Meta Arts - Time Scope Creep , A Human Near You

At so many levels it would be boring to examine them all, the nature of time as it is expressed within material universe is a function of the quality of light. If we just examine the reduction of the Einstein (and others) equation for Energy = Mass times the Speed of Light squared (as in graphic below).

Quality of Time a function of the quality of light/photons

$$E = MC^2$$

$$E = M * (C * C)$$

$$E / M = (M * (C * C)) / M$$

$$\text{or also can be stated as } - E / M = (C * C)$$

$$((E / M) / C) = C$$

where C = the 'speed of light'...this is to say
C = the 'quality' of light expressed as 'time'
required to pass 2/two points

we can see by logical reduction of the equation that Energy divided by Mass, the resultant of which is divided by the speed of light is equal to the ?, damn, why the 'speed of light' yet again. In math this equation works as we are actually reducing down toward a 'quality' of a component, not the numeric representation of that component as an absolute. Further, the formula works in reality (as far as it takes us) due to the [speed of light] being very far indeed from a 'universal constant'.

The equation is muddled even further from actual arithmetic by our desire to focus on the 'human perceived quality of time' rather than some abstraction which would leave the 'human perception' out of the calculation.

The point of this exercise is to isolate, and highlight the 'quality' component of time. All humans have experienced the 'shifting quality' of time, though likely there are some who are unaware of the differing layers of quality within the perception of time. It can easily be argued that the 'perception' of time is absolute. This is to say, that without humans to experience the time, it is moot and does not therefore exist. Further in that logic chain, the quality of the perception of time becomes a larger function of the 'whole experience' of time but as a necessity, the 'personal experience' of 'time quality' becomes a huge additive to the complexity of the expression of time itself. In other words, 'time' is 'simple(r)' when 'many humans feel the same level/type of quality from the time'. Stated in the reverse, 'time is more complex, the more that individual humans feel the perception of time at unique or diverse levels'.

Some 'truisms' about time include that 'time perception' is 'time expression'. In other words, as humans experience 'time' in differing qualities, that experience of time itself, alters the time itself. Again, stated another way, the 'quality' of time is dependent (to some extent), on the perception of that quality. As a corollary we must also allow for 'individual perceptions' of the quality of time to be diverse, and non conflicting within the expression of time. As an example consider 2/two friends walking down the road. Human A sees a pot-hole and steps aside, but Human B, busily flapping gums, and not paying attention, steps into the pot-hole, and falls. The instant that Human B starts to fall, his mind begins to process time differently, and it *appears* that time slows down during the fall. To Human B, his mind provides for a very long quality of time which allows for some subtle body adjustments (or not) which may prevent injury from the fall. The whole of the fall of Human B takes place in less than a second, just about the time it takes Human A to take her next step. To Human A, the complete fall of Human B to the rough road surface happened apace with her stepping around the pot-hole, and so Human B appears to fall very fast to Human A. However, for the 'fallee', Human B, the experience of time has actually changed. It had a differing, palpable, almost quantifiable difference than the second before the fall, and from the minutes following the fall. Time changed for Human B due to the change in the perception of the quality of the passage of time. The change in the quality of time perception is arguably triggered by the focusing of Human B's consciousness/attention on nothing but the fall, therefore more 'channels' in Human B consciousness are devoted to perceiving the 'passage' of the time of the fall, and thus the alteration in perception, and quality of the time involved.

We can delve deeply into the joules of energy expressed in the $E=MC^2$ equation, or into the perceptual filters involved, as well as explore the question(s) of photonic influences on matter (i.e. more awareness of photons = more photons absorbed = more time absorbed), but while fascinating, most of these lead to further appreciation of the individual experience of the quality of time, and what we need to be focused on, according to our data, is the [increasing alterations] of the [perceptions of time] which will be coming to a Human near you (maybe even you, the aware observer) and the impact of [individual perceptual changes of the quality of time] as they may affect our [collective experience of time] as a species.

In the example of the Human B stumble (due to attempts to impress Human A with his babbling), it can be seen that Human A did not experience the 'time quality appreciation shift' as did Human B. Perhaps if she were very sensitive, Human A might just get a hint of the change as it was occurring, and certainly as a caring human she would participate in the slight acceleration of the 'shared/common time experience' *after* Human B falls. But the experience is qualitatively *and* quantitatively different for Human B (fallee) than for Human A.

A (observer of the fall). Our data sets are indicating in the longer term value sets, that from 2009 onward, and as a component of the expression of the [transformation] meta data layer, that our 'common time perception' for all humans here on Terra, will be undergoing changes.

The accretion patterns as we progress modelspace forward through 2009 and into 2010 suggest that a [noticeable] and [commented upon] [difference in the perception and experience of time] will begin to assert itself within [collective human consciousness]. We have some small amount of details about this [perceptual alteration], though not enough to form definitive conclusions as of yet. The data suggests that the [effects] of the [scope of time quality creep/change] will *not* be perceived the same way by all humans, and thus this [experience of time quality] *will* be contributing to the [collective discord] as well as the [cognitive dissonance] which is indicated to participate in many [communications breakdowns] over 2009.

