

ALTA 1008 - Part Two

Asymmetric Language Trend Analysis Intelligence Report

'Changes in language precede changes in behavior.'

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

01.05.2008

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in *italicized bold green*, and *red* when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 27.991 million reads of the 1008 series.

Markets - Hari Kari, Big Steaming Lumps,3/Three Way Fight

It cannot be avoided any longer, that is, the death of the [dollar]. The meme has been very clear within our work for a number of years, and the [manifestation] of those prior predictions is now occurring. The recent records set for gold and oil testify to our position within the time-stream; we are at the death of the dollar.

No longer merely hovering at the 'beginning of the end', we have now moved into the [active] phase of the [dollar demise]. The data is quite clear that [activity] will be a [compounding] problem for the [speculator/investor] as well as the [duped/investor]. In both cases the [thepowerthatbe/banksters/globalcabal] will the [enemy], but also in both cases, the [activity] that each group generates as a response to [manifesting circumstances] in January will exacerbate the [dollar slide]. While the aspect/attribute sets show that these [individual speculators/investors] will contribute [frequency] to the [currency impacts], it will be the [derivative debts] which will increase the [amplitude] of the [waves of defaults] rolling around the financial world.

As the Markets entity is progressed through [winter], and as it passes January 23rd, the largest gain is in the aspect/attribute set for [disembowelment]. A curious aspect/attribute, this [disembowelment] is supported by other, human body part descriptor sets. When such body part/processes end up in the aspect/attribute sets, we have noted a tendency on part of universe to freely copy our linguistic analysis when manifesting reality. So we do pay extra attention to these very fundamental archetypes when they break through in the processing. Now we have Markets entity developing a late January/early February sub set around [disembowelment], with some of the support going to the idea of a [ritual] being involved. A quick examination of the other supporting aspect/attribute sets does *not* reveal any particular personality likely to be the subject of the [ritual disembowelment], so we must reluctantly conclude that the data sets are forecasting a more general form of [disembowelment]. And, as the data sets are explored further, this is indeed the case. The references are going to the [gutting/cleaning/disembowelment] of the [financial] industry. There are also dishonorable mentions for [military/defense], and [pharmaceuticals] as also being [guttled] and [cleaned] like a fresh caught trout being readied for the frying pan.

The [ritual disembowelment] of the [markets] begins as February starts off. The [january damages (from) extreme winds] and [flooding] as indicated by the cross links over to the Terra entity also pressure the [economic] sub set. The data sets are pointing toward [job loss/unemployment], as well as [infrastructure damage] as twin memes with high [visibility] factors for this time.

Also rising to the surface of the teevee spew late in [winter] is the return of the [unauditable/uncountable] story. This sub set is shown as affecting the [political process] and is impacting of at least [3/three] of the current crop of candidates. The impact may include multiple layers of [resignations], both within the [political infrastructure] as well as [commercial banking interests]. This [unauditable] story also

has cross links over to the [military, usofa], and further, within the directly held Markets data sub sets now has accrued longer term values indicating that the [effects] of the [unauditable] on the [military, usofa] will persist from about the March equinox, 2008, all the way out through the equinox of 2009. The rising aspect/attributes in support of this sub set of [military industrial/ defense cabal] are led by [change], [secrets revealed], [space goat farts (aka - official denial/active denial/fatal denial)], [stimulation], [surprise], [unexpected (forces/results)], and [sudden/rapid changes (in) direction]. (See Populace/USofA below).

As the Markets entity is progressed through [winter], the immediacy data sets, as well as the shorter term values both have a rising aspect/attribute set which we have labeled as [big steaming lumps]....the [of shit] is implied. Specifically, the data sets are suggesting that before the Spring equinox there will be the [grandest collapse] ever of a financial system as the [derivatives mountain melts (down)]. The shorter term, and immediacy values producing this area are chock full of associated longer term values being brought in via the [duration] and [intensity] fields. These longer term sets are distinctly [bad] in scope, and contain repeated supporting aspects/attributes for [multiple generations] of impacts from these [big steaming lumps]. The immediacy data begins to accrue to the Markets entity as soon as modelspace is progressed, while the shorter term values jump in to the situation with noticeable strength around the January 24th turn into the next building emotional tension phase. See chart below.

