Conclusion: Part 1

Asymmetric Language Trend Analysis Intelligence Report  
'Changes in language precede changes in behavior.'  
By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy or lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

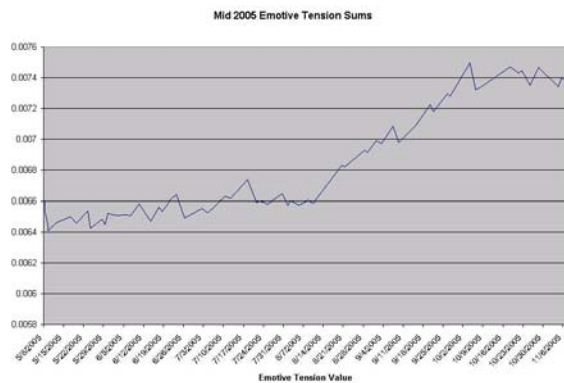

10.22.2005

Note: Entities are identified by a blue typeface. Aspect words are enclosed in square brackets []. Attribute words/phrases are within parentheses (). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk \*.

Data set distilled from 12.322 million reads . Our expectations are to achieve 60+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

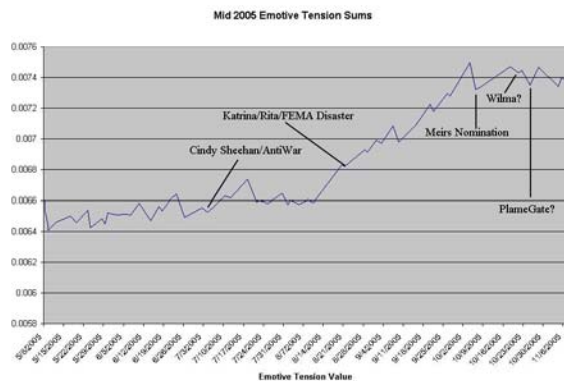

Meta Data - 4 Year Emotional Tension Ratio Projection, Shocks, Shakes and long ride comin'

Well, as usual, all the news is disturbing.

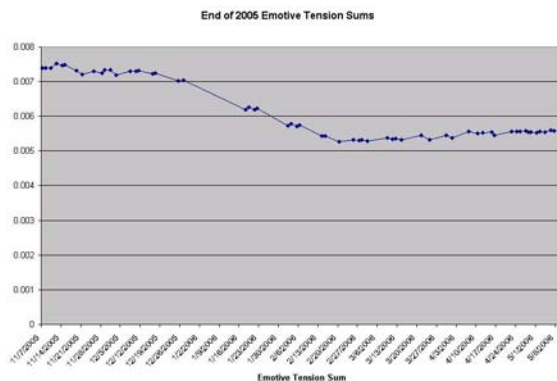

The chart above shows the emotional tension sums trend line for most of 2005. We note that the trend is still in a building mode as we saw developing since ALTA 405, and that as forecast, the emotional tensions started to rise in steps in late July, and early August. We also note that the meta data layers overlay the manifestation of the rising emotional tension. As the tensions rise, the observer can note that 'militancy/aggression' issues are way up at the top of everything, and that just below that layer is the manifestation of the 'secrets revealed' layer. These two layers of seemingly controlling meta data influences are "in play" until late in 2007 and will still be having a major effect through 2009.

As the chart above illustrates, and the annotated chart below suggests, it is possible to place significant emotional generators within the context of the rising emotive sums at least through most of the month of November.

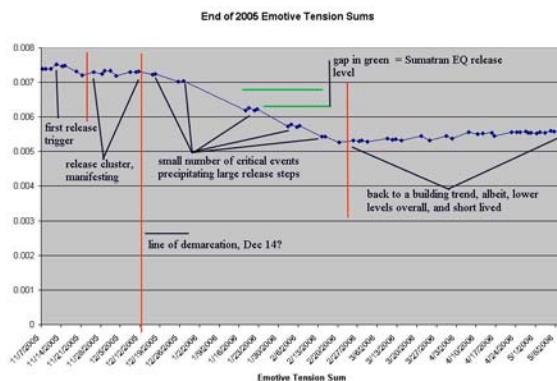

As we progress our modelspace forward, and then extract the long range versus immediate impact values to get a glimpse of the emotional tension/release of the short term future, we are still faced with an apparently very large release state beginning in late November and continuing on through the majority of 2006. As the chart below indicates, the general trend is downward beginning with the 'shocks' period of late November, and through to mid March of 2006. Note that this chart is presented with a slightly different scale, more compressed, in order to provide a less jagged chart and to be able to discern those points which are pivotal in the progression of the data forward. In addition, the chart has key cluster periods indicated by the small diamond shapes. These represent our best attempt at clustering our data clues to pick out significant dates within an over arching trend period. This is the method that we have usually employed to pick target dates from the chaos of our modelspace. These dates are then plugged back into our modelspace as "stop and examine" points within the modelspace. It is from these snapshot points that we determine the interpretations.

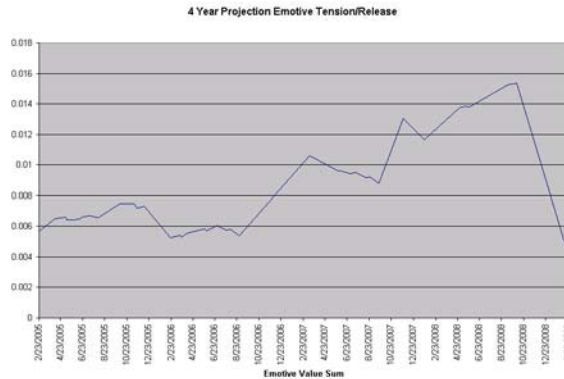

One element that becomes clear in viewing the data in this manner is that the number of "significant dates" is very heavy within the early part of the release period, that is to say, mid to late November, and then diminishes in number as we move forward into the release process. Also it is fair to say that as the release period gets underway, that the number of manifesting/activating events decreases while their overall impact rises. That is, the number of "things" happening will seemingly slow down, but the intensity and impact of each of the "things" will be greater.

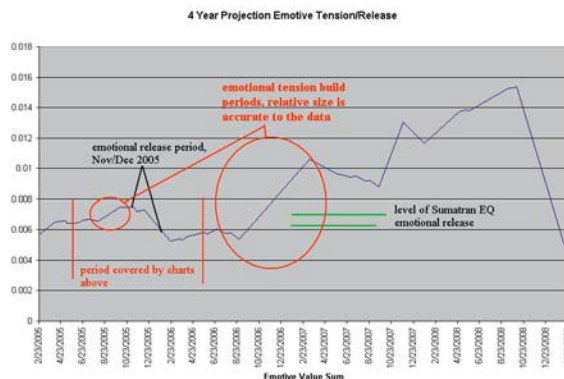

In illustration of this concept, the chart below presents an annotated view of the same chart.

Bearing in mind that our work is not an exact science, and would also have many of the mainstream academics dispute it as any kind of science, exact or not, we need to note that the following chart is even more in-exact than others. The chart below pretends to indicate the overall trends for the next few years. This chart is constructed as a very broad, and thus both inaccurate and inelegant, example of the far reaches of our emotive value sums. This chart is developed out of relatively few values which have been carried over from all the report series of the last two years. We have been maintaining a snapshot of the long-long-long range emotive sums from run to run in order to be able to build a very broad, and far reaching extension to the modelspace. Noting that we have no details of any significance for any of the dates, and instead are left with merely overlapping trend lines which we have merged into the chart below, we nonetheless think that the data is representative of the over arching trends and emotional conditions pending.

The annotated version of the chart as seen below will provide some relative indices for judging our emotive tonality values over the period indicated. We are using a mixed scale that has been reconciled and reduced to fit the needs of the charting program. This should have produced a chart in which the various emotional tone "legs" or line movements are all relative to their actual numeric strengths/sums and thus provide a chart capable of delivering reasonably accurate comparisons.

We suspect that as events play out over the course of these next two to three months, the careful observer should be able to plot out the various sorts of "things" which fit within our emotional release period of this Winter, and then to mentally project the kinds of "things" necessary to "fill out" our chart above with its much larger values, and value swings.

We also need to note that while the first charts for near-term values were produced with a particular approach and processing, the last chart, the long range view, was produced using a different set of values from within our multi-dimensional value array. The very interesting part is that the data gave us the same view of the near-term, with the same level of trend lines, as did the near-term processing. This has a tendency to push our level of confidence in the long range data.

We also need to note that the alternating periods of 'release' and 'building' of the emotional tension are not to imply periods of quiescence, or lack of activity. Rather, as we note, the Katrina/Rita/FEMA disaster occurred during a 'building' period. Even though there were several emotional releases within the weeks of the event as it manifested, the over all effect was, and still is, a building of emotional tension. That is to say, we have had no release of the tension created by the K/R/F disaster on a national, or international level. It is true that millions of individual 'release' events have undoubtedly occurred, these were at the personal/individual level, and still, within the over arching disaster event, "normalcy" has not returned, and so the residual emotional energy is still participating within the trend of 'building' of the emotional tensions.

In contrast, the 'release' periods, in so far as we have observed within our data over these last few years, are periods in which big "things/events/circumstances" appear with a subsequent emotional release. We note

that the 'release' of the emotional tensions are usually on the order of very intense, and short-lived, initial reaction sorts of emotions. These will persist for a brief period, then the residual impacts and their resonating emotions will participate in the next building period. So, as an instance, we had the initial 'release' of emotional tensions following the Sumatran EQ/tsunami which lasted perhaps as long as a single day, then the 'building' wave of tension as a result of the "sinking in/absorptions" of the total extent of the devastation. A similar series of generally building steps were seen following the initial "whew/release" following the Katrina impact on New Orleans.

It is fair to say that so far as our scant few years of work suggest, the longer the 'release' period, the more devastating the impact of the event(s). Stated another way, the extent of emotional tension release appears to be commensurate with the size of the initial impact. Further, we note that the scale of the rise of emotional tension following the release period is also an indicator of the size of the 'release' event.

Assuming that the charts above are accurate, even broadly, then the supposition is that the release event(s) of November, which appear to be lead-ins to the December release event, will impact tens/10's of millions, if not hundreds of millions of humans directly. That is to say, that if we use the recent past of the Katrina/Rita/FEMA disasters as a guide, then we are seemingly looking for a November/December period in which events will alter the course of the lives of perhaps as many as 100's/hundreds of millions. From the extent of the continuing release data, its length of impact, and the subsequent building period starting in Summer of 2006, it is our \*assumption\* that the release period is tending to show a 6 month (m/l) event sequence. If we look at the Katrina impact alone, with its "playing out" of emotional tension release then build over the course of a week to 10 days for the event, then the suggestion is that the November/December events will be like a Katrina situation, only one which unfolds over the course of nearly half a year. Of course, the extent of such a duration also factors into the intensity levels shown.

One last note on this period is that the key lexical aspect that we have for November, specifically from November 5 on through to December 3rd, is 'shocks'. While this obviously has connotations leading toward earthquakes, we also have rising aspects for 'fire' and 'expulsion' which are suggestive of volcanic participation within the whole mess. This is not to suggest that our 'shocks' events which trigger the release will be one-dimensional. Rather, at this stage, it appears that a lot of individual elements blend into the whole 'shocks' structure, and these include political as well as 'space' based events, and Terra entity 'heaves/starts/jumps'.

Returning for a moment to the Spring 2006 period shown within the 'release' triggered by the November/December 2005 events, we find that all the entities are showing very large impacts during this period. At this point we are not able to determine if the general wave of downward emotive sums for the entities en masse are being impacted by the same event, or conversely, are all responding with unique events, or alternatively, resonating with unique events triggered by single event. What we can suggest at this stage of the processing, that the 'release' period \*could\* be something akin to the 1930s where in the Depression was a coloring agent which flavored all other aspects of life here on earth, sub set, USofA. Taking that period as a model for what is indicated as pending following December, 2005, we could postulate a global economic collapse which impacts all other aspects of life. An economic impact of sufficient intensity would take months to play out in its release phase, and would certainly stamp all other entities with both a general trend for emotional response, and propel them down a particular emotive trend.

What is clear, without taking any interpretation as to cause or events into the equation, is that Winter of 2005 flowing into and through Spring of 2006 promises to be one hell of a loooooong ride.

#### Terra - Wilma - Blows

Within our data relating to Terra entity, sub section 'alterations/changes', we have a really curious development in which much of the language shares several rising, and common aspects with the BushWars/Iraq. The entities are \*not\* cross linked as they do not contain the same or similar attribute sets, nor do they merge or join further as the modelspace is progressed. Rather, we are merely noting that what

appears to be a lexical set of 'military' related words is the dominant aspect/attribute set for the 'alterations/changes' sub set, and that within this sub set we find more references for 'storms/hurricanes' than within any other section of the Terra entity. We need to note that a growing expression of 'weather wars' is emerging within the data collection streams and thus the current aspect/attribute set dominating the 'storms/hurricanes' sub set collection could what we refer to as a "conscious bleed through". If so, we should be able to eliminate the bleed through in processing when filter sets 140 through 168 are run in about two weeks. In the meantime, as the references are so strong, and are fully populated with supporting aspects, and numerous cross links, we will apply the military terms to the current conditions within the data set.

Our references in ALTA 1305, near the end of the processing, picked up a further set of data emerging about the 'dark aspect woman' which we are taking as a metaphoric pointer to the recent, female-aspect-cloaked named storms, Katrina/Rita. Whereas the original descriptors had the 'dark aspect woman' being 'blind in \*both\* eyes, and lame in \*both\* legs', the last reference within the data set for ALTA 1305 had only singular words involved. This implied, if we are correct in our metaphoric deconstruction, that a single storm would be the next large problem, and unlike the Katrina/Rita situation, this next storm would be a 'problem unto itself', but in essence, a singular occurrence.

If we are to extract the imagery from the 'military' language relative to the pending storm impact what we see is that 'a lone/single observer, stands on cracking, barren plateau/bluff, watching the defeat of the land by the winds of the storm'. Further, the attribute set goes to the idea of 'torrents, and winds, scrub/expose red earth/clay hills, denuded'. This is supported in turn by 'valleys fill {with} bones/corpses {of} trees/brush and animals'. There are further illustrative sections which go to the idea of winds so strong as to 'drive/impel birds {through/into one's} chest'. Some suggestion that this last reference is not to a body part, but rather to furniture. This last ambiguity is one of those which frequently crop up and the emotive sums are adjusted during the next lexicon cleaning and reset.

The language at the higher levels of the entity suggest that the aspect of 'defeat' by the 'superior forces/army' of the 'wind' will 'induce permanent/lasting changes to the earth'.

Our current data set shows a very large increase in the already numerous references to 'floral city' and other like descriptors mentioned in ALTA 1305. The descriptor set further indicates much damage to the area to the 'north and west' of the 'floral city'. This area is currently 'wooded/forested' with 'small {under 50 foot} trees' which dominate the landscape, are 'rooted {in} red clay hills'. There are ever so slightly more references for 'Georgia' than other locations, but not so many as to be conclusive. We again note that a reference for 'past built {from/of} bricks {of} local red clay' as a descriptor. This aspect/attribute set has repeated descriptors for 'brick buildings', and 'charmed/cherished past' associated with the 'floral city'. As a note on the 'floral city', one of the many descriptors is that the 'scent of the peach/stone-fruit ripening' is a well known local phenomena in which late 'summer winds carry fragrance south', and the fragrance is heavily 'scented of peaches'. One of the many descriptors that we have which also tie back to Georgia. Sadly, from our data, it would appear that the 'remembrance of the past' is destroyed by the 'winds pushing brick up hill'. We have numerous, and repeated, well populated data sets going to the idea that the 'charmed past' will be 'reduced to ruin' or 'utterly destroyed' in the wind storm.

As noted in the chart above, the expectation for a 'danger' and 'defeat' situation arises on October 21-24, 2005, and the lexical associations are clearly for USofA based activity. The Populace/USofA entity also has a cluster of cross linked aspect/attribute sets which are seen as the modelspace is moved to that date. The expectation is for a "release event" which will be shortly followed by a brief emotional tension building period, and then another, more major release event on or about October 30, 2005.

We also note that the 'winds' in 'defeating the earth' have a very large component of 'loss' developing from cross links over to both Populace/USofA, and Markets, sub section, 'real estate'. The suggestion is that perhaps the Wilma storm is the impetus for radical change in 'housing/homes' that has been noted since ALTA 405. Within the cross links currently in modelspace the linkages between aspects, and dissimilar attribute sets suggests a very large impact of 'winds' upon the 'desire' {ed note: this is \*the\* key emotive

value sum for possessions}, for 'debt/ownership'. We have in this year been interpreting this as a shift away from owning housing due to a 'weather/sun incident'.

#### Terra - Bowels and Bladder

Occasionally the modelspace reveals key dates in a very visual fashion as the progression of the entities is monitored. In this case we have a November 4, 2005 date in which many supporting aspect/attributes start to accrue to the Terra entity under two inter-linked aspects of 'bowels' and 'bladder'. We see that the supporting sets for both lexical threads begin with 'ooze/flow/overflow/viscous/discharge', and both terminate within the aspect of 'shocks' which is cross linked internally within Terra entity over to the primary aspect of 'shocks'. The supposition at this point is that the descriptors are going to either a volcanic explosion, with subsequent 'oozing out {of the} bowels' of the planet, or less likely, but still possible, a 'parting {of the} skin {allowing} discharge {to} ooze out'. In both cases, the 'ooze' is supported by a fully populated set going to the idea of 'fire' and 'heat'. Soooo, hmmm?

The references to the 'bladder' are less clear, and rather more ominous. This 'bladder' is going to 'release misery/hurt/damage {upon/on} beaten backs, rub raw red, fleeing west'. The implication is that the 'bladder' is relating over to 'fluids' which may be an oblique reference to something not now/yet described within our lexicon. In clarification, we note that the lexicon contains descriptor sets for a wide variety of types of mud, some of which also include the 'ooze' adjective sub set, but perhaps what is being referenced is a new type of 'mud' or 'fluid' not \*adequately\* described by our lexicon. Such a case occurred with the September 2001 attacks in which we had an interpretation of 'military + accident' since we had not thought to model 'terrorism'. So this may well be such a case where a new type of descriptor is emerging, and is only partially being caught by our processing. In any event the lexical set is replete with references to 'lady/woman/female, plural' being in 'distress' as she is 'anxious' over the safety of her son during this event in which the 'bowels and bladder ooze fluids over the land and sea'.

There are some further, tempting, and curious references within this set which go through cross links to suggest that somehow the 'bowels and bladder releasing/expelling/oozing' is related to the 'handles' coming 'loose {from the} earth'. One \*possible\* interpretation is that a pole shift, magnetic or crustal, is involved. Of the two, given our charts above, a magnetic pole shift would seem to be the most likely. Further, it could be imagined that a \*small\* episode in which the 'handles of the earth come loose, and the bowels and bladder ooze' would also be both a very good trigger for the emotional release, as well as conceivably being large enough to take a number of months for the release process to complete.

Igor and I have discussed the set repeatedly as the modelspace was progressed back and forth through this period with differing entities highlighted. We have an embarrassment of riches in that so much data is clustering near early November, that it is very difficult to point to details within any entity which appear to be the \*key\*. However, that having been said, we do show several lexical threads, in Terra and other entities, with cross links, which all go to the idea that the 'stabilizers', or 'feet', or 'handles' of the earth are 'coming loose' or 'shaken loose'. And within most of the entities with such cross links, subsequent lexical sets which are added later are showing up subordinate to the 'bowels and bladder ooze' sub set which is suggestive of an event of continuing influence.

There are supporting sets for both 'bladder' and 'bowels' suggesting that some will be 'enclosed/trapped' within 'darkness' wherein the only contact with the outside is through the 'ears'. Again, we note that body part and bodily function references are archetypically very powerful, and have repeatedly demonstrated that they carry a significant weight within our manifesting model. So we tend to pay unusual attention when such references pop up. In this case we have such references repeatedly showing up both as aspects and as cross linked aspects within supporting attribute sets. Kind of a very "in your face" move from modelspace.

In support of the 'ooze' from the 'bowels' we have a whole section that goes to the idea of 'pressure' and 'rising pressure'. Further the suggestion is that a 'lid' will 'shift within the bowels' and cause a 'sealing {of the} vent' which in turn precipitates 'rising pressure' which in its turn will 'unleash the ooze'. No indications as to how long the process will take but the modelspace quickly goes on to other lexical values as we

progress past mid November so our take is that this may be a several days long process, but likely not lasting weeks.

Then things get interesting.

#### Terra - Worms Signal Putrefaction

As we note in the charts with the small diamond cluster markers, there is a significant clustering around the period of November 19 through the 21st. Within this cluster, and within the Terra entity, we have a lexical structure arise which is parallel to, but slightly higher in precedence than 'bowels/bladder'. This structure is led by the aspect of 'draining well', or perhaps 'drained well'. The implication is that a 'well drains from the bottom' which 'leaves dry dust evident'. Further the 'loss {of the} well hinders movement'. We also find that this area is heavily cross linked over to the 'shakes' aspect which really begins to get pumped up during this period and on into December.

A curious note rising within several of the aspects/attribute sets which cluster around this date is the aspect of 'worms/subterranean'. With the cross links back to the 'shakes' aspect, perhaps an indication that the shakes will be so violent as to 'shake {the} worms {from the} soil'.

Again, we also have to note the progression of the data set from the 'lost earth handles' which accrues many new values all in support of the main aspect of 'shakes' in that they go to the idea of 'shakes' which induce a period of '3/three years' of 'no prospects/outlook' other than 'turmoil within the dark valley'. As this area progresses from the 'lost earth handles' and also contains its own cross links to both the Populace/USofA and GlobalPop entities, the suggestion is that the 'shakes' are more-than-regional. Further that they are related to, or caused by, or participate within the 'losing of the earth handles', and are seen as precipitating a '3/three year sojourn {into/through the} dark valley'. We also note that the supporting aspect/attribute sets cluster around images such as 'naked and oppressed/threatened' and 'jolted {from} broken beds, feet/leg shattered, naked {in the} road/street'. Hmmm. Perhaps a reason to wear pajamas...or keep a robe handy.

The progression of the entity through the modelspace has the aspect/attribute set of 'lost earth handles' replaced, over the course of several weeks, with the aspect/attribute set of 'dying off' which we also translate as 'putrefaction'. In this instance we have the primary aspect for the section moving into a stronger position relative to the overall Terra entity, and consuming more of the Terra entity mass as it moves forward. Within the supporting aspect/attribute sets we find repeated references to 'millions' as well as 'multiples' and other words suggestive of 'multiples of millions' who will have their 'futures peeled {from them}' in the course of '9/nine days time'. The notation for the 'millions' is quite clear, and rather than our more vague 'many', this is very well supported with repeated references to 'tens of millions cleaved away {from} home' by the events such that 'new lives must {be} constructed {from} vapors'.

Again, we have had references showing up to a 'pre work day' earthquake since January 2005, ALTA 105, and this theme keeps re-appearing. At this point it would appear that the data is suggesting that such an event would be part of the 'shocks' which triggers the emotional release seen within the charts above. New details are emerging in which 'trunks' of trees are shown as 'down and bare, stripped/naked'. It is unclear whether these are already damaged trees, or if the 'shocks' actually 'strip bare trunks {to} white'. In either case, the trees are shown as being down over 'regions, valleys, mountains' such that the 'scalp of the earth is exposed'. Hmm. Know what that feels like.

#### Igor's Gut - Doubled Over and Spasms

One of Igor's tasks is to run integrity check programs against the incoming data stream. These are mostly prolog programs, but there are a few complex perl scripts as well. We have the perl language well integrated with the server operating system and as a result, these perl scripts can be blindingly fast. As Igor was not a participant in the coding, and the scripts only log errors internally, then recover and continue, it was necessary to put in a visual clue for Igor to be able to determine that all was well. I have found over the decades of programming, that it is easiest, most efficient, and most meaningful to provide some representation of the data being processed as this visual clue. It has a tendency to give the operators a gut-

level feel, after a while, for how the data processing proceeding, as well as how the resultant is shaping up. It has become so for Igor. As he monitors the processing, he gets to see several representations of data as it is clustered by numeric sums representing the cross checks on the multi-dimensional emotional numeric indicator array.

Igor noted that his gut was telling him that 3 areas all had begun to share a common trait. These areas were "doubling up, and spasming" as he puts it. Bearing in mind that he sees merely a dark screen with columns in which numeric values appear at specific row intersections as the data is processed. These displays are very rapid, on the order of several thousand changes per cell per minute so he is rarely actually reading the numbers, and a more accurate impression is that he is "watching the stream" with "soft eyes", which is to say, in his usual, more or less, un-focused fashion. But in spite of not really paying conscious attention, he does, and patterns do emerge.

At the level which he sees, he does not know under which entities the data will gather, just that numeric clusters or patterns are emerging. In this case the pattern which emerged and was common to all three areas of processing was that the data all moved towards a 'doubling', both of the sum, and the number of times that it appeared {ed note: the spasms were the same data sums flickering in place while the emotive sum counter maintained the doubled previous value}. Igor has quite the gut, and taking it seriously, these areas were flagged for early examination.

#### TPTB - Mirrored UP, Doubly Abysmal and Scary Clouds

The first of Igor's Gut's three areas turns out to be the TPTB {The Powers That Be} entity. The entities all have both internal and external lexical descriptor sets. The former goes to how the language is "self descriptive", while the latter goes to how the words are used to describe the world outside the entity, that is, from "its" point of view. As these twin elements stream across the monitor screen, Igor had noted that this group was 'mirrored' which is to say, the internal values were the reciprocal of the external values, and thus were mirroring each other both for position and value. Further he noted that as the longer range data sets were processed, a 'doubling' effect was seen where in the internal values and the external values were now moving toward the same value set, within the same position relative to the half of the entity they referenced. While not unseen before, nonetheless, the pattern is rare.

