

Half Past Human presents

ALTA Report

Asymmetric Language Trend Analysis Report
'Changes in language precede changes in behavior.'

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

This report in the ALTA 509 series is from the first 18.124 million reads. It includes immediacy, and short term value sets.

Meta Arts - No Fries

It is worth noting that we are now employing several variants of similar terms in order to express the particular view point or greater context around the linguistics involved. As an example we offer the differences between the [usofa military], and the [usofabilderberger military]. In the case of the former, this descriptor set goes to the 'man in the street' view, including the emotional drivers for self-involvement with the military such as [patriotism], and [lured (by advertising)], as well as [extreme poverty], and [self betterment]. This is the view of the people serving in the military, while the [usofabilderberger] context represents the [con game] that is the [corporate control] of the [usofa military] as a [bilderberger asset] and all that such implies. This goes to the idea of [american (illuminati) empire], as well as [israeli control] of the [sham government of the usofa (congress/elected leaders)]. Thus the [usofabilderberger] designation goes to the [acts] and [results] rather than the [emotional drivers of the person in the uniform excepting as has been co-opted by the TPTB/Illuminati/Bilderbergers]. Eh? Clear as Bilderberger membership? In the case of the [woman or man standing ground and doing duty someplace], the Bilderberger overlay on their actions, and exercising control on their lives would be *totally* denied, and/or ignored as [beyond their pay grade] and so we felt the need, given the developing linguistics pointing to the coming global insurrection against TPTB, to begin to differentiate as clearly as we may within the very complex nature of these reports. And no, there ain't no fries with these 'burgers'.

The above is not merely a nuanced distinction. Rather we have a

real difference which separates the [populace], both global and domestic to the US, from the [populace as is manipulated/controlled/owned by the bilderbergers]. In our reporting, many emotional threads exists within the populace *due* to their ignorance that they are being *herded/controlled* by a small elite group with its own agenda. How many in the US populace would have 'volunteered' to go into the US military if the real facts of the 9/11 attacks were broadcast at the time? How many would choose to place their lives at risk for Bush's aggression against the Iraqi's if *any* of the real facts were broadcast at the time? Such is the life-and-death difference which arises from the 'nuance' of understanding the level of Bilderberger control over the global populace, but specifically also over the now-dumbed-down-by-the-school-system "citizens/slaves" of the Anglo-Illuminati part of the world.

Markets - Prima Fascia

The data sets accruing to the Markets entity from the most recent processing include immediacy and shorter term value sets. It is these last which extend out far enough, at 3/three months inclusive, to directly contain references to the October 7th period when the aggregation of data within the totality of modelspace points to a sudden shift into 'emotional release language'. These newly processed shorter term values are accruing to many sets within Markets entity, but the preponderance are sliding into supporting positions under [decrease/passing] which is an aspect/attribute set directly supporting, via cross links, the Populace/USofA entity sub set of [loss of currency/money]. This is alternatively interpreted as [the great loss] due to the emotional impact that this [loss of money/currency/wealth] has on the Populace/USofA entity. The Markets entity sub set of [decrease/passing/loss] *is* consistent with what we would expect to see arising prior to a 'great crash' scenario. Noting that just because an expected pattern appears to be forming in modelspace is no guarantee that it will continue to shape up as expected. However, at the moment, all the accretion patterns within modelspace as a whole are both consistent internally, and seemingly being made manifest within universe at large. Of course, pure dumb luck, and likely to get off track in the next second after this is read, but....at the moment, the data does seem to suggest that a [big crash] or [passing of great impact] is pending for around October 7th. IF SO, then this is likely the proximate cause for the global plunge into release language. IF SO, then the magnitudes of what is being forecast are beyond immediate grasp as the size of the

crash is implied by the steepness of the planetary plunge into 'emotional release language'. If the crash of the [markets] is the cause of the sudden twist into the release language state, then the implication is that the magnitude *must* be large enough such that it is being discussed that day pretty much around the planet, and that it is *THE* topic of discussion for the next 4/four months without let up.

Please NOTE: our timing frequently sucks. When we picked October 7th, at 7:10, we did so out of a range of granularity that extends slightly over 3/three days in either direction, and October 7th is a more or less mid point of convenience for labeling purposes. IF there is a crash, it would be *extraordinarily* gracious of universe to arrange it on our selected day, to say nothing of the selected minute. So, bearing in mind the [bullshit factor] around [timing/temporal clues], we proceed.