As the Markets entity is moved through the last of January and into February, the [big steaming lumps of derivative shit] laying around the [markets] world cause many of the [weak willed], and the [duped] to [desire egress/want out]. This component of the aspect/attributes in support of the [derivatives crap out] points toward [energy crises] within the USofA in particular, as well as the juxtaposition of (by then) recent [natural disasters], as providing the [pressure/weight/leans] of [collapse] to a large segment of the [banking system]. The [natural disasters] have been, and will continue to pressure the [insurance industry/cabal] such that even though they are shown [contesting/fighting] large numbers of claims, they are nonetheless, showing as a [big draw/large hole/drain] for the [currency system] in total. Further pressures on 'liquidity' will also come from the [health care] world, with specific and early focus on the [pharmaceutical manufacturers]. Conjoined to the January/February [disease/pandemic] memes manifesting, noting also that they were long forecast here in previous ALTA series, the [currency crush] component of the developing Bush Bust is forecast as forcing [drastic measures/changes] on the [pharmaceutical industries] globally.

On top of these considerations, that is [big steaming lumps], [bank problems], [health care collapse], there are indications within the shorter term value sets that [civil servants] in many countries around the world, but specifically within the Anglo/American countries, will face [dire] and [trying/challenging] times. The issues for them will be the [ramping/lifting/accelerating] of the [lies machine] to a level of [blatant illegality], *just* as [hyper inflation], [deflation], and [currency collapse] remove nearly the *last* incentive to continue showing

up at their work. We note that it is **nearly** the last incentive, as there is a remaining value in [government employment] even when the government is insolvent and can no longer pay out salaries. This last value in such work is [pure power]. Curiously, the forces at work within this sub set of the general population will be acting as [self organizing/selecting collective] during this year as the [strains] of the [dollar death] hit the [civil service life]. We further note that many of the [participants] and [victims] of the first [acts of revolt] within the [class struggle] sub set within Populace/USofA will come from the [civil service class]; further we note that these areas of Markets are cross linked extensively over to the Populace/USofA entity providing a very large segment of that entity's emotional tension values for this time.

While on the subject of emotional tension values, it is worth noting yet again that on or about January 24th, the current release language period ends and goes into a building language period. At this point of the modelspace, and continuing for a number of months into [spring], the [derivatives] context set gains supporting sets for [repeated failure(s) (to) cure/fix]. This is in its turn supported by cross links over to the [dollar] area, and the [politics/political elite] sub sets, where we find terminating aspect/attribute sets suggesting that [dollar inflation] will [jump/leap] with [each] of the [repeated failures]. While this lexical set persists for a number of months of modelspace movement, it is **not** persistent in time that long, rather it has a [brief] and [violent] [flash] of a [visibility] sum, and then a long term, slowly fading impact.

As the [derivatives lumps] lexical set grows, it acquires a detail layer showing that a [3/three way fight/contention] around [derivatives payouts/equalizations] will emerge, probably late in February. This [3/three way fight] is at a [supra national level], and is itself supported by aspect/attribute sets for a general [central bank malaise/disease]. This [disease of money] meme persists through 2008, and gains emotional strength as the [summer] nears, and matures.

Yet another sub set of support for the [derivative lumps littering economic landscape] meme includes aspects/attributes for [political process], and specific pointers via cross links to the Populace/USofA. The supporting layers in Markets entity show that [3/three political surprises] will result from, or occur near the [manifestation] of the [derivatives steaming lumps]. The imagery coming across is of a [compounding] and [complex] set of circumstances which will see [3/three] of the [major candidates] opt out of further campaigning. The [3/three surprises] also includes support from aspect/attributes for [3/three guests/newly arrived] who will themselves further upset the whole of the [election process]. As this area is heavily supported by [death of dollar] meme links, as well as directly held sub sets, the implication is that the [guests] may well be something such as [collapse of derivatives, dollar death, central bank instability]. The [guests] are shown as [invoking/causing] the [loss of blood] by their mere presence. In this case it may well be that the [loss of blood] should be interpreted as [weakness] in the face of such adverse economic circumstances. After all, no fun in being in charge of the public purse of a bankrupt economy.

Also during the January through February [economic crises], the cross links over to the Bushista entity are pointing to yet-another-round of [madness] from the [fading king]. In this case, due to a [slip up/error] of **whatever** cause, the [rantings], and [drooling madness] will be very [visible] indeed.

