Meta Arts - Motto, Scenario Planning

Our personal motto here at HPH is becoming ever so more timely by the day....

Je suis un chien qui ronge l'os
En le rongeant, je prends mon repos
Un temps viendra qui n'est pas venu
Que je mordrai qui m'aura mordu

I am a dog who gnaws his bone (universe).
I sit and gnaw (universe) all alone.
A time will come, which is not yet,
When I'll bite him by whom I am bit.

It may be imagined that the [political classes of the USofA-bilderberger] *will* (did on Friday, October 3rd) 'pass' a bailout for their friends within the various self-serving special interest groups. Such an action can be expected to have a momentary 'up tick' effect, followed by a real emotional 'kick' as reality intrudes into the thinking of the populace, and everyone asks 'ok, now what?'. The data suggests that passage or not is immaterial to how the future proceeds. At a fundamental level, it is obvious that the thinking that got us into this mess cannot be the thinking that will extract us from

the problems. Further, again at a meta arts level, it is not possible to 'cure' a sick economy by inducing more of what made it sick, which is to say, [privileged access to public coffers] and [printing more worthless dollars]. The actual [economy] of the USofA is ill. The steps taken to [bailout] the [criminals] at the top of the [paper debt pyramid] will do [nothing] to affect the underlying dis-ease within the broader economy. We still suspect that Tuesday (or Wednesday...our timing is frequently off by a day or so) will be altered by the [next] in the [economic crises] indicated to continue unabated in a river-like [flow] through to March of 2009 (see Markets entity).

Of course, we could be 100/one-hundred percent wrong. Release language is neither good nor bad, it is merely that language which expresses the emotions and takes the tensions out of the body (relative to any particular situation). So we could be looking at this ass backwards, and just perhaps, on Tuesday morning, the [bailout] is implemented flawlessly, or appears that it will be so, and the populace will willingly fall in lock step behind their political leaders/elite, and further the banking system will instantly unlock billions of dollars, and the economy will be off on a 6/six month (more or less) tear/rally of unbelievable proportions as we all gladly sing the praises of the Bush Administration for 'saving our asses' from our 'own greed and stupidity'. Indeed, Tuesday morning we can all wake up and realize how incredibly lucky we are to have such far sighted and benevolent leaders within the political elite, and that we should all vote all the incumbents back into power and insist that the Bushies stay another 4 years. The rally will continue unabated into Spring of 2009, and the economy of the USofA will come roaring back as our intrepid military defeats all enemies and comes home in 'honor' and 'glory' to parades down every 'Main street' in the nation.

Given the manifesting circumstances, only 1/one of the 2/two scenarios above would seem to fit...eh?

Populace/USofA- Live-able Tonsu, Squatter(s) Rule(s)

A curious, and probably nasty development has taken place within the data sets. This preamble is being written due to the conjunction of 2/two disparate threads in reality combining to cause a very strange Wednesday here at HPH. The data sets are pointing toward a conclusion, which is now being echoed within the conscious

worries, and rumors on the net. Not only are we picking up the archetypes, *BUT* also are now receiving multiple (15/fifteen and counting) 'insider tips'. These are all about the [banking business shutdown(s)] which are indicated both in the immediacy data, *and* within the range of the rumor-stream, as taking place over this coming week and in through October. At the moment, both the data and the 'insider tips' are pointing toward a [banking business shutdown] at a pretty much *all* of [western world]. Bearing in mind the unreliability of the rumor stream, *and* that our data *always* errs on the side of the extreme state of things, this may not be quite as bad as we are all now imagining.

According to both the rumor stream, *and* some of the insider tips, the banks will [holiday] within the next 2/two weeks. According to our data, the most likely first occurrence of the [stressors within the system indicating failure] will become [visible] on October 7th. The duration of the [hiatus] in the [money/currency] business will be [expected/desired] to be [shuttered] for only a [few days], *but*, it will, as they say, [go horribly pear shaped] as may be expected when corporations and politicians try to alter reality. The data sets are indicating that the [unexpected consequences] of the [closing of the business] will be [completely/totally missed/overlooked] by the [petty people/politicians] and the [banksters].

Please remember that we have had data sets for the [loss of THE currency] for well over 2/two years. We have also had the month of October as being especially emotionally 'hot' for over a year.

And that is the immediacy values.