The data accretion patterns within all of the entities are suggesting that [change comes] to the [planetary human consciousness] beginning in late 2008, or early in 2009, and that this change will [directly] involve the [ability to experience time] at [differing levels of perception]. Further there are trend lines suggesting that this [difference of time quality perception] *will* increase over the year c [transformation] (2009) such that it becomes an issue of [discussion], albeit through very diverse thrashing, and fumbling as the [changes in universe] at a [personal perception level] begin to [percolate into (the) human collective understanding of universe]. In other words, we can expect a range of reports beginning early in the year which go to all sorts of strange phenomena and odd personal experience. These reports of [oddities in perception] will continue, and increase over 2009, and by the end of the year, there will be some larger, collective understanding that [time has changed], at least for some significant part of the populace of the planet. Not all humans will be aware of the alterations at an individual level, and this will lead much [denial of the phenomena], as well as creating [discord/disharmony] and the [breaking of the bonds of common experience]. There will also be all sorts of [organized religion intrusions] into the [time quality scope creep phenomena] including much [denial]. There are indications that [officialdom] will also become involved in [commenting] and [attempting to control] the [common perception of time quality]. Further it would seem that this [perceptual change] will also fuel [cognitive dissonance] in large parts of some populace segments. These are primarily those who are sensitive enough to perceive the changes, yet are under the control of [rigid mind constructs] such as [organized religion] and [government think patterns], and so they will [try to deny] their [personal perceptions], thus creating [internal conflicts] which will [express] as [cognitive dissonance].

There are a number of sub sets within the data which *could/may be* interpreted as suggesting that new [schools] of [skills] which are associated with [meditation] and the [yogic arts] relative to [consciousness control] will begin to [flourish/bloom] in mid to late 2009. These are indicated to get a huge boost from those humans who are in the [new time experience] group. There are also indications of a [counter trend] in which the [failing control structures (of TPTB)] will be attempting [yet more desperate efforts] trying to [control (the) time perception phenomena]. This *may* include attempts at [mass drugging] of large [populace sub sets].

Please note that in spite of Igor's feelings on the subject, pies are *not* indicated to be an antidote to the [TPTB mind control] methods, though pie certainly is a universal panacea, and cannot hurt.

Meta Data - More Definitions and process descriptors, Memeering Detected

directly held values = duplicate aspect/attribute sets in different parts of the same entity which causes the duplicate set to contribute to the emotional sums for multiple sub sets within an entity, and thus increase the duplicated aspect/attribute sets weighted impact on the entity as a whole, and any discrete sub sets which may be involved.

internal cross links = sub sets which share the same set of supporting aspect/attributes within the same entity, though not within the same sub set category, and thus there is not a contribution to the emotional value sums from the sub sets joined *only* by cross links.

participation = sub set in support of an aspect/attribute set which is, in its turn, directly held within the meta data layer sub set of an entity. I.E. a sub set that contributes emotional values to the sum of the array values of a meta data layer

Why 'Space Goat Farts'...? Well, according to the 2nd 'law' of thermodynamic for every action there is an equal, and opposite reaction, and as we may speculate, the giant mutant space goat does *not* swim through space, so there has to be an effective propulsion mechanism involved in their galactic migrations. Thus the 'space goat farts'....as propulsion. Though some planetary based species may think that the space goat fart is in fact an insidious weapon of war intended to blind the eyes, sear the nostrils, and disorient the afflicted with nausea and dizziness from the stench, they are wrong. The wandering herds of giant mutant space goats are peaceful munchers of inorganic debris who *only* employ their farts as a means of propulsion. Noting that the

supposed "attack on Rigel 21" incident was *not* deliberate and really results more from the lack of sphincter control from an older member of the herd, we nonetheless advise caution in extra-atmospheric rocketry experiments when herds of giant mutant space goats are in the local neighborhood.

Just a quick note to let you know that our web bot data sets are indicating that the TPTB (the powers that be) have a memeing (engineered thought patterns exercise going). This relates to 'space alien artifacts'. We do not try to guess the 'why' of the TPTB efforts, as that goes to 'intent' and thus anything said on our part would be speculation, but be advised that the TPTB are mounting an effort at the moment to draw out or control/direct conversations in various fora about space alien artifacts. The indications are that this is a clampdown/dis-info or discrediting operation with the intent to make a central core of 'believers' feel like idiots in a while when the 'artifact' is revealed as a mundanity available at some specialty hardware shops. Further there is some deeper form of information gathering going on within the space alien artifact memeing effort that we are detecting. It may relate to an attempt to determine human networks from the types of responses, and where they are originating. This effort is ongoing now, and also is cross linked to the [2/two liberators] of the [space alien hardware] linguistics that we had previously detected.

Terra - Fishing ...

While it may be ever so boring by now, we *still* have aspect/attribute sets accruing in support of the [twin earthquakes] sub set within the Terra entity, and the accretion patterns of the *(mostly) immediacy values are *still* focus on the 3/three days of December 10th through the 12th inclusive. These sets within the Terra entity are now also providing support for [fire/lava/magma] which is described as [illuminating/displaying] the [base of the mountain]. The [display] sub set is not very significant in the area of [visibility], so it may only be a relatively local (to the earthquake location) phenomena, *BUT* it does indicate that there will be [volcanic] involvement with the [earthquakes]. As the [earthquakes] have been continuously described as [twinned], it may be that only 1/one of the [earthquakes] involved has any [volcano] associated. The [twinned] concept is supported by language suggesting a [visible link], or a [joining] of [behavior]. This is apparently *THE* big deal about these [2/two earthquakes] in that for all of known 'academic' science, there has been the bespoke position that no earthquake is related to any other earthquake. The idea coming across from modelspace in the newly accruing supporting sets for the [twin earthquakes] is that these [earthquakes] and their [obvious relationship] will cause a [re-examination] of supposedly [known facts/theorems].