In general the Markets entity is pointing toward a period of [split views] of the [world/universe]. These include the [abject poverty], and [deepening recession] already influencing the lower 90/ninety percent of the [populace, usofa], and opposing this is the [disconnected view] of [every (economic) ill is fixable]. The cognitive dissonance created by these opposing views will be manifesting over the course of [winter]. The data sets suggest that the [happy talk] will diminish rapidly as the economic [reversal] and [dollar death] continue. For the [populace/usofa], the immediate impacts will be [encounters with scarcity] and [escalating prices]. These are parts of the same [duality] meta data layer influence manifesting now within the economy of the country. Food prices, as well as the costs of **any** commodity which is required for daily life, can be expected to rise steeply. This will include [energy], in all forms, but will specifically exclude any form of [shelter]. It does include [precious metals] which will benefit from a real [resurgence] of [public notice].

The [housing crisis] will rapidly change into a more visible sign of the Bush Bust in very early [spring]. After a brutal [winter] of [unexpected expenses] being compounded by [weather damage], the [housing crisis] will be [starkly apparent] in the early days of [spring] which is the **presumed** good time to sell real estate. As the first days of [spring] show [no promise], some of the last [hope] for [recovery] **any** time soon, will be [destroyed]. Thereafter, a new mindset emerges as the [spring weather/climate] gets [strange], and the [economy] gets ever more stressed.

Terra - Flood

Continuing with our theme of [winds] dominating the [climate], the Terra entity has acquired several new supporting levels of [extra seasonal] and [extra ordinary] in support of the [winds] context for **all** of 2008, and into 2009. The first of the longer term data sets have been processed, and these are stating that [winds] dominate 2008. Hmmm. Probably not good for the coasts.

Further, the longer term data has developed a new context around [flood]. The new [flood] context is in the direct support line for [global coastal event]. We note that this is **not** [flooding], nor any sub set of [flooding] previously seen. Rather this is a new context focusing on a 'single' event in which the dominate linguistics are [flood]. This [flood] context differs from the [flooding] context in that it will be a [labeled, globally, singular reference] event, that is to say, the [flood] is seen to be so devastating as to 'earn' a name. **And** the label/name that it receives will be pretty much the same, [planet wide]. Thus we see that the [visibility] of this [flood] will be unique in modern weather/climate history in that all over the planet, mostly all humans will end up naming the [flood] with a label arising from the same linguistic group. Some of the supporting sets are reminiscent of the Sumatran tsunami. We have the reappearance of [force driven water], and [inundation] as well as many of the other supporting aspect/attribute sets. In this processing however, these supporting sets

are sub sets of the totality of the context. This implies that the event will be a 'super set' of the previous earthquake/tsunami. And it would seem that the supporting data sets are also painting that sort of picture. We have indications for a [continent affecting flood]. The supporting details do *not* yet tell us which [continent] is to be so affected, but as the date range from the longer term data is for [early 2009], we will likely gain further details as this next year progresses. In any event, the data sets are pointing to a [continent affecting flood] in early 2009 which will last [many days/weeks], and will give a huge boost to the [diaspora] meme.

As the [diaspora meme] within the longer term data sets gains support from the [continent affecting flood], we note that [tens of millions] will be [impacted] by the [displacements]. Further the [food shortage], and [energy shortage] memes take a very large jump up in emotional tension summation values along with the accretion of the [flood] meme supporting sets.

Populace/USofA - Chicken Fat, Act Drama, Fluttering Paper, Illusionary Chariots

The newly processed shorter term aspect/attribute sets have placed several new supporting sets for [impede/obstacles] within the Populace/USofA entity. The [impediment] will be [visible] within [winter]. As [impediments] go, this will be large apparently, as it is [affecting] the whole of the [nation]. Again, it appears that the [impeding of progress] will be also pulling in longer term values which will [echo] later in the year. So the temporal markers showing within the lexical structures supporting the [impede/obstacles] which the Populace/USofA endures this [winter] will reappear in late 2008 in a much expanded form. The supporting sets for [impede] include aspect/attributes which go to [the whole/complete way of life]. Hmm. Probably that is not good.

Other supporting sets show that the [infrastructure/laws/codicils] will be [altered] this [winter]. This will cause [rejection] by the [populace] of the [fat foul offerings] {ed note: 'a chicken in every pot?'}.