When we get into the shorter term value sets, we find that the dominate aspect/attribute sets are going toward the image of [living/residing in boxes]. This aspect/attribute set is a very full set, and is what we call 'correct and complete' within our working process, so we give a lot of credence to its forecast. This set is taking the place of the [homeless] sub set which has been so robust over this past year. The data sets are presenting the idea that [homelessness] as a concept is going to transform over these next 2/two months. The [transformation] will include a whole lot more [visibility] as well as a much larger percentage of the global populace becoming [officially homeless]. This will create huge stressors within the social order, but the good news is that we are transiting from a state of [wandering homeless] to [residing in boxes]. Now while this may not sound much of an improvement,

the nature of the data suggests that several positive changes are taking place. The first will be the [populace] in the form of the [social commentary] coming from the [press] and the global media stream will now be according a larger measure of respect for those humans trapped in this situation. The bad news is that this comes about largely due to the sheer size of the populace which will be officially [homeless]. Further issues are being forecast within the data sets which go to the idea of [shanty towns] or what we are calling [live-able [tansu](#)] which will be [sprouting] over the last of Fall and into Winter. We note that this is actually a positive change of state in that the [residents] of the [live-able tansu] will be accorded status within the [social order] that they do not possess now, *and* it is only a short term situation.

The longer term data sets are suggesting that the next stage of evolution within the [homeless populace] which the data describes as [tens of millions] will be toward a state of [squatting] with aspect/attributes of [militant] and [fierce] as modifiers. This sub set starts moving into place as the modelspace is progressed into late November of 2008, and grows all through 2009. The [squatters] will present several layers of problems for ThePowersThatBe. First among these will be the [militancy] within the [BushBurgs] that will present a decentralized, and [unmonitored], and [uncontrollable] source for the [active citizen movement] which is the precursor to the [revolution] breaking out into [actions] in 2009.

The aspect/attribute sets which describe the [squatters] and the [building of Bushvilles] also includes lots of language reporting the coming [collisions/clashes] with [authorities/officialdom]. In several places within the data sets the aspects are describing some very intense and [emotionally shocking] incidents that in turn will lead to [rebellion] within the [squatters camps] and actual [running battles] with [mercenaries (BlackWater prominently featured here)] and other [law enforcement stooges] of TPTB. What is heartening are data sets going to [routs] and [crushing defeats] for the [mercenaries]. As an aside, many of the [mercenary masters] will soon come to respect the [hidden relationships] between those who [hire] the [mercenaries], and their [mercenary employees]. This is going to the idea that many of the [mercenaries] will [turn] and [participate] in the [rebellion/revolution].

As a separate thread of support under [squatters], there are other descriptors going to the idea that [groups/families] will simply [move into/take over/squat] in [vacant housing]. The data sets show

that this is both a separate thread of activity, but also is an outgrowth of the [bushville battles] of 2009. In the former, the [squatters] will likely be in less concentrated numbers, and will be [moving] around, and will just, out of desperation, and the [collapse of the social contract], move into what ever empty McMansion they can find. The data also indicates that this will become an [acceptable] social phenomena over 2009 and into 2010. In the case of the latter sub set, the idea is coming from the data that following several months of increasing [battles] and [skirmishes] between [minions of TPTB] and [squatters], the TPTB will [retreat], both [bloody] and [beaten], and thereafter many in the [Shrubburbs/shantytowns] will begin to [move out] and [take up/take over] the [nearby empty houses].

As an outgrowth of the [squatters victories] in many parts of the USofA, the data sets are starting to highlight a new group of [personalities] who will be [rising to prominence] in 2009, and 2010. Many of these women and men will be the leaders of [am rev 2/american revolution 2]. As these personalities are coming up in [visibility], the data sets are pointing to the [disappearances] and the [killings/assassinations] of TPTB as creating very large amounts of [internal turmoil] and [power vacuums] within ThePowersThatBe.

What makes these new personalities significant within modelspace is that they will [collectively] start a process of forming the [new american social contract]. This work will start in late 2009, and will come as a result of the very large impact of [secrets revealed] which is described as [stripping] or [peeling] the [secrets] from the [shadow government]. Further we have repeated aspect/attribute sets going to the idea of [secrets revealed] such that [exposure] comes to the [crimes] of the [elite] going back [generations]. This will precipitate a situation that has some similarities to [revolutions] of the past. Of course, we will put an american face on the coming expression of these 'old time linguistics' such as [re-education facilities], and [show trials]. In the case of the former, these [facilities] are described as being both [huge] and [running 24/twenty-four hours a day]. In many cases the local version will be the [cinplex] where the [crimes/horrors/atrocities] committed by TPTB and their [masters] will be on [constant display]. As supporting sets to the [re-education facilities] there are aspect/attributes indicating a whole new 'industry' in producing [videos] and other material for the [facilities]. This material includes the [biographies] of [the powerful/elite/super rich/TPTB] that will provide a [complete picture] of their [crimes against the

