Asymmetric Language Trend Analysis
Interpretation and Predictions for 2009/2010
By [clif high \(halfpasthuman.com\)](http://halfpasthuman.com)

WARNING: This report is not for the faint of Heart. Very nasty stuff follows that **WILL** impact your consciousness in a negative manner (at least at first). And may affect your health. **BE WARNED NOW!**

So make a decision now to **NOT** read this material any further if you have any health or consciousness problems that may weaken your bodily systems.

NO BULL HERE! VERY SERIOUS WARNING!~

DO NOT READ FURTHER IF WEAK IN HEART OR MIND!

Stop now and make your decision. Refunds are available on request.

Disclaimer of Methods

The predictions herein are produced using our radical linguistics method that has been in development and production since 1997. The data sets employed are a result of the data gathering begun in October of 2008.

Conventions employed in this interpretation.

Within this document, words or phrases that are enclosed within square brackets [example] are extracted from the data presented in its more raw form. Words, not delineated in other ways, and that surround such bracketed words or phrases are used to place the marked word/phrase in context. This is to say that there is a deliberate attempt to present the information in as coherent an essay format as is possible, given the complexity of the subject matter, and the process involved.

Disclaimer of the Extremes

The process employed to produce the ALTA reports seeks out emotional associations with words in common use on the internet. As a result of the nature of emotions, it is easier to find and identify such words that are associated with extremes of emotions. Thus there is an in-built artifact of our production that will always tend toward the most extreme ends of the emotional range. Further, it is easier to identify words associated with negative emotions than with positive emotional states, therefore, again, there is an in-built artifact within our processing which tends to focus on the more extremely negative range of words.

Disclaimer of status of knowing

This document presents forecasts of trends and predictions based on radical linguistics that are derived from a process of invention. This invention process is on-going, and self-transforming. This invention process is inherently flawed at so many levels that it discussion of the discrete problems is beyond the scope of this presentation. The reader is cautioned against the in-built process in humans to 'believe' the written word. The information presented herein is at best a very poor process of mapping the collective consensus reality and some small amount of the changes that it manifests. To restate this premise: it is our understanding here, that each viewing of the future, changes the future. Usually these changes manifest in unanticipated ways. Likely this is due to universe favoring 'surprise' as a method of keeping consciousness awake and slightly jittery.

To repeat this in other words:

Do not assume we know what we are doing in the presentation of this material.

Always discount the information presented as it has an in-built error toward the most extreme connotations available in language and trend interpretation. In yet more words, the information presented uses words that presume the worst-case for future manifestation of the collective consensus.

ALTA Disclaimer

The text of the last of our subscriber 'runs' is included in this presentation. The following disclaimer applies to all the text of this document, with special emphasis applied to the text of the ALTA reports.

Note that this report is offered for entertainment only. Any resemblance between the events portrayed in this report and any developing reality is purely coincidental and in no matter represents foreknowledge on the part of the authors of this report.

Note that the results presented herein are derived from humans expressing themselves on the internet. As such, emotional values and the words used to express these emotions are being sampled and interpreted here, not the future. Any resemblance between this report and future developments is entire in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy, or lack thereof, in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment only analysis demonstrate themselves incapable of rational appreciation of reality, and the Authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

Meta Arts – Blowing in the wind, Hover(ing) craft, THE 15/fifteen percenters

It is very likely that the ‘whistleblower’ who had been described in previous ALTA reports (see 1309) as emerging out of the period of the [coagulation] of the [government/officialdom of the USofA due to financial structure collapse] is a person by the name of [Andrew D. Basiago] who is the author of a paper titled “The Discovery of Life on Mars, 12/12/08 (PDF)” and that can be located at <http://www.exopolitics.com/>. The past forecast for this person who would make a [planetary impact] of such magnitude that [a second wave] of other [whistleblowers] of all kinds would be drawn into the public view includes descriptors and archetypes that are currently being fulfilled by reports about Andrew’s paper. While it is curious that Washington state is some form of hotbed of woo-woo activity (Andrew is a Washington state resident), and the home to so many researchers working in the woo-woo world, nonetheless, the linguistics both around Andrew D. Basiago, and by him reach to almost 34/thirty-four per cent of the predicted linguistic set (actually quite significant levels when attempting to match personality to forecast at this early a stage). If we are correct then the events of these next few months will raise the public profile of Andrew Basiago to a very high level within the mainstream media and that such presence in the media will climb over the next 9/nine months to a planetary level.

In the same vein of data from the SpaceGoatFarts entity that produced the forecast about the [revealing] about [space secrets] was a set that led to the forecast of [large scale viewings] which we had indicated as being likely to take place in [south america] around [mid Summer]. The location information was mistaken, while the archetype for the [mass sighting] within the [contact] meme was correct. The actual occurrence happened in China, and was recorded by many persons. The sighting was significant in several ways, including [officialdom (in China)] acknowledging the [reality] of the [contact]. See the article at <http://www.ufodigest.com/news/0909/UFO-development.php>.

Integral to the processing that produces our reports is the concept of ‘supporting aspect/attribute sets’. These supporting sets slide ‘under’ the larger archetypes as they are formed within our database. It is possible for us to err in our timing clues if we assume or think that the supporting stream of new linguistics for a particular archetype has slowed down, or in some other

way indicated that the particular archetype is about to ‘express itself’ in universe or manifest in reality. In those cases the interpretation may state that such-and-so forecast is to happen in XYZ period of time. And it does not. But rather what does happen is that a new or unexpected stream of support for the archetype starts up again, after we had thought it finished.

Such conditions exist due to our monkey-minds attempting to ‘beat time’ in the forecast. And getting it wrong. In some instances we interpret a drastic slowdown in newly accreting values in a supporting structure as an indication that the stream is ending due to the manifestation of the actual circumstances in reality, thus ending the predictive stream of data. In such interpretations, we may be noting a dramatic slowdown that gives the impression that the data stream is terminating, only to be surprised in the next round of processing by resurgence of newly accruing values in that area of the linguistic set. Thus we can, and frequently do, get our timing clues wrong.

This has occurred repeatedly with the larger archetype of the [israeli mistake]. This data set has been particularly troublesome in that regard as it has had supporting set movements in almost a ‘waxing and waning’ form of flow. It is as though there are forces at work within the underlying manifestation (when ever, and how ever it fully completes) that are running into universe opposition, and thus ‘falling off’ and having to ‘come at it again’ later. While this **may** still be the case, the drop off of the data stream, as well as newly arriving supporting sets **seemingly** indicate that 2009 may see the resolution of this large archetype’s journey through our reports.

The forecast [chemtrails decision point] has apparently manifested over Summer of 2009 as predicted. In previous reports the interpretation had been for a [decision point] within TPTB about the [chemtrails] in which they would either [abandon] the [chemtrails program] or would [accelerate] it beyond all previous levels. Unfortunately for humans, the latter has apparently occurred. Levels of reporting of [chemtrails] both in terms of number of reports, as well as number of days reported are up substantially. Further new language is emerging that matches some of our forecasts for [chemtrail planes (not seen)]. While we had interpreted the [chemtrail planes (not seen)] in previous ALTA and Shape reports to mean that the [chemtrail] program would most likely be shut down, we were wrong on both counts. The [chemtrail decision point] resulted in the actual appearance of language on the net about [chemtrails being sprayed] at levels previously not seen, and

in places previously not seen. Further there is now language around the [chemtrails] being [sprayed *without the planes being seen]. This [language] is describing either a situation in which the [chemtrail] is reportedly being created by a [disk shaped object], or the [chemtrail plane] can only be [barely seen] as though in a [light haze] suggestive of [camouflage] or [cloaking (to visible light)] of a very sophisticated type.

The [chemtrail decision point] over Summer of 2009, accepting the evidence of a nearly 100/one-hundred per cent increase in reports at chemtrail sites, was a temporal marker for an increase in the [attacks] by TPTB on the [populace (of) earth]. The associated forecasts were for TPTB to increase the [fascism vibe] through the [main stream corpo-fascist media] by way of increasing use of both bespoke [fear] language, as well as an increase in the use of sophisticated [social order engineering] by way of alterations of the [language of control]. We can expect a rise in 'strange language' use from the [corpo-fascist media] over Fall of 2009, and increased introduction of [counter revolutionary memes] through Winter of 2009/2010.

*** Attack Tactics Exposed

Yet another attempt is being made by the TPTB (The Powers That Be) to inculcate a culture of 'divisiveness' in humans. Likely readers of this missive will encounter this new meme, if they have not already been exposed, in the next months as it is promoted by TPTB and their agents of dis-information, and deceit. The meme is already being pushed out on the internet with the woo-woo community as a specific target. Further the meme is well crafted, and is of a particular appeal to the 'new age' mindset. This meme involves yet another attempt at 'divide and conquer', though it also has a sub text that can be read as 'divide and subsume (or absorb)'. This meme is constructed and crafted by experts, and has been found now in several, disparate points of release 'into the wilds of the internet'.

This new divisive meme will be presented as a variant on the 'we are special' theme so often used by TPTB to create divisions between humans. First the TPTB use the concept of separation of themselves from humans to maintain both the 'divine right to rule' mentality that has existed on this planet for at least the total length of the Piscean age, and secondly to enforce 'loyalty' to the 'core group of TPTB' by familial bonds. Now that circumstances and cosmic pressures are building on the TPTB both at personal levels and within their infrastructure of control, they have taken the small risk of extending the 'we are special' meme outward.

In recent months the TPTB have used back channels into the 'truth movement', and the 'new age movement' to put out the idea that some 15/fifteen percent of the populace of the planet has 'alien' or ET genes within their DNA. The idea is further augmented with language which expresses the idea that these '15/fifteen percent' people are 'special'. The 'special' definition includes such things as 'not susceptible to mind control', and 'have ability (for) ET contact'. This last is usually further described with words such as 'telepathy' involved. The language surfacing around this idea of 'special humans' who are 'ET genotype' is yet another form of separation language. It goes to the core of the idea of 'a chosen people' which is THE key zionist concept, and THE key point of separation that TPTB have **always** used to cause human-on-human violence and repression.

Note that this bit of Neural Linguistic Programming (NLP) as a tactic is very sophisticated, and very powerful, even if not very subtle. It is used to create specific emotional responses that will ultimately be used by TPTB to get this group of 15/fifteen percent'ers to join their side of the upcoming struggle. It will likely be presented at a point of extreme stress that "after all," say TPTB, "you (meaning those with ET genes) are like us (or are our 'children') and therefore by extension, the idea will be communicated that it is "ok" for the 15/fifteen percent'ers to betray humanity, as their 'real' loyalty should be to their genotype, which includes TPTB, but not the more 'backward' and 'primitive' humans. Further, and more subtle imagery associating the mass of humanity with animals will be used to convince the self-selecting 15% group to behave inhumanely and to 'bond with' and 'join' their "true brethren" the TPTB....who are also going to claim ET DNA. Note that there is very little difference between the claim of 'divine right to rule by a special family bloodline as one of a "god's" chosen people' as was used to dominate humanity in the early centuries of feudal control, and this new 'special by way of ET genotypes' meme. All of the various elements and sub texts are identical in effect if not specific language.

This meme is particularly noteworthy in both the timing, and strength of its appearance in the general linguistic stew. The introduction of this meme has also demonstrated care in how the idea is being promulgated. First we note that it comes from persons who will be labeled as 'authorities' within the woo-woo community (the specific target for the meme). Second it has a completely unverifiable provenance, but is attractive in that it appeals to the ego of stressed individuals by facilitating 'self selection' into the 'special

category'. Further it is completely unverifiable at the level of those who 'self select' into allegiance with the 15% group. And virtually undeniable from outside the group which further reinforces the concept to those within the self selecting category. Additionally the nature of the meme allows those within the self selecting group to be able to categorize any persons claiming bullshit on the whole concept as "obviously NOT in the special group", and therefore easily discounted right out into some form of oblivion. Basically the 15% meme is being nurtured now to create a group of self selecting humans who will be able to be manipulated by their own self selection from the broader base of humanity. This meme is particularly impressive in that it actually allows those in the self selecting group to internally identify other humans not within this group as being 'lesser beings'. Once that mental barrier has been destroyed, it is but a small step to motivating such individuals into treating the 'lesser beings (the sheeple/the primitive humans)' first with contempt, then with cruelty. We need not look very far back into history to find that this basic meme is a tediously common tool of TPTB in their retention of power and control.

