming any more awareness than the average dog, we still would like to gently point out that the outcome of the actions of the personalities at the top of the American/Anglo world stage are hugely impacted by "awareness of context". If one has no awareness of greater context, then one cannot, even G. Bush, and K. Rove, be blamed for not "rising above circumstances". This phrase is used within our society as a catch phrase indicating a situation of overcoming of personal patterns. However, this very rarely, perhaps arguably never, occurs when the personalities are ignorant of the greater meta data themes, or their personal karmic/universe relationship. Again, merely a pointer to those of us in the audience that awareness should not be minimized.

It is the aware person in our audience who has greater freedom of action as they can at least vaguely sense the outline of the theater, and can discern at least the outlines of the direction the plot of the play will take. Once given the key of awareness, the individual audience member, or actor can then enlarge their responses within the over-all plot of the play. Once one realizes that the play is all about 'aggression/militancy', and that one becomes aware of standing in the cast dressed as a spear-carrier, well, one knows what happens to the spear-carriers, and so can choose to work on their personal militancy/aggression issues in ways that do not favor ending up as scattered body parts on foreign sands.

Unfortunately for all of us, the personalities at the top of the planet {ed note: another, higher meta data layer? such as all our collective issues with leadership?}, are all as ignorant of greater karmic context as pigs are of the fine points of opera. And as we all know, one cannot teach a pig to sing opera, it just don't work, and it irritates the pig.

However, the universe has apparently been built, as odd as it sounds, as a classroom where pigs are to learn to sing opera. The catch? Well, there always is a catch of course. This one is a great catch, perhaps even greater than "catch 22". This catch is that while it is true you can't *teach* a pig to sing, they can *learn* to sing. The difference lies in the level of awareness within the pig.

Currently, the pigs at the top are not only "context awareness challenged", they also get real irritated when such is pointed out. The audience members of this play should, over the course of the next 15 to 20 months, see that universe is teaching a few lessons in awareness, and as is best put by an old Mongolian saying about the personal impacts of the meta data layers of the times on individual personalities at all levels within the play, "those who do not ride out to meet destiny are trampled in the stampede of fate".

Now, as we get into the grittier details of the current meta data layers discernable, and the sub layers within those, it pays to remind ourselves of the more modern version of Mongolian saying, most commonly found at the local Mongolian BBQ Palace, 'pig who can't sing end up as pork on grill'.

You want hot or mild sauce with those ribs?

Terra - Winter - On the road

As we progress our modelspace forward through the trigger points of November 21 and December 3-15th discussed in previous sections of this series, we enter an area where we have apparently, as the data suggests in one of the aspects for the Terra entity, 'crossed the threshold'. An alternate wording could be 'walked out the door'. In both cases, the Terra entity seems to be suggesting that by the end of December and beyond {Ed note: post solstice- Winter}, the population of the planet will have 'crossed the threshold {into the} new room'. The implication within the data set is one of 'crossing the line' which is supported within the aspect set by attributes going to the imagery of 'destruction of past roads/paths, never to return, completely new conditions prevail'.

As the data is explored, supporting sets reinforcing the idea of a 'threshold crossed, house abandoned' and 'living {on the} roads' grow in some profusion. The new data sets processed from the intermediate term values suggests that 'all generations impacted, feet move, young/old carried, dead abandoned'. While this would seem to suggest that the events of November/December are the cause of the 'abandonment/casting off' of the 'houses/structures/cities', it may be that the circumstances will be a bit more complex than that. We have indications that what is being hinted at is more akin to a 'planetary threshold' being crossed which in its turn begins a period of 'pressures {from} weather' which 'continually push populations' around. There are also indications that 'congestions {within a} volcano {create/cause} population movement/relocations'. Within this set we find some details for a '6/six millions live {on the} roads' as they apparently get to 'watch/observe {the} melting/covering' of their city.

The Terra entity has developed a slight oddity of expression in that within it, rather than Populace/USofA or some other entity, or through cross links, we are finding many references to 'political/social action'. The aspect/attribute sets may be suggesting a period in which the observable, and impacting daily/weekly earth changes precipitate a wholesale change in political structure. Much of this area is USofA focused, but we note that the second layer out is those "traditional" cronies of the Anglo power structure in the world. The data is clearly showing that 'old regime, antiquated/antique/ancient, {is} passed by, {in} ruins, millions {of} feet {on} road'. We also have supporting sets which show that 'corpses retrieved {from the} mud' are 'examined' and if found to be that of an 'old regime guard' are 'mutilated'.

The whole 'destruction {of the} old way {of} control {of} life' section of Terra begins to grow with some rapidity as the new values coming in from the processing add to the already bleak projections we have from our "emotional tension and release" charts shown in previous parts of this report. The new data for the Terra entity expands our view out from December of 2005 to approximately mid March, 2006. At that point both the emotional tension release levels and the severe alteration of the weather patterns are still seen as in progress, and gaining momentum.

Terra - Oceans - Shocks {again} in Winter

Much of the Terra entity's 'ocean' references are picked up via non-roman alphabet/non-english language words. In our current modelspace structure, we note that more english words relating to 'ocean' effects are being picked up. This may be taken, as an expression of relative values of linguistic weighting, that more 'ocean' impacts will be percolating up through the dense consciousness of the anglo world. The english language lexicon links that are accruing now have increased by over 100 % in the last run, and when compared with the ALTA report series 105 from Dec04/Jan05, such references are up over 1000%.

Our 'ocean' sub set has a dominant aspect of 'shocks'. Again, with this 'shocks' aspect, as we discussed last in Part 3, the cross links are very extensive, going to dozens of entities, and within the major entities, showing up in hundreds, if not thousands of spots. Again, our 'shocks' aspect continues, in virtually all the entities, to gain both size and emotive summation value strength. This is a very good indicator that in a general sense, the 'shocks' which are initially seen as beginning on November 21, 2005, will be continuing through at least the end of March, 2006.

In the case of the 'ocean' and its 'shocks' aspect, we find that much of the supporting aspect/attribute set goes to two separate kinds of shocks. One is seen as an 'explosion' over the 'surface of the waves', and the

other is seen as a 'shock/shake through the feet' which in turn is seen as 'vibrating the legs'. Of course, such language would be suggestive of a meteor or other explosion above the surface, and perhaps subsequent plunge into the oceans/sediments. There are *no* direct links between the two shocks to suggest that the 'shock to the feet' is triggered by the 'explosion {of} noise/light' over the waves. In fact, the two areas are distinctly separate, sharing only entity, temporal proximate, and inter-twined after-effect threads. The suggestion at this point is for a secondary, likely earthquake or sub-oceanic volcano to cause the second shock, the 'shake through the feet'.

While these twin 'ocean' shocks are noted within the modelspace as being very impacting, their long term effects seem to get lost in the rest of the events/circumstances developing around the idea of having 'crossed the threshold'. The cross links between this area and the Populace/USofA, and GlobalPop is that, while heavily discussed, the 'ocean shocks' will be but one part of a complex puzzle of circumstances all competing for attention during this period.

Markets - Fluid Motion

The modelspace is gaining many new layers of complexity as we find that various entities are forming more cross links than have existed in the past. This is good in that it provides some reinforcement to the concepts/contexts found within the interpretation of a single entity, but bad in that the complexity of the cross links makes the whole of modelspace that much more crowded with information.

In the case of the Markets entity, we have a Winter of 'fluid motion' ahead on a global basis. This rising aspect is supported by constant 'global' and 'planetary' images within the attribute set, and by indications that the 'problems/crises' of Winter will not be due to 'internal functions', but rather from 'external errors', and from 'external relationships'.

We note that many indications for the aspect of 'shocks' are brought into this entity around the end of November and that these cross linked 'shocks' are continuing to accrue all the way through to the end of March, 2006 and beyond. We do not yet know how far beyond as the modelspace is at its fullest, detailed extension at 4.1.2006. What is clear is that the 'pressures' which will be affecting the Populace/USofA and the Bushista entity are also within the Markets entity. The political 'crises' associated with the 'wounding' of the Bushistas, and the subsequent transfer/participation of the Populace/USofA entity with the 'wounding' also cascades over to the Markets entity where we note that 'joy/smile vanishes, heartache arrives'. This area is directly cross linked over to Bushista where it terminates in 'asleep/unconscious/distracted' as an aspect with a supporting attribute set going to the idea of 'awoken, sleepy, distracted, fires burn, smoke fills nostrils, coats/covers eyes, paper flutters aflame, mind burns'. A curious supporting attribute set which has even more revealing language in layers below where the image of 'office lit/torched, desk/table piled high, smoke billows' is attached to a structure which suggests that a 'planned fire' will be used as a 'temporary lie' to attempt to disguise what is happening to a very large purveyor of derivatives. Our data would suggest that there will be actual 'blood let, flesh opened' as a result of the apprehension of the parties involved within the fire. One point of note is that the data suggests that these derivatives are tied to 'housing'.

While we are on the subject of derivatives, there is a very interesting cross link which goes from this area of Markets over to the section within the Government entity structure where it terminates in 'NASA, space'. Hmmmm....didn't know that NASA was using derivatives to finance their space operations.

As may be expected, there are thousands of cross links between the Markets entity, various sub sections, and various areas of the Bushista entity. Admittedly, these used to run to the tens if not hundreds of thousands of cross links, but, as we have seen over the past two years, much of the financial based support for the Bushista entity is falling away. Now the cross links are mainly originating within Markets, and terminate within Bushista at structures going to the problems arising from the building emotional tension period of Fall-05, and then the subsequent emotional release period of November and beyond into mid to late 2006.

We should note that as far as the Markets entity is concerned, there is no "up" emotional values seen at all as far as we can reasonably extend the model. That is to say that certainly within the detail layer out to the

first of April-2006, and then also within the larger, entity emotional trends layer which goes out to August 1, 2006, and even within the tertiary "far-annual carry values" layer which is a rough sketch approach going out to near November of 2006, we find no positive emotive values rising. Again, just for clarification, there are no positive values sums which rise over the negative value sums, thus the entity stays in a 'down' and 'sliding down' mode at least through to Winter of 2006.

We also need to note that the Markets entity is acquiring a very large base of descriptors which go to the idea of 'barter' and 'trade'. These are gaining emotive value sums almost in a direct but inverse relation to the loss of sums around descriptors such as 'purchase', 'buy', and 'debt'. The interpretation is obvious under the conditions expressed by the Markets entity. It is seemingly suggesting that the 'shocks' of Winter on the populace of the planet will propel humans toward more of a 'barter' economy, and less of a paper/debt based one.

Populace/USofA - Economic Clarity Shocks Status Quo

As the modelspace is moved forward past our November 21 'shock' beginning, we find that a new aspect rises and settles just under the 'secrets revealed' meta data layer. This new aspect of 'clarity' is most closely associated with the Populace/USofA entity and as such may represent a meta data layer that USofA has to operate under which may not affect other peoples on the planet, sort of a group specific meta data layer. It also could be that this really is a meta data layer which is globally applicable, but is first manifesting within the Populace/USofA entity. We may be able to determine which at the time that it begins to manifest. That time is shown within our modelspace as being in the December through June of 2006 period. The aspect may extend its influence beyond that period, however as our modelspace only holds details to that time, we are necessarily limited in our view forward. Nonetheless, we expect that as the 'militancy/aggression' and 'secrets revealed' meta data layers lay heavy on the Populace/USofA this Winter, yet one more blanket is being put down, and its aspect is 'clarity'.

We first find that this 'clarity' is being supported by a huge amount of lexical descriptors for all things 'economic', but note that this is specifically not including most of what we find in the Markets entity, and thus is speaking to the actual economy and not the fiscal/financial/paper markets most visibly offered as economic indicators. The data states quite clearly that 'clarity' of 'economic vision/state descends/covers' and that in the words of the supporting aspect/attribute set, 'clarity induces vomiting/retching, poverty looms large/overwhelming, gonads/sexual/energy spent, bankrupt'. Hmm. Seems a picture is emerging.