The supporting sets accruing under [decrease/passing] as modelspace is brought through early October include [very/extreme], and [evil omen/bad sign], and [ill patients]. Further sets include the aspects/attributes of [soldier (guard/block the) door], and [sounds (made by/from) the sky]. There are also direct and bespoke references to [bad luck], and a number of these are themselves supported by aspect/attributes of [continuing (to) fly (high)], and [due to flying (beyond range)]. There are also supporting structures for [those (who) remained at the lodge] are to be [safe], while those who [ventured out] will be [taking a bad fall]. Of course, we are aware that many of the [flying] supporting structures *could* be interpreted as though pertaining to the potential for an [israeli mistake] in the form of an attack on Iran. These would be so interpreted in the GlobalPop entity, however they are appearing within the [decrease/passing/loss] sub set of Markets entity and seemingly are referring to [those who would venture to fly high]. Note that [fly high] as a descriptor set also contains [ascend], and [climb to height], and [raise high] all of which are very suited to [market] behavior. We suspect that these references will link back to the PPT, or other manipulators who will be [caught out] as the data suggests, and [shoved/pushed over the edge] and [into a bad fall]. We also note that there are explicit, and bespoke references to [those (who) possess great amounts will lose the most]. That, at least, is seemingly clear.

There are further aspect/attributes of significance to the [markets], including, via cross links over to the now fading Bushista entity,

some which suggests that the 'evil doer' himself will surface yet again as [bin ladin] is resurrected. The accretion patterns and the cross link sets could be interpreted as suggesting that in the [dire hour] of [illness] within the Markets, that the Bushista's will come out with the story that the [prince (Bush)] has, at last [shot the man in the cave (O. bin Ladin)]. This is a very interesting sub set as it goes back in its turn by way of cross links over to the Markets entity where it terminates in [greater (the) fortune, greater (the) loss]. There are also specific sub sets within Markets for the [greater loss] which include personality descriptors for some of the more [famous talking heads] of the various [business channels]. These [teevee personalities] will also be making [news/headlines] as [victims] of the [crash].

As if to supply reinforcement for the interpretation, as the [decrease/passing/loss] sub set grows along with modelspace movement through Fall 2008, and Winter 2008/2009, it is gradually shifting from being in support under the meta data layer of [encounters with scarcity] over to direct support for the meta data layer of [revolution]. Just as a human may expect that the reality of a catastrophic crash/loss of the USofA dollar *would* shift the [populace, usofa] as a whole via [deprivation], and [hardship] to a [revolution] mind set. The [decrease/passing/loss] sub set is [markets] focused, and is shifted over to support for the [revolution] meta data layer by late in Winter, 2008/2009. The [visibility] sum for the [decrease/loss] sub set suggests that by December of 2008 there should begin to be visuals within the global media stream going to this idea of [loss of currency(Populace/USofA)] and [decrease/loss (Markets)] will be [driving victims] into the [process of radicalization] which will produce the [first erratic acts of defiance/rage] that will coalesce over 2009 into the [planetary populace movement] and the [explosions] of [global revolution] by Summer, 2010.

For the [global economy] the Fall of 2008 is characterized best by the primary aspect in support of this sub set within the Markets entity; that is, [stasis]. This aspect/attribute set is also labeled by its primary descriptors of [held in check], or [awaiting developments], [static], or [moment of no change]. The aspect/attribute set becomes far more emotive as the supporting attributes are taken into account, and they would favor the label of [awaiting further developments]. This descriptor is modified by the emotional sums of the supporting attributes and becomes [awaiting further developments (without breathing or alternatively, with held breath)]. We need to remind

that *any* references to human or other body parts or processes are taken very seriously as they are of fundamental archetypes and can be very powerful forecasting descriptors. In this case, the reference is to [waiting for next shoe to drop] in a very emotive sense, and this is applied to the *non USofA* [global economy] and is placed for Fall which is to say, post September equinox.

NOTE: The [global economy] sub set within Markets entity is also *deeply* affected by the aspect/attribute set of [usofa military], and [military] in general in Fall. These aspects come into new strength in mid August, but really are impacting in Fall, shortly after the September equinox. It seems to matter, but the relative depth of the problem is less than a concern due to *other* issues hitting the Markets, such as the [great loss of currency], and other [paper debt market degradations]. However, the [global economy] is still vulnerable to the [Bilderbergers blowing things up].