Directly held values within the [impede] supporting sub sets include [rains] which in its turn is supported by cross links to the Terra entity where we terminate in the [dramatic rains]. The supporting sub sets within Populace/USofA paint a picture of [dramatic rains] which will [interrupt/stall/impede movement], and which will also [produce/trigger encounters with scarcity]. Both of these last are participatory within meta data layers as well as being directly held values. Further complications arise as the [rains] are described as being [intense], and so [stressful] as to [push buildings], both [down], and [over]. In the sub sets at further layers down, the [rains] are shown to [wash away] the [disappointments] which have been produced by [dollar exhaustion]. The idea coming across is a relatively *large* [rain] impact on a partially completed [building project] which is totally [destroyed] by the [dramatic rains].

In a curious linkage, the [impede] sub set also holds direct values for [Bush], as well as having the area cross linked over to originating aspects within Bushista entity. In this area the [Bush] is shown as being [distracted] over the [infrastructure damage] and its [impact] on [impeding his progress]. This [distress], according to the Populace/USofA entity will be [visible] and it will trigger its own set of [political ripples] which will be echoed back in late Spring. The meta data layer of [secrets revealed] has woven its cross links throughout this [Bush] set held in the Populace/USofA entity. The interpretation is that some component of the [dramatic, and impeding rains] will also produce a [flush] of [secrets revealed] which are described as [soiling] the [spoiled prince].

Also within the details of the shorter term values in support of the [dramatic and impeding rains] of [winter] are a few, clear temporal markers. Just before the [soiling incident], and during the [dramatic rains], the data set suggests that a very high [visibility] [act/action /drama] will unfold in which a [straight forward man] will be [observed/filmed/videoed] during a [heroic deed]. This fellow will in some way [contribute] to the [soiling], causing some [official angst], but the [visibility] will be a [protective shield] for the [thin man] during coming months of [hectic activity]. Apparently the [visibility] gained by the total [absorption] of the [populace] with the [heroic act/drama] will allow the [plain spoken man] to say some very [grating] things on national teevee. He is able to persevere in this due to his [protection] and [honesty]. His presence is seen to [grate] on the [nerves] of TPTB.

There are several layers of support within the [impede] sub set which explicitly are pointing out that [small fractions] can [alter] the [greater whole]. Again, the repetition is likely meaningful, and it goes down some number of layers, say over 1000/one-thousand, with the same basic message that [what happens to the smaller part may affect the whole].

The Populace/USofA entity has gained several longer term value sets in support of the more dire projections presented in Part One. In this last week the processing has yielded [extreme difficulties], and [emergency] among others. These are showing up as the modelspace is progressed into [spring], which is to say, March 21, 2008. These sets are supported by aspect/attributes which include descriptors that predict the [populace] will face such [extreme difficulties] that [calls for help/assistance internationally]. Again, these are more of the sets which were discussed in Part One. However we now have some greater detail sets and we note that the transition into [spring] marks the [transformation] [manifestation] which had been discussed in previous ALTA series. This [transformation] will bring about the conditions of [radicalization] which apparently are to [occupy, and dominate] the [populace] through [spring] and [summer]. This is also the set which includes the basis for our forecast of the [calls for early elections] detailed in Part One. That more of these same aspect/attribute sets are growing, and that they are bringing in the longer term values does tend to support at least some of the emotional states which *could* produce the perfectly preposterous predictions of Part One.

The [transformation] sub set within the Populace/USofA entity has as its core level of newly accrued support, the aspect/attribute set of [additional difficulties]. These will include the [dollar leak] as the data has labeled it within the Populace/USofA entity. There are apparently to be [officials crying for relief]. These [cries for help for the dollar] will be [unheeded] as the [officials] from the [Bush government] will [discover] to their [horror/shock] that they are [refused entrance], and that [appointments are denied]. Basically, the [dollar death] will have removed *any* incentive for most foreign governments to deal with the [petulant officialdom] from the USofA.

Coming at the beginning of [spring], the [shock] to the [officialdom] is but 1/one of a number of [strikes/hits (to the) awareness] of the whole of the [usofa] that [transformation] is both [global], and [underway]. This [transformation] then takes root from the [spring rejections] and progresses toward the [political shaking/upset] of [summer]. Along the way, the Populace/USofA entity begins to gain support under the aspect/attribute set of [workers revolt]. This set can also be interpreted as [class struggle/warfare]. The data sets are indicating that by the time that [summer] has arrived, the [long shadow war] will be over, and the [populace] will be engaged in [active revolt] against the [thepowerthatbe].

