## Meta Arts

As with the last ALTA report in November of 2013, this report has been prepared by first tuning the lexicon. This tuning process is tedious, and given the nature of evolving and ambiguous language, is fraught with potential for error. The nature of the tuning is that the emotional qualifiers and quantifiers are examined and compared to current entries. We are presuming that this effort will keep the work current with evolving linguistic trends. In this run we need to note that at the meta (linguistic) arts level, there are some surprising new areas of growth around such subjects as [encryption] and [privacy (of) internet use] that are clear indicators of a new level of interest in the subjects. These must be understood in their context however, the large, and noticeable change is from near nothing, to slightly more than little. The issue appears to resolve entirely down to consumer issues such as ease of use, as the level of verbiage around the subjects are suggesting that there is a pent-up demand of considerable size. There are also all kinds of indicators from 'the other side' of things (tavistock/cfr/corrupt officialdom) that they are very much afraid of a [pending break-through] in encryption software. The idea is very [chilling] to [officialdom] at all levels, and does NOT relate to anything like 'terrorism'. Rather their fear is 'loss of control'.

Also for the first time in our processing we have some evidence that the powers-that-be/officialdom are actually [anticipating hard times at personal levels] due to [converging circumstances]. This is a very narrow view however, as the [stooges/politicians] and [other minions] are clearly [oblivious] to the [trends propelling (their) lives]. These include the [internet 'going dark'] to their spying, but also, we find evidence of a greater fear set that has some (new?) level of growth in its immediacy values that suggest they (ptb) are very guarded about their [anticipation for 'success'] in 2014/2015. The implications are that some [threat (is) looming] and is, from their perspective, [nearly visible]. What is not apparent is the nature of the [threat].

## Meta Data

This data run continues to provide [disruption] as THE key word for 2014. The [disruption] word is showing in all entity areas, and is sustained as far forward into 2014 as we can progress modelspace (about early September with complete detail layers still gaining aspect/attribute sets). The implication from the supporting sets across all the entities is that both [planned], and [spontaneous/unexpected] forms of [disruption] will be taking the [headlines] and filling our internet discussions as we move (along with terra) further into 2014. The [disruption] linguistic structures vary from [innovation] through to [chaotic responses (to displacement/diaspora)]. The [disruption] sets continue to gain supporting sets through the progress of modelspace to its limits, thus suggesting that we will likely finish this year with [disruption] on our minds.

At a meta data level (the 'context' surrounding one of our samples, e.g. site of origin, date of retrieval, comparison point (site URL), emotional summation, and other details about the conversation from which the sample is extracted), this past data gathering period has been extra-ordinary in a number of ways. The [disruption] sets are heavily focused on the [populace/USA] sub set of the GlobalPop, however, they are existent in most of the larger GlobalPop sub sets as well. The [disruption] sub set is found in the SpaceGoatFarts entity, and the Markets, and Terra entities in enough quantity as to suggest that it is a [meta data trend] developing across the entire of structure of modelspace. It may well be that this trend will shift into a context change, however that cannot be determined from the data sets at this point in time.

The [disruption] sets are also extraordinary in that the spread of emotional qualifiers is wide, and heavily weighted toward the extreme ends of the range which has produced a 'teeter-totter' look to the sets as modelspace is progressed through the first half of 2014. The [disruption] sets have extremes that range from far-negative-building tensions through to far-negative-

tension-release. There are also a few sets that are within the range of far-positive-tension-release. These more positive sets do contain negative elements for [systemic imbalance/upsetting/replacement] so are not totally positive in any of their emotional parameters. Nonetheless, some of the sets do gain positive emotional positioning as modelspace is progressed past the last of [summer (northern hemisphere)].

The [disruption] sub set also has extensive support from aspect/attribute sets that are also within the supporting chain for the [break-away civilization] actually [breaking-away].