Populace/USofA - 10-55d, Shit, Hippies, Wedding Redux

The Populace/USofA entity continues to accrue values for a [marine/maritime incident] relative to the [navy] of the [usofabilderberger] and its [alternative use plans]. The data sets accruing are appearing in the Populace/USofA entity over the course of Summer. There are 3/three spikes in the [visibility] of the [maritime incident/accident/disaster] in Fall. These spikes are also very coincident with 2/two other threads within modelspace; the [contact decision] meme, and the [disruption (of) electrical service] meme. This last is cross linked over from the Terra entity and may be pointing to [hurricane/cyclone conditions] which not only [destroy electrical generation/distribution] for a [large island (of) people/large city], but also concurrently causes a [swept ship]. This last is also described as [blown ship] or [wind moved vessel]. We note that there are no references for 'sails' in this set, so likely the [wind movement] of the ship is *not* a good thing. Other indicators such as [floating corpses], and [miles (of) debris] are pointing to a [wind induced maritime disaster involving a usofabilderberger vessel out doing USofABilderberger work]. Further there are cross links over to both the Markets entity and the GlobalPop entity. As had been noted in previous ALTA reports when the context of a [prison ship/death camp ship] running into [inclement weather] first emerged. The data accretion patterns are still growing within the shorter term values just processed and the accretion patterns are appearing later in Summer, nearer the September equinox than the

Summer solstice. Again, we note that [political problems] within the USofA power structure *will* arise as a result of the [floating bodies], and further that [gloating enemies] {ed note: via GlobalPop link} will be [enthralled] by the [affect of these particular secrets revealed] on the [populace/usofa].

This [maritime/naval disaster/wreck] is also wrapped up within the [restrictions on movement] of February. There are 2/two primary aspects from the set of [maritime disaster] which come to the fore in late Winter (February 2009). These are the [ocean] and [military]. In the case of the [ocean/water/maritime] aspect, this has very high levels of [visibility] through January, and into February and beyond. The [oceans/maritime] aspect becomes a very large component of the emotional sums providing support for the [restricted movement] which covers the [usofa(bilderberger) populace] in late Winter. There are some indications from the Terra entity cross links that the [floods] theme previously forecast as being of very large emotional significance in 2009 (akin to the [traumatic winds] of 2008) will be a driver for [restrictions on movement] affecting a very large sub set of the [populace].

The rapid rise of the [restrictions on movement] affecting the [populace/usofa] is indicated to propel much of the gathering emotional strength for the [revolution] meme within the [populace]. The [restrictions on movement] also contain a [political] sub set, and is also gaining support from a sub set of [panic] and [loss (of) delusions].

The tendency for universe/pesky_reality to place the apparent substance of developing circumstances behind some of our forecasts is especially disturbing in the following aspect/attribute of [shift] which becomes the dominant descriptor to be applied by the populace of early 2009 about the [usofa economy]. Again, as noted ad nauseam, we tend to take body part and process references seriously. The data sets are indicating that the [consensus view] coming from the [populace/usofa] in late Winter (February 2009) is that the [usofa economy] is [shit]. Further the longer term associations via the emotional sums for the aspect/attribute sets are reaching out nearly 3/three generations providing a forecast that the [emotional tone] of the [populace] relative to the [economy of the USofA] is for the [economy to remain shit for over a decade/long_damn_time]. There are positive emotional indicators within the [american populace] relative to [their economy], but many of these are [future expectations], and [gray markets] based.

The more positive contexts are moderating the rather dismal majority of economic related contexts, but are curious in that they are in large part under areas broadly categorized as [alternative/indy/independent]. Hmmm. Basically a flavor of 'hippie shit saves the world', or "forward, to the past".

Given the appearance of the aspect/attribute set of [wedding] in past ALTA reports both in the Populace/USofA entity, and the Terra entity, we are becoming quite skittish when we note that yet another instance of [wedding] is showing up. In both previous instances, the primary support for the [wedding] aspect/attribute set came from [interrupted], and in both instances we had large earthquakes which were the de facto cause of the [interrupted wedding]. This was true of both the Sumatran earthquake/tsunami, and the recent Great Quake in China. Yet again, as noted, the aspect of [wedding] has risen to very high levels of emotional summation, this time within the Populace/USofA entity, and it appears in the entity as the modelspace is still transiting the [summer months]. Yet again, the primary supporting aspect/attribute set contains [lay down the burdens/relax the responsibilities (of the wedding due to) interruption]. Yet again, the proximate cause for the [wedding interruption] is an [intrusion by Terra into daily life patterns]. Yet again, the [intrusion] and the [interruption of the wedding proceedings] both have very high [visibility] summations indicating some level of significant play in the global mediastream.