The [revolt] aspect/attribute set is participating within the meta data layer of [revolution], and is also supported very extensively with language going toward [work]. The supporting sets center around [work] in a number of ways including [economic], and [personal satisfaction]. This last is actually more telling a linguistic clue as it conveys the deeper, bespoke emotional state. In this case the imagery rising from the supporting aspect/attributes for [personal work satisfaction] are all going to the [lack] of it, that is, they are relating to the idea of a [manifesting employment crash] in which the [rapidity of change] in [work status] is referred to as [shocking] on the teevee. Given the high [visibility] summations, the [employment crash] will get a fair bit of coverage on national controlled corporate media just due to the size of the national impact being [too large] to ignore. Further supporting aspect/attribute layers for the [personal satisfaction of work/employment] are also suggesting that the [employment crash] is both [currently underway], and about to get a large boost upward emotionally in late January. The idea coming across from the movements of the Populace/USofA entity within modelspace is that by the time of the [summer solstice, June 21/23], conditions will have [matured/ripened] over nearly 6/six months to provide the [stage/platform] for a [revolt of the former workers] here in the USofA.

The data sets may provide a seemingly unlikely view at the moment, however we note that the construction industry, both housing and commercial is basically already bust, and is causing a very large ripple effect in employment. Further the largely illegal nature of the workforce for that particular industry has made it very easy for the government to ignore the rising social costs of the current 'construction depression' as it manifests. This will not be so easy very soon as the ripples from the whole rotten core of the [usofa economy] starts to stink. The data sets are showing, via cross links over to the Markets entity, that January will bring some very 'exciting' times within the 'financial industry'. The spill over from the collapsing 'consumer economy' will soon start a feedback loop of unexpected proportions. Again, the supporting data sets are pointing to [months] of [continually degrading economic activity] which causes serious problems for the [populace].

As a part of the [degradation] of the [economic status] at a national level, the [secrets revealed] meta data layer is suggesting that a continuing string of [corruption], and [bad practices] information will come to light. As this continues over the months, the [populace] alters its understanding of the recent past history. The data suggests that the [scam/confidence_trick] meme will replace the [honest but stupid] meme currently governing the [wall street] image. In a way soooo in tune with previous depressions, the whole idea of [wall street] will bring a [negative association] instantly to mind. This area is also in support of the [workers revolt] for [summer]. There are also some small level of details within this area which suggest that a [spark] for the [unrest] will be [pension plans] and [dollar death] combined.

As the modelspace is progressed through [winter] and into [spring] there are 2/two memes which arise, at first seemingly in conflict. These are [peak deception], and [exposure of core/root of problem]. In both cases the supporting sets are split between the [political] and [economic] sub set categories. In both cases the aspect/attributes have a high [visibility] summation, indicating some level of national discourse on the concepts. And even though they seem to be conflicting, they are both joined within the [duality] meta data layer, and the [secrets revealed] meta data layer.

Both the [peak deception/max lies] and [secrets revealed] will begin to gain values with [visible] intensity on January 24, and continue through to [spring] at an accelerated clip. While the trend line for these linguistics sets vary over time, the general direction for both is up, and both experience the accretion of longer term value sets indicating a multiple month impact of these aspect/attribute sets. The [peak deception] is directly related to the [election] and the supporting aspect/attributes predict that it will be the [process] of [elections] which will first [break down/crumble], and then the [personalities] involved will reach a [stumbling block]. This last is acquired as the entity is progressed through mid February, and at that point the [stumbles] and [grumbles] are both growing rapidly. The [grumbles] are coming from sets indicating that [real pain] has hit [economics] such that [individual households] in the [millions] are [defaulting] on [debts]. What is being referenced here is specifically *not* the housing issues, but rather appears to be [car debt], and [personal loans/HELOCs] and most importantly, [credit cards]. The [debts] shown being impacted are enumerated within our data sets in the [hundreds of millions], and that is not [dollars], but is rather [global credit accounts].

