## Meta Arts - WAIS Wails, Cold Noise

With the recent publication of the news that the collapse of the [WAIS \(West Antarctic Ice Sheet\)](#) will raise sea levels significantly, and at different levels around the planet, and further, just \*may\* cause a change in the tilt of the earth several of the linguistic sets previously discussed in this and earlier ALTA series are manifesting. First the [antarctic] discussions appearing en masse globally as the studies cited above are released and spread around the planet starts the [visibility] rise relative to [antarctica] that has been consistently forecast from ThePowersThatBe entity as beginning in early 2009 and growing over the course of the year. Then, a second set of linguistics is satisfied as the various articles describe the 'expected/forecast effects' from the water level rise. The language being mangiest in the descriptor articles goes directly to the forecast linguistics for our [global coastal phenomena]. Also note that the [volcano] language from ALTA reports of several years back is appearing. The language conforms to the George Postulate which states that the longer we see it coming, the more significant it will be on daily human life. So it is most significant indeed to see the many [under ice/ and under seas] volcano references in the language as it manifests in these, and future articles. Note that our work does not specifically focus on the manifestation of the underlying events, but rather merely captures the language that will be expressed \*about\*

the underlying event or phenomena. Sooo....if, and it is a big if, the whole of the planet fixates on this recently released information, and vast quantities of other language shows up in support of the descriptors already seen, \*and if\* the populace of the planet gets really really emotional about the language manifesting such that the emotions involved bleed over into affecting behavior of the populace at large, then, it could be that our forecast of the [global coastal phenomena] relates \*only\* or strictly to the language manifesting, and not an event. Seems unlikely however, especially given the reality of climate change and volcanic eruptions emerging across the planet. It would seem slightly more likely then that the [global coastal phenomena] forecast from the Terra entity, extensively cross linked over to ThePowersThatBe entity, sub set [antarctica], and further cross linked over to the GlobalPop entity, sub set [diaspora], will be related to a potential unfolding of the scenario described in the article above. Without regard to the appearance of a WAIS shift, and subsequent alteration of planetary ocean levels, the language forecast \*is\* manifesting on schedule. Previous ALTA series had anticipated the arrival, in very early 2009, of the first of the language for the [global coastal phenomena]. Having this language manifest as forecast, the next temporal marker in the series leading up to the 5/five (plus?) months of the [global coastal phenomena] will likely be around the vernal equinox (March 21, 2009), and will most likely refocus attention back to [antarctica], though the language \*should\* show up with a much more [active] nature, and heightened emotional tone.

Within the [antarctica] language sets from several years back were the many [under waters volcanoes] references, and within a sub set of those were found instances of language going to a [large noise] coming up from the [ground/earth]. This language appeared in the data sets ahead of the [global coastal event] language which has now been recast as [global coastal phenomena] since the accretion patterns are suggesting something over 5/five months for the totality of the 'event', which really makes it much more of a process, at least to human minds operating on human time scales. The [ground noise] was described in the data sets as being [cross planet], and as [emerging (from the) ground/earth]. This [noise] was further described as being a [precursor] to the [emergent (set of) new planetary conditions]. The [noise from the earth] has support from aspect/attribute sets including bespoke [fear], as well as a number of human body parts or processes. We always assign more importance to aspect sets with body parts/process references as these are the most primal of all the archetypes. In this instance the language includes aspects for [fear sweats], and [incontinence] and [involuntary urination]. This last is a bit odd as there are also references within the set which have cross links over to the SpaceGoatFarts entity where the termination points are within aspects for [resonance] with the detail aspect/attribute sets providing the idea that the [resonance (of the) noise from the ground] will induce [sympathetic vibrations that are described as [emptying bladders]. Hmmm. Probably that will be a good

day to do laundry.

So, courage mon ami, yes the whole damn planet is changing, and the rate of change is accelerating by the minute, and most, if not all of the change is \*not\* immediately good for humans, and other life here on earth, but it could certainly be worse. And probably yet will be. So we go forth with cheerful courage, basically as we have little choice in the matter, so onward and forward, into 2009 and beyond....