The picture actually gets very grim as it develops within our modelspace. We have lexical descriptors for 'sudden clarity' which are yet once again supported by 'shocks' as an aspect. This 'sudden clarity' is also very heavily tied over to the Press entity. Within these cross links we find suggestions that a 'sudden insight/clarity' about the 'economy/material wealth' of the 'country/union/populace' will actually place a 'reporter/sayer' at 'risk of death/revenge/censure' for having spoken. But of course, the kicker to the whole situation is that the 'clarity' so suddenly "revealed" is already known to the whole of the populace in any event, it is just that the revelation of the giant elephant in the room forces the populace to acknowledge it, and thereafter, change their behavior. We see that the 'revelation/clarity' within the greater context of 'secrets revealed' will forever change the nature of the relationship between the Populace/USofA, and the government, both elected and civil service.

Once again, the meta data layers show that within our 'sudden clarity', we, as a nation, will be confronting our karmic patterns with 'aggression/militancy' and our issues with 'leadership/rulers'. At the point that the modelspace is moved through into December, and past the initial 'shocky' period of November 21, we note that more and more language suggests that the 'militancy/aggression' of our government will 'shock {with} clarity, costs hidden exposed, magnitudes unimaginable', and that the data further suggests that 'abandonment/rejection' in the 'face of clarity {of} sight {of} material crimes/murder', that the Populace/USofA will begin to manifest its own collective karmic response which our supporting aspect sets suggest will be to 'topple the pillar, stones flying, breaking, shards bring blood'. And that further, 'talk/voices {of the} mob/crowds cry revenge/death'. Also note that this whole area is under the aspect of 'economy' which also includes references for both 'confidence' and 'dollar'. We note that the data suggests a complete collapse of confidence in the populace of the USofA, both at a personal economic level, and at

the national economic level. This of a necessity also causes a collapse of confidence at all political levels. We note that our earlier ALTA report series of this year where the political structure at its very core was seen 'at risk of upset/core change', and that 'both parties' were to 'go to dust, one forgotten, one slaughtered as sheep, blood let, throats cut' appears to be shown as manifesting beginning in December and intensifying as we move through Winter. Not a good time to be in the insurance business if your clients are politicians.

As we progress the modelspace forward through the details offered for December and beyond, the imagery keeps reinforcing the idea of 'mobs' with 'torches' and 'pitchforks/implements/weapons' banging on the gates of the powerful, in other words, revolution. To that thematic end, we also have aspects which are stating 'power diagonal reversal' under which we find that 'powerful cut/blooded {at the} knees, clarity/revelations/insight exposes overload/excessive burden, unanimous purpose/focus {on} graft {brings} revolt'. Hmm. And this is playing out within the 'shocks' which are also continuing, and which are within the meta data aspects of 'aggression/militancy'.

Noting the meta data aspect of 'militancy' we also have to reference the very large number of cross links over to the Bushista entity where they terminate in the sub section devoted to the Wars of Aggression. Our entities are clearly indicating that by the time December is well underway, everyone, especially the Bushista's will desperately wish to 'turn back time' {ed note: not a reference to daylight savings} or to 'undo/reverse events/circumstances'. This area is one of the controlling aspects within the Bushista entity, and through its supporting aspect/attributes would seem to suggest that 'costs {in} blood {and} money' will 'rise {to the } back {of the} throat' of the populace and that the general feeling will be one of 'revulsion' with a tendency toward 'vomiting/retching' from the stress of the shock of the 'sudden clarity'.

Within the Populace/USofA entity, the data suggests that those of the political class are to learn that while shit may roll downhill at an individual level, once there it is swept back up with the rising collective emotional flood tide. In the case of our data, we have numerous bespoke values for acts of extreme violence including 'hanging' and other punishments. There is much in the way of newly acquired aspect/attribute sets to suggest that actual violence is possible or likely. We do note that if there is to be a manifestation of a civil war within the USofA, our data suggests that the lines are much more economic class determined than the 'culture' class determined as the mainstream media has attempted to foster. Our data suggests that the level of violence possible is seen as 'overwhelming/crushing' under 'weight of numbers/mass' the small fragment of the population which are actually the true believers and supporters of the status quo.

Populace/USofA - Shocks Doubled, Sliding City, Crust Cramps

Oh well, we had to ask...that is, Igor wanted to try an "entity extension". This is where we concentrate all the latter stage processing on a single entity, dump the modelspace over to an alternate window, and then populate with just reference values and sums {ed note: from the filled modelspace in the other window} and then see what we can see.

His concern is his extensive family in the Southwest of the USofA, primarily California. With the increasing "oddities" of late he wanted to ascertain any clues that might give him yet one more reason for them to label him the family nutjob.

Nonetheless, I agreed to the arrangement even though it has severely added to our processing load this week, thus delaying this posting. It has some value though, even if not as precise or as easy to interpret due to all the external cross links going over to the other window. The value of the exercise is that we do get to consider and examine a very complex structure without the distraction of its mingling with other complex structures. So this view offers us the ability to twist the entity about and poke around in some of its more private, hidden spots to see what we can see.

Igor's primary concern for his relatives safety has him basically asking two questions; firstly, is the next "city to go down" in California or the USofA, and what is the general state of affairs for the Populace/USofA as we progress from February of next year through June?

In the case of the first question, our entity extension is less than precisely helpful. It is true that there are a few thousand references to this "second city" and all of these are of course in the USofA as we have limited our scope to this area. However we need to note that this is not conclusive as to location, but what is very clear is that the 'sliding city', when it goes will have a huge impact on the Populace/USofA. Even more so, according to our data, than the impact of Katrina on New Orleans/et al.

Within the descriptors for this 'city sliding', and all geographic references aside as these are primarily misleading, we do note that the descriptors have a curious mix of both 'mountain/hills' and 'boats/sea/bay'. Since this conjunction of data elements is not an artifact of our processing {ed note: we re-ran several times}, we are left with a much more limiting description of the 'city sliding' in that it is described as both a place of 'hills, steep grades', and the proximate to actual 'mountains'. Further, within the 'skin of the city', which we can translate as the boundary or official borders of the place, are to be found numerous 'boats/small craft' as well as 'working vessels bearing loads, laboring'.

The descriptors would appear to fit such cities as Seattle and its environs, as well as numerous places along the West coast down through to San Francisco. However we need also note that places in Maine would also fit, as perhaps would areas within the Southeastern Inter coastal system. But of course, as the data still continues to indicate that the 'sliding, heedlessly into {the} valleys below' is the result of earthquake, then very likely we are restricted to the West coast.

We have little to no specific references which allow us to make a meaningful discrimination between all of the possible places which would fit the descriptors. We find that the 'city' has inhabitants who 'wallow in material affluence', as well as 'submerge in material delights'. But well, these days, such language can fit any city around. So less than helpful.

The data also indicates that 'boats dock, large streams/rivers'. There are some descriptors which also point to an interpretation for a 'ferry system', but lacking clear, bespoke wording to that effect, again, merely an interpretation. We also have more ambiguity in that we descriptors for such as 'brilliant sunrise pours down the mountains', with an obvious interpretation for the 'mountains' being in the east. Ok, fine, but not real helpful.

We persisted in rooting around in the belly of the Populace/USofA entity and after many hours were indeed rewarded with a possible break. Not that it is good, but at least not so ambiguous.

If we are interpreting the data correctly, it would appear that California is not the site of the 'second city sliding'. Rather it would appear to be the Pacific NorthWest (PNW). It may be that our interpretation of this area of the modelspace is confused as a result of performing the entity extension, however we do have some suggestions that the PNW will be severely impacted by events in the December through June period.

IF WE INTERPRET the descriptors correctly, then the data is describing a scenario in which we are looking at the aftermath of the 'earthquake, pulsing motion' which was, after the fact, seen as 'persisting 9/nine minutes'. Now please note this is one of the very few references which come through. It appears that by progressing the modelspace forward to June from an initial starting point of late February, we have created a view which is after the earthquake, when the effects are being felt. Our window is clearly on the other side of the quake, we just do not know how far past the event this window takes us.

What we can determine is that there are two significant areas of concern for the Populace/USofA, and that sub section within the PNW region. First is the actual, internal damage to the area, and second is the relationship of the region to the rest of the continent and the globe.

Within the first area, we find that much of the 'standing structures, 9/nine minutes old, 1/one minute dead/down' and that 'voices break, halted evermore'. This last is heavily internally cross linked and all of these go to 'communications' in one fashion or another. And given our second large area of concern, that is, external contact, we are interpreting this as being a very large separation of communications between the site of the earthquake and the rest of the world. Within our cross links we find supporting evidence to that

effect in that the descriptors note 'nobody comes forward', and 'no voices {of} concern {from} relations {to the} east or south'. Again, our general geographic references fitting for a PNW site.

We also find that 'no contributions arrive/sent', as well as 'no feet come', as well as other references which go to a bespoke value for 'isolation'. We also need to note that this theme of 'isolation' has repeatedly popped up in our series this year, and more often than not, associated with the region of the PNW.

As we drill down into this area of the Populace/USofA entity, we do note that general characteristics which can apply to a number of places as descriptors do have a very high degree of correlation to the PNW. That is, our general descriptors may apply to other areas, say San Francisco as an example, but if so, then perhaps as many as one in ten would be a very hard fit, whereas there is almost a 100% match with the region of the PNW.

Outside the specific references to the PNW, and within the data as a backward facing description, we do occasionally run into some language referencing the actual '9/nine minutes {of the } descent {into} valley'. We find that 'palms chafe, skin abraded' right off the hands as the imagery of the aspect/attribute set would have the populace seeking refuge by 'sitting, hands anchoring' on 'rough roadway'. The image coming out of the attribute sets is that the event so bounces people around that virtually the entire population is 'wounded/injured' albeit most are minor, such as 'palms scraped raw, flesh left {on} rocks'. However, the data also note that even these small wounds have dire consequences as the suggestion is that 'surgeons/doctors {are left} handless, patients wither'. The image clearly suggesting that doctors can't work if their hands don't.

There are a number of areas within this section of the entity which also go to the effects of the 'sliding city' on the rest of the country. This event is seen as having acting as a 'lever' or 'trigger' in the political realms of the country. Further we find that the rest of the country 'feels reduced {by} half'. This last descriptor supports an aspect relating to 'trade, goods' and implies that the impact of the quake reduces cross country travel of imports and thus affects the nation as a whole. We also note that repeated references to 'restricted movement/travel' within both the affected region and the rest of the country come about due to the earthquake's impact on both communications and movement infrastructure.

Sadly we can see from our entity extension that perhaps months later the affected population of the 'sliding city' is still trying to cope with both 'fire' and 'winds'. The latter are supported by a very large descriptor set which includes many chemical references as well as event descriptors indicating that even months later, 'small movements' within the 'rubble/ruins' will trigger 'fires' which in turn are now being fed by 'unseasonable winds {from the} south and east' and that these wind driven fires will cause both breathing problems, as well as 'driving survivors/remnants' from their 'precarious perch/hiding' among what are seen as 'ruins, holes of danger, scant sanctuary'.

As if the above were not sufficiently disturbing {ed note: especially to Igor and I who live smack in the middle of the PNW}, we have to report that within the entity extension is a small sliver of data structure populated with descriptors going to the idea of a 'pole/crustal' shift for the planet, with the emphasis being put on the 'crustal' part of this. There are no clear time indications, but we do note that the 'sliding city' does so as a result of an earthquake which is seen as a pre-cursor to the crustal shift. This shift, while only sparsely described {ed note: likely indicating some years off}, is nonetheless cross linked to the backward viewing descriptors for our quake multiple times.

Those descriptors that we do have suggest that a 'shift/movement/spasm/cramp' of 'one-sixth' of the 'skin' of the planet will occur. This 1/6th movement would imply a rotation of 60 degrees of surface, though we have no clues as to directions or angles of spin. We do find that the '2/two days' of planetary 'cramps' will require '21/twenty-one generations' to settle down, with the 'first sons/daughters/generation' receiving 'one-fifth' of all the 'movements'. Hmm. Don't much like the sound of that, and Igor is over spilling his coffee all over his shoes as he reads this.