## **Terra**

One of, if not THE, largest of Terra entity 'cautions' for 2014 is within a set that is headed by [fractured poles]. This is referring to a [fracturing] of the [earth's magnetic poles] such that we will have, albeit temporarily, several [north poles]. It does not appear that the [south pole] will fracture, though it may be [so reduced] as to be [nearly invisible (magnetically)]. There are several new supporting sets for the [polar chaos] sub set that would seem to indicate that [terra/earth] will have [several new (20+?) north poles]. And as if that is not concerning enough, it would also appear that some of these will be [going walk-about], and causing pretty much the [frozen-mammoth-with-undigested-grass-in-its-mouth effect] on various parts of the planet.

The data sets accruing within the supporting sets for the [polar vortex] include sets that suggest that the [drought] on the [west coast] of [north america] will be [broken (from stasis)] by a [polar fracture] that appears in modelspace as it is progressed into [Spring (northern hemisphere)]. Without regard to the unlikely nature of the forecast at this moment, the data suggests that [horrific rainstorms] will [devastate] the [south western (north america)] such that [mudslides] and [changing contours] of the [coast line (due to

slides)) are a major topic in 2014. The data sets are forecasting a [flood] of [storms] that will arrive [like train cars (one after another after another)] and bring [much needed water], but also [waaaaay too much] in [far too short a time].

The data sets are also filled with supporting sets that are concurrent temporal markers (meaning several markers all in a row across modelspace) for the [foods (price/availability)] crises that are forecast to arise from the [devastating rainstorms/mudslides]. Further, the [climate] of the [west coast (of) north america] is described as being in [rapid oscillation] such that [mudslides soon (get/are) baked (by excessive heat)]. As modelspace is progressed through 2014, the [wacky weather] is so [acutely prominent] in [mind (of populace)] as to lead to a new [pass time] of [weather forecasting gambling/gaming]. The data suggests via cross link that there will be [engaged attention], and [conscious support] for this [weather gaming] coming from the [new language techno-soc's (see GlobalPop below)].

The [polar stream/vortex rupture] is extensively represented in the newly processed data and is cross linked both internally in the Terra entity area, and externally to the GlobalPop entity. In the GlobalPop entity the terminating sets include [jet stream split], and [dropping (jet stream)]. There are other terminating sets that in their turn are cross linked through to SpaceGoatFarts entity and include such as [(air/sky) slick], and [floating (unknown)] that is supported by [barely seen through the clouds] and [(just the other side of the clouds)].

The Terra entity is further entangled with the SpaceGoatFarts entity via cross links that terminate in the proto-typical SpaceGoatFarts sub set of [unknown energies from space]. This set (one of the original sets prompting the creation of this entity) has terminating sets from the Terra entity that are in their turn cross linked back over to the GlobalPop entity where the links end in sets going to [broken/interrupted sleep], and [mental (state) under (duress)], and [mental state (slightly, but noticeably) unbalanced/not centered], and others

of similar nature. The 'narrative' coming from the detail layers of all three areas would have the [msm = 'main stream media' = (presstitute whore media)] having discussions about [global sleep pattern interruptions], and [other mental effects] being [reported (mostly globally)].

The data sets accruing to the Terra entity are diverse, and not concentrated on any given area, and at the same time, the number of geographic references is up significantly over previous ALTA report data gathering periods. The diversity of the many new sets causes some problems in the interpretation in that it appears that very diverse [climate/weather] will be hitting almost everywhere, and pretty continuously throughout 2014. The data sets range from [no Spring] over many areas of the [northern hemisphere] to [spectacular Fall (south africa/far south america)] that then turns to [brutal winter (not seen before extremes (in southern africa, and southern australia))]. Further diversity of the ranges would seem to be indicating that 2014 will have at least [3/three areas] that will [see no Summer], and further, may even have [snow/hail] that will [fall in June/July] and [remain even a year later].