It will be the late January [economic] movements in which [secrets revealed] seemingly goes on a [meteoric tear] through a few [centuries of lies] that will really bring the [economic pain] to the fore. This [economic pain] will naturally be striking the lowest rungs on the hierarchical ladder first, and the data sets accruing to the Populace/USofA entity around the end of January and into February are focusing on [tribes] of [displaced], both [citizens] and [illegal aliens]. It is seemingly from a [self organizing collective(SOC)] found within the [displaced citizenry] that the [protest] at the [national monument] will grow. It is from this [protest movement] that the situation will evolve into a [showdown] between [veterans] and the [law enforcement] later in the year. It is from that act as a temporal marker that we will be able to date the more active phase of American Revolution 2. Please note that according to the data sets the [incubation] phase of AmRev2 has been ongoing for at least 2/two years.

As the [economic squeeze] matures for the citizenry over the course of [winter], the [political impacts] also start to become [visible]. These will include a number of [attacks] on [politicians] for [wealth] and [possessions in great measure]. The idea coming across is that a genuine [populists] movement has taken hold within the [populace] such that *all* [rich politicians] are now [assumed corrupt] and are [made pariah/outcast]. It is this emotional component of the [revolution] meme, manifesting against the [dollar death] across [winter]

which will produce the most [visible] results within the [campaigns] as [several] of the current prominent crop of presidential wannabe's drop out. At least 1/one will be [heard] to [emit sighs of relief] when [out] of the [danger zone].

Much of the [relief] will be very real, as about this time, that is late in [winter], around the end of [february] the [religion] context collides with the [secrets revealed]. This is at a [global] level, and the extensive cross links between Populace/USofA and GlobalPop are themselves 'revealing' of a vast conceptual, and contextual change manifesting over 2008, however, the largest point of impact will be within the Populace/USofA, as the [religious] in all areas come to grips with the [secrets revealed] meta data layer influence. While not being described as 'religious wars', there are aspect/attribute sets in support of [aggressive denial], and [lashing out (in) disbelief/rage]. Of course the whole of this area is also pressured by the [economic] impacts being felt nationally through [winter].

As the modelspace is moved into [spring], and that is actually as the Populace/USofA entity moves into early April, there is a brief, and very sharp elevation in a number of summations pointing toward a [military] based [celebration]. This is a 'pre echo' of the previously discussed more [ebullient] mood of August and September. However, all is not good. Also supporting the [military, usofa] within the data summations for that mood change are the distinct, and unusual aspect/attribute sets of [illusionary chariots]. This can also be interpreted as [false glories/fake triumph]. In the case of the [april] change, the brevity of the mood change alone will be very notable. In August, as the 'mood' persists, a counter swing of [pending anxiety] will start to rise, but it is shown peaking out before September. There after the Populace/USofA entity shows that 2/two mind sets or a [duality of opinion] will prevail. There will be those who [get used to/expect] the [ebullience] to continue, and then there are those who are [enjoying (it) while (it) lasts]. The latter are the wiser it seems as the mood very rapidly changes in October as the 'mother' of all release periods to date gets underway. Both the April and late Summer mood swings relate in some significant manner to the [military]. However, this is within a very dire picture excepting these noted months. Even the exceptions of April, and late Summer also are bringing in longer term value sets pointing to a huge level of [challenge] for the [military] as the Populace/USofA entity is moved into November. Again echoing the [illusionary triumphal chariot].

Not only does the Fall appear to bring the crescendo of a [global economic crash], but now is also showing that the [military, usofa], long suffering from [neglect], and [abuse] will face a [growing crises set] of previously not encountered scope. And it will be [hampered/bound /hobbled] by the [collapse] of the [global derivative debt system]. Some of the problems coming through in the details of the longer term value sets suggest that [gardens] may be [germinating] on [military bases] nationally if not globally by Spring of 2009 as the many [crises] deepen.

Oddly though, and in testament to human spirit, our longer term data is showing that a [new mood] of [potential] will emerge in early 2009, even though we are collectively starkly staring into real problems demanding real solutions. This mood change does not affect everyone, as we have noted, many people will be deeply mired in 'alternate realities' created by [active denial] as they attempt to [push time back into the past].

Conclusion - Part Two: Rabble, Repudiation, Riots, Rationing

As the recent [markets] action here in the USofA suggests, all is not well in Bushland. The anecdotal reports of a crisis in [employment] are increasing, and further, the [employment crash] long forecast in ALTA series has just begun. Even the [propagandists for empire], both at the [economist] level, and the [news] levels, are having to admit that it would *appear* that 2008 may have net job losses reported each month. What they fail to discuss at all are the very dire consequences now unfolding within the [employment/consumer] base of the [global economy], and the specific levels of pain to expect within the [populace/usofa].