## **Meta Data - Types**

Types:

Immediacy = 3/three days out through 3/three weeks inclusive

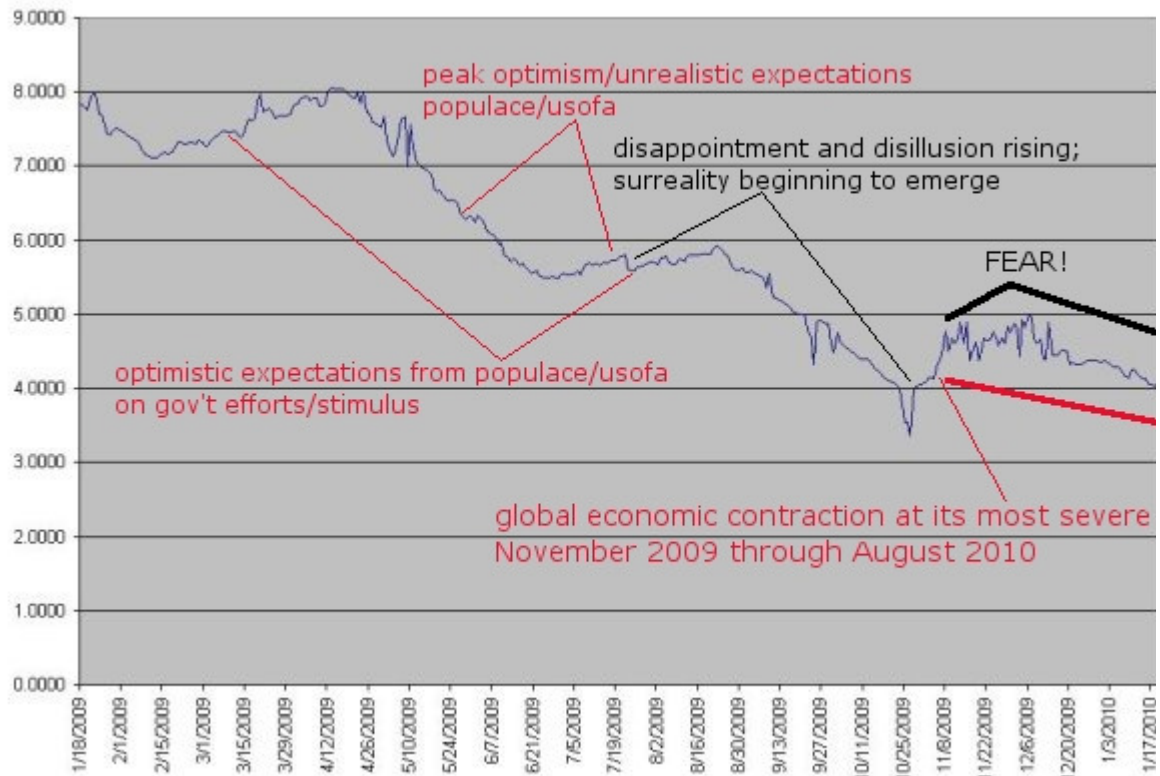

Shorter term = fourth week through 3/three months inclusive

longer term = fourth month through (with best levels of granularity) 19/nineteen months,

From the longer term data is it possible for modelspace to project out nearly 20/twenty years, however granularity drops steadily beyond 19/nineteen months.

## **Markets - Disappointment, Disillusion, Dissolved**

As has been previously discussed in this series, the accretion patterns for the Markets entity, as well as those of the Populace/USofA entity are suggesting that a change in mood for the [populace/usofa] arrives in mid May and persists through to mid July. The Markets entity is clearly indicating that the emotional tension sums for this period, and especially for the [populace/usofa] \*will\* be [markets impacting].

