Brooms of History - August, 2015 covering 2015 - 2020

Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing millions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes are: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities are: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon is: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: ***emotional qualifiers*** which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders are: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop

The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)

All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets

The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra

The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional

level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

In the body of the text which makes up the active part of this report, those words which are **bolded** are the extracts from the data sets. Bolded words in groups within brackets or parentheses or quotes are details as picked up within the data samples by the spyders. Words which are in larger font, and italics, and may also be **bolded** are labels for sections of the report or sub structures within modelspace.

Data and Interpretation

Meta Data – processing for August 2015, through to June 2019.

GlobalPop

Vast **unemployment** and **misery**. As the 'credit freeze' sweeps across planet as a globe girdling storm, the social consequences will dominate even though in many ways the financial and political consequences will be in a state of flux far longer.

Diaspora from **economic** and **climate shift** globally, as well as impact of **economic dislocation**, and **geo-engineering**. This **diaspora** is described as **fluid**, **erratic**, **sporadic**, **swelling**, **over-whelming**, **tide-like**, a **weapon**, a **response**, a **river**, a **disease channel**, a **political problem** (of generations, at least 5 (so 106 yrs)), **surprising**, **devastating**, **wealth draining**, **land sculpting**, and **terrain altering**.

Further descriptor sets include labels such as '**death march**', and '**death spiral**', and '**refugee extinction**', and '**refugee dissolution** (dissolve into the **masses**)'.

Details point toward incidents of '**ship boarding**' (a new form of 'soft' piracy/hijack), and '**stowing away**', and '**mislabeled freight**' that will lead to international coalitions/alliances emerging from former enemies at the nation state level. The 'refugee load' or 'refugee burden' will be used, by the power elites to attempt a 'sector' or 'regional' form of government that is indicated to fail under a 'blood load'.

But coincident with the emergence of the '**new electrics**' from China, India.

The new diaspora is '**caravans** (trailers) and nightly gatherings around the **fuel cell**' and big screen teevee for **global weather news**.

Vertical alignment social discord (industry specific social actions due to **industry wide labor complaints**) leading to **social upheaval** including **sieges**, **industrial squatting**, **industrial sabotage**, **labor based kidnapping** (of gov't or corp. officialdom), **seizures of public property** (**protest occupations**), **battles in the street**. Many of these '**industrial actions**' will be as a result of rapid changes in the '**credit availability**' at **regional**, and **industry wide** levels. Examples would include '**milk delivery**' to '**retailers**' across a wide area of (example) **central Europe**. The impact of a the '**credit freeze**' to these firms leads to **social 'actions'** by '**deprived customers**' as well as '**industrial actions**' by **frustrated 'employees'** and '**owners (small scale)**'.

The older form of 'geo-political' instability is indicated to **overtake** events in Greece, and to push the **populace** toward some form of **inter-populace fighting** (multidimensional '**civil**' **warfare**, sort of) that is being described as being 'interrupted' by 'co-operative offers' from/between 'greek shipping interests', and 'turkish mining/minerals consortium? (turkish word implies family-group)'. This 'offer to explore'

their mutual **interests** and **challenges** is temporally coincident with a 'new vision' being offered by 'greek shipping interests (oligarch?)' that is described as 'bringing (street) fighting) to a 'halt' as all factions consider this new, and apparently both **radical** and **unique** idea. This period is a temporal marker for the 'turn around' in GreecePop (and TurkeyPop) future views. The data shows that **optimism** will emerge tentatively as the **experiment** is slowly put into place. Data points to '**self-shedding government**' in which many '**government functions**' will '**dry up**' and be replaced by private party initiatives. This includes data sets with indicators of very large impacts on pensions, and salaries. There are a number of identified periods of very high **tension**, and very high **misery** index values within the 3+ years that will later be identified as '**The Transition**', or '**Those Years (of transition)**'.

Also we need to note that the **stressors** on **GreecePop** are not merely financial but are also human, including very large refugee populations that grow daily. The data sets are pointing to ever increasing **humanitarian** demands from sea-carried refugee groups in various forms (**small boats** as well as **ship-boarding** (a new form of 'soft' piracy/hijack)) that will drain both financial and sympathetic energy funds available from the local greek populace.

EUPop is breaking up within the data sets into more discrete sub sets likely indicating the **break up** of the **European 'Union'** as it was conceived by **TPTB** in the late 1940's. The data sets are showing a **Scandinavian** sub set, as well as a generalized '**Teutonic peoples**' sub set. In both cases, there are sets indicating the formation of the '**groupings**' or '**self-referencing, self-isolating**' movements are the '**invasion**' of '**conflicting cultures**'. In the ST and LT data, 2016 is indicated to provide some very **significant social** as well as **political change** in the **Scandinavian region** as a direct result of the **government making threats** against the **local heritage society/movement**. This is indicated to lead to **rioting** in areas not known for such behavior, as well as a **brief, violent stand-off** between **government** and '**social cohesion groups**'. The data shows that over the course of 2016 and 2017, a series of **confrontations** and **conflicts** between the '**core peoples heritage movement**' {ed note: a very likely poor translation of something near to the actual name that will surface} and **government** at several levels will lead to '**take overs, occupations** of **government facilities** including **military bases** (which is indicated to totally freak out NATO and their masters)'. Once the strength of the '**core peoples heritage movement**' becomes visible as result of the **confrontations**, an **exodus migration** begins. Curious elements to this is that many **jewish** people within these countries will also **emigrate** as they will find their '**cultural self-exclusions**' questioned in the **peoples' media** (once **state run media** is fractured by **occupations** in several production facilities).

In many instances of the **occupations** of **public buildings** including **housing** that will occur over the '**years of assertion (of core peoples rights)**' will be for the **specific purpose** of **instigating wholesale abandonment** of the **area** by **immigrant populations**. Deemed to be '**ethnic cleansing**' by **press** in other **countries**, the '**core peoples heritage movement**' is described as '**fighting back**' with a **barrage** of '**immigration was social engineering** by the **rich** and **we wont take it any more**' **anti-propaganda**. This period is showing within the data sets as perhaps one of the most exciting, in the media sense, in **several hundred years**.

The **displacement** of the **former immigration populations** is described as **crippling**, and **stagnating**

to the **general popular feeling** in **Europe** as well as **generating vast quantities** of **verbiage globally**. Further **economic impacts** are huge and **described** as **rippling** through the **economic fabric globally** for nearly **30 years** subsequently. **Immigrant businesses** are indicated to be **wiped out, fortunes lost, stolen, and taken by betrayal**. **Capital controls** are **set up** throughout **Europe** and **social (and food) chaos** new to the current generations **takes hold**. Not since the **'displaced persons' chaos** following WW2 has there been anything like what is coming.

Immigration channels (aka **smugglers**) are described as **'bringing in new people'** only to **encounter** former **'clients'** **headed back** due to the **human population pressure** behind them.