Well, enough of that trail through the data for now, as apparently this 'crustal cramping' is at least a couple of years off in the future, but before we leave, on last note that seems to indicate that within a short time,

perhaps only three to seven months after the earthquake sends the 'city sliding' down into the 'valleys' and partially into the 'sea/ocean', we have some 'ocean' links which suggest that large portions of the Populace/USofA start making plans, or actually undertaking the 'removal {from the} edge/boundary {of the} sea'. The cross links are extensive and most are going to either Terra entity or the GlobalPop entity, so our interpretation is that this becomes a global movement of populations away from shorelines. This apparently comes about after a very sharp, sudden rise in ocean levels such that 'seals/dolphins' will be seen 'swimming {down} boulevards' in some global capitol cities. There is other imagery, but nothing suggesting a time frame. What does show up is near the end of our extension out to June of 2006, but again, having only on entity and limited cross link tracking ability we are necessarily suffering a lack of details.

TPTB - Hunkering Down During Secret War, Particular Pigs

In returning to the completely populated modelspace, and after having examined our Populace/USofA entity extension, one is stuck by the curious nature of the TPTB {ed note: The Powers That Be} entity. It is clearly, when progressed into the mid December period, starting to show a separation or cleavage, much like school lessons on the asexual propagation of amoeba. However in this case, it does not appear that the 'cleave/split' within the entity is to allow for growth. Rather, it seems to be indicting a period of 'internal strife/disagreement/discord' which leads to 'cousins violence {against} cousins'. In support of this idea we have many, repetitious references to weapons of all kinds that can be held and operated by a single individual. This is significant as it points to the actions of small groups and individuals, and not nation-states with their much larger potential for destruction. We have data showing 'small arms', and 'knives', 'daggers', 'bows/arrows', and even 'poison {by the} drop'. It's beginning to sound a lot like the old path to papal succession in the middle ages in which Family A did what they could to take out all the contenders for the position in Family B and vice versa.

Now we note that our data suggests that the Populace/USofA, as well as GlobalPop, will be able to 'observe' the 'hands behind the curtain, shapes reveal' during the TPTB's developing 'secret war'. It would appear that our data is pointing to a period beginning in mid to late December when 'visible cloth' is actually 'revealed/ exposed' as 'hiding secret faces', and 'hidden alliances'.

It is important to also note that many of the 'innocents' are seen as victims of the intercline warfare secretly carried on by TPTB during this period. There are many areas within both sides of the TPTB entity as it splits which show that 'minor functionaries/diplomats/officials' will meet their 'death/demise' as a result of 'standing too close, being too close' to the wrong individual at the wrong time.

One of the apparently observable signs of this time will be the 'withdrawal' of large numbers of the glitterati from the 'hardened ones' of the TPTB. The suggestion is that after a few of the hangers-on, or entourage members are killed in our secret war, the rest of such persons for both sides, smelling the 'fresh blood, acrid, {in the } air' will actually, physically distance themselves from the potential targets. Therefore, to the outside observer following the global drama of it all, it may become easier to pick out just who's who in the middle of it all, as certain figures start traveling about or being seen with far fewer persons in tow.

An alternate interpretation, and one that is supported with many internal cross links is that the various members of TPTB will 'drop from sight' or 'vanish' virtually overnight, such that all of the 'personality press' are actually left to wonder on air, and 'in visible/observable light' as to where is so-and-so, and so-and-so, to the point that the large number of personalities suddenly missing from public view is a news worthy event of some discussion.

But in the end, our data suggests that this period of 'secret' war is limited both in scope and duration, as events elsewhere in the solar system and universe at large play themselves out. IF there is any warning to be taken from this particular entity, it would appear to be to 'watch/observe' in order to see the 'hidden hands move', and to also be damn sure you don't find yourself in anyones entourage.

A last clear message is that the entity is very explicitly saying that 'dying days' are coming for TPTB, both as they 'seek withdrawal to safety' which will turn out not-to-be, and as a result of their own unawareness

which leads them to ignore the fact that they too are pigs, only these particular pigs think themselves too good to learn to sing.

Hmmm....can almost smell the barbeque from here.

Y'all want sauce with them ribs?

Conclusion: Part 4

Even without Igor's wanting the entity extension, we are finding ourselves in one of those periods where the data change out rates in the modelspace is very large. At this point running nearly 55 per cent in total. This is very large change out rate, and exceeds by five times the rates seen prior to the 9-11 incidents, and is still running at 3 times the rates seen prior to the Sumatran quake and tsunami.

As a result of our data movements, we have many entities forming and dropping on the periphery of the main entities at a rate too fast to really capture, given the work required to produce these reports. In other words, there are huge areas of the modelspace going unexamined necessarily due to the tempus fugit {time flees} part of reality.

We have been working toward the end of providing a context in which the major entities can be viewed and as such have been concentrating on these entities. For at least part 5, anticipated out next week end, we will look at as many of the smaller entities slipping by as we can. This plan may have us with many small paragraphs with little details, or we may become captivated by some small entities and do them in depth, we cannot say at this point. But our goal is to find out what interesting bits are hanging out at the edges in order to increase our awareness. As we note above, awareness of the cycles in play around one provides a greater freedom of action to those who are paying attention. We really want to pay attention.

We are pigs who really want to learn to sing.

Note: Entities are identified by a blue typeface. Aspect words are enclosed in square brackets []. Attribute words/phrases are within parentheses (). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *.

Data set distilled from 59.038 million reads . Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

Meta Data - Relationships

In this last week's processing we are seeing another meta data layer emerge which we are labeling as 'relationships'. It could also be thought of as 'intertwining' as both are in the descriptor set. What is clear so far about this layer, which has snuggled up just under 'secrets revealed' is that over the next 8/eight to 10/ten months, the theme of 'relationships purify/distill' will be manifesting. Our data shows that this layer will contribute to both the 'secrets revealed' and 'aggression/militancy' layers in that new 'threads of reason/connections' will 'reveal secrets long thought dead' which in turn are directly {somehow?} connected to big issues of 'aggression/militancy'.

The impact of this new meta data layer is seemingly way out of proportion to its actual value accretions. This is due to the odd nature of the layer which fittingly is composed of aspects which are almost 100% cross linked upward. The interpretation has to be {ed note: at this stage the Press entity, and Bushista have not been analyzed yet} that 'inter-relations' will be one of the driving forces for 'secrets revealed'.

Terra - Dark Space Difficulty

As odd as it may be to place matters of 'space' within the Terra entity, the practice does make sense in that humans as a rule tend to see 'space', at least at the base emotional levels, from an entirely geo-centric point of view. It is as though 'space' is thought of as a support system for earth.

Within the Terra entity, 'space' sub section, a new sub set has developed that we are labeling 'dark space'. It perhaps could be deep space, but the imagery goes more toward 'dark' and 'opaque'. This section is fully populated with supporting aspect/attribute sets with a large number of cross links, almost all of which are internal to the Terra entity. This area has robust and continuing support through the layers for a dominant aspect of 'difficulty'.

At the first layer down, a supporting set of 'hiatus' or 'period/space of quiescence' with imagery of 'caution scents winds, far-away/distant smell/scent {of} dry earth/ground'. It needs to be noted that this last aspect of 'earth/ground' may well be referring to 'electricity' and indeed that word is within the descriptor set. We also need to note that it was 'electricity' descriptor set which was the primary rising aspect for the description of the Sumatran earthquake and tsunami which we posted about 2 months prior to the event {ed note: we misinterpreted it as 'electrified water' rather than 'force driven wave'}. This being the case, it may make sense to consider that we may be getting impressions of either a 'wave' or an 'electrical' event. The deeper supporting data is ambiguous and could easily be interpreted either way.

In any case, the data set has a primary aspect of 'hiatus', supported by many layers of words going to a description of an 'event'. Each of these layers, either directly or through cross links, contains words for 'caution' or 'risk appreciation'. In a disturbing note, as we drill deeper down we begin to encounter references to 'death', and 'end of life' with some increasing frequency. To reduce the drama, let us note that this is not showing anything such as the numbers or even the idea of 'manifestation' that we saw with the Sumatra focused data. Rather this wording would seem to be suggesting an event which 'puts life/death' in perspective for 'all creatures/beings' such that 'old eyes see new again'. The data may be suggesting that a large event in deep space will be 'visible {to} all planet/globe' and even to 'all under water eyes'. This event is described by the imagery as 'putting in context' which is directly supporting our 'death' references. So the good part is that this is much more likely to be a turning point in consciousness, rather than a big smack on the planet by something from "out there".

That said, the words of 'caution' are to be taken quite seriously. If we are even close in our interpretation, then the aspect/attribute set would seem to be suggesting that the 'caution/risk appraisal' will be necessary, and that in some way, seemingly an actual physical manifestation, many 'creatures/beings' here on earth will go quite 'raving' insane. There are extensive descriptors indicating 'finding {the} old ones wandering, soiled, bereft of sense/mind/reason'. Other, more illustrative supporting areas are concerned with 'compassion' for the 'millions' who will be 'mentally depleted/reduced/extracted' by this 'dark space difficulty'. The supporting layers go the imagery of 'givers/volunteers' who labor to 'feed, clean, care' for those whose 'reason ran tumbling away' in the midst of the event.

One of the rare, external cross links from this section goes over to the Populace/USofA and GlobalPop where it terminates in 'shock'. The aspects/attribute images go to the idea of 'dark space difficulty thunders/shocks senses/mind {so} violently {as to} reverberate, drowning {out} reason/sanity'.

Ok fine. At this point I reassure Igor that all indeed will be ok for him as he is already 'bereft of reason' as is demonstrated by his participation in this screwiness, and so he has nothing to lose. A big "whew, dodged that one" is heard and we continue.

The 'dark space difficulty' event apparent is to follow a 'hiatus' of some form that will be 'notable/seen/observed' and 'comments flow, discursions proceed'. The idea being that something about the 'dark space' being in a state of 'hiatus' will cause comment publically. Our data suggests that just as the discussion is really getting rolling about the 'hiatus', it will end suddenly, and with some visible event.

Other than the many layers of descriptors which all are going to the earth-bound impact of the event, we have very little indeed to describe the nature of the event. Assuming that this interpretation is not completely wrong, it may be that the 'dark space difficulty' is unprecedented within human understanding and therefore we have no archetypical analogs within our descriptor set. What few things we can discern go to the idea of 'waves' or 'force' which has 'mass/body' to 'only some beings/creatures', while apparently others will 'eat/digest {the} wave/force'. Hmm.

Both Igor and I have a difficulty in placing the nature of the event and its impact. While this section of the Terra entity, when progressed through the modelspace ends up with a 'thunder {in the} mind/senses' which is seen as being 'heard above all noise', and while the section as a whole does dip below the neutral line into negative territory, the over-all emotive values and their sums do not fall in to negative emotional territory. Rather they are just barely hovering either side of neutral.

Terra - USofA - Noisy Weather Doubles, and Doubles Again

The Terra entity, sub set which is geographically focused on the North American continent and the extended USofA nation, has gained considerable data going to the ideas of 'weather/climate doubles', and this in turn is supported at the next layer down with 'doubled is doubled again', or 'repeating of the doubling'.

This area is within our 'shocks' sub set, and within its supporting layers we find a reinforcing of that idea in that 'shocks' is a repeated aspect as well as a primary attribute and modifier. These lower level 'shocks' are several times carrying the number 4/four within their sets. We also find that the 'shocks' are seen as 'spread/diverse', with impacts which are 'felt both above, and below'. These in turn are supported by the idea of 'serious situation' or 'gravitas momentum' in which the 'aware humans/beings' will 'smile' in 'realization' while others will 'ebb away into fear and dismay'.

Within this area we also have many cross links back to the 'noise' section of Terra entity that has been growing all year. Apparently this will be one hell of a 'noise'. It is described within the data sets as being 'heard for 100 degrees' which basically if we apply that to the globe of 360 degrees will be approximately one-third of the planet.