There are large linguistic structures for [devastating winter (in southern hemisphere)] that includes [new glaciers forming in high mountains (S. America)], and [new river (channels)] that will be [created by sudden snow melt], also in South America. Further sets in seeming opposition include [snow (in africa)], as well as [devastating brush fires (also in Africa)] due to [extreme, and sudden drought conditions]. There are new sets indicating that [coastal flooding] from [storms] and [exceptionally high tides (driven by underseas events)] will affect large parts of the planet in the southern hemisphere over the first half of 2014. However disruptive the [coastal flooding] is in 2014, the data indicates that it is but a [prelude (opening)] for similar effects in both hemispheres in 2015.

Data sets for [asia] include new structures indicating yet another case of [extreme drought] as [rain patterns] are described as [ceasing (to exist (as they had in the past)))] over the course of these next [7/seven months]. The

Terra entity has most of the [old patterns (of climate life)] moving into a [transition phase] over this year. In all the sets that are within the supporting chain for the [transition (period (of several years? 6/six or more?))] for the [climate/weather patterns], we find detail layers that are filled with shorter and longer term values for [food crop impacts]. As may be expected, very very few of these sets are in any way positive. Most of the [food crises (due to transitional climate period)] are also extensively cross linked over to the GlobalPop and Markets entities where a majority of the terminating sets include support for [food price crisis], and [food shortages], and [food (crops) disappear (from retail sales)].

Sets referencing specific kinds of [food plants] that will be having a [rough time] include [grapes], and that includes most of the [wine grapes]. The data is forecasting that 2013 (last year) will be an exceptional year for [wines] across the planet. Now the data would seem to be suggesting that this is the case as 2014 through 2019 (peaking) and trailing off to 2021 will be [harsh years]. Some of these supporting sets are also indicating that [vineyards (will) go extinct] in many areas due to [adverse (sudden) weather shifts]. As may be expected, much of the supporting set chains go to the idea of [water impacts] and [rainfall patterns shifting]. There are some sets indicating such 'screwiness' as [rainstorms] that will [flood] areas a mere [2/two kilometers] from the [northern (by west) edge] of the [(new) drought desert]. The data suggests that [msm (mainstream media prostitute whores)] will even have [helicopter video] of [sharp lines (of floods juxtaposed against) drought devastated (former farms)].

Further problems are revealed for humanity and its habitats as modelspace is progressed through the March equinox. The data accrual patterns bring in aspect/attribute sets that have geographic references for [dozens of islands (island nations)] in which [underseas convulsions] will be [altering coast lines] and in some cases [forcing withdrawals] of [humans/habitats/stuff]. These linguistic structures have high [visibility] profiles and will likely end up as video streams that will induce the conversations forecast. The impacts

sets include references to [islands (in northern hemisphere)] that include [US], and [EU].

The data shows that a [March/April 'Slam'] will be hitting the [west coast] of [north], and [central america]. The [slam] is described as being a [toxic wave] that is [so large] as to be [daily toxic (rad limits reached in mere hours)]. This [radioactive toxic wave] is described as a [trigger] to [vast social] and [economic] changes. It is also extensively cross linked over to the GlobalPop in both [food], and [social disruption] sub sets.

Yet another [cold wave (freezing 'node' of high-altitude air)] will [settle in (over eastern NA? And Western EU?) ] late in the winter. In fact, modelspace shows this [late season freeze] as coming in [early spring (northern hemisphere)].

February trails off of the [coldest period on record] for much of [northern hemisphere], but the data sets are indicating that the [worst] is yet to come as [extra-seasonal climate patterns] appear to be [stuck in place]. These include [eastern third (of ) north america] that will be [stuck in cold], with the [southwest] seemingly [stuck in summer]. Although the data sets are also pointing to [haarp] as the [culprit], and are additionally forecasting that a [reduction in electrical output] will [precipitate] a [sudden], and [massive] change of [weather patterns] across the [northern pacific] as well as the [whole of north american continent \*(from arctic to central america)].

Some of the [sudden shifts] include descriptors for [long running/stationary (on the california coast) rainstorms] that are also described as [washing away] several [small mountains] as well as [displacing tens of thousands] of people from their [homes] due to [flooding] and [mudslides].