In our current instance of [interrupted wedding], the supporting details includes a [bride/woman standing (in tatters) next (to a) small box outside the ruins of the church]. Further the [first/best man] is [visible] in the global media stream and is described by the data as being [arrow straight], and [top of the list/first named]. Note that both of these last 2/two aspect/attribute sets are transliterated colloquialisms from non English language sources. The implication is that either the earthquake is *not* in the USofA, but gets huge air time on the mainstream media here, *or*, the earthquake is here in the USofA and strikes a community with a high percentage of immigrants, which include many [signs/markers] that are in a non Roman alphabet. There are also indications that the [emergency] will [propel] the [scholar to the forefront] as the [damage (is) viewed globally]. This [scholar] will there after become something of a [resource] for the [planetary populace movement] in about 9/nine months to a year's time. Further the [scholar] is described as [poorly dressed/in rags/tatters] at the initial level of [visibility] due to the [travails/privations/suffering]. We note that the primary

supporting layer for the [suffering] context is based around the [natural disaster(s)] aspect/attribute set, and further the [natural disaster(s)] set is explicitly plural. The idea coming through this layer of details is that a [natural disaster] occurs such that [other natural disasters] follow in very short order to become all merged into the same event. An instance which would be illustrative would be an earthquake which triggered a [lahar](#) which then becomes its *own* level of disaster further away from the initial disaster. There are a large number of supporting sets at a primary level which appear as modelspace is progressed forward which are tied to, or hold values directly from the [traumatic winds] sub set. This set may be pointing toward a [wind event] which is our [magnifying action] that [doubles the problems].

Within the supporting sets for the [interrupted wedding] which will be [visible] within the global mediastream are several sets which explicitly provide temporal references to [summer], and further which are also filled with supporting sub sets for [bad], and [burdening], and [crushing], and [dislocating]. Note this last is internally cross linked over to the [diaspora] sub set that the Populace/USofA has in common with the GlobalPop entity, and which is continuing to grow in both entities. Other supporting sub sets include [high lakes] and [doubled/twinned lakes] which are/will be affected by the [natural disaster]. These are in their turn cross linked over to the Terra entity where they are supporting layers for the [flood] meme which continues to grow in importance for 2009.

Other sub sets in support of the [interruption] aspect/attribute set in support of [wedding] are also pointing to [interrupted vacations] which further are supported by [stranding], [grounding], [hardships], [suffering], and several aspect/attributes which go over to support [diaspora] once again. This repetitious picture is further reinforced by lexical images of [boats] being used to [move around mountains]. In this instance the [mountains] aspect is supported by attributes describing [mountains in the wrong place], and further these areas are continuations of the [dancing mountains], and [mountains do jigs/shaking dances] memes which appeared in previous ALTA reports. There are also temporal supporting links which become visible as modelspace is progressed forward. These links span from the [summer natural disaster] and provide a hint of a [winter] temporal event echo. The [winter] echo is primarily supported by [sickness/illness (of the) atmosphere] which are shown as arising from yet another [natural disaster]. This

[atmospheric illness] lexical set has few points of granularity, and thus is not yet able to be interpreted in any meaningful way. We cannot tell, at this point, if the [atmosphere] become [ill], or causes [illness]. That's the ambiguity of language, bites your ass every time. The [interrupted] aspect/attribute is also shown as [interrupting] a [glamorous occasion] which is not the wedding, and seems to be trying to indicate some [filming/video] actions or event. This also gains prominence via the global media stream when [participants] of the [interrupted glamour event] are [seen on teevee]. Please note that [glamour] is a very emotionally charged sub set linguistically whose roots go back to [mind controlling magic] within several languages.

The [summer natural disaster] is further described as being all about the word [double], and this word has many differing supporting layers which combine to a very high degree of [visibility] suggesting that [double] or [twin] will be used very extensively in the first reports of the situation developing. The [natural disaster] is also described as [revealing worn transportation] where [worn] is supported by [old/broke down] and other sub sets of similar meaning.