The cross links back to the 'noise' section detailed in previous ALTA report sections have their origins within the 'weather doubles, and yet again' part of the Terra entity. The imagery coming out of this section is one of a period of 'oscillations' between 'repose/rest' and 'violent expressions {of} weather'. This area is either on-going, or is initiated by our 'noise' incident. The interpretation is likely flawed as this whole section of data is very confusing in the cross links and counter links, but what is clear, absent any understanding of a causal relationship, is that the 'noise' and the 'weather doubles' are temporally close to each other if not inter-mixed.

Bushista - Chief Dick at Discontented Rest

As a rule our entities are not personality focused. The exception of course is the Bushista entity which is all about personalities, and relationships. In the case of our most recent processing, things are, as the data actually says in the aspect dominant for Dick Cheney, 'in bad shape'.

The data further goes to the idea that the 'calves are reduced to uselessness, twitching below' and further that 'discontent rises {as} body fails {from} lower limbs {up through} torso'. Under this area in a very large supporting base the lexical descriptors paint a picture of a machine whose 'circuits {are} failing, shorting-out', and whose mind 'rages {at those} near-by' out of 'frustration {with} personal decay'.

The descriptor set also goes to the idea of 'twin mountains {of} dead flesh anchor {to the} bed' as though the legs will fail and some form of creeping paralysis will ensue. This is all directed by and part and parcel

of the heart disease already known, however our immediacy values suggest that Dick Cheney may not last through to December. The data indicates a very 'weak' state and 'bleak outlook'. Further it suggests that 'abeyance' is in place on 'construction' of some 'secrets/plots' while the 'illness/weakness/disease is assessed {for its} impact'.

There are many repeated descriptors going to the idea that the 'dead lower body' takes control, and that this is a bespoke 'bad sign {indicating a} bad state developing/growing {into a} bad time'. In support of this, we find that much of the data hangs under an aspect of 'bend' and is all negative and going to the idea of 'inability {to} bend', and thus the interpretation of onset of paralysis.

The whole of this section within Bushista is very robustly filled and hugely cross linked. We note that curiously the cross links are mostly off of the 'frustration {of the} exercise of power' aspect/attribute set and are mainly internal to the entity. This section is a follow-on area which has grown from the previous ALTA report series reports that the Bushista entity was indicating a 'melt-down' or 'dissolution' in progress. Now that thread for 'dissolving into chaos' has several, clearly shown causal "clumps" within the data. One of these clumped areas of data which participate in the over all dissolution seen developing over the next 2 months is the state of 'ill health', and 'mind decay/degradation' which is shown as being 'clearly visible/exposed' in the course of October. As near as we can determine through the cross links to the Press entity, the issue of Cheney's health will come out early in October and grow as we proceed through to the 'shocks' of November.

While the death of one of Bush's brain cells {ed note: Dick Cheney} would clearly be a large emotive event, it is hard to see how it could be the generative cause for our 'shocks' of November, or the emotional releases of December. Even if TPTB pumped up the death of such an individual for a 24 by 7 week long parade a'la Regan's funeral gala, the sense is that very few would actually care, and that this very few humans could not be capable of generating the emotional release that was seen for December. So in our opinion, the 'decay' of the Chief Dick of the Bushistas does not constitute enough emotional mass to be a significant part of the pending emotional release.

Needless to say, as the modelspace is progressed, the situation for the Chief Dick deteriorates over the course of the next few months. The impact on the Bushista entity is shown as being severe. We note that the entity actually is shrinking now, and as the 'decay' of the Chief Dick becomes evident, the 'rushes fall leeward' with the 'prevailing winds'. This we can interpret as a shift toward the exits for much of the support for Bushista which was Dick Cheney dependent. And so goes the 'dissolution' of Bushista.

Bushista - Putrefaction Interconnected, Merde rolls downhill

Staying with the Bushista entity for a moment, we note that as a whole one of the larger rising aspects is 'putrefaction'. This aspect has a supporting attribute set going to the idea of 'interconnected'. An alternative primary attribute could be 'inter-twined' or perhaps 'spreading'. We favor the former interpretations, as 'interconnected' seems to best describe the visual effect of 'threads/ropes/vines of putrefaction' which rise from the "gray spots" seen besetting this entity since early in the year.

The rising aspect of 'putrefaction' with its dominant supporting attribute set of 'interconnected threads', is itself supported by numerous, and repetitive references to 'energy'. As is clearly the case, the Bushistas, and the USofA have some real 'energy' issues to deal with at many levels. These sections of the entity are suggestive of a whole new round of 'energy' or 'dearth leads to death' issues to arise. We need to note that this latest week of processing has been on collected immediacy values and as such the idea is clear that another 'energy crisis' will erupt into public consciousness very soon and the consequences for the Bushista entity are seen as being extremely 'dire'.

The cross links from Bushista over to Populace/USofA indicate by their origination and destination nodes that the 'crisis of energy' will soon 'roll downhill', {ed note: much like merde} to 'settle on the aching backs' of the populace. In this case, the 'populace' is shown as 'not caring/heeding' the 'blandishments from the tops of the hills'. Instead, it appears that a 'reaction of abandonment/leave taking/forswearing' will take place within large segments of the populace. This area is very hard to interpret. We can see enough

supporting aspect/attribute sets to indicate a sharp and sudden 'emergence of thought' which can be interpreted as a 'movement' towards 'ignoring' the government, especially the elected sub set. This idea is reinforced with repetition in supporting aspect/attributes with imagery toward 'abandonment with feet, trampled edicts' and 'edicts/proclamations shat upon, officialdom runs {in} fear'.

While not the total sum of the indications, this area of Bushista with its cross links to the Populace/USofA does participate in the 'transfer of wounding' which has been developing all year in regards to the 'relationships/interconnections' between Bushista and Populace/USofA. Contrary to the official teevee propaganda seemingly intent on fanning the flames of a "culture war" which would split the populace, our data is showing strengthening accretions of new descriptors for the idea of a "class war" in which a very large majority of the now 'struck down, bleeding, knees scraped raw, flesh removed from back' citizens of the populace will 'rebel' and 'incite revolution' against the 'moneyed few/minority elite'.

In support of the outlandish, and improbable idea of the sheeple of the USofA actually rebelling, we have had recurring themes toward that image all year. In fact the imagery has consistently pointed towards actual 'blood, fresh, red' and 'black dried blood' in the streets. We have also come across disturbing images of 'corpses, hanging, {from} granite building fronts/facades' where 'neighbors/passers-by' are 'encouraged {to} hack {at} flesh {with} blades'. A curious reference here is that more associations for New York arise than do any strictly political areas such as Washington, D. C.

Since our data is also showing a very severe impact on the 'economy' over the next month or so {ed note: the cause of which is not yet manifest}, it is not out of possibility that those first victims of the 'rebellion {of the} popular spirit/movement' will be the 'fiscal lords/masters'. This bespoke reference also has some really creepy imagery of the members of this 'class, cohort' being 'hunted {for} bounties' and 'skinned/beheaded {for} proof'. In some areas the data reads much as a horror novel might, at least for those who identify with the 'power elite'.

As we move the modelspace forward with these newly processed immediacy values, we find that the Bushista entity has a falling dominant aspect of 'satisfaction, internal' which is replaced with the rather dark image of 'seeing/viewing {oneself/us} surrounded by energetic enemies howling {for} blood'. This area is rising in support of the 'putrefaction spreading' within the Bushista entity, and seems to be indicative of the general tone for October.

Bushista - Iraq - Remorse Comes

A subset of data within the Bushista entity is pointing at a very bad period of '3/three days {of} advancing {of the} populace against {the} forces {of} tyranny'. Given the nature of the Bush War of Aggression against Iraq, there is no way in which the USofA forces cannot be viewed as representing 'tyranny' in the eyes of the people whose country is being occupied. Given that caveat, it appears that a very serious 'remorse' will 'arrive over 3/three days' as the 'fulfillment of intentions manifests'. This last can also be interpreted from the lexicon of the descriptor set as the 'manifestation of karma'.

Whatever the period is to bring, we have some small indicators that '15/fifteen parts of 16/sixteen' will 'participate' and that the outcome, from the Bushista entity view point will 'weigh as a rock on a pea'.

All of this is wrapped up under the bespoke emotion of 'remorse', but even though it is within the Bushista entity, there appears to be very little of the bespoke emotion tied to the Bush personality. Rather within this entity, it appears that the 'remorse' will be 'sitting on/covering/pressing on' those who formerly supported Bush the personality, and to whom a new image is emerging which they are apparently categorizing as 'disgusting'. We have much to suggest that a natural human reaction of revulsion is about to set in with some largish section of former Bush personality/image worshippers who will find their god has feet of clay. This last is portrayed within the data set in the imagery of the 'followers standing bare feet {in} shit'.

TPTB - Dark Aspect Woman Reappears

Well, if this isn't a big howdy-do, our 'dark aspect woman' is reappearing within the data set during this processing. Still seen as 'blind and lame', she now has 'arms linked' {ed note: relationships again} with the 'dred companion' and is seen as 'walking danger' by TPTB entity.

This 'dark aspect woman' has now gained about 4/four fold in the area of bespoke 'fear' and 'anticipation, negative' references within the data set for TPTB entity, and is also carrying nearly a 10/ten fold increase in references to 'danger'. These 'danger' references are heavily cross linked back to both the 'relationships' meta data layer, and to both the Bushista entity, and the Populace/USofA entity. It is clear from the data layers and their arrangements internally within the TPTB entity that the entity is expressing 'fear' and 'danger sensed' from both cross linked entities. To be clear, our data shows that the TPTB entity is 'afraid' of both Bushista and Populace/USofA. In the case of the Bushista bespoke 'fear', the emotions captured suggest that the 'fear' is of 'contamination', or perhaps better interpreted as 'guilt by association'. However we also need to note that much of the 'fear' within the TPTB entity which is Bushista cross linked is concentrated around the aspect of 'revealing/exposure', so perhaps the 'guilt by associations' might be better thought of as 'revealed {as} manipulators {by} too close an association'. Again, this area is heavily participatory within all of the meta data layers.

Seemingly just to muddy everything up, we find that as we progress the TPTB entity forward in modelspace it gains not only the expected cross links to the Bushista entity, but also is gaining cross links which terminate in the Terra entity, the 'dark space difficulty' sub set. These cross links originate within TPTB and terminate in Terra. They do not, as is more usual, involve any reciprocal links back.

The originating points for our cross links are also very expressive, even though one sided. We note that the dominant aspect within the originating cross links is our recent favorite 'shocks' and that 'shocks of thunder {in the } air send quivers/tremors {through the} body'. This in turn is supported by sub sets within the TPTB entity which are headed by 'delusion, self', and 'lack of sense'. Almost a mirror of the emotional tone found within the area in which the cross links terminate. It may be that this is a reinforcement of the idea of a 'mind shock' which will also impact the TPTB. We find in support of this many threads which go to the idea of 'relatives beset {upon} heavily {by} mind/mental/reason rocks/weights/ballasts'. Apparently TPTB will fare no better with the 'dark space difficulty' than the populace in that we find the data showing the impacts on the 'relatives' such that 'piss runs, legs tremble, mind shakes, leaves' and that TPTB will be 'burdened' with 'walking problems'.

This area of the TPTB entity in which the cross links to the 'dark space difficulty' exist is dominated by the sub set suggesting that a 'war' or 'struggle' within the ranks of TPTB will be occurring or in its later stages at the time that the other 'difficulty' comes. We have thousands of words suggesting that TPTB will be engaged, or are engaged in 'active war' with 'struggles against denied rights/favors' occurring. And within much of this we have areas going to the idea of 'hostage taking'. These descriptors are suggesting that seemingly the traditional way of war amongst the TPTB is with 'hostage taking' rather than open hostilities. Now, the data points to new levels of violence appearing. The whole area imparts the feeling of reading about turf battles between rival factions in a gang, or the same description of the various medieval families fighting over the pope-hood. Basically same old shit.