Our data processing and interpretation forecast the appearance of a new meme of this sort as a component of the early appearing language around [alien wars]. While not specifically this language, but rather the more generic language around 'special' and some form of [alien or ET] component, modelspace nonetheless has been warning of the use of this tactic since 2004. Within modelspace, this tactic of [divide and conquer] was forecast as a temporal marker that would precede the first of the "hard" manifestations of both the [repression/suppression/oppression] language at the higher level of [visibility] within the global mediastream, as well as being within the temporal marker chain that brings out the [alien wars] meme into mainstream media (over the course of several months).

Note that the form of presentation for the 15% meme will usually follow along the lines of first being informed of the 'fact' that some 15% of the human populace (across all sub races) has 'special' DNA components that have been 'identified by an expert' as being of ET origin. Then the 'special' nature of these genes will be reinforced by the idea that such persons with these genotypes will be 'immune' from mind control (yeah...right...what else is NLP if not thought control). Then the next component of the meme will be presented as it being 'obvious' that those who are hearing or reading this information are within the 15% by merely being 'awake' and 'aware' enough to 'see' the information being presented to them. Ergo, quod erat

demonstrandum that the ‘special people’ should reduce their loyalty to humans in general and afterward identify with TPTB who are, after all, their ‘cousins’ in having ET genes. Of course TPTB are even more ‘special’ as they have more of the ET genes, and thus we have created a new form of hierarchy that perpetuates control based on the idea of a ‘chosen people’. Yep, the old divide and conquer has been updated to the ET and mass media age. Yep, the old line of ‘believe me, you are not a slave...now get back to work’ has been made fresh by the introduction of this new line of memeing.

Note that TPTB are maneuvering the word ‘special’ into the category of the other words usually associated with ‘royalty’ and ‘aristocracy’. They will be putting increased energy behind the spread of this new meme, and will choose specific outlets to get it into their target population. Also note that many of the people repeating this meme will be its victim as they wish to ‘feel special’ and will be of an open hearted nature, and will be sure to invite you to participate in ‘being special also’ as it is obvious that you too have 15% of your DNA as coming from ET.

It is interesting to note that it does not matter if the basic premise is factual. Even if some percentage of planetary humanity does have ET genes, it is not pertinent to how this meme is being used by TPTB. To TPTB this is just a tactic, after all, they ‘know’ themselves to be the ‘owners’ of the planet and all beings upon it, and as the ‘kings’ and ‘aristocracy’ are the ‘chosen ones’ whose destiny it is to ‘rule’ this world. And thus we see the ‘divine right of kings’ being time shifted in the language into the age of genetic engineering. At its core though, all words describing ‘royalty’ of any form are expressing the same idea....”you work, I eat”.

Beware the non-discriminating mind. Those persons, good natured, or well meaning, without an internal discipline and protocol for examining the greater level of experience of reality presenting to their consciousness **will** and **are** falling for this meme. And as with viral infections of all kinds, they then become the vector for the spread of the disease within the populace at large.

Meta Data – Nuts and Bolts

Our work is based on complex (and fuzzy http://en.wikipedia.org/wiki/Fuzzy_set) set theory. The data elements that are collected within our sets are linguistic structures. These linguistic structures are identified by a word or phrase called a ‘descriptor’. These descriptors are mnemonics which are used to both encapsulate the broader context of the total set, and to track/label the set of linguistic structures.

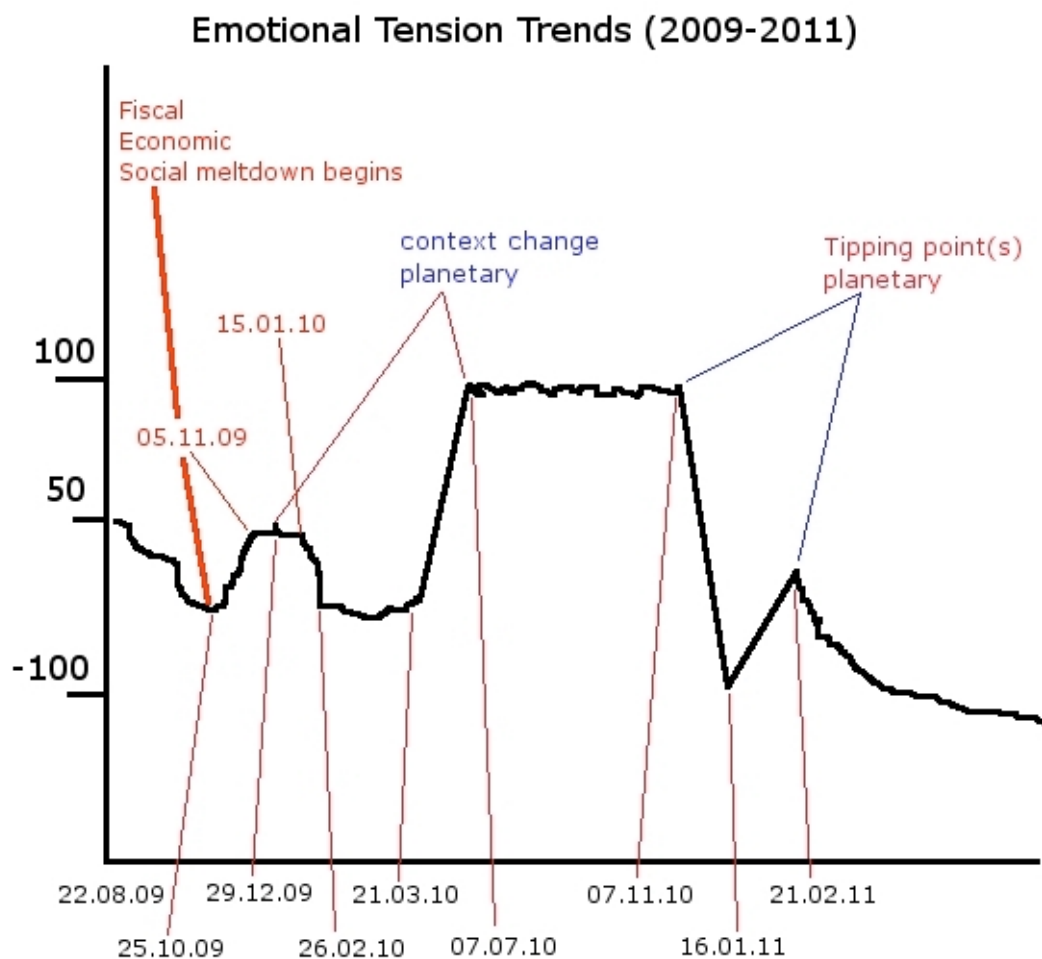

The linguistic sets are aggregated into sets or groups based on various defining characteristics in the course of our processing and ultimate interpretation and forecast. These sets are continued to be clumped into larger sets as the processing continues. The largest set is modelspace, and the next smaller set down is the ‘entities’. These entities include such as GlobalPop, Terra, Markets, Populace/USofA, Press, TPTB, and other smaller supporting characters in our bizarre play of words.

Of course, since our work is all about humans, it is to be expected that similar sets of descriptors will appear in all entities. When a descriptor set appears in ALL entities, and it contains exactly the same set, arranged in the same format of interlocking sub sets, each of which is also an exact duplicate {ed note: down to the 5th/fifth level of support}, then we call that descriptor a ‘meta data’ set. This is to say that this data set is seen across all entities, and therefore is beyond, or ‘meta’ to the entities in which it appears.

In our brief (only since 1997) history of this work, we have discovered that the **meta data layers** are very powerful as they manifest in our event filled world. In our confidence level thinking, the meta data layers are more ‘sure’ to appear than even the primary archetypes located in each entity. The history of these last 10/ten years demonstrates that the meta data layers are not merely ‘event forecasts’, but rather are ‘time period emotional tone forecasts’ that predict a [mass of manifesting circumstances contributing to, and participating in, larger time periods that have a collective emotional tone] as perceived by the humans experiencing the karios, or qualities of the time.

A different part of the mechanism of our work includes the flow of new supporting sets into existing descriptors. A very significant element to the

flow is patterns expressed as the newly accreting sub sets arrive. These accretion patterns are where we are able to actually monitor the change and growth of the various sets. The accretion patterns also reflect the point of change within the various sets. As these patterns shift, so shift the entities. Note that there are potentially tens of thousands of accretion patterns pulling entities into conflicting directions. Where we are **wrong** in forecasts usually arises from paying more attention to a 'flashy' pattern, and placing less weight on the sometimes smaller, more 'dull', patterns that actually manifest.

Note that all dates in the chart above are in planetary format of day.month.year

Terra – Sheets, Disease, Shifts

At the inception of this last data gathering run, the Terra entity was the largest of all of the entities. That distinction has now passed over to the SpaceGoatFarts entity, though the Terra entity is still gaining new aspect/attribute sets at a very consistent rate of growth. It is barely in second place by number of total aspect/attributes, and is also barely in second place (to SpaceGoatFarts entity) in the total of the emotional sums contained within the aspect/attribute sets.

This having been noted, the Terra entity still is gaining large levels of new support from the [earthquakes], and [volcanoes], and [storms] descriptor sets, but most surprisingly is the new levels of supporting growth under the [new lands] sub set of the [oceans] descriptor sets.

The [new lands] sub set is a long lived lexical set that has been in the Terra entity since 2002. It has seen intermittent growth over the last 7/seven years, and is once again gaining support from new aspect/attribute sets. The data accretion patterns gain significant emotional strength from the newly processed values largely from the shorter term and longer term sets. These new data patterns are providing support within the larger [oceans] sub set as well as the [global coastal phenomena] sub set. It would appear from the data sets that the [global coastal phenomena] will be gaining [visibility] due to [changes (in the) oceans], most probably the Pacific and Southern oceans, over 2010 and into 2011. The data sets are indicating that [new lands] will [alter] the [ocean floor contours] and cause [tidal overflowing/breaching] of the [traditional tidal range] at several points in both 2010 and 2011. These [overflows] are also supported by descriptors going to the idea of [excessive tidal influx] and [estuary submergence]. The [new lands] sub set includes supporting sets associated with the [pacific plate], and the [southern ocean (between India and Australia)]. The data sets in support of the [new lands] are also internally cross linked over to the [antarctic ice sheet] sub sets where the details would suggest that [large scale ice movement] will somehow [precipitate (or trigger)] the [emergence (into visibility)] of [new lands]. There are repeated sub sets in the support for [new lands] that are pointing toward large impacts on [human civilization] as the [new lands] will [push] the [water levels (tidal range)] inland on all [coasts]. This [tidal scouring (of new channels)] is indicated to [isolate] or [destroy] or [inundate] a very significant portion of [human coastal facilities]. Note that

this is a nearly [year] long process, and not merely the events of a single tide change. Rather the data sets indicate that the first [impacts] will not be noted as [permanent] for some time, and instead will be considered, and labeled in the propaganda press as [freak tides].

The data sets for [antarctica] are gaining new levels of support under the [fracture (in the ice)] and the [destruction (of the ice shelf)]. Part of the gain in the emotional sums for both duration and impact derive from a very large increase in [visibility] that the [concern] or [issue] of [ice shelf collapse] will have over late 2010 and through 2011. There are various data sets within the Terra entity as well as the SpaceGoatFarts entity that are gaining supporting aspect/attributes under [water (level) rise] as well as [fractured ice 'countries' or 'continents'] that will apparently soon go [float about]. The increase in [visibility] over the [antarctic ice sheet] actually has its roots in the SpaceGoatFarts entity and starts to appear in very late November or early December of 2009. The data accrual patterns are suggesting that a series of [targeted articles] {ed note: likely with tons of fear language} will emerge during some particularly [socially stressful days] in very late Fall as ThePowersThatBe attempt to us [fear of earth changes] as a [point of diversion] from other, more immediate, though related problems such as [food crops collapse]. This data set in the Terra entity is cross linked over to the TPTB entity, as well as both of the populace entities, and the Markets entity.

Other areas of multiple cross linked data sets originating in the Terra entity include a curious reference to [disease] in the form of that linguistic structure with support at the primary level from [environmental] and [oceanic]. The data sets can be interpreted in 2/two distinct, and compatible directions. First that the [oceans] will [come down with a disease] that will [impact humans] by way of [restricted access (to oceans)], and also that the [oceans] will act as a [vector] in [propagating disease (onto) humans]. In both cases the [oceans disease] sub set core linguistics have rising [visibility] for Fall of 2009 and continue to gain supporting aspect/attribute sets for the entirety of 2010 and most of 2011. The [oceanic disease] that will [impact humans] is also cross linked over to the [food crops/chain collapse]. The [oceans disease] sub set is also cross linked over to the GlobalPop entity where the terminating sub sets are within the influence of the [dollar death] sub set. The implications are that the [dollar death] and [oceanic food chain] degradation will seriously impact humans by amplifying the [famine] of 2010/2011.