As a last note, the data sets supporting the [natural disaster] have the same [thrown back to the past/previous age] language which first appeared prior to the Sumatran earthquake/tsunami, and which further was also seen prior to, and in reference to the Katrina/Rita disaster forecast. In both cases, reality has shown that [recovery] from disasters which [throw the populace back to a previous age] are painfully slow.

GlobalPop - Accent Marks (Inflection Point)

The GlobalPop entity, our second largest behind the Terra entity, has added some new support behind the idea of [rising/walking/dancing/jigging mountains] which had been reported in previous ALTA series. These new supporting aspect/attribute have longer term associations which bring them into [visibility] in January/February of 2009. These supporting values are also cross linked over to the [global coastal event] within the Terra entity. These [dancing mountains] *may* be showing up as a temporal marker which we can use as an indicator for the [global coastal event]. If so, the span within modelspace appears to be between a month and 3/three months before the [viability] of the [global coastal event]. Noting that our timing clues are sometimes

way off, as we note that the [uniting female personality] appearance was over a month after our projections. The rapid rise in global presence for [Ingrid Betancourt](#), including the [uniting] and [peace] messages were forecast, and if anything, have been larger, and speedier than projected. Still though, her release and subsequent publicity has occurred in [summer], and we suspect that the other linked forecasts may be also in the forecast sequence, though also a bit more compressed than described. If so, we should see a [culminating effect] of [uniting female personality] in early December, relative to the American hemisphere.

Concurrent with the [dancing mountains] are aspect/attributes for [wealth], and further, for [wealth] defined as [possessions of coins and ingots of gold and silver], which will come into a great rise in [visibility] in January/February of 2009. These aspect/attribute sets are under the GlobalPop internal sub set for [secrets revealed] and are also internally cross linked to a deeper sub set of GlobalPop which goes to the idea of [joy], and [happiness]. These 2/two aspects are very telling as they had disappeared from the GlobalPop entity within 20/twenty months of the installation of Bush as president of USofABilderberger. It was within that same time frame that the GlobalPopulace entity was split to allow more accurate forecasts by removing the [tainted] sub sets which were then used to form the Populace/USofA entity. This change was necessary and noted at the time as being caused by the [increasing dichotomy/divergence of the information streams] which fed each sub set. The more realistic and far less [interfered with] larger sub set of the GlobalPop entity lost its [happiness] sub set during the subsequent run up to the Bush war of aggression against the Iraqi's. That this sub set has now returned is being taken as an indicator that the GlobalPop is [happy] with the installation of the next, presumably *not* republican president, though we note that the USofABilderberger does *not* change with the ceremonial anointing every 4/four years in January. Nonetheless, the sub set within the GlobalPop for [happiness] has returned, and within that set, a large number of cross links, both originate and terminate within the sub set for [wealth as coins/ingots of gold/silver].

Also within the [joy] sub set are indications that the [scare/fright] within GlobalPop has abated, given that by late February, the [global economy] has not caught the [usofa disease] of a collapsing economy. The previous forecast from ALTA reports of 2007 and 2008 about this Summer and the [lock down/seizure/rigidity] of the [markets] are reinforced by the language now appearing within

GlobalPop and centered around the definition of [wealth] as [metals/things] rather than [debt] or [paper]. Again the [debt load/credit crash/economic meltdown] which takes a huge turn for the [worse] in late September such that [economic] and [fear] language sets merge within Populace/USofA by the point of the October 7th shift into major emotional release language shift does show as [creating fear] within the GlobalPop, but by late January or early February, there are indications of a [sigh of relief] over both the [economic future] of the [planet], albeit [absent the USofA], and the installation of the [last american emperor].

We note within the sub set of the [european zone], or the [EURO dominated countries], this same sub set of [wealth as coins/ingots of gold/silver] contains aspect/attribute sets indicating that the [document] is [irreparably damaged]. This likely refers to the combined [Treaty of Lisbon] and the [EU constitution]. These are combined within the data sets. The newly accruing data explicitly points to [damaged document] which produces a state of [questioning] which is supported by [not knowing (how or if) to go forward], and [not understanding how to go back]. Further the [dithering about] is also to be influenced by [local economies] as the [shock of loss of USofA wealth/dollar] is still being [felt/experienced] in January/February. The data sets indicate that several [secrets revealed] episodes over [fall] and early [winter] will put the kibosh on the [document] in such a manner as to [effectively seal off alternative (courses)]. This area of [losing choices] is extensively cross linked externally out to ThePowersThatBe entity. Further, a large number of the internal cross links terminate over in the [joy] linguistic sets indicating that much of the [global populace, sub set EUzone] will be quite happy with the [damaging of the document]. At least for a small while....