However, as we noted above, when the modelspace is progressed, cross links of fear associated words form between the TPTB and Terra entities. Much within both entities seems to suggest that times are a'changing, and now is the when.

Within our subset of TPTB we have two descriptor sets going to the idea of 'rebellion/revolution'. In one it is clearly the view of the TPTB who will 'lose strength, hoarded possessions', and the other is that of those without who will be instigating the 'upset/overturning' of the 'cart/wagon of strength/power' such that 'possessions and secrets {in} great number fall/tumble out'.

And a good time is had by all, except the TPTB. The lexical structures here, if examined with an eye for accentuation of the drama of it all, would have us entering the 'beginning time, before acceleration, as the start {of the} beat {of the} wings are heard'. When viewed from the lexicon of the TPTB entity, the verbal

imagery is one of 'dred' of this 'time {of} challenges {for/of} existence'. This area of 'dred' is cross linked internally over to the area from which the 'dred companion' imagery is taken. Within that section, the termination of this cross link goes to the idea of 'dred companion eviscerates/disembowels, blood, entrails'. Hmm, from the TPTB view, this fellow does not have the proper attitude of respect for his self-proclaimed 'betters'.

Populace/USofA - Road Rises from the Abyss

While the goal in the parts 5 and 6 of the ALTA runs is to examine the smaller entities that form for significance, we find that this particular processing for part 5 has brought in some large scale changes within the main entities. One most noticeable change has occurred within the Populace/USofA entity.

In the examination of new values accruing to an entity it is important for us to keep the previous layers in mind as what is frequently most important is not the momentary end result of the change to the entity, but rather the nature of the change itself. What have we shed, and what are we adding? In the past our best interpretations come from paying close attention to the shift of the data itself. What is revealed within the framework that is built by the language that is going and the language that is coming.

In the case of this week's processing, we have had a nearly 65% change out rate with our primary aspects. Those aspects that have stayed with the Populace/USofA entity have tended to cluster around the 'rebellion' theme mentioned in the TPTB section of this article. The newly arriving aspects also are heavily clustered in this same area of our lexicon.

We note that the Populace/USofA entity is now being shown a 'road rising from the abyss, destination unknown'. We also find that a 'period/time/phase' of 'bloody retribution' is ended not by the mobs running out of targets for retribution, but because of the 'appearance of the alternative path' which could also be interpreted as 'the new road'.

A very interesting cross link development goes from the Populace/USofA over to the TPTB entity where it terminates in the 'abyss/bottomless pit' area which is under the 'dred' sub aspect. The origin of the cross link is within the Populace/USofA entity, where it jumps of from 'pushed/propelled/forced' and this area also contains the same lexical descriptors for 'abyss'. Our interpretation is going to favor, given the rise of the 'rebellion' words, and both the 'secrets revealed' and 'aggression' meta data layers, that the populace is going to be having a good time roasting the former power brokers when an alternative will rise which will take most of the heat off the remnants of the TPTB. Some of the mob is seen as 'continuing, in excess, gratification/satisfaction' in the 'retribution {for} evil {in the} beginning', but much of the energy being put to the task of 'redressing wounds {to the} skin, organs' will then shift, and apparently rather rapidly, toward this 'next doorway/new path/sudden road'. All of the words used in the phrase are within the lexicon, and each could easily be the interpretation. As opposed to an exact translation of the lexical structure, what we find to be very important is the development of the change itself as this key value for 'new path/next road' is appearing at many levels within the Populace/USofA, and all of the instances are both sudden, and fully populated with supporting aspects. That these supporting aspects present less than a detailed image of the new road is not too surprising given that it has just formed within the entity. We do expect that it will clarify over time as more values are brought into the modelspace.

As we had progressed the modelspace, and Igor first spotted the appearance of this new data area, we were surprised to find that it was forming in similar fashion at both ends. That is to say, within the Populace/USofA entity the "front end" of the lexical theme was forming as it simultaneously formed at the "back end" within the TPTB entity. If this effect has occurred in the past within the modelspace we have never captured it, or become aware of it. In effect what we have is a 'road' appears for the Populace/USofA which leads from the 'abyss' where the 'remains/corpses' of TPTB will be left. A very curious thing indeed.

We also note that our 'new road' is likely not a strip of asphalt. Rather the indications are that what is being described is, as the data would have it, the 'removal' of the 'condition' which 'prevents the

appearance/manifestation of the wise man/human'. So we have a situation in which the lexical data structures that are arising are point at the appearance of a new insight or sudden mental change which is described as 'sweeping' or 'cellular' in its personal impact on people, and is also shown as 'spreading' as though 'fire' in the 'veins'. This is, of course, the view from the Populace/USofA entity.

When the data is seen from the TPTB entity, these cross links do not provide warm and comforting feelings. Rather this whole interlinked area of the Populace/USofA has *all* of its cross links to TPTB housed under 'dred'. Further down the 'dred' is detailed in many differing ways, some personal and brutal, with large numbers of references to body parts and functions. In other sections under the 'dred' we have huge numbers of four and five way cross links which are participating within the 'secrets revealed' meta data layer almost in totality. This suggests that much of the building, and soon to be visible 'sweat in the eyes' or 'extreme anxiety' that TPTB are feeling has to do with this particular layer of the meta data. We find that the corresponding connections within the Populace/USofA, and to a lesser extent the GlobalPop entity, are focused on 'liberation {of} action' which is seen as being 'produced/created/manifested {by the} revelations {of} evil {in the} beginning'. It is as though the data is painting a picture of the emotions on both sides of a single event or occurrence. What is showing up is the image of 'personal/individual behavior/reactions' suddenly becoming 'free of restraints/taboo' with the 'release/revelation/exposure of truth/fact' concerning the 'evil occurring {in the} beginning'.

This area of the entity could easily be interpreted at many differing levels. If we were to focus on mainstream news events, one could say that what we are seeing is the rejection of the Bush Wars of Aggression against the Iraqi's, and the wholesale repudiation of the restraints due to the lies used to promote the invasion in the beginning. However, due to the nature of the entity, this may be the smallest of the manifestations of this emotional theme. It would appear that larger issues will be triggered by smaller ones. Not to diminish the Iraq invasion and its toll on both Iraqi and American populations, but the sense we get from the data points to the lies and coming exposures relative to Iraq and the Bush admin to be only the very thin edge of the wedge. From the cross links it is clear that TPTB fear that once the 'unraveling' begins, that it will not be limited to the 'surface of the table', but instead will go all the way down to the 'rot in the legs'.

From the point of view of the Populace/USofA entity, and our personal involvement within that group, what seems most significant is that 'behavioral constraints/shackles' will be 'overthrow' with the 'spreading' of the 'revelations/exposures'. Within our entity, as it is progressed through the modelspace of the next two months, we find that increasing 'reports of alteration/change' of behaviors, on the part of the populace, once labeled as 'aberrant', will now be 'shown shirtless/bare'. The effect, at least within the Populace/USofA entity is seen as being startling. We should note that the relationships between the TPTB entity and the Populace/USofA entity are suggesting that the TPTB will be/are in serious mental decline. That as a result of the stressors that they feel that 'privilege {places/demands} responsibilities {of} knowledge' has been draining their capacities over these last '13/thirteen' years slowly, and that they will 'fail' to 'observe facts/developments/manifestations' until too late. Actually, as described through cross link imagery, the TPTB will be so far behind the curve of events once the 'restraints break/fail', that they will only become aware of the core nature of recent changes as the 'noose/rope descends'. Presumably over their heads to 'rest discontentedly' on their necks.

While we are describing the modelspace as though all this takes place as a more-or-less single set of occurrences in October, what we need to reinforce is that the immediacy values just processed are painting a picture still in progress, and that events in October are merely the 'begriming {of the} beginning'. The emotional release charts presented earlier in ALTA 1105 and here in 1305 are still holding up their state values, and are indicating that the 'beginning' seen starting in October, will be continuing at least through next June.

The lexical set which describes our October beginning period contains some verbiage going toward warnings. We find that 'continued movement' and 'successful advancement' are dependent on 'subordination' of 'pleasures/desires' to 'serious matters'. Further the 'serious matters' contains many curious references to both the 'moon', 'earth', and 'space' which may be inter-related to the Terra observations discussed above. However, such relationships aside, our detailed lexical areas show that 'subordination of

personal pleasure' or perhaps better translated as 'sacrifice' will be required of 'all who walk' for the 'new road'. Those who choose to 'take the change' will be 'lame, hurt' the 'first half hour', and there after will be 'strengthened' by 'walking through pain'. This is likely describing the mental change necessary to accept or grasp what is being 'revealed {about/concerning the} evil {of the} beginning'. There are admonishments within the data that the 'road is hard/rough', and that 'success equals acceptance plus perseverance' as the 'pain of understanding' is apparently so great as to cause many to 'loose their bowels'. Hmm. Gonna get smelly here on earth, in more ways than one.

Further details show that a high-profile 'wedding' will be 'postponed/held off' due to bespoke 'conditions/circumstances' of the moment. The changes set in motion by the 'revelations and particulars' will cause much 'distance/relocation' among certain groups and families.

The really odd detail, considering how much of this section of the entity goes to the 'appreciation of the past' and 'the state of the beginning' is that a strange phrase is showing up. This phrase, with its supporting, and technical language is very unique and is presented here as it appears. No interpretation is likely to be needed. This detailed phrase, making its first appearance in the Populace/USofA entity is a rising aspect with high negative emotive sums, and is 'the thermostat of the earth'.

NASA - Disturbance in the Force

The recent admissions by the titular head of NASA about the un-wisdom of the ISS and Space Shuttle decisions is the first of the 'changes of relationships' {ed note: reference to the new meta data layer emerging} between NASA and the Populace/USofA. This has been discussed in prior ALTA reports as well as prior sections of this 1305 series.

The NASA entity is still acquiring the lexical values for 'secrets revealed' at a very high rate as we processed this last week's immediacy values. The suggestion from the data is that we are only at the 'beginning of the beginning' and that much remains yet to appear visibly to the public at large. Bear in mind that much of this as well as previously reported forecasts about NASA are actually being developed from the Populace/USofA entity and thus are showing the manifesting circumstance from that point of view. Therefore we can state that yet much more in the way of revelations await the populace as these indicators for 'shocks of words' coming from NASA are still very prominent within the Populace/USofA entity.

As we progress the modelspace forward through October and November, we still are, within this area of NASA related lexical constructs, gaining emotional tension values. The entity does not show any release level values or wording until very early December when it also starts participating in the general emotional release wave which over takes the totality of our modelspace. There after, as the modelspace progresses through to the end of useful detail definition near the June timeframe, the NASA section continues to accrue emotional release values far in excess of its relative size.

A still curious reference to 'derivatives' seen previously associated with the disturbance in NASA's force, is now joined by 'secrets exposed, currency/money blood, evil {in the} beginning, flesh stretched/scraped raw'. Much more language to this same theme is present. The wording suggests that "hides will be tanned" as a result of the 'exposure of the tainted smell' from NASA which somehow is connected to the core issues around 'money'. This is an admittedly confusing area, which has not gained any clarity with recent additional language. Rather the mud is getting thicker, at least at the detail level. If we back up a layer or two, we can note that the public-at-large, at least as viewed from NASA's perspective, is seen by them as an 'emerging threat' whom they are trying to 'engage early' such that 'steering/herding' might be possible. However, even within that lexical structure, we note that the NASA entity contains language suggesting that even they don't believe their own optimistic projections about their own place and power. We note that 'foul smells debilitate' and that 'eyes weep, hearts sag' at 'faces revealed'. Hmm. and Hmm again.

Just as a final note on this area, very large 'moon' and 'lunar' references are piling up. Much more so than any other space related values by about 20 to 1. This increase is large, and is also broad in that references to moons of all types including those for Saturn, Mars et al, are well represented. So perhaps the general tone will end up as we are interpreting it as 'revelations about the moon'.