The previously discussed increase in bespoke [optimism] among the [populace/usofa] is larger and more dynamic than a similar burst of [optimistic feelings] in the GlobalPop entity. The Populace/USofA cross links over to the Markets entity are pointing toward a peak of the [optimistic feelings], especially as regards the [economy], in mid July 2009. Linguistically, though there are plenty of other problems and issues for mid May onward, the real Summer of Hell begins in mid July with the manifestation of the [disillusion] and [disappointment] trends within the [populace/USofA]. Prior to that the bubble of [optimism], while not materially altering any of the problems, does provide brief respite from the [oppressive mental fog] of the former [bush administration]. Unbeknownst to the [populace/usofa] at large, the [government policies/actions], as well as the [implementation from officialdom] are forecast to actually [create worse conditions]. These will resurface as an economic focused release period from mid August through to November. Then as the Markets entity is progressed through November and December, it fills with support for bespoke levels of [fear] not before seen in this work. These [fear] levels are part of an agonizingly long release period that extends from mid November 2009, through the end of August of 2010. Yes there are building tension episodes within the nearly year long release period, so it is \*not\* similar to the release period that began on October 7th. Rather the end of the year release period begins and sustains a general downward slope of rapid shifts of emotional tension directions that persist through August, 2010. On a very long range view within modelspace, the period from November 2009 through August

2010 resembles crocodile teeth of sharp peaks and valleys separated by small flattening's. The Markets entity is suggesting that the [global economic contraction/coagulation] will be at its most severe levels over this saw-toothed release period. Further, the Markets entity is suggesting that [international tensions] will also be at a peak over this time, as will the [impacts of planetary climate change]. As an instance, the data sets from Markets entity have extensive numbers of cross links from late November 2009 through June of 2010 which show that the [winds] and [oceans] will combine to provide [society impacting damage] along the entire [pacific coast] of both American hemispheres as well as the [eastern coast] of [Europe], and [northern Africa]. Further problems are expected from [climate pattern shifts] as well as from [unknown energies from space] which are focused on the [far north] of [Russia] and the [Scandinavian countries], as well as [Canada], and [Alaska]. These [winter 2009/2010] manifestations of [climate change] are forecasting that the [last] of the [global insurance businesses] will [collapse] under the weight of [damages]. Further the data sets \*seem\* to be pointing to the beginning of an [increasing/growing] emergence of [diaspora] \*as well as\* [animal migrations] will be seen in this coming [winter 2009/2010] as well. Both of these [fundamental changes] will significantly impact what is left of [global trading] at that time.

The Markets entity is suggesting that a supporting issue for the [disappointment] which will be the [reigning emotional tone] from July onward will be [banking lock-down], or a [banking holiday]. The linguistic structures for a [banking holiday] start to appear in modelspace in late February, but only reach [visibility] near, or shortly after, the Spring equinox. However, it is the [crushing of confidence] which emerges over a very [miserable spring/2009] that will produce the emotional binding to [despair], and the [realization (that the) expectations (of earlier in the year)] are totally [fantasy/unrealistic]. This [waning confidence] will not be the matter of only a few days, but rather will be the culmination of the problems that emerge over the whole 3/three months of [spring]. There is no contradiction between this forecast and the previous discussion of a more [ebullient mood] for the [populace/usofa]. These are merely complementary. The [ebullient mood] linguistics are very low in emotional tone summations, but are spread across a large enough portion of the [populace/usofa] to have a sustaining effect, even in the face of continuing economic chaos as the [financial systems crumble]. The [more ebullient] mood trend line degrades over Spring as larger segments of the [populace/usofa] \*and\* the [global populace] shift their mood in response to a more sober view of the manifesting reality of the season. The data sets accruing over Spring segue into Summer as though both part of the same sine wave graph; this is to say that [ebullience] fades almost in direct proportion to the gains in [disillusionment/disappointment]. Supporting sets for the whole of the [disillusionment/disappointment] descriptor set contain the [banking lock