The **GlobalPop** entity contains a long standing set for the **impacts** of **'sun disease'** on both **humans** and **animals** and **plants** here on **earth**. New data sets within the supporting sets for **'sun disease'** within this entity are showing that **'harsh solar rays'** are going to be **blamed** for new forms of **'heat related' deaths** in many **regions** around the **planet**. These new forms are where the **person (or animal)** **heats up internally** so **rapidly**, and so **deeply** into their **core** that they are **unable** to **shed** the **excess heat** and **pass out** and **expire** from **over heating**. What makes this a **new phenomenon** is that these **deaths** will be **caused** from the **'inside out'** and not **due** to the **skin** or **outer body absorbing heat**, but rather from **too much heat** within the **core** of the **body**.

Other forms of symptoms of **'sun disease'** within the **human** population (not so much animals), are what we will come to call **'sun strokes'** with a new emphasis on the **'stroke'** word. These are described within the data sets as **strokes** that come about due to the **blood** (and other **fluids**) **pooling** in a **spot** in the **head** where **UV rays** have **penetrated** to the extent of **'cooking'** a **small capillary** or **lymph (system) passage** between **capillaries**. Many of these **'mini strokes'** will be **experienced** during **outside exercise**. The **'medical establishment'** is forecast to make all kinds of **erroneous conclusions** about the **cause** of this **'epidemic'** of **mini-strokes**. As modelspace is progressed through the LT data over the next several years there appears a spike in the number of incidents of these to the point that the general awareness of the population leads to the reappearance of **'tin foil hats'**. Note that these are NOT to be made of tin, and are going to be a wide variety of approaches to the problem including **foiled plastic helmets**, but they will be labeled (pretty much globally) as **'tin foil hats'**.

The use of **aluminum** for the **sun stroke protective head cover** will have a curious couple of side effects. First in **China**, they will note ahead of the rest of the world that their **populace** does not have the same level nor **severity** of **impacts** of the **sun disease** as other parts of the planet. At some point in late 2016 the discourse will center on the **widespread use** of **aluminum safety helmets** by the **Chinese populace**. This is indicated to bring out a **discussion** in **Chinese media** which leads to a very large increase in use of the **aluminum hats** of all **descriptions**, and even to **'innovations'** in **'wearable computing'** within the **hat structures**. A certain style of these **aluminum hats/helmets** are showing as being so **associated** with **Chinese populace**, that outside **China** the **silhouette** of a **person** wearing such a **helmet** is taken as a **visual symbol** of **China**.

As modelspace is moved from Fall 2015 through to Fall 2016, a series of data sets move into **GlobalPop**, sub set **Indonesia/Malaysia** (and **India/Pakistan**) that are suggesting a very strange set of **circumstances** will bring about a social **'relaxation'** of **tensions** between **'warring factions'** in both

Indonesia as well as **Malaysia** due to a very large and practical success between **India** and **Pakistan**. A side effect or benefit from the **India** and **Pakistan exploit new engineering** [something unknown, links over to SpaceGoatFarts entity terminates in Unknown/Not Yet Labeled] that in some way benefits **transportation systems (land based)** immensely. The descriptors would have this break-through being on the order of making all cars 90% more efficient for the **cost** of a **cup of weak tea (no sugar)** {ed note: again a poor translation of a popular local drink name coming through our processing -most likely or a local expression wherein things are compared to the cost of tea). Whatever is the engineering break-through, its exploitation by the **IndoPak consortium** will also provide our missing connection to both **Brazil** and **Portugal** (from earlier ALTA reports, but same sub sets).

As the **credit freeze** takes hold of bankster occupied earth, some consequences are forecast by the data sets that include the **cessation** of **ship destruction** in **Bangladesh**. This is indicated to move that countries leadership to much closer ties with first **China**, then **Russia**. Apparently **Russia** will set up both **port facilities** as well as some kind of **marine fabrication plants** in **Bangladesh** in mid **2020's** due to, according to the data, **changes** in **coast lines** due to **ocean shifts**.

The **Indonesia/Malaysia** populations are shown within **GlobalPop** as becoming a center for **marine innovations** as **electronic** tools for **design** become '**promoted**' by **local governments** in the regions. Apparently some **school initiatives** in **Singapore** will start the whole thing off as the **government** there gets into the '**open source software hosting/distribution**' business as a part of the '**all citizens rights to/of access**' movement that will be taking hold of **Asia** over the next 20+ years.

Australia and **New Zealand** both are showing in the data sets as being '**damaged**' as well as '**benefiting**' from the twin symptoms of **planetary expansions**, '**new lands**' and '**ocean current changes**'. In the case of the former, **coastal communities** with **developed infrastructure** are shown as being **damaged** by new **storm patterns**, rising **sea levels**, and **earthquake** related **slides**, and **underseas contour changes**. In some, very tall areas will be **liquified** by **temblor** to the point that long **run-out landslides** into the **oceans** occur which produce new **coastal contours** and new **coastal currents**.

South American populations largest challenges over 2015 through to 2020 will at first seem to be the **economic meltdown globally** that will put the **continent** into a state of **multiple country government defaults** and **failures**. These **governmental failures** are described as being so **severe** as to **isolate whole regions** unto their **own solutions** to the **problems** on the ground. The data sets are indicating that the **current local population** has new **initiatives** to cope with their **symptoms** of the **global credit freeze** just as they are then hit by the large **waves** of **immigrants** due to **food, climate, economic, and political crises** in the **northern hemisphere**.

Described as a '**diaspora**', or **scattering** of the **peoples**, within the data sets, this **upcoming migration** will not be like previous **migrations** in past centuries in that it will be **started** or led by the **ultra rich**, then the **slightly less rich**, then the **celebrities**, then the **merely rich**, and so on down the economic **social strata** until it reaches a point where **consistent southward traffic demands supports** many **new transportation hubs** for reaching **South America**, **legally** or **not**.

The data sets are indicating that an **early wave** of the **common people's migration southward** will be initiated by the **collapse in the north american college system**, the **welfare systems failing** in many states, and other **economic** signs of the **upcoming harsh deprivation** will lead to both a **naturally occurring desire** for the **astute, aware and overly indebted college student** to **seek their future in new environment**. Attractions to **South America** are such to this cohort that many will make **businesses** out of the **touting of immigration** (to **North American young college students**) and **supplying support** to the **new immigrant class**. As may be expected, the **hard sciences students** are **welcomed** to several of **south American countries** as is their **ability** to **generate or bring in business, and wealth**. This phenomenon is indicated to cause both **widespread language melding** (across southern hemisphere first), as well as to provide an **entrepreneurial boost** to **South America** as a continent that data sets describe as persisting for over 5/five generations (100+ years).