Silver/Gold/PM - Slivers of Shivers

Yet one more of our heavily cross linked areas goes between the Populace/USofA entity, sub section, 'road from the abyss', and the Silver/Gold/PM commodities based entity. We note that a 'sliver of light' is now 'lifting the wings' of our Silver butterfly, but soon a 'storm of running shivers' will cause so many 'vibrations of air' or 'rising currents' as to 'dominate speech' at least for a few months. The suggestion is that the 'secrets revealed' about the 'evil in the beginning' will encompass areas which promote an impact on the 'desire for surety', which can be interpreted within this entity as the desire for 'surety of value', or non-paper assets.

There are cooperating sub aspects within the Silver/Gold entity which are going to the idea that an 'explosion/propulsion' will be 'ignited/fired/initiated' by the 'failure of reserves', or the 'paupacy of forethought/planning' which affect the 'reserves of strength' such that, simultaneous with the rise of the 'road from the abyss', we will see a 'return to bonding/shackling {of} work for work'. Given the context in which this lexical structure appears we are interpreting it to mean that a 'remonitization' of non-paper assets will unfold with all the other developments within the Populace entities along with the 'revelations/exposures'.

At a visual macro level, the Silver entity has now entered into a more or less 45 degree upswing as we progress the modelspace forward. We note that EU influences are just about to kick in with some seriousness, but that it will be the end of October, and then the end of November before the first two of our large steps up occur. As the emotional tensions are rising through October and November, we still see that 'suppression rests/sits' on the Silver entity, with the exception of '2/two times wrestled free' only to be restrained again. However, the data sets are very clear that as the emotional release begins to manifest visibly in late November and on through to June of 2006 and beyond, we have a 'freedom' to 'act/react' within Silver which is described as not been seen for '2/two generations'.

Press - MainStream Media - Believe ME!

The Press, our entity representing the mainstream media which is clearly *not* a part of the populace, nor aligned with popular interest, is indicating that a category 5 shit-storm is about to hit. The Press entity is adding layers of 'denial' of responsibility words on one side while gaining words toward the 'secrets revealed' and 'rebellion' on the other side.

The conflict in opposing language at the core of the entity is broadening. We find that the entity itself appears several times to nearly divide as the modelspace is progressed through October and November. However, in summary, by November more of the language goes to the support of the 'rebellion' rather than the 'believe me' insistence language of control that we have seen all year.

In watching the modelspace progress, Igor noted that 'that beeeatch is in trouble', pointing at the Press entity. Noticing the area he was indicating, I have to agree. The Press entity is indicating that the mainstream media is about to enter a period in which it 'eats its lips' or 'consumes its own words'. We are taking this as an indication that the mainstream media will find itself divided such that a clear separation is emerging. In this case '1/one of 3/three', will 'proclaim true words' with 'insisting/forceful tone', while the other '2/two' are seen as 'showing pictures {of the} evil in the beginning'.

The interesting part is indicated by cross links over to the Bushista entity where 'harsh/fierce denunciations' will further 'define {the} set/stage/platform', or as we can interpret it, Bush loses control of the press in a sudden, and large way such that 2/3rds of all the articles are using 'words of defiance/rebellion' against him/them.

This period also is shown as beginning in seriousness in October. This is also a very large contribution toward the 'manifestation' of the 'secrets revealed' meta data layer.

The first casualty of the emergence of a 'vocal press opposition' is the 'facade' of the 'dollar/currency'. This area goes by cross link to many different entities but none of the termination points are positive. There are also numbers of cross links from this area back to the NASA and 'dollar phony/fake/unsubstantiated evil in the beginning'. We are not able to discern if the NASA problems are effects or causes, but can note a temporal problem to 'surges' in interest rates, and the 'downfall of false faces' within the NASA and Bushista secrets revealed.

Part 5 Conclusion:

Both Igor and I have worked hard to process and interpret these immediacy values such that we can post this section earlier than expected. Our goal is to get it out ahead of developing circumstances. Bear in mind that from September 29 through to October 3rd, we have a sudden rise and equally sudden release in emotional tension indicated within our charts for this period.

It is our current view/hope that the emotional tension rise and fall of this weekend and early next week will be political in nature as opposed to earth tremors or other larger impacting events. So far, with the recent spate of geopolitical news, we have some reason to be optimistic that our hope is being realized. Nonetheless, the level of impacts of the build and release are likely to be visible.

Part 6 is anticipated for late next Sunday, October 9th. We are still processing on pent up immediacy values and if something comes out of next week's lexical analysis work that is instantly pending we will notify by email.

Igor is getting a real kick out of the 'secrets revealed' meta data layer being so visible. He actually runs chuckling gleefully each time some 'sleezeball' is being 'outed' on teevee to report that the 'sheeit is still flyin high'. This tickles him to no end. Of course, I remind him that the essential lesson from this work is to know that "when the sheeit is flying overhead, the wise person practices their ducking".

Altogether now....one and two and three. Duck.

Terra - USofA - Water Descends, Fire Reaches up from Flower City

Given the Part 5 appearance of the 'dark aspect woman' and her 'dred' companion, and taking this as an odd metaphor for the next stage in the recent storm series begun with Katrina/Rita {ed note: originally 'dark aspect woman' was noted as being 'blind in both eyes, and lame in both legs'}, we have been paying special attention for nasty weather indicators, seeking more specifics. Within the Part 5 data, the 'dark aspect woman', so feared by the TPTB entity, only was referenced in the singular, such as 'blind/lame' with no modifiers for multiplicity. So if that metaphoric interpretation was correct, then the implication in Part 5 data was perhaps to expect another devastating hurricane to hit the USofA, likely within the Gulf region or the lower eastern seaboard.

Within the Part 5 data for the TPTB, 'dark aspect woman' we also found specific references to 'lost land' and 'walls {of the} city, breached, stormed'. The only geographic references which stood out seemed to suggest the area of the state of Georgia.

We now find that data within the most recent processing of the immediacy values is suggestive of yet another storm, thus reinforcing the TPTB entity data from part 5, and further, we find within the Terra entity, more references indicative of 'female' as an aspect, thus again, reinforcing the TPTB entity, and perhaps pointing our attention to this latest female named storm to appear.

At this point the new data is piling on in reinforcement of a 'city taken {by} fire and storm'. The references to a 'lost city' are now up about five fold over previous size levels. Again, we note that 'female' is an aspect modifier of the 'attacker of the city', and that the 'appearance of the woman/female' is seen as 'causing

families to flee'. There are also indications that '5/five of 6/six' will 'climb hills {to} escape {the} rising waters', and are seen as 'still visible/resident' on the 'hill tops surveying {the} remnants/remains {of the} city' long after the storm. The indication is that 'bridges/roads/roadways/paths' will 'go to ruin underwater', and that 'marsh blends with river and sea' such that 'passage is restricted 20/twenty days on'.

In words which would seem to describe the images coming out of New Orleans we do find lexical clues for 'old city resists strongest' and 'new walls crumble/overcome'. However our 'city' of the moment, is also heavily populated with descriptors which go to 'marshlands' and 'grasses in abundance', all of which are unfortunately 'behind the city, between city and hills', and thus will present a problem to both those who will evacuate, and later, those remaining, and those who would attempt to reach the 'city' now seen as 'surrounded, moated {by} muddy marsh, flooded field, mudded roads'.

Also, in a very curious, and duality expressing way, the imagery which describes both the storm and its aftermath are just chock-o-block full of references to 'fire'. There are images suggesting of 'fire spouts' or 'fire tornados' which 'leap from the earth' or are 'released from the ground' by the 'winds scraping clean {the} surfaces of hills'. The impression is that the overall storm will be remembered for its 'fire' aspect, rather than its 'wind/water/flooding' aspect, at least by that 'one/1 in/of 6/six' who stays and survives.

The overall imagery is of winds from due south, which breach the walls of the city, perhaps an indication of the suburban landscape, and then in the process of bringing the deluge, and 'lifting the waters of the marsh', will somehow trigger lots of firestorms, at which time, those who remain within the city think it advisable to get out and head for the nearby hills. Many will make it in spite of fierce obstacles. Then comes the flood stage in which waters from river, sea, and marsh are so intermingled as to bring together 'toad, fish, and eel'. The whole mass of water is shown as going swirl-about around the city, and separating many people who 'sheltered {on the} lee side {of the} hills'. These people are seen as having many injuries mostly sustained from flying debris, rather than water induced problems.

Not that there won't be water induced problems. There is much to suggest that 'rain/water descends' in such force as to 'collapse beams' and 'bring down' the roof of many structures.

We have some geographic descriptors which go to the idea that the 'center of resistance {to the} winds' is famous for its flowers. The association for floral themes is very large, pervasive, and fully populated. The suggestion is for 'houses of flowers' or 'houses for flowers' as both appear. The suggestion is further that the area is replete with 'names of flowers', this most likely suggesting that street names are floral themed.

Some of the major areas of impact within our 'flower city' are seen as 'centering around/circulating' the 'inspiration building'. This 'inspiration' is apparently very old, and very well known, though it is not clear if the structure is a place of inspiration, or actually named such. However what is clear is that this structure is in the 'center' of the town and will also end up in the 'center of the storm' and is somehow 'resident in the potential' for 'fire tornados'. This last may be suggestive of a location near chemical processing plants or other sources of flammable substances.

ETS - Mature Relationship Transforms Here on Earth

As we have noted in Part 5, there are several new data layers developing which are pan-entity, and thus show promise to rise up to the level of meta data, that is, a specific set of phrases, with a specific emotional content base, which apparently are affecting all entities within the modelspace. As of yet, we have not the time to develop these layers, and hope to be able to tune the lexicon prior to the ALTA 106 run.

One new meta data layer which has been recently identified is the layer for 'relationships'. This layer is currently rising to snug under 'secrets revealed'. At this point the suggestion appears to be that the entities are either going to work out some of their relationship issues, or conversely, relationships will 'pump up/inflate/accelerate' already manifesting trends.

Within the 'relationship' meta data layer, there are a number of common phrases with common emotional tones which as may be expected, are Populace centered. We find that these phrases and lexical data links go

to a very large number of cross links. Just given the cross links alone, it was clear that in the runs for 2005 we have witnessed a very large, statistically significant, increase in reports of 'extra terrestrial species' and 'human contact'. So much so that we have decided to apply the linguistic rules to the cross link set to see if an entity can arise from this data set. We were rewarded with success. {ed note: too easy, really freaked poor Igor out. He is young, and has many conditioned concepts yet to clear out of his mind}. We are calling this new entity ETS for 'extra terrestrial species'. Please note that this entity is to be viewed from the perception of human contact/interaction with the ETS.

As extracted, and then processed, the ETS entity forms up completely. It is fully populated, internally self consistent, and builds the correct relational node in the MOM {ed note: the Model of the Modelspace which is a referential integrity cross check}. This being the case, the recent changes in this particular subject grouping or descriptor set are as apparently real and valid as the changes we have seen in other entities, such as the progression of the BushCo entity to the Bushista state, or the break up of the Populace entity into GlobalPop and Populace/USofA.

Within the ETS entity, the dominant aspect is 'transformation' or 'is transforming'. We note that the active state is more likely a better choice. Within that aspect set, the primary aspect/attribute image goes toward the 'mature relationship is transforming'. Within that set we find that its dominant aspect/attribute goes to the idea that 'movement toward progress' or 'movement/steps toward transforming relationship {to humans}'. There are indications of 'large shifts/changes' and these are heavily tied to the meta data layer for 'secrets revealed'. Note that within this section we have a preponderance of French words and linguistic constructs followed most closely by Brazilian Portuguese and then Anglo/English.

As suggested by our data, there are to be '3/three steps, two small rises, followed by a very large leap'. These '3/three steps' are seen as 'moving man upward, toes first, walking', then 'muscles clench, not promising/not pleasant', and then a very large emotional tension jump up which is, within the ETS entity, linked to 'talking/jawing does no good' which in turn is supported by 'muscles {of the} jaw bite hard/fiercely'. Then the really interesting layers which support this whole section and go to the idea of 'jaws bite, grimace, yellow blood drips'. And 'muscles clench {in} anticipation of jump/leap {from the} rocks {onto/at} superior/larger {than} earthly element, physical'. We also find that 'spirit/consciousness superior, rage roars, essence revealed, long lies/deception peeled/removed back'.