down/holiday] language. The implication is that the linguistics for this new form of [banking holiday] will likely \*not\* include [official language] that harkens back to the previous depression, though that language will show in the [commentary] on the [banking lock downs]. The [lock down] sub set supporting sets include [shuttering] and [curtailment (of the) distribution (of) dollars]. The sub set \*also\* includes the references for [digital dollars]. Again, the top level descriptor is [lock down]. The spread of the [lock down] supporting sets is very wide, as though the actual manifestation of the [lock down] will include all kinds of [effects] not initially obvious. These supporting sets include impacts [food supplies] at many different levels from [wholesale] through to [retail], and even [pizza delivery]. The supporting sets also include references to the forecast [implosion of the Church/religion]. These sets are indicating that the [global banking system failure] \*will\* be the proximate cause for [rioting] late in 2009 \*and\* 2010 which is described as [spilling over] or [sloshing through] the [vatican (aka sorcerers palace)]. The [church] and the [vatican] are supported by aspect/attribute sets with internal cross links that indicate that it will not be \*only\* the [vatican] which [crumbles] as does the [banking system]. From the [banking lock down] descriptor internal supporting sets are cross linking to the Populace/USofA where the terminating sub sets are within the [evangelical/prosperity church systems]. The implications are that the [lock down of the banking system] will, within the [populace/usofa] induce an almost [immediate response] within the [evangelical church systems]. Longer term data sets which stem from the supporting sets of the [banking/digital lock down] include aspect/attribute sets in the Populace/USofA which are showing [degradation] in [roads], and other [utility systems] that will reach [visible] levels in Summer, with a larger increase in Fall, and especially in November/December of 2009.

Further problems within the [populace/usofa] which become [global populace affecting by late November, early December stem from the [tax revolts] at the [states] and [local governments] levels over late Spring, and through Summer and Fall. The situation being described by the data sets is nothing less than [chaos] and all of it around the kernel of the idea that [manifest/emergent bankruptcy] forces [confrontations] between various layers of [officialdom]. This situation is exacerbated by the [emotional confrontations] with [citizenry] at the global level, as well as the various [food crisis] globally, and within the [populace/usofa]. The imagery from the detail layers is pointing toward [creeping chaos] within the [usofa political system] due to the [fiscal systems crash] over [spring] with many of the more [visible] effects showing up in [summer/2009].

## SpaceGoatFarts - Chemies, Sweaty Palms, Cognitive

## Cracks

While there are several entities that each have directly held sub sets under the descriptor set [chemtrails], it is the SpaceGoatFarts entity that is the 'home' to the [chemtrails] aspect/attribute set as it falls under the larger linguistics of [those things that are officially denied]. Further, within the SpaceGoatFarts entity are other, discrete sub sets which also either are under the [chemtrails] set, or contain [chemtrails] as a supporting sub set for the higher levels of linguistics, (e.g. as in the [unknown energies from space] sub set). Therefore, even though the [chemtrails] sub set has its impacts in the populace entities, the main discussion of the [chemtrails] descriptor set is within this entity.

The current processing of all of the data types provides a view of a [chemtrail: component to the [summer of hell/2009]. In this sub set the [chemtrails] is directly supported by the [duality] meta data layer. This is manifest within the [chemtrails] aspect/attribute set as the primary supporting layer contains [decisions] as \*the\* focus of the [chemtrails programs] this [summer]. The [duality] layer is expressive at all of the supporting aspect/attribute layers. The most of the supporting aspect/attribute sets have the appearance of being juxtaposed against an alternate influence or focus for the set at that layer. Make sense? As an example, there are supporting aspect/attribute sets for [cessation/finished/stopping/halted] which are at the same level of support as [fearlessly flowing/accelerated/enhanced]. In the case of the former set, the supporting aspect/attribute sets for it are primarily drawn from cross links over the Markets entity where the interpretation is that the [global economic chaos] which manifests from mid July onward will [put pressures], or [cut funding], or [stop (the) flow] of the [chemtrails program]. These areas in the Markets entity are fully supported and include aspect/attributes such as [airline (industry) failures/crippling] due to [demand collapse] as a direct result of the [death of the dollar] meme. So there are internal self-referential integrity checks which support the whole of the linguistic chain all the way back up to the [cessation of the chemtrails program]. However, at the same level of support we have the [duality] expression of [free flowing without fear] sub set which has its own chain of supporting sets going to the idea that [in spite of the economic collapse/dollar death], the [environment] becomes so [super saturated with \* (UV?) radiation] as to [cause visible deaths] that in turn drives ThePowersThatBe to [increase] the [flow] of the [chemtrails]. Both of these views may be correct, and though seemingly mutually exclusive, it may merely be a matter of temporal perspective. Imagine what would happen if the [economic chaos] does produce a [shut down] of the [chemtrails] over this [summer/2009]. If that were the case, the data sets are projecting an [immediate] and very highly [visible] (in the global mediastream) increase in [super clear skies] coupled with [ozone depletion/hole] such that [large scale effects of UV poisoning] would appear. These effects would \*not\* be limited to

[slow burn] effects such as [skin cancers], but would also include [sudden onset blindness], and [bizarre effects on plants], as well as [animal deaths] in unusual patterns and places. Ed note: too much glare and mountain goats losing their footing to plunge to their deaths globally...that sort of thing.