The [flooding] set is also gaining new supporting sets for the [eastern third (ohio valley eastward)] of [north america]. This [flooding] sub set is

combining both [rainstorms/rain driven floods/rivers over-topping] with [exceptional tidal floods (due to storms)].

The data sets are growing in support of a [positioning/preparatory movement] within the [planet] as it proceeds along in the path of expansion. Note this is our bias showing here. The data itself does show [preparatory movement (plate shifts)] without the [expansion model] language. Without regard to the 'cause', the data shows that [land re-formation] is going to be part of the first half of 2014. In the same way that the [new lands rising] data from previous ALTA forecasts rose to the top of its interpretation stream, so has this current data set growth around [land re-formed/(waves of change through the crust)].

There are several sets within the Terra entity area, sub set [land surface re-formed], is cross linked over to the GlobalPop entity area where the data is seemingly centered on [Italy, middle Mediterranean area] that seems to suggest that [earthquakes (preparatory to volcanic eruptions)] will cause [all of officialdom] to [be forced (to) wander (among) the refugee citizens]. The accretion patterns are providing growing support for [volcanic impacts (as part of land reformation)]. The data sets under the [volcano] and [volcanic ridge/mountain range] sub sets have more than doubled in total size in this last period of data gathering.

Other sets that emerge over the first half of 2014 are forecasting that the [jet streams] and many [ocean currents] will be [shifting across the globe]. The data describes several [emergency expeditions] attempting to [understand] the [nature] of the [current climate change]. Note that our data sets also continue to grow in support of the [new ice age] sub set for several years now. The data sets have new linguistic structures that describe a [crashing] of [jet streams] that in turn trigger [bizarre weather] in mid 2014.

A few of the sets in support of [volcanic reformation (of lands)] also seem to be indicating something of a [bonanza] as [rare earths], and even [gold] are brought to the surface by the [reformation of 'old hills'].

Other aspect/attribute sets within the Terra entity area are also providing support for the idea of an [oceanic 'bonanza'] as [new lands (are) formed]. However the [ocean] sets also include sub sets for [pollution (from the new lands)] as well as [devastating (impacts on) fisheries]. There are other sets that go to the idea of the [submarine highway marker system] being [disrupted] by the [reshaping (of) benthic contours]. In these instances, there are also strong cross links over to SpaceGoatFarts entity where many of the terminating sets are within the supporting sets for [alien wars]. This is a repetition of the growth patterns seen in 2012 and 2013 for [sub-oceanic space alien wars].

The [oceans] sub sets also contain a new growth pattern of supporting sets that are associated with the [Indian Ocean] and the [Southern Ocean]. In both sets there are large areas of new growth of aspects that are headed by such as [storms (uncover/reveal)], and [storms separate (the lands?)], and [upending (of lands) by storms]. Further sets would seem to suggest that [storms (in the indian ocean)] will [compound (communications)] problems {see SpaceGoatFarts, laser tag discussion}. Many of these sets are also housing [military] as supporting sets and the implication from the detail sets is that a more or less permanent [communications problem/hole] will be [created] either as a result of an [Indian Ocean storm], or simultaneous with the appearance of the [storm]. These sets have very large cross links over to GlobalPop entity where the terminating sets include [diaspora], and [mass evacuations], and [international (relief) effort]. Hmmm....probably NOT a good sign.

## **GlobalPop**

A [marked] and [significant drop] in [airplane travel] will [hit] the [travel 'industry'] nearly simultaneously to the [slam] from the [radioactive debris] that hits the [west coast] of [north (and central) america]. This [demand

cratering] is also showing as [rippling outward] through [cruise ship bookings] and affecting [tourism] in a large way over the course of 2014. There are indications that [tourism] has many different issues from [violence (in the streets (mostly over 'austerity'))] to [volcanic disruption (of locations/air traffic patterns)] through to and including [disease clusters/blooms] in which [bad waters (are blamed)], but the data would suggest that it is actually [pollution] from [hidden sources] rather than the bespoke [bacteria]. Other sets showing impacts on [tourism] include the [currency crises globally].