Areas of the '**new lands**' forecast by the **Terra** and **SpaceGoatFarts** entities are to the **west of South America**, and again, to the **west of Australia**. In other instances, these **new lands** are more **north**, and near other, **existing island chains**. In both cases, the **new lands** are described within the **GlobalPop** entity as a **refugee haven** (for **low lying countries** being **inundated**), a **mineral/wealth source**, an area of **pollution** (all are initially), areas of **commercial opportunity**, and sources of **dispute** (as sovereign states try to make claims to new lands). But the **GlobalPop** entity is also focusing much more on the **opportunities** within the **new lands** and other **symptoms of earth expansion** than the **geo-political** consequences. Much of this appears to be due to the **waning of the dollar's influence** at the **international level** over a very **short period of time**.

USAPop (includes Canada with several months time lag)

The data sets include linguistic structures of great complexity, at levels not seen before. These structures are more discrete than previously seen (these last 4+ years), and the accretion patterns are suggesting that the **USAPop** will be headed into **waves of highly emotionally charged periods** over these next 19 months. The highly emotionally charged language now being seen arrives, as noted, in waves, however, we also need to be aware that these are wave-lets forming on a consistent bed of emotional reaction to the unfolding circumstances.

The language accretion patterns, independent of the data therein contained, are suggesting that **USAPop** is bound within a long period of '**contention**' that is both '**internal**' and '**international**'. As modelspace is moved forward toward the end of the LT data range, the sets are coalescing on '**internal revolution**', and '**reformation** (of the) **political system**'.

The data accretion patterns are suggesting that for perhaps as long as **3 years**, the **USAPop** will be impacted by '**sporadic breakdowns**' in the various forms of **infrastructure**. In some cases these will be the **resultant effects of physical changes** within/on the **planet**, or **climate** such as '**stretching**' that will **break underground installations** of all kinds. There are further, extensive cross links over to the **SpaceGoatFarts** entity where the data is showing that some of these **planetary instability** affected **installations** will be **black projects**. Some of these **breakdowns** are forecast to render **large areas uninhabitable** due to **lack of water**, or **lack of electricity** and increasingly **severe climatic extremes** (of too much **heat** or **drought**).

Within the general **despair** and **misery** language which besets large areas of the **USAPop** and **EUPop**, are small kernels of **optimism** and muted **joyous** expression. These are seeds that are cross linked over to the Markets entity Longer Term data sets descriptions about patterns of events and life 2020 and beyond. While **misery** is still a large **emotional blanket** over the whole of life in these united States in 2020, it has been/will be by then, counter balanced by a general shift into '**new freedom/liberty**' at a **societal** level as **government dies off** by **strangulation** of **funding** in these next years. While not gone in 2020, the data sets are indicating that **government** has **abandoned** many of its **former** areas of **claimed authority** as **funds** to **press** those **claims withered** with the **death** of the **USA dollar** as **global reserve** (arguably 2015, though many will state it occurred in early 2016) currency.

As modelspace is moved from 2015 into 2020, the **USAPop** undergoes very **large changes**. Not only are there sets going to **diaspora** and **population redistribution** due to **planetary changes**, especially along the **eastern seaboard**, and **southern coasts**, but also due to the **failure** of the **Federal Reserve dollar** as a global '**store**' of **wealth**. The **devastating** impacts of the **credit freeze** in **Fall** of 2015 and the subsequent **shock** to the **GlobalPop confidence** in the **dollar** is clearly showing as a **primary** cause of the '**dollar rethink**' at the **population** level that leads directly to the **flood** of **dollar repatriation** in early 2016 (see **Markets** entity).

Within the emerging **sound money economy** of **precious metals based barter**, local popular opinion and **functioning electrical infrastructure** allows some regions (sub sets of the **USAPop**) to continue to advance the **crypto-currencies infrastructure** to the point where the data is forecasting that **BTC** to **gold/silver exchange** will be both **common place** and used as **region to region business lubricant**.

In the GlobalPop sets accruing in late 2015 with LT data effective for 2016 and beyond, the **sound money transition period** is described as **brutal**, and **debasing** (of **infrastructure/economic activities**), and **severe** (to **endure**). In details we find areas of '**migrations for food**', and '**government failures (lead to) riots** (in which) **government installations** are **attacked/stormed**'. In some of the more extreme language we note that whole '**military bases**' are '**besieged by local populations**' due to '**rumors of food stores**'. These events are after the **credit freeze** has **seized** the **Just In Time delivery** system and **depleted** nearby **local stores**.

During this period, the **USAPop** is forecasting that the population of the USA undergoes changes at levels not previously '**imagined**', nor '**considered conceptually possible**'. These includes **millions** of **people dying** over the **first 5/five of 12/twelve brutal years**. Not only **malnourishment**, **disease**, and **extremes** in **climate**, but also, and perhaps the largest cohort in its entirety, those whose '**conditions** are **maintained** by **pharmaceuticals**' as sources of **drugs** as well as **foods** dry up rapidly with the **credit** system. Other causes include **forced relocation** as **weather extremes** also motivate populations to relocate. Several sets are indicating that not only **economic infrastructure** but also '**live giving**' **infrastructure** will be destroyed by either **climate**, or **credit freeze** (or other aspect of **economic transition**) such that areas where **life** in the **region** is '**dependent on electricity**' either **directly** or to **import water**, will be **deprived** of either **electrical power**, or **water** and **wholesale relocation** of the **population** will begin. These modern era breakdowns are echoes of the dust bowl relocation events of the 1930s and many of the social consequences will be similar. In the modern version however, the

migrations will be **sourced** from **both coasts** and seemingly headed **north** toward **central Canada**. Or at least laid out along the various **mountain ranges** and **north-south highways** within the **central** region of **north America**.

Terra

Within the forecast weather patterns for Fall and Winter 2015 and beyond are rains so **torrential** as to require a '**new name**' for the phenomenon. **New rivers** will be created that will **wash away old human 'trails'** in **flash floods** that will **demolish down to rock**. The data sets have **soil/land shifted miles** in **long run-out slides** from **major mountain ranges** in both **Central Asia, Alps, and North America**.

Further there are to be new '**wind storms**' that will be **beyond tornadoes**. **Cluster Suckers, single giant thing** that has **multiple vortexes** as its **terminating points** on the ground. These are also described as '**harder than diamond**' and they '**scrub planet into channels** (that then fill in subsequent flood)'.

Volcano fields are indicated to **rise up** as **new lands** from several areas **under seas**. New '**island groups**' are shown as being **created**. These will include many in the **South Pacific**, but now we are also getting data for **new lands** up here in the **North Eastern Pacific Ocean** (off PNW of **North America**). Some **political discord** and claims on '**future lands**', and '**mining rights**' are going to emerge as a result of all of these occurrences as it becomes known that these are '**mineral funnels**'. The '**mineral funnels**' are described as '**up-wellings**' from within **cracks** in the **mantle** as a result of the **expansion** of the **planet**. During this current phase of **planetary growth** the **material** being **pushed** to the surface by the **expulsion** process is of a **density** that will/does contain **new materials** from our human perspective. As the planet ages, it may be expected that more complex material will be formed internally from the maturation of the plasma core at the center of the earth (no molten metal core in planet). We alive at this point in time are fortunate that the expansion is of a maturity to provide denser materials as previous expansions provided much more water and harmful gasses than we are currently observing. We are perhaps unfortunate in living on an increasingly unstable planet trembling and cracking beneath our feet, however, universe has provided some compensations.