Further there would be [satellite signal disruption] as the [uv radiation influx] caused all kinds of strange effects on the upper reaches of the atmosphere. Other noticeable problems, besides planet wide [crop failures] would be widespread [life threatening sun burns] from even [brief exposure] at the [wrong time of day] and under [clear skies]. There would also be startling developments in the [non food plants] of all kinds, including [mass die off] of [UV sensitive plants] including [landscaping]. Further, the effects on the [oceans] of [UV poisoning] would be/will be vastly accelerated. Ed note: the presumption is from the vast numbers of reports that most of the planet's oceans are not now being sprayed with chemtrails, and thus many of the strange effects seen in recent years are likely the result of the [UV poisoning] already under way.

Then there would be the planet impacting effects on climate, glaciers, ocean levels...et cetera.

Under such conditions, especially with the large [visibility] level of these problems, it could be that the other side of the coin would express itself as TPTB \*may\* try to take advantage of the [gasp heard round the world] and come out with an [in your face] form of the [chemtrails program] with [maximum effort] being placed behind it \*in spite of\* the [global paper debt/financial system meltdown], also known as [dollar death]. Thus we could see both the [shutdown] of the [chemtrails program] over [summer of hell (UV poisoning summer?)] and then a rapid reaction in the form of a [balls to the walls] effort on [chemtrails]. And thus both forecasts \*might\* be accurate, depending on just how much screwiness will manifest in universe over [summer].

The concept of a [UV poisoned summer] is indicated in more than a single area of the linguistics. The [uv summer] has support in the ThePowersThatBe entity as well as the Populace/USofA entity, specifically the [officialdom/minion] subset. There are other areas that provide support for the [uv summer] and these include the [military] sub set of the GlobalPop entity, as well as the Markets entity.

A curiously large level of support for [UV poisoning episodes over summer 2009] comes from the [revolution] meta data layer. The detail level aspect/attributes suggest that the [episodes of uv poisoning] are in some manner connected to, perhaps even as a causative association, [revolution]. The

problem arising for the interpretation is that the [uv summer] is also a directly held set within the Terra entity, where it is participating in the [revolution] meta data layer in that entity. So the [uv episode summer] cannot be ruled out as a [proximate cause] for some [revolution] meme growth over this year. The data aspect/attribute sets contain descriptors going to the idea that [uv episodes over summer] will [propel/impel] the [revolution] growth, especially in [europe] and [south america]. There are specific references to [riots] and [killings] which will be [visible] to the global media stream later in 2009 that will be tied to [uv poisoning episodes]. Some of the [revenge killings] are likely to be misinterpreted at the time. A smaller sub set of the [revenge killings] is supported by extensive cross links over to the [disappearances] within the ThePowersThatBe. Further sub sets within the GlobalPop entity are indicating that some of the [revenge attacks], specifically some of the less successful attempts, will be linked by the mainstream media to [unemployment] and the [global depression], rather than [revenge for ecologic corporate terrorism].

The [uv radiation episodes] are supported by sets including [distillation] that is supported by [sweat], and [plants (which sweat)]. These are cross linked over the [strange flowering] sub sets previously discussed in this and other ALTA series. These cross links contain references to [distillation (by radiation) which induce plants to sweat]. Unlike humans, who can stand a good sweat, and even pay good money to create conditions \*just\* for that reason, the [plants] are not happy with the [sweating]. The [sweaty plants] response to the [episodes of uv poisoning] aspect/attribute sets are cross linked back over to the [revolution] meta data layer within the SpaceGoatFarts entity, and the Markets entity. These cross links terminate in sub sets that point toward a [revolutionary impact] on the [social order], as well as the [social consensus], both of which will be affecting what remains of the [economic system].