The whole of the ETS entity is dominated by lexical descriptors with supporting sets containing 'transformation' in one form or another. We note that many of the 'transformations' lexical sets are also going to the image of 'ideal state {of} productive/enhancing transformation'. Further the supporting sets for these aspect/attributes frequently contain references to 'split between/among worlds/perceptions following trails/paths common goal'. A curious cross link over to both the Populace/USofA and the GlobalPop entities show that while the ETS entity may think the 'goal common', the Populace entities suggest that the human view is 'repulsion/rejection'. Within both of the Populace entities we find that cross linked 'rejection' is internally supported with 'rebellion' and 'conflict looms/pending'. Further, there are a large number of internal cross links within both Populace entities from the 'rebellion' theme to other areas within their structure.

We can also note the lexical descriptor set within the ETS entity which goes to the image of 'strength/numbers drop {like} rain {from} starry sky'. This aspect set comes in under the 'transformation' set, and under that the 'innocence returned/broken/lost' sub section. This area is directly tied over to the Populace/USofA where it terminates in the aspect of 'army' and has a terminating value set of 'aroused passion/force strength {of} consciousness/will, conflict'. A bit confusing, but clearly not too good for peace and quiet in the local stellar neighborhood.

The ETS entity has a relatively large immediacy quotient, but is primarily dominated by long range value sums. When examined in the view of the cross links, it is surprisingly linked to the immediacy values of a number of other entities, even though it does not carry any of these value sets itself. This is rare within the modelspace, and may be indicative of a situation where events or circumstances start to race ahead of the main theme or plan of the entity. That is a situation could be developing where circumstances proceed and

the ETS entity is suggesting that the space aliens are about to discover that here on earth, the 'best laid plans
aft gang aglay'.

Terra - Moon - Mountains Grow Yellow Fur

As we have noted in previous parts of this series, a new Terra entity sub section concerning the 'moon' is developing. While in existence from the beginning of our work with this modelspace, this 'moon' sub section is "new" in that many new layers of data are accruing, and that much of these lexical sets have not been seen associated with the 'moon' before. Primarily the emotional sums for this sub set are very stable, but as indicated have recently begun changing.

The change in emotional sums has been accompanied by the arrival of two new sets of aspects/attributes within this part of the Terra entity. One is being interpreted as 'yellow fur' for lack of any more meaningful word combination arising from the dual, linked dominant aspects. There are other words, but within the descriptor set, the other combinations are just as lacking in insight as 'yellow fur'. However to proceed down the aspect/attribute chain for this area we note that 'yellow fur' is seen as 'growing/appearing/developing' on the moon, and that this 'yellow fur' will be a 'sign/harbinger' or 'voice' of 'misery'. Further the 'yellow fur' is part of a 'new behavior' and that this 'behavior' will involve the 'radiance' of the moon somehow. This area is cross linked over the Populace entities and shows that 'spots/areas' of 'dark concentration' will 'take the mind/awareness', but that the 'yellow fur will grasp/hold the attention'.

The data also suggests that internal changes within the 'earth' are intimately linked to the 'yellow fur' on the moon. That the same forces causing lunar behavior changes are also involved within the earth behavior changes. The descriptor set goes to the idea that 'even cows notice/see' the 'changes {on the } lunar face', and that this is all part of 'inner changes' within the moon which involve 'mountains' and produce the 'yellow fur' seen 'growing on the face'. Hmm. Moon beards?

While compact, and still growing slowly as the modelspace is progressed forward, this area nonetheless is adding cross links in a very significant way all out of proportion to its size. These cross links are twisted involved with all of the 'shocks' areas of the various entities and are not easily followed, nor interpreted when they can be discerned down to their terminating points. The general impression is that the 'behavior changes' on the moon will be all caught up in the basic emotional stew here on earth, and will likely get lost in the drama of it all that develops through our pending period of shocks.

We do have an inordinate number of geographic references, including within the cross links, which go to central Germany, though this may be as a proxy for a central European general location. These associations are not adding any further knowledge about the 'moon fur' specifically, but may be indicative of the first place to notice it, or perhaps the point of origin of mainstream reporting which first speaks of the developing 'fur'.

Specifically to this area we do find repeated references to 'mountains' and 'mountains {on the} moon grow higher'. Now this latter could be indicating an actual change in the relative altitude of the lunar mountains, or perhaps is the first half of a comparison which has not yet been completed, as in 'the mountains of the moon grow higher than ?'. The carry values are long term with low immediate impact so the suggestion is toward the latter interpretation rather than the mountains actually changing their height. Perhaps this could also be attempting to describe a situation in which new measurements are released which re-appraise the height of the mountains. Why this should be significant to us here on earth is anyone's guess, but the over all emotional values are quite clear that it will have some broad emotional impact.

Still though, it would be interesting to be able to sit back with some hot chocolate and watch the 'moon fur' grow.

Terra - Mountain Building Tension

There are still indications supporting the idea of yet one more 'great quake' {assuming that the 10.08.2005 Hind quake was number 2 of our 3 set series}. This quake is seen as 'building mountain/tension', and that

'labors {on the} mountain are interrupted by activities, inducing hurry/haste'. Further the quake will 'raise the mountain, shoulders up' over the 'quivering/shaking waters {of the nearby} marshlands'.

We note that this is most likely a volcanic reference as the data goes on to describe a 'hollow' mountain in which 'tensions rise high', and which is described as now '2/two baskets taller' and containing a 'straw/tube' which has but '1/one thumb width' of material covering the top of the 'straw/tube' and at the bottom is a 'thimble full' of 'hot lake'. Hmm. Thimble? We have a puzzler here as there are no other modifiers or descriptors which seem to fit any better. The data is suggestive of a 'small amount' of a 'hot lake' at the bottom of our newly rising mountain. Well, how bad can it be?

Bush Wars - Karmic Harvest Time

Within the total collection of data points, when we isolate the cross links and other data sources for those descriptors for the Bush Wars, we find that the primary aspect of 'dismal' is changing to 'abysmal'. Along the way it goes through 'disaster' after 'disaster', and the whole lexicon for this area is a very depressing read indeed. Suffice it to say, that those things begun as lies under secrecy will be 'revealed' within the current meta data period, and 'lies do not produce good fruit'. Unfortunately for all concerned, it is karmic harvest time.

Bushista - Wrapped in Leather, Last Days of Empire

The Bushista entity has developed a rather bleak visage lately, this is perhaps a "leading mirror" to what the faces of the Bushistas will resemble as we move forward through Fall. In our modelspace, some point prior to early November, and thus just at the beginning edge of the 'shock' period, we find that the rising aspect/attributes show that '5/five {will be} wrapped in leather'. Obviously one interpretation would be that 5 persons within the Bush administration will be 'restrained' by 'public bonds' which are also words which appear within the 'wrapped in yellow leather' lexical set.

Further we find that 'there remains {only} tail people/remnants/last people'. This situation is described by the data set as being 'very dangerous' for 'all concerned/affected'. As this section is followed through its progression through the modelspace, we end up with more accretions of sets going to the idea of 'danger', 'risk', 'opportunity ignored/risk not perceived', 'blood {on the} floor, hands drip, feet slip', 'skin flayed {off} back/spine, exposure', and others of similar meanings within a developing tone of 'very great risk'. The really really disturbing part of this is that as the modelspace is progressed to just near the end of November, the Populace/USofA cross links to Bushista entity thicken very rapidly and seem to come into terminate within this area.

All of the very large "ropes" of cross links that exist within the Bushista entity to Populace/USofA entity are themselves within the participatory bands of the meta data layer of 'secrets revealed' which itself is under the 'aggression/militancy' meta data layer. At this point the indications are for much more interaction between the Bush admin and the peoples of the USofA as Fall moves into Winter. Much of this interaction will continue to focus on the Bush Wars of Aggression, and the 'exposure' of 'secrets/plots/plans/diversions' which will become 'transparent {on the} hands', or as we are interpreting, 'plain for all to see'. According to the way the data sets build through the end of November and into the 'shocks' period, one of the areas of shocks may well a series of 'exposures/revelations' about the Bushistas which arrive '3/three times daily' for 'uncountable days'. Probably this should be interpreted as a 'whole lot of crap comes out day after day'.

As we progress the modelspace from Fall and towards Winter, we have only to move a very few days to see that much language accrues within the aspect/attribute set for 'power' that is suggestive of, and is being interpreted as the 'last days of empire'. The Bushista entity has a very clear image of an 'isolated', and 'barrier/wrapped/cloaked' Bush remaining 'within the empty house' with only 'the last servants' still around. These 'last servants' or the 'last ones' {ed note: two separated areas describing this group, suggestive of an emotional tell-all from person or group about the other, rest} are very clearly described as 'the weak ones', and this is further reinforced by supporting aspect/attributes which paint pictures of 'young men/women' who 'vomit yellow blood {ed note: bile}' on 'public streets' {ed note: interpreted as 'visible to the public'} such that 'all know the smell of fear {from under} the cloak'.

In a general, image-reinforcing manner, much of the data set within the 'last ones' shows a group in some real emotional anguish, and suffering. They have very large, very real, and staggeringly pervasive fears such that they are described as 'eating fear {for} breakfast, dreaming fears {at} nights rest'. Further there are descriptions of 'escape/flee' plans in a vague sort of way which hang under this area as though many involved have already 'made plans to hide, flee/disappear {when the} moment has come'. Hmm. Not a good sign when the 'help' is jittery and vomiting bile in the streets.

Even more ominous examples of anxiety emerge from within the data set. We have clear indications that a 'suicide' will be attempted within the 'empty house' involving a 'belt' which will be 'hooked to the 5/fifth pipe'. While the 'belt will not break', nonetheless the data set is ambiguous from that point forward as to who tries to suicide, and the success of the attempt. However, in no way can this be taken as a sign that things will improve for Bushista as we go forward into December.

The Bushista entity as a whole, which is to say, the representative lexical descriptor set for Bush, and his administration, and those who both support him, and put him into power, is showing a 'winter of distress/despair'. Much of the new language that is arriving is piling onto the data sets which led to the 'bushista dissolves' interpretation of previous ALTA reports this year, as well as earlier sections of this series. This new data, with very high immediacy values, is also shadowed by other data sets with very long range carry values all going to the same vein of 'despair', 'distrust', and 'dissolution'. This theme of destruction is specifically showing an 'from the inside outward' flavor, as well as now showing that 'wolves/animals gather, circle, seeking {to} exploit {the} stink {of the} carcass'. We also show that very large and fundamental {ed note: pun intended} changes are coming to the religious right which has been the assumed power base for the Bush admin. These changes will be so deeply impacting that the whole notion of a religiously bound, political association will be not viable, and will be a 'shame admitted to under duress'. This last emerges from the long range carry values and shows a very large gain of momentum about late Spring of 2006. However, the 'dissolution' and 'drama {of the} hurrying failure' begins just slightly before the emergence of the period of 'shocks'.

On the other side of many of the cross links from Bushista to Populace/USofA we find that the 'shocks' will begin with 'profound insight' given by the 'secrets revealed'. Further we note that a very large amount of emotional tension which has been built up during this Fall will be released as we get to the point of 'surrendering great possession'. This area is less than clear, but may be suggestive of a very large economic collapse on a global scale. Again, this whole area of cross links originates under the Bushista entity area we are interpreting as 'last days of empire', and that these terminate, for the most part, in an area of Populace/USofA, and GlobalPop, where 'economic', and 'money' terms are at the higher levels of aspect ratios. The interpretation could go to the idea that a global economic collapse will initiate the 'revelations of the shirts, reduction of great possession, sudden', in which many more 'secrets are revealed'. This further exacerbates the situation as the 'ruler' is seen as 'impotent' and 'unable to leave the empty house'. Not that Bush has any real sway or impact on the economy, but the impression that is coming out of the data set is that the public at large, perhaps on a global scale will, in the early stages of the economic collapse, get a reality-check about the capacity of the financial 'masters/officialdom' and their real power. This wake-up call is seen, through the cross links, as preceding a period in which 'great possession {is} taken to sea {by the} tides'. Further this 'tidal flow outward' of the 'great possessions' is described as 'continuing daily' as with the rising of the moon.