Well within the **waters** between **Greece** and **Turkey**, the data sets are showing that a '**new trench**' will emerge from an **earthquake** of **low surface impact** but one that '**stirs the waters**'. This **trench** is indicated to be '**explored**' and then to become something of a **point of discussion** as its **characteristics** are '**quietly** and **excitedly**' discussed.

Late in 2015 the '**sun disease**' meme is showing as gaining traction in both alternative and msm media. The reasons are not quite clear, and this may be due to the phenomenon being new in our experience and thus yet unnamed, but it seems that from early 2016, the idea of a '**changed** and/or **changing sun**' will intrude on the '**global warming**' debate.

As directly held sets in both the Terra entity and the GlobalPop entity, the **contamination** (of **planetary environment**) linguistics are appearing as forecast. Further data sets within the supporting structure for the Terra entity version of these **geo-engineering consequences** also includes supporting sets going to **volcanoes**, and **inter-planetary dust**, as well as (by way of **SpaceGoatFarts** entity cross links) other language around the idea of the **vacuum filtration** of **interstellar dust** that then reaches into the **upper earth atmosphere**. These sets are growing, and have been for a number of years. Within the longer term data sets there are numerous internal cross links in both Terra entity and in the SpaceGoatFarts entity that suggest that the '**sun disease**' is actually being triggered by this '**dust infiltration**'.

The **contamination** of **planetary environment** set has a number of supporting aspect/attribute sets at the primary level indicating that the '**process**' of '**solar change**' is just at the beginning of what will be a '**multiple generational**' experience for humanity. These supporting sets contain details going to '**skin scalding**' as a new form of '**extreme sun burn**' that will be part of the wholesale change of language around this '**skin damage phenomenon**' from which the society will adopt '**solar radiation damage**' or '**sol-rad**' as slang. The damage to the **skin of humans, animals, and plants** is being forecast as being **fatal**, and in some cases causing the **deaths of whole regions and multiple species** (more than likely plant die off rather than more **mobile** animals and humans).

Speaking to the **mobility** of **humans** and other **animals**, the data sets are quite clearly forecasting wide spread **diaspora (migrations)** into new areas of the planet as a direct result of the **solar changes** now under way and their impact on the planet from the inside outward. The data sets are suggesting that '**heat waves**' will force '**millions** (of **humans and animals**)' away from **traditional habitat/regions** over much of **Summer** (northern hemisphere) **2017**. A primary cause of these larger scale populations shifts has to do with the very **far reaching breakdowns of infrastructure globally**. See Markets entity, **credit freeze**.

As the Longer Term data sets are brought into modelspace, a number of temporal echoes and markers are discernible. These include contexts for **earthquakes** and **volcanic activity** of a scale, and in places, not seen by **modern humanity**. In some of the language around the emergence of the **underseas 'new lands'** the details include **vast amounts** of **lava** being **hurled** many **hundreds** of **yards** to **splash** into the **ocean** (primarily in Pacific, and Indo-Australian oceans) from **volcanoes** that pop up '**rapidly**'. In other sets the descriptors are describing **multiple volcanoes** that will **fuse** into **islands** in a process not previously known.

In many of the sets within the '**new lands**' sub sets, the **volcanoes**, as with the recent **Russian discovery of very special diamonds** (predicted in an ALTA report from 2011, then restated in 2012), are described with detail language going to the idea of '**mineral funnels**', and '**mineral pipes**'. It is this discovery of the **new nature being expressed** by the **planet** that sets off both the '**land stampedes**', and '**mineral claims (wars)**' over these **new lands** by **countries** and **peoples** in **geo-spatial proximate** to the their **formation**. In many cases within the sets we find language going to the idea that '**rising sea levels**', and '**surprisingly fast rising sea levels**' will **prompt** or **propel** '**low island (sea) populations**' to **migrate** to the **new lands** frequently in **spite** of **officialdom** (from some country or other) **censure**

of their actions. The bulk of these **popular migrations** are indicated to be post **2020** and to **extend** for **many generations** as the **expansion** of the **planet matures** as a process.

The data sets within the **Terra** entity are forecasting a '**topsy turvy**' world in which the **climate** has gone '**pear shaped**'. This supporting set is extensively cross linked over to the **SpaceGoatFarts** entity where the **termination** sets are arguing for an **actual**, or **literal** interpretation of the description in that a **video** or other **discussion** is described in which the **envelope** (of **high atmosphere**) of **earth** has taken on a **pear shape** with the **bulge** being over the **north pole** (an upside down pear if one places north at the top of the image).

The **Terra** entity has ST data that merges into LT data trends that have been identified for a few years now. These include the '**heat banding**' of the **northern hemisphere**, as well as the '**new lands**' in the **southern hemisphere** (mostly). Other supporting sets within the ST data accruing now to the **Terra** entity speaks to **large regions** of the **planet** that will become, over the next 10 years, mostly **uninhabited**. This is due to **extremes** of **temperature**, **loss of water** or **access** (due to **floods** repeatedly **destroying infrastructure** and **wearing away mountains** into **plains of mud**), and due to **gasses**. This last set has support within its structure for **methane**, and **volcanic (underground) gases** that will **accumulate** and form '**death atmosphere pools**' in some **areas**. The data sets describe places where the **cost to retrieve bodies** is **too high** to **warrant** the **effort** (a **group of tourists** get **gassed to death**), and where whole (large as in **tens of thousands**) **herds of animals** are **gassed** and the visuals taken by **drone**. In at least one instance to be reported over the upcoming year (maybe into 2017), a **helicopter** and/or **drone** will '**ignite a conflagration**' in a '**pool of unknown methane**' with an '**engine spark**'.

Other reasons within the **Terra** entity for **large scale human population movement** include '**smoke outs**' where **forest fires** produce so much **atmospheric pollution downwind** that even **several hundreds** of **kilometers** away whole **towns** and **cities evacuate** in order to **breathe**. Other areas will be **abandoned** due to the **fires themselves** which are described as **driving** (the **human**) **population** ahead of them over a **multiple day long period**.

Some regions, while not described as being abandoned, are going to find that the human activity levels slow to a crawl as either **atmospheric changes** (too hot to breathe), or **too much pollution** to go out during majority of day, or **earthquakes rumbling** at a **low level** for **weeks** causing **anxiety** and **general disruption** will '**settle in**' over **2016** and into **2017**.

In other regions, most notably near **equatorial** (or within the bounds of the **tropics**) will find that their **weather** takes **new**, and **bizarre forms** such as **ice showers**, and **snow** at **sea level**, as well as very **rapidly rising** (and **heaving, falling**) **sea levels**, and **storms** with **abnormally tall surge strength**, and while not forcing human population to leave, these areas will nonetheless **suffer damage** to such levels as to out pace (**overwhelm**) **local resources**.