Related to the [social consensus alterations] sub set within the supporting layer for the [revolution] meta data layer in both the Populace/USofA and the GlobalPop entity are sub sets within the SpaceGoatFarts entity which are in the [officially denied] major sub set. Recalling that the SpaceGoatFarts entity was created over 2003 - 2005 to hold the plethora of language around subject matter that are either [unknown], or [officially denied], we can note that the [officially denied] sub set continues to grow in breadth of subject matter, as well as depth of denial. The accretion patterns in the current processing, in both the shorter term and longer term sets are pointing toward a major emotional shift this Summer and Fall within the [officially denied] sub set. The areas involved are all extensively cross linked to ThePowersThatBe entity, as well as the 2/two populace entities. These areas are also heavily cross linked over to the Market entity though their terminating sub sets are in the very far end of the longer term supporting sets in that entity. These areas of interest within the [officially denied] sub set are all within a sub set that we will label as [hyperdimensional

science/technology/techniques]. This sub set is where the [secrets] sub set of the ThePowersThatBe entity terminate in their cross links. This sub set is where the terminating links from the [zero point source/free energy] sub sets within all entities terminate. This sub set is where the various bespoke [temporal unknowns] sets terminate. In short, a very active sub set of obvious importance. And, the data accretion patterns in several entities are all interacting to point to a material [shift] in the nature of [hyperdimensional understanding]. This sub set of [understanding] also includes [knowledge] and [gnosis] as primary supporting sets. The sub set of [understanding] is itself supported at the secondary level by aspect/attributes sets including [breakthrough], and [leap (of) discipline/technique/skill], as well as [successful implementation]. These sets are all within a supporting group of new language going to the idea that a [breakthrough] in the [understanding of hyperdimensional science] will [produce] a [material alteration/physical change/material device] with [wide] application possibilities and potentially huge impacts on the [populace/global]

The [breakthrough] in the [hyperdimensional science] has cross links showing that the impact on ThePowersThatBe will \*not\* be good, and that there will be something of a [freak out/losing it/fit\_of\_rage] coming in [visible] ways from several of the [senior TPTB members]. There are some descriptor sets in the details indicating at least 2/two [visible] episodes of [fits] so [violent] that [vehemence] and [spit] comes from the [old (powerful) men]. The cause of the [vehemence] and [insistent/demanding denial] from TPTB will be a [technical/science achievement] that is described as having [giant/enormous potential] for omni humanity. While there are not indicators for free energy, or other identified hyperdimensional sub sets, we can be sure that the [breakthrough] is in the realm of [understanding] and is such that the [knowledge] will be [internet available], and it is this last that sooooo pisses off the old farts in the TPTB. Apparently they realize that by the time that they have become aware of the [breakthrough] it is already too late to [sequester] the [understanding] and their [worst fears] are manifesting. Both the bespoke [fear of worst possible situation], and the [breakthrough] itself have very extensive cross links back over to the Populace/USofA entity, and the GlobalPop entity. The geographic references that we have for the [breakthrough] have a preponderance of [india], and [russia] as the source of the [new understanding]. This area is cross linked over to the [new electrics] sub set, but not apparently as a precursor, but rather as a separate, but related thread of emerging [understandings] which will be the [base sciences] of post 2012 social order. Whereas the [breakthrough] for the [new electrics] has been forecast for Fall of 2009, with [visibility] being relatively low through into 2010, the [breakthrough] in the [hyperdimensional techniques/science] is spread out over Summer, and Fall of 2009, but has its initial increase in [visibility] in Winter 2009/2010, and thereafter has steady growth in several impact areas over all of 2010 and into late 2011. It is not until after mid 2010 that the growth in the da

sets suggest any slowdown in the ripples extending out from the [breakthrough]. There are internal cross links from the [breakthrough] set over to the [space] and [unknowns (about space programs)] sub sets within the SpaceGoatFarts entity, as well as cross links over to the Populace/USofA entity and the [nasa] sub set.

## **GlobalPop - Crags, Crisis, Coagulation**

The accretion patterns for the GlobalPop entity continue to build support under the [revolution] meta data layer across all of 2009. There are specific inflection points through the Spring and Summer indicating that the [revolutionary actions] will be increasing along with [general rioting], and [large scale strikes] across a number of nations. The geographic references point to [china] and [europe] as being the areas of most activity through Spring and Summer in both general [rioting] and [revolutionary actions]. Both of these are in direct response to the [increased degradation/collapse] of the [financial systems] globally.