The [earthquake] sub set of the Terra entity has experienced very large growth in supporting aspect/attribute sets. The [earthquake] sub set growth is in keeping with both the [oceans new lands rise] and [antarctica ice shifts] sub sets. There are extensive internal cross links between these sub sets and the growth patterns suggest that these are areas of linked activity. It would not be surprising to see that [earthquakes] of very [destructive] forms of [shallow] and [rolling] types will accompany the [rise of new lands] as well as the [shift of the ice mass] in Antarctica.

The data accretion patterns across all of the Terra entity are prompting the view that a [crisis] in [catastrophic global climate change] will appear across the next 2/two years. The data sets include bespoke references to the [crisis] in [planetary climate], especially as it is linked to [food crops], however the larger mass of [crisis] related data sets are under the combined areas of [habitat] and [atmosphere]. At this higher level the data is ambiguous, however the lower levels of supporting aspect/attributes are providing pictures of [extremes] of [climate change] that will be both [oceanic] and [atmospheric] at their core. The accrual patterns suggest that a series of [temporary crises] {ed note: momentary human conscious capturing 'events'} will be experienced over 2010 that will propel the [longer unfolding/manifesting climate crises] to a [critical state] in [human awareness]. This [crisis state (of) terran climate change] is yet another data set that merges into the larger supporting [chaos] of the 2011 manifestation of the [alien wars] meme.

Markets – Trapped (in the) markets

THE worst possible [climate] for [doing business] at a [global] level begins in slightly more than a month as the next period of building emotional tension starts on the 25th of October, 2009. From that point forward, it can be considered that the [active] phase of [planetary paradigm transformation] will have begun. Within the Markets entity, the [planetary paradigm transformation] descriptor set is the largest area of cross links that we have ever encountered in the more than 10/ten year history of this work. This area of cross links spreads out to **all** other entities, and nearly completely covers the archetype level of the GlobalPop, and the Populace/USofA entities. This is to say that the cross links within the data sets are pointing to a period in

which the [planetary paradigm transformation] will dominate **all** other aspects of life here on earth over these next 5/five years.

While the [planetary paradigm transformation] begins with the [destruction (through abandonment)] phase of the [dollar death] linguistic sets, the [transformation] meta data layer has sufficient emotional energy to propel the [alteration (in) planetary view (of personal place)] through the complete [year] that the [dollar death] phase will consume, as well as the subsequent 2/two years of [new structure creation].

The [destruction (through abandonment)] linguistics are supported at the primary level by very extensive cross links over to the GlobalPop entity where the terminating sub sets are under descriptors such as [(slow) rejection by all], and [gathering (clouds/storms of discontent)], and most significantly, a very large area of bespoke [distrust]. The [distrust] sub set is supported at its primary level by sub sets of cross links back over to the Markets entity where these terminate in the tertiary supporting layers for [dollar repudiation/abandonment]. The whole of these sets, both in Markets and in GlobalPop entity, gain strength from new accretion patterns as modelspace is progressed through the last days of October. The patterns appearing would seem to be indicating a [slip-slide] or [strike/pull] form of [(financial system) earthquake] that is described as quite actually [breaking (the) ridge beam (of the) financial house/system]. The whole of the supporting imagery is of a [house collapsing internally] with [widespread dust and debris]. This [financial house/system destruction] is indicated to [build (from October 25 onward)] until by December it will have the [feeling] of a [financial/paper debt system tsunami].

As modelspace is moved from very late October and through November, the linguistic accrual patterns of the newly processed supporting layers can be easily characterized as [propelling (or pushing)] of the [calves (of the) legs] as though by a [powerful wave/tsunami] such that those [feeling (the pressures on the legs)] are [compelled (to) march], along with the [system/house] to their [financial doom/destruction] against the huge [wall of reality] against which the [wave (will) crash] thus [crushing] those who will be [trapped in the markets].

Several linguistic sets within the Markets entity are under archetypes of a similar form to some found in the Populace/USofA entity. These archetypes are not only similar at their archetype level, but also are gathering support in

broadly similar forms. A central theme now emerging in both entities is that the [old forms/manner/formats/infrastructure] will be [dropping off] in the [first half (of the) year], while **some** of the [new forms] will be [manifesting/emerging] in the [second half]. The data accretion patterns have several 'hot' dates for 2010, with a central clustering around July 7th. The accretion patterns have a general 'chaotic' and 'rushed' or 'hurried' feeling for all of 2010, but no matter how stressful the first half of the year, the data flows are indicating that the second half will be of greater than twice as 'dense' with [new forms] emerging.

Within the Markets entity, the first half of 2010 can broadly be categorized under [reality demonstrates power]. Within this period the [wave of bankruptcies] will [manifest] at a growing rate that will begin its larger level of visibility in late 2009. The [bankruptcy] is described by 2/two sets of support at the primary level. These 2/two descriptor sets indicate that the [bankruptcy wave] will both [descend] and [ascend]. In these 2/two supporting sets the dominate support for each under the [visibility] sub set is [unemployment]. The 2/two waves will be manifest as the [large corporations] begin to [drastically cut/slash] their [employment levels], just as the [small business (sector)] also reaches a point of [visible rot/decay]. In this area of the [economy], the [wave of bankruptcy] will [flood] the [planet] with [unemployment]. This is indicated to be a [planetary effect]. This [economic collapse] will bring [unemployment] to levels described as over [5/five of 8/eight]. The data sets indicate that at first the [unemployment wave] will [creep] into awareness by way of [small business infrastructure collapse], however as the [visibility] rises on the [unemployment wave], a [wave (of) bankruptcy] will proceed through the [corporate (world)]. The [bankruptcy crisis] shows its first [visible] level (in the global mediastream) in November and that appearance is supported by linguistics going toward [shock (in severity)], and [frightening (rapidity)].

The totality of the [unemployment] and [economic breakdown] impacts will not be seen until late in Winter. The idea coming across is that the [collapse of the social order] will become an [active problem] for [officialdom] in January. As the [officialdom] is [struggling] with the [economic collapse], the data sets are indicating that the [visibility] of [officialdom] will rise significantly, and not in a pleasant way. The data sets include aspect/attribute sets that point to a [schism] becoming noticeable over late Fall and Winter. This [schism] has such [visibility] as to be able to be used as a temporal marker for the next [phase] of [dollar death/markets

implosion]. Further, as the [main stream press] is observed to [criticize] the [officialdom] with new forms of language not seen this century, it will also become apparent (to the aware observer) that the [numbers], upon which the [markets (currency in particular)] rely, are [fading] in [meaning]. This area of data has detail sets pointing toward [default] or [collapse (in some form)] of [planetary commodities (paper debt)] markets. The [collapse] of the [markets/trading infrastructure] data shows with timing clues pointing to about 40/forty days following the [visibility] of the [contention] between [corporate press] and [officialdom].

The data sets under [currency] within the Markets entity are indicating that while the [currency (of the USofA)] is [rejected by all], many of the smaller countries are already [preparing] for the [currency crash (dollar death)]. These data sets indicate that perhaps several dozen countries are preparing to [create (new) currency] in direct [response] from the [dollar death]. Many of these [interim currencies] will be [temporary] at best, and will be [defunct] along with the later issues of the [dollar death]. Stated another way, the [death of the dollar] will create a [wave of currency defaults] in a similar manner to the [dollar]. Then, some months later, the [dollar death (as international reserve currency)], will precipitate another [wave] of [local currency collapses] as the [last of confidence] is [lost].

A significant portion of the [emotional tension values] around the [death of the dollar] will be related to the [digital currency/dollar]. As the data sets accrue to the Markets entity over Fall of 2009 through March of 2010, the patterns of the aspect/attribute sets are within 3/three distinct ripples. The first will be related to the [death of the dollar (as global reserve currency)], while the second ripple of concern will be about the [other currencies (of the planet)], and the third will be related to the [dislocation/disappearance] of the [digital (forms of debt and currencies)]. Please note that this last set of aspect/attribute sets explicitly contains references to [digital forms] of all manner of [transactions] including [banking], and [insurance], and [retirement accounts], as well as [government documents] in a very broad sense.

As the [fiscal/economic] and [social] crises of Fall move into Winter, and the first few months of 2010, the [gold/silver] descriptor set gets a large increase in supporting values. As modelspace moves past the markers for early January 2010, the data sets in support of [gold/silver] grow even faster than will be seen in late Fall and early Winter. Stated another way, the

[visibility] of [gold/silver] within the [global mediastream] will be rising steadily through Fall and Winter, and then the rate of increase itself increases over January and February and well into March of 2010. The rate of increase of [visibility] nearly doubles over January and February, and then nearly doubles again over late February, and through to the March (Spring) equinox. Please NOTE: the ‘doubling’ of the rate of [visibility] increase does NOT mean a doubling in the price of precious metals in any currency. What it does mean is that the numbers of persons with a heightened emotional response to the subject (of precious metals) will double, and then nearly double again over 3/three short months. While the implications within the emotional response are for an increase in demand for precious metals, the actual projections from the [currency collapse] of the [usofa dollar] supporting set are for a [discontinuous] or [disjointed] or [out-of-proportion] rise of the [value] of [precious metals] specifically relative to the [usofa dollar]. As this period is indicted to be a very [chaotic] time both in the [social order disintegration] and the [dollar death], large, and sudden swings upward in the ‘price’ of all forms of [rare commodities] are to be expected.

Also it needs to be noted that additional pressures are placed on the notional (in currencies) value of [precious metals] as the [planetary food crisis] begins in earnest over the late Winter of 2010. As the [visibility] of the [food crisis (global)] spreads through both [alternative/independent] and [mainstream media] in late Fall and through Winter, the first hints of the [emotional impact] of the [food crises] will be felt in the [price pressures on precious metals]. It is noteworthy that the first rise in [visibility] of the [food crises] meme is coincidentally seen to start in modelspace just as the other [international crises] of Fall are reaching their [peak] of impact on the markets and the prices and values of [precious metals]. This is also coincident with the [banking crisis] reaching a peak of near-term emotional values in the [populace/USofA] in December, 2009. The [banking crisis] of Winter 2009 will be able to be used as a temporal marker for a very rapid onset “context change”. Note that this instance of “context change” will have the most impact on the [economic/fiscal/financial] area of the infrastructure, and is to be dominated by [energy prices].

A “context change” period can best be described as a “relatively sudden shift in mass social awareness and priorities”. An example of a context change in recent history was the ‘sudden’ rise of the issue of ‘illegal immigration’ and its political cousin of ‘comprehensive immigration reform’ in the middle of

the Bushista years. The rise at that time of the issue of immigration within the mass consciousness of the populace of the USofA was very sudden, and for many in the populace, seemed to ‘come out of no where’ in the most unexpected manner. In the media, the issue of immigration did not grow, but was suddenly ‘fully fleshed’ as millions of undocumented and illegal immigrants became very [visible] with [parades] and [protests]. In our work, a context change is forecast by large level shifts of the shorter term and longer term values that appears very suddenly at or near the peak of building emotional tension sums (in that period), and usually just prior to a plateau of emotional tension sums.

As a side note, the coming context change pivoting off the [winter banking crisis context change] in 2009 is indicated by both of the populace entities to induce or cause a wave of [repatriation] of [immigrants] from the USofA back to their [countries of origin] as the [populace/usofa] begins to react to the [context change] and coincident [social order meltdown]. Further, the [river] of [monetary transfers] from the USofA by [immigrants] is indicated to be [closed (by) officialdom] over [winter 2009] as it will become [illegal] to take [value/assets/dollars] out of the [country]. Further, the continuing [death of the dollar] places more pressures on the [immigrant populace] as they are the [most damaged] and [first damaged] in the [massive wave of unemployment] that sweeps away [small business] and [corporate masters] alike.

Populace/USofA – Hard Squeeze, Bastille d’America, Press Popped, Barren Sun, Eating Boots

As modelspace is progressed past the last of [disastrous/stressful] Fall, and into Winter of 2009/2010, the [government] of the USofA, as directed by TPTB, with some small level of [visibility] to that effect, will begin a period of [repression], and [suppression] against the [populace] that will begin in [Winter (likely January 2010)] and that will continue through most of 2010. In the ‘early days’ of this [repression/suppression], the data from the Populace/USofA and the TPTB, and the Officialdom (formerly the Bushista/administration) entities, indicates that the [officialdom] **will** [prevail] or [be successful] in their [efforts].