The '**processes**' that are driving the **climate** and **weather change** have **passed through**, over these last ten years, a **marker** of sorts and have now entered into the **transition phase completely**. There will be **no returning** to **weather patterns** of **previous decades**, or even **centuries**. The data sets are

forecasting **climate change** as a **multiple decade long process** that has '**taken its first (complete, both feet) step**' on a '**change** (from which) it **does not return**'.

Some of the **changes** indicated to occur will show in **2015**, most **shockingly** in late **Fall** and early **Winter (northern hemisphere)** as **storms** leave **devastating ruins behind** (of **industrial areas**, and **sub divisions/housing**). These **storms** are showing as so **voluminous**, and **ferocious** as to '**fill (Florida sinkholes (and land permeability))**' such that it takes '**weeks to drain**' **post deluge** and then another two or three of these '**air born floods**' appear. The impacts on many **Caribbean island communities** will be quite **severe**, as will the subsequent **isolation** as **generalized communications** are also **devastated**.

In **North America** sub sets of the **Terra** entity, both **earthquakes** and **torrential flooding** are showing as causes for **shifts in habitation patterns** as **bridges, tunnels, power distribution lines** and **centers**, and other '**necessary and vital logistical systems**' are **destroyed or damaged** to the point of being **non-functional**, even if **repairable**. Due to the **impacts of credit freeze and dollar death**, many of what would be '**mere inconveniences**' of a few **days**, turn into '**wide spread outages/disruptions**' that last for **months** and **years**. In a few areas the **infrastructure repairs** are **indicated** to be **impacted** by '**near continuous** (more or less daily) **damage producing**, but **low level earthquakes**'.

As we have had indicated by the recent IDIR successful forecast of '**tunnel damage**' due to **fire**, we have further data sets pointing to '**tunnel problems**' as a wide meme in the **Terra** entity over the next few **16/sixteen years**. According to the cross links from the **Terra** entity to the **SpaceGoatFarts** entity, the **tunnel issues** will also include **underground military installations**. Many of these such forecasts have been in the longer term data for a number of years in slowly growing sets that are now gaining new aspect/attribute sets rapidly.

Markets

Operating with a base understanding that '**free markets**' do not exist within '**regulated/taxed jurisdictions**' and that all '**markets**' involving the US Dollar (**Federal Reserve Note**) are necessarily controlled by **ThePowersThatBe**, we can approach the **Markets** entity data with a discerning eye toward discovery of the unanticipated (excepting in these reports, e.g. '**russian space diamonds**' from SGFs and Terra entities over 5 years back) patterns that may forecast directions of the stumbling zombie beast of Global Markets.

Note there **are 'free markets'** around the planet, but these are all within the '**gray market**' area as viewed from the statist perspective. The closest we come to an open free market with actual price discovery is for **Bitcoin** and other **Alternative crypto-currencies**.

International '**equity**' markets are shown within both ST data and LT data sets as **mirroring** the **1929** experience within the markets that existed at that time. These sets continue to show, as they have over this last year+, that the '**chinese stock markets**' will lead the way to **paper debt conflagration**. The timing extractable from modelspace has been reasonably accurate thus far in 2015 as regards to the **Chinese stock market**, and the data accretion patterns continue to point to **downward momentum**,

but no longer are the modifiers in the category of '**hard first step**' as we had forecast in **November** of **2014** for **June 2015**; rather now we have new attribute/aspect sets that go to the idea of '**stumbling**', and '**reeling**', and '**lurching downward**', as well as '**descent at vomit inducing speed**'. {ed note: let me emphasize once again that any body parts or processes referenced within the data are very powerful forecasting clues as has been determined in our past experience. This is thought to be due to the primal nature of these archetypes.}

The image coming from the linguistics as they flow through modelspace is of a crowd of crying children following a disjointed and stumbling jejune female as she tries to cope with her own internal state as well as the pressing din from around her legs. The data sets are painting **continuing chaos** within the **Chinese markets** through to the last 3(three) weeks of September when the dominant supporting set is headed by the aspect of **coagulation**.

As the **coagulating** meme spreads, the data sets are, and have been since late 2014, reporting that the '**army of blue ants**' aka **ChinaPop** is going to '**scour the planet**' in search of **wealth holding assets**. The first, and primary visible signs of this movement will be an importation boom in **gold, silver, and precious stones**. This last shows for an early bust as the issues of man-made counterfeits as well as **natural discovery chains diluting** the **scarcity** value will rise to general discussion. The data sets are also pointing toward a run on **Bitcoin** (and to far lesser extent, the Alt coins), as **ChinaPop** consumes all hard assets and yet still has **wealth** to **protect** from **governmental currency games**.

As a sub set of the **coagulation** linguistic structure, the '**credit freeze**' language (already manifesting in the strange reality in front of our lying eyes) is forecast to **accelerate** into very rapid growth once the globe gets past August 8, 2015 and the forecast coincident **fracturing explosion** of the **Chinese stocks markets**, and the beginnings of the long run up in **precious metals**. The data sets are pointing to a two fold effect in which the **rupture, disembowelment, disgorging stocks markets** cause a **flight to safety mentality** just at the same time as the safest of assets, **gold and silver**, start into a **major bull market** (at least according to the emotional sums within the current data sets....yes, manipulation is acknowledged).

The **credit freeze language** is supported by **global, sporadic, growing, mold-like** (in its **growth**), **sticky**, and other **supporting** sets going to the idea of a **creeping credit disease**. In these sets the details suggest that the most obvious and telling signs will be the '**channel choking**' as the '**distribution veins**' dry up and reach '**collapse**'. The details include **store shelves** going **empty** and **not** being **restocked** as **no credit** is available to **front** the **purchase** and **transport** of **items** for **resale**. This sub set grows in the accretion patterns in a fairly steady fashion in spite of it containing bespoke references to sporadic in relation to the appearance of the **credit freeze symptoms**. Other such **symptoms** include **unemployment**, rises in the **misery** index of **local populations**, **economic migrations** of the most **mobile segments** of the **populations** (usually younger people but not so in this instance as many millennials simply refuse to move for '**work**' and so the new **diaspora** is their **parents** (and the **reluctant basement dwelling child**)). The **basement dwellers** are a large linguistic part of the **diaspora** as many will provide **moment by moment** (probably moaning) **reportage** on the **experience**.

These near real time reports of the diaspora are indicated to propel a whole **new generation** of '**great**

writers' (hmmm....through suffering?) as well as bring a 'generation (into) hard look (at itself/future)' that is then linked to, later in 2016/2017, an emerging '**counter wave**' to '**officialdom political structures**'.