In this case, the initial "mirror" had a value set which supports a main, entity dominant aspect of 'repression/suppression/oppression' and which had internal mirroring values of 'precautions' internally, and 'danger' externally.

Within the 'precautions', internally referencing data set, the primary imagery from the supporting aspect/attributes goes to the concept of 'no precautions taken against presenting/impending danger', as well as 'being attacked and wounded by surprise realizes/manifests/appears imminent'. There are further references within each of these supporting sets which cross link over to an aspect/attribute set going to 'temper flares, realization/understanding dawns {too} late {as} flesh wounded, blood flows, bowels empty, cold flush'. Cross linked internally within this group, and terminating the whole of the area is a very interesting section going to the idea that the 'trusted servant' will be the proximate cause of the 'wounding', and that the 'wound bleeds many bodies'. Further that the 'servant, formerly respectable, now disguised, whereabouts unknown' is seen as being an 'unstated/unannounced/secret enemy, hunted {in} stealth'. We should also note that Igor's gut had picked up a true spasming in that the values supporting this whole set have a supporting layer going to bespoke 'fear'. This layer is the supporting group for 'bowels empty' and others of such ilk. So it would appear that the TPTB are, for some internal reason, afraid to 'announce the name of the enemy' once the 'wounding' becomes apparent.

When we examine this entity from an externally focused lexical array, we find that the 'danger' set really does mirror the emotive values of the 'precautions untaken' internal set. The suggestion is that the TPTB entity is expressing actual, manifesting danger which has some energy already in place toward its manifestation. This area shows that TPTB entity is aware of the 'existent danger' and 'exposed risks', but, for reasons internal to its structure, finds that 'precautions blocked, conflict stalls'. This latter has supporting sets going to the idea that actual internal-to-TPTB conflicts have blocked the implementation of 'barriers

against danger'. The nature of these conflicts is not exposed by our entity, though we do have descriptor sets sufficient to interpret as 'internal conflict' or 'intercine fighting'.

Nonetheless, a paralysis has set into the TPTB entity just as it is moving toward a 'doubling of the abysmal state'. This 'doubling' also has a section supporting the idea that 'dense clouds {of} trouble/risk {from the} west' and that these 'clouds push fear, no rain'. So apparently these are very scary clouds as the entity suggests the response will be to 'hide in caves' from these 'dense fear clouds'.

Much more of the language goes the various forms of descriptors for bespoke 'fear' and also other forms of the emotion, all of which are repetitive, and do not necessarily further the interpretation. But it is worth noting that the entity is rapidly becoming dominated by 'fear' words, and we are noting a very significant, fast diminution of 'confidence' value words. Probably not a good sign.

One last note on this initial state for TPTB entity, its primary aspect of 'repression' has multiple cross links over to the Populace/USofA entity where they terminate in an area that is headed by 'open rebellion', though perhaps we should be interpreting this in a more active state such as 'rebellion emerges into the open'.

TPTB entity, as it moves into its 'doubled abysmal' gains a rising aspect of 'water' which moves rapidly enough through the processing as to come to dominate the 'fear' area within only a few weeks of progressed modelspace. The suggestion is that one of the manifesting fears of the TPTB entity will be water, and that it will appear as within a short period. It would be unlikely that our timing was really accurate, so we can extend out our range to perhaps mid December, and thus have about 8 weeks time over which the manifestation of 'water' as a bespoke fear of TPTB will show.

#### Bushista - Chief Dick Limp, Two Mountains Press Down

The second area that attacked Igor's gut has shown as the Bushista entity, sub section for 'dick cheney'. In this case the pattern that Igor observed developing was a doubling within the emotive values of several of the array elements, all of which referenced short term, or immediate value sets.

These data sets showed, upon examination, to be composed of aspects/attributes going to the idea that 'clouds {of} troubles heap up, heart beats unsteadily'. We of course can all easily pick up this same emotional "tone" being portrayed in recent MSM {main stream media} reports about the developing PlameGate investigation.

In the case of our immediacy values, these arise from data that was gathered nearly 12 days ago, and all of which have a 'less than 2/two weeks' immediacy value. Further, Igor's gut had focused in on the ratcheting up of the values, doubling each time, of those aspects going to 'restraints', and 'strength removed, limp/lagging energy'. Within this set, we also find that a 'quality bottom survey' is seen as 'producing view to wounds' which will result in 'unsteady beating {of the} heart'.

The final note within this data is that a 'group' will form around this issue, in 'linkage/entrained' with the Chief Dick, and that as the modelspace is moved forward the Bushista entity reveals that 'two mountains of worry' will come to 'sit on' our Chief Dick, who, as may be expected, and as shown within the data set, will be feeling a bit 'limp'.

#### Populace/USofA - Doubling Up the Other Way

The last of the entities which were signaling Igor's intelligent gut is the Populace/USofA entity.

We note that ominously, this entity shares the 'two mountains sitting upon' area of the modelspace as it is progressed, so not only does the entity exhibit internal doubling of lexical values {ed note: these produce the steps in the charts above}, but also moves to share much of the same area, and linguistic set as the Bushista entity. This last is consistent with the moves we have seen for the better part of the year within the various ALTA report series. This pattern of the Populace/USofA and the Bushista entity sharing the

'wounding' has been referenced repeatedly. Further, as has also been noted, the 'wounding' propagates from the Bushista entity to impact the Populace/USofA entity.

In the case of our entity now, the Populace/USofA not only has doubling behavior expressing, but is also undergoing a near complete change in aspect dominance ratios. This suggests that big changes are coming on the national emotional levels, and that likely these changes will not be perceived as being good.

At the point that Igor had picked up the doubling behavior of the Populace/USofA entity, the processing had yet to reach the level of the 'wounding' cross links. This has made the usual stew of visual objects within our modelspace even that much more complex and hard to trace as the cross links from large entities such as Populace/USofA can turn whole areas of the modelspace totally black with ropey threads. It has done so during the current processing. We hope to have better separation of value sets as we continue the processing for Part 2 of this report series as the intermediate and short term value sets should produce a separation of the descriptors to where we can better trace the cross links.

We can say that large areas of the cross links go to origination points within the Bushista entity and on their termination within the Populace/USofA entity, they complete the image of 'taint spread, source known', and 'realization/understanding of injury/wounding'. Further descriptor sets suggest that the Populace/USofA is about to be forced to 'eat {their} naivety/unawareness/denial', and that such will 'taste foul/tainted'.

At the entity level, a curiosity has emerged in how the Populace/USofA entity has reached the same area of lexical structures as portions of the Bushista entity. As Bushista has moved downward, the Populace/USofA is rising. Their angles intersect in the area of the 'wounding', and then depart from there. As the Populace/USofA entity moves away, we can see that the Bushista entity is significantly diminished, and that the Populace/USofA has now added several new areas of descriptor sets {ed note: part of the large scale language changes within the entity}. So in a real sense the Populace/USofA has reached the same 'doubling up' emotionally, just coming at it from another direction.

As the modelspace is progressed, we note that the 'twin mountains' while 'beset' the Populace/USofA and are 'pressing in the wound/hurt'. As noted, we have little discrimination for further clarification at this point. More should emerge in Part 2.

We do need to note that much of the changes within the Populace/USofA are also cross linked over to Terra entity, and are usually terminating references which suggests that much of the upheaval and change within Terra will act as initiators for emotional changes within the populace. Ought to be a very interesting few months ahead.

## Conclusion: Part 1

The preparation of the charts presented in this section consume some considerable effort and time, and thus reduce our ability to examine the modelspace as deeply as we otherwise would. The charts presented should compensate by providing an overview and framework in which to place subsequent sections of this report. These charts will be used throughout this series, and likely will be included again within other sections when discussed.

Note that these charts are \*not\* to be taken as mathematically accurate representations. Instead they are trend lines extrapolated from a small sub set of the numeric values with which we work. And also note that the numeric values themselves are of our own devising, and likely are not accurate in more than a small fractional part. Therefore, it would be unwise to consider the charts to be more than a vague map of potentialities or probabilities. It is clearly not written-in-stone-prophetic-bullshit. These charts are to be considered as rather bad maps of universe which may or may not get you to the neighborhood you seek.

Part 2 is expected out late on October 31, 2005, and as it is 'all hollows eve', we will try to concentrate on really really scary entities....oohhh! Shivers!.

Remember, let the children gather up all the treats, then confront them with a trumped-up offense against the household rules and confiscate all their candy. You will be educating them about life under rule by IRS, saving them from a stomach ache, saving yourself some dental bills, and will have a bag of candy for your trouble.

Note: Entities are identified by a blue typeface. Aspect words are enclosed in square brackets []. Attribute words/phrases are within parentheses (). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk \*.

Data set distilled from 17.981 million reads . Our expectations are to achieve 60+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

#### Analysis - Recent Emotional Tension Release Events - Reality Check

Just a quick reality check for all of us. We have taken one of the charts from Part 1 and included it below. The original forecasts as to events are in black letters, while the recent emotional tension release events are noted in red letter. Both are approximately plotted on the chart. Igor gloats with some satisfaction that while we may not be able to guess the events which are slotted to fulfill the emotional tone, that both our timing and our overall forecast {ed note: building versus releasing} is getting much more accurate. This, for Igor is a double edged sword, first it means that we are getting better which is good, but also means we are getting better, which is bad as he thinks that either MIB {ed note: men in black} or space-alien-whatzits will come and pack us off for nefarious purposes if we get too good. In any event, a small check on results against projections.

Now, if we are any where near accurate with November projections, then everyone hang on for the December ride.

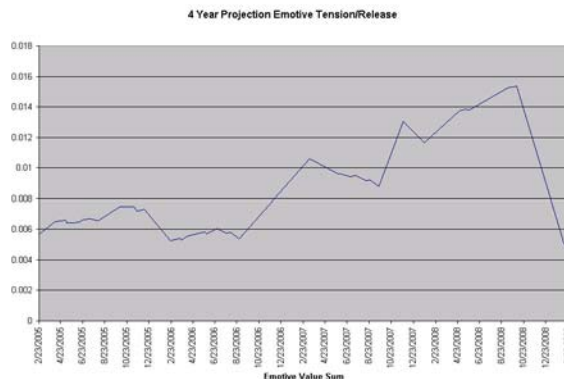

#### Meta Data - Restricted Movement Rising, Secrets Revealed Strengthens

As time and the modelspace progress, we are occasionally lucky enough to have our eyes pointed in the right direction at the correct point and are treated to a view of a new pattern emerging. This is usually an "aha!" moment, but with us, as there are large beasts sleeping underfoot, it is unwise to celebrate discovery early in the pre-dawn hours by suddenly leaping up and shouting.

Nonetheless, we do have an "aha!" developing. Within this latest round of processing we are finding that a number of entities are now all sharing a common set of aspect/attributes, and that within all of these this aspect is both very heavily populated with support phrase sets, and is rising in importance within the entity. At this point it sure looks like we have caught a new meta data layer developing.

We have seen this critter pop up throughout the last 18 or so months with some repetition, however, now the fellow is all over the entities like fleas on dogs. In the past we have not been so fortunate as to catch the meta data layer in its nascent, developing state, but only have seen them after they were ubiquitous throughout the modelspace.

This meta data layer is currently labeled as 'restricted movement'. This is the name that we have used for this descriptor set since it first popped up a number of months ago. However, there may be a better label, extracted from within the same descriptor set, and that would be 'scarce resources'. Both labels/names are within the same emotively bound group of words. We chose the 'restricted movement' as our first encounter with the overall descriptor set arose from bespoke fears of 'martial law'. Again though, in examining the totality of the data set, now spread across a number of entities, it may be best that we start thinking of it as 'scarce resources', or perhaps an 'encounter with scarcity' to place it within a more active context.

This 'encounter with scarcity' is being seen as a rising area within all the major entities, and many of the minors. It begins to dominate the cross link thread "weave" as the modelspace is progressed forward through the remainder of October, and all of November.

In taking a longer view, as the modelspace is extended out on only the meta data layers, we noted that our 'militancy/aggression' meta data layer morphs over into 'conflict' in about 18 months, but prior to that period we have the strengthening influence of our 'secrets revealed' meta data layer. This layer is growing significantly and expanding with each incremental advancement of the modelspace. It is now quite ubiquitous in all the major entities, most of the minor entities, and is pervasive through the general modelspace lexicon as well. While not as large a layer as 'militancy', it is nearly so, and the 'secrets revealed' meta data layer is much deeper into the lexicon than is the 'militancy' layer above it. The suggestion that arises from watching the meta data layers play out on the larger canvas of the extended modelspace is that 2006 will be a year split into two types of emotional activity, The first 5/five months of the year will be spent in the digestion phase of the emotional release begun in December of 2005. This period will have its share of secrets come out, but not much in comparison to what will appear in the emotional tension building phase immediately following. That building period as shown in the chart below {from Part 1} will occupy itself as a minor plateau, and then steeply launch into emotional tension beginning around the end of August, 2006. At that point we will gain emotive tension values greater than twice what was seen in the Summer/Fall of this year. So as a point of reference the tension gains are likely to be greater than twice the combined total of all the emotional tension built up since the appearance of Cindy Sheehan on the scene. Remember to sum in the Katrina/Rita/Fema/Wilma/Harriet messes along with the South Asian earthquake, and whatever comes out over the next month relative to the continuing Bushista meltdown, and any other emotional disasters which appear prior to December.

Within the context of the 'secrets revealed' meta data layer, we find that as the modelspace pushes forward, there is a growing section within the layer which supports the idea of a 'change {of} complete reality'. Further, the 'reality change' is heavily cross linked to both Populace entities, and within those entities, terminates at lexical structures which go to the idea of 'false history destroyed, liberation, fear, burdensome task(s) climbing/re-ascending'. We need to note that this is one of the originating lexical sets from which

the idea of mass insanity derives. This area is worth noting also as it is very extensively supported and is growing over the progression of the model very rapidly. Within this area are those lexical sub sets of 'science' and 'technology'. These include all the so-called natural sciences, which apparently are first up to get their 'shocks'.

There are still building lexical structures, which when viewed from the 'secrets revealed' meta data layer, that suggest some large, and very emotional 'confessions' are to arise from N(A)SA, and other space-focused government bodies. What is very interesting within this sub set of data is that here we find the first appearances of the supporting sets which contain imagery of 'reality changes, new laws'. The suggestion is that 'new laws in reality/physics {will} change NASA, tearful confessions, remorse appears'. Hmmm! Somehow I am not comforted by this thought.

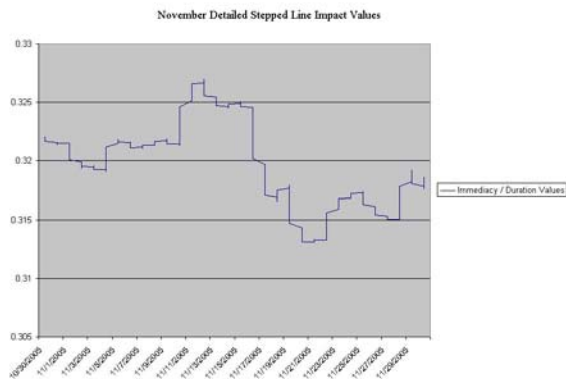

#### Meta Data - November / December Impact Details

As November and December are showing up as such critical months in setting 'tonality' for the coming period of a little over a year, we thought to provide a detail chart on each month. These charts are the plots of the line of 'impact' values across the individual months. The data set is composed of the sums of all new values coming into all entities as the modelspace is moved forward, day by day. As we actually have millions of these points, a sampling technique of weighted clusters is used. In the case of the November chart below, the data set was composed of 36,800 clusters, and December is made of 43,900 data element clusters.

The scale on the charts is the numeric representation of the following formula:

(sum of all immediacy values) divided by the (sum of all durational values) for each data element summed for each day.

This formula provides us with a daily 'impact duration ratio'. This is the numeric expression of the "impact" of the emotional release on all entities. THIS IS AN INVERSE chart. As the numbers go down, the long term duration increases.

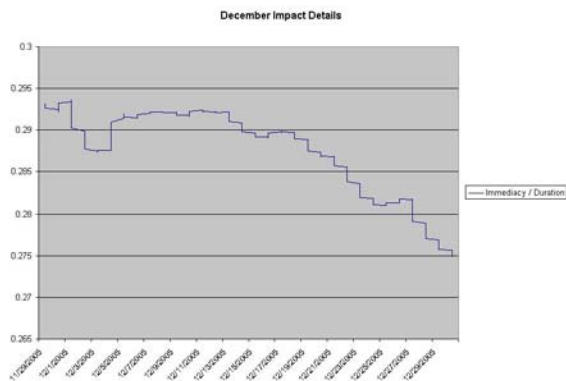

We can see from the chart for November that the month promises to be somewhat choppy in that many short term impacting events (the "upward" steps) are competing with many long term impacting events (the "downward" steps). It is this sort of action seen in a number of our summed value sets which reinforces the idea that November will bring a series of 'shocks'. Then, in the interpretation process, as we go forward through the November data set, we see the lexical reinforcing of that idea with actual lexical sets, so that we end up with both with a visual impression of 'shocks/shakes' in the various charts, and a set of lexical references for just those words.

The value of such detail charts as the November and December charts, is \*NOT\* to plot against daily event/circumstances, but rather to track durational effects from such events as do occur. The theory is that the "downward" steps length, when multiplied by the lexical sum for the complete durational array values

will produce the future "echo" of that event/circumstance. So for the plot above (November) and below (December) those areas of the chart where we find horizontal lines are representing the daily-impact of the event that starts the line, whereas the "downward vertical" lines are representing the "seed" of the impact of this emotional release on future events.

So if we examine the chart above for the period of November 20th through the 22nd, we find an indicator for an event which will take up about 2/two days for immediate emotional release, however, note that to get to that part of the chart, we have been stepping downward {ed note: creating future echoes} since about November 12th. This implies that the echo of the period, when multiplied will have a very large effect, and consume a number of months of total emotional energy in the future.

In contrast with the 'shakes/shocks' shown in the November chart, the December chart below shows only continuing downward steps.

With the exception of the event/circumstances of December 3, 4, and 5 where we return to a building pattern, the rest of the month is continuing with the general step downward of continuing emotional release. The implication is that once the process has begun, there will be very little stopping it. Further, the way the emotional patterning is developing is suggestive of a period in which the 'roots are gathered' and that 'all roots join' such that one emotional trigger/release begets another, perhaps related thematically, but clearly continuing in the 'get it all out' manner shown in the chart above.

What is not shown on either chart is the long step down on November 29/30 which caps off the month of November, sets up events in May of 2006, and is somehow a trigger for the December 3rd occurrence.

One can also observe, perhaps not as much with the November chart as with the December one, how the impact value set participates in the emotional release components mapped out in the four year projection chart at the top of this article. Note that many such numeric operations are performed for the emotional tension sums, so they will not correspond directly, but nonetheless, impact and duration value sets are key components of the tension/release dichotomy.

Populace Entities {GlobalPop, Populace/USofA} - Economy - Dissolving, Digesting Secrets, Looong Echoes Coming

As we progress the modelspace forward and move it from the last days of October into November, we note that the Populace entities are showing a curious shift, followed by a total lack of progression. Within the sub section of 'all things economic from the view point of the workers/peoples of the planet', we note that both populace entities have a sudden(ish) shift to 'dissolution' as the dominant aspect of the area, and then no movement of other aspects as the modelspace moves forward. This is to say that the now dominant aspect of 'dissolution' is reinforced, but not altered as the new lexical sets are brought into the model. This suggests that the 'dissolving' is going to be a long term process, and that the initial, perhaps defining stage is developing now. When, in past ALTA reports, we have seen this effect, a longer term event/circumstance manifested within those characteristics described.

The 'dissolution' is not without its drama. The lexical set moves into 'dissolution', but does so through an aspect/attribute set which starts off as 'pressurized/compressed/squeezed'. This aspect is fully supported, however is only briefly rising before being merged into the supporting aspect/attributes for 'dissolving'. The 'pressured' data set is internally cross linked over to 'explode' and 'explosive forces'. Both of these are supported by 'steam' and 'heat' as supporting aspects. Within the attribute sets for both, a common image of 'fluctuations/oscillations' is supported by 'explosion {upon/when} reaching extremes'.

What we have to temper our interpretation with is a view that this 'economic' sub section is not growing in isolation. Rather it is part of a large scale change under way throughout several of the entities. Some of this change, perhaps as much as 30/thirty percent is attributable {ha ha} to the rising meta data layer discussed above. The converse is more revealing, and should be stated that some 70/seventy percent of the changes are related to areas under the 'political' and 'social' sub sets. These are of course influenced by, and perhaps in several instances, triggered by the 'economic' dissolution, but are nonetheless, appearing within the Populace entities, primarily the Populace/USofA entity at this point, as their own level of significant change. Again, a reminder that the meta data areas of 'militancy' and 'secrets revealed' layers are participating in all this activity, including the 'scarcity encounter' noted above. So, that said, the new political and social aspect data sets are also worth exploring.

Heavily cross linked over to the 'scarcity encounter' we find that the top two threads of the cross links layers are going over to 'political, structure', and 'social organization' areas. While there are cross links to the 'economic dissolution' section, which does grow significantly over the course of the processing, the main cross links for the meta data layer of 'scarcity encounter' are socially oriented.

The data suggests that the 'scarcity encounter' will 'open avenues {of} thinking'. Please bear in mind that the 'shocks' seen first as the descriptors for this November period in ALTA 1305 are still in place within the modelspace. So if one wanted to "read" out the imagery with the meta data layers included it would go something like

"Against a background of militancy and secrets revealed a shock will trigger an encounter with scarcity which seems to first affect a significant portion of the the Populace/USofA and then the GlobalPop. This will trigger some very large social and political reorganizations. Oh, and by the way, this shock is temporally related to the beginning of what looks to be one hell of a global economic problem."

The 'shocks' of November {including last week of October} are the edge of the precipice from which the Populace entities begin their slide. While our charts depict the slide in right movement, downward, and reduction of emotional tension values, we need not think of this period as being an overall negative. Undoubtedly an indicator of widespread, even rampaging change, nonetheless, change can be good. There is much inference from the meta data layers to suggest that a generalized social housecleaning and furniture rearranging is coming. There are specific references going to the idea that 'social organization' is about to come 'unglued'. Within the Populace/USofA entity, and to a lesser extent by about 30/thirty percentage points, within GlobalPop, we find that the 'secrets revealed' meta data layer is prompting, if not driving, much of the coming social house-sweeping. It will be during this period of digestion of the secrets already revealed that the set-up for the next period of building tensions begins. As that period will last nearly 6/six months {08.2006 to 03.2007} contrasted with the current build period which is lasting approximately 2/two months {08.2005 to 10.2005} at the same steeply upward angle, we can anticipate a very rough Fall/Winter of 2006/2007. We have the evidence of these last two months fresh on the teevee screens to act as a base for our understanding of what may be pending {ed note: assuming we know what we are talking about}. If we examine the actual changes which have occurred to life-as-we-know-it here in the USofA over these last two months, then the suggestion is for next Fall to begin a period with 3/three times as much life-altering change to manifest.

And that will come after a period of approximately 6/six months {02.2006 to 08.2006} which will fractally rhyme with whatever levels of plateau release we have occur within the month of November, 2005.

Restated another way, the period of 6 months will be one looong echo of the tone set in the upcoming month. Whatever economic or social or political emotional tensions build within the next month will be setting the stage not only for the slide seen economically for December, but also for the tensions to be encountered next Spring/Summer. This is not to say that it will be merely repetitious, as there likely will not be a tit-for-tat expression of elements, but rather the general emotional themes of November will come back magnified next year.

Keeping in mind the magnification effect apparently shown by modelspace, the Populace/USofA entity specifically, has a lexical structure that is of two distinct parts which comes into the entity in November. The externally cross linked and focused aspect is 'engrained/enforced domination', and the internally controlling aspect containing the entities 'self' value shows as 'free {self} from imposed restrictions'. This also needs to be noted as having the 'restrictions' be cross linked back over to the previously discussed 'scarcity encounter/restricted movement' emerging meta data layer. Again the interpretation goes to the idea that an encounter with scarcity will alter or change the nature of the Populace/USofA entity, and that specifically, some 'social {and} political constraints' which have the supporting aspect of 'imposed' will be 'cast off/thrown over'. This in turn is seen as setting up a larger echo later in 2006/2007 which grows into the often repeated 'rebellion/revolution' theme noted in the last year within this entity. In both periods the entity is indicating that no shortage of those 'willing to be partisans/insurrectionists' will be found.

The Populace/USofA entity is also indicating that November brings about a 'confrontation {with the} ruler' and this is further described as the 'errorfull/mistaken civil servant/service {which} transitions {from} service {to} ruling'. This echo again repeats in 2006/2007. There are also further areas within the entity suggesting a very large scale schism occurring in which even those who work for government will 'feel repelled' and will see a time of many 'abandonment/rejections' of government jobs.

The Populace/USofA entity is showing via cross links that the 'shocks' of November will lead to 'restricted movement'. This is being interpreted as that, rather than 'scarcity' as there are both appearing within the entity. The suggestion from the originating cross links is that a combination of 'secrets revealed' and a run-in with 'scarcity' will lead much of the populace of the country into a period of 'restricted movement'. This may well be indicating a very very bad holiday travel season.

#### Populace/USofA - December Gloom

The appearance of bespoke emotional indicators is expressive of one very significant level of lexical clues as to the emotional state of the modelspace, and emotive sums are another, a third is the appearance of archetypical descriptor sets. Such sets of importance might be our often discussed "human body parts and/or processes", or as we have developing within the Populace/USofA entity, a set which archetypically describes the 'point of view' in emotional, or metaphoric terms. We have such a set emerging within the Populace/USofA entity, and it appears with an early December onset cluster of values.