The data sets for the [damaged beyond repair document] are also in direct support for the [radicalization of the planetary populace] which is forecast for the [4/four months] prior to the launching of the [planetary insurrection] in the Summer of 2010. The cross links over to the ThePowersThatBe entity suggest that their [response] to the [crumbling (of their) ambitions] will be a proximate cause for the [radicalization] of the [populace] in the countries of [europe].

SpaceGoatFarts - LE's, Cloaked

The SpaceGoatFarts entity is the method by which we attempt to keep track of all of the 'strange things' out-and-about. These include all the [go bump in the night] things which generally give humans a [creepy feeling] as evidenced by [crawling skin], and [hairs standing on end], and other such bodily reactions to emotions which come to the fore as humans encounter the [unknown] in universe. Further, a few years back, when the SpaceGoatFarts entity was created, and then started populating in the data processing, it was discovered that there is a whole class of linguistics which ThePowerThatBe wish to have [suppressed] or [controlled]. We also placed all of these linguistics within SpaceGoatFarts under the broad set of [officially unknown and/or suppressed/denied]. These include all of the subjects of [ancient humans] roving about universe, as well as [space aliens], [ufo's], and even [evidence] of all sorts of [officially denied planetary history].

New areas of linguistics are filling in some diverse, and fuzzy sets. These new areas include a linguistic set headed by the aspect/attributes for [light emitters]. These [light emitters] are within the larger set of [unknown], but also are deeply involved with the [officially denied/suppressed] sub set. Currently the accretion patterns suggest that [light emitters], which we are interpreting as a [device/mechanism], but which is also described as a [personal technology], will soon be causing *big* problems for ThePowersThatBe. The data sets processed out of the immediacy values have brought along associations to a large number of the longer term values. The supporting aspect/attributes are pointing out 7/seven years, or into 2015 as the [duration] of the [light emitters] problem for TPTB. The data sets are less instructive about why only a 7/seven year time frame for this problem. Could it be that TPTB are no longer 'viable' over the course of the 7/seven years? Or do they still exist, and somehow have [made peace] with the [light emitters]. We note that the [light emitters] have very high connections to [humans], and *if* a device, its impact on the [social order] is to be more [profound] than the impact of [computers] or [technologic communications]. There are some number of supporting sets hinting that these [light emitters] may be on the order of a [psychophysical technology]. Again, *IF* so, then this [psychophysical technique/phenomena] is being described as a [conflict source] for TPTB, as well as [hundreds of thousands] of [minions/officialdom/agents] who will be [initially directed] to [go forth and contend/conflict] with the [light emitters phenomena]. However the data is indicating that by the end of the [second year] it has become apparent to TPTB that [all/every agent] employed in

the [LE phenomena effort/conflict] is [ultimately/in_the_end corrupted]. The [corrupted] aspect/attribute set is also supported by the primary attribute of [rendered useless], or, from the [powers that be perspective] these [agents] are [taken out of service/made impotent] by their [encounters with the LEs]. Hmmm. Noting that as modelspace is progressed into the far reaches of the attached longer term values of this set, or about early 2010, the [visibility] of the [LE versus TPTB] issue rises to very high levels indicating that the [battles/confrontations] will be much more public.

It should also be noted that alternative interpretations for [light emitters] include [photonic projection], and [transiting photons/light], as well as [photonic creators]. But also note that the descriptor set does not contain references to such things as LASER, or MASER....so this is a new kid on the block.

There are a few internal cross links which tie the [light emitters] to our [decision journey (by) the 2/two poor bastards]. An interpretation favoring the sci-fi movie feel would go to the idea that the [light emitters] are [alien technology] which is [liberated] by our [2/two poor bastards] and that is part of the reason for the "insert chase scene here" pursuit of these fellows by TPTB.