As the longer term data sets are processing, modelspace continues to grow supporting sets within the GlobalPop entity, \*and\* the Populace/USofA entity that have very large increases of volume over November, and December of 2009. The growth patterns alone suggest a very turbulent couple of months, and this idea is also supported by the incoming data. The new aspect/attributes for both the GlobalPop and the Populace/USofA entity are supported at a primary level by [dangerous position] or [risks (of) standing (at the edge of a) crag (of) a sheer rock face]. There are supporting sets to the [dangerous position] aspect/attribute set that include [wealth], as well as specific references to [gold and silver coins/bullion]. There are other supporting sets for [documents (of) importance], and [documents (being) transported]. Further support comes from sets including [bank branch(s)] and [special express service], and [digital transmission]. The supporting sets include aspect/attribute sets for [clearly/distinctly heard/sensed (but) is not seen/visible]. This last set is the termination point for the [dangerous position] primary descriptor set and \*MAY, JUST MAY\* be forecasting that a [crash] of the [digital transmission (of) currency system] will be [felt/heard but not seen] in the last 2/two months of 2009.

The [dangerous position] sub set has several numbers of significance within its supporting sets. There are references to [100/one hundred thousands], and [9/nine], and [7/seven]. The [7/seven] has associations with [houses/cabins (in the) hills], as well as containing supporting aspects/attributes for a bespoke [week] of [7/seven days] of [crises]. Further references within the [7/seven] sub set tie it back over to the [9/nine] sub set where they terminate in [hills] once again. Other supporting sets within all the numbers here go specifically to

[time]. The [time] supporting sets are indicating specifically this [time] which to say the [early days (of the) November/December crisis], as well as [time] in the sense of [temporal process], or [flow of days].

Other supporting sets within the GlobalPop entity for the period of November and December, 2009, include top level support for [terrified], and [heart stopping fear], and [breath holding fear]. Hmmm. Probably both are not good. At the highest level of support for [dangerous position] as November is past a modelspace moves into December is the aspect/attribute set of [ruin]. This [ruin] sub set begins in late November, and thereafter is very dominant for the GlobalPop entity through September of 2010.

Though the GlobalPop entity is gathering supporting sets for [ruin] over November and December of 2009, it is the Populace/USofA entity that actually will be providing the seeds of this particular sub set of [destruction]. The data sets within GlobalPop for the [ruin] are all cross linked back over to the Populace/USofA entity where the termination points are in supporting sets accruing in very late October, and early November 2009, and which include explicit references to [shutdown] of the [office/plant/facilities]. There are some sub sets in the supporting chain to indicate both a [national strike] as well as the [fiscal collapse] of the [federal government structure] here in the USofA which will act as a [triggering crisis] for the [crash] of the [digital documents/current transmission system]. The Populace/USofA entity sub sets in support of the [shutdown] have aspect/attribute sets for [plants closing], and [offices shut] as well as for [cleaning out (personal) possessions]. Within the Populace/USofA entity, these sets have internal cross links to sets that appear in late Spring and early Summer for the [crash/collapse] of the [unemployment system] as well as the [coagulation] of [government].

After a [disastrous summer], the [ruin] of late Fall 2009 is forecast to produce large [acceleration/growth] in the [planetary populace movement]. This [growth] is indicated to include [rioting] in the [americas] as well as [active revolution] within many other countries. However the largest distinct sub set within the values accruing under the [planetary populace movement] over Fall of 2009 are within the [secrets revealed] meta data layer. Many of these are cross linked back over to the SpaceGoatFarts entity where the termination points are the [whistleblowers], and the [breakthrough] sub sets. Further cross links appearing in the data sets accruing in late Fall are going back to the [disappearances] sub set within the ThePowersThatBe entity with specific points of termination pointing to emergent echoes from late Spring and early Summer. In other words, the events of Spring/Summer of 2009 relative to the [disappearances] meme will repeat in a manifestation of a larger, related meme in late Fall and early Winter of 2009.