As modelspace is progressed through the last of the **chaos weeks** into the **coagulation beginning** the **second week** in **September**, 2015, the data accretion patterns are pointing to a confluence of events and forces that will be seemingly upending the **existing social order** (over following years). Of course the forces are and have been in motion for a considerable time, but it will appear from the confluence that this is a '**sudden event**'. The idea arises from the extensively cross linked **Terra** entity, **Markets** entity, **ThePowerThatBe** entity and the **GlobalPop** entity, that a point of what can be described as '**peak silver**' is reached. In this definition, '**peak silver**' according to the data patterns will be a point in which it becomes '**then obvious**' that '**silver coins**' will not be able to be **delivered**, nor **created** for a significant period of time by almost any **officialdom source**. This '**peak silver experience**' comes just as the **ChinaPop** is described as becoming '**physical (hold in my hand) asset hungry**' to a level never seen before and which is driven by the **rapid onset** of **currency** and thus **political instability** sweeping the **planet**, but especially as it is **manifesting** in **China**. The '**peak silver**' experience is further described against a background of the '**freeze up**' and '**deep freeze**' that is **hardening** its way through the **credit markets** during the **coagulation weeks**.

Other symptoms of the '**peak silver**' include **skyrocketing premiums** at **dealers** who then start going **out of business** as their **stock** is rapidly **depleted** and **no replacements**, which had been drawn in by larger **purchase premiums**, **dry up suddenly** as the **depth** of the **crises** in both **precious metals** and **currencies** starts to become more evident.

Shortly before the **silver dis-hording** ceases due to '**panic to own**' the same effect occurs with **gold**, then **platinum** (although not as fast nor as big a rise on **platinum**). The detail sets are indicating that media will be showing **videos** of **too crowded coin stores**, followed by a **stampede** to **jewelry**. It is worth noting that the **gold** and **silver jewelry run** is a solid temporal marker for the shift into the next phase of **currencies collapsing**. The reports on the media about people buying even **2% gold bangles** as '**a something**' in which to **put currency** also is a temporal marker for the enlarging **wave** of **hyperinflation** and **systemic infrastructure breakdowns**. In this instance, as modelspace is progressed through the '**run on jewelry**', the data accretion patterns show several of the **large zombie banks** that will be '**hollowed out**' to the point that **employees** are seen **stripping the facilities** and **walking away** with the **doors left open**.

Both IM and ST data types contain sets pointing to the emergence of the **break-away civilization** as an **economic issue** later in 2015. The accretion patterns suggest that the subject is **derailed** or **obscured** by developments in other areas of the **global economic picture**, but the LT data shows it resurfacing in mid 2016 due to both **political events** and **geo-spatial manifestations**.

The **break-away civilization meme** grows over **2015** and **2016** into a very large point of **contention** within the **USAPop** and **EUPop** (NATO focused sub set) as the **hidden taxation** becomes **apparent** while the **currency** and **infrastructure collapse** gains **momentum**. Many of the **revelations** about the **break-away civilization** are **indicated** to come from **documents liberated** (usa first?) by

food/austerity/currency riots that will '**accidentally spill over**' into '**sensitive document storage areas**'. One of these instances is known to be in **Rome**, and to be **Vatican** related and likely will occur in mid to late **2016**, while another is cited in the **USA** and near/within **Maryland**. This instance maybe either late **2015** or early **2016**. It is a large temporal marker for a number of major memes in both **Markets** entity and the **GlobalPop** entity.

Further impacts of the **break-away civilization** includes longer term data pointing toward a '**meeting of anxious peoples**' in which **representatives** of the '**space resident break-away civilization**' are in talks aimed at **restoring logistical channels**. This meeting is described in such a way as to suggest it is **post-revolution** (against **bankster occupation of earth**), and involves a very active '**new political group**' which is indicated to have risen to **political dominance in several regional areas (north america including mexico, and northern and southern Europe)**. Also described as being in attendance at the meeting are **representatives** from **China** and **AfricaPop**. This last is a new, regional **association** that is describing as being '**self-forming**' over 2016 and 2017. The way the data is laying out, it would appear that the massive earth changes in 2017 and 2018 participate in **shutting down** the last of the **supply chains** to the **break-away civilization**, and this is what prompts a '**mutual aid meeting**'. As an aside, it appears that **live video coverage** is part of the **proceedings** as this is a **de rigueur** part of the '**new peoples ruling group**' in which **transparency** is not a slogan but is a way of life.

The LT data for 2016 has a very large echo in the **March** through **May** period that replicates the **chaos** of these last few weeks of **July** and all of **August** of **2015** as well as the first week of **September**. In that echo the memes are **enlarged**, in some sets, to the **next order of magnitude** in respect to the verbiage that we may expect to see in the various media.

The events of **August, economically**, and at a global level, can be labeled as **chaotic**, and will extend through the first week in **September**. The data sets, both IM, and ST are suggesting that there is a sharp turn at the end of that week that leads the **global economic system** into a period of **coagulation**. This **coagulation** is described further with body parts and processes language going to the idea of a/the **pool of blood rapidly coagulating** into a **still mass**.

The 2016 echo of these events is seemingly describing a generalized markets **shutdown** or **closure**. This includes **banks** as well as **brokers** and other forms of **trading houses** and **clearing houses**. Further there are a number of Markets sub sets with supporting sets containing **governmental interference** and **closure** within those sets. There are deeper supporting sets and detail layers indicating a wave of **depression** in the economic sense that rolls around the planet as the **credit markets seizing up** and **coagulating** in turn reverberates back onto the global financial structure. The **central banks** are showing in the linguistics as being **targeted** both as **institutions** and as **people** within **power structures** as **failures**, and as **incompetent** (and worse). The language in the mainstream press is, through much of the first half of 2016, NOT going to vilify the **central banksters** per se, however after the mid year solstice, the data suggests that '**things change**' in a very substantial manner.

In at least one instance, or country, the data is showing that a '**coup by the people**', or a "peoples'

revolution' will take over the formerly **corporation controlled media**. This event is showing as having been accomplished by mid year such that by the second half of 2016, this newly **freed media** will take on their '**former masters**' with such ferocity as to propel a global awakening at a new level.

It is during this '**new eyes**' movement that the data shows the turning point for **vilification** of **central banks**, the **global warfare** and **debt model**, and **zionism**, and **judaism**. This last is due to both historical patterns of behavior as well as the general ignorance of the majority populations in some regions, however it is worth noting that in at least one instance, the **anti-jewish program** will be the result of **calculated political agendas** with very specific **economic goals**.

The LT data is forecasting great waves of **social change** that will **negatively impact** the **labor markets**, especially in **Europe** (over 2016 – 2021), and then **positively impact** the **labor** and **entrepreneurial growth** of **Africa** in 2018 – 2029. The data sets are accruing in patterns that suggest very **wide spread social unrest** as never before witnessed in **Northern Europe** that is **directly fed** by **cultural pressures** from **immigration** that '**tolerant people**' **thought** they could **absorb**. The data is forecasting a **severe backlash culturally** that will have very **large economic impacts** in several ways.