The references are for a view of 'gloom' which is supported by repeated references to 'dark', 'darkness' and others indicative of a 'gloomy' perception of the time. This area is separated from, but internally linked to other Populace/USofA entity areas which are also December(ish) pointing, however, it is arising clearly separated from the already discussed economic references.

The area is explicitly suggestive of a very 'dour' and 'bleak' point of view where 'peering at the gloom' is seen as 'stupefying the mind' and 'reducing the will/willpower/intention' to the point of 'no action/standstill'.

There are some curious references internally to 'rise and fall of the waters' which are not cross linked over to Terra entity and are also carrying 'moon' references suggestive of some form of 'tidal movement' which is seen as 'drawing the eye/mind'. There are also other odd internal descriptor sets, many not completely populated suggesting "more to come" which go to aspects of 'sun' and 'energy', and 'unfavorable movement'.

The whole of this area of the entity is solid, and growing as the modelspace is progressed forward. We expect more data to appear when the short-term and intermediate duration value sets are processed later in

the series. But for the moment an intriguing area suggesting that the Populace/USofA will have more emotional turmoil than just the economically generated ones discussed above.

### Silver/Gold - Phosphorescent Seas

The general movement as well as the details within the Silver entity {ed note: stands as proxy to precious metals, except as noted}, suggest a very tumultuous period in the month ahead. There is a suggestion from the movement of the entity through the modelspace that it will participate within the buffeting winds of change which are developing into the economic storm of December and onward. The trend is emotionally very strong, and rising, as is the movement of the entity through the modelspace, however we have to note that the sub section of the 'economic' structure held by the Populace/USofA entity is many times the whole of the Silver entity in references, so while there is a jerky, and irregular progression upwards through the course of November, the Silver entity also is impacted by the emotional release trends which are shown as manifesting in December. This is to say that while the general trend of steps upward in emotive attachment values is still present, the whole of the scale against which it is being measured is falling.

As the modelspace is progressed through November, the level of details suggest that 'large sparks/shocks {are to} leap {from the} phosphorescent waves/seas'. While this is within the Silver entity, it is specifically referring to 'gold' in this sub set. Not to worry though, as 'silver' is also associated with imagery which suggests that 'health drives acquisition'. This continues from trends first noted several ALTA series back wherein a health related, new category of human to silver emotional attachment was showing up and continuing to grow in strength. This is still the case, and in fact, the number of references for increased health related aspects of silver are still increasing, so our suggested interpretation is that even though there have been a number of recent announcements about silver and its impact on human health, much more is pending. As our scale goes, we have only seen about one third of what the language structures suggests are currently manifesting. The impact so far on silver as a commodity from such health related uses has participated within the price stabilization and pressures in recent months. Again, the suggestion is that this trend is still only at the beginning of a large wave.

There are some recent structure changes within the Silver entity, and one of them is its joining the ranks of those entities which are now hosting a 'scarcity encounter' sub set. Within the Silver entity, the 'scarcity' is seen as 'jumping up swiftly' and will first appear in 'gold'. While the entity shows that upward emotional movement for 'gold' and 'silver' will appear within the November period, it will be later, when the general 'dissolution' has begun seriously in late December, that a proportional shift will take place relative to 'silver' emotional attachment and the general economic background. The suggestion is that late December and beyond will show significant pressure on silver both in the 'got to have it' factor, as well as the ability to get it 'scarcity encounter' component.

Much of the data within this entity is cross linked over to the Populace and Markets entities, and is also flavored with the aspect of 'confusion' which is much in evidence this processing period. The Markets entity has 'confusion layering' over much of the activities there, but within the Silver entity, the 'confusion' lexical set is mostly a set of only terminating cross links which implies that external confusion, say within the general marketplace, or populace at large, will be one of the primary influences for silver/gold over the month of November. Thus the suggestion is that while upward trends in price support exist for the precious metals, the most likely scenario is painted as "fits and starts" wherein each upward jump is hampered by dragging along bags of confusion. It may be that any rapid/sudden price jumps will run into consternation and contrary energies at each plateau. Nonetheless, the impression of the entities movements are for a very 'pressured' upward push with largish steps throughout the month.

As the modelspace is moved into December, a split in lexical descriptors overtakes the Silver entity relative to the Markets entity. At that point, the downward pressuring language for the Markets entity is merely part of the overall negative language pressure on all entities within the modelspace. Still though, relative to the Markets entity, the Silver entity, even though negatively pressured, is rising. This rise is against a falling background.

## Bushista - Reality Bites, Pulled Out by the Roots

This report is being prepared against the background noise of the mainstream {cable} media spewing speculation concerning pending release of indictments. Without regard to their speculations, and without regard to what levels of angst occur if/when the indictments are released, our Bushista entity is hinting at much worse to come. And much of the developing category 5 shit storm is being manifest in November. However, the Bushista entity is indicating that nothing is resolved in November, rather only that 'beginnings {of the} multitude/many fires spark {in} shocks'.

As the Bushista entity is progressed through the period of November and up to about December 5th {maybe as early as the 3rd}, we have a developing or building lexical set deep within the Bushista entity which is hanging under the aspect of 'blockage/bouchon/cork', and is extensively constructed of language supporting the idea that 'blocks build ramparts/shoulders {against the} waves/sea {of} troubles'. The whole of the structure is pointing toward an idea of 'heaps/hills/mountains' of troubles, but no time to react or even have a quiet little breakdown, as the 'pressures continue constantly, nightly drama revealed/exposed'.

The visual impression, as we watch the Bushista entity struggle forward through the newly processed immediacy values is that it will be one long month of 'accumulation {of} voices/words {about/concerning} shame/regrets'. This area is one of those which participates within the meta data layer of 'secrets revealed'. As a note to those of a more curious nature, we find that a group of cross links from this area within Bushista go off to create some real trouble for all of 'government, america' that will begin to manifest in late May of 2006. The "budding" of the 'secrets' of next May, will be anything but 'darling' to both the remaining Bushistas and to the 'shadows {on the} walls {of} government house'. This area also participates very heavily via originating and terminating cross links with the 'reality change' sections discussed above.

As we move the Bushista entity forward through the end of November and into the beginning of December, we easily see that it also starts the slide downward lower under the mid-point neutral line of the modelspace. As do most of the other entities {Silver being one exception at this point in December}. However, the visual impression is that the Bushista entity is falling slightly faster, and just a little ahead of all the other entities. From this very high level view it would be possible to think that the Bushista entity is leading the way downward. Clearly it is \*not\* a case of Bushista entity dragging the rest of the entities along, they are all falling down or sliding down in roughly the same angle on their own. Rather it is the appearance that the Bushista entity is just a smidge ahead on the downward slope.

If the modelspace were populated with cartoon characters, the Bushista entity would be the hapless critter running just scant inches/millimeters in front of the rolling landslide of boulders which are the other entities.

The lexical area which is leading the Bushista entity down hill as it goes over the tipping point of December 3rd {m/l} is the structure headed by 'misunderstood actions', however we also need to note that this is the language as is seen from the Bushista point of view, and if we subtract the 'self' component value from the emotive sum, the lexicon instead provides us with 'hidden/underhanded movements'. So merely a point of view issue. Nonetheless, this is the area which is the leading edge of the Bushista entity in that it accrues more values per unit of time at that point than any other lexical element. The implications are pretty clear.

One interpretation \*could\* go to the idea that so much of the chicanery of the Bush administration and Republican party are exposed as to depress confidence within the country in the government/system to the point that the globe gets a depressed view of the USofA and starts dumping our product, the dollar. This in turn feeds back to the populace of the country which starts a self-reinforcing feedback loop that cannot be broken by the weakened to the point of ineffectual political structure.

As to the actual support for such an idea, we do indeed show that within the cross links from Populace/USofA to Bushista and in turn to Markets, we find that 'banks' will be 'stressed' during the end of November and early December. Further, the 'secrets revealed' layer is heavily laced with 'dollar' references. We also find that the Bushista entity contains a bespoke 'hapless/helpless/incapable' structure which is currently controlling the 'economic' sub set within this entity. The suggestion is that when the economic category 5 develops, the Bush administration will show itself just as robustly capable as demonstrated following Katrina.

Again, much of the 'secrets revealed' meta data layer is currently pressing on all things Bushista, and it is not hyperbole to state that no part of the entity is without at least a cross link over to the concept. Much of the Bushista bespoke 'fear' and 'disquiet' goes to this layer as originating cross links. We also have terminating cross links from the meta data layer which resolve themselves in the Bushista entity which is suggestive that some secrets will stop or be resolved within the Bushista entity public karma. Again, we must note that however much is revealed in November is but a fraction of what will be manifesting next Spring/Summer. And the suggestion is that the events of this Winter will be merely a fraction of what we face in the next emotional release period of February 2007 through October of 2007.

As to the specific language that we have for the Bushista entity and November, one of the most interesting of the many lexical structures is headed by the aspect of 'roots' and has supporting aspect/attributes going to the idea of 'harvesting distant plants by yanking on the roots of this one'. This idea of 'gathering roots' in 'clusters {that/which} pull {out/up} together' is repeated at many layers within the structure suggesting a long process with many separate groups of 'roots' being 'gathered'. Noting also that the whole of this area has meta and local data language which goes to the idea that 'complaints {against/about} hidden actions' are the driving force behind the 'pulling up of the plant by the roots'.

And as if that is not enough of a problem for the Bushista entity, the whole area of the BushWars sub set within the entity is now starting to get words going to 'smell' or 'stink'. Actually as the modelspace moves forward toward the end of November the emotional sums go to the lexicon where we have the aspect of 'rot', so the idea of the 'stink' which will arise relative to the BushWars in early to mid November is merely the indicator of the 'rot' to be exposed later in the month, and beyond. Also note that much of the lexical structures emerging in Bushista in November are showing up as cluster points rising in Spring/Summer of 2006.

#### Terra - November Rings Out

The modelspace is curiously showing a degree of favoritism for the month of November, or rather, for the 12th lunar month which includes most of November. Within our data set a large number of Terra aspects include November references either as aspects, or within the attribute set. While the appearance of dates relative to 'fear emotional sets' has to be taken very skeptically, it is still interesting that so many references to November are showing up within diverse aspects under the Terra entity.

The way we are going to interpret this predilection for November dates and Terra entity is to take one of the primary images under a November date which goes to the idea that 'November sets the tone'. Or, in other words, as Terra moves and shakes in November, so shall the next year reflect this energy back. And apparently with some level of magnification if our emotional sums turn out to be anywhere near accurate. Thus our title for this section of 'November Rings Out', and perhaps we should have sub-titled, '2006 echoes back'.

In any case, the many references within the Terra entity for the month, while scattered, still show that at some point a 'celestial fire' will be temporally near, or proximate to a 'near surface earthquake' of some magnitude. Recognizing that our previous 'great quake' reference for 3/three of these in quick succession turned out to be 7.1, 7.5, and 7.5, we can postulate that the language now is suggesting perhaps only a high 6 in magnitude, but because it is seen as being 'only one layer down', or very near surface, the results will be significant. We have language that suggests an actual, permanent, 'warping/twisting {of the} surface {of the} earth/ground'. This 'twisting' is also seen as taking down a number of bridges and bringing up our recurrent theme of 'restricted movement'.

Separately from this earthquake event, or at least so we think, will be the emergence of a 'new mountain'. This 'new mountain' lexical set is also found with a number of November/12th-lunar-month appearances. It is further described as also causing the 'failure/collapse of bridges' and the 'blocking of roads', and will even 'alter the course of rivers/streams'. This last is internally cross linked and suggests that next summer, the reversal of flow of the water table will have dire consequences for a number of communities to the 'east' of the 'new mountain'.

#### Terra - Transformation Through Brief Fire

Coincident with, or rather temporally close to the December 3rd through 14th period which begins the emotional release period downward slide, we have a few Terra lexical sets which are headed by the aspect of 'transformation'. To further illustrate, the set, with its primary attribute group goes to the image of 'earth transformed through fire'. Within the 'fire' aspect, its supporting aspect/attribute set goes to the idea of 'sun fire {at the} 30/thirty latitude attaches to fuel source, direct and indirect burn alters ground/earth'. Further down in the supporting set we note that this incident of 'alteration of the landscape by fire' is also supported with 'light {from the} fire radiates over the mountain' and 'a long line is locked up, bereft of use'. This and other references to 'long straight sighting' and 'far distant healthy rumbling, dead silent' give rise to the idea of a fire that affects a large pipeline of some very volatile fuel. The 'transforming of the ground' from this fire is supported by lexical sets which go to the idea of a 'brief fire', but one whose intensity is seen as 'melting houses', and 'burning channels' in the earth.

#### Terra - California/West CoastUSofA - Drunken Lurch

Slightly further along on our timeline, the Terra entity starts accumulating a rapidly growing lexical set which is 'west coast/usofa' sub set referencing, and within that 'california'. However note that much of the references are for the 'north' and the descriptor set is leaning more toward the Pacific Northwest rather than California proper. Nonetheless, the whole of the 'west coast' is seen as taking a 'drunken lurch' which in turn causes 'spillage of dinner, hot pots fall, darkness comes, 9/nine days long'. The implication is for a long blackout. There are other lexical sets going to the idea that 'stations damaged, bricks, dust grind teeth', and that the long electrical lines running down the 'spine' of the area are left 'separated by valleys, rivers, tendons torn loose'.

Interpreting the data set suggests that '3/three shakes' are involved in a 'day long exercise/event' which 'frays, tears/rips nerves, squeezes bladder'. Further references go to the 'change of seasons increases/exacerbates danger', and that '9/nine cold nights separate families/groups'.

Cross linked from here, and perhaps indicative of a causal relationship, we have many 'fire' references. It could be that our 'fire' originates as a result of the shaking. We do note that the imagery goes to describe the resultant effect as 'tiger skin, stripes ablaze {on the} earth'.

The over riding caution is seen as arising from the '9/nine days of misery/danger'. The effects of the 'drunken lurch forward/downward' is perhaps bad enough, but most of the 'danger' and 'risks to/of life' are in the subsequent period which, due to repetition, is being described mostly as '9/nine days separation/misery'. There are suggestions within the data that indicate that many will not survive these 9 days, and only those who are 'calm in chaos' will be 'present/there {to} climb {the} bricks/rubble/ruins {once/when} light returns'.

While there are many cross links over to our previously discussed 'near surface quake', this area would seemingly be suggesting that it follows that event by some weeks in time. Noting that our time clues are still the worst and most fallible part of the process, we still have a visual, and thus implied temporal separation from the 'near surface earthquake' and the 'drunken lurch'. Does not mean that one really exists, but it is lexically showing as though a few weeks separate the two events. We also have some descriptor sets which include 'change of season' references implying the change from Fall to Winter with the December solstice.

## Terra - Antarctica - Burdened Roof Breaks

The data set continues to supply references for 'antarctica' all out of proportion to its easily perceived importance to the populace in general. As the modelspace is moved forward, with this last set of processing, there is again another sudden increase in Antarctic descriptors accruing.

The currently dominant aspect of the newly acquired values goes to the idea of a 'sagging beam breaks, the roof falls/crumbles', and with many cross links at the 'secrets revealed' data layer, the attribute set goes on to suggest that 'internally/within antarctica new leaves/life sprouts'. Further we see that 'externally roof is stressed/burdened', and that 'risks are cast aside, waters gathered for a voyage/journey', and that 'above the bulging/extended roof, feet walk unknowingly'.

Within this data set we have little in the way of further details except to cite some 'north' references and others suggesting that a 'stream' whose depth at the sea is 'greater than head high' needs to be crossed and apparently runs, mostly, north-south.

This whole area of the Terra entity, sub section 'antarctica' is still wrapped around the very large data set going to the 'mountain rises' or 'newly discovered mountain' data set first seen in June/July data sets.

As we progress the data set through the modelspace the values for Antarctica increase rapidly near the end of December period. Just prior to that, a sudden new value set of 'risk' or 'danger' appears, and then that is overwhelmed with our 'roof beam breaks' references. These appear to be emerging around the end of December, perhaps as late as the middle of January.

After the 'bough breaks' our particular Antarctica data set shows a rather strange event. The suggestion is that some 'discovered green leaf/life' will necessitate a 'walk across the ice' in which the above stream is crossed, and then a 'below mountain' hike takes place. It is here that the 'leaf' will be retrieved, and brought back. During all of this walk-about, the primary aspect seen dominant is 'wind'. Further the 'wind' data set is very curiously described as 'celestial/space' wind. Hmmm. Lead lined underwear needed? Maybe so.

### Conclusion: Currently Operating Meta Data Layers

In conclusion just a reminder that the various meta data layers are "discovered" elements within our processing. Unlike our lexical descriptors, we did not go looking for these critters. When the patterns first started becoming apparent, we spent some time in backwardly validating the appearance as factual or at least, pragmatically applicable. We also need to note that there may be higher or lower layers of meta data operating whose patterns remain to be obscured {as of now} within the chaos of the modelspace.

We now think that our meta data layers are very pertinent both at the human collective level and individually. We have received a number of emails concerning the appearance of evidence of meta data layer activity in peoples' daily lives. It is within that context that we thought to take a moment to review that currently we know of at least the following meta data layer structure.

- 1 - militancy/aggression/military/frustration-of-energies/
- 2 - secrets revealed/crimes exposed/conspiracies detailed/
- 3 - relationships matter/importance of links/tribal affiliations/
- 4 - encounter with scarcity/restricted movement/scarcity resources/

We also should note that there are lexical clues that the number 1 layer of 'aggression' is moving into the word set lead by 'conflict' which has a much higher level of 'active presence/action values' and is suggestive of much more energy being put into manifestation. So far we do not yet have any indications of similar morphing of the other two identified layers.

We do expect the secrets revealed layer to show us much more over the course of the next few years. At this point the lexical clues are clear and without ambiguity. They are stating that a whole new world is to emerge with very large changes in the social order of things being merely one of the more abstract, less important levels appearing. Much more significant change is seen as beginning very deeply in the 'thing' layer where 'things' are manifest.

Hmmm. And you thought Halloween was a spooky as it gets. Wrong, we ain't seen nothing yet.

Igor has started the processing for Part 3, and as we are moving into the period of November, and still have data coming in to the front end of the processing stream, we may end up with some details emerging from the immediacy values which may catch our attention. If so we will pass on the results via email notification while we are processing for Part 3. We expect Part 3 to be posted by November 6, 2005 assuming....

Data set distilled from 26.12 million reads . Our expectations are to achieve 60+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

Analysis - Racial/Religious/Ethnic Disharmony and Meta Data Layers, Swimming Against the Tide

As an aware observer may note, human events around the planet are seemingly aligning with the 'aggression/militancy' meta data themes discussed here in the ALTA reports. The current and developing situation in France is certainly aligning with this theme.

The populist thinker/analyst Buckminster Fuller noted the existence via evidential trails of what he termed the 'invisible hand' which was behind the veil of events pulling the strings, apparently in control of things, which is to say, circumstance. B. Fuller was also of the opinion that the actions of this 'invisible hand' did not bode well for humans. Further he was convinced that the rationalization presented that the 'elite are merely bound by natural common and commercial interests' was deliberately obscuring far deeper, and likely, more sinister entwining connections.

In our work the 'invisible hand' is represented by the TPTB {ed note: The Powers That Be} entity. The modelspace that we have constructed is painting a picture of a theme or global point-of-view trying to be pressed upon very large sections of the planet. Further the modelspace is showing that this 'pressing downward' of this POV is actually running smack into the wall of opposing emotional waves that we term the Meta Data layers.

This larger level of conflict between the apparently natural emotive cycles and the imposed orderly view may be what the modelspace is attempting to show in the transition of the current meta data layer of 'aggression/militancy' into 'conflict' in about 13 months. Rather than suggesting conflict between nations as we have now, and have had for some time, it may well be that we are going to see conflict at much deeper levels. This impression would fit with both the other meta data layers of 'secrets revealed' and the modelspace predicting that large percentages of the population will actually go 'insane' during the 'exposure of the conflict' which develops during the transition of meta data layer 'aggression' into 'conflict'.

We need to note that 'conflict' as a meta data layer lexical value can also be translated as 'resolution', so one need not see the whole of it as a negative. Certainly there are stresses and tensions within the transition, but even with difficulty, 'resolution' is a good thing. Hmmm. Starting to sound like Martha Stewart here.

Anyway, the point of this introduction to the report below is to acknowledge that 'aggression' is certainly on the rise. Further, to note as a lead in that no matter how much the 'invisible hand' may wish to exploit racial/religious/ethnic disharmony for their own nefarious goals, things often get out of hand. Hahaha. Sorry, poor joke. The point is that TPTB entity is suggesting that 'when the tide turns against you, ain't no swimming back to shore'.

Or as Bucky Fuller discovered, 'humans do not control circumstance, they only think they do'.

## Populace/USofA - December's Bloody Wounds

No bad news is ever simple. Good news frequently is, and sometimes, great news is blindingly so, but again, no bad news is ever simple.

Since ALTA 105 of December/04-January/05 there has been a recurring theme of 'wounding' or 'a wounding' which would take place near the end of the year, and which would somehow impact the whole of the Populace/USofA. Since the first appearance of this lexical set, we have had the occasional new data point show up which we took as emerging "clarification" of the coming event. However, so far in the last year, most if not all of the clarification data was anything but clear. The best we got out of most of the data set was that the 'wounding' would be very large in scope, and would come via the Bushistas. Much of what has been newly emerging over the last few months has repeatedly gone to the idea of the 'wounding' arriving more or less by proxy, through the Bushistas. This was ambiguous enough to have had several, mostly nasty, interpretations. None of which offered any furtherance of the details.

Now the data set is growing very rapidly around the 'wounding' associated with the Populace/USofA. On one lateral arm of the aspect of 'wounding' within the Populace/USofA entity, we have a lexical set emerging which goes to the physical description of 'wounds' and 'washing blood away {from the} wound interior {so that} examination {can take} place'. On another lateral arm of the aspect, we find that the 'wound' is seen as being the 'shock wave {which/that} shatters complacency/status' and begins the 'initiation of change/alteration/evolution/growth'. The data set also goes to the idea that this 'wounding shock' will come with such force that 'bones shatter'. Be advised that the reference to 'bones' is not necessarily to actual body parts shattering. Rather we have found that 'bones' frequently appears within our data sets as a metaphoric reference to 'very rigid' structures. This also refers to 'very rigid mental structures/abstractions'. So the lexical set going to 'bones shattering' may well be merely a more poetic method of getting the idea across that a 'rigid mind set/preconception/global-view-of-things' is what shatters, and thus as the data set would have it, the 'world comes undone/loose-its-moorings'.

Returning to the 'washing blood from the wound interior' section, the data set also contains repeated references to doing so in 'brain deadening fear', and 'panic, and hurt blind reason'. Then under this area is a section in which 'sweat pours {from} fear {as} gibberish/nonsense rushes {from} mouth {like/as} vomit'. Hmm. Nope, don't sound too good.

In the process of 'washing wounds', the 'body falls apart, requiring strings/cords'. Further, the 'grains {are} not enough' and 'hands demand/grab/grasp {for} keys {to the} stores/warehouses'. This whole area of the 'body falls apart' data set is very fully populated, and contains lots of internal cross links. The suggestion from most of the data could be taken either as a description of an actual 'body' falling apart, that is, degrading into merely basic functioning over a short(ish) period of time, or it could be referencing the same degradation impact on the 'body politic' and its internal structures. The latter appears to be the best interpretation given the data. So rather than some strange space-base-giant-goat-fart-radiation which causes the human body to 'fall to pieces', we have the worse side of the coin in which the data suggests that the social infrastructure will come under some 'shocks' so severe as to 'shatter its bones' and cause it to degrade to merely basic levels of response. What is perhaps even scarier is that the above sort of thing has actually been broadcast on teevee recently as the world watched as New Orleans degraded over merely days to a social morass of barely functioning groups. The data appears to be painting a similar picture now about events to impact within December, and to involve a wider section of the populace of the USofA.

Considering the large impact forecast by the data set, there is little in the way of meaningful descriptors for detail. We do see that the 'army' is a primary aspect, and is one growing over the course of the Populace/USofA entity being moved through the modelspace. We also note that the 'wounding' in December also contains a core lexical set which again, grows as we move the modelspace forward. This lexical core goes to the idea of 'redemption/renewal', and therefore does provide hope that actual wounding of humans is not being forecast by the data, rather the 'wounding' of social institutions. Again, given the meta data sets discussed in Part 2, this does seem the more likely. If so, then a 'social wounding' of some scale is involved. One that will involve much of the populace in a very emotional response, each of which individually will 'feel wounded'. Another way of looking at it is that our data suggests that the coming

social wounding will elicit an emotional response from each of the citizens of the populace as though s/he had been physically wounded. Hmm, neither way can this be good.

This area is a large participant in the emotional tension/release wave crest seen in the charts in parts 1 and 2. It is also more accurate to say that the wounding in December comes from events in November. The way in which the Populace/USofA entity grows over November and the lexical sets gathered, set up the 'wounding' aspects rise in early to mid December. The November period is one in which 'shocks' impact by each 'raising stress'. This is seen as 'continuing {the} whole {of the} month/lunar', and each 'shock' is described as 'weakening {the} rivets/bolts/underpinnings'. Then sometime near the end of November, a large 'wind of disturbance' {ed note: also translated as 'discontent of the atmosphere'}, will add further 'shocks' and set up the December 3rd release. There is some suggestion from the data that the type and nature of the shocks which hit in November will be 'tuning the bell' or setting the tone for the emotional release period which follows.