The data is suggesting that [geek (hacker/cracker) culture] is about to go [fully political] in a way that the [central planners/banksters/officialdom] had [not anticipated]. The [geek/hacker culture] is described as [getting a sense] of [its own presence] as the [global populace] is described as [running into (several) walls]. These [walls] are found within the [energy], and [communications/money] areas, as well as within the Terra entity (ice age sub set), and the SpaceGoatFarts entity (sub set unknown energies from space conjunct the alien wars sub set). These [walls] are further described within the detail layers as being [hard obstacles] that (each) will require [maximal (social) efforts] to [over-top (climb over)]. As a result of the first [3/three] of these [hard stops (in perception of species progress)] being [encountered (impacted by)] nearly simultaneously in very [early spring (northern hemisphere)], the [geeks/hackers] will find themselves at the [center] of [attention] of GlobalPop. The [centering of attention] is supported by sets indicating that not only will the [geek/hacker culture] be [transformed] by this [new sense of social meaning/presence], but so will the [larger social order (at a planetary level)].

If one were to interpret the SpaceGoatFarts entity cross links to the [walls/hard stops] as contributing to the problems, then a reasonable interpretation would be that [unknown energies from space] would be a [component] to the [cause of communications failures], as well as [energy disruptions]. Further the data would also suggest that the [unknown energies

from space] will be [labeled] or [categorized] in some [socially prominent way] that will have a large number of people linking these [unknown energies] to [space alien wars] in their conversations; this to the extent that the conversations themselves become a [reported feature] of the [event/times].

The data describes the [geek/hacker culture] as being [exemplary (of) volunteerism] as well as [demonstrating Self Organizing Collective (SOC) methods] to [mainstream social order]. This [rise to the occasion] component of the linguistic sets is supported by several new accretion patterns indicating that the [social order] will be [profoundly/deeply] [affected/alterd] by the [enthusiastic nature/dedication] of the [geek culture]. As modelspace is progressed through the rest of 2014 and into about mid 2015, the data sets show that a very long term change occurs as a direct result of the [years long efforts] by the [geek culture] in [absence (of monetary motivation)]. This [long term change] is described as [altering (the) relationship (of students to organized classrooms schooling (it dies significantly?))]. Further, it would appear that [new self organizing collectives (SOCs)] will be [started (this spring/northern hemisphere)] that will [exist (for centuries)]. These SOC's have supporting sets that may be indicating that many of them will morph into [educational SOC's].

Other data sets are pointing to the [emergence] of an [a-political democracy] that begins in 2014 with the [response] to the [hard (social order) stops/walls]. The data would seem to be suggesting that the [geek culture reaction] to the [species crises] includes the [development] of [direct participation democracy] that [eliminates (over time) (the power base)] of the current [political class]. The [SOC ] version of [democracy] is supported by data sets indicating a [buy-in (\*ante up)] is required, though it does not involve [money] as the ['currency'] of the [direct participation democracy].

The [failure] of the [health care system] in the [USA], along with [planetary health system problems] is described as bringing forth a [new class] of

[internet based health service] in the form of [diagnosis centers]. There are several descriptors for these that paint a picture of a range of this type of [service] which includes [complete clinics (with automated biometric sampling and broadband (wide) connections] to [remotely located diagnostic teams] all the way down to [store-front operations] with [time share doctors] on [call (via internet)].

The data sets are pointing toward a [collision] of [government (employees)] and the [reality] of the [crashing dollar] as their [pay scales (for civil servants /military)]

[Whispers] are shown in the data as becoming [logged (archived)] via a [shock-wave] that is described as [flowing through] the [internet] as a [rampaging bot-net] gets hold of [hundreds (of) millions (of) always-on devices]. The data sets accruing to the [whispers (captured) surreptitiously] linguistic sets point to [trillions (of) pictures] being [taken] in the [shock-wave exploit] of the [planetary surveillance infrastructure]. These [stolen images] are described as [surfacing/(being revealed)] some [decades later] as the [results (of the) exploit] are [used (in blackmail/extortion)]. Curiously, the data sets would point to the [(self) proclaimed 'righteous'] as being the [targets of the blackmail].