Not only are **populations** indicated to **shift** in **large scale manner** not seen in Europe since the end of WW2, but also economically as these **populations exit** or are **driven from former** (short term) **homes**. **Businesses** will **change hands**, **labor markets** will **collapse** then be **filled** again (in some cases by **robotics** in about 5 years), **new baby booms** will begin that will bring **economic booms** with them, and other changes **positive** and **negative** within the areas being **vacated en masse** due to the **social discord** and **emerging cultural wars**.

The data sets are further forecasting the **economic impacts** as **large**, now **displaced** once again, **immigrant populations** are on the **move** across the **planet**. In the case of Europe, the **diaspora** there is indicated to be **social** in-cohesion and **economic drain** that causes the large scale shifts while in both the Americas and Asia the shifts are either **climatic** or **geologically prompted**.

The LT data sets are indicating a surprising turn of events as many of the newly **displaced** former **immigrants** are shown to **prefer Africa** to other **destinations**. There are some suggestions within the data that **China adopts** an **official policy** that **supports drawing human talent** to **support** their **ventures** in **Africa**. There are many indications that these **efforts** will be supported by **nations** in **Africa** as well in that they will send '**immigration recruiters**' to the **human diaspora river** to the north to **siphon off talent** with offers of **housing**, **transport**, and **identity papers**.

The **diaspora** in the LT data from **social/cultural backlash** is but one of many **regional events** of a similar nature. As mentioned in the case of the Americas and Asia, much of the **diaspora** motivation derives from **planetary changes**. Both the underlying causes, as well as the diaspora itself will have significant, **region altering economic impacts**.

The ST data is indicating that the **fires**, and **floods** of 2015, especially those to manifest this upcoming Winter (northern hemisphere), so **strain** the **municipal government structures** of **USA** that many will (effectively) **cease to operate**. This will include **city offices shutting down** as **workers** are **unpaid**

(over months), and all manner of **services 'failing'**. This latter includes some **dramatic** (to be seen) **video of flooded streets** (due to both **weather** and **broken piping not to be repaired**), and **self-rescues** both **successful** and **not**, as **no 'first responders'** appear in **developing disaster situations**.

Many of the **western cities** hit by **devastating drought** and then **floods** will be then left **'high and dry'** by their **insurance companies** as those **crumble** under the **load** of **claims** and the **inability** to **gain liquidity** due to the **conditions** of the **currencies** and **'equities' markets** at the time. These **cities** then **experience** the **flood** of **consequences** to **no funds**, and **no credit**, and begin the **process** of **withering** as have **cities** throughout **civilizations** of all **ages** once their **resources** were **depleted**.

Already reaching into **depression levels**, the **international transport** of **goods** is shown within the data as taking yet **another hit** over **2015** through **2017** as the **shipping industry** has to **react** to not only economic conditions, but also to **very wide spread**, and **intense, weather/climate** changes. Data sets are indicating that **ocean currents** will change to the extent that **surface shipping** has to **re-plot** their **routes**. A very dangerous task that will produce an **exceptionally high number** of **ship groundings** over these next 5+ years. These current issues are also indicated to affect **submarines** and military activities and to cause **several collisions** requiring very **extensive repairs** and in at least one instance, to produce video of a **submarine** being **towed home**.

The **economic** impact of **oceanic changes** forecast by the data will be **greater, globally**, than all the **fraud** of the last 20 years by the central banks of both USA and England **combined**. These **oceanic changes** are described as affecting the **lives of all beings on the planet** whether near to the ocean or not. **Weather, climate, coastal shape, sea levels, access to ports, flooded rivers, new deltas, giant mud deposits** are but a few of the supporting sets accruing during processing. In the case of the **mud deposits**, the detail layers are stating that this process is **on-going at this moment**, but we are not yet 'visibly' aware in the sense of media coverage, but that we will soon discover a **major port/river complex** is having **vast quantities** of **underseas mud/silt** put back to the **delta** due to a **shift** in near-by **oceanic currents**. This is to have very **large social**, and **economic impacts** in the **region**, as well as to move **ocean access** several **miles away** as the **delta fills** with **mud**. In the longer term data sets this delta region is a **'new lands'** area.

Both the ST data and the LT data are focusing on **Fall of 2015** as the **shift** into **catastrophic disruption** of the **global digital markets** as various **'markets'** and their **supporting structures** go through **upheaval** and then **attempt** to **reconnect** to the global **infrastructure**.

The **catastrophic markets disruption** supporting sets include language about the **'cessation'** of **gold** and **silver availability** from **dealers**. These sets are tied into LT data that provides a **glimpse** of the **'gold/silver trading world'** of 2018 and beyond. As modelspace is moved forward from **September 2015**, the accretion patterns within the **gold** and **silver** sub sets begin gaining extensive **internal cross links** to LT data within **Markets** entity. These terminating LT sets include language about **barter** with **precious metals**, and **trading coins** for **buildings** and **large ships**. Other sets include **descriptions** of **commercial aircraft** being **sold** for **housing** and **moved** at the cost of **10/ten gold coins** (size not described, not USA, most geographic references are for Italy). The descriptors for the **precious metals social order** that will emerge from the **transitional period** include a very wide range of **valuation** for

the **metals**, and the cause of the **spread** appears to be **entirely local conditions** at the **moment/point** of **exchange**.

Many of the **diaspora** sets within the **GlobalPop** entity are also **cross linked** over to the **Markets** entity LT data sets about the **gold/silver barter economy** that is forecast to develop over these next **20/twenty** years. This could be a description of a '**sound money economy**' working its way out of the corpse of the **bankster occupation** of **humanity**. Many of the sets have very long term associations via generational language and would seem to be referencing events 120+ (one hundred twenty plus) years out.

The data sets in the entire supporting chain for the **gold/silver barter economy** contain sets indicating that **government** (primarily in USA and EU, and at '**national**' levels) will '**wither**' away once the '**USA dollar**' is no longer the **reserve currency** of the **planet**. This is indicated to have occurred visibly by **Fall 2015** as the '**flood of USA bond sales**' hits **markets** for '**any amount offered**'. This interpretation is assuming that it is the continuing **Chinese stock market crash** that had initiated the **process**, and once begun by the **Chinese**, all other large holders of **USA** and **EU** bonds **followed** as well.

The data is describing a **dumping process** that will include **corporation debt** as well as **government debt** being **pushed** into **markets** in **absolute desperation**. Within modelspace there are several clusters of data supporting sets that accrue rapidly over **August** and into **September**, but that have very low visibility sums until much later in 2015. These are apparently the precursors to the **flood of debt paper** later in 2015 and into early 2016.

In early 2016, the **flood language** of the **paper debt (bond) sales** goes into very **large expansion**, and at that time cross links from the **GlobalPop** entity terminate in areas that are explicitly referencing language about '**Federal Reserve dollar failure**' as a '**viable reserve**'. As modelspace is progressed further into 2016, the **Markets** entity focus on '**dollar repatriation**', and '**government roll-over**' jumps to the point of near **total domination** of the entity by mid **Summer (northern hemisphere)** of that year. Temporal markers within both **GlobalPop** and **Markets** indicate that future historians will place the '**death of the dollar as global reserve currency**' to **early 2016** based on the events of mid-year as the dollar **repatriation** jumps to very **high visibility, hyperinflation, and governmental squabbles**, both **state-to-state**, and **state-to-federals**.