Please NOTE: that this [control mechanism/machine] of TPTB and Officialdom WILL be [clamping down] or [squeezing down] on the

[populace], and this [repression wave/movement] LIKELY will coincide with the [push/skirmish] over the [swine flu vaccinations]. IF that is the case, expect a very [severe] and [effective] wave of [repression] in [direct response] to some form of [public action]. Again, this may be centered around the [refuseniks]. There are also indications that in the midst of the [pressures] from TPTB and Officialdom in [response] to [public actions/protests/riots] in [winter], at least 1/one, if not more, attempts at [assassinations] will occur against [statesman/officialdom] at [global levels]. The data accretion patterns would indicate that not only USofA [politicians/officialdom], but also [heads of states], and [heads of corporations], and [department heads] will also be at risk of [loss of life (due to violence)]. This forecast of increased risk of [assassination attempts] for [heads of state], as well as [heads of corporations] {ed note: multinational/globalists are indicated to be targets of particular interest} includes the [head of state] for the [populace/usofa] as well. The accretion patterns for the [assassination attempts] indicates that this 'trend' will trail off as the planet moves from late [winter] into [spring] of 2010.

Also, as the entities progress along with modelspace past January of 2010, the Officialdom entity is clearly moving toward its goal of [world of control] so [desperately sought] by [the powers that be]. The Populace/USofA entity moves along with modelspace from a series of [repressive/suppressive] incidents that will constitute the [particles of a wave] in mid [Winter]. This [wave of repression/suppression] continues to gain supporting aspect/attribute sub sets through the rest of Winter, and all of Spring 2010, and the beginning of July 2010. However it must be understood that the accretion of supporting aspect/attributes does not imply that all the incoming values are in support of TPTB nor their agenda. Many of the elements of supporting linguistic are negative toward the [goal/agenda] of the TPTB. In general, the growth of the building tensions in support of the [repression wave] **do** come in on the 'positive' side of the emotional tension values, and thus **do** imply some level of [success] in the [repression/suppression/oppression] of the [populace], at least through to July 7th of 2010. After that point, everything changes in the dynamics of the situation regarding [power], and the [infrastructure] which supports it.

From July 7th, 2010, the [revolution] thread not only moves into a state of [activity], but also the whole of the [revolution] meta data layer shifts over to dominate the Populace/USofA entity from that point forward. The domination of the entity by the [active] phase of the [revolution] meta data

layer continues through the rest of 2010, and all of 2011. {ed note: at the end of 2011, the [active] phase of the emotional tension sums for the [revolution] meta data layer in the Populace/USofA entity shifts over under the [alien wars] sub set in the entity.}

From July 7th of 2010, the emotional sums trend lines are supported by growing, and continuing sub set accretion under the [revolution] meta data layer in the Populace/USofA entity that indicate the [downfall/failure] of the [officialdom] {ed note: as [minion class] of TPTB}. From July 7th onward, the [revolution] gains in both [visibility] within the totality of [verbal expression] here in the USofA, as well as throughout the [planetary media]. Again noting that from July 7th onward, the language is pointing toward the [defeat] of [the powers that be through their minion classes]. This [defeat] will **not** be an event, but rather will be a process that will be gaining in [visibility] after that date. Stated another way, while the first skirmishes of the [revolt] will occur in mid Winter, likely January, and likely over the [vaccinations], the ‘tide’ of this next [revolution] will not turn **against** [the powers that be] until early July of 2010. And even though this is the case, the data sets are forecasting many horrific and bloody battles will continue through the rest of 2010, and even 2011.

The very extensive cross links from the Populace/USofA entity over to the GlobalPop entity are indicating that the [active (phase)] of [revolution] will be ‘exported’ from the USofA sometime in late July {ed note: or rather its rise in visibility within the global media picks up then}. From approximately the 15th of July forward the [revolution] meta data layer dominates both of the populace entities {ed note: Populace/USofA, and GlobalPop}. As the [revolution] meme is indicated to [take root] in places that are currently [slaves (of the) english crown] in mid July, it is not until late in Summer of 2010, that the first of the [populace victories] begin to appear in such countries as [canada, greater britain, and france and australia].

Please Note: the [victories] of the [populace] versus [the powers that be] **will** not be without costs, including extensive casualties {ed note: lots of data suggesting ‘gassing’, and ‘aerial poisonings’}, and the [battles] are indicated to continue for [several years] as the former [powers that be] and their [minions] are [rooted out].

The active phase of the [revolution] meta data layer within the Populace/USofA is indicated to be initiated in 2010, by the [spark/ignition]

of a [tax rebellion/protest] in either very late 2009, or early 2010. This single instance of a [tax refusal/protest] is shown as gaining huge levels of emotional support as the [officialdom] will respond with [crushing force] against a very small group of [exposed citizens] in such a manner as to cause a giant [wave] of [adverse publicity], and [massive complaints] across the full range of the [global internet]. The data accretion patterns suggest that the [officialdom] will [intentionally] act both [brutally], and with [open visibility] with the [idea/concept] of [causing fear], and thus, they [plan] to use the [increased fear] to [curtail/limit] any other [tax protests]. However, as per usual, they screw it up. They choose just the wrong group as an [example], and end up creating their own worst nightmare, a [storm] of [global internet] activity that will have bloggers in places like [pakistan, russia, china, south africa, argentina] and elsewhere writing extensive articles about the [human rights violations] of the [government of the USofA] as it [oppresses] its own [taxpaying (formerly) citizens] with actions more commonly associated with zionists in israel oppressing the native palestinian population. This association in [tactics] used by the [black hooded oppressors] acting for [corporate zionism] in the USofA will not be lost on the global populace. The data indicates that this [spark] of [tax protest] so [brutally suppressed] will be memorialized in approximately 12/twelve years as stability gradually returns to the planet.

As the [active phase] of the [revolution] begins in 2010, it will gradually dawn on some 'brilliant' mind in the [the powers that be] or other [officialdom or minion class], that the [internet] has been used to draft a [list] by parties unknown. This [list] is indicated to be [suspected to exist] as the [repression] brings out both [officialdom death squads], and, most [shockingly (to TPTB)], a [popular response]. The data sets indicate that as the [citizens] begin to [disappear] and to [be killed/murdered] by [officialdom], a [response wave] will begin that will involve the [targeted assassination] of [lower level members/participants] within TPTB themselves, as well as the higher level [minion class]. The idea coming across from the data sets is that while TPTB have prepared for the [killings] of more [visible] targets such as [bankers], and [brokerage staff], and [insurance executives], they will not be prepared for a [shocking] and [sudden] wave of [assassinations/killings] of members of the various [illuminati front groups (both in the USofA and elsewhere)] and the even more startling [assassinations (and attempts)] of [teevee (news/propaganda) personalities]. Several of these [assassinations] will involve [very visible female propagandists], and the data sets are accruing large supporting sets

under both the [shock (to TPTB)], and the [value (of the) female targets]. This last is taken at a core level of understanding by TPTB that [revolution] has begun, and their response is [repression] not imagined here in the USofA. These [killings (of high level minions)] are indicated to include [whole families] of these [higher level functionaries], as well as some very [brutal] and [sadistic] forms of [murder] focused on many of the [attendees] of [recent global planning events]. Some time into the [revolution], it will dawn on a minion somewhere that the [list of the dead] (and soon to be dead) has been [gleaned] from the [internet]. At that time, even though it will be too late, the [officialdom] response is indicated to be a [blanket shutdown] attempt. The data clearly shows that the [attempt to curtail internet activity] will [fail]. This highly [visible] form of [failure] can be used as a temporal marker for the beginning period of the [general uprising/revolution/social order breakdown]. Of course, not all will be as it seems, and some of the [murders] will be [rivals] within TPTB taking advantage of the [chaos] of [revolution] to [even old scores]. {ed note: see the TPTB discussion for more details.}.

As the [revolution] turns its internal corner in July of 2010, the data sets are pointing toward an [incident] in which a [vast liberation] occurs. This [liberation] linguistic set is supported by [prison], and [political prisoners]. The data sets *could be describing the [breakup] or [shut down] of the [secret prisons] run by the [anglosphere empire]. There are some supporting layers indicating that [ships] and the [navy] as well as [hired mercenaries] are involved. However the data is less than clear, and an alternate interpretation would be for the [liberation (by force)] of [political prisoners] within [government control centers] here in the [usofa]. If this is an accurate interpretation, then the [political prisoners] will have among their ranks, many persons who had been [disappeared] in these last 9/nine years. The [liberation (of the political prison)] sub set, regardless of which interpretation is accurate, is a key temporal marker for both the ultimate [success] of the [revolution], as well as the [planetary spread] of the [revolutionary meme].

The accretion patterns in support of the [diaspora] sub set within the Populace/USofA continue to accrue values for the [very large population movement] from which the [220/two hundred and twenty millions] in [flight] forecast derives. This set is **still** gaining large amounts of support, though in this latest processing it is the longer term values which, in the main, provide the new directions for the [diaspora] sub set. As the various

new sub sets are placed into the entities by the processing, the timing clues are fixed at that time, therefore the timing clues change with each set of processing. With this current processing, it would seem that the [massive diaspora] has shifted outward in time toward late in 2011. This shift in time comes from the very dominant level of longer term values in this latest processing. After running the referential integrity checks against the latest data base accretions, there are no errors that indicate that this predominance of longer term values is an artifact of processing. Therefore it appears that the timing clues used in the previous forecasts relative to the [mass diaspora] affecting the [populace of the usofa] were lightly weighted with longer term values and thus the interpretation tended to see the manifestation of the [diaspora] of the [mass populace] closer to the present than it likely will emerge.

Noting that the longer term value sets are dominating the [diaspora] sub set within the Populace/USofA entity, we nonetheless have both immediacy and shorter term values that point toward [diaspora] to appear in both the remaining months of 2009, and across 2010. The data sets indicate that much of the [diaspora] set growth over 2009, and through to July of 2010 is driven by cross links to Terra entity, and the Markets entity. However, after July of 2010, the primary driver of the Terra entity is joined by TPTB **and** internal cross links within the Populace/USofA that terminate under the [revolution] meta data layer. Yet another way to say this is that the drivers for [diaspora] will have the [economic] impetus give way over about 6/six months time (from January 2010 through July 2010) to the [social order disruption] that comes from [active revolution].

Without regard to the emotional drivers for the [diaspora], the data sets continue to show that [diaspora] events will occur over 2009, and across, almost frequently, 2010. These [diaspora] forecasts include [hurricane] and [other storm types], as well as [earthquakes], and [floods]. The data sets for the [earthquakes] and the [floods] show a linkage that may be implying a cause and effect relationship suggesting a [dam failure] that will result from an [earthquake]. While not described in really catastrophic terms, the [earthquake] sub set with associations to the USofA does include several new sets that include details of [water born rescue] and [water (overcoming) buildings/foundations] such that [governments/officialdom] and [local councils] are [washed away]. This period has longer term values within both the cross links and the detail layers pointing to many of these [council buildings/officialdom meeting places] *not being [recovered]. In this

instance the data sets for both late 2009 and across 2010 show a trend for [permanent], and/or [long lasting] as being the primary supporting descriptor sets. The details of the data suggest that [small towns] will be [relocated] after [earthquake (plus) flooding] due to other [crushing burdens] from the [destroyed/declining economy]. The inference is that the [economic woes] are so deep at the time of these [flooding] incidents as to [forbid] or [make impossible] the [collection (of) taxes] for [rebuilding] or even [repairing] these [small city central areas].

A smaller sub set of the [diaspora] major linguistic area contains an interesting descriptor of [contention]. This aspect/attribute set includes a complex, and very intricately contorted sets of internally referencing cross links that draw the eye in modelspace. This set, while lending support to both the duration and impact areas of [diaspora] seems to be describing an isolated occurrence that is only tangentially connected to the [diaspora]. Stated another way, this supporting sub set only seems to add to the emotional tone of the period of the diaspora simply because it occurs within the same time period. The data sets are indicating by secondary levels of supporting aspect/attributes that a [rift] or [split] will develop within the [upper political (minion) class] that may be [triggered] or [initiated] by a [divorce]. The [divorce] of these [upper level political minions] is indicated to be accompanied by [visible] (in the main stream media, as well as the global media stream) articles to the effect that the [male/husband] attempted to have the [female/wife] [assassinated] in order to [end his suffering]. The supporting details could be interpreted to indicate that the [husband] had [helpers/stooges] who were instructed to [steer] or [deliver] the [wife] to a [place of danger]. The [writings] to this effect are indicted to include some very [revealing information] {ed note: temporal marker for second wave, and larger, wave of [secrets revealed] from [coagulating government]} about the [dysfunction] of the [government] of the USofA. The data suggests that the [particulars] of the [divorce suit] will come out in such a manner as to have a very large [emotional impact] on the [populace/USofA]. This [emotional impact] is indicated to be so large that it not only intersects with, and provides support for the [diaspora] sub set, but also induces a level of participation in the [global populace]. The [divorce suit] further contains details indicating that the [secrets revealed] meta data layer will be triggered by bespoke [fear of assassination (attempts)] on the part of the [wife]. This sub set indicates that once the papers are filed, and a [battle] breaks out in the [mainstream media] here in the USofA, the [wife] will discover that she is best off [spilling everything] in an attempt to fend off [repeated (attempts)]

on her life]. The data would seemingly be pointing to someone who knows (or is thought to know) so much of the [internal secrets (of TPTB)] that **even** the attendant [publicity] inevitably surrounding each [assassination attempt] is [not a deterrent] to other attempts. A smaller sub set within the detail sets indicate that in at least 1/one of these [assassination attempts], some members of the [press] will be [wounded] and possibly [killed].