We also have a newly developing support structure for the 'right wing christian, conservative, fellow-travelers' section within Bushista. This is one of the areas that has, until recently, remained stable within the base for this entity. We now can easily discern that 'abandonment' is underway. It would appear that the recent Supreme Court nomination by Bush has had a large impact on this section of his base, and while this just the latest in a long series of angst creating moves by Bush, it is apparently nothing like what is pending. We note that so far the conservative christian base has been whittled away from the Bushista entity, but that very soon, and all wrapped up in the mountain of 'shocks' pending, will be such a wholesale abandonment by this group that the data suggests that Bush or crony will actually label them as 'traitors' and will claim that they have 'stepped on {his} tail' and they will be threatened with 'being bit'. The impact of the threat is unknown, but certainly the data does not suggest that it slows the loss of support.

The impact of the christian and Bush relationship change within the USofA is seen within the lexical descriptors as actually changing the nature of social customs, and conditions. It suggests that a very large emotional 'reappraisal' will take place with 'support {for the formerly} deluded/deceived'.

On the other side of the cross link chains, this episode of 'desertion' by the 'traitors' will cause a new form of 'behavior' amongst WH inhabitants. The change is not perceived as being pleasant. But all things considered, the suffering of those closest to Bush is not even measurable in the overall morass of emotional turmoil shown developing.

Gold/Silver and Markets - Repression of Society

As noted through the cross links from both Populace entities, and the Bushista entity, there are large scale changes seen developing within the Markets entity. Not only are we adding new descriptor sets, but are also discovering that long associated lexical sets are themselves changing as though the very definition of the Markets entity is undergoing a transformation.

A very troubling primary aspect of 'repression' is appearing within this last set of processing. The 'repression' may be a misnomer, or rather a ms-interpretation. A better choice of wording would be perhaps going to 'depression', but the connotation of that word is seemingly lacking in emotional tone. What we are really finding within the emotive sum values is that the primary aspect is going towards an image that might be loosely interpreted as 'markets repress the globe and all critters on it'. Or perhaps, 'events within markets ends up repressing global emotions'. Either would seem to describe the situation developing within the modelspace at the moment. The number of cross links from Markets, 'repression' aspect sub set over to both Populace entities, and the Bushista entity are striking. Most of these appear to be originating within Markets with the suggestion going to the idea of a 'spread of repression' which affects the populace, politics, and especially adds to the Bush woes of November and onward.

The language appearing within the Markets entity and going to the emotional impacts of the immediate future suggests that '20/twenty years on {the} social customs {will be} cut from {the} cloth {of} today/current time flavors'. The idea is that the pending Markets movements will be still influencing social movements/mores/customs in 2025.

The Markets data set is very heavily cross linked over to the Bushista entity, and one interpretation deriving from these cross links suggests that when 'movements become painful' that Bush and/or cronies will 'speak out, too loudly, too untimely', and that this incident will act as a marker for the next increase in change rates within markets. Actually, the data indicates that the 'critics of the speech' will be the appropriate marker. This criticism will come in the form of 'statements/accusations of unawareness/blindedness', and 'decrying the denial of dangers'.

According to the data set, that is the cross links between the Markets entity and the Silver/Gold/Commodities entity, it will be an extraordinary rise of the 'golden bird to dangerous altitude' which will trigger the Bush admin into making its 'denouncement of reality' speech in which they are basically insisting on 'deny/denial {of the} globe/world perception {of their} character, ability'. The data suggests that '4/four days on' the mainstream media will still be full of comments from 'repressed citizens/populace' who will be 'raging' about the speech. Apparently on the 'fifth day' a new 'face' will appear on the Bush admin. Needless to say, it will not be a happy face.

The Markets entity is indicating a '2/two' of '3/three' parts of 'great possessions' will be lost. This is translated as a 2/3rds reduction in perceived "wealth", though please note there is no indication of how long this process takes. We also have a conflicting data set with an even more dire view in which 'only 1/one in 6/six remains', suggestive of a 5/6ths reduction in nominal capital. Also note that as the actual markets are manipulated by governments and extra-governmental bodies for their own purposes, we may well be running into a collision of what our data suggests versus "allowed" events. How that would/will play out is anyone's guess. What would happen if the various manipulated market indices go up, but the actual economy collapses?

As the cross linked areas would seem to indicate, the immediate future is very bright for precious metals, and their "wealth association cycle". The suggestion is that as the emotional tensions build through the rest of October, and into November, that the trend for PM's {Precious Metals} is generally upward in nice sized steps. Also though, please note that our data suggests a huge damn step at some point with the result that the 'shock' of the sudden leap in notional value for PMs causes a 'panic' and 'fear, bowel releases unexpectedly, soiled' both within those who are supposed to be manipulating or controlling this market, and those outside, within the general population who suddenly want to get some of these PM's.

It is within this period of 'shocking rise {of the} golden bird {to} unimagined heights' {ed note: suggesting risk? and to whom?}, that many of the cross links over to Bushista entity come into existence. As the modelspace is moved forward, several large areas of cross links develop which suggest that a very bad time for Bushista will also be mirrored in a very bad time for Markets, and those who 'depend on the cream'. The data suggests that 'bad oozes away' as 'obstacles are forcibly removed' with the Bushista entity. Further we get language now going to 'reeling {from the} economic shocks' within Bushista which, as the modelspace is progressed, transit over to the image of 'stupor/stupefied, placid satisfaction pours out', with the obvious interpretation being the image of the 'stupefied' and 'placid' face of those seeking refuge in drink.

Continuing within this area of cross links we see that the 'shocks' associated with the rise of the 'golden bird' will precipitate the 'abandonment' of Bush by large numbers of the wealthy who will rightfully perceive 'their fate' to be in the 'hands of the crazed'. This whole section has a number of aspect/attribute sets going to the idea of 'cutting the knot binding emotionally', which is certainly suggestive of the abandonment of support.

The effects of the 'shocks' rising from, or amplified by the Markets entity are seen as rippling around the globe, suggestive of a global economic problem which is 'tail chasing' in its complexity. We also can note the disturbing references to the part that 'violence' and 'disease' will play in all the Markets developing problems through this period.

Conclusion: ALTA 1305 Series - 7.6 is close enough for web bot work

With the recent 7.6 earthquake in the Hind area (Kashmir, India, Pakistan), and the previous 7.5 earthquake in Peru, both sharing a temporal proximity, it is likely safe to conclude that the '3/three great quakes' seen in previous ALTA series this year which are either preceding or participating in the 'plate shift', are likely occurring now. While human science and general acceptance may take the word 'great' as regards earthquakes and associate it with 8 on the scale or higher, apparently 7.6 is close enough for ALTA work.

If this is correct, then the expected scenario would have another 8 level quake, m/l. This would be followed by a 'plate shift' or perhaps, the quake itself occurs as a result of the rupture of the plate boundary layer and it is thus part of the shifting. At this point, or rather, within the over all event, we would expect a significant level of 'isolation' to occur with the suggestion from the data that the infrastructure damage will be a '10/ten years on' repair process. And that this will follow the displacement of a large population base, literally, and actually being scattered and forced to live 'on the road' in camps that spring up where people simply 'stop walking, too tired'. Further, one of the key visual images is of a displaced population not able to use much in the way of wheeled transportation, and thus the 'roads, impassible {by} wheel, littered with goods/property, sparkle as scaled arrows, long trail pointing {to the} population, walking'. Both Igor and I take this reference to be painting a picture of the exodus from the 'deserted city, slid down the hill, stacking upon each other' as seen from the air, in which the discarded goods hauled out of the city by its inhabitants are left on the road as a 'sparkling' kind of arrow showing their direction.

As the previous data sets suggested, the 'people will walk, and suffer'. The point about the suffering appears to go to the idea that the people affected are 'not used to/acustomed to' walking in large amounts. This is being taken as yet one more pointer to a North American site for this occurrence. Further the suggestion is also that 'rains' in some great quantity will participate both in the 'isolation' and the 'inability to succor' the displaced. The imagery goes to the idea of 'truckloads/carts' will be 'stopped in high passes, awaiting {the} cessation {of the} impenetrable rains'. During the flight from the city, people will disperse in '3/three'

directions. This is again another pointer to a 'coastal' city, even though it is seen as being 'up in the hills' and will sustain much damage in the 'slide into the waters'. The data also indicates that at least one group of those who flee the city will be further at risk in that they will be trapped in the nearby hills by rising waters. This group will be rescued, at least according to the images within the attribute set, by a flotilla of 'small boats' from neighboring communities which are piloted by very emotionally distraught, but also very determined rescuers. These will bring not only food/water and medical help, but also will be able to remove some significant portion of those who flee the city, though the effort is seen as taking '13/thirteen days' to ferry just 'one/third' to relative safety. The imagery suggests that on the '2/two week' mark from the quake, that finally supplies including tents and tools are delivered to the 'displaced in the hills', and the data suggests that a new community starts to spring up 'in situ/in place' as it is realized that the 'displaced have no where {else} to go'.

Additional damage from the 'plate shift' portion of the event is seen as 'destroying' the ability of '5/five' ports to function. These likely include 3 sizeable airports.

With the posting of Part 6, the ALTA 1305 series is concluded. A nasty bit of stuff to read through, no doubt about it at all. In spite of the no good news part, and the constant cracking {ed note: computer slang for 'breaking and entering'} attempts on the servers, we were able to obtain our read goals. Even within the general very hot or very high emotional tone language which has followed the Katrina/Rita disaster(s), we think that we have been able to extract some valuable intelligence from the data sets. If so, and even a small fraction of the fictions imaged from our data actually materialize, it will be a very rough ride from now through the end of December, 2005. We expect that November, and the appearance of or lack thereof, the 'shocks' manifesting will guide our accuracy analysis on this series. As events are shaping up at the moment, both terrestrial and political movements would tend to suggest that the data set was reasonably good, and that the interpretation was not that inaccurate. We will see over the course of the next 2 months as we move into both the 'shocks' and the 'release' period following. Remember, these do not necessarily *only* relate to 'shocks' from earth movement. The wording in the data set is clearly showing 'shocks' at all levels such that the majority of the population of the USofA, and from them, by extension, the rest of the globe, will emotionally react to the 'shocks'.

Given our reasonable {ed note: slightly better than chance would allow} accuracy to date, both Igor and I are preparing for actual earthquake shocks, as well as political shocks. These latter shocks may well prove much longer lasting in their impacts than *merely* the destruction of a good sized city.

New Business: ALTA 106 is being planned now. Our principle is already setting up bandwidth contracts. Igor will start the data acquisition on October 10, likely very late. I expect that processing will proceed apace with the first part of the report series being posted on October 23, 2005, a Sunday. As we will be in the midst of many of the emotional tensions building during this run, we expect to be able to extract a very good data set, and again will target above 60 million reads. The ALTA 106 series is intended to cover from November, through January 2006 with the detail portion and to extend the outer limits of the modelspace to near October of 2006. An announcement for subscription signup will be sent via email shortly.

Thank you for your participation in the ALTA 1305 series. We actually cannot do it without you. This particular run is likely to be surprisingly accurate, or a total flop. If we do continue the emotional building period as it seems is manifesting, then we expect that the appearance of the 'shocky' period is not far off. If it starts to manifest, then prepare for the 'emotional release' period of December and onward into Summer of 2006.

Remember that in so far as we can determine, there just ain't no safe place so might as well make the current place safe. And that while survival can come down to competition, life, the universe, and everything is clearly a cooperative venture.

Cliff and Igor, with much thanks. {and watch out for that 'moon fur'}