The data sets are continuing to accrue under the [abandonment] of

[vehicles/cars/trucks] as a result of the [earthquake]. This is as though both [vehicles] and [roads] are [damaged] during the [earthquake]. There continues to be supporting set growth under the idea of [getting out] and [walking out], as well as imagery of [stuck (on) islands/promontories (of) roads]. This last is replete with examples of [isolation] in which [overpasses], and other [elevated roadways] will become [isolated] resulting in some [trapped] people having to be [extracted]. There are some newly accruing values in this area which are all increasing the [visibility] sums so the global mediastream may be offering us views of these [extractions] after the earthquakes. The language in support of the [abandonment of vehicles] also includes [simplicity furthers] with supporting sets for this indicating that an example of [stupidity] during an [evacuation/emergency] will arise from which we can all learn a few things.

The data sets are indicating that at least 1/one of the [twinned earthquakes] will result in a very long day indeed, such that over [24/twenty-four hours] are [consumed] or [eaten up] just going through the [totality] of the [event]. These sets are seemingly indicating that the [whole of the day] will be [involved] with the plethora of [immediate needs] for those [affected] by the [earthquake], and that this will be [reflected] in the [imagery] within the [global media stream]. This is likely indicating a time of [continuous coverage] within the teevee sphere of the [mediastream].

The [earthquake] with the [abandoned vehicles] supporting sets is also *still* accruing values for [friends (from) abroad] who will be [sending airlifts] and other [mercy flights] into the [afflicted (by) isolation] area. These [flights of resources] are being described as [welcome], *and* also that they are [burdened] by [language translation problems].

As the modelspace is progressed past the [earthquakes], which is to say from December 13th or 14th onward, the supporting sets for this area of the Terra entity are going to toward the [twin] problem meta data layers of [restrictions on movement] *and* [encounters with scarcity]. We note that this last meta data layer is also expressing [duality], and suggests that the [afflicted area] will not only [encounter scarcity], but just because of where the [damage] is done, will *cause* [encounters with scarcity] in other areas. This last is seemingly pointing toward a [region] where something unique, or [vital] is produced such that, by [isolating] the region, the [earthquake] induces [encounters with scarcity] of this [vital resource]. This may be a rather local phenomena, and may be indicating an effect that is strictly regional in scope.

There are indications that [mills] which [produce threads/strings] will be within the set of [primary impacts] of the [encounters with scarcity], though this may be indicating not location of the [earthquake], but rather a [resource dependent chain].

Of course we are probably wrong about this. And if you claim, as does George that we are 'boating on the river of denial' about this, we respond well, maybe so, but the fishing is nice on de Nile this time of year.

GlobalPop- Summer Confusions, Isolated Anglo's, Loose Lips, Cardo titulus humanus

The [summer] of 2009 will not be the [summer of hell] for only the Populace/USofA. The GlobalPop entity is indicating that much of the [hell] aspect/attribute set will also show up in the language of the [english (dominated)] parts of the planet. This [english/anglo] dominated part of the planetary sphere includes large parts of the EU which has many of its sub sets such as [banking/finance/economy] and others, dominated by [english language interests]. These areas are also indicated to [go horribly pear shaped] as the [dollar death] metastasizes throughout the [planetary finance system]. The GlobalPop entity is indicating that [personal confusion], and [collective confusion] will [control/overwhelm] the [thinking] of the [anglo dominated] world as the [american empire] goes through its [crises (threatening) existence] beginning in late May of 2009.

The [ripples/streams/flow] of the [confusion] through the GlobalPop entity begins early in [summer] just past the [june solstice], and is concentrated on [finance] and [planetary climate concerns]. This last is also headed by [biospheric degradation], and includes [habitat/eco-system collapse] as supporting sub sets. These are also cross linked over to the [global coastal event] sub sets in both the Terra entity and the SpaceGoatFarts entity. In both cases the cross links originate in [oceanic/coastal problems] and terminate in [planetary magnitude (of the) occupancies]. In both cases the termination point are also internally cross linked to the [diaspora/dispersion] sub sets indicating that the [populace (of the) planet] will find itself being [pushed around/relocated] by *both* [planetary climate/habitat changes] *and* [economic alterations]. We note that relative to the pending [north american] experience of the [diaspora], at least that sub set induced by [economic woes], the rest of the [anglo sphere of influence/EU/Australia et al] gets off relatively lightly. Much of the [pain/suffering/dislocation] of the [american populace] w *not* translate to the [anglo influence sphere] due to differing living conditions. However, we do note that a sub set of the [diaspora] within the GlobalPop is showing as somewhat [voluntary], and includes a [progressive (modern) movement] to [recreate/newly_create] a [new form] of [village life]. This sub set within GlobalPop corresponds to the [bogslife] sub set within the Populace/USofA and is indicative of a [return/choice of (alternative form of) self organization]. This time the [village life] may begin as [feudally affected]

within some parts of the EU zone, but by the time that modelspace has progressed into the [planetary populace movement] of late [summer 2009] and thereafter, much of the [feudal control] systems come under the [attacks/alterations] imposed by the [planetary revolution] meta data layer, and they begin to [crumble] as [revolution (against) TPTB] becomes [active] over late 2009, and in through 2010.