Since the current emotional building period which is now coming to an end began with the Cindy Sheehan/AntiWar ramp up, could we witness the emotional release period also begin on a political note? Then to be followed by more physical/natural disasters with even weaker levels of response? Perhaps so. The current climate of the Libby indictment will necessarily incite passions over the fruitless Iraq invasion debacle and the many other failed policies of the Bush admin. Will some shock associated with the Iraq war incite yet more social unrest and a very large scale anti-war, anti-bush popular movement? Could be. We have many indicators with geographic specifics going to the idea that the BushWar of Aggression against Iraq is failing, on all fronts. Further there are suggestions that conditions on the ground will deteriorate rapidly. Another worrisome note is the appearance of the 'army' as a primary aspect within this area of the 'December wounding'. While we have not gotten any data suggestions that it will be the 'army' which is wounded, it does certainly arise as a gathering descriptor set as the Populace/USofA entity is moved forward through modelspace. As one with a history with said institution, and who deeply resents the use of such a fine organization by shithead politicians in support of cannibalistic corporations, I surely hope the data is not suggesting a large scale problem for the 'army' such that most of the population of the USofA 'feels wounded'.

#### Populace/USofA - Winter Difficulties Frozen in Place

Now is the Winter of our Discontent. Ok, so it is actually the Fall of our Discontent, but our data sure seems to suggest that any 'discontent' being experienced now, that is through November, and December will still be with us as 'festering sores' in January and February. Further the lexical structure goes to the idea that 'no movement will occur' or 'resolutions fail, efforts stymied' will be the overall descriptors for virtually any problem affecting the Populace/USofA in the Winter of 2006. The descriptors are quite clear in stating in a bespoke fashion that 'effort furthers not' and 'reduction of work to null' is the net result of 'attempting propagation of solutions' during this time.

Our newly processed data provides the latest descriptors for the period immediately following our December emotional tension release events. These provide some new details suggesting that 'no thing/reason tried succeeds' will be a metaphor for the period. Beset by some serious level of on-going problems previously described as the emotional release which extends from December 2005 through May of 2006, these continuing problem conditions are seemingly cooperating to bring about a period of 'standstill' or 'reduction to no movement'. Repeatedly we have a 'no movement' lexical set being added to the support of this already fully populated area. Unlike the 'restricted movement', this aspect/attribute set of 'no movement' is properly describing a 'lack of progress' rather than an 'enforced halt'. So we are confident that this area is actually describing the situation as the images would have it of 'people clustered {around a} table, confusion, frustration, pain, sorrow, standstill/failure {of} each/all efforts/work/solution'. The data set very much goes to the idea of a continuing crisis period in which all efforts either fail or even worse 'add problems/difficulties' to an already bad situation.

Within this sub set we also find that 'difficulties' as an aspect is supported by aspect/attribute sets going to the idea that 'difficulties emerge/beset/stall rescue, more {at} peril/risk', and other indicators of 'bad decisions {create/cause} more problems'.

The whole of this area suggests that as the going gets tough, the officialdom of the Populace/USofA, grinds to a halt and dithers in place while things get even worse. Well, that sure seems proven by recent governmental actions, but it is somewhat disheartening to imagine that a multiple month long demonstration of this is pending.

#### Terra - California Pajama Party

An odd triplet of entities is sharing some interesting cross links. We have Markets, Terra-SouthernCalifornia, and Terra-Sun all sharing cross links around the area of 'water'.

Taking the Terra, 'california, southern' reference first we note that this is a situation where the dominant aspect has a new element accrue as the entity advances through modelspace and that new sub section develops the cross links from deep internal to the supporting group. In this case we have the indications that a significant earthquake will be followed by repeated issues around 'water'.

The data indicates a night-time, or early morning quake in that the supporting sets go to the idea of 'pajamas, light-weight clothes' appearing with 'bobbing lights'. The imagery then goes to the idea that the 'people/population {are} trapped outside {as} dew collects {in/wearing} lightweight-clothes/pajamas {due to/because of the} rapid shaking'.

This area of the entity is wrapped around the newly appearing core that 'water' woes will beset those who are 'trapped outside in their pajamas'. These water woes are emergent within the data set after the appearance of the lexical earthquake clues. The suggestion is therefore that the water problems arise after the earthquake episode. These 'water woes/troubles' are of all kinds. There are references to 'sea water' and 'rain water', and 'water from the bay' and 'water rushing down the hillside'. There are structures for 'too much water' and others for 'not enough water'. And we find that some places will have 'too much water {in the} wrong place' while others are 'awash in foul waters', and still other areas are 'bereft of drinking water' and others they will be 'digging after lost wells'. And so it goes, water woes every where.

While there are hints of 'fire ' problems resulting from the earthquake, even these are affected by the 'water' or rather the lack of it. The earthquake is seen as having a very large area of impacts. It is described as 'ringing the bowl' or 'hollowing out the log' within the lexical set. There are very few specific location clues, and again the impact is seen as happening over a very large area. This would appear to be the specific detail data showing for our 'shallow' earthquake reported earlier in the series.

There are few timing clues, and about the only specific period that can be referenced is beyond December. We can infer from cross links that this episode participates in the Markets entity forecast decline, but as to when that occurs is difficult to determine due to the huge level of "signal to minimum noise ratio" within the data. That is to say that there is a hell of a lot of stuff going on in the data sets for December and beyond which makes it difficult to extract meaningful items for specific instances. This has to do with a burden of so much information as to make the determination of which detail is meaningful very hard to accomplish. Sooooo... we think December, or shortly thereafter. What is of real interest is the carry over of the 'water' issues into the Markets entity.

Within this lexical substructure we find much in the way of detail arising as to the 'aftermath/afterward/follow on'. The level and clarity of detail is similar to what we picked up prior to the Katrina/FEMA disaster wherein the descriptors for people living on the 'freeways/roadways' amidst discarded heaps of possessions was so accurate. Now what we have is a large collection of data set elements going to the imagery of 'stumbling out in pajamas', 'lights bobbing everywhere', 'shaken to the knees, bruised, injured, small cuts, bare feet bleed'. Then a very large set relatively to 'abandoned cars, refuge', and 'sleeping in car', as well as 'taking shelter in car'.

We also have areas of the data going to 'walking out of the dying city on foot, no water/food'. This is a very robust area with much imagery going to the idea of 'bare feet, bloody trails, misery, walking out/deserting the city'. We have further images of 'people cover {the} hills/mountainsides {like} flowers {in the} spring'.

This area is also more richly descriptive in that supporting areas go to the idea of 'clad in lightweight clothes/pajamas, modest, cold, shakes {force/cause} sitting, watching dwellings slide downhill'. A curious sub thread to this area suggests that in the emotional release of the 'after earthquake' or 'after quake' period, a number of 'officials' will 'lose lives, property' due to the 'hidden evil perpetrated'. The seeming suggestion would run to perhaps 'code/building officials', and perhaps inflated property values? This latter is suggested by cross link to the Markets entity which is also heavily participatory within this event. Over there, this cross link ends in 'insurance' and with supporting attributes suggesting that the 'insurance industry {will} fight/dispute inflated property values' as a result of the earthquake, and further the data suggests that a very large 'appeal to the king/ruler/government' will go out from this industry claiming that it was 'flood damage' due to the follow-on water problems.

Before leaving the Terra - 'california, southern' area we need to examine two last points prominently showing up within the data set. The first is to the idea that '5/five out of 6/six' rocks are seen as being moved by this quake. So a large one, though we have no number guess, we can say that with the previous data set growth for a 'shallow but destructive' quake, that perhaps this is more in the same vein. Also within this area of the 'shifting of the rocks' and the 'desertion of the city' we find that the 'earthquake/shake' extracts internal change, 3/three times over, 12/twelve times through'. This last area is bound up within the data set going to the 'structures' of the state, and also include 'social' and 'political' sub structure sets. So the interpretation is perhaps to another FEMA effort similar to post-Katrina.

The second area to examine is that the whole of this sub set of Terra, 'california, southern' moves en masse over to a new dominant aspect/attribute set following the 'earthquake/shake' which 'dumps the bed over, bruises' suddenly. We did not see such a data shift following the Sumatran earthquake/tsunami, but we did see hints of it following the Katrina/FEMA disaster. In this case the new dominant aspect for the area is 'tension'. This sudden rise of a bespoke 'tension' contributes to our supposition that things after the quake will not go well, and large scale social/political tension will result. Again there are cross links deep within this data set over to Markets which further reinforce the idea.

This 'tension' is seen as long lasting at least to the point of 'influence 3/three years on', and is very deeply felt by the 'whole of the place/area/populace'. It is curious as the 'tension' is clearly still contributing to external relationship problems throughout 2006, but a very odd, small sub set within the lexical set goes to the idea of 'internal gathering, bonding' which is seen as basically an "us who-survived-the-big-one, against them-who-let-us-down" kind of attitude. This area in turn is supported by aspect/attribute sets going to the idea that following the earthquake, this will be one of the best prepared regions on the planet, though somewhat insular, and rejecting of outsiders.

Terra - Sun - Excited Space Sweat?

Ok, so sometimes we get some real strange lexical "phrases" coming up in our work. By combining the dominant aspect with its primary supporting descriptor aspects we can usually come up with a very human kind of phrase, but not this time. We have the main area of the Terra entity which is 'sun, sol, solar' focused having a new dominant aspect moving into position over the course of the progression of the modelspace through the month of November and into December. However the phrase makes no real sense {ed note: these are the scary ones}, we have 'excited {by the} sun, space sweats'. So this is a new one. Space sweats. Hmm, sounds smelly and bad somehow.

Of course, we can also use the other words in the lexicon which also come from the same emotive/descriptive sets. But these are no more revealing. In order of primacy values, we could have also interpreted this as being 'electrified space water' as the primary cross links are internal to the Terra entity and terminate in the area of the 'water woes' seen arising post-earthquake temporally. Or perhaps we could have also used the idea of 'tsunami of water from space' or 'space water whipped up/excited by sol'. Any of these are just as illustrative.

What we are able to determine is that the 'sun rains water' as part of the 'water woes' coming in December and beyond. These 'water woes' are seen as 'global' in scope, and impacting diverse people in diverse ways. In one area we find that 'rain water {from the} sun comes from above and excites the abyss/abysmal

depths, restricted movements crossing oceans'. In another area the supporting aspect/attribute set goes to the idea of 'rivers alter oceans, seas change', and in still a third section, 'ocean waters cover mountains, fire below seen bright'.

The whole of the cross linked area which goes to the 'water woes' is contained within a sub set of 'excited' or 'electrified' or 'electrical energy'. This area is growing, and as the modelspace is progressed, goes to the idea that the 'populace will discuss increased sun energy'. This 'increased sun energy' is seen as taking place now and continuing into the future. It also is heavily participatory in the Markets sub section via cross links. Also many of the terminating areas within Markets from the 'water woes' areas of Terra are also participatory in the 'secrets revealed' meta data layers.

The whole of this section is also bounded by cross links internally to the Terra entity, sub section 'oceans' in which the terminating aspect is also the dominant aspect and that is 'change'.

#### Markets - Wet Worries Holidays

As noted above, the Terra entity, specifically the areas of the 'water woes' has very large numbers of terminating cross links over to the Markets entity. Many of these terminate in 'water' related aspects as well. While scattered throughout the Markets entity, we do find that much of these terminating cross links go to the image of 'water woes impede flows {of} currency' and 'water drains resources, fluids costs capital excessively'.

Also note that much of the 'water woes' internally arising within the Markets entity is also cross linked back over to the 'ooze' areas reported in Part 2. The links originate within Markets {ed note: who the hell knows why}, but on termination at 'ooze' also have a reciprocating cross link suggesting somehow that the 'ooze' will play into the 'water woes' which impact the Markets entity so heavily after December.

While noting that the data for the last few ALTA reports has shown the downward tendency for all things economic within the over arching emotional tension release period, we can now see that some of the downward pressure on the Markets entity will be exerted by the 'water' issues coming to the fore this Winter. We specifically do have 'change of season' indicators coming up in our timing clues as the modelspace is progressed, though these appear to be for the impact on the Markets to start rather than the 'water woes' events themselves.

The data within the Markets entity is much more diverse in its view of the water problems and we have only a portion which are directly related to the Terra entity, 'california, southern' sub section potential for an earthquake. However there are very large numbers of lexical sub sets within the Markets which either duplicate or cross link to the Terra, 'sun, sol, solar' area. The Markets side of the cross links to the 'excited space sweat' seems to indicate that it will be a significant impact/stressor on things economic. The data set descriptors actually go to the idea that the 'sun sits on {people's} minds, money falls to floor'. And, within this area we also have a rarity, the question arise within the aspect/attribute image, where we find that 'what reason {to} own debt?, sun sits {on} all minds'. Again, we have to note that for some time, the better part of the year, we have had recurring references to the 'sun changing property ownership emotions/state'.

Could dripping 'excited space sweat' be a real problem for home ownership? Hmm.

The data sets are now cooperating just a bit more in that we have had, through cross links from Populace/USofA, and GlobalPop entities, much more clustering around November 28, 2005 and aspects headed by economics terms. The indication is so far that co-incident with our emotional tension release period of December 3rd, actually, preceding it slightly, is a definite downward emotional trend relative to 'paper currency'. The data gives the impression of a very long period of nearly 2 years in which 'paper currency dies off' globally, but the die off begins on the 29th of November. This is slightly ahead of our December 3rd release point, but within the up and down jerks of the entities through the modelspace in November, it is easy for us to miss dates by one or two either side. At the moment though, a clear cluster of

values has picked November 28th to stick to, and so will we. The next movement of the Markets entity following the formation of this cluster is a sudden jerk upward, then a downward step which brings it into participation with the emotional release from the other entities on December 3rd.

For the Markets entity, November is a particularly trying month. In the early part of the month, beginning on November 6 and going through the 8th, the data suggests a strange 'short, violent wave' will take its toll emotionally. The impression given by the data is that a three day period of very radicals emotional swings will apparently affect all things that are traded 'for paper'. What is being expressed is that this is an apparent 'wave action' of very 'short periodicity', and very 'violent movements'. However, the underlying sub text suggests that this is not really a wave, but is rather the result of two, 'nearly equal, large opponents'. The suggestion is that 'retrenchment favors the building of the house', and is the dominant aspect of the violent move upward {ed note: emotionally, not necessarily any given index of prices}, followed by a very 'high energy/frenetic' day in which 'equally disposed forces' face each other across 'opposing views, eyes fixed'.

We also need to note that our continuing theme of 'rebellion' has a very large cluster of lexical descriptors for November 8th and these are economic and markets related. Within these supporting areas we find that a release point in which 'groups' and 'tribes', and 'individuals' will be 'turned'. When we examine it a bit further, the supporting set for 'turned' could be read as 'turned to the other way' or 'set on the other path' as an alternate.

There is also a sub set of data indicating that the 'alignment of the day' {ed note: November 8th, 2005} will be the 'echo seed' for events of the next 2/two years. The impression is that some tensions released that day set up the confrontations which will come about as the meta data set shifts from 'militancy/aggression' to actual 'conflict' on or about November 18th, 2007.

The charts of the tension build/release patterns also suggest that the November 6-8th will be the first of the releases of the month, and will act as a opening for more immediate echoes which will express over the course of the month.

#### Bushista - Going on 19

The data sets suggest that as the economic issues emerge, and the emotional release event begins, that Bushista will also go into its own form of 'shakes' as the result of 'shocks'. The data suggests that 'infantile/sophomoric behavior' at a very inappropriate time will cause 'shakes/quivers, and piss {to} run down legs'. The 'worst' is a rising aspect with fully populated supporting attribute set in which we find that 'foul/tainted words' are to be 'repeated/reported globally', and that the 'tainted words seal {the} time/period'. Of course the obvious interpretation would be for the GeeW Bush to actually speak \*his\* mind rather than that of the voices in his head/earpiece, and from there the problems really begin.

The section under the aspect of 'worst' is intriguing as it grows fairly continuously as the modelspace is progressed from December through to March of 2006. The dominant aspect within this area is a curious reference to 'turning 19/nineteen' which of course is suggestive of the backwardization approach that GeeW took to maturation as a human being.

Along with this image of 'retarded maturation' we also find that the Bushista data set is suggesting that the current travels to South America will result in the 'propagation/promotion' of the image of the 'cheerful, willing immature' on one side and the 'wise man' on the other. Further the data suggests that 'speech defeats face', and that 'destruction of pipes brings dark thoughts in'. The imagery goes to the idea that the Bush visit to South America will be seen by the locals as 'conquistadors seeking oil/energy', and as the 'smiling mask, hidden face' of 'imperial aggression'. Hmm, smart fellows down there it would seem.

TPTB - Oh oh, Liver Problems, Bile and Spittle

Separate from our various power players entities, and derived from a word extraction from such sites as The Council on Foreign Relations, and others of such ilk, we have our TPTB entity {ed note:TPTB = The Powers That Be}. This entity is also showing the stressors that are creeping into the language and portending a 'shaky' future. We have much in the way of new material in the lexical accretions which have come to this entity both in immediacy values and in the longer range emotive indicators.

TPTB entity is suggesting that it is 'rupturing/splitting\_apart/breaking' due to stressors showing at levels of bespoke 'internal' and 'external' to the group. A very interesting occurrence, we have 'internal' as an aspect, with supporting aspect/attribute sets going to 'internal pressure/stressor pushes walls apart', while also having an 'external' aspect with supporting aspect/attribute sets going to the image of 'external pressures/stressor drives spikes into flesh'. And under the 'spikes' aspect we have a supporting aspect/attribute set going to 'spikes/bars drive between bones, lungs penetrated'.

There has been the appearance of such language within the last year, with greater mass accruing to the 'splitting apart' aspect than others, suggestive of continuing 'pressures/stressors' attacking those emotional bonds which form the cohesion of what is termed 'the powers that be' or the 'elite'. In the case of the massing language, this has been a reliable past indicator of actual manifesting conditions leading toward a crescendo event/circumstance within the area concerned. As the lexical sets have built over the last year, the TPTB entity has shown a gain of nearly 80/eighty percent in new, supportive values containing references to 'separations' or 'pressures'. This has been true without regard as to where the lexical set ended up within the entity. The current shape and direction of the entity through the processing thus far within the run still suggests that stressors are building.

When examining the modelspace as a visual entity aquarium in which the colored blobs swim, the very striking thing is how much impact the December period is having on the TPTB entity. The colored blobs are visual proxies for the actual lexical entity structure and as a rule we pay little attention to their shapes as these are highly complex and probably meaningless. Rather we care more about the general direction of the entity, any shifts in direction, and growth patterns. In this case however, the TPTB entity has flattened out in a very un-entity-like fashion. We have not observed this behavior before so were intrigued to locate the motivating code for its behavior. We have found the program component that accounts for the behavior we are visually observing. It relates to the ability of the entity to separate over time, as we have seen in the past with the separation of the Press entity from the BushCo combined entity. We have also seen the language cause a separation into the Populace/USofA and everyone else in the GlobalPop. The language is the separating factor, and to validate the entity movement into pieces, I had placed some checksum code which had inadvertently caused the flattening effect we have just seen. However, after clearing the blocking algorithm, the TPTB entity, much plumper now, is \*still\* showing a movement toward separation. In this case we have the additional oddity in that both of the groups of competing language within the entity would have the whole of the entity in their camp. This is to say that \*unlike\* the clear separation between the two populace entities, this entity would split, but both resultant groups would claim the dubious title of 'the elite'. And each competing section contains 'exclusion' language suggesting that once "they, their side" had 'won', the 'others' would no longer be 'in' and would rather be 'excluded' from power. This exclusive language is one of the predominant identifying descriptors for TPTB entity.

As the modelspace is progressed through December and on into the next few months of troubles, or emotional release period, the lexical structure shows increasing internal pressure for a split mounting. There are aspect/attribute sets suggestive of actual 'warfare' though of some clandestine, once-removed kind. But the goal is nonetheless to 'eliminate blockages' to the perceived 'correct' point of view.

A number of the lexical sets also show that body parts and processes are showing up. These are archetypically significant, and first begin as rising aspects in early December. The appearance of 'bile' and 'spittle' each with fully populated supporting sets has both cross linked over to Bushista, where both terminate in 'wars, aggression', and 'iraq, invasion'. The data is also of note in that these two rising aspects, 'bile' and 'spittle' are apparently going to possess some long lasting effects in that the entity shows these still gaining well into 2006. As the modelspace is pushed further and further out, the levels of details and newly acquired words necessarily diminishes, but of note is that even out through the complete period of the

emotional release shown going through to May 2006, the internal/external stressors are still pushing on the TPTB entity, producing 'bile' and 'spittle'.

There is also a largish set which shows that the TPTB will suffer 'liver problems', and that its outcome will be 'beyond repair'. The 'liver problems' are such that 'disease flows easily' and 'currents of discontent provoke actions, bile tastes/sour'. The 'liver problems' begin with December release period, and continue to produce 'bile' throughout the Spring of 2006. The data suggests a number of causes, but all of these are details masking some larger, deeper issue which is the divisive point around which the 'sores fester, grow, irritate' and threaten 'rupture'.

One of the issue areas which exists within the TPTB entity goes to the idea of 'earth changes' though this is merely a locally applicable term for a much broader process. Curiously within the TPTB entity we do find that 'earth changes' is hugely supported and much goes to extra-terrestrial planets also under going their own "earth changes". So the suggestion is that as broadly discussed as the alteration of our planet's biosphere has become, nonetheless TPTB have a much broader, more 'celestial' view of things. Further, this may well be the manifesting area of the point of contention. Our process cannot divine thoughts of groups, merely is inferring and interpreting language clues as to their thinking. In this case we find that as deep as we can go toward isolating the "point of contention/aggression" within TPTB entity, there we continue to find "solar system changes/novelty/emergence". So one begins to wonder? Perhaps this is THE issue which is prompting the 'great divide/separation'.

The new data sets are gaining new values for 'impaled' and 'stuck' on their 'dilemma' which is seen as 'growing towards/at/to conclusion/threshold'. The entity also adds new lexical sets beginning in January which are gaining in 'anxiety' and 'fear' emotive values almost exclusively. That is to say we find little counter balancing more positive language, and are able to note a distinct trending toward increasing 'fear' value sets as the entity is progressed through Spring and toward the bottom of our release cycle near end of May, 2006.

#### GlobalPop - Europe Locked Down

The GlobalPop entity is showing that a rising aspect of our old friend 'restricted movement' will apply over the course of the Winter and into early Spring of 2006.

Beginning within November with the aspect/attribute set of 'attraction to conflict/battle', a sub set of the overall 'militancy/aggression' meta data theme, the GlobalPop entity shows that Europe will move toward a period of 'restricted movement' over these next two months. In that period the current dominant aspect of 'attraction to conflict' adds data sets suggesting that unlike the USofA, real culture wars have been ignited from recent rioting in France. Over these next two months lame verbal attempts at reform and problem resolution will lead to a point of even larger frustration as other events/circumstances close in on Europe this Winter.

A curious cross link exists between the TPTB entity and this sub section of GlobalPop, 'euzone', in which the GlobalPop has an originating cross link that terminates within the TPTB entity under the section of 'spittle'. The suggestion from the combined data through cross links is that the 'refusal, stubborn behavior' which develops within the Euzone over 'rustic concerns, country-rights' is actually one very significant cause for increase on the 'pressure' within TPTB, and apparently it drives them to 'spittle sprayed over face, frustration rushes out, tongue tied twists'. From the GlobalPop point of view though, the 'refusal' or 'stubborn behaviours' cross links to 'rebellion', sub set, 'articulations/actions'. Within this section we find that the area goes to the idea that 'stress kills plants, crops', and 'stress/pressure kills pigs/farm animals'. This obtuse reference is supported by internal linking within GlobalPop suggesting that 'culture/religious affront fuels Winter rage, fires in ice'. All of this is within a supporting set going to the idea that 'culture wars are ignited by religious affront, rebellion on all/both sides {against} authority, refusal to disengage/obey orders given creates crisis in leadership'. From TPTB entity point of view, the continued conflicts and cultural battles are simply \*not\* what was ordered and they get so mad that 'spittle' is the manifestation of their frustration.

Of course, things are not so good for the populace of Euzone during this time. As we have seen applied to the Populace/USofA sub set these past few months, we now find that the GlobalPop is moving over to a period of 'restricted movement' as the dominant aspect. This is not, as discussed earlier, a case where alternative interpretations are offered. Rather we have clear lexical structures indicating that a number of 'crisis' will be cited, but that basically during Winter of 2005/2006, an official proclamation of 'restricted movement' will be issued. As may be expected, the peoples will not think too well of this demand from on-high, and their reaction, forecast here as 'refusal to obey' is what drives the frustration of the TPTB. It also causes no end of problems for the people involved, as there will apparently be some need to 'militarize' areas in support of the 'restricted movement'. This will bring back some very ugly memories, and stir up 'unanticipated response' within the population. The GlobalPop entity suggests that 'unanticipated actions {will} break apart plans/designs' and 'induce disorder {within/inside} command structures/organizations'.

Within the GlobalPop entity, some details emerge about a 'female' personality who will emerge at the center of a 'reconciliation/restructuring' group. This 'female, aquarian' is seen as being in the 'middle {of her} youth', and is 'scarred/damaged on the face', and is also 'athletic/athlete' with some relation to 'dry red valley'. The descriptors have her currently in, or having a recent stint in what appears to be Greece, both by nomative association, as well as descriptors for 'mountainous area' with 'olive trees' and 'stark hills, sharp roads'. There are indications that this woman has had some 5/five years 'peace' after a 'lifetime of peril' and will be once again in 'peril/risk {from} association {of} them {to} her'. This last is taken as an oblique way of saying that some 'movement' or 'self-organizing collective' will 'associate itself' to our female personality which produces two separate lexical threads. One is headed by 'risk/danger', and the other by 'presence moves'. This last is in turn supported by a lexical set going to '{her} presence/speech moves people/group past anger'. This area is cross linked over to the other section for 'risk' such that an interpretation of '{her} presence moves people past hate placing her at risk/in danger'. And of course, our 'at risk/in danger' lexical set is cross linked from 'risk/danger' over to TPTB entity, which suggests some obvious thoughts. Hmmm. Oh well, in dangerous times such as these, telling the truth is a revolutionary act. And now, thanks to Patriot Act and its ilk in other countries, truth telling is also punishable by imprisonment.