The immediacy and shorter term data sets accruing to the Populace/USofA entity from very late October through to November 5th are pointing to a period of [emotional building tension] that will be immediately followed by a period of slightly over 2/two months of [daily (instances) of contention]. The data set taken in total suggests that [aggression] and [response] will be [dominating] the [government] and the [political minion class] of the USofA on a [daily] basis. It is as though the time from November 5th though to January 9th will be filled with a [newly manifesting crisis], or a [new addition (to existing crisis)] such that the [whole (of) political government] will be [agitated], and [aggressively (lashing out)]. The data sets indicate much [travel] as the [administration minions] are sent out [internationally] in an [attempt] to [curtail] or [limit] the [spreading damage]. Note that the [damage] sub set here is dominated by cross links to a number of entities terminating in such descriptors as [toxic] and [cancerous], and that all of these descriptors contain support from [economic meltdown]. Also note that the [meltdown] sub set gaining support in Fall from [economic coagulation] changes as modelspace is moved into 2010 until it gains most of its support from [social order disruption] sub sets.

As modelspace is progressed into November of 2009, a large number of cross links form between the Populace/USofA entity and the GlobalPop. A small majority of these links are supported by 2/two aspect/attribute sets of some considerable size. These sets are headed by [wars], and [new alliances]. The latter set has very extensive cross links over to the Markets entity where they are terminating in the [death of the dollar] sub sets. Further cross links go to the Terra entity, and the TPTB entity. In both cases the main terminating sets are in the area of [disruption (of old geopolitical alliances)] and [new arrangements]. The majority of these sets also include cross links back to the Markets entity and the [death of the dollar] sub set. At the archetype level these cross links seem to suggest that a [new alliance] will form of [necessity]. This [geopolitical alliance] will be [in defense (against the dying dollar)], and will be a [fiscal] and [political] alliance of [countries (creditor nations)] who will be [attempting to mitigate/reduce

(the) damage] from the [death of the dollar (as global reserve currency)]. The longer term data sets in the primary supporting areas for these aspect/attributes point to this [financial alliance] gradually becoming a [fence (of isolation)] around the [populace/USofA] as the [revolution meme] becomes active. Much of the supporting sets for this [fence/barrier (against USofA financial/social chaos)] include aspect/attributes going toward [fear] of [contagion] and [planetary war].

As the [dollar death] supporting sets accrue with modelspace moving through Fall and into Winter (2009/2010), a [wave] of [unemployment] is [generated]. These supporting sets for [unemployment] are describing a situation in which the [general economy] of the [populace/usofa] is [crushed] such that [over half] of the [small businesses] will be [bankrupt] and [closing doors] in a [short period]. The timing clues that are available in the data sets seem to be describing a [collision] of [waves of bankruptcy] from both the [international corporate business], as well as the [local small businesses]. A natural consequence of the [bankruptcy wave collision] is the almost immediate manifestation of a [crisis in unemployment] that the data sets accruing to the Populace/USofA indicate will also [precipitate bankruptcy crisis] at the [state government] level as both the [unemployment funds] and the [retirement accounts] are [reduced/eliminated].

As modelspace is progressed through Fall and into the Winter, the accretion patterns paint a picture of [crippling/crushing] and [sudden] [poverty] that will provide the pressures that [propel] the [revolution] meta data layer into [active state] later in 2010. As the [populace/usofa] is [reeling] from the [economic infrastructure collapse], it then has to [contend] with the [assault] on the [health (of the) body] by TPTB through both [disease/vaccines] **AND** [aerosol spraying (aka chemtrails)]. These aspect/attribute sets accrue with descriptors for [new (tactic)], and [increased volume], and [choking spray], and others in the vein of [chemical fogs].

Again it is noted that the larger archetype of [duality] is dominating all of the other archetypes within the Populace/USofA entity. As the [duality] is to be expressed over 2010, the trends of Fall will be [amplified] and the primary supporting aspect of [contention] will be the most [visible] over 2010. The [contention] archetype is filled with repeating support for [old (control/patriarch) structure] being [opposed] by a [new], and [novel] grouping of [self adhering alliances]. The [new alliance] is indicated to take its [philosophy] from the [thinking] of a [curandero (or healer/shaman)],

most likely from Southern Mexico or other area within the [highlands] of central america. The [new alliance (of opposition to TPTB)] is indicated to be [global/planetary], and the cross links from the GlobalPop entity totally obscure the detail layers of the [opposition/contention]. The accretion patterns show that the [planetary/global (level of opposition)] get a very large boost in the emotional sums from the [success] of the [american revolution/opposition] in mid 2010.

A trend of Fall that will be [amplified] over Winter of 2009/2010, and especially within the months of January and February of 2010 is the emergence of the [refuseniks] within the Populace/USofA. This sub set of [refuse (to take the) flu vaccine] grows from its initial point of maximum [visibility] in Fall into the [central hardness (of the) core] of the [expressing (or manifesting) of the [revolution] meta data layer from early in the year through to the tipping point of November 2010. The newly processed data sets include details showing that the [refuseniks] of Fall are met with a much more [aggressive] and [brutal (officialdom) suppression] in February. The [battles] in the early months of 2010 over the [disease] and [vaccine] contexts are indicated to form the [first rallying cry] of the newly [emergent revolutionary movement] here in the USofA. The cross links from Populace/USofA over to the GlobalPop entity are pointing toward a similar movement at a global level, though with a mixture of responses by various regional [officialdom].

The [refusenik] sub set within the Populace/USofA entity grows from its focus on the [vaccine refusal movement] to a broader [revolutionary] group over the course of 2010 as the [oppression] from the [officialdom] becomes [unveiled/unhidden]. This area is also under the influence of the [secrets revealed] meta data layer. These data sets continue to point to [incidents] in which [revolutionary actions] will [liberate] many [deeply held secrets] of [officialdom] that will in turn lead to the [resignation] and [elimination] of numbers of [high level minions] in both the [civil service class of minion] as well as the [political class of minion].

The [refusenik] sub set growth over January/February of 2010 is joined in early March by internal cross links over to the [famine] sub set, specifically focused on [north america]. These internal cross links both originate and terminate in both sets, implying a joining or [confluence] of forces acting on the [mass social behavior]. The [famine] sub set of the Populace/USofA sub set gains support over Spring of 2010 from [officialdom actions], and [plans

and policies] that are indicated to [exacerbate] the [planetary food crisis] due to the [dollar death], and the [collapse (of the) just-in-time (national food delivery system)] here in the USofA. This area also has extensive cross links over to the GlobalPop entity where it mostly terminates in geographic associated areas that can be described as being within the [anglosphere of influence]. The combined sets of the [famine], and the [refuseniks], when added to the [dollar death] sub set provide nearly half of the emotional tension values for the Populace/USofA by the time that modelspace is progressed through to the vernal equinox on March 21, 2010. This is a huge proportion of the emotional values and is rarely seen. Usually there are several thousands of contexts driving any entity, and to have this much of the impact, and duration values resolve down to so few issues has **only** ever been observed following a “context change” for the larger social order. Stated another way just to muddy the idea, we have only had data sets driven by so few values twice in the last 9 years of this work: the first was following the 9-11 attacks; the second was following the sudden emergence of the [comprehensive immigration reform] social/political movement here in the USofA. The first was an example of both a ‘tipping point’ and a ‘social context change’. The ‘tipping point’ due to a single (more or less) incident or event being the cause, and the ‘social context change’ following 9-11 due to the [usurping of powers by officialdom/TPTB] and the promulgation of the ‘war on terror’ meme. As indicated by the chart near the top of this report, modelspace is indicating that we face both ‘context change’ and ‘tipping points’ in the near future. It also notes that the data sets are forecasting 2/two of each in the next 2/two years.

While it seems fairly clear from this perspective on the upcoming year that the context change marked for July 7th of 2010 is likely due to the [turning point (of the war against TPTB by the populace)] and the sub set of the [revolution] meta data layer, the flavor (particular pun intended) of the context change expected in late December derives from the mass of data linking the [famine] sub set at the planetary level, to the [dollar death] sub set within the Populace/USofA entity. Further emotional reinforcement is derived from the GlobalPop entity where the growth during that time is within sets having cross links to the Terra entity with specific termination in [oceans] sub set, as well as [crop crisis/food crops failure] sub set. Both of these sub sets in the Terra entity gain support from [extra (or beyond) cyclic weather changes] in the Terra entity, and external cross links to the SpaceGoatFarts entity where the termination points are within the [unknown energies from space] sub set.

An interesting, but small sub set within the Populace/USofA entity gains rapid [visibility] over late 2009, and into 2010 as the [fertility (of humans)] sub set is heavily cross linked over to both the Terra entity where it terminates in the [sun/sol] sub set, and the SpaceGoatFarts entity, where it terminates in...you guessed it...the [unknown energies from space] sub set. Apparently there will be some [scientific] study or other information presented in the [global mediastream] as well as the [controlled anglosphere propaganda press] about the [rising infertility] within humans being [inextricably linked/associated] with the [current solar cycle]. What makes this sub set doubly interesting is that the language suggested to appear will not be [general], in the sense of merely noting the [causal links between fertility and the sun], but rather will provide the first in [specific detail language] relating the current [sun cycles], as well as citing [extra/beyond sol energies] as [causal agents] in the rising wave of [global infertility] in **all** species of [mammals].

An important supporting element within the [infertility] sub set of the Populace/USofA is also cross linked back over internally to the [unemployment] sub set, as well as externally over to the Markets entity where it terminates in [bankruptcy], and then is further cross linked over to the Terra entity where it terminates in the [oceans] sub set. Taken as a whole these linked, but diverse sub sets provide details pointing to a [fertility crash] within [ocean populations (of fish and other life)] that will help propel a [wave] of [unemployment] within the [food service industry] over much of 2010. The data suggests not merely [restaurants], but all segments of the [ocean to human food chain] will be [crippled] as the [biosphere contracts] at an [extremely rapid pace] within the [oceans]. There are even deeper levels of sub sets indicating that [farmed fish] and other [farmed aquatic ocean life] will also experience a [significant reduction] in productivity] as the [weather/climate conditions] change, including a [notable/noticeable] [rise (in ocean temperatures)], and due to [carbon dioxide] issues with [feeder sources (of water)].

TPTB (The Powers That Be) - Global Gulag

The shorter term and longer term data sets are both, even loaded separately into modelspace, independently focused on the first months of 2010 as the [initiation] of the [purge] within the [establishment/global corporate/political elite]. The TPTB entity gains data sets as the modelspace is moved into

[winter 2009/2010] painting a picture of a [purge] within the [political and corporate elite] designed to [remove obstacles] to the [usurping of power].

The linguistic sets within the TPTB entity that accrue to the entity as it is progressed along with modelspace past the first days of 2010 arrive mainly in support of [purge]. The [purge] descriptor set includes [schism], and [discontinuity], and [disruption], and [dysfunction], and [confrontation], and [contention] all as primary supporting aspect/attributes. These aspect/attribute sets in their turn contain primary support from [tribal], and [clan], and [group] and other aspect/attribute sets going to the idea of [inter-tribal contention]. The [contention] sub set includes supporting aspect/attribute sets for [angry], and [betrayal] in an active form of the language supporting the idea that an [eruption] of [distrust] and [anger] will occur on or before the [solar calendar new year] in January that will propel an [alignment] of various [tribes] within the [the powers that be], and their associated groups of [minions/servants]. The data sets indicate that many of the [minion class] of the [political elite/financial elite] will be [forced/compelled] into [decisions] that will [place (them)] into [dark (areas of) extreme risk]. This last aspect/attribute set contains both directly held supporting sets as well as extensive cross links indicating that the [minions] in many cases will be [compelled/forced/coerced] into [new alliances] and [betrayals (of old associations)] by [direct/personal threats] to their [lives], [livelihoods], and [families]. In many respects the data is painting a picture that is both complexly baroque and murky as the [minion class] serving the [the powers that be] will be [pressured] from [all sides] {ed note: may actually be referring to 3/three major groups within TPTB, rather than just 2/two} to [‘convert’] their [allegiance] to [new masters].