As the [dollar death], and the [crumbling of the american empire] progress through [winter 2008/2009], and then continues, even increasing, as [spring equinox 2009] is passed in modelspace, the GlobalPop entity acquires large aspect/attribute sets in support of [dysfunctional confusion] which is indicated to [settle/blanket] most of the [english dominated] sub set of the [populace]. This [dysfunctional confusion] sub set is itself supported by other forms of [confusion]. Many of these are going to the [active denial] of the [manifesting circumstances] both [locally] and in [america]. The data presents imagery that [active disbelief], and [active denial] will be [rampant/dominating/raging] in the [global press] railing against the ['false' stories] about [american empire dissolution]. This [active denial] about the emerging [new social order] is filled with bespoke [fear] and bespoke [denial] language. Much of this appears to be generated by the [inability] of some large parts of the [english speaking] populace to [grasp] the [demise of the american empire] due to sheer [scale/scope] of the [manifesting changes] across the planet.

There are indications within the supporting sets that the [global populace] will be coping with an [onslaught/overwhelming cascade] of [primary source difficulties]. This last is focused on the [dollar, usofa] and the [federal reserve (private) bank], and its [owners]. The [failure of the federal reserve system] in [america] is indicated to [produce primary (bank/funding) failures which [ripple around (the) planet], but which will have the most profound effects on the [english language speakers]. Much of this area is participating via cross links to the Populace/USofA entity and the main termination points are within the aspect/attribute set of [loss (of) status/position], and [contraction/dissolution].

There are repeated sub sets within the GlobalPop entity which are in support of [press/speech] and which are indicating that [evil(s)] will be [spoken out/leaked out/documented] by the [crumbling (of the) american empire's control structures (in) foreign lands]. Apparently a whole lot of the [evil done] by the [american shadow government] will be coming to [print/video] as a result of the [secrets revealed] meta data layer influence and the [loss (of the) dollar/usofa] as an effective [bribe/pay-off]. As we have indicated within the Populace/USofA entity discussions, once the [dollar back] is [broken], so are the [chains of silence], and a [growing wave] of [whistleblowers] is indicated to [emerge] over the last half of 2009, and through 2010. So much information is indicated to [come out/emerge] that the data sets have a [2/two generation] or

[42/forty-two year] time frame for the [impact value] of the [emerging lies/evil].

There are also a few new developments within the [israeli mistake] sub set. It had seemed that the Georgia attack on Ossetia, with the Russian response, had provided significant level of fulfillment to the linguistic set. As this most recent processing has included yet more growth in the supporting aspect/attributes under the [israeli mistake] sub set, it would appear that we had missed the interpretation as being a series of [mistakes], and had assumed the [israeli mistake] to be a single incident. The data now accruing in support of the [israeli mistake] has a number of new lexical structures that are raising the emotional value summations within the [israeli mistake] sub set, as well as placing new dates into modelspace. We have some longer term data sets that extend out several years which are including aspect/attribute sets such as [moving rashly] will [produce great/heavy/huge losses]. This group of long range values is tied directly to a cluster of immediacy values which accrue to the [israeli mistake] sub set in February 2009. These longer term values have [extent/duration of impact] sums that suggest that the [mistake] of [moving rashly] will produce a [heavy loss] that requires nearly 17/seventeen years in [recovery efforts]. The [heavy losses due to rash actions] is supported at a primary level by language indicating that a [case/instance] of [blindness] will be the [proximate cause] of the [heavy losses]. The imagery seems to suggest some [incident of blindness] perhaps an electro-magnetic pulse sort of thing, which renders the [attackers (planes)] both [blind] and [mute]. Further the [blindness] is *not* limited to the 'ability to see' form of the definition, but includes descriptor sets that indicate [control systems] are also affected, and the [attackers] are described as [throwing (themselves) from (the) sky]. This is *not* in an 'intentional', suicidal assault, but rather the linguistics are providing support for [hardware problem]. Much of this language, as well as other, secondary, and lower levels of support *could* be describing a [late night in the cold] attack on Iran. If so, the accrual patterns would suggest a late January, or very early February [assault] as the repercussions of the [heavy losses] sub set begins to show in mid February and then continues on for years.

Within the [european zone (of influence)] sub set of the GlobalPop entity are specific sub sets for a [visible] (in the global mediastream) [duality] of [economic impact] over [summer 2009]. The idea coming across from the accretion patterns is that those areas of Europe which were heavily invested or [transformed] by the [credit bubble] originating in the [dollar/usofa] will [suffer implosions] of a similar nature to what will be expressing itself here in the USofA over all of 2009. These [implosions] will not affect all places equally. The data sets are showing that very [positive] outcomes with differing levels of [transformation] will be felt in areas that were relatively left behind in the [cheap credit blitz] of these last years. There are other parts of the sub sets

indicating that the [fuzzy revolution] will be expressing itself first in areas *most* impacted by the [credit/dollar/derivative] collapse, as at least some of these areas are indicated to attempt to [form new villages]. This will apparently include a [wave/trend] for [local councils] to [appropriate] the [holdings] of [large] but [absent] [landowners] for [local food production efforts]. Such moves are indicated to appear in a number of countries as both the [dollar] and the [legal reach/grasp (of the) corporation] begin to seriously decline. The accrual patterns are indicating that throughout all 2009, beginning in earnest in Summer, the [flare ups] of [village secession/self-rule] and [reformation/recreation (of) village life (from) sub divisions/commercial parks] will occur across a broad landscape. At some point in late Summer or early Fall we will see temporal markers of the [last of the squatters battles] beginning. These will be instances of [squatters] who will [seize commercial property/land] and rather than merely [occupy] the [space], they will set about [transforming] the area by [recycling] the [material] and [location] of the [commercial park] into a [functioning village]. At some point in the [harassment] of the [effort] by ThePowersThatBe, and more likely in Fall than Summer, the local [police/law enforcement] will [opt out/refuse to further participate]. This will set the stage for a very nasty [confrontation/battle] between the [homesteaders/villagers], and the [mercenaries] of the [corporate (titular) land owner]. The outcome is forecast to be [not good] for anyone directly involved, but at the same time, apparently necessary as this [single battle/skirmish/confrontation] forms the core of the [planetary populace movement] shift into [active revolution]. This is an example of the areas of the linguistics in modelspace which are being dominated by [monumental/epic] as top level meta descriptors. This is forecast to be a [confrontation] to which [monuments] will be [dedicated]. A true [turning point in omni humanity history].