As the GlobalPop entity is moved through the modelspace to emerge from the Winter months of January/February, the data shifts to a dominant aspect of 'restricted movement'. This 'restricted movement' is described as being both 'internal' to the Euzone, and also 'external' in that 'airspace' is seen as 'going quiet/silent' suggestive of a travel ban. This is further a point of fuel for the rebellion/revolutionary emotive patterns developing within GlobalPop, and itself causes no end of problems. These 'problems {with the} consequences {of} restricted movement enforced' also cross link over to TPTB entity where they terminate in 'problems' there as well. It would seem that just nothing will go right for TPTB entity this Winter. Not only are their peoples 'disquiet', but also starting to manifest out-and-out 'rebellion'.

### Conclusion: Part 3 - Time/Emotional Tonality Transitions Stirs the Stew

As usual we have a lot of data pouring in for parts 3 and 4. Far more entities than could ever be processed, so we try to consistently explore the larger ones which will have impacts on lives everywhere. This time that was very easy.

Apparently there are differences to the quality of time, at least perceptually. Granting that, then if one period of time "feels" a certain way, and another possesses a different "feeling" or emotional tonality, then we must grant that there will exist a point of transition from one time/feeling to another time/feeling.

We suspect that such time/feeling boundaries are both stressful and chaotic.

We also suspect that we are within the outer edges of one such period of time/feeling transition now.

And as time is acknowledged to be some pretty complicated shit no matter which discipline is used to examine it, we suspect that we are seeing evidence of many different layers of time/feeling within our work. So if there are many different layers of time/feeling, and each layer would have transitory states, then there would come a point at which numerous transitory periods would coincide, each within its own layer, but also each at a transition state. This would be analogous to our nested meta data layers.

We suspect that we are within the very outer edge of a period in which the many layers of time/feeling are all working through transition states. The current impression is that a wave of transition has hit the time/feeling field, and is rippling upward from lowest towards most dominant.

This wave of transition moving through layers of emotional time states probably does something really corny but meaningful like crest on December 21, 2012, but at the moment we cannot extend out modelspace that far. What we do see though is that unlike recent years' ALTA reports where it was this entity or that one which had action within the modelspace, there is certainly something stirring the whole damn pot.

As ingredients within the universal stew, if you go very quiet and still, you can start to discern the movement now.

We are posting Part 3 early as the indications are for Saturday through Tuesday to bring out a number of new contributors to the whole mess of things, and we want to get out ahead of the new demands on reading time.

Part 4 is anticipated to be posted on Sunday, November 13th.

Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk \*.

Data set distilled from 38.476 million reads . Our expectations are to achieve 60+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

Analysis - November Shocks Begun

While not an earthquake, California has begun entering into the period of November 'shocks' with a political quake. With the moneys spent on a 100% rejection of their whole vision, the Gubenator has had his political career plan terminated. Yet one more in a series of political shocks. True, this was not a shock to anyone living within the bottom 75% economically of our "classless society", but it was a shock to the California Republicans, to Arnold, and to the national Republican leadership.

We also need to note the culture shocks hitting France, trembling EUzone in general, and the manifestation of the 'aggression/militancy' meta data layer in these activities.

As well, shocks are continuing to come from the manifestation of aggression/militancy within both USofA politics, and the global political stage.

Then there are the actual shocks of increased militancy seen in escalating attacks in Iraq and other middle eastern areas.

Shown within the charts in parts 1 and 2, these are the slight up and down movements within the November period of the emotional tension plateau.

Terra - Weather - Here We Go Again?

Unfortunately we are back here again, only in the echo. It is now November, and as it happened last year about this time, a data acquisition run was underway, and we were working on an interpretation in which a curious phrase rose to be the dominant aspect. The phrase was 'electrified water', which we interpreted as a storm, instead of taking the next layer down within the lexicon and thus interpreting it as 'force driven wave' which would have at least been a closer prediction of the Sumatra earthquake and subsequent tsunami. So now, once again, here in November, we are getting a rising aspect within the Terra entity which is in the same vein, 'water on water', or 'waves over waves' depending on which of the top two words

one takes from the lexicon. Technically this use of 'water' comes from the same set construction as the 'electrified water' seen in November 2004, before the tsunami in December 2004.

Another coincident occurrence has been that the 'electrified' component has also shown up. In this case we have something slightly different than was seen in 2004, and we would have to interpret the aspect/attributes as a whole as 'energy pulses through the abyss' rather than 'electrified water'. Now, this could be seen as a tsunami being described, but our data does not show this clearly. Rather we have the situation where supporting aspect/attributes muddy the situation somewhat. In fact, we have an occurrence of a well populated supporting structure which goes to 'undersea mud/sediment/floor' which was not in the 2004 data set.

As a modifier to the 'energy pulses through the abyss, sediment/mud', the data set shows supporting values for a 'pulsation' to 'vibrate' or 'create oscillating movement' within the 'supports for/of the oceans'. There are also structures going to the idea that the 'bottom one-third of the ocean {will be} pulsed/rocked'. Within this data set, supporting the 'impact/rocked/pulsed' lexical set we find that 'power/energy {of/from the} sky/sun/solar system increases in power {and} weakens/damages {the} declinations/slopes under the oceans/abyss'. This area has cross links from the 'power/force' lexical structure over to both Populace entities where it terminates in 'force' as an aspect. Within the two terminations we find that 'weak forces/ineffectual response {will} develop/manifest {in} response' and that 'personal focus teaches reliance {on} self'. Hmm, perhaps a way of saying that "government does as it usually does, craps out, putting the focus back on self-reliance".

In any event the 'pulse/force/wave' that is shown as affecting the 'bottom/support of the oceans' is also apparently quite visibly 'coming from/originating' from the 'sky/sun/space'. This is one of our key emotional points. The data set is indicating that the 'origin' of the 'pulse/energy/force' is going to produce some really interesting effects in humans. Totally out of character, and \*not\* involving cross links, but in stead, actual data sets within the Terra entity, we have a 'religion/religious expression' area arising relative to our new showing of 'energy pulses through the abyss/oceans, sediment/mud affected/impacted'. Within this 'religion/religious expression' aspect there are over 43 aspects all at the same level. Unusual for a sub aspect, but not rare. Within the many aspects competing for dominance are several that indicate that 'reactions/response to' the 'energy pulse' will trigger 'religious insanity' within one group of humans. These fellows suffering from this response set are seen as being royal-pains-in-the-ass and causing all kinds of problems for all kinds of other people all just trying to wrap their brain around what is happening. A minor note is that the use of the word 'royal' was intentional as our data set indicates that one of the 'religiously insane' will attempt to 'harvest the royals'. Hmm Now I wonder what that might entail? Doesn't really matter, other than to note that these 'religiously insane' individuals, freaking out over the 'pulse' will attempt all kinds of 'irrational mayhem/destruction' as their minds degrade further to the point that the majority of them end up as 'huddled box people'.

Many of the other data sets also go to a range of 'insanity' affecting people. On one end of the scale we find the manifesting nutters out trying to 'harvest royalty' and a the other end a kind of 'mild insanity/madness' such that normal behavior is 'called off/canceled' as in the idea of 'commuting' or other 'going to work' activities. Note here that this area of descriptors are within the intermediate to long range emotive sum set. That is we are looking at descriptors which are suggesting a multi-month response to an event. The emotive sums are very large, indicating sustained strength of the impact, and are mostly found in the long-range, and intermediate time frame positions in our array of emotive values. The suggestion is for a response which spans months, with some manifestations of the response becoming more extreme as time moves on.

Within the 'internal parameters' array elements, and the immediacy value sets, we have a number of lexical descriptors going to the idea of a 'caution' or 'warning'. These bespoke words have supporting value sets indicative of 'haste precipitates bad/poor decisions {within/at} a nexus/primary point'. Within this area we find the actual 'caution' to 'resolve internally {to} stay centered/calm and polite/well-behaved'. Hmm, hard for humans to do either, but we'll see. And then, deeper within the supporting set for 'caution' we have 'force {will/has} not jumped/climbed {the} point/place {of} separation, no imposition/thrust {of} pulse'. Within the immediacy set values under 'caution' is an explicit warning to 'not succumb' to 'violent reaction'

or 'immediate conclusions'. This is explicitly brought out and supported by sets of descriptors going to the idea that 'violent reaction brings self-hurt/damage'.

Back at the Terra entity, 'energy pulses through the abyss' level, and directly supporting it are a number of descriptor sets which would appear to be describing the actual manifestation of a 'wave' through the 'bottom 4/four' layers of the ocean such that 'crackling {of the} skin {of the } earth is heard'. The data set contains a number of references which are for actual physical items which did not occur within the 2004 pre-tsunami data. In this case we have descriptors for 'fencing' which will be 'holed/torn' by the 'wave/pulse'. Hmm, got to be a big fence to warrant its own sub set within the data. And it is showing with 'spikes of energy' and 'holes larger than vehicles'. Further data sets go to the idea of the 'sediments' being damaged, as well as actual areas of caution/warning about response behavior. Other sets go to descriptors for 'colors of the wave/pulse' as well as 'volcanic activity {on} land, smoke obscures' as though the smoke will obscure some view of the 'pulse'. The data also shows that 'strength declines suddenly, heavy lifting subsides'.

While we have a robust set of long range emotive sums, we have little geographic or timing clues at this point. We can note the proximate "echo" of the 2004 data set and subsequent earthquake/tsunami, but other than that, and excepting the previously noted emotional release period of December onward, we have no specific data suggesting a timing. Nor is it clear that this is an earthquake or tsunami event. It could also be interpreted as an 'impact', the way Igor favors. Under that wording, and substituting other active emotive values from within the same data set, the highest level of aspect for this area \*could\* read as "impact of sky originating object damages the ocean floor, causing ejecta, and rippling within the sediment".

Hmm Now that don't sound good.

Terra - Weather Eats A Mountain/City

As noted above, a disturbing reappearance of several of the nastier data sets of late 2004 and early 2005 has occurred. Within the Terra entity we again find the development of a data grouping going to the 'destruction' of a 'mountain of people', which we are now assuming is pretty much a good archetypical description of a 'city'.

In the first appearance of this data form in January of 2005, we had '2 cities going to destruction', whereas now the construct would read 'destruction visits a city totally'. Or alternatively, 'total destruction bursts upon a city'. In this appearance we have some new data elements which suggest, through linkages to 'bursts upon' that 'volcanic' activity is one very probable source of the 'destruction, complete, wounding the skin {of those who} rest', and 'wounding flesh {of those who} sit/repose, destructiveness {at its} most total/complete'. As the data set is examined within the supporting aspect/attribute areas the imagery for 'total' continues with 'summit destroyed, mountain/plate slides down {upon} city, total devastation'.

Part of the problem of the reappearance of this data form is that it has only been seen once, so any conclusions we make now are based on only one manifested occurrence which places our assumptions at risk. We are \*assuming\* that as with last January's '2 cities go to destruction' data form, that this current appearance is \*not\* of an immediate nature. And we are \*assuming\* that the levels of emotive values seen, which are just slightly over 2/two times the emotive sums of January 2005, are indicative of the size of the calamity, and again, not an indication of immediacy. So if our assumptions are correct, then the forecast is for a destructive event some months in the future, and if 2005 were to be used as a guide, then a gap of 8/eight to 9/nine months may elapse before our next global disaster. However, all of the preceding is based on only one actual manifestation {ed note: '2 cities to be destroyed first seen in January, then Katrina/NOLA, and subsequent Kashmiri quake/deviation}, and any such assumptions are risky at best, and falsely guiding at worst.

In this most recent appearance of our 'city/mountain of people' to be destroyed data form, the indicators are for 'weather' to play a very large role in the actual event. So while there are several supporting sets for volcanic activity under the 'bursts upon/over' aspect set, we also have that set under the over arching, and dominant, 'weather' aspect. This is curious and likely will become clear later, but if we do the interpretation based on imagery, and leave out the 'volcanic' references deeper within the supporting set, then the

interpretation \*could\* read as 'plate/summit of mountain is moved, weather bursts upon city, devastation complete'. The juxtaposition of the 'plate/summit' being moved, and then the occurrence of the 'weather' eating the city is quite clear within the data. Our lexicon constructs conjoined tuples constantly and we have one formed within this data set. These, in our past experience, have been apparently replicated in manifestation in that the Condition A has come before the Condition B. In the data form now, the required condition is apparently that the 'summit' of the mountain move, or put another way using alternate descriptor language, the 'plate must burst' prior to the 'weather' being able to cause the actual destruction.

Within the supporting data for the 'plate/summit' movement, the aspect/attributes go to the idea that the 'plate is pulled apart, shredded, torn' and that further, the 'tearing/shredding' will release 'thunder in the ground'. The deeper we go within this area of supporting aspects/attributes the worse the imagery becomes. The idea is that the 'earth' will 'ripple, and shift, and charge'. This last is curious as its supporting data shows that the 'skin {of the} ground charges uphill'.

In spite of the emotive values which would usually, through merely their sums, indicate a time frame of more immediate nature, the 'city going to destruction' data form likely is one of the longer range precursors. Arguing in favor of this view, we have a number of internal data structures which go to the idea that 'harvest' is near to when this event happens, however, our data is ambiguous here in that it may be referring to a 'recently completed harvest' rather than a pending one. There are a number of specific references to both 'autumn' and 'winter', so the possibility cannot be ruled out, but given the emotive sums involved, and the previous appearance of this data form a number of months prior to the event(s), we can be forgiven for matching this up with our charts and suggesting that if such an event as a 'city totally eaten by weather' were to happen, the emotional tension/release charts would favor a time of September 2006 through February of 2007. This is suggested just due to the general charting prior to the Katrina/Kashmir twin disasters, that is an over-all emotional tension building period, the totals of the sums generated in January of 2005. The next point on the charts where such a conjunction of emotional tension building period, and rising emotive sums of sufficient magnitude exists begins in September of 2006 {ed note:see chart below}.

We do have to acknowledge that if this is a forecast of some more immediate disaster, meaning that we really ought to be paying more attention to this data set's immediacy values, then the probability is that the destruction of this particular city by 'winter weather' would be a participatory event within the general emotional release of these next few months. Given this as a possibility then the question is begged that if the total destruction of a city is buried within the immediate downward chart trend line of the pending emotional release period, then what-the-hell is likely to cause the levels of emotional build seen for next year? The elections in the USofA? Naw, that don't make no sense, at all. Probably much more likely an invasion of space aliens or something equally as large to stir that big of an emotional stew.

Returning to the grim details of the destruction of the city by weather, we can note that the imagery is one of 'putrefaction' which also arose in the language forecasting the Katrina 'city returns to mud' scenario. In this case we again are finding that 'rot coats everything', and that 'corpses impede movement'. In this case, we find that the supporting data set for the 'corpses' contains both animal and human references, again, a case being made for 'totality of destruction'.

Within the 'plate/summit' descriptor set is an area going to 'layer after layer' of the 'earth skin' being 'peeled off' until the 'mountain/plate/summit' is removed, and then the 'weather' is seen as 'charging the city/mountain of people' where it 'pushes the inhabitants east'. The destruction comes due to the 'unexpected/impossible' nature of the 'weather' and where it comes from. The 'city', once seen as 'sheltered' by the 'hills/mountains' is now described as 'reposed/sitting' in a 'broken cup'.

Within the areas of the data set going to the 'inhabitants' of this hapless city, there are strange and recurring references to 'rebels', and 'partisans' who 'emerge' from 'ravines/crevasses'. Here they attempt to survive by 'fishing', and 'retrieving' what the 'weather splattered' over the landscape. The data set gives the impression of a lot of survivors, and that the strongest emotion rising is one of 'anger', which is cross linked to 'determination'. It is as though they intend to succeed by themselves out of spite directed either at the offending weather or at the supposed 'rescuers'. There are some suggestions that such 'rescue' attempts are a long time coming, due to both the nature of the disaster and its effect on local/regional infrastructure, and

the impact of the disaster on political structures globally. Again, the many references to 'global' impacts suggest that the emotional sums will be very large, therefore this event is more probably located in the future many months away.

#### Markets - Reruns of Bad Reality, Derivatives and Gasoline

Our data set for the Markets entity is showing that a number of issues of early Fall {ed note: likely including Refco problems} will re-emerge as primary considerations. This also includes 'fuel, gasoline' as a sub set.

In both cases the 'influence' is seen as 'waning' to the point that 'support collapses' which in turn causes the Markets as an entity to begin participating in the December and onward release event.

As the Markets entity is advanced through the modelspace from December through to March, the Markets entity undergoes significant levels of change. While not having a complete change out of rising or dominant aspects, the data set grows considerably under some aspects.

In the first case of the most growth within the movement from December through to March, the primary aspect of 'net' gains the most descriptors by far. Its first supporting attribute set would have the idea go to 'trapped in a net, unable to move, constrained by ropes'. As this area of the entity is examined deeper into the support layers, the data shifts to a more detailed view suggesting that 'small fishes/multitudes {will/are} become trapped in net'. Noting that this area is within an area of Markets dominated by the rising aspect of 'reconsideration/review/revisiting/returns/reruns', and that the whole of the area of 'net' aspect/attribute is supported by both direct, and cross linked references to 'corruption' and 'scandal', the idea is that 'events/deeds come back to haunt present conditions'. The data even would seem to be suggesting that 'derivatives' will be central to the soon to develop discussion around the 'reduction/dissolution {to} goo/paste/slime' of the derivatives markets.

This last element of 'derivatives' and their ilk is central to the area of the 'support collapses' section of the Markets entity. The data is clearly pointing towards an 'agricultural circumstance/event' which will or already has begun the collapse of the 'derivatives state/status'. The issue of "already has begun" is raised due to the emotive shading we are seeing within the duration, and impact value sets. The immediacy values are such that the data is stating that the 'circumstance' or 'event' is here now. Given our poor timing track record, the "now" may be just slightly premature, and if the event has not already happened, merely unknown in its significance at this point, then it is likely very shortly imminent. Also given the so-far-so-good charts of parts 1 & 2, the supposition is that perhaps our derivative event or circumstance is bound up with the November 19/20 date for emotional release. Again, though \*IF\* it has not happened and is merely not yet public knowledge.

The Markets entity is, at a macro level as it moves through the modelspace, moving down while moving forward, looking much like a "fighting retreat". The indication is that while under large stressors, and after some level of emotional trigger event(s) in December, the Markets, along with the global economy, actually begin a very long period of 'degradation'. Within this prominent aspect with growing support as the entity is moved through the modelspace is support in the form of aspect/attribute such as 'degrades as a whole, none left out', and 'degradation over time, flesh stripped slowly {to the} bone'. The downward motion of the Markets entity is nearly mirroring the general downward trend line for emotional release, though with some small exceptions. This downward motion is impelled by a continuing trend of increasingly negative emotional tone numerics. That is, the words being used for Markets entity as a whole, composed of the aggregate of the particular is now trending toward negative tone in all expressions. Said another way, and giving an example of something a human might catch as it happens if observant, \*even\* the positive expressions about market related activities are now phrased in negative or doubted negative or double negatives. Such as "it weren't as bad as it could have been" or similar wording. These kind of phrases are negatively focused, and merely are emotive "pullbacks" from a negative position. Since late 1998 when we reached a staggering 90 per cent positive verbiage about markets {ed note: in our early twice yearly runs}, we have now reached a point where we are better than 94 per cent negative summed verbiage about markets in this latest processing.

As might be expected, the Markets entity grows in size as "things happen" such as the Katrina/Rita/FEMA/Wilma disasters. This has a tendency to elevate long term financial, and large scale financial discussions slightly both during such periods and afterward. While we recognize the impact of currently being within such a period, we have to note that the accretion levels for the Markets entity are, disaster impetus included, all out of proportion to recent events. Where we may have expected up to a 20 per cent increase in fiscal discussions being prompted by recent disasters, we are actually recording over 38 per cent increase in this latest processing, and that was against an already increasing trend of over 27 per cent in previous runs. This has led us to a state where the Markets entity is consuming verbiage resources in excess of its usual space to the point that it is approaching both the Terra entity, and the Populace/USofA entity in size.

Editors Note: Pious Hope

As an adjunct to the material above about Markets and economic indicators, we need to note that our previous call of shocks hitting through out November on our way to a December release is apparently manifesting now. We can note recent political shocks in EUzone, more revelations about US mistreatment of humans globally either as prisoners of the Chief Dick's torture squads, or within the context of "offensives against insurgents", as well as further recent shocks of bombings in Jordan apparently carried out by global jihadists madmen, and then further political shocks here in USofA to the rigid mindset of the ruling elite, the revelations of the shock of the trade deficits, and others of similar nature globally.

That these shocks are political/economic , to our small minds is sort of a qualified good thing. It is a good thing in that the shocks do not involve terrestrial upheaval. This is good thing in that the timing and tone clues we have suggest that the emotional release periods "emotional tone set" will be flavored by the types of shocks within the month of November.

Yes, we are noting that there has been significant terrestrial upheaval within the weather systems, and recently within the earth itself in the western edge of the Himalayas mountain range with the Pakistan/Kashmir quakes, however, these predate our "time echoes" period shown within our "model of modelspace". The indications are that the flavor or tone of the emotional release is in response to the tonality of events raising human emotions during this month, ergo we presume that if the predominant emotional shocks of the month are geo-political, then the likelihood is for political events to trigger the release in December. Again, in our small minds this is a qualified good thing in that it would seem less suffering could arise from political degradation that takes six+ months to play out, as opposed to earth jump-about that take the same six+ months to manifest.

Of course we could be way wrong.

Without regard as to the causal agent for the emotional release period, we do note that 'economic' and 'markets' elements are hugely involved within the emotive degradation. It is easily possible to come up with scenarios for both earth upheavals as well as political causes for the emotional release in which either would trigger deteriorating, global economic conditions. And again, without regard as to cause, the suggestion from the data is that over the December through late May, 2006 time, while the emotional release is on-going, that global economic conditions do degrade significantly.

Silver - Gold - Precious Metals - Running into the Scarcity Wall

Our combined precious metals entity, the Silver entity, also participates within the degradation seen within the Markets entity and discussed above. However, two things of note about this entity as it progresses through the modelspace of the next few months; first, its trend lines are up, in spite of a background of degradation, and second, its trend lines depart current upward momentum sometime before the end of February. To rephrase the latter, the Silver entity shows a large increase in emotive values of a positive

nature accruing before the end of February such that the current positive up trend is accelerated beyond mere deviation from the background degradation. Did that make sense?

Much of the positive aspect/attribute flow increases in late December and through the first 22 days of January as an 'encounter with scarcity' happens. This would appear to be the trigger of a series of jumps of general public awareness in late January and through February as to the potential/advisability of having some Silver. Now, bearing in mind the disclaimer that we are looking at emotive sum values on predictive word sets and \*NOT\* charts of prices, we do have a Silver entity that rises nearly 3/three times the rate of general fall. So against the Markets entity falling, the Silver entity is rising after this period as though goosed up with helium. However, again, note that our emotive sum sets tend toward extremes, either positive or negative, and thus we can offer no direct correlation to prices paid other than general directional indicators. Again, the indication is that an 'encounter with scarcity produces the rise of grasping awareness' as regards to the Silver entity's emotive sums over these next three months. And again note the caution that all things are relative and the Silver upward move is against a general move to degradation within the economy.

The aspects/attributes gathering into the Silver entity across this period show a tendency for the dramatic in such examples as 'silver/gold equals nourishment/sustenance/food'. Others go further toward the idea that 'silver equals life'. This imagery also comes through in the supporting aspect/attribute sets for 'encounter with scarcity' in which we find much negative words/phrases which sum to 'fears of lack/loss'. The imagery emerging from this sub set is dominated by 'fear' and all of that fear is focused on 'lack of' precious metals.

Populace/USofA - Dark Clouds Gather in Winter, Wrong Side of the Bed

Much of the Populace/USofA entity, in this latest processing, is pointing toward a period of 'repression' which will emerge as the result of the 'december bloody wounds' discussed in previous parts of this series. The latest data shows that 'repression' as an aspect is rising rapidly during the period of late January through March. As we advance the entity through the modelspace for this period we acquire a supporting structure for 'repression' which is going to the idea of 'totalitarian regime rules' and 'totalitarian rules nation'. In both of these two, fully populated areas there are numerous cross links over to both the Silver, and Markets entity. Within the origination points and the termination points for the cross links to the Silver entity, we note that both are aspects of bespoke 'fear'. The cross links from the Populace/USofA entity over to the Markets entity are primarily terminating in areas going to 'encounter with scarcity'.

Bound up within the various ropes of cross links between Populace/USofA, TPTB, Bushista, Markets, and Terra, the Populace/USofA entity nonetheless maintains an integral, separate section nearly as large as all the cross linked areas, in which we have an aspect/attribute set for 'dark clouds gather/mass/approach'. Further there are numerous explicit references to 'winter solstice' and other timing clues pointing toward the period of December 21, 2005. These are all held within the 'dark clouds gather' and so we can append our 'in Winter' and proceed to the details.