A new data accretion pattern has developed within the GlobalPop entity area that centers on the [msm (mainstream media whores)] and a series of [limits] that will be [manifesting] in the form of [disappeared personnel/reporters], and [stops (legal/extra-legal)] being placed on [msm publications]. Some of the [msm publications] apparently do have a few atoms of [bravery] left, and the [ptb (officialdom)] discovers that [rebellion] in the [press (msm)] cannot be [tolerated].

Several data sets are participating within this new growth pattern. The [serial (nature)] of the [rebellion (within msm)] arises as an [increasing number] of

[disappeared/jailed/censored] [staff/reporters] and even a few [dead editors] to mark its 'progress' through the [msm (mainstream media whores)] as an 'industry'.

Within the GlobalPop entity are a number of sets going to the idea that there will be a [planetary rebellion] as [news/information] comes out about [plunging birthrates (for humanity globally)]. There will be many [cries/calls] for [consultations/committees] and [other forms of 'investigation'], while at the same time there are forecasts for [pundits (of all stripes)] including [raving religious lunatics] who will be citing everything from [(their) god's displeasure with XYZ)] through to include [gmo foods] as well as [fukushima radiation] to [chemtrails] and other [geo-engineering] as the 'cause' of the [rapidly falling birthrates]. Further problems with [procreation] will include [mutations], as well as [staggering numbers] of [abnormal births]. This year (2014) will be viewed as the [tipping point] for the [procreation crisis]. The longer term data sets are forecasting that the [birth rate crisis globally] will still be an issue [10/ten years] on, and there are some hints that a [resolution (or understanding)] of the [procreation abyss] is not going to be developed for another [30/thirty years].

Along with the [human species procreation crisis], we will note here that other species are experiencing an [extinction wave] that is indicated to [grow significantly] over the next [8/eight years] as the [shift of the planet (in its position relative to the sun)] continues. The impact of the [animal extinction wave] on humanity is forecast as being manifest first in areas of [art] and [story telling], rather than [science] or [academia] as both of these latter are under the [tight control] of the [tavistock institute] and its bastard offspring the [CFR (council on foreign relations)] here in the USA. As 'western academia' has had such success in suppressing dissenting opinion, and ridiculing what they cannot suppress, it takes nearly all of 2014 for [russia] to emerge as the [leader in new science discoveries], especially those relating to [space (and the impact of energies from space on humans and other terran species)]. The data sets indicate that [new universities] and [centers of

innovation/invention/study] will be [created] in [russia], and to a lesser extent [india and china] from which the [hardware (quantum-ware?)] of the [new electrics] will be [incubated].

The data sets indicate that [2014 through 2017] will be a [flush] period in which the [early fruits] of [decades] of [research] into [fringe thought] will be [visible] as the [new electrics] begin to produce [devices] and [products] that will be [high prized (sought after)] by the [visionary adopters]. The data sets accrue supporting sets with very extensive cross links over to the [markets area] within which we find terminators pointing to a [russian (global serving) manufacturing industry] that will be [providing HPELP (high performance, extreme low power) devices]. These are initially shown as being in the categories of [home (cooking) appliances]], and [home (medical) devices]. Please note that the cross links from the GlobalPop (Russian innovation) sub set through to the Markets entity also are themselves cross linked over to the GlobalPop entity by way of the Terra entity. These are centered on [new electrics] and [new (diamonds involved?) energy forms].