SpaceGoatFarts - Tattered Tapestry, Old Men Plot, Planetary Hot, NuGlots

The SpaceGoatFarts entity, as are several other entities, is presenting linguistics which suggest that the [dollar death] will have [repercussions] at many, unexpected, levels within the planetary social order. Within the SpaceGoatFarts entity, the [dollar death] cross links from Markets entity, and Populace/USofA entity, and GlobalPop entity *all* converge on a terminating set of aspect/attributes which can be interpreted as [end of bribes and loss of pressure (points)]. This aspect/attribute set is both deep, and broad, and within its depth is very complex. The primary supporting layer goes to the idea of [dollar lack/dearth] means that there is [far less/much reduced continued pressure (of bribes)]. The aspect/attribute for [bribes] is directly tied through supporting aspect/attribute sets to the [contact] meme. The [contact] meme accrues these

[lack of dollar bribes (means) increasing exposure (and) lack of pressure (to) keep quiet] supporting sets all through 2009, with a very large 'bubble' or 'peak' of growth at the end of [summer 2009] and through all of [fall]. In other words, the scatter graph of modelspace shows that the Fall of 2009 can be considered the [season of transformation] in which very intense pressures are placed on the planetary populace by the [bursting out] of [information/data/leaks] relative to the [contact with Other consciousness] meme. The data sets are clearly pointing toward the [official (tapestry/cloth) of lies] relative to [space aliens/NotFromHereBeings] becoming [threadbare/tattered] throughout 2009, but with a very large series of [rents/tears (in the) fabric (of) official denial] occurring in very late Summer, but then ramping up to [unreal/staggering] levels in Fall of 2009.

There are indications within the cross link layers that at least part of the emotional power of the [contact] meme in Fall 2009 comes from the [officialdom/governments] that will [seize] on the [revelations of contact] and [alternative human/terra history] as a mechanism to [distract] the [populace] from the [local effects] of the [planet covering economic depression] which will be *just* getting really [serious/intense] in late [summer 2009]. These [officialdom] groups throughout the planet will be facing [huge], [local action] by their [rebellious populace], and some [bright fellows/old men (scared)] will decide that the [only way out/escape] from their [personal dire circumstances] as [officialdom] will be to [let loose] the [hoards of information] about the [contact] meme. This [ultimate distraction] is indicated to begin with a [conversation] in a [restaurant] which overlooks a [small canal] with [direct] outlet to the [ocean]. This [restaurant] will become [famous/well known] later in 2009 and throughout 2010 as the [Place-it-all-began]. The data sets in support of this [restaurant conversation] go to the idea of [attacks] on these [officialdom] figures {ed note: at least 1/one of which is (at that time in the future) recently retired, and suffering from 'too many exposures to ?'} in the [open/blatant] will produce a [schism] between [government officialdom] of the particular [nations/countries] involved, and the [vatican/sorcerers]. This [bad blood] attitude by the [vatican/sorcerers] is shown as being a temporal marker to the [defeat] of the [vatican/sorcerers] later in the [planetary revolutionary war(s)] of 2010/2011.

Contributing to the general [disquiet] and [unease] of the [planetary populace] will be the [accelerated global climate change] that will be [displaying/demonstrating] in a variety of ways in late Spring 2009, and throughout the Summer. The appellation of the [summer of hell] for the Populace/USofA entity is only partially driven by [economic collapse]. A large portion of the contributing emotional sums for that entity derive from [climate related [demonstrations of abnormality]]. These sub sets describing the [climatic strangeness] are primarily held in the SpaceGoatFarts entity with either

extensive cross links over to the populace entities, or with smaller representative directly held value sets within those entities. The many [climate change] lexical sets within the SpaceGoatFarts entity are dominated by a [hot (and) getting hotter] descriptor set that applies to the [northern hemisphere summer] for 2009. This [hemispheric phenomena] of [exceptional heat points/areas] is also contributed to by a [chemtrails] sub set that *seems* to be arguing the position of a [failure] of the [chemtrails] to [alter the albedo (reflect incoming radiation)]. This is not necessarily saying that the [chemtrails] themselves are not attempted, but rather that the [concept] in its [totality/completeness] is [defunct] or [defeated] by [circumstances] this coming Summer (Northern Hemisphere NH). However, we do note that the [economic collapse], beginning sometime in Spring, *does* have an effect on [reducing] the whole of the [chemtrail] activities as the [fuel crisis] spreads in late Spring into the [military] sphere within the [english dominated] populace.

Further problems for the whole of the [chemtrail experiment/experience] develop as the [number] of [commercial flights] decreases [rapidly], and [radically] in Spring, the [chemtrail planes] become just that much more obvious. The accretion patterns within the Populace/USofA entity, as well as ThePowersThatBe entity, including cross links over to, and from the SpaceGoatFarts entity, are indicating that the [chemtrails] become a [point of discussion] with significant level of [visibility] within the global mediastream *and* [mainstream press] due to the [increasing contrast (inability to hide)] as the [global commercial airline industry] hits its [implosion] point in late Spring 2009.