SpaceGoatFarts

The **SpaceGoatFarts** entity is usually dominated by '**officially denied**' labels applied to various contexts such as '**space aliens**', **ufo's**, and other areas deemed not polite or politically correct for discussion by **ThePowersThatBe**. However, at the moment the dominant sub set aspect/attribute set is in primary support of the '**unknown**' descriptor. In this descriptor, the subject of the set, that is to say, the context and its detail sets, are actually unknown in the sense of not within the framework of modern (western) science, and culture.

The rise of **unknown** to the dominant supporting set status is associated with the '**sun disease**' set both

in this entity as well as **Terra entity**. The '**sun disease**' set has grown and the growth is dominated by unknown as label to the 'object' of many of the aspect/attributes that are in its description. Clear? The object is unknown, or rather, as yet to be labeled or identified within our lexicon, and yet there are aspect/attributes that are showing up within the data.

The data sets include aspect/attribute sets that include '**strange (illumination)** from the **sun**', and '**strange 'eruptions'** (of **light**) on the **moon** (during an **eclipse upcoming**)', and '**ripples (twisting waves)**' that will '**roll across the sun**' from '**pole to equator**' in a '**diagonal**' line.

There has been a recent rise in the amount of language around the idea of '**alien invasion of earth**' as well as its intensity. With this context being a well known point of mental meme manipulation by **ThePowersThatBe**, such changes are reported, along with details, but without confidence in their prescience. Further detail aspect/attribute sets describe a '**group of jittery government officials**' who are to '**blab/leak (discuss)**' the '**pending invasion**', and the '**latest incoming ship information**' in an '**open microphone**' situation that will '**set tongues wagging and fingers flying**'. The impact of the '**leak**' and subsequent denial are shown continuing for months.

Many of the forecast planetary changes are the direct result of the **expansion** of the **planet** beneath humanity's feet. The data sets are pointing to several '**deep underground military bases**' as being '**moved**' in some places many '**inches**' as a result of the **expansion** of the planet. Further areas within the **SpaceGoatFarts** entity are pointing toward many **underseas bases** as also being **displaced** by **earth movements** at **unexpected depths**. Some of these movements are the result of **spreading ocean basins** and several **cable sets** will be **disrupted** as well as '**military structures**' of an '**unknown**' form.

The **SpaceGoatFarts** entity also contains a large number of cross links over to the **Terra** entity with termination in sets going to the idea of **dramatic weather changes** that will **overwhelm** the **abilities** of **officialdom** within **hours**. The data details contain sets describing **giant weather systems** that come down (to the **east**) from over **western** mountains that will **devastate** the **electrical** system as well as **dry up** and/or **contaminate water systems** for **hundreds** of **miles** around.

A cross linked set within the **Terra** entity that terminates in both the **Markets** entity and the **SpaceGoatFarts** entity contains references to '**new precious metals (alloys)**' discovered in **Canada** as a result of the **contamination** of **drinking waters**. Some **people exploring** the cause of the latter **discover** the former and this sets off something of a **mining boom** in the region as other **explorations** into **exotic metals** begin. This is a visible in the media on-going event by mid 2016, with further **governmental** and **regional confrontations** developing over '**whom owns what (exactly)**' over the course of the subsequent 10 years time. These metals are linked to the Russian space diamonds in older forecasts that have an '**italian (disgraced? Discarded?) scientist**' coming up with a '**key component**' to what will be '**near zero cost, perpetual, useable energy** (as either **electricity** or (**heat/cold**))'.

In many of the supporting sets for the **SpaceGoatFarts** entity, there are terminating cross links from the **Terra** entity. A frequent connection is the amount of unknown in nature, in so far as humans are concerned. As modelspace is progressed through 2015, and the first half of 2016, a number of these

cross links are indicating that '**planetary expansion**' events will be causing **problems** for '**military installations**' both **in**, and **above ground**.

A few of these described incidents are continued growth in older sets such as the '**food riots**' which '**liberate secret documents**' sets from 2007 onward. In the majority of the other instances, new data sets have been added that are referencing newly forecast instances of '**deep underground facilities**' being '**moved** and '**shaken**' to the point that the '**local** (on base/in base) **population**' has to '**suspend activities**' in order to '**assess damage** and **respond**'.

New aspect/attribute sets are growing in support of '**aliens**' and '**public contact**'. This does NOT mean disclosure or **space aliens** walking down the street. Rather the data sets contain language about '**finds (discoveries)**' and '**public contact**' with the '**discoveries**', and other language indicating that the **alien** meme is going to rise up suddenly in the **public consciousness**. An example of the type of imagery coming out of modelspace would be as if we all discovered that the whole north American continent was entirely built on the scale of a very large space fish. It would shock most everyone to imagine their personal relationship to the size of the space fish. For some considerable period of time the emotions involved would propel public discourse. That is the kind of impact the data is suggesting will arise with the '**alien meme**' over this next year though there is nothing in the data about giant fish scales.

Conclusion: Brooms of History

The monad, the individual aware of themselves as themselves, and experiencing their lives as moment by moment challenges, is not usually aware of being swept along with the rest of the dust by the brooms of history. Sweeping impacts of historical trends are, until recently, usually denied the individual excepting rare glimpses provided by a shock from the outside that expand vision and awareness suddenly, and usually in a very frightening manner under extreme circumstances.

Our data sets are suggesting that such extreme circumstances are going to be presented to a very large segment of humanity over these next 12/twelve years. The suggestion from modelspace is that the very frightening manner of awakening is going to bubble up through a large enough segment of the population as to affect life in general. That is to say, stated another way, that more than 10/ten percent of the populace will be self-describing as 'aware', or 'awake (to reality)', or 'on the path (to awareness)' as humanity pulls its weary butt into 2028 and beyond.

This new awareness of the state of awareness is going to 'change everything' as the expression goes. The idea percolates up from the data that decisions made by aware of awareness humans take on a different character, and have much longer lasting effects.

In a very real sense the effects of this new way of thinking will be very much as though the speck of dust can decide which current of air to ride as history sweeps it along. Not a bad thing at all for the

individual dust monad itself.

The effect of the aware of awareness thinking will be that the individual will naturally favor and gravitate toward solutions and choices that are harmonious with the new perspective. The effect of the wave of awareness will be that hundreds of millions of individuals will be favoring the same types of decisions, and thus magnifying both theirs, and others choices.

This is how humanity's feet put are onto a new path....by a single decision making itself known to tens of millions of ordinary human leaders/early adopters repetitiously over years. Tai Chi Chuan at a species level; effortless, relaxed, invincible.

Thus are the brooms of history made, one human straw at a time.