The SpaceGoatFarts longer term data structures held over from ALTA 209 have had some growth under the linguistic structure for [pole shift]. This new growth is building under the aspect/attribute set of [illusions/masks/masques] and primary support for this set comes from the aspect/attribute set of [changes] with support in its turn coming from [misleading appearances]. Other supporting sets fill in the idea that [many humans] will have a [difficult time] in [accepting changes] which are [not as they appear to be, or illusionary/cloaked]. These sets accrue to SpaceGoatFarts as modelspace is progressed through 2010. At that point they are a [building emotional tension] trend, with supporting values themselves having multiple year or multiple generation impacts. The data is suggesting an interpretation going to the idea of a series of [accomplished/recent changes] in the [planets] and also specifically here on [terra] that produce [active denial] from [lots/millions of humans]. As described within the linguistics, these [millions] will have a [difficult time accepting changes for what they are]. This set is repetitively filled with references to [appearances are deceiving], and other such language pointing to some form of [self deluding denial] relative to the situation in 2010 and beyond. The first accretions of these sets begins in February of

2010, and likely is directly the result of the [alterations] in [planets] in late Fall of 2009. We note that the SpaceGoatFarts entity is referring to [planets] as a set, and of which ours [terra/earth] is a member. Further the [changes] are explicitly described as [in the planets], and not between the planets, so the context of orbit alterations is not being brought up. The relationships between the planets are described as [stressed] and [compressed], with this last being supported by [denser] and [more filled] which are also supporting a linguistic set of [energy bands]. So the interpretation is that orbital parameters will stay the same, but somehow the [energy bands] between the [planets] will be [denser] or [more filled with energetic activity/potential]. These [inter planetary phenomena] are directly related by internal cross links over to the [ufo behavior] and the [contact decision] threads elsewhere in SpaceGoatFarts.

Conclusion: ALTA 509 - Part One:- Boots, Drop Outs

The data sets are pointing to a [winter] of pretty much global discontent. While there are pockets, in both space and time, where emotional trends are able to get some uplift going, there exists a majority of emotional indicators for the continuation of the 'release language period' from January onward as a general trend. A very large level of support for this general trend of 'release language' over the next 19/nineteen months comes from [intrusions] into the [orderly progress] of society from both Terra based events, and global economics. In both cases, a common thread now emerging is that the [officialdom] will be using the [same response] for both (or any) intrusions, and that is [fascism], or [corporate seizure of control]. Beginning in Winter 2008/2009, which is to say before the March equinox 2009, the [visibility] of [fascism] will place it into the global media stream. This will arise in the USofA due to [lawsuits] over [past actions] of the [government]. The data sets are indicting that the [shadow government], or the [illuminati masters] will become [jittery] over the [publicity], and will attempt a relatively rare form of [direct control]. This will result in even more [visibility]....but also, according to the Populace/USofA entity, perhaps includes a form of [visible due to absence] as the data suggests that the [press], including [prominent members/reporters/talking_heads] are [put in their place] in such as way as to be no longer able to [live in denial]. This data set is but 1/one of many which go to the idea of [break outs] of [visible cognitive dissonance] as the [populace/usofabilderberger] slowly

begins to [see hand prints] of their [masters] emerge.

As with all good and proper [fascist movements], we can expect that [fashion] will follow, and [boot sales] will take off. In this case we note the irony of universe showing up as the data sets are pointing to a [late winter] event or events in which the [duality] of [boot types] appears. The data seems to suggest that smooth, leather [boots of power] will be [favored] by the [masters (of) fashion], but that a counter trend will develop in [hiking/walking boots]. This [duality] of [fashion] will be taken, in certain quarters of the populace, as a clear sign of [which side] the wearer is on. And so goes the fuzzy pink revolution as it matures into barricades and bloody revenge. On this last note, the data is still growing toward a [hang'em high] sort of approach during the coming [cleansing phase of blood letting] as the [global insurrection] begins in earnest in 2010.

An interesting sub set forming within the modelspace later in 2008 indicates that a [third force] or [counter path] is being taken by a significant number of the populace over these next 2/two years in which they will [opt out] of the [petty political concerns] of society as they are building/preparing for [continuing planetary biospheric change]. There are a large number of cross links from the populace entities in this sub set which go over to very complex areas in the SpaceGoatFarts entity. Presumably these will be sandal wearers.

Evidence of [solar disquiet] will soon be [visible]. This is a temporal clue to some pending terra problems including our [dancing mountains]. When the [visibility] of [solar disquiet] rises to the global media stream level, our modelspace suggests that the [mountains dance] within only a few weeks of that point. Probably *not* a good time to be bare foot.

###

This concludes Part One of the ALTA 509 series. Speculator slices will be posted by late on Sunday, July 13th.

We expect to have Part Two posted by late on Saturday, July 19th.