The impacts of the [planetary economic crisis] on [chemtrails] will produce a [hot summer] with new [appreciation] forming within some segments of the [global populace] about the [incoming radiations] from the [sun] and [other places]. This area within the data is extensively tied into the [contact] meme, and has its largest gains in supporting sets over late Summer and into Fall of 2009. Much of this area is also tied into the [global coastal event] sub set with the Terra entity. The [global coast event] sub set within Terra entity is seemingly in lock step with the [chemtrails program] and its [changes/alterations] that begin in late Spring of 2009.

The whole issue of a [hot planet] and [strange new energies (unknown) from space] will heat up (pun intended) over the course of this [northern hemisphere Winter 2008/2009], and then increase in [visibility], and [intensity] as [winter] moves into [spring]. The building emotional tension values in late March, just prior to, and just following the [vernal equinox] with regard to the [climate] will form the [emotional perspective] or [basis for view point] from which the [summer of hell] progresses. Stated another way, some significant portion of the global populace will have a [new level of emotional connection] with the who

subject of [climate change] from late Spring onwards; further this [new level of emotional connection] will cause [disruptive behavior changes]. In addition, the [new level of disruption of previous behavior patterns] will be in a large enough subset of the populace of the planet, and at deep enough levels, so as to motivate a [prolonged response plan] by the ThePowersThatBe. Further, the [depth, and breadth] of the [new behavior patterns] will be at very high levels of [visibility within the global mediastream]. Further, these [behavior changes] are indicated to [produce tribes/associations/SOCs (self organizing collectives)] which will [bedevil] the [authorities] as they will be [cross border/beyond nation-state control]. These [awareness based SOC]s *will* be [declared (to be) enemies (of the) state/nation] at some point in late 2009, but by then the [declaration] will only be [meaningful] within the [limited minds] of the TPTB and the [minion class].