species and the planet]. Further the data indicates that the [facilities] will be [attended by tens of millions] as the [revolution] proceeds. These [camps], to be absolutely clear, are NOT any kind or form of 'concentration camp'. There are no descriptors for these general [reeducation facilities] in any sense being [torture] camps, that sort of thing. There are many descriptors for the [show trials] of the [elite] and their [minions], and some of those have very negative language associated, but in general the [populace] is not being persecuted by TPTB, rather the reverse. The [show trials] will include many [public executions] of those deemed [too corrupt] and [too damaged] and [too dangerous] to be granted the [privilege of re-education], but probably not as many as would be the case without the preceding periods of the [disappearances] and the [revolution (Am Rev 2)]. Much of this language is indicated to emerge over very late 2009, and through 2010.

Markets - 'Dis Con Next, Disaster Neckless

Existing for a while longer, the Markets entity is indicating that the [balance of (economic) power] shifts next week. The data sets accruing within the immediacy sets are overwhelming expressions of extreme building tension language. The [fear] is not only palpable, *and* bespoke (e.g. -people actually using the word 'fear' in conscious conversations about the immediate future), but also is now [visible] on the [faces featured] in the [main stream media (MSM)]. That this language had been forecast for this time for well over a year now, does not diminish the very powerful reactions being experienced. This is a very propitious time for us to be collecting data sets, and we have a wealth of new associations with which we can (hopefully find time to) fine tune the lexicon.

Within the archetypes developed or supported by the processing of the most recent of immediacy values are aspects/attributes for bespoke [risk], and [speculation]. These aspect/attribute sets are very heavily supported with negative/negating values and associations such as [not], [no], [unacceptable], [refused], [rejected], and other language that explicitly refers to a [negative view of risk and speculation]. These aspects/attribute sets are sub sets of the [stocks/bonds/paper debt markets] sub set of the Markets entity. This aspect/attribute set has longer term values in support such that the [negation] components are still in place some 19/nineteen months from now. As the Markets entity is progressed

from the end of September of 2008 through to June of 2010, the [don't speculate] and [negative view of risk] are still in place. As the Markets entity crosses the Spring equinox of 2009, the data sets start to acquire support from aspects going to [recalibrating], and [resetting], and [re-engineering], all of which and more are associated with the [usfoa currency/dollar]. This in turn is a huge supporting set for the [political structures] sub set. The idea coming across from the detail layers of the supporting aspect/attributes is that the late Spring of 2009 has [reorganization] and [creation (of) new social/political structures] as the lead in to the Summer of Hell. The *ONLY* positive values coming out of the Markets entity across the whole of the rest of this year and all of 2009 are arising from the [revolution] supported sets for [destruction (of old institutions/methods), and re-construction]. Other supporting emotional value sets are pointing toward the [challenges] of the [new world/new year] as being of an [exciting] and [stimulating] nature for at least some sub set of the [populace]. This is referenced within the Markets entity as a small, but building [social trend] which is in opposition to the [dying of the old guard] emotive sets dominating the [markets] over that period. What the Markets entity is describing is the [youth/revolution] meme rising to [visibility] as a [non-moneyed/non-wealth oriented] response to the [vacuum] left as the [dollar] dies and along with it the entire [speculative papers business/arena].

Note that nothing happens in a day, and all events are merely a millisecond away from becoming history, and being replaced by yet more events, so do not expect that [Wall Street] will die all in a single day. The data sets are suggesting that this is a [watershed state change] which will take over 11/eleven months to manifest into a mature situation. The descriptor sets seemingly are portraying a period in which the USofA will be transitioning via an [internal social transformation] into almost an [extreme rejection] of the [greed based economy] of the past 50/fifty plus years here in the USofA-Bilderberger. As a point of note, as the [transformation] of the [usofa populace and economy] progresses, the [bilderberger] crowd becomes a [spent force] with many of its [attendees/members] being on the receiving end of [warrants of arrest] issued by [revolutionary councils]. In many ways the language is suggesting the onset of a period of [extremes] {ed note: as had been forecast since 2005} language entering the [body politic of the populace]. This is a to-be-expected response to the many decades of increasing [social] and [political pressures] brought to bear on the [populace], *and* as a natural outgrowth of

the [self-educational movement] which has already taken hold of the [populace] due to the rise of the internet as primary information source. The years of 2009 and 2010 as [transformation], and [revolution] expressions of the social dynamic of the populace of the USofA will/have actually begun in the Fall of 2008.