The data sets are accruing in patterns that seemingly suggest other, more ‘universe’ created [pressures] on the [minion class] of the [political] and [financial/fiscal elites]. These patterns are arriving in support of secondary and tertiary archetypes going to the idea of [rare (set of) circumstances]. The primary supporting aspect/attribute set for [rare] is even more reinforcing of the concept of [‘rarity’ of occurrence] as it contains repeated examples of [extremely], and [very] among other adverbs and adjectives of similar meaning. These [exceedingly rare circumstances] are indicated to [repeat 5/five times] in a very short period. The appearance of the [5/times repetition] language sets accrete to the supporting sets as the modelspace is moved through January and February of 2010, hinting that the pattern of

[repeating extremely rare events/occurrences] will take place over the first 2/two months of 2010.

The [purge] language contains a large emotionally significant sum of supporting aspect/attributes under the tertiary archetype of [grave]. These supporting sets branch off to include [threats (of being sent to the) grave] as well as actual [killings]. This last has many variants indicating that a [wave] of [/murders/assassinations] will occur as the [inter tribal contention] heats up in 2010. The indicators are for [strange circumstances] and [unanswered questions] to accompany many of the [deaths] of high and low level [minions] as well as some members of [the powers that be] in the first half of 2010. Most of the [purge] language appears in the first 2/two months of 2010, however as modelspace is progressed through to July, the [purge] sub set continues to gain supporting aspect/attribute sets albeit at a much slower rate.

As had been previously discussed within this series of reports, the TPTB entity in the [minions class] sub set, contains large areas of language suggesting that [promising careers] for [minions] will be [cut short] by [untimely death]. Further, the data sets are now gaining additional support under the [promise] supporting sets indicating that [bribes/bribery] will become [visible] within the global mediastream as [minions] will be [rapidly shifting positions] in the [support roles] for [the powers that be].

The [minion class] of the [political and financial elites] are described in the accreting aspect/attributes as having a very hellishly bad 'new year'. The language contains references to [waiting and trembling] in [pits of blood], and [trying (desperately)] to [climb (out of the) pit], with [mud walls (made slick with) blood]. These areas are supported by archetypes that go to [violence], and [responding (with) violence], and [dangerous situation], and [(being) run-over/crushed (by) fate]. Other supporting aspect/attribute sets suggest that at least **some** of the [minion class] will be [assassinated by medicine]. This last is supported by the idea that some [prominent minions] will be [terminated] while [in hospital] ostensibly for [minor operations].

The data sets indicate that [3/three] of the top dogs within the TPTB entity **will** [suffer death (by medicine)] in the early part of 2010 as part of the [purge (of internal) obstructionists]. It is this sub set that has some of the most interesting language as it also contains references to the [disappearances] sub set that has been in TPTB entity for over a year. This

[disappearances] descriptor set continues to build support under the supporting layers of [strange], and [mysterious]. These newly accruing values include aspect/attributes that reinforce the idea that amidst the [purge] and [inter tribal warfare] amongst [the powers that be], and contributing to the [strangeness], and [inter tribal/factional tensions], a series of [disappearances] of [prominent participants] will occur. The [disappearing elites] are described as [being gone (with) no trace] between [one step, and the next]. This area also contains language indicating that the [minions] who will be [sent to investigate] are just going to [freak out/lose minds] over the [total lack] of **any** form of [rational explanation]. Part of the [pressures] on the [minions (doing the investigation)] will come from the [unwillingness] of their [masters/owners] to [accept] the [non-answer] that their fellow cabalists have simply [disappeared (from the earth)] between [heartbeats]. While connected obliquely by internal cross links over to the [rare circumstances] sub set of TPTB entity, this area of the [disappearances] supporting sets does NOT derive from the [rare circumstances], and rather is very deeply tied by cross links over to long existing sub sets within the SpaceGoatFarts entity where the terminating sets are in the area of the [contact (with non-terran consciousness)] meme.

As the TPTB entity is progressed along with modelspace through 2010, the entity accrues supporting sets of aspect/attributes for a [plan] or [attempt] to [corral/fence in] the [opposition]. The accretion patterns of these sets indicate that an attempt in early 2010 to [jail] the [dissidents] or [obstructionists] will be buried in the background of the [revolution] meta data layer as it manifests. This will be especially pertinent to the USofA and other areas directly within the 'anglo sphere' of influence. The data sets have secondary support coming from the [reluctance] of TPTB to take this action now. The real issue is apparently timing, not the action itself as they are well prepared to be [brutally suppressive]. The data sets are suggesting that the timing of the [repression] is going to be an issue, as it will be [felt/perceived] to be [too early]. The issue of [too early] is supported by sub sets going to the idea of [sustainability]. This aspect/attribute set supports the [suppression] such that an interpretation would go to the idea that TPTB are [worried] that [applying brutal suppression too early puts their ability to sustain the effort **long** enough at risk]. So to be clear, the bespoke [fear of too early a suppressive action] is tied into the idea of a [finite requirement (for) control (to be maintained)]. It becomes a bit clearer in the data that the issue of most concern to TPTB relative to their [brutal suppression] of the [populace] is that TPTB have a sense of [urgency] and [anxiety] about the

effort being able to [last]. This [last] aspect/attribute is not indefinite and only has longer term values going out barely 3/three years...so it begs the question of “last until what?”.

It is worth noting that most of the increases in supporting aspect/attribute sets for ThePowersThatBe (TPTB) entity are within the [fear] sub set in the lexicon. The rise in [fear] and [loss] language is remarkable. In the last several years of these reports, the rise in the [fear] language in support of TPTB has continued to accelerate, but no to the levels we are now finding. The [fear] language has several components to it, including the sub text of TPTB attempting to use [fear] as a [control mechanism] over the planetary human populace. However the largest continuous increase comes from the main core of TPTB entity, and there the [fear] language is very explicitly related to the [loss of (perceived) control (over circumstances)]. The [fear] language is becoming the dominant aspect within the TPTB entity and gains supporting sets and internal cross links at rates over 20/twenty to 1/one against any other aspect/attribute set.

GlobalPop –Sweat, Domo Arigato, Mutant, Feminine Mystique, Break-away

The data sets continue to grow under the [israeli mistake] sub set. We need to note that the [israeli mistake] sub set has been seen in the data for a number of years and it seemingly waxes and wanes with new supporting sets over this time. In this sense the data set is ‘irregular’, and has **not** continued to grow at a steady pace, and therefore is unlike our other sets of long duration. Further, while the George Ure postulate going to the idea that the longer we have a data set in modelspace, the more impact the circumstances would have when manifest, has been repeatedly proven, the [israeli mistake] sub set has not had continuous growth as had other, longer term sets. So we do not yet know if this set will either manifest in reality, nor if it will have the expected level of impact implied by its multiple year life span within modelspace.

A backwater pool in the stream of our data sets accruing to the GlobalPop entity suggests that as a direct result of the [biochemical/biological warfare] sub set of the [disease] descriptor set of the GlobalPop entity, a large portion of the [global populace] will become ‘asian’ in the sense of the [acceptance/practice] of [bowing] as the new form of [greetings]. While not

to say that [handshaking] or even [hugs/kisses] will cease suddenly, the data sets do suggest that they will be [less practiced] over these next few years due to [human to human contact] being a [disease vector]. The [dropping/reduction] of [handshaking] between [acquaintances] is part of the trend which will introduce [respectful bowing] to the [planetary populace] as a whole. The [new social body acceptance] of the [bowing ritual] has secondary and tertiary supporting sets going to the idea of both a [revival] of ancient [nuances] of [bowing] within the [japanese culture] as well as a [renaissance] of new [forms] and [meanings] of [symbolic greetings] which will [emerge] from this [resurgence] within Japan, as well as its [export] to the [global populace]. The [renaissance] of the [ritual masters] from Japan sub set is interesting in that the cross links over to the SpaceGoatFarts entity indicate that during the time of the [alien wars] or [determined contact] period, and beyond, the [japanese culture] will be a center for [diplomatic skills] and [development/creation] of [inter culture (extra terrestrial) contact symbols (meaningful rituals)]. This area of the data sets rises to great [visibility] levels in late 2011 as the [japanese culture] will apparently provide the [first] of a line of [planetary contact persons/cultures] that are indicted to be the [first point of contact] with [earth peoples] and [extra planetary consciousness/visitors]. The [japanese ritual greeting masters] sub set shows that this trend will found or create a very great, and long lasting {ed note: indicated to last for 100/one hundred generations or approximately 2000/two thousand years} school of thought of inter species/consciousness symbols. This [bowing culture] is shown to grow to be [highly respected (globally)] and [subtly nuanced] and [powerful] in the [flow of contact] with extra terran beings. Basically, the tourist guide books of the future will indicate that new visitors to terra will be met by [disciples of (the japanese) symbols university] first before hitting the beaches and other areas of interest.

The data sets for the [disease] sub set continues to grow at very strong levels. Much of the growth is under the [swine flu] sub set. There are very very disturbing geographic references to [canada] which are linked by association to the January and February period in which the [lethal mutation] of the [swine flu] is indicated to make its **first** appearance. The data sets indicate that the [swine flu] of a [new and lethal form] will be [released (upon)] the [global populace] in earnest in January and February of 2010. The [canada] sub set is growing very rapidly, and significantly faster than the next 4/four geographic references combined. Hmmm...probably not a good sign for our friends and neighbors to the north. Specific references to

the [olympic games] are also found, and the data sets in the primary supporting layers under these supporting aspect/attributes the [olympic games] sub set also appears as a nexus for indicated [disease release], and even more ominously, [spread/distribution] of the [new lethal disease].

This single point of [disease] within the GlobalPop entity is shown as being the [vector] of the [wave] of [deaths] that will flow outward from the [returning visitors/participants]. These [deaths] are indicated to be **the** single point of [sparking] within the [populace/usofa] into the next and active [phase] of the [revolution]. Stated another way, the [flow of people] through [canada] during and for the [olympic games] will precipitate or be related to (by the mainstream media) a [global flush/break-out] of [deadly flu] that in its turn will [shock] the [planetary populace (specifically the usofa populace first)] into [active revolution]. See Populace/USofA, and TPTB entity discussions.

The [disease] sub set is not limited to the [canada visit] as distribution system for the [lethal virus], but the [canada visit flu] will be the most [visible] within the late February, and early March [repression, suppression, and oppression], that will shift a very significant portion of the [parents] within the [planetary populace] into [seeing] and [understanding] the [lies] and [deceptions] of [government]. This [first shock] to the [masses (of parents)] is indicated to cause a [disaster] of a [protest] in 2/two separate [locations] {ed note: likely the usofa and canada} in which the TPTB are shown to be [brutally repressing] the [parents (of the dead)]. This [visual imagery] spread by the [internet] is described as [throwing chaos seeds] into the [social order] of the [planet].

Rewinding modelspace back to early Fall of 2009, specifically October, and then loading modelspace with the most recently processed immediacy values {ed note: effective from 3/three days out through 3/three months}, and the shorter term value sets {ed note: month 4/four out through 9/nine months (more or less)}, the [disease] sub set, specifically geographically associated with the [northern hemisphere], gains significant levels of new support from aspect/attribute sets under descriptors that include [rush], [flush], [flare (up)], and [not a whole day passes], and [less than a single day]. These sets in their turn gain support from new aspect/attribute sets that include such descriptors as [rage], and [eruption (of) rage], and [flames (of rage)], and other variants on bespoke [anger/rage]. There are 2/two separate sets of supporting data for the [day of rage]. A first, and smaller component

provides an interpretation of these aspect/attributes and other detail level sets could go to a [day of rage] that will/may develop in late October, most likely on or around the 25th. Such a [day of rage] would be derived from the [fears] of the [vaccine/disease] which [manifest] in a situation of [worst case/most crippling]. The [crippling] aspect/attribute set is supported at its primary level by a descriptor of [not dead]. We note that this descriptor derives a lot of support from non English languages, and is specifically referring to a condition of [the body (wounded)] and [crippled], and [ill], and [fatigued], **but** is specifically [not dead]. A second, and larger data set provides supporting emotional values for a [day (or week?) of rage] that originates from the [loss of wealth/retirement] which is indicated to be [perceived as theft]. The [day (or week) of rage] is described as [subsuming **ALL** other concerns]. The data sets provide a picture of [riots] across the [globe] that are [sparked] by [(near) instant poverty]. The imagery provides a glimpse of the [chaos and riots] that come from the [(sudden?) crash of the dollar (at an international level)]. The details prompt an interpretation of [rioting] over the [loss of stored wealth], as well as [rage] over [deception], and [theft]. These [global rages/rioting] incidents are described as being [self sustaining/self creating] as the [information] about the [death of the dollar] spreads out through the [global populace].