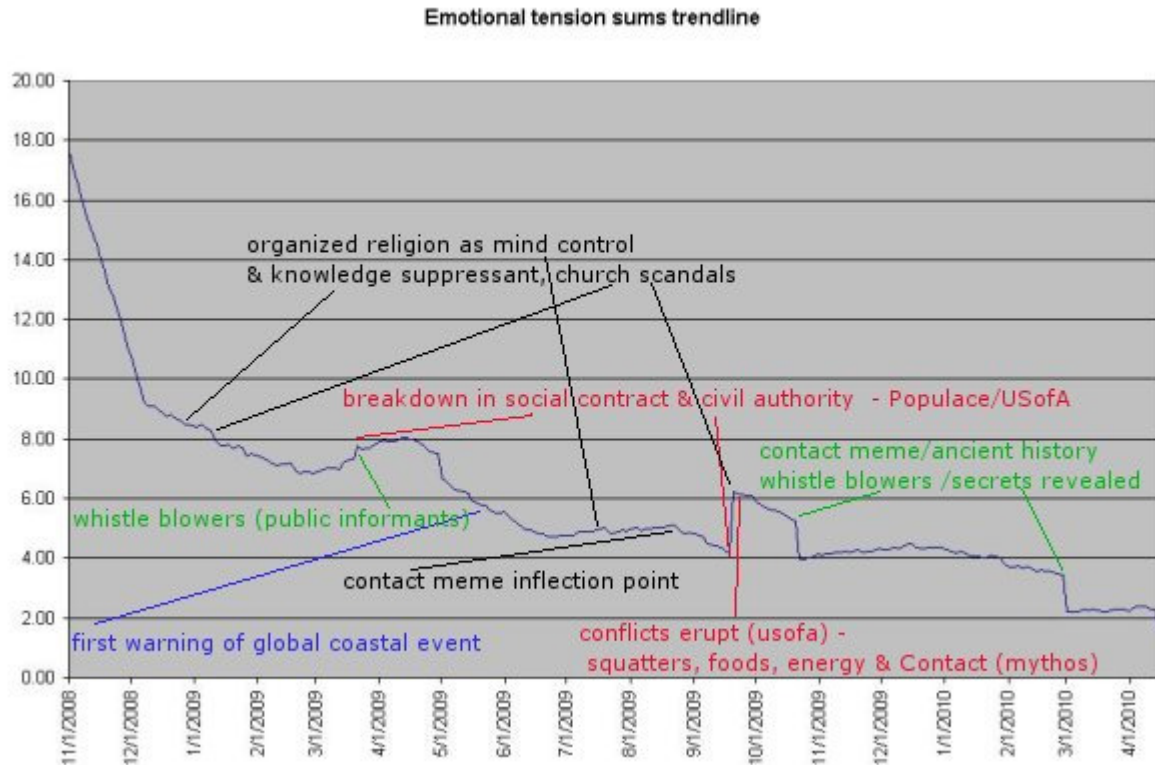

The SpaceGoatFarts entity gains several new supporting sub sets under the [awareness based SOC]s at the [international] sub set level as the modelspace progressed past September of 2009. As the [autumnal equinox] is passed, a new [SOC] at a distinctly [metaphysical] level emerges. This [pan planetary metaphysical SOC] produces a sub set which contains pointers to a new [language] which will form as a result of the [awareness based SOC]s and the [planetary behavior change]. We are labeling the new [language] as [nuglot] as it will be created by [polyglot's] or those humans who are [multiply language users], but more than merely a new form of esperanto, this new [language] will include a deep level of [embedded gnosis] through the use of [expressions of archetype via common understanding/viewpoint/perception]. In many ways the [main stream] component of the [enslaved mega mind of omni humanity] will label this as nothing more than a [fringe development], however the data sets are indicating that this [nuglot/nuspeak/nutongue/new_language] will spread from the [le park'rs of paris] to the [bark'rs of the amazon] and to the [shoe maker in tibet] and to the [street vendor in caracas]. It will encompass a [new basis] for understanding [humans] in universe, and is indicated to bring along with it the underlying assumption that [alternative (info/view) is true] and [officialdom *always* lies]. In short, the [nuglot] will represent the [death of the old paradigm] that is the expected outcome of the [tattering t(r)apestry of officialdom lies]. We are placing all of the [nuglot] related sub sets into the SpaceGoatFarts entity (for now) as so much of the core of the data falls into the [officially denied] category. There are indications that this [nuglot] will include some rather interesting, and new linguistic structures, the hints of which offer some small clues to the actual staggering level of [transformation] at a planetary populace level pending for all of 2009.

Populace/USofA - Bitter Pill, Demolition Dana, Stripmall Colleen

The accretion patterns of the longer term values within the supporting layers of the Populace/USofA entity present some interesting challenges for interpretation. As the model space is progressed just barely into 2009, say around the 14th or so of January, a new sub set which we will label the [terrible medicine] or [bitter pill] starts to take shape within the [economic] sub set of the Populace/USofA. What makes this linguistic set very interesting technically is that it also is building under the [infrastructure] and [military] sub sets. Within in all 3/three of these major supporting sets of the Populace/USofA entity, the [terrible (foul tasting) medicine] is supported in 1/one of the top 3/three layers with the aspect/attribute set of [necessary/required] and this is in its turn supported in all 3/three instances at its primary level by [suffering]. So we can interpret the broader trend developing here as being a case of [terrible tasting medicine which causes/produces necessary suffering in the areas of the economy, military, and infrastructure]. Further, the [bitter pill] sub set is composed of high duration value supporting aspect/attribute sets with impact values going out between 5/five and 9/nine years.

As we look deeper into this linguistic [bitter pill], the various supporting layers provide clues as to the nature of the [necessary suffering] coming. Some of the indications are for an [employment crash] of [never seen before size and scope] which is indicted to [involve (the) federal civil service]. This [unemployment 'experience'] at the national level really has already begun, but the data sets are indicating that it will be Spring before the [visibility] of the [actual extent/picture] will emerge. At that point, and throughout [spring 2009], the [officialdom] will have begun a [multiple year effort] against a [rising tide] of [crashing 'industries'] and [increasing unemployment]. There are a few clues for temporal markers such as [trade collapse] which will [precede] the next [unemployment rise]. As the [officialdom] struggles with the [Unemployment Problem] {ed note: in a short while *everyone* will capitalize this in their speech patterns}, it will manage to provide *some* jobs, and the data sets are indicating that a [national icon] will be [visible], likely before mid Fall 2009, in which a [young woman] will be the [poster child] for a [new form] of a [new deal]. In this case our [poster child] {ed note: internally labeled as 'demolition dana'} will be [visible] at her new job of [sub division demolition]. A social trend of some significance with multiple generational impact of over [42/forty two years] will be emerging from the simple beginnings of the [demolition dana] story. The accruing supporting values are indicating that the [sub division/housing development] trend or wave is near [death] and will be [officially interred] in 2009. The idea coming across is that [cadres] of [workers] organized by [crafts] will [descend] on [empty housing sub division] beginning in 2010 with the intent of [scavenging] any and all [materials], with special emphasis on [metals]. These [demolition corps] will be [federally organized] and over late 2010, and into 2011 will be a [growing] phenomena here in the [usofa]. These longer term values are set against a backdrop of the

2/two disasters of [death of the dollar], and the [repudiation (of the) paper deb trade]. As such, if there are near term solutions for either of these areas, the data sets we have may need to be reinterpreted. But we don't think so at this point in time.

As the modelspace is progressed through the Summer of 2009, and into Fall proper, the [visibility] of the [squatters] as a [social movement] rises considerably. The data sets accruing bring in [visibility] values about several [archetype personalities] which will be [rising to prominence] along with the [squatters movement] all through the [summer] such that by [fall 2009] they are becoming something of [national social icons]. We note that these [personalities] are associated with the [emergence] of the [new economy] that [crawls] slowly from the [dying ashes] of the [official economy] over the first half of 2009. This [new economy] will be (initially) [mostly (declared) illegal] by TPTB, and in *some* localities in the [usofa], and at differing times in 2009 the [minions/officialdom] *will* attempt to [enforce laws] against the [rising] new [displaced classes].

In the examination of modelspace we have to be careful to note that the populace has yet to provide the 'labels' that will arise for these new social phenomena. In other words, the [newly displaced/disenfranchised, former middle or working classes] are hardly likely to label themselves as the [displaced class]. While the [media] may try [disparaging labels] for a short

while, these will not 'take' internally, and the [affected persons] in their [tens of millions] will label themselves with something much more positive than we provide here in these reports. This is also likely true of the [squatters movement]. It is likely to be labeled with more [pejorative terms] by TPTB and their [press minions] initially, but at some point {ed note: most likely in late 2009, say November or December} the participants will [declare] themselves [new (social/political) identity]. This [self-identifying label (for the squatters movement)], while an unknown at this point, nonetheless is backed by linguistics suggesting that this [squatters movement] will form a key component of the [active revolution] through 2010 and 2011. Further, this movement is indicated to participate in [defining/delineating/creating] the [new american social contract], as well as providing the [basis/core] of the [transformative mythos] which will emerge from these [epic years] and provide the [framework] for the [continental populace] for the next [4/four generations (82/eight-two years or longer)].