Within this area, the 'dark clouds gather/mass', which itself is under the 'repression' rising aspect, the lexical clues go to the idea of 'darkened winter day, newly lighted/exposed'. Under this area in the very extensive support sets which also have December 21/22 as time pointers, the data shows that 'exposure {of ?} leads to sleepless night, rough/disturbed/tossed morning, bad favors'. Yet more within the deeper supporting layers emerge pointing to a time around the solstice which will 'deliver the flavor/tone/sensation' for the Winter as a whole. The data suggests, through cross links back to the meta data layer of 'secrets revealed' that a 'sleepless night {of} debate' will occur, and that late in the morning the participants will get to sleep, only to be 'splashed/covered {with/in} shock, new revelations scorch' within a few hours of laying down to rest. On awakening, the participants {ed note:presumably the Populace/USofA as a whole, difficult to read this section} will discover that the 'whole {of the} outlook {for the} globe has dissolved/altered', and further that the 'wrong side {of the} bed' has now set the mood for the whole of the season.

The season's mood is not shown as being positive. Rather a whole lot of 'negative thinking/bad thoughts' will have to be 'chewed through/digested'. Of course this area is very heavily involved in producing the

numbers which have led to the chart {ed note: replicated below} in which we find the emotional tension release which will last some months.

As the Populace/USofA continues to 'wake up' over the course of Winter-05/06, the indications are for the impact of the 'wounding' of the Bushista entity to continue to 'drain blood' from the Populace/USofA such that the 'rebellion/resistance/change' wording will penetrate the public consciousness more and more. Our Press entity cross links indicate that the period of the 'wakening' of the populace will be very painful for much of what remains of the press. The lexical clues and cross links between the two entities are for a period in which 'duplicitous/deceitful purveyors' will be 'pilloried, hung, and assaulted {with} stones' for their 'perceived participation {in} crimes'. Probably the politicians would be cheering for that if not for the Press being the \*only\* layer between them and their public.

The data set is curious within this section of Populace/USofA as there is a set which is lexically isolated and is clearly indicating a bespoke 'week/7 days' in which 'long days stripping/removing lies/falsehoods' will 'capture every eye'. This period is also associated with 'blood, bile, entrails'. Further into this sets supporting aspect/attributes is imagery going to the idea that 'hooves betray silent awakening', and 'false tales trouble father, long dried blood scrubbed clean'. Within this area the data, as the entity is moved through this period within the progression of the modelspace, adds images for 'pointing to the Army, stands alone amidst damage {to/which will} last ten years on'. Hmm Not quite holiday fare.

Back at the top layer of the Populace/USofA entity, where 'repression' rises to become the dominant aspect by February, the data has a number of originating areas for internal cross links which are clearly descriptors for a 'shocked' emotional base. The number of bespoke emotions going to 'shock' and 'confusion' is very high. We have had larger groupings of bespoke emotive values, but only in conditions of tipping points. This does not appear to be a tipping point, in that this area does not grow to consume the entity as the modelspace is progressed forward through Winter and into Spring. Instead what we have is an area that grows in size to a maximal state and then rapidly shifts over to become a supporting base for the 'wake up/awakening' area which is in prominence by mid December. Therefore our idea is that the bespoke period of a 'week' of 'revelations' should most likely occur in the last week of November or first 2 weeks in December. If that is the case, then our 'bad mood' period which begins around the solstice (December 21/22) will or could derive its taste from the "official" reaction to the public 'waking up'. Said another way, the populace may wake up with a bad mood and find that the officialdom institutes repressive measures in response. We do find supporting values both within the Populace/USofA entity, as well as the TPTB, and Bushista entities which would support such a view. However, consider the alternative interpretation presented next.

It is possible to read our entities data in several different ways. This arises due to the structure of our lexicon. In the case of a descriptor, this is a set of words all going to the same emotional values, and with the same general connotation. And this is a set. So an alternate interpretation can come from the same data, if the second, or third, or n-th layer of words down were to be used as the descriptors' key word.

In the Populace/USofA entity, we could take the tertiary layer and we would probably end up with an interpretation that would go something like the following: 'terrorist attack, or anticipation of terrorist attack is used as reason for repression of the populace in early December, but the populace learns facts around December 21 which cause it to wake up to the lies involved'.

The Populace/USofA entity is not solely concerned with political things, although the representations for 'army' are strikingly high within the set, and there is the obvious, actual pre-occupation with the Iraq Disaster, the largest area of emotional values involved within the Populace/USofA entity for the December through April emotional release time is 'economic/fiscal'. Dominating this area, several complex emotional structures are completing a profile of the public being run through an emotional obstacle course with new stressors at every turn. The data set suggests that economic news at the end of November plays a large part in stressing things out further, as will some news from Iraq which will also go to the 'economic burdens' on the Populace/USofA. This last is seen as 'sparking' a whole new area of 'irritation, and spitting in fury'.

The addition of yet one more economic problem can be viewed from three separate perspectives given our cross links. From the Populace/USofA -2- Bushista view point it shows that the Bush admin will \*not\* grasp what has just happened. Clueless is a good descriptor for their initial reaction, then changing {ed note: over December/January} into the aspect of 'stupefied'. From the Populace/USofA -2-TPTB view point we see that TPTB will appropriately grasp the impact of the economic news, but that they will be 'impotent' given the Bushista non-reaction. Then the last view point is the Populace/USofA-2-Markets in which the impact is apparently grasped, and it is here that the data set has the cross links returning to the meta data layer theme of 'encounter with scarcity', which can also be interpreted as 'restricted movement'.

At a core level of the Populace/USofA entity, the data shows that 'confidence fails, evaporates' and 'cohesion splinters'. However, this must be read in its context of 'economic burden', rather than political structure. In fact, the political structure area is also undergoing large changes and shows a preponderance of either bespoke 'fear' or 'confusion' words, but oddly enough, while 'confidence falls', and 'institutions wither', the political outlook has several new aspects suggesting an emerging consensus as a reaction to actual pressures on the social environment. It is too early yet to tell if the 'unanimous purpose' aspect will gain support over time, but its mere appearance is a hopeful sign. For the populace, if not the politicians.

#### Bushista - Flames Flick Butts

Within the Bushista entity, beginning in late November, and on through into the emotional release period, an aspect of 'rising flames' comes into view, and grows as the entity drops down over the course of December and into Winter. The 'flames rise out of place, cloth scorched', and 'flames rising from lowest point seek fuel upward, flesh seared/burnt'.

This whole thing of 'fire' and 'flame' is somewhat repetitious for the entity as the modelspace is progressed. Almost all the newly acquired aspect/attribute sets end up under one or more 'fire' references. Further, the several thousand 'flesh' or body part aspects are mostly cross linked back over to one of these same 'flame' points. Somehow very disquieting to observe.

In any event, the Bushista entity moves through the modelspace progression into Winter with the natural grace of a horse on ice skates. The entity is jerking around, leaving bits and pieces all over the modelspace in such a fashion as to suggest that large areas of what remains as support for what will be legally known as 'Bush, et al' are desperately seeking to split off from the entity. The actual view of the entity moving through the modelspace is one of a jellyfish at odds with itself, where differing groups are clearly off on their own, merely belonging to the entity by being wrapped in the same skin.

Where in the past we have seen the original BushCo entity shed both the Corporate and Press entities to become the much reduced Bushista entity, we are apparently to be witness to a further deterioration such that only a very small core will remain. In this case that core represents approximately 1/3rd-one third of the size of the current entity.

It is within that core of the Bushista entity that we observe the accretion of the most 'flame' and 'fire rises' aspect/attribute sets. It is within that core that we find the most cross links to Populace/USofA concerning the pending revelation of a new 'economic burden'.

It is within this core that a real rarity for Bushista arises, that is the bespoke 'humiliation'. This area suggests a timing near the end of Winter, and as part of the response to the 'populace wakes up with bad mood' part of Winter, the Bushista core body is showing a rising aspect of 'humiliation'. Under this is the supporting aspect/attribute set of 'dependent on laws', and in turn under this is 'grasps both sides at once', and just under this we have 'burned/scorched {by} own dependence on laws {for} power'. Hmm

The Bushista core area, replete with 'fire licks flesh' lexical sets is also showing a large movement towards bespoke 'fear' of the 'leader/organizer' who is seen as being 'outside the gates/fence, ringed, bound, restricted'. Further this 'fear' is actual in that the descriptors go toward 'vomiting, flushed, faint, hot' in association with the 'outside leader'. An odd area of the entity, but one which is structurally consistent, and

which grows over the course of the modelspace move through Winter. The aspect of 'leader/organizer' is not well described, but the supporting aspect/attribute sets suggest that the 'fear' is real and not imagined, as is the 'leader locked outside the gates'.

#### TPTB - Danger, Danger, Shiny Threats

Amidst all of the problems besetting the poor Powers That Be, our representative entity, the TPTB entity, is now showing 'danger' as the rising-to-dominance aspect. This aspect of 'danger' moves from a lower level to become the dominant emotive theme set within the entity by the time the modelspace is progressed to end of December. The 'danger' descriptor set has grown a very large number of cross links and many of the new links are suggestive of a whole new round of dangerous thingeys ahead for our favorite elites.

Within the deteriorating conditions for the Bush administration, and specifically involved within the sudden rise of our new 'danger' within the TPTB entity, the data suggests by cross link that the Powers That Be are very afraid that the 'secrets revealed' mood of the times, specifically applied to the Bush cabal, will go 'too far' and 'produce fingers of danger/threat/risk' which may 'expose membership/affiliations'. In support of this the 'membership/affiliations' descriptor set goes to the idea that 'fish on a string' are vulnerable to 'grasping one hook'. Further supporting data goes to the idea that the 'roots' which will apparently be discovered soon in association with the Bushista entity {ed note: cross link terminates in Bushista at 'contacts/groups'} will be 'yanked' and that 'all will be exposed' as the 'dirt is flung upwards'. Under the 'exposed' aspect are a number of descriptive aspect/attributes suggesting that 'warmth {of concealment} is pulled/yanked off, cold rain slams flesh', and further that 'yanked/pulled {from beneath} concealment exposes flesh to pelting/injury'.

The 'danger' area rising within TPTB entity does not stop with 'yanking' their roots out. We also find that parallel areas of 'danger' are seen at several levels within the entity. These are heavily internally cross linked indicative of a whole web of inter-tied problems, and indeed our TPTB entity shows that sources of problems and risk are rising around a number of areas including Bush, Iraq, Oil, Weather, Solar, and most prominently Gold.

Yes, when we examine as closely as we can the movement forward of the TPTB entity through the modelspace, we can observe a number of descriptors which come on early and among which one or more is the actual primary risk or threat which is then built upon by the rest of the data accretion over the course of the model movement. In this case it would \*seem\* that our first indicator is actually the bespoke precious metal 'gold'. We find that within TPTB entity this seems to be the spark of the danger. Alternatively one could also say that whatever is the spark for the 'danger' arriving for the TPTB entity in early December, the first manifestation of it involves 'gold' as a controlling aspect. So the distinction is that some unknown may cause the 'danger' to the Powers That Be, but to us plebes out-and-about, the first sign we will have of it will involve references to 'gold'. The reason that we cannot be more specific has to do with the granularity of the model and the millions of inputs. At some point we have to just be satisfied with a guess that we have drilled down to a "meaningful bit" and let it go at that. These interlinked lexical data sets go for thousands of layers.

This is co-incident with the timing and movement of the Silver entity and the 'encounter with scarcity' or 'restricted movement' discussed in previous sections of this series.

Noting that this is an \*emotive\* reaction, and not necessarily any indication of pricing, the data is clearly showing 'gold' as a key to the fear/danger/risk which develops. Again, interlinked with the economic indicators and other cross links to Populace/USofA and other entities, the suggestion seems to go toward a crisis of currency, confidence, or government producing a situation in which the rise of 'gold' as an aspect causes real concern for TPTB. While noting that there is no other reference with the early data set for anything more specific, we still have areas cross linked to the whole of the economic area of Populace/USofA and GlobalPop as point of 'concern/irritation' for TPTB. One interpretation of the data would be that ThePowersThatBe are afraid of the secrets revealed mood of the times pushing too deeply into their business, and that at the leading edge of their concern is not merely the metal gold, but also the concept/context of 'gold' as an emotional underpinning or archetype. That is to say, what gold can

represent. This whole area of the data is deeply thick with descriptors going to abstracts, and abstractions of abstractions, and it may be safe to say that the fear that is being described is a result of the potential to have the focus suddenly shifted to reality and the data symbol of that is 'gold' in its complete context.

The TPTB entity has grown over the course of the most recent processing and is participating very extensively in both the 'secrets revealed' meta data layer as well as the emotional sums release period of the Winter of 2005/2006. The growth of the TPTB entity has not been in core areas, rather it has been accruing values at various nodes such that the visual progression of the entity through the modelspace provides a visual image of problems-clumping-on sort of growth, rather than growth-from-within-core-sets. In contrast, the Populace/USofA entity is nearly totally growing through data sets going to core descriptor sets. True the growth at this level portends large amounts of change ahead, much of which is likely not to be pleasant, but still it is preferable to the "piling it on" kind of growth that we are seeing with TPTB entity.

One note of a curious nature is that TPTB entity is showing much fear related language around the idea of an 'earthquake' or other 'weather danger'. Now this might be merely a natural reaction to the manifest problems of the NOLA/Kashmiri disasters, but there also might be a bit more here. Our data shows forward looking lexical structures so it is very unusual for us to process the retrospective of any subject. The processing also takes out such language as would suggest past associations to present emotions other than within supporting sets of attributes. So it would appear that the entity is suggestive of a fear focused on future circumstances. The emotive levels within this section of the entity are larger than that within the 'gold' based 'danger' group, though, are not anywhere near as immediate.

Cross linked internally to the 'weather' based fear section of the TPTB entity are a number of areas going to 'loss {of} control/discipline' as well as 'fear of loss of 'authority'. All of this area is very forward looking and has little immediacy values to contribute to the entity, but nonetheless does contribute a significant amount to the 'danger/fear/risk' value set.

#### Conclusion - Part 4

This has been a more difficult than usual processing to do, given that we are ever mindful of being within the plateau period of emotive tension values as shown on the charts in earlier parts of this series. Since we expect the appearance of significant change within early December, we have been paying much more attention to immediacy values, and contextual shifts than would normally be done. This has impacted our long range view of things in an understandable fashion.

Our target posting day for Part 5 is November 19th. Given that our charts show the 19th is within a release point which extends through the 23rd {ed note: granularity issues, can't be much more precise}, it may be that we can capture a little of the flavor of the circumstances in next weeks processing. If so, we may send out early posting announcements if warranted.

Excepting that, we will post by late Saturday, November 19th.

Data set distilled from 51.3 million reads . Our expectations are to achieve 60+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

Analysis - Shift Hits the Fan

When we first started this screwy adventure in improbable linguistics in 1997 {ed note: actually started noodle-ing the ideas in 1994}, there were certain patterns of data "scatter" which we came to expect, that is, to assume were a "natural" pattern of distribution. Initially these were overlooked as significant information sources, in a way, similar to web site visitor patterns. It is only when one has a few years history to examine that the larger patterns emerge. Sort of like life and times, anyway, back to it, the point is that prior to 2000, actually very late 2000, the patterns of distribution as to subject content were fairly regular. There were expected blips such as during the impeachment of Clinton, but relatively even that was within expected bounds.

Why this is pertinent is that we \*have\* to assume that large shifts in how the distribution of our areas of concern emerge are important. One notes that the shifts to certain aspects/attributes prior to the Clinton impeachment were significant in the longer term view of how events manifested. If we had been paying attention, it could have been determined perhaps a year earlier that legal proceedings would occur.

Over the course of the last 3/three years we have watched the larger distribution patterns shift. In a way that we would have predicted \*could not\* occur, very large distribution patterns have shifted their emphasis, and even more startlingly, their context. This is to say that ordinary subjects of concern, {ed note: i.e. insurance, bills, childrens' behavior, et al}, that are increasingly coming to be cross linked to the Bushista entity. An example of the "meaningfulness" of the issue might be the following: shortly after the 9/11 attacks, one could suddenly find the general subject of 'raising children' had cross links to the 'war on terror'. In effect one could say that the 'war on terror', or the 'war' became a subtext to the context of 'raising children', and as such we would find that conversations about raising children took on a new tone both verbally and in print. In a very real sense, the whole subject was shifted to a new context and could be described as 'raising children in a time of war on terror'. Thus a new meaning was revealed in the associations of the lexical clues. These last 3/three years we have seen a pronounced shift to cross links from nearly all levels of all subjects going back to the Bushista entity. It is as though are data were describing a new context in which the 'raising of children in time of war on terror' has moved on to become 'raising children in a time of Bush'.

The pervasiveness of these cross links cannot be under estimated in our view. In our discussions about emerging patterns, Igor, myself, and our advisors are increasingly of the opinion that at least 2/two conclusions can be extracted from the current shift of global context. First, that it is probable, given the way that humans and emotions seem to work, that at some point saturation of context will be reached, and that will likely signal a release event. This is supposing or postulating that at a very broad scale, an emotional tension building cycle is in existence. Such a cycle is larger than our meta data layers and is playing out fractally at levels too long for our senses to read. The second conclusion that we are able to reach from the emerging pattern alterations, is that the trend is accelerating. That is to say, the shift is hitting the fan.

#### Bushistas - Wounding Imminent - BunkeringDown, Cheney Chained To Ignorance

On the surface it would appear that the meta data layers of 'aggression/militancy' and 'secrets revealed' are directing the universe karmic interplay with the Bushistas in recent months. As we have been noting since early in 2005, the last two months of the year held another large impact on the Bushista entity, and that had been characterized as a 'wounding'. To refresh your memory, we also noted that the 'wounding' of the Bushista entity during this period was to be somehow carried over to the Populace/USofA entity such that, as suggested by the levels of emotive sum values, everyone within the populace would feel the wounding at some level.

As our immediacy values from this last round of processing indicate, the 'wounding' of the Bushista is still pending. Perhaps though, rather than being a single incident, we may be witnessing the wounding occurring as hundreds of cuts. If that is the case, it begs the question of what next and what would be required of such a process to elicit the levels of emotional values we have seen?

It is possible that the 'wounding' is merely part of a larger clustering of significant events/circumstance as we move forward into the December emotional release period. The building period for emotional tension certainly has seemed to manifest as we note the tensions filling the airs both politically and economically at both national and global levels. We have the continuing horses-ass opera of the US Congress and their desperate searching for solid footing in the midst of the crumbling Bush administration and the rupturing USofA social structure. There are the developing nasties in EUzone as the policy of non-integration {ed note: on both their parts} of muslims into EU social structures is being tested. Recently we have the Bush and his traveling band of cronies spreading their particular brand of "good will" in South America and that continent enthusiastically joined into the global massing of rising emotional tension. As of this writing we have the Bush and his supporting troop descending on Asia, so likely we can presume they will be chiming into the global tension chorus here pretty quick. Oh, yeah, then there is the ever present turmoil and tension

from the middle east. Hmmm. Hate it when the trend lines in the current charts prove to be accurate. It means I have a tendency to trust the rest of the charts.

Whether the 'wounding' is the result of a single incident or the toll of the combined karmic load playing out, the Bushista entity is clearly showing that the previous trend lines are still in effect. As the modelspace is advanced over the course of the newly processed immediacy values we note that next week brings a lesson in 'results {of} strength misapplied'. This, added to the continuing problems of the Bush administration is showing up in our Bushista entity as a 'movement at night' or 'operating after daylight fades'. Further we have lexical structures within this aspect set going to the idea that 'myriads of stars, revelations of past actions'. Within this last phrase we have a supporting aspect/attribute set which suggests that, from the Bushista point of view, the 'revelations {are happening} before horrified eyes {self}' and that 'all energy spent, horror/shock shown {on} face'. This is further supported by 'arms clamped {in} strong grip', 'chest heaves, sags', and is further modified by 'face down, old flesh sags, horrified eyes revealed'. Wow. Sounds like a really really bad hair day.

The newly acquired lexical value sets for the Bushista entity, starting about in the last week of November and continuing for pretty much the next 3/three months, show a general predisposition to join the aspect/attribute set of 'hoarding mundane/earthly property/possessions', or alternatively the other set of 'chasing enlargement/growth {of} property/possessions'. In both cases the lexical sets drill down to nearly the same value set, and their total array summations also are very similar. Usually such repetition or doubling up on data sets is taken from past interpretation experience as an indicator for a "rhyming" of manifesting themes. So in this instance the entity is likely showing that multiple points of 'prodding/probing/seeking' will take place around the specific themes of 'hoarded wealth' or 'hidden money/resources'. This appears against the background of the whole of the modelspace indicating an emotional tension release of nearly 6/six months duration, and the continuing showing of 'economic' as a primary aspect of the Populace/USofA during this time. Additionally, we have the cross links from this area going over to the Populace/USofA where they terminate at the 'encounter with scarcity' aspect/attribute set.

Further distressing language is seen as we examine other areas of the growth on the Bushista entity. There are bespoke references to 'no prosperity', as well as 'no sharing {of} wealth', and 'poor time {for} enterprise'. Beyond these individual aspect/attribute structures, we have a number of originating cross links which go to Populace/USofA or to Markets, or to other entities, but the main theme in all the cross links is that the points of origin are within the lexical structure going to 'abdication/shirk {of} great responsibilities'. This bespoke reference to the Standard Operating Procedure {SOP} for the Bush admin is further modified by significant aspect/attribute support including such images as 'awareness of words {of the} past, deeds, reservoir {of} suffering, no quality, no virtue'. Also found within this set are aspects/attributes which cross link over to the Populace/USofA entity and show bespoke language toward 'keeping {them} dependent'. Within this set the supporting imagery goes to 'muddy marsh grabs legs, exerts pull', and 'dependent {on} nobility, great burdens'.

A shocking amount of the Bushista entity is now contained within the lexical structure of bespoke 'fear'. Now in the far distant past of say 3 years ago, the 'fear' quotient was stable, and mostly externally directed, which is to say, an 'incitement to fear' in others. What we now have is a very significant portion of the entity is under the 'self' aspect, and is totally dominated by 'fear' in one form or another. The immediacy values suggest that the 'fear' component will impact the current Asian trip by Bush. It is actually quite amazing to see so many, and so varied a collection of references to 'fear'. These lexical sets range from 'frightened' up to 'bowels release {in} public, self soiled shame'. As if this is not bad enough, the lexical references include other body part/processes as in 'trembling {in/with} fear', and 'knees weak, blood drains {from} face'. As the modelspace is progressed over the course of December and through January we see a very large amount of the 'fear' based structure move into place. This may be a reflection of the view point from the Bush gang as events unfold in the greater world. Or, conversely, it could be the direct result of the 'wounding'. In either case, a trembling titular head of the 'free world' is likely not a good thing.

In the 'chief dick' sub set of the Bushista entity, that is to say, that area of the entity which pertains to D. Cheney, the rising aspect is one already heard from his mouth, that is a claimed 'ignorance' of the miss use

of intelligence {ed note: let's be clear, we are linguists after all, it is \*not\* intelligence, a misnomer that, rather it is a "wild ass guess"}. In the case of our lexicon, the wording is more suited to describing the longer term relationship emerging between the Chief Dick and the universe, that is 'chained to ignorance'. The supporting aspects/attributes sets show that this will be the refrain into the future, a 'claim to ignorance, bound to flesh, chained'. The data further suggests that the claim will also be made in the next few weeks that 'corrective measures to rectify {a bad} situation {in the} past {are} inappropriate', and further that 'persevering in punishment is useless, {and} harms others not involved'. The whole of the emerging pattern, that is the area under 'ignorance' is modified by internal cross links over to an aspect of 'shouting' under which we read the image of 'shouting {for} patience with {the} ignorant', and also 'shouting {that} patience with {the} ignorant is {a} good thing'.

There is also a large section of the Bushista entity, sub set Chief Dick, under the aspect of 'past' in which the primary rising supporting aspect/attribute set goes to the idea that 'past {is/will} produce shame', and that 'turbulent temper explores its limits, blood on floor, tongues cut'. A further oddity is a reference to 'irritating the child {to/is} stupid behavior'. Rather obvious, but oh well.

The only other oddity that shows is a reference to 'biting' which is also the terminating point of many of the sub section internal cross links. The 'biting' is ambiguous as to the whom that is being bitten, but it is actively externally focused so is suggestive that the Chief Dick may be getting 'biting mad'. The data set supports the idea of 'mad', as this is found in the aspects/attributes, but this 'mad' is the 'insane' descriptor, rather than 'anger'. Hmm. So the loons are really in charge of the asylum.

Ed Note: Terrorism in USofA in December

There has been much analysis and mainstream media/alternative media questioning of the idea of 'terrorism in USofA' and specifically in December. It well could be that the sudden up tick in uninformed chatter about the possibility does foretell an actual terror attack in the USofA in December, however if that is the case, we have very little data to point to an interpretation of such. That is to say, we are hard pressed to find any data pointing to such an attack being likely or probable. Our only aspects of note that go to that idea are found within the larger layer of 'transformation' within the Populace/USofA, and within that are located under 'fulfillment'. There we find the single, cohesive reference which goes to the idea that 'helpers are useless/not to be relied upon, union unable to continue under these circumstances'. Beyond that, as the modelspace is progressed forward through December, we do see a movement in this area to the new aspect of 'beginning, return to' and a sub set rising aspect of 'energetic behavior'. That, in the immortal words of Porky Pig, is all folks.

Not to say that there is not a probability of a measurable level for a terrorist strike on the USofA, but in the past we have had some decent luck with forecasting conditions for, or the supposition of terrorism, this last was the East Coast power outage where everyone instantly thought it was a terrorist attack. But now, we find little to suggest such an occurrence.

Terra - Pulse Erratic, Equilibrium Lost

A large section of the Terra entity has moved under the 'transformation' sub set of lexical references. As was discussed in Part 4, this is repetitively similar to the patterns which emerged in the November prior to the December 25 Sumatran earthquake and subsequent tsunami.