The data sets for both the Populace/USofA, and its larger super set, the GlobalPop entity, are forecasting very challenging days ahead. The Populace/USofA entity suggests that [roving bands/tribes] of unemployed persons will begin to be [visible] within the USofA perhaps as early as late Spring. Reminiscent of the 'oakies/arkies' diaspora phenomena of the 1930's and the Dust Bowl, the coming wave of [involuntary diaspora] will also have both [economic] and [climate] causal agents. The people involved within the [diaspora] here within the USofA will also face the challenge of coping with the last of the [dominator culture] trying to [reassert] itself into power. Already fading in strength visibly, the [dominator culture] of [predatory capitalism] and the [political establishment elite] is indicated to push [wildly/desperately] on the 'social fear buttons' in 2008. At some point there will be attempt to [divide the populace] by the expedient of pitting the [government workers] against the [rabble (of the) unemployed]. Not to say that it will work, just noting that it will be tried. The data sets are pointing to this [visible] labeling of the [unemployed] as [rabble] as a temporal marker for the next phase of the social movement towards wholesale revolution.

Mixing in with the [unemployment crisis] will be other, sub texts, which themselves are contributory to the terrible stew that is now the [economy] of the [usofa]. These sub texts will coalesce around the idea of [repudiation]. This will include [dumping loans], [walking away (from housing debt)], and....the really big news...a wave of [repudiation] of [credit card debt]. This last is indicating, by the totality of the [visibility] value summations, that it will be perhaps the fourth or fifth largest 'story' for the media this year. The [repudiation] is forecast to take on the [fervor] of a religious movement as more and more 'consumers' come to the crux of 'no jobs' and 'no money'. The data suggests that [repudiation] will take place at [hundreds (of) millions (of) persons] levels. And further, that the [wave of debt repudiation] will eventually reach to the point of virtually all [institutionally provided debt] including [student loans], [car loans], [credit cards], and [home equity lines of credit]. Of course, the conditions at the time will be such that the [banking collapse] will be over shadowing the [repudiation] meme for a short while. Some of the longer term values brought in on the [repudiation] meme are suggesting that it will eventually bring about the [investigation] of the [magnificently wealthy] across the nation, and a [leveling] of [resources]. This last is heavily cross linked to the ThePowersThatBe entity, and shows support in that entity for [attempts] to [hide] the [reality] of [fortunes]. This last is more about the 'how' the fortune came into being, rather than 'amounts'. This theme is short lived, and apparently does not

progress very far socially, but this is due to Terra intrusions on the social order causing 'bigger issues', as well as [reducing/eliminating wealth] due to [disruptions].

To return to the main theme, 2008 will also have [riots] in the [suburban areas] as the [energy crisis] and the [dollar death] combine to [destroy work], and [reduce food sources]. Then the other impacts of [global weather pattern shifts], and the [rising coastal problems], *and* once again, the deteriorating [dollar], will all combine to reduce [food imports] to the [usofa]. Coupled with the [riots], and the Bushista crowd tenancy to 'demonize poverty', a move will be made to institute [rationing] nationally of what will be called [strategic resources]. We call such things, 'food' and 'fuel'. The data is suggesting that the [rationing] proposal will go a very long way toward radicalizing the populace. This will come about due to the absolute levels of [distrust] of the citizenry for the government, especially the [political class], and the other, more mundane problems with trying to implement a [food rationing system] when the government itself is losing people due to [dollar death], [hyper inflation], and [energy reductions]. The [rationing] aspect/attribute set has very little [visible] summations at this point, but the overall lexical set is growing so perhaps this is indicating that the meme is even now hatching in some little [officialdom] skull somewhere....

The continuing thrashing around within the populace of the USofA as we sort out these problems will put incredible pressures on the surrounding countries. The [dollar death] will instantly shrink the GDP of Mexico and many countries to the south by billions. Already it is estimated that the construction industry turn down within the USofA has cost Mexico hundreds of millions in 'remittances' from illegal workers who are no longer working. Further, the social pressures, and food/energy/political/environmental crises within the USofA in 2008 will prompt many millions to return to their country of origin. However, many of these countries will be less than welcoming.

###

This ends Part Two. We expect that Part Three can be posted by January 12.