As the [squatters battles] erupt in various [usofa] locales across 2009, the data sets are pointing toward a [central personality] that we are calling [stripmall colleen]. This [female personality] comes into focus as modelspace, and the Populace/USofA entity is progressed into late Fall 2009. The first hints of the [female archetype] that supports the [female personality] in her [visibility] late in Fall are indicated to be [visible] during late Spring and early Summer. These [hints/clues] as to the profound nature of [change] affecting the [social contract/order] will be [pointed], albeit very temporarily (this first time), on [stripmall colleen] as a [minor figure] in a [confrontation] which will [seize the public attention/consciousness] in late Spring. The data sets are showing that [stripmall colleen] will come across as a positive [force] of some [surprising strength] in an otherwise [bleak battle/confrontation]. The [archetype] itself is a bespoke part of this sub set in that the accretion patterns include references to the [colleen (as) archetype (for/of) woman] as [emerging] from the [confrontation] and providing the [fulcrum] for [transformation]. The data sets are providing support for the period in late August of 2009 as providing the [resolution] for the [confrontation], and as acting as a temporal marker for the [transformation] of the [idea/status/meme] of [personal property] and [property ownership] in all of its [mythos] as the [underpinning] of the [american dream]. So basically the data sets are presenting a picture in which late August of 2009 is the [pivotal point] in the progress of the [social contract dissolution] here in the USofA. There are also extensive cross links over to the ThePowersThatBe entity which terminate in many sub sets that contain bespoke [fear] relative to this [occurrence] of [social contract dissolution]. The accrual patterns, including the sets via cross link, are indicating that the [social transformation] of the [american populace] really takes off in late August, and brings with it, [secrets revealed], and [encounters with scarcity] that are indicated to [threaten] the [political elites/TPTB]. Further the [secrets revealed] meta data layer itself

grows rapidly from late August of 2009 and begins to actively provide supporting sub sets under the [revolution] meta data layer.

Conclusion - ALTA 909 - Part Five :- Empty Space Inside c No Box

We are all, that is to say, the whole planet full of humans, are facing a unique situation with the continuing [death of the dollar]. This is the first [planet wide currency collapse], as well as the first [collapse of a global reserve currency], well as the collapse of the first [petrol linked currency], as well as so many other 'firsts' as to bring the [mainstream media] to constantly repeat the refrain of [unprecedented]. The situation facing us as yet another unique component that not many pundits seem to be seeing, that is the existence of the [dual] nature of the [usofa dollar]. In fact, MOST of all the [us dollars] in 'circulation' do not really exist. The actual figures are hard to calculate and change daily due to the huge numbers of [dollars] being created, but somewhere less than 2.4 (two-point-four) per cent of *all* USofA dollars actually exist. That is to say, that less than 2.4% of all dollars exist *outside* of a computer as actual currency. The actual number is even smaller in that a very large portion of the 100/one hundred dollar bills in circulation outside the USofA are counterfeit. And there is a continuing trend for the 'creation' of ever larger numbers of 'dollars in computers' which are skewing the ratio daily. The point of maintaining this awareness is that we may yet discover that the [death of the dollar] meme results in the [destruction] of the [digidollars/dollars_in_computers] primarily, and internationally, resulting in the actual paper [federal reserve note] remaining (temporarily) as the [currency in circulation] here in the [continental usofa].

If the [death of the dollar] continues as it *seems* to be progressing, its use as an [international currency] will [collapse] or be [repudiated] or be [defaulted upon] first, and almost instantly (when digidollars are no longer able to be 'traded' between computer accounts), the USofA nation, currency, and economy would suffer a near 98/ninety-eight percent deflation in nominal 'wealth' across the entirety of the planet. Not only would the 'velocity of money' grind to a near halt, but the social fabric would also be severely tested by the sudden stress of virtually NO circulation of currency.

It is at this point in the progress of things that the new economy will become very visible to even the most obtuse of the [good citizen class] as they will suddenly have to start dealing with the [criminal classes (almost everyone by this time)] merely to survive. The new economy will develop in surprising and very unexpected ways, some of which are hinted at in our data sets. But as much of the data is accumulating into sets trying to express contexts which do not yet exist as the conditions for their creation do not yet exist, providing any

interpretation means that we are *assuming* we have *most* of it wrong. This is to say that we are trying to pick up meaning for words (and contexts around words) that do not yet exist. Talk about 'fishing up the river of de Nile'....here we don't even have the basics of even an illusionary fishing pole. Merely hints of vapors swirling in mists driven by puffs of words not yet spoken.

And none of the words not spoken in the future in modelspace will be speaking of a [federal reserve note]. Rather a [new thing] is coming in the [social arrangement/order] of the [USofA], and it will seemingly [not care at all] about the [remnants] of the [old government system]. Whatever will replace the [dying dollar] will likely NOT be as Igor wishes, a pie based economy. Whatever we will derive as our new social arrangement over these next few years, it will certainly not be crafted around the old Picean paradigm of growth and growth, and control. As yet our combined future has the solidity and form of empty space in no box (to paraphrase the Zenistas), but still, in the moving vapors of linguistic abstractions on the internet, reality, as tenuous as it is, has started to harden into only *nearly* empty space in no box at all.

###

We expect to have Part Six (final part of the 909 series) posted by late Saturday December 13th (assuming we are incorrect about earthquakes and are still able to access internet).