The currently rising aspect/attribute set within the Terra entity under the sub section of 'weather, global' is also under the 'transformation' sub set. This aspect/attribute set goes to the idea of 'risk of balance/equilibrium lost', and further, in support of that, aspects/attributes going to 'missed goal/point/state, calm lost, balance lost, respiration/wind pulse erratic'. This very extensive set of lexical references is describing the global condition for weather as being 'dependent upon' the 'respiration of the planet'. And is further stating that beginning in December {ed note: clued in by our immediacy values, so timing may be as much as a few weeks off}, the 'respiration/pulse of breath' will become 'erratic' to the point that 'protestations cease, dropped jaws {in awe of} effects'. External cross links within this area to both the Populace entities show terminations in bespoke emotional responses or body parts. In both cases

we note that body parts and processes references are taken as very significant archetypal pointers to behavior.

The area of the 'equilibrium lost' data set is internally cross linked to aspects suggesting that an 'outcry/protest of denial' will emerge, but will be largely 'ignored' by the populace on the "mainstream media versus my lying eyes" equation as weather is seen as 'carrying away' and 'beyond control'. These two references each go to supporting sets suggestive of large storms driven by extremely unseasonal, and atypical wind patterns manifest. In fact, it would appear that the data is suggesting that perhaps even the idea of 'predictable' patterns for 'winds meander/walk' will be 'abandoned' after the 'transformation of the winds, pulse erratic' period.

The suggestion is clearly for much more of the recent-same. Only more so. That is, the 'transformation' aspect suggests that there will be 'no return/going back', and that our brave new world is nearly upon us. The data also suggests that the 'transformation', while offering some 'sudden' elements, or 'shocks {to the} system', is not to be a short process. In our lexical set we find descriptors for 'grinding' and 'daily pressure', 'daily endurance', 'pressing nightly', as well as a number of other pointers to 'constant/unrelenting pressure' as a result of the 'transformation of the pulse of the winds'. This is emotional pressure rather than barometric. Our emotional sums show that much of the release period, at least in so far as the Terra component is concerned, stems from the 'pulse erratic, balance lost' area of the Terra entity.

Whereas the November/December of 2004 data showed 'transformation' rising prior to the Sumatran tsunami, and while it did then show, as it does now, for 'electrified/forced' as a driving aspect, we now have 'fire' showing up more than 'water'. So in the course of the November 2004 interpretation we came up with 'electrified water' or 'storm', we missed the other interpretation deriving from the same set which would have been 'force driven wave'. Now what are we missing? We have 'electrified' which is also to say, 'force driven', and while 'water' does show up, it is currently subordinate to 'fire' as the more dominant aspect. So a 'fire tsunami'? Hmmm. Now that really don't sound good.

What may make the whole idea of a 'fire tsunami' even worse is that many of the supporting data sets are internally held references to 'sun', or internal cross links to 'sun'. So perhaps the suggested interpretation should be for a 'solar fire tsunami' in December, which is being shown as directly linked to our soon-to-develop erratic global wind-pulse.

There is a mass of data which would support this idea. We have references to 'diurnal', and to 'daily light' and 'daily light exposure', as well as 'discontinuous, disturbed' as primary aspects for a 'sun' and 'earth' relationship area. Then there are further aspects/attributes going to 'night relief' as though the 'sun exposure disturbs pulse of wind'. The erratic patterns of the 'winds/breath' are shown as causing areas of 'vast drying {of} marsh/marshland/estuaries'. Also found within this area is a reinforcement of the idea of a 'transformation' in that we have a bespoke aspect/attribute set of 'transformation of the 4/four seasons'. Ominously the terminating aspect for this set is 'unrecognizable'.

#### Silver/Gold - Winter Enchantment

The Silver entity, our proxy for all the precious metals, composed more of Silver, and Gold in relation to the emotive descriptor set, shows by way of a very large rise in emotive sums as the modelspace is progressed through December, that a significant part of the emotional release period will involve a 'realignment' and that this 'realignment' will involve a 'shedding of the exaggerated notion of the dollar', and an 'upwelling' for Silver/Gold.

There are repeated references both internally within the Silver entity and through cross links to both Markets and Populace entities for 'silver coalesces {like/with} dew, drops adhere to outward appearance, old beauty {ed note: dollar via cross link} reflected away {in} silver shine'.

Again, in examining the entity, we find that a significant portion of its mass is now under 'transformation', and within that area the dominant aspect/attribute set is 'leads/points the way'. Specific references show that

'dollar superficial display {will have/has} little success'. And further that 'gold/silver chain to energy', and repetitiously 'energy propels/fuels gold/silver'.

The data set also suggests that our period of emotional release will include the 'cutting of the tie/bind to dollar', and that the 'transformation' is primarily seen within the 'mart/markets of/for metals' at this point. In other words the data suggests that while a new 'enchantment' is developing for the precious metals, that at this point and through December, the 'winter enchantment' under 'transformation' is primarily within the 'markets' and not the public at large. At least at this point, that is to say December. The pointers within the Silver entity are almost all internally driven, and are suggestive of a huge level of transformation. Rather than the tipping point activity which we have observed in the model in the past, this transformation is from multiple points, and unlike a tipping point where one area overtakes the whole of the entity, in this case we have numerous points leading to new mass within the entity such that its overall appearance is changed.

The data would also seem to be suggesting explicitly that the dollar has/is probably topping in this area. How much further movement upward is likely to not go beyond another half a percent of this week's average basket values. Our modelspace shows that some time in late December, and accelerating in January, a pressure wave of 'continuing loss of confidence' will affect the dollar. At this point it would appear that the causal area will be internal USofA politics and a rejection of 'public debt'.

TPTB - Banks - Burning Sensation Internally, Dark Aspect Woman Visits, Rot Stench Rises

As a sub set of the TPTB {The Powers That Be} entity, we have an area in which references to 'banks' are clustered. The 'banks' sub set is found in any number of entities, and expresses within each a certain facet of the relationship of humans to the abstraction and the manifestation that are banks. Within the TPTB entity, the 'banks' area is gaining new verbiage at a large rate, thus indicative of a developing emotional change. Pretty much the basis of all our work, this looking for change in volume and tone of the conversations about various subjects has this time caught a developing change relative to 'banks'.

The 'banks' area within the TPTB entity is extensively cross linked to both of the Populace entities, but is being viewed for interpretation from this entity due to the higher level of emotive sums, and the larger number of cross link origination points.

The data set for 'banks' under TPTB as well as through the cross links to Populace/USofA and GlobalPop entities is very heavily participatory within the meta data layer of 'restricted movement' which can also be interpreted as 'encounter with scarcity'. Within this entity a case can be made for both interpretations. That is to say, there are supporting data sets which go to the idea that an 'encounter with scarcity' will lead to a period of 'restricted movement/shutdown'. We must note here that the whole of this structure arises under TPTB entity, sub set bespoke 'fear'. So this must be interpreted as a 'fear' or 'worry' of TPTB, rather than a planned or predicted happenstance. It is true however, that the cross links to the two populace entities do suggest the actual manifestation of 'bank lockdowns', however, this is not necessarily any form or permanent condition, and may be referring to a temporary, and terrorist related incident in late December.

All caveats aside, we do need to note that the TPTB entity is clearly projecting out that fear within the language seen over this last week's processing. This is a new occurrence, and actually rather sudden as we had no previous warnings such as a gradual increase in this sub section. Rather, suddenly, starkly, the 'fear of bank lockdown' is there.

It needs to be noted that the descriptor set under the 'fear' sub section, 'lockdown' aspect, is very extensively supported with detailed aspect/attribute sets going to a myriad of differing kinds of both fear, and problem situations. It would appear just from this entity that the banking system, as a complex system, has/is running into some problems keeping all the parts interconnected. The language gained this last week suggests that stressors are appearing at 'personality' levels, as well as a very large area of concern about the ability to 'grip numbers'. This last has a slew of cross links to markets. An astute observer might speculate that recent trend directions in metals versus currencies, as well as underlying pressures yet remaining from

RefCo et al are pushing the emergence of these sorts of fears among the self-considered 'moneyed elite' whose opinions and verbal descriptors go into our TPTB entity.

The details of the TPTB entity, 'banks' sub section at all levels are quite revealing. First item noted is that most of our emerging, rising, and transiting aspects are active verbs. Further these lexical structures are very high in both impact values and emotive response sums indicating that some sense of 'impending crisis' looms. One for which several pre-planned responses are prepared. These particular value sets are what a highly motivated athlete feels at the starting gate, every cell straining in anticipation of the start.

Next up for notice in our detail set is the repeated references to 'internal burning' and 'burning sensation', as well as supporting structures under the 'burning' aspect going to 'burning anticipation/want/desire/need', and 'burning/consuming demand'. We also find that several areas within the various supporting branches for 'burning' contain references to 'water {being} turned {to} steam', and 'steaming hot, pressure braces pipes'. We also note that 'solid bank ruptures {from} steam pressure'. Within this last reference is a further supporting set going to 'many/millions try to/attempt to jump {to} new location, ruination {as the} ladder crumbles'. Hmm. Not sounding too good here.

As the detail set is examined, a number of scenario clues come up, or rather, those which are feared arise. We note that 'fox {and} friends' {ed note: perhaps a reference to V. Fox in Mexico} are in 'position to know', but are 'hampered by weights, wet sand' and 'proceed too slowly/cautiously'. The 'proceed too slowly/cautiously' comes about during a period in which 'banks are braking/slowing'. We also need to note that we have the other homonym of 'breaks' as in 'ruptures' appearing as well. In any case, the 'engine is stalled by action in the rear' according to the data set.

If that is all not enough, at this time the 'woman' seen as 'dark {of} aspect' comes to 'visit'. During this visit, and why it is likely under the 'banks' sub set, we note that 'she tears/rips' the 'roof' off the 'bank/financial vehicle'. The 'roof' is seen as 'flying north', while the 'building/structure' remains, 'open to the sky/exposed'. It is interesting to note that this sub section is a participant in the 'secrets revealed' meta data layer. The suggestion may be for another hurricane, one that causes damage to financial structures such that some level of exposure of their vulnerability comes out, which is one of the fears of those who run the banking system, the possibility of a 'perception of weakness/fragility'.

Cross connected internally to this area of the 'burning' we have the area for TPTB perception of G.W. Bush, the personality. This area is the point at which most of the cross links between the TPTB entity, and the Bushista entity originate. This lexical set is currently heavily involved via internal cross links, albeit at a twice-removed level, with the 'burning' of the 'banks', and the appearance of the 'dark aspect woman'. Within this area of TPTB entity, is a clear reference to 'saps/drains/depletes' under which is found the numerous reference to the Bush Wars of aggression. The implication is that TPTB are finding the 'wars depleting {to the} resource base {from which a} living {is} made'. Further the data is showing that 'fears of depletion pending crisis' are driving the emotional responses of TPTB entity at the moment. There is the sudden rising of a 'fear of crisis/burning/destruction' just as the 'flow of depletion' is also seen as rising. Also within this area is the bespoke statement, via aspect/attribute imagery of 'small minded men fail gigantic {undertakings/enterprises}'.

The TPTB entity is also carrying its own internal set for 'balance upset' or 'equilibrium lost' which is seemingly coming up as a theme these days. Again noting that we are speaking of the period of December through late February, given the immediacy values, the TPTB entity is stating that 'crisis/crises' are imminent, and that a state of 'alert' is now underway within the self-labeled 'elite', and further that while 'nothing is left to chance' in the 'contingency planning', apparently now there is some level of 'fears of small vision' or 'lack of foresight' such that the 'resolution {is} uncertain'.

Curiously within the TPTB entity, and reasonably rare, we find an interrogatory in the aspect/attribute set. This one is ominously 'are {you} prepared?'. And, as if that is not enough, supporting sets under 'prepared' clearly show that TPTB are putting 'energy/work' into the 'effort {to} prepare {as a result of the} danger ahead'. Under this layer, as a supporting set, we find that 'prepare beforehand' and 'prepare arms against {the} crisis {in} advance {of its} appearance over {the} hill'. Within this whole area are numerous internal

cross links boringly going back and forth to the idea of 'watch out/alert to the changes of balance {of the} structure'. Presumably since we find the whole of this area under 'banks', what is being described is an 'upsetting of the balance of the banks/banking structure'.

As the modelspace is moved forward over the course of the Winter of 2005/2006, that is from Solstice to Equinox, the 'crisis' of the 'banks', at least as seen from TPTB view point, grows into the 'stench of rot filling the air'. Further modifying this image is the idea that 'putrefaction odors induce public vomit'. Of course, one could take this as a metaphor as opposed to an actual description of the public heaving, and instead interpret it as a 'rejection' due to some proposal or other not 'passing the smell test'. Nastily complex, these linguistic thingeys. What is important to note, as stated repeatedly, is that references to human body parts or processes are indicative of very deeply felt, therefore deeply moving emotional complexes, and are therefore taken as powerful archetypical descriptions of same.

Not to dwell on this area too deeply, as there are many other points within the modelspace which are demanding attention, but just a quick reference to the internals of the 'banks' area within TPTB. One lateral, descriptive arm, is stating in a bespoke manner that a 'cross roads/decision point' has been/will be reached, and that the 'remainder {of the} road of life is at risk'. Hmm. Damn big decision it would seem.

In previous ALTA reports of this year we have noted the 'ripping' of TPTB entity and the internal references to a 'war' going on as the entity is impacted by various stressors. Seeing the "elite" humans causing a ruckus in the Congress of the USofA, and the many manifestations of the 'aggression/militancy' meta data layers promotes a certain confidence in the descriptors arising from this entity, and thus, unhappily, suggest a certain confidence in the details now emerging for a 'feared banking crisis resulting in putrefaction of the complex banking system' as the TPTB entity would have it through a compete read "down" through the supporting layers.

This is not a good thing, and this may well be one of the signals coming from recent market behavior for gold/silver.

Populace/USofA - Economic Storms, Dollar Drains, Long Ride to May 2006, Congress Transformed by Fire

There it is again, the appearance of an internal structure going to 'balance' as an active verb. These are appearing all over the modelspace, yet are not forming meta data layers via cross links. So far in any event.

What we have appearing yet again, is the dominating idea of 'balance' which is 'at risk of being lost'. In the Populace/USofA entity this is the dominating aspect/attribute set for 'economy, USofA' sub set. Again this structure is repeated in very extensive support. We had previously seen that 'economy' as a subject would be a very large participant within the emotional release period of December through May of 2006, but it is still surprising to see the sudden appearance of 'balance at risk' as the dominant aspect. Especially finding it in so many entities.

Competing with 'balance' as a rising aspect when the modelspace is progressed through Winter, is 'storm'. This also is under the 'economy' and is heavily supported with descriptors suggesting that both actual and emotional 'storms' will strike the Populace/USofA, and will heavily impact the 'economy outlook/view' for the next year. The impact of the 'emotional storms' are seen as being the more severe however, as they contain long range emotive values and when summed are still showing an impact in the 3/three year range.

It must be remembered that a carpet of cross links going to 'encounter with scarcity' which go to Markets, Silver/Gold, and other entities is well represented within both the Populace/USofA entity, and the GlobalPop entity. As a quick aside, we note that the GlobalPop entity has far less immediacy/impact ratios suggesting that for them, the 'encounter with scarcity' is not so emotionally, nor economically impacting as with the population of the USofA. Within the Populace/USofA entity, the 'encounter with scarcity' is one of our 'shocks' to the system, as well as participates within the 'crisis fears' of the TPTB entity. Also the 'scarcity/restricted movement' aspect is one of the driving forces for the Silver/Gold entity over the next few months, and much of its emotional impact values are derived from the weight of the same emotive sets

within the Populace/USofA. Basically a reminder that we have other lexical clues pointing to the 'risk of loss of balance of the complex financial system' which are showing up in other areas, and describing the same overarching theme from other view points. Thus, our higher level of confidence in the projection that all is far from sanguine in the worlds of currencies/fiscal things.

Additional support is gained for a "less than optimistic" view of things with the progression of the modelspace forward as we can note that the 'balance lost' aspect set is replaced over the next couple of months with 'destruction of past edifices' or alternatively interpreted as 'beggaring of historical assets'. Both are within the descriptor's data set.

As the modelspace is progressed past the initial emotional release of December 3rd, followed by a brief period of emotional tension building until December 14th when the emotional release period is shown as beginning for the long ride to May of 2006, we note that the 'dollar' sub set within the Populace/USofA is shown as gaining the aspect of 'evil', and within that the further descriptor set, first seen in January of 2005, of 'rejected by all'. At this time, as the modelspace is progressed forward, two separate lexical sets are acquired by the 'dollar' area, each related to 'water'. In one set, the idea of the 'dollar {as} water, evaporates {until} 80/eighty per cent {of the} lake is gone', and in the other, we find a similar sentiment in 'dollar {as} water, drains {into the} boundless ocean, most/mostly gone, puddles remain'. Most of this 'evaporation' and 'draining away' is shown as beginning in December, and is participatory within the emotional release period, likely as an exacerbating influence.

As the modelspace is progressed through the complete extent out to nearly the end of June of 2006, the 'dollar' section within the Populace/USofA {ed note: going to the ever illusive measure of confidence} is continually under pressure emotionally from one or more sources. The theme, if there is one, for this section, is that the pressures of the next few months will 'drain the vital energy from the dollar', or alternatively, 'energy drains deplete the dollar'. Either could be the correct interpretation from the data set. While ambiguous as to cause, the direction is not, it is emotionally downward.

In the vein of "you ain't seen nothing yet", we have to note that the lexical sets within the Populace/USofA for 'congress' show that the fireworks and antagonism will continue unabated for a while. Indeed, the data would suggest that the emotional tension building period plateau showing for all of November and up to December 3rd {ed note: brief period from 3rd to 14th of emotional building as well} will continue to impact the 'congress' such that 'accommodations of the past are at risk'...hmm? Another way of saying 'balance at risk'? It might be also worth while noting that the congress is certainly manifesting, or 'acting out', the meta data layers of 'aggression/militancy' as well as 'secrets revealed'. Could it also be participating in the 'split' showing up in the TPTB entity? Hmmm. And now the new data shows that 'congress' will actually face a 'trial by fire' which will result in the 'burning/destruction of barriers' such that 'union emerges {from} unlikely quarters'. However prosaic a picture of political harmony may be being painted now, unfortunately some level of emotional building and aggression yet remains before the overtaking of that trend by peace and transforming harmony.

Also of note is the support for 'transformation' within the 'congress' section of the Populace/USofA. In this area we can note that 'fire' is the element driving our 'transformation {to} difference {from} past' and that 'fire fuses interests, common skin/flesh'. Hmm, no doubt all the little porkers will run in the same direction once the barn is on fire. Politician herd instinct.

#### Conclusion: Part 5. Energy From Space

Our apologies for the small number of entities covered in this part of the 106 series. Usually for part 5 we are able to start broadening our view around the larger entities for some more entertainingly tasty bits. In this case our recent week long battle with cyber-cracker-bastards has taken its toll. We also have discovered that there is a certain amount of consolidation or coagulation of contexts going on within the data set. As noted above, many subjects are blending into one more complex mass in various intriguing ways. An example is how pervasive is the Bush War against Iraq debate within the USofA.

Igor and I wanted to end this part on the note of the many references which are occurring about energy levels increasing here on earth. These are now constant threads consuming more verbiage over time. Further reports of manifesting energy levels increase monthly.

And, as in November/December of 2004, the earth is once again subject to bursts of energy arriving to the southern hemisphere, but spreading its impact globally. Not only GRBs {ed note: gamma ray bursts}, but also other forms of energy continue to flood our solar system. The impacts are certainly measurable on the earth.

Given that the energy levels are increasing, the question of such increased energy levels and their affect on humans is begged. Are we being individually and collectively affected mentally and physically by the increasing energy we know is now streaming down to earth.

Our answer? You bet your ass.

Yep. No doubt about it. Igor and I can see the impacts of the energy levels altering the 'moods of the times' as expressed within the shifts of language around our mostly meaningless conversations about nothing.

Yep. So now the question becomes, given that increased energy levels are influencing collective action, can awareness of the effect avoid the impact at a personal level?

Hmm. Don't know. Guess we'll all be able to experiment and see for ourselves.

Part 6 {krackers excepted} is expected out next Saturday, November 27th.

Descriptive Definition : Emotional Tension Building, and Release

It finally occurs to our over-worked, dim witted minds, to provide a descriptive definition of our 'emotional building period', and the following 'release period'.

We are currently, as this report is being written and posted and likely read, within the emotional building period of August 2005 to December 2005. During this period, for those have lived through it, the emotions of the time have been concentrating around certain themes and building in tension. An example would be how the Katrina/FEMA disaster brought out every possible twist and emotion around the destruction of the city of New Orleans.

Within other matters which occupied the populace, such as the various Bush wars, the emotive direction was for building tension. Examples within this time around this theme abound and extend from the appearance of Cindy Sheehan, to the indictment of Libby, to the meltdown in Congress over the aggression issues. Again, all building emotional tensions. Nothing is being resolved, all attempts at resolution are failures, and the tensions continue to build in a tit-for-tat pattern. Again, around the central theme, all the individual emotive centers are now in a building trend.

Such is a description of an emotional building period.

We expect the pending emotional release period to be a multi-month extension of the release of the pent-up emotions of the previous months, years, and decades. An emotional release period will express itself

through the populace in the forms we saw within the Katrina/FEMA disaster. During the actual 8 to 10 days of the event from hurricane to first real sign of assured success {ed note: at least in first response, long term reaction to Katrina success is still in doubt}, the populace was in a small release period in the larger building wave. Make sense? Lots of weeping and rage during the event as emotions are released during the "immediacy" of the emotive impact, followed by the frustration and other emotional components which were exposed during the release, and thus were then available to participate in the general building trend. In the exposing of points of emotional "knotting" or pressure, we frequently see that trends or waves of various cycles are shown. For instance, the populace of the USofA, and by extension the world, are now coming to grips with the waves of actions/reactions started with the Bush wars of aggression. These are multi year emotional waves which crest during emotional release periods. Within those, waves of other cycles including months, weeks, and days will be observable. Apparently, much like old-style psychiatric sessions, the longer the time of the emotional release, the more internal baggage we will be able to bring up for "work". Hmm. Gonna be one long damn Winter it would seem.

Such is an emotional release event. A period of immediacy driven reactions to events of the moment or recent moments in which emotions are close to the surface, pressured, and may act as drivers for actions.

We need to note that our view of emotional release periods is \*not\* like the concept of "closure". In our modelspace, emotive release events precipitate conditions of the next building period. In our modelspace, emotive release events are on one level, manifestly cathartic, but as with any catharsis, involve trauma, pain, and the release of the expressions of suffering. Remember, like much of human mental constructions of recent centuries, the concept of closure is bullshit.

#### Meta Data - Echoes of the Long Night of Broken Glass

On November 9, 1938, the Nazis unleashed a wave of pogroms against Germany's Jews. In the space of a few hours, thousands of synagogues and Jewish businesses and homes were damaged or destroyed. This event came to be called Kristallnacht ("Night of Broken Glass") for the shattered store windowpanes that carpeted German streets.

The pretext for this violence was the November 7 assassination of a German diplomat in Paris, Ernst vom Rath, by Herschel Grynszpan, a Jewish teenager whose parents, along with 17,000 other Polish Jews, had been recently expelled from the Reich. Though portrayed as spontaneous outbursts of popular outrage, these pogroms were calculated acts of retaliation carried out by the SA, SS, and local Nazi party organizations.

Citation: Kristallnacht Link

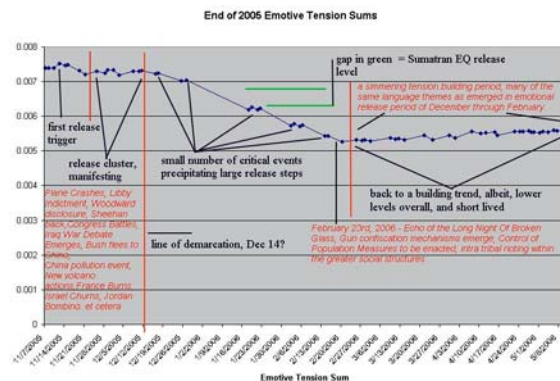

What makes the above reference pertinent is the suggestion from our meta data layers that an 'echo' of this period is coming and is due as the emotional release period shown on our charts reaches the end of February, 2006. Around the 23rd the modelspace shows that language indicative of some similar events arises. As they have the karma, and as our geographic references center there, we have placed our echo of the Long Night, once again in Europe, though given recent events we may find that the players in the roles have changed and it will be the muslims as both the victims and the accused instigator of what will be once again seen as a "spontaneous outburst of popular outrage".

It may be that the appearance of this echo will be within the USofA. If so it would provide support for other language echoes we find which include the appearance of much of the same language in proposed, and feared right-to-bear-arms hysterias currently floating about in the cyberspace spew. The curious element is the appearance, now, of echoes of language found in 1938 from 2 inter-related events/circumstances. In the

second case, the following link provides a sample of the language now reappearing, but from its original source. No guns bitte.

In our movement of modelspace forward through to March of 2006, as we pass through February we encounter echoes of language for both events of 1938. These can be extracted from the various entities, and when past events are searched which provide the unique word associations, these are two that match both the individual criteria, and also possess the required interrelationship to each other. There are likely millions of examples which could be found, but these present what we can get from the small amount of searchable digital archive material available to be found.

In a meta data sense, that is, layers of emotively associated words which are related outside of the entity relationships, the end of February is the first edge of the next building period as shown in chart below.