It is at this point in the discussion that we need to return to the higher level archetypes as the supporting sets within the GlobalPop entity are predominantly now in support of the [monumental (or epic)] descriptor set. The data accretion patterns shifted at some point within the early data gathering of this run, so around early to mid July. At that point the larger data set accretion patterns swung decidedly under the very large archetype of [epic (or monumental)]. This archetype is best described as ‘times which will later have monuments build in honor of the people who lived through them’....hmmm... probably, from our point of view as those people, will not be all that pleasant. The data set shift was not particularly subtle. It was noticeable at the level of the GlobalPop, the Markets, TPTB (The Powers That Be) and the Populace/USofA entities themselves wherein all of these entities altered both their direction and speed through modelspace.

The large linguistic structure previously labeled as the [feminine collective] is still growing within both the GlobalPop and the Populace/USofA entity. Within the Populace/USofA entity the [feminine collective] can be seen emerging in that the current [economic collapse] has the [males] being [discarded] at [faster rates], and at more [diverse areas] than [females] in the

labor force. The data sets indicate that as the [planetary unemployment] wave rolls over the various economies tied to the anglosphere by the [usofa dollar], this trend of [males first (to be fired)] will continue until, with few exceptions, the [industrialized nations] employ more [women] than [men]. This [planetary employment] pattern is but a single instance of the [manifestation] of the [global feminine collective]. The growth patterns under the [planetary feminine self-organizing collective] show vigorous growth during the [revolutionary] phase of the [formation/creation] of the [new planetary social order] over 2010 and 2011. Further, the data sets seem to indicate that the [planetary feminine collective] is integral to the [success] of the [populace revolutionary movement] in the latter half of 2010. Further, the longer term data sets are indicting that the [planetary feminine collective] is a significant [force] or [emotional energy source] as the [alien wars] emerge in 2011.

The accretion patterns for the GlobalPop entity as modelspace is progressed through 2010 are indicating that a [break-away civilization] will be emerging if the aware observer knows where to look. The aspect/attribute sets in support of the [break away civilization] include the large [soc (self organizing collective)] sub set. There are several sub sets within the [break away civilization] that are also supporting the [feminine collective], though these are not pivotal to the [breakaway civilization] and seem to indicate that the [planetary feminine collective] will support, or at least, not oppose the [break away civilization]. The descriptor for the [break away civilization] shows support at the primary level for [withdrawal] and [separation], as well as [growth (in the midst of) chaos]. The bespoke [growth] supporting aspect/attribute set shows a [4/four generation] impact, or about 84/eighty-four years duration. The deeper level details paint a picture of [thousands (perhaps tens of thousands)] of [self organizing collectives] that will [seize (the) advantage(s)] in the period of the [dollar death] to [separate] or [break away] from the [mainstream social consensus]. The data sets indicate that there will be examples of a social movement that could be labeled as “Hippies 2.0”, but that in the main, the [break away SOCs] will be acting from a [technologic] as well as a [social/personal maturity] in [rejecting] the [idea] that the [main stream social order] **can** be [reformed]. Rather these [SOCs] will be [separating themselves] from the [dying anglosphere] while [purposefully pursuing hidden/banned technology]. The [break away civilization] sub set is in the direct line of support for the [revolution] meme, and along with the rise of the [success] of the [revolutionary movement]

from mid 2010, this linguistic set shows a greater level of [visibility] in late 2010 and beyond.

The [break-away civilization] descriptor set is large, and continues to grow throughout the total length of the data processing. This indicates that this trend is likely to be both very impacting on humans, and very long lived. That the trend itself produces long term values with multiple generation duration levels is reinforced by the large, and dominating, accretion patterns of the supporting sets. These supporting aspect/attribute sets are also extensively cross linked to almost all the other entities from this sub set in bi-directional forms.

The [break-away civilization] is described within the primary supporting aspect/attributes as [separated] from the [TPTB controlled social order] that is itself indicated to be in a state of [internal fracturing] and [system fatal instability]. These bespoke concepts are reinforced by the general accretion patterns within modelspace as a whole, and as may be seen in the chart above, the patterns are forming ‘tipping points’ later in 2010, and early 2011. The ‘tipping point’ was first noted in our work in Summer (June/July) of 2001 when the data clustered into tight, inter linked lexical sets within the entities as though the emotional tension was about to be released suddenly. The tipping point indicated on the chart for the 7th of November, 2010 is approximately 15/fifteen times the emotional values seen in the Summer of 2001. The rapid release of the emotional tension from the plateau that persists from July through to early November takes place in just over 2/two lunar months. It is the release language around the November of 2010 tipping point that propels the GlobalPop entity into the [alien wars]. As modelspace is progressed through the plateau of emotional tension values of 2010, amidst the [transformation] of the [revolutionary movement (in the USofA)] into a [planetary social upheaval/re-creation], that the SpaceGoatFarts entity enlarges to encompass both GlobalPop entity, as well as the Populace/USofA entity. It is at this point that the [break-away civilization] will start to show [visibility] at a planetary level, as the vast majority of [connected humans] on the planet slide into the first manifestations of the [alien wars] language.

SpaceGoatFarts – Tipping (into) Contact

The SpaceGoatFarts entity is our digital 'bucket' for all things that are either unknown to humans, or are officially denied by the 'ruling bodies'. A very great deal of the supporting data sets are filled with [space] or [aliens] descriptor sets.

A new part of the SpaceGoatFarts entity is headed by a descriptor set of [critical mass]. Now note that the [critical mass] descriptor does not refer to the radioactive material, but rather to the [emotional transition] from [stasis] to [movement (or change of behavior)]. The examination of the data sets moves toward the conclusion that a [critical mass (of humans)] has now been [involved] in the [aliens contact (meme)] such that a tipping point is about to manifest. The emergence of the [tipping point (into) contact (of aliens) awareness] sub set is predicting that a [mass populace movement] will manifest over the course of Fall of 2009, and the Winter (2009/2010) in which [officialdom] is [pressured] to [stop lying]. The cross links to this area over to the GlobalPop entity include termination points that seem to indicate that some [governments] will [fall] due to the [alliance] of the various [truth seeking movements] within their populace. A significant level of the emotional sums that drive the interpretation include data sets for [abduction (of humans by unknowns)]. Apparently there has been a shift of the [number of abductions] such that a [critical mass] of [humans] has now been involved. The data sets are pointing toward some [residual effects] of these [abductions] that will be [emergent] over these next [11/eleven months]. The [residual effects] are described as being at the [core] of this new [manifest behavior change]. The [abductees (and others with contacts)] are indicated to be [altering behavior] over the rest of 2009, and the first half of 2010, such that a [response behavior] from the [officialdom minions (especially the political class)]. The data sets include aspect/attributes going toward the idea of a [planetary monitoring/watching] effort that will be {ed note: as indicated by TPTB entity} [rushed] into [effect]. The idea coming across is that [rather suddenly] a [behavior change] is [observed] by TPTB (or their minion class) within the [class/group of abductees] and this [change of behavior] triggers a bespoke [fear] within TPTB and [orders] are given to [monitor the situation]. The problem, as presented in the data accrual patterns, is that the [behavior change] observed is merely the very beginning of a process, and that by the time the [rushed monitoring] program {ed note: basically lots of spies/agents on the ground following people} is put into place, the whole of the [behavior change] has itself changed. These [spies on the ground] will be themselves a [problem] to the TPTB and the [political

minion class] over the middle of 2010 as they become [caught up (in the) chaos] of that year.

As modelspace is progressed forward into 2010, the early months have new levels of support for the [hyperchroniacs] sub set. This descriptor set of the [hyperchroniacs] is filled with aspect/attributes of [time shifts], and [time distortions]. The [visibility] level of the [hyperchroniacs] is due to rise in 2010, likely first appearing after the vernal equinox, as several of the [hyperchroniacs] will be in the position of being able to [publicly demonstrate] the [effects (of the) hyperchroniac condition]. Note that there are cross links indicating that the [military] of several [nations] will be very interested in [hyperchronism]. The data sets indicate that these [military intrusions] will be [unwelcome], and [badly received]. Further that the [military] will persuade the [global health organizations] to [declare] that [hyperchronism] is a [disease], with both [physical] and [mental] components.

The data sets in support of the [hyperchroniac experience], and the [abductions/personal contact] begin to merge from about mid 2010. Thereafter the supporting set that is the conjunction of the 2/two descriptors grows at a level that is several times the early growth rate. Perhaps nearly 4/four times the previous level of accretion. This growth is parallel to, and externally cross linked over to the Populace/USofA entity where it terminates in the [success] sub set in support of the [revolution] meta data layer. The participation of the [hyperchroniac experience] within the [revolution] meta data layer has cross linked support to the [aura], and to [human energy fields]. These sub sets, with the cross links from SpaceGoatFarts over to the Populace/USofA, taken as a whole provide detail sets indicating that a [pair (of males)] {ed note: taken as archetype this suggests togetherness/groups rather than only a single pair (or 2/two)} and a [pair (of females)] will be [integral] in the [manifestation (of the) revolution]. This [center point function] of these [pair of pairs] will be based on the [hyperchroniac experience]. The data sets at the details provide a view of [energies] that will [cause problems], and [trigger the hyperchroniac experience]. The [hyperchroniac experience] is indicated to provide [understanding] and the [ability to fast understanding]. In the SpaceGoatFarts entity the [fast understanding] sub set is describing a capacity on the part of the persons involved to [speed learn] and to [speed teach]. This is to say the description **seems** to be describing an [enhanced mental acuity] such that [whole concepts] can be [inferred (from) few

words/images], and that [complex and complicated matters/forms] can be [readily] and [rapidly] [absorbed/understood]. There are also supporting sets indicating that a [critical mass] {ed note: yet another appearance of this descriptor set } of [mental preparation] or [experience] is part of the [hyperchroniac experience]. This is apparently the [point of discrimination] or [differentiation] that has some people [under (the) energy waves] come out of the [hyperchroniac experience] with a [new perception] whereas other, less [prepared minds], are left [dazed], and [confused]. In any case, the data sets within the combined Populace/USofA entity, sub set [revolution] in conjunction with the SpaceGoatFarts entity, sub set [hyperchroniac experience] are painting a picture of an [underground facility] which is [accidentally looted] in the [riots] and [civil chaos] of 2010. Within that situation, the [pair of pairs (of) hyperchroniacs] will be [crucial] or [instrumental] to the [deciphering] and [dissemination] of [secrets hidden (at the underground facility)]. As a pertinent note, it appears that the [underground facility] is [hidden in plain sight], and its [location] will be [shocking] to its [neighbors] when they [discover] just what was [around the corner] and [down the way]. We anticipate that the aware observer will be able to note how accurate this rather vague description is at the time that these forecast circumstances manifest as it is extremely unlikely that HPH will be publishing reports at that time due to the aforementioned chaotic circumstances.

A significant level of support that binds sub sets of the SpaceGoatFarts entity at the [hyperchroniac experience] is the [underground facility] sub set. There are repeated versions of this lexical set in support of various archetypes of the SpaceGoatFarts entity. These archetypes include both the [revolution] meta data layer by way of cross links, and the [flood] sub set within the Terra entity also by cross link. However the SpaceGoatFarts entity also has a directly held set for [floods] that is under the [officially denied] sub set of the larger descriptor of the [unknown energies (from space)] sub set. In the [floods] sub set within the Terra entity are cross links that originate in the [floods] sub set of the SpaceGoatFarts entity and that terminate in the deeper sub set in the Terra entity of [floods/continental/underground facilities]. The detail sets of these sub sets allow a forecast of a [water rise] that will [drown] several of the [deep underground facilities] in an [unexpected manner]. Apparently some of the [points of egress] into the [underground facilities] will be [unexpected] and will cause some serious [consternation] within the [residents/workers] of the

[underground facility]. Hmmm. Probably puts your underground pie supplies at risk...

As the [revolution] meme progresses in the populace entities through 2010, it 'runs into' several bands of cross links from both the Terra entity, and the SpaceGoatFarts entity. In the case of the [underground facility] sub set, the [flood] sub set is only 1/one of several, higher level supporting sets, that join these entities around the idea of big doin's [underground] over 2010, most likely from July onward. This is also a [global] or [planetary] issue as the [revolution] meme grows beyond the Populace/USofA entity.