The Markets entity, via cross links over to the Press entity and to the Populace/USofA entity, is indicating that as the [extreme imbalance] within the [dollar based debt markets] becomes more [visible], this causes the [awakening (to) potentials/realities] of very large numbers of previously [cloaked/blinded minds] within the [populace]. As this [awakening] unfolds, and is even [forced] into [consciousness] by the manifesting circumstances of the [dollar/currency death], the [populace] is shown as increasingly shifting into [extreme states] of [emotional turmoil] and [reality shock] which have been previously forecast as producing the [ambulatory crazies] or the [cognitive dissonance wounded]. This is but half of the total reaction in that the other side of the emotional range includes those who [awaken] to their previous state of [dollar/debt slavery] in such a powerful way that they are [shifted] to the other extreme of [acceptance/openness] within their view of universe. This sub set of the populace is indicated to react with the [rabid ferocity] of the [newly converted/awakened]. It is a natural response to the situation, but even so it will produce [extremes of violence] as the [decades of deceit and slavery] are worked out of the collective social/emotional consciousness.

At both the meta data level, and within the Markets entity, the current thrashing around (Sept/October of 2008) within both the [financial] and the [political] classes within the [populace/usofa], are shown to [produce NO precautions], and thus the dominant aspect/attribute set for the [usofa economy] sub set within the Markets entity for October and beyond is easily encapsulated as [endless string of disasters]. This [endless string of disasters] is further supported by the aspect/attribute of [compounding], as in the 'compounding of interest', and in its turn the aspect/attribute set is supported by [drunken (to death) corpses fall over]. This sub set within the Markets entity is a primary supporting set for the [revolution] meme both within the Populace/USofA entity, and in the larger super set of GlobalPop. The data sets are clearly indicating that the results of the [fall crashing down (of the dead drunken corpses)] will act as the [initiating emotional wave] that boosts the [creation/emergence (of the) planetary populace movement]. The aspect/attribute sets in support of the [endless

string of disasters] are replete with examples of the [removing of the heads/ceo's] from many differing [organizations] including NGO's, and [charities] as the [populace] thrashes around trying to [lay blame], and [extract revenge]. Much of this is merely the [frothing] necessary as a part of the [internalization/acceptance] of the [sudden shift (into) poverty], but some of it is indicated to [spill out] into [anger/rage] that in turn *will* produce instances of [extreme behavior/response] including [assaults] that will leave some [organizations], including [government entities] in a [decapitated state] as the [positions (of) titular head/ceo] are [left begging].

Terra - Too Quiet

Previously in ALTA reports from 2007, and this year, we have had the imagery of [dancing mountains] showing up for late 2008 and into 2009. These were describing 2/two separated episodes of [dancing mountains], and the first we have pegged to December 10th through the 12th, and have tied it to language suggesting a major earthquake with [destructive and damaging results]. In support of this idea we now are showing 2/two separate episodes of [quiet mountain], or [unusually passive/inactive geospatial features]. These sets are separate, with the first indicated to emerge in late October, and to extend through November. The idea rising up from the supporting layers is a [quiescence] of some [magnitude] which itself become [disturbing to the harmony/consciousness] just before [rupturing] into [dancing mountains]. The lexical sets for the [rupture of too quiet] begins to appear within modelspace in early December and rises very rapidly to a peak on December 12th. Be advised that our geographic references are very worthless, and mostly are wrong. So we have no clear understanding where these episodes will play out. As an instance, the earthquake which hit Hawai'i a few years back was initially registered as a 6.3, and we had successfully forecast that language. But, we had the earthquake for the 50th parallel in northern latitude, and thus were incorrect as it was actually the [50th state]. So while we have confidence in the forecast strength of this [destructive] and [damaging] earthquake, we do not have confidence in our forecast that the PNW of the USofA will be [near central] to its occurrence. And there are enough indications of [twinning] to suggest that an 'antipodal' issue may be emerging with 2/two earthquakes on opposite sides of the planet, *OR* in opposite

hemispheres. So, it makes sense to review the engineering in your life with an eye toward correcting those things that can be addressed now, i.e. 'tie shit down', and provisions made for 'worse case scenarios' in your local environs.