A large emotional driver for the [planetary populace movement] is indicated to be the continuing [financial system collapse] including the [death of the dollar and the [giant piles of stinking derivatives shit] which will be indicated to start [plopping] down around the planet over the Summer of Hell. The data sets are indicating that the [stink of summer/2009] will [cover the planet populace] for the next 2/two years.

## **Conclusion: ALTA 1109 - Part Five:- 9/Nine hard years**

Over the rest of Winter and through Spring, the continuation of the [great unraveling] will result in the [dumping of the derivatives]. This will be a process rather than an event, but the result will be felt in early Summer as the [globalist agenda] and [hegemony] begin to crumble under the [burden of derivative collapse/cross party defaults]. The [steaming lumps of derivative shit] left littering the former economic landscape will effectively put an end to the [infantile obsession with marketplace] that has ruled much of the planetary consciousness since the late 1970's. As the paper debt crisis unfolds over Summer, the beginnings of the [destruction of the social contract] will become apparent. Many of the temporal markers discussed should be seen by mid Summer, or around the cross quarter day of August 8th or so.

In many ways the language arriving in support of the [revolution] meme for Summer 2009 contains echoes back to previous [revolutionary] periods including the late 1960's here in the USofA. However, in most of the language supporting [revolution] as the planetary meme for 2010 and beyond, the supporting sets are arguing for something [completely different/totally new]. This core of [new expressions], and [global dialogue] is directly supported by linguistics relating to the [awareness] of the [populace]. The [awareness] sub is supported by [illuminati/secret societies] and their 'outing' or [exposure] in the global mediastream. The total impression presented by all of the [revolution] meta data layer is that at the center of the chaos being expressed in frustration over ruined lives, there will be a core of the revolutionary cadres which will be focusing the brunt of the planetary insurrection not against systems, or ideology, or even government, but rather against [secrecy], and [global cabalistic control] and [global corruption]. This core is shown as producing a wave of [social reformation] that will last better than 20/twenty years. The same data sets also indicate that the revolution or planetary insurrection against ThePowersThatBe will be taking 9/nine hard years.

Governments are already collapsing (Iceland first), and soon the Anglo/American Empire will be visibly reeling and seeking a way to fall over (begins November 2009). Then the chaos will begin to thicken, but note that a

things \*always\* and perpetually contain the seeds of their opposite. Even as chaos produces active revolution at a planetary scale in the midst of both economic coagulation and climate catastrophe, the core of a return to order, albeit of a totally new form, \*should\* be barely visible emerging first in thoughts and then, over the years, in expressed form.

The opportunities as well as the risks during this period of 9/nine hard years will be large. Transformations on the scale we currently face are rare in human and planetary history. It will be the time of the release of creative energies beyond our ability to predict. Such times frequently produce great human personalities who leave an imprint on omni humanity lasting millennia. Our data, in the far reaches of its 19/nineteen month granularity, are indicating such personalities will emerge from the great levels of risk and opportunity dominating this particular time in omni humanity history. Will it be another Tam'ojin (aka Genghis Khan) who will once again merge tens of millions of climate displaced peoples into a wandering nation? Or will it be another Shaktimuni (buddha) who will liberate the populace of the planet with hyperdimensional techniques demystified into practical technologies? Or.....?

With our data sets, we cannot predict just what roles will be filled or created by the great humans who will be emerging from these next years of chaos and opportunities. What we can predict is that the unfolding economic/paper debt chaos \*will\* destroy the corporate control over media over these same years, and that no person pimped by (current) mainstream media will be among the planet shakers of 2011 and 2012 and beyond. While the comatose populace is slavishly ordered by media to look to politicians and government as the solution to all problems (given appropriate worship), the aware observer will begin to scan the fringe reports for very unusual, even contrarian persons with visible-i-you-know-where-to-look rising support from universe itself. This is an exercise in learning to listen to universe speaking.

As with all things, practice will increase perfection. In listening to universe speak, the results can also be applied to the personal level. Such a skill \*will\* be very very useful over these next few years. The whole of the language of universe is composed of highly efficient, densely packed symbols.

####

Part Six (final report of the series) is anticipated to be posted by mid day on Saturday, February 14th.