1/2 for this period from December through to May? Perhaps. It can be argued that the emotive tension over the Iraq war certainly has fallen in line with the build up to a plateau as shown in the charts. So as we have manifesting events/circumstances which appear to support the first part of the chart, that is the emotional build period, then one \*could\* have a slightly higher degree of confidence in future events also continuing to manifest along this general trend. Thus the emotive release period with its key dates of November 29, and December 3rd, and December 14th could be predictive of issues arising within this area as this week's emotional level rising was entirely Iraq War/Lying Bush based. So if the emotional levels around the subject continue to ratchet up, then it is possible that the release levels shown within the charts could be related to Bush's wars of aggression. We have to bear in mind that the data in previous ALTA reports of this year suggested that in December a 'wounding' would come to the Populace/USofA by way of the Bush administration. The current anger within the war debate is certainly within the emotional parameters which went into our charts.

If it is the case that the Bush Wars/Bush Lying issues are at the heart of our emotional release period, and constitute the essential nature of the 'wounding' to be passed on to the Populace/USofA, then the levels shown within our modelspace would suggest a very significant change event is imminent. In just discussing levels, in the mathematical sense, for a moment, and leaving aside any particular language, then we must consider that the levels of release shown within the mathematics are suggestive of a level of abrupt change which will be shocking. As an example, we note that the emotional levels are to be several times higher than was encountered within the Sumatran tsunami situation. Also the levels deteriorate so fast from December 14th through to the end of February, that seeing the visual image of the entities moving through modelspace, one is tempted to say that by the end of January the USofA will have withdrawn what is left of the occupation forces in Iraq. Or a change of equally staggering size. The level of change is such that the 9/11 events are about 1/10th (one tenth) the size of what is involved over these next few months.

Other aspects that come up about our change levels are pointing to two separate threads, one is that Bush will be pilloried for some screw-up he has yet to make, due in December, and that our change state relative to the emotional release levels will be 'violent'. We can see the latter based not only on the bespoke 'violence' which is now accompanying the 'wounding' data set, but also can see that the math around the emotive release levels is also suggesting 'violence' just in how rapidly the emotive release occurs.

Also associated both in links and in directly held aspect/attribute sets, we find that the 'violence' aspect of the change holds many representations of a lexical set which could be read as 'transformation into/from confusion'. Or alternatively, 'revelations/exposures transform from/out of confusions'. There are some linguistically interesting points about the appearance of 'confusions' in that it has attributes of being "nomative", and "object" which, under the circumstances of its appearance could be interpreted a bit more broadly as 'place on confusion', or perhaps a bit more poetically as 'laid on layers of confusion(s)'. Then if we gather up the emotive sums held by the sub set as whole we find that the modifiers suggest that a best-guess interpretation would read as 'exposures of long held secrets transforms the mindset of the Populace/USofA by bringing clarity out of past attempts to confuse the issues'. Make sense how this works? Before we go on though, please remember that this set is held completely within the context of a 'change so sudden as to produce the feeling of violence in those who experience it'. Also one note on our work, in the previous sentence, the 'so sudden' could just as easily be replaced by any of half a dozen modifiers including 'so shocking' or 'so large'. Y'all get the idea. Of course, the real problem is that the language can become ambiguous as we have here, and so the 'into/from' is not distinguishable at this stage. It really is merely an aspect of 'movement' without much guidance for direction.

A further note about our work is that it is vulnerable to our interests and ideas. We have, in the paragraph above, a three word phrase composed of an aspect/attribute set extraction. This phrase 'transformation into/from confusion' has three elements/words, and depending on which we concentrate upon, the meaning can shift. First we find that we think this phrase to be significant, given the emotive sums and its participation within the 'emotional release' events of December, but thereafter we could focus either on the process, that is the 'transformation' or what was shed in the transformation, that is the 'confusions' or we could examine for the possible outcome which is {usually} suggested within the movement aspects, here found in 'into/from'. Of course we have to acknowledge that having choices only comes about when

universe provides a completely populated data set. Sometimes things are more restricted and thus the number choices reduced, and thus the interpretation slightly easier.

In the case of this data set, we do note that there are far more supporting sets for the 'confusions' than any other elements. However, much of this language is curiously about either the past where the 'confusions' were laid down, or the potential for removal of same. If, for a moment, we divert to the future tense sets within the supporting layers for the 'confusions', the data suggests that the 'removal' of the 'confusions' will come from 'the south', where a 'hunting party' will 'uncover accidentally' some 'supporting evidence/scent'. Within this set the members of the 'hunting party' are seen as having a 'series {of} problems/obstacles' which, during the 'uncovering' event, and prior to its becoming widely known, will produce arguments about 'how much to carry back'. The arguments will be won by the 'woman from the city, robed {ed note:modified by formerly and past attributes? a former judge?}'. This woman will 'caution against greed', and will 'wisely advocate sufficiency' as 'being enough to get the job done'.

According to the data set, part of the problem that the 'woman from the southern city' will encounter will really begin once the 'uncovering problems' are reconciled and the 'hunting party' returns to the populace. At that point the level of 'insanity' which emerges is shown as being 'shocking' to the 'hunting party'. Hmm. Sounds like media frenzy. Further we get a glimpse of chaos around the 'letters/words returned'. All of this is held under the aspect of 'insanity' which is multiply held within the Populace/USofA entity and which has gained considerable modifying sub sets during this last processing. The 'insanity' aspect, when applied across the broader view of the Populace/USofA and juxtaposed against the lateral arm of the 'wounding' aspect, perhaps should be interpreted a 'pending' level of insanity on the part of the populace as a whole. However, we have the situation of a 'deliberately placed' modifier to the 'confusions' which is one of the higher level aspects for our 'insanity' aspect and so it may be suggesting that someone 'wishes to place confusions/insanity' on the Populace/USofA. If so, the data does not support such an outcome.

Backing out of the Populace/USofA entity for a minute, and examining it as a whole within the modelspace, the visual impact is clearly of a transformation of the entity beginning over the course of our release period of December 3rd onward. The entity is seen in movement both internally and externally as the modelspace is progressed forward over these next few months. Very distinctly \*UNLIKE\* a tipping point occurrence, this change is very sloooooowly progressing. In fact we are showing the entity still in the midst of both internal and external change as the planetary humanity mass moves into the next emotional building period in Summer of 2006. However, the transformation shown occurring may well be a tipping point event only so large and lasting as to take some time to both settle into to all the nooks and crannies, as well as to totally manifest. Whether or not a tipping point, the amount of internal change shown for this entity suggests massive amounts of emotional energy during the release period' will be involved in manifesting these aspects within the populace of the USofA.

Before moving on let us note that the 'wounding' aspect of the Populace/USofA, while shown as also impacting pretty much all of the populace of the country, is now gathering immediacy values which suggest not a Terra sort of event, but rather the 'imprisonment/exile of the ruler' as the precipitating cause. Further data sets come into play that state that 'danger' arises from the 'regime in power' and that, apparently, universe is about to provide some 'stimulation' to the 'interaction between/with plebeian mass/populace'. The data set would appear to suggest that something which will has been 'incubated in the prison of the dictator' {ed note: so many dictators these days hard to guess which one} will be the proximate cause of the 'return of winds/movement {to} thoughts/opinions alluding {to/about} concealment'. Well, of course, upon discovering this in the immediacy values we get a natural 'Gee Whizzer' feeling about it, and reading on discover that more supporting evidence exists for a view of the immediate future in which really damaging evidence comes out about the Bush administration's past actions. The data further suggests that it is the 'error/mistake' in how the 'response' is 'handled/presented' which causes the actual 'wounding'. And we now could draw the conclusion that it will be the infrastructure, that is to say, the constitutional infrastructure which will be 'wounded' and through which the 'pressing of the wound upon the populace, all bleed red' is shown as occurring.

There is the usual reinforcement of the near continuous refrain of 'danger to humans'. Gets to be quite boring. Yet more 'danger, danger all around' kind of things showing up. More and more depth of relatively

less-than-detailed-or-helpful repetitious warnings of danger. So, lets go looking for stuff we don't already know.

### GlobalPop - Double Suns Pour Troubled Waters

While the Populace/USofA entity is wrestling its 'insanity' issues this Winter, all is not a bit quiet within our other populace entity, GlobalPop. Here we find that cross links are suggesting huge Terra based impacts on the 'ability to decide'. Apparently our GlobalPop brethren, that is, those of the regular human variety without much individual power, will be subjects of a 'crippling/doubling wave {of} indecision' resulting from '2/two suns contribution/presentations'.

As if the poor GlobalPop doesn't suffer enough under the 'wafting, waning' of 'powerful opinion' which 'produces no things/no change', they then 'wake' one morning in Winter to discover the 'rainwaters' are 'merging/joining' the 'aquifers' and 'overflowing wells' to produce 'new lakes' which will 'surround encampments/habitations'. Within this section we again are finding the data seen the whole of this year which goes to the idea of 'neighbors' or 'adjacent tribes' coming to 'rescue' those who have fled to 'perilous safety' clinging to 'wet rocks on the sides of mountains in high winds and rains'. Of the many who come to 'rescue', only a few are 'turned back' or 'over turned', and the majority of small boats are then shown as being 'tied/moored' to the 'tops of trees' and/or 'secured to mountain rocks'. In one descriptor set we even find the details of people having 'lived in tunnels' and 'converted utilities, useless' to 'practical shelter/tools'. These people are further described as 'hosting' the 'fleet of small boats' which will be 'moored to guard rails, mountain rock netting'.

As if the Terra problems with 'rainwaters' seeking out the 'rising aquifers', we also find references indicating that the situation in EUzone over Winter will deteriorate due to 'senseless and cruel words'. Curiously we also note modifiers suggesting that 'deeper games' are being played than might so appear on the surface. The data suggests that the 'incautious words' will themselves come back to 'return wrongs' in a short while, and that the 'inciteful language' will be shown to have 'origins royal'. Hmm. Looks like Queenies people have been/will be messing about again. In any event, there will, at least according to our data, be two separate responses within the GlobalPop to the 'incitements'. On one hand there will be the 'expected reaction' from a 'small tribe' of malcontents/agents. On another thread, there will be 'investigations' into the 'accidental release/exposure' which comes from the 'placement of the words' in 'advertisement/print'. While initially reading this area as a 'screw up' which leads to the printing of some damaging words to some very powerful personalities, mostly likely EUzone located, we also have to note that the data shows a supporting layer suggesting that not all 'screw-ups' are in any way, accidental. Hmm.

In any case, the release of the 'inciteful words' will certainly cause things to be 'doubling/increasing rapidly' within the emotional release occurring within GlobalPop. While the other populace entity, Populace/USofA will be dealing with issues of several hundreds of years making, specifically focusing on constitutional promises and current conditions, bespoke 'turmoil' will be overtaking large parts of the EUzone. These issues will mirror the USofA issues somewhat in that they both contain many data sets which are participating in both meta data layers of 'secrets revealed' and 'militancy', but the GlobalPop data set is distinctly differently behaving as the modelspace is progressed through January. Whereas the Populace/USofA is just getting a good stride on it in January, we find that much of the fire goes out of the GlobalPop entity due to the 'rising waters' which start to appear in seriousness in mid-Winter. Does this mean that EUzone will be inundated? Perhaps a very likely occurrence. Our data suggests that 'warfare/fighting/confrontation {is} difficult {during} floods'. And specifically we are finding 'exaggeration of normal/seasonal patterns' such that 'rock faces are scrubbed bare by winds, rain'. These last are very heavily associated with the French Alps.

### Markets - Push Into New Year, Metals Float, Exploding Subordinates

The Markets entity, as the modelspace is progressed forward through December and into the new year, shows a distinct movement for descriptor sets favoring a 'push' or 'manipulation' being underway. This

needs to be put into a larger context however as the meta data layers are very heavily extracting value now from the politically focused sub sets, and unlike previous years, the impact of the financially related word sets is diminishing rapidly. Thus the dual implications that the 'manipulation' will both fail, and be exposed.

In a bit of reinforcement of lexical clues presented in previous parts of this ALTA series, we still note that 'economic' issues will emerge from within the Populace/USofA as the December emotional release period begins. While not necessarily causal, these issues within Populace/USofA have already begun to collide with an apparent planned rally in certain markets. While this rally is progressing, we nonetheless note the counter currents showing up within the precious metals markets, and long term fiscal instruments markets which are supportive of the views expressed previously that all is not 'happy' within the institutional markets.

This view is being supported in this processing with newly acquired descriptors going to the idea that while the markets 'may punish the ignorant', it will 'do no good' for the 'elite/rulers/managers' as the 'innocence {is} lost {but} once'.

We also find that during the progression of the modelspace the Markets entity continues to acquire values for 'danger' and 'inexperienced failure', along with the re-appearance of 'ken lay' as a headline item. If we examine the 'secrets revealed' meta data layer as it slices through the Markets entity, we note that 'ken lay' and others who may in the past have been 'shielded' by political pals in the Bush crowd, will now find themselves 'skewered, stabbed' as 'protection evaporates'. This last likely due to the need for the Bushistas to concentrate their energies a bit closer to home.

Returning from the political to the economic themes, though admittedly perhaps a distinction with little difference these days, we do note that the Markets entity is showing that a 'push new year' campaign is underway with the goal of 'driving away'. The expressed object of the 'driving away' is a bespoke 'negativity'. What gets a bit tricky is navigating down the 'negativity' lexical set where a confusing rabbit's warren of descriptors gives back the general impression that, as Igor says so eloquently, "this beatch don't smell right". Now Igor is of the barely-out-of-puberty generation, that is to say, in his mid thirties. So in his parlance 'beatch' has absolutely nothing to do with the shore, and has much more to do with a whore.

In spite of the interruptions, we proceed with our examination down the rabbits many holes to find that the Markets entity has, as the modelspace moves just slightly into January, run smack into the Populace/USofA entity's economic malaise. Or really perhaps we should not characterize it as a malaise, or disease so much as a shift in perspective that seems to best fit the descriptor set. So much will be occurring, apparently, that the ordinary citizen, and perhaps even a large number of the economically-hyper sub set of the population, will shift priorities, emotionally, to other subjects. The data indicates via cross links that the Markets movements in January will be 'directed' or 'cast again/recast/redirected' as a result of the impact of 'lack of progress towards unity' which is found at the core of the Populace/USofA entity and its period of transformation.

The lexical sets in support of a 'push' being underway include imagery from aspect/attribute sets going to the idea that the 'markets {are} foot-tangled, wrapped in sticky paper, string, oppressed, entangled', and other language in similar vein. As the modelspace is shifted from November and into December we get a building wave of emotive values whose reconciliation to the lexicon produces a set in which a warning appears. While we usually get words expressing 'warning' in a general sense such as the frequently seen aspect of 'danger', or 'risk', we have now come across language when extracted seems to be a very clear statement to watch out. The aspect of the warning set is 'liberation' with modifiers for 'personal' as opposed to a national or community 'liberation'. If we just take the top level of phrase out of the aspect/attribute set we arrive at the image of 'faults in front of your feet now, acknowledgement of risk/danger position essential'. Then the warning arises if we extract the supporting attributes from the aspect of 'essential'. In the final form the whole of the imagery reads as 'faults in front of your feet now, acknowledgement of risk/danger position essential, {if} no liberation/awakening {from} old patterns of thought/mind, brink of abyss underfoot, imminent danger, one more step {causes you to} pay dearly {for} it'.

Very extensive cross links tie the 'liberation' lexical set back to one of the central themes within the meta data set of 'aggression/militancy', and that is the 'revolution' sub set. We note that the Markets entity is faced with both internal and external 'liberation' issues arising in December. These are still showing as participatory within the general emotional release period as opposed to its causal trigger, however the emotive sums we are showing just with cross links to Markets are several times that of what was seen coming out of the Sumatran tsunami period. Now admittedly several factors will be involved in comparisons of the emotive potential of various events. In this case we have the issue of local versus global, and the terrestrial upheaval versus an economic upheaval. Our data sets would seem to indicate that the economic upheaval will involve a lot more emotional energy. We can qualify that by stating that even a little economic pain spread over the globe will have huge emotive and actual impacts. Further the Sumatran tsunami was a local event to only several hundreds of millions of peoples, whereas any economic impact in the age of globalization is local everywhere. And locally felt events/circumstances always have higher emotive impact values both for immediacy and duration.

We are still showing, both by cross links to the Populace/USofA entity, and through internally held values that the emotional release of December onward, as it pertains to Markets entity, is one where the tone arising from the rising aspect/attribute set can be read as 'push into the new year'. However, we need to note that under the aspect primacy set, the next supporting layer of aspects/attributes can be read as 'movement to rot/putrefaction'. The layer immediately under this is supported both by a held value set of 'secrets reveal hidden rot', and by that aspect set participating within the meta data layer of 'secrets revealed'. Further supporting the idea of 'putrefaction rising stench' which is seen as affecting the "palatability" of the USofA dollar and markets, is a data set which is very heavily populated with 'oppression'. Every possible variant of the idea of 'oppressive' or 'excessive/sadistic control' is being acquired as we move the modelspace forward through December. If we had to choose now, it would appear that the trigger for the release event, at least as far as the Markets entity is concerned, would be thematically revolving around 'oppression'.

Our 'oppression' aspect is self referential through both internal and external cross links. In the case of the external links, we find that in several cases where the links originate within the Populace/USofA, they terminate in our 'liberation' warning discussed above. But what is of more interest is that they originate within areas of Populace/USofA in which the language suggests that the 'contrived/created ignorance' about the 'old patterns/mindset' will 'deny prospects for 3/three years on'. The further suggestion from the cross link data is that the trigger for the release period will be arriving to the Markets entity from external events, rather than beginning within the financial structure. However the data sets are clearly {ed note: one hopes to be wrong here} indicating a 'system failure' is in place now, and will be 'uncovered/exposed' by the 'revealing of oppression/control'.

On a last note about the Markets entity, we need to emphasize that a 'duality' is shown emerging as the modelspace is moved forward through to about June of 2006. In the rapidly approaching new world disorder, the markets will be headed down, as will currencies, but during this period, and relative to the dropping background, precious metals will be rising. Now, even within the held data sets within the Markets entity, the 'duality' of 'gold/silver' is rising internally. Another way of looking at the 'duality' set is to apply it to the 'dual role of gold/silver', both as industrial/jewelry and a precious metal.

Other aspects supporting the 'duality' set include views, interpreted through cross links, in which the populace at large will wonder at the 'split' between 'sinking paper' and 'floating metals'. In several curious instances, we find that supporting areas cross linked over to Markets entity are originating within the 'insanity' aspect discussed in Part 5 of this series. One interpretation could be that the more normal course of events might be so reversed as to cause the ordinary citizen to wonder about the 'insanity' of the times, and/or events. In any way one chooses to examine it, having 'insanity' as an aspect of your markets structure just ain't a good sign.

Also in the 'not a good sign' category, and acquired in the Markets entity as the modelspace is progressed through mid December, we have a 'cut off of nose' and 'gouge out of eyes' situation. These aspects show up in Markets amidst a bunch of other 'bloody body parts' references including 'feet chopped off, no running'. We also find that 'respiration impacted, contractions spew', further into the set the supporting aspect/attribute imagery goes to the idea of 'blood drains {from} hidden leaches/leaks/siphons', and

'subordinates explode under pressure'. We also see that 'blooded head {of the} subordinate explodes with effort, no avail'. Under the 'no avail' aspect more details emerge of 'bloody body parts'. In this case the language is clear that 'subordinates, given orders usual/normal {to} normal times, manifest/exhibit blow-ups/explosions {due to} frustration {of} no thing/attempt {being able to} produce results'.

In the examination of the Markets entity as it moves through the critical mid December period, we find only two proximate causes for the large scale release changes within the entity. One of these possible causes is clearly 'energy', as it continues to gain in emotive strength right up to December 13th, and the other is 'dollar' which is showing a strange alteration of its supporting data set subsequent to December 3rd. It is as though the issues related to the USofA dollar will be hitting a small wall on December 3rd. After a small stumble, the emotive tensions go back to building right up to the December 14th point in the modelspace. After that, all of the dollar based data sets start joining the rest of the modelspace in the release period.

#### Bushista - Down to the River to Pray, Stay in the Frying Pan

During this past week of processing the Bushista entity has added some details about the pending 'error in judgment' or 'mistaken decision' aspect/attribute set which is seen as 'sitting on' the Bushista entity beginning around mid December. Within this new detail, a small drama emerges.

We find that the detail set suggests that 'movement to the east' brings a 'response from the neighbors'. Within this response, the problems for Bushista begin in earnest. The rising aspect/attribute set is 'head regularly under water'. This is supported by 'dangerous position' and 'prayerful time produces morass {of} increasingly deep problems'.

Unfortunately, we find indications within the Bushista entity that just as the 'neighbors of the east', and let us read this as the 'neighbors of Iraq' are shown 'stupidly butchering {the} engine/energy of power/growth', the Bushista entity shows that it will be busily 'praying down at the river'. The net effect shown by the Bushista entity will be that the populace stands in wonder at the 'duality expressed'. Let us also read this last as 'total brain dead disconnect from reality'. See, these bots are tricky bastards.

Basically the new language suggests that the 'wounding' is here, and that the Bushista entity will once again bravely rush to the rear to courageously ignore reason and reality, there to seize upon just the wrong thing to do. Much of this set is either a container for the aspect of 'leaks' or has cross links over to 'leaks'. Further we find bespoke references to 'leaks sinking the boat', and 'all day spent bailing water {from} leaks, exhaustion'. Deeper within the supporting set we find that 'leaks spring {up} as rotted wood fibers part {under} pressure'. {Ed note: pressure is external}.

The Bushista entity, as it is moved forward through the end of December, new aspects indicating that the 'heat rises' and that the 'frying pan leads to heat' suggest that the release period will be a doozy for the Bushista entity. There are hundreds of accruing values which, in one form or another, go to the idea of 'fire' or 'frying flesh'. We have the numerous aspects all being supported by even deeper layers suggesting 'burning' and 'fire hotter {than} pan', and other indications that at least the Bushista entity will not have a huge heating bill this Winter. Too bad not true for the rest of the USofA.

#### Press - Blown About, Shocks Electrify

Usually not a very energetic entity, the Press entity in this past processing has added enough new values to warrant having a look. We find that the Press entity is trying to digest an 'immediacy lump', much like a python trying to digest a wild pig.

In the case of the Press entity, the pig is still wriggling around, not all nicely crushed up, and also is based on a lexical set which goes to the 'judgment of words'. Or alternatively, the 'weighing of words for worth'. In both cases, the aspects are top level and fully populated which appeared very rapidly suggesting the appearance of a sudden event or development which will move the Press entity about like 'paper blowing in the storm'. The data set is replete with 'blown away' and 'blown about haplessly' references.

We need to note that the Press is not necessarily the object of the 'weighing' or 'judgment of words' and may well be merely reacting to a judgment initiated elsewhere. What is indicated though is a 'movement to reversal' or a 'withdrawal of the words'. In some ways the entity is moving as through it will be reporting on the 'withdrawal of words' this coming week, rather than withdrawing its own words. The overall impression of the entity growth is that a sudden event will be the 'occupier of focus' for about a week as 'words from consultants are sought in desperation'. Further the 'shape of the future' is involved, {ed note: always is} and the nature of the words are shown as 'cruel' and 'useless'.

What makes this small entity of general ambiguity worth examining at this time is its rising aspect which appears around December 4th, 'withdrawal'. This is significant because the large emotive sum array coming along with it, and the reaction of the Press entity which is shown as being 'shock'. Hmmm. One might speculate that Iraq might be involved. In any case, it is rare that our Press entity originates 'shock' as a value set. This is one time when it does, and does so with vigor. Many of the primary supporting aspects go to the idea that the 'shock' will be as motivating to the press as would an encounter with a taser. Hmm. Can't wait for this one.

#### Conclusion ALTA 106 - Spooked Satisfaction

We note with some spooked satisfaction that a continuing call for a 'reassessment' of the human to alien relationship, that is to say a 'maturing' of sensibilities about the relationship proceeds apace with the latest "outing" by the former Defense Minister for Canada of the whole idea into the public political main stream media consciousness. As we had noted in previous ALTA reports of this year, the relationship will come into much more focus and will manifestly mature as these next months expose more under the meta data influence of 'secrets revealed'. This whole area really is a hot button for Igor, and he is both intellectually fascinated while being 'war of the worlds' paranoid. Seems a pretty much safe position to occupy, so I'll be joining him there. In any event, it would appear that universe is favoring some of our more outlandish, improbable fictions with substance in recent runs.

So we now come to the conclusion of ALTA 106. The data is in, digested, and interpreted. We get more details about the impacts of the approaching emotional release period' with very little in the way of new hints about causes. This may arise due to many areas combining to create a large impact, or a general ambiguity about impact causes during the event period. In other words we may be way too close to crashing into the trees at this point to see the shape/location of the forest.

We get the impression from the way the data has built these last 8 weeks that much of the emotion components will be going to the manifestation of the release, rather than much energy being devoted to the 'whys' or 'what caused it' kind of discussions. The impression is clearly of a Katrina disaster style period in which very high levels of emotional release will be getting attention rather than more cerebral discussions about causal agents and such.

There is the possibility that the causal elements are right in front of our eyes, and are being obscured by some other element within our vision. At this point, given the nearness of the release, it is probably moot.

Our primary patron for bandwidth has already contracts in place, and Igor has new IP addresses for the next data gathering run which will begin on December 1 and likely continue through to January 15th. We will send out email notice with the details of the new run.

Thank you for participating in ALTA 106. Hopefully our entertainment offering will bring you value as context in which to place your developing world. And it sure seems to be a strange world that is cooking up these days.

Stay safe, and if you can't manage that, endeavor to stay sane. It may come in handy.

Cliff and Igor (soon to be out with the wife being hauled around the malls by his balls. Happy Merry and all that).