As an adjunct source of emotional tension growth under the [flooded underground facility], there are other linguistic sets within the SpaceGoatFarts entity that are participating via internal cross links. A particular example of note is a sub set headed by the descriptor of [alien (consciousness)] which apparently is of a [herd (feeding) mentality] that [exists (as a) single being]. This [smart herd being] descriptor set appears in late December, and grows over the [winter months] and through Spring 2010. In very late Spring, it gains significant [visibility]. However, the idea coming across within the data sets is not of the manifestation of this [herd consciousness], but rather the manifestation of the **language** describing this [herd feeding consciousness]. The detail sets here are complex and in many ways, contentious in the imagery presented. In the past this has been discovered to be due to the lack of appropriate word definitions within our lexicon...in other words, we do not have the appropriate language modeled. However, what we have is the association now between a [herd feeding consciousness] and a [pile/collection] of [metals (of an extremely) unique nature]. It needs to be noted that the [herd feeding consciousness] is a context which contains aspect/attributes describing a [collective consciousness (that) originated/developed/evolved (in a collective based) species]. The nearest analogue here on terra is that of [herd feeding species] and so this descriptor set was chosen as a label.

The [pile (of strategic metal)] sub set has very high emotional values that participate in raising the [flooded underground facility] (somehow) into higher level of [visibility] at a planetary level. In both sub sets there are internal cross links in the SpaceGoatFarts entity over to the [officially denied knowledge] sub set, and from there very extensive cross links go to the TPTB entity, and over to the Populace/USofA entity. The termination points within the Populace/USofA entity are within the [political elite class] which

is the representation in that entity of the [political minion class] in TPTB entity. In both cases the terminating cross links are in supporting sub sets that are headed by [fractured], in the case of the Populace/USofA sub set, and [severed/broken] in TPTB entity. In both of these sub sets, aspect/attributes at the detail level are describing a [political minion/elite] who [gets out of line] due to [questions] raised about the [contact] meme, with some specific references to this [herd feeding consciousness]. The data sets are indicating that this [questioning] will be [raised] during the [politically chaotic] period of late Spring 2010. Other supporting sets in the SpaceGoatFarts entity suggest that the [collective consciousness (herd feeding consciousness)] contact meme will have a long impact on humanity with the potential to last [4/four generations (approximately 84/eighty-four years)].

Other supporting detail sets under the [herd feeding consciousness] include references to the [2/two 'travelers' or 'thieves/liberators of alien devices']. These references include detail aspect/attribute sets that indicate a [return home in glory] ending for the [travels/travails] of the [liberators of the device]. However this supporting set derives from the longer term value sets and is, at the earliest, not [visible] until late in 2010.

Further, and perhaps specifically focused data sets include aspect/attributes for [plum flowers], and [plum tree twigs/branches]. Given the sighting of the UFO and its subsequent filming by the Chinese observatory at Plum Mountain, these data sets are likely reflecting the importance both of this event, and the subsequent [unfolding] of the [secrets revealed] meta data layer from this source. See the Meta Arts section of this report for links.

Previous data runs from 2006 through to current processing include data sets around the [unknown energies from space], and the [sun disease (affecting the sun's output in frequency and intensity)] had led to the forecast of [plant damage] specifically related to the all important [global food crops]. Summer of 2009 had a record number of reports of [crop failures] at a planetary level with many farmers here in the USofA having to replant 3/three and 4/four times, and even then not having much success. There have been [extreme weather] situations that have contributed greatly to the [crop losses], but also reports have come in to regional agricultural centers planet wide of [failure to thrive] incidents, as well as [burnings (likely UV-C)], and other [food crop] problems including [disease] and [fungus] as had been forecast in previous reports. The current data accretion patterns reveal a

picture of [on-going crop failures] that will now start to include [herd disease] at a [regional (multiple country)] level with the implication coming from the [main stream (corporate) media] that the [plague (on livestock)] could become [global]. The data sets indicate that the [zionist control media] will be pummeling the [populace] within the [anglosphere] and much of the rest of the globe with [fear] language around [food crop/herd failures], and [disease] over late 2009 and intermittently (though frequently) over 2010.

Additional plant related data sets have come through this latest round of processing. That they are showing up in the SpaceGoatFarts entity is due to the nature of the [discoveries] coming about [plants]. These [discoveries] are all falling under the [officially denied] sub sets. A rather prominent theme is the [discovery (of) new species]. Within the [plant species] soon to make their appearance will be a new family, genus as well as species that we are labeling here as the [quatre cot] {ed note: 4/four separating cotyledon leaves}. This [discovery] is indicated to be of a [newly (self) creating] species, and not merely a discovery of a long over-looked plant. The data sets are pointing to several such [fundamental discoveries] to emerge within the areas of [biology] over these next 3/three years, in a [science renaissance] that parallels the [technology revolution] about to sprout within terran humanity.

When the detail sets within the SpaceGoatFarts entity are examined an interesting sub set appears that **may** be forecasting some very [unexpected] assistance for the beleaguered Gary McKinnon (<http://www.youtube.com/watch?v=B4PkNPCEnJM>) . The detail sets contain some references that just *may apply. If so, then [unexpected help] will arrive from a very [unexpected person] who will have association with the [Bronx] area of New York. It is unclear just what form this [help] will take, however, the general emotional tone of the lexical set is positive.

Other personalities showing up, as indicated by some interesting cross links over to the TPTB entity, include an individual who will be doing a lot of [swearing] both to [oaths] and afterward. The data sets are pointing to the [problems] that TPTB will have in [replacing] some very key [minion]. These [problems] will include not only the [disregarding (of) policy], but also will include [episodes] of [language] which will be [causative] and [provoking] to the point of being [incendiary]. The [flaming language] is being forecast as rising to the level of the infamous 'let them eat cake' remark of a previous [revolutionary age]. That the data sets for this language

are within the SpaceGoatFarts entity is due to the supporting sets coming under the [officially denied] descriptor set. The interesting thing about this incident of [officially denied (offensive/provoking) language] in the SpaceGoatFarts entity is that all of the [officially denied (fomenting) language] as well as the [facial expressions] will be available for viewing on the internet, and the very [damning video] is indicated to be [propelled] into [higher levels] of viewing every time there is a corresponding [main stream (corpo-fascist) media] airing of the [official denial]. The data accretion patterns are suggestive of almost a 'game' mentality developing in which [tacit support] for the [revolutionary] movement comes in the form of [simultaneous viewing] with the [repeated broadcast] of the [denials].

The SpaceGoatFarts entity is also gaining support from a descriptor set around a [female human] who will emerge as something of a [leading figure] in the [revolutionary movement] in mid 2010. The impact of this [female person] who will rise to [planetary celebrity] due to [specific actions redacted] in a very specific [battle] with [minions (of the) TPTB]. This [battle] is forecast from language that is within the [active phase] of the [revolution] within the Populace/USofA. These lexical sets within the Populace/USofA entity are points of origin for a thick rope of cross links that terminate within the [female person] descriptor set within the SpaceGoatFarts entity. There are some suggestions that this person will come from a [technical organization] and will be [followed] not because of who she was, but rather who she will be [after circumstances (of) battle] have [changed her]. Not unlike the [woman wearing scars] forecast {ed note: fulfilled language that was spread across at least 4/four women of within press reports of the forecast time}, this forecast *may be referencing [female personality] in a 'spread out' meme fashion. In any event, the descriptor contains associations for [northern europe (down to poland)], and [technician], and [powerful], and [wounded], and, rather more ominously, [a biter of flesh]. The detail layers suggest that this incident will be lurid enough to call attention to itself.

Other sets continue to build under the [siberian (and northern chinese)] sets relative to the [new electrics] and the rising of the Omnihumanity entity. The [siberian couple] are forecast by the data to be receiving [local notoriety] by this time, and should be [visible] on the global medistream within the next half year. Their efforts will be [led] or [preceded] by a [video] that will be able to be used as a temporal marker for their appearance within a month (more or less). The aware observer will be able to recognize the temporal

marker [video] by the [siberian background], as well as the production [including] or [involving] a [Self Organizing Collective] that is [pan global]. In other words, the [video] temporal marker for the rise in [visibility] of the [siberian couple] will be a [planetary effort]. There is no data suggesting that this [couple] is the subject of the [video], but rather that it will be associated with them both by [location], and in time. The data sets are not clear in the language, but a main component of the [video] will be [northern colors]. There are no associations between the [northern colors] and the northern lights or aurora borealis. The [siberian couple] is also temporally tied to the [fundamental discoveries] within the [new electrics physics/science] over the course of Fall, 2009.

It is worth noting that the [break-away civilization] sub set is overtaking the [new electrics] sub set from very late 2011 onward. The [alien wars] sub set subsumes both the [new electrics] and [break-away civilization] sets over early 2011 through to the very last extent of our detail granularity which extends out to early 2012. There are some indications that the [break-away civilization] will play a pivotal role in the years of the [alien wars]. The data sets at the detail levels {ed note: as warned, often the **most** unreliable of our fuzzy sets}, are describing periods in which [what remains (of) officialdom] is [desperately seeking aid] and [intelligence] from within the [break-away civilization]. Part of the [problems] that face the [remnants of officialdom] is a [multiple generation distrust] of [officialdom] that will not be easily overcome, in spite of the many [public purges] indicated by the data sets as the [revolutionary movement] takes hold globally. The [officialdom] most [reviled] will be the former [anglosphere], and its [planet covering shadow government], and it will be the [remnants] of the [organizations] created by this [criminal cabal] that are indicated to be [most desperate] for [information] and [solutions]. The data detail sets of aspect/attributes include descriptors for a incident/episode involving the [2/two (river) boat persons] and their [understanding (of) natural systems]. These [2/two boat persons] are described as being [highly educated] and [enlightened] as well as [personally accomplished]. Though both are identified as [boat persons], with supporting sets at the primary level of [river systems], the data indicates that it will be the [crisis] that the [officialdom remnants] face which brings the [2/two boat persons] to the [same river] (so to speak). The [crisis] of the moment-to-be in about a year or so is forecast to involve the [ability] or [understanding] of how to [manipulate] the [template creation stream]. These [2/two river boat persons] will be coming from the [break-away civilization] and will also be [lauded] in future [monuments]. {ed note: the

broadest level of archetype currently effective is [monumental] or [epic] and is applied over this next decade as being a period about which future generations will build monuments}.

Conclusion: Rewards

According to all of our data at the archetype level, [revolution] this way comes. Further, at least here in the USofA, there are signs of [revolution] showing up in manifesting circumstances. Also within the USofA, many public discourses have included [revolution] language at increased rates over this past year. So, it seems reasonable to conclude that [revolution] is indeed manifesting. If the data accretion patterns are correct, the [revolution] meme will spread across the planet.

Revolutionary times are tests for individual courage. It will pay to remember that courage does not equal violence. Usually, violence is a poor response to circumstance and indicates a lack of imagination to conceive other options. Our data suggests that this premise will soon be demonstrated by TPTB.

The natural response to [revolution] by officialdom will likely be to [encourage] or [promote] acts of violence. They will do this for several reasons including their understanding of the flow of populist revolutionary movements. By promoting violent acts from their opposition, they let the opposition play to the primary strength of TPTB, which is that they understand and use violence every day.

What TPTB cannot understand, and have no effective counter strategy to, is non-violent non-cooperation. They are masters of only the strategies of [repression through fear] and violence is their primary tool. Thus has human history been for the last several thousand years. However, there are several successful demonstrations, most notably by M. K. Gandhi, and the Rev. Martin L. King, that the strategy of non-violent, non-cooperation is the way to win revolutions. In fact, by its very nature, it is an unbeatable strategy.

Gandhi recognized the inevitable success of this strategy against any oppressor in his statement that “first they ignore you, then they ridicule you, then they fight you, then you win.”.

Revolutionary times are coming, if not here now. Such times are testing periods for courage in all. Universe demonstrably rewards acts of courage.

Courage is **not** synonymous with violence. As we will all soon have an opportunity to discover in a personal way.

Addenda:

Our next possible point of publication will be in late November to mid December, 2009. The intention is to examine the data sets from the currently running data gathering effort in early November with an eye toward making a decision to post a new issue, OR NOT. If the data sets , and or manifesting circumstances suggest that nothing significant has changed, we will not waste ours, or anyone else's time with another issue.

*

A new version of software for swirling crop circles will soon be available. It is superior to the version offered for free from Halfpasthuman. This new software will run on Windows OS, though apparently a Vista version may not be initially available. This software will be offered for sale at a reasonable price. We have been very encouraged by the early results of this software offering, and when it is available (likely within days of publishing this report), there will be a link to the sales and information site from the main Halfpasthuman page. The link to this commercial version of the swirlies software will be at the top of the HPH page. Please check back if you have an interest in spinning crop circles for fun and education.

Please NOTE: Halfpasthuman is only linking over to the software producer and has no commercial interest of any kind in the software.