If correct in our interpretation, the [visibility] of the [too quiet] meme referencing the [planet] will come out just ahead of several very large [episodes]. The [dancing mountains] sub set is not only referring to [earthquakes], but now includes several supporting sets for [ash] and [volcanic activity]. These are further reinforced by cross links over to the GlobalPop were they terminate in sub sets indicating [problems for humans and animals] as a result of [tides of ash] floating around.

Press - October Surprise...surprise...surprise

The Press entity is an odd collection of [corporate], [media], and [bilderberger/TPTB] contexts. The entity is small, and in comparison to the others within modelspace, does not change much, therefore we rarely dive into it. Recently there have been some very fundamental changes within the Press entity which are now causing [separation], and [pullback/retreat] to rise to the dominating positions for aspect/attributes within the primary entity descriptor sets. These supporting aspect/attributes are rising rapidly, and are very robustly supported. Again, not something that is usual to this entity. The detail layers place these rising aspects under the influence of the [revolution] meta data layer, and in the direct support chain for the [duality] meta data layer. In both cases, the aspect/attributes are providing both increasing emotional sums in support, and increasing quantity of supporting aspect/attribute sets.

The detail layers are seemingly suggesting that [revolution] against the [corporate masters] within the Press entity is at a very high level, much higher than in previous years. The accretion patterns also are suggesting that the recent Israeli [mistake] in Georgia is to be [paying dividends] to [certain members] of the [independent press] very soon as [documents] and [prepared videos] will be [released]. This is a *HUGE* component of the [revolution] being fed by [secrets revealed] forecast that we have had for the last year and a half. These pending {ed note: very damn soon} [releases] will be the 'gift that keeps on giving' as the data sets within the [separation] indicate that [large numbers] of [slaves of TPTB] will

be able to be [freed] along with the [release] of that [information which binds them]. These [defectors] will in their turn [ignite] a [firestorm] of further [secrets revealed] which will then further increase the emotional pressures on the [populace, global and USofA] in their inexorable climb into [revolution].

As modelspace is progressed past the early days of December, and more toward the solstice, a linguistic and temporal echo of the [press consternation] and [verbal constipation] which was (will be) first seen in the USofA in late November, returns once again, but in a much [expanded] form. The accretion patterns are pointing to both [volumes/books/videos] being released in a parallel stream of [secrets revealed], and to [gauffs/leaks] on [live teevee]. The data sets are further accruing under [real speak] or [facts (inadvertently) revealed]. The aspect/attribute sets indicate that a [prominent face] within the global mediastream will [turn/revolve/rotate] a particular [position] which provides an [opening] for a single [question]. The response will [stun] all of the [reporters] in the [room], *and* will cause a *HUGE* sensation on the internet {ed note: likely on captured video}. This [captured secrets revealed] is indicated to be so [wildly] emotively affective that it goes [viral] so fast, and so pervasively as to become the [standard] by which [viral] will be measured in the future. From the scanty clues we have, it would appear that the [secrets revealed] will come from a very very deep insider. There are some indication that this [personality] leaks the information as a result of their own, *sub-conscious* motives rather than as a conscious [whistle blower]. There are further indications that this person will later be found to be [suicided].

GlobalPop - Gangsta's

The data sets continue to grow under the aspect/attribute sets in support of the [israeli mistake]. While we have already seen the appearance of close to 93/ninety-three per cent of the initial language forecast from the first appearance of this set, we are now (apparently) in the pause before [further storm]. The data sets are moving the whole of the [israeli mistake] sub set forward in time, and shifting it within the totality of the GlobalPop entity. This last may be significant as it is causing separations within the very extensive cross links between the [israeli] sub set in GlobalPop and the various termination/origination points within the Populace/USofA entity. Further the shifting of the [israeli] sub set is now altering the primary support for the [israeli mistake]. The rising to primary supporting aspect/attribute set is [doubled

trouble]. The supporting sets for this are also reflecting the [double] aspect set at a macro level in that the supporting sets themselves are doubled within the sub set. This is probably not a good sign.

The detail layers of the [israeli mistake] are now being populated by aspect/attributes going to the idea of a [branding] of [israel] as a [criminal state] which will emerge over the course of this Fall within the global media stream. This [branding] will come about due to an [influx] of [criminal refugees/felons]. Apparently these fellows are more versions of the 'deposed russian oligarchs', but from a variety of countries. These *may* be instances of some form of [currency piracy]. The data sets are not that specific. The idea coming up from the detail layers are of some very very powerful people being forced to [seek refuge] within [israel]. The problems for [israel] stem from the [warm welcome] which is provided to these individuals, *and* its perception within the global medistream as [criminal] itself, or at least as [accomplices after the fact]. There are a number of pointers suggesting that somehow these individuals will be perceived as [global criminals]. It is this sub set which starts the [active] phase of the previously forecast [pariah state] meme indicated to [overtake] or [blanket/cover] Israel in 2009, and by extension to [brand] *all* [israelis] as [members of a criminal gang].

The data sets are not ambiguous about this sub set. The forecast is that these individuals will be [tainting] all [israelis] due to the perception that they [stole] from the [whole of the planetary populace]. This sub set is *the* key item in the progression of the events in Fall and Winter of 2009 into the Summer of Hell in 2009. As modelspace is progressed through Spring of 2009, the data sets turn very [grim] relative to [israel] such that there will be a [global boycott] of [all things israeli]. As an aside, this will combine with the already [soul crushing poverty] afflicting most of the formerly 'first/developed world' nations into a [global meme] of the [rejection of jewelry/diamonds]. This will turn into a point of [pride] in many cultures, and as may be expected, will be most extreme in those countries formerly heavily involved in the [diamond trades]. Yes, the [poverty] will be a very large contributor to this, but the [social meme] will also run very deep and is indicated to have huge [peer pressure] components that drive it deep into the global psyche. Also attached to this sub set laterally are several indicating that the [global boycott] will be [policed] in a [neighbor reinforcing neighbor] manner. The [global boycott] is indicated to be so effective that a significant portion of the [israeli

populace] will [consider fleeing] the country, and some smaller sub set will actually do so. Within this sub set are indications that some of the very top [press controllers] will find that they are [reduced to] an [israeli passport] as moves begin to [strip citizenship] from them in several countries.

The [israeli mistake] supporting sets are now accruing either under the influence of, or in direct support of the [secrets revealed] meta data layer. We note that the [israeli mistake] sub set first appeared nearly 2/two years ago within the data, and as such falls under the Ure postulate where we suspect that the longer the distance between the appearance of the circumstances within the data and its actual manifestation in developing reality, the greater the duration and intensity of impact on the affected populace. This promises to be a real humdinger with ice cream and toppings. There are also some number of cross links over to the SpaceGoatFarts entity where they terminate in the [contact] sub set. No details on this layer yet.

Conclusion - ALTA 709 - Part Four :- Omens, Good News

At all of the levels within the Populace/USofA entity there are archetypes developing for [disaster], either directly held, internally cross linked, externally cross linked, or through association back to the lexicon. The [omens, signs, portents] sub set, which we here at HPH employ as a proxy for [recognition of complex patterns at a pre/sub conscious level] are waaay the hell up in both summation of intensity values, and the duration values. And the sub set of [omens/pattern recognition] takes a huge jump up in emotional sums with the shift into the release language over this next week.

The indications at all levels of the Populace/USofA entity are for a [continuing disaster] feeling affecting the [populace] at large with a [general malaise] as [disaster] after [disaster] heaps [burdens] and in turn [exposes old wounds/wrongs] for [cogitation] and [digestion]. The detail layers within the entity read as though directly cut from some epic novel (probably Russian) about the [suffering] of [great numbers] of [people] as they [come to grips/digest/integrate] their [destiny] with karma.

The data sets indicate that in spite of the TPTB performing [rituals] and [incantations/praying], the [worship of money/desire/lust] is

about to [pay (its karmic) dividend] here in the USofA. The data sets bring the [money crash] and other [fiscal/financial disasters] right to the [heart] of the Populace/USofA entity for a round of [national soul/identity reconstruction] that will produce some very astounding results. Of course, this is to be a [hardening by way of fire/pain]. But as with all [cathartic experiences], the developing string of [disasters] *just* ahead will provide, for those who come through to the other side, a sense of [rebirth] and [new possibilities].

The really good news is that with the actual plunge into the [disasters] and the months of [release language], the [worry] will at least be gone. Once you are [burned], the anticipatory stressors are relieved. Some consolation, eh?

The last bit of good news here in the northern hemisphere is that it is now pumpkin/squash pie season. Soon to be followed by a 'holiday season' stranger than any of us could have imagined...

but now, off to pie.

###

We anticipate posting Part Five of the ALTA 709 series late on Saturday, October 11, 2008. As we are shifting into release language this week, and the servers are still in data gathering mode for this very unique opportunity, the extra work for Igor and I may push back next weeks posting to Sunday, the 12th. We will send out an advisory if this should be the case.