Further the data accretion patterns for the [russian (home) medical devices] are, as modelspace is progressed past June of 2014, extensively cross linked back to the GlobalPop entity, sub set [USAPop], sub set [health care system collapse]. The longer term data sets are suggesting that a 'fortuitous' alignment of [new invention (in energy healing devices)] within the [new electrics] sub set geographically focused on [north eastern russia] will be coincident with a [demand increase] as the [USA health care system] crumbles. The data sets within the terminating area of the [alternative (store front, and traveling (no fixed abode)) medical system] within GlobalPop, USAPop sub set, are painting a picture of a [flow] of [russian energy healing devices] of [sophistication] that will foster a whole new level of [economic activity] as [gifted individuals] begin to [provide energy medical device expertise] across the [crumbling North American health care system]. The details suggest both [store-front] and [traveling man (fixed routes/days)] offerings of [medical device expertise] as a [replacement] for much of the

current [second tier (non life threatening) emergent care system].

Still within the GlobalPop entity, sub set [health], we note that there are a number of new accretion patterns appearing as modelspace is progressed past July of 2014. These new patterns suggest that the [spring economic crumble/ (the great fold-up?)] has, by Summer (northern hemisphere), brought the [psychotropic drugs industry] as well as other significant parts of [big pharma] to a [virtual halt] as [international commerce] is [disrupted] first by [global currency impacts (of US dollar devaluation)], then by [space alien wars] (within the oceans?)....huge levels of cross links over to the SpaceGoatFarts entity.

Other sets within the [medical device] sub set includes a set that shows that [rampaging disease] within [prisons (both commercial, and 'invisible' = CIA)] is going to cause the [revealing] of a [secret prison system]. A sub set of the [secret prison revelation] is gaining supporting sets under the [crashing (of) dollar] that indicate that the [payment (of subcontractors/food services/fuel/energy)] will [go bad], and that a result of [non-payment] will be [vendors] who will [demonstrate] outside [secret facilities] demanding their [money].

There are several new accrual patterns indicating huge levels of [power shifting] over the course of 2014. These patterns are pointing at some [large elitist meeting (about mid year)] in which [counter meetings (public demonstrations)] will take a [radically new direction]. In this case the data suggests that [people (protestors)] will [employ drones] and many [new forms (of surveillance)] to [totally ruin] the [elitist meeting]. Further, the [meeting (itself)] is described as [breaking down] due to the [new rule of law (aka -people's surveillance) and data release].

The level of [new technology data capture] around the [elitist meeting] are going to (for the aware observer) act as a huge temporal marker for [power shifting] from [elitists/officialdom] over to [techno-SOCs].

There are several sub sets that indicate that a [global philosopher] will [reluctantly] be [used as (an) 'algorithmic' visionary leader (of the techno-soc revolt)]. Much of the [impact] of this [algo-seer philosopher/leader] will gain much of [his/her fame] from this person's ability to [create (a new) language]. This [language invention] component was an obvious magnet for our processing here at hph....even so, the data sets are quite extraordinary in that the [algo-techno revolt] will be [intimately inextricably wound] into [new language] about [human experience (as network absorbed beings)]. Much of the [new language] is describing [instant network effect] that will be [at the command] of the [algo-tecno revolteers]. This [new language] is not being described as a computer programming language, but rather is described as a [human experience modeling language] that ['escapes'] the [laboratory], and is close to an [instant hit] within [aware humans] across the planet.

This [new language] accrues supporting sets indicating that it will be able to be used to [model] new [levels] of [human experience] {ed note: especially as regards to being [network'd beings]}. This [new language] while not a programming language, is indicated to [spawn] a [plethora of applications] within a very short time (months?). Through the [network effect] of the [new language], it is described as having [near total (human) contact] within less than [3/three years].

Along with the [techno-soc revolt] in 2014, the data sets are also filling with support for [social order breakdown] as [commerce collapses (see Markets below)]. This [social order collapse] linguistic structure is very large, spans several entities, and is very detailed. It paints a dismal picture of conditions within the [former ameri-anglo empire].

These [dire/dismal] conditions are filled with language that would easily populate Great Expectations by C. Dickens. We have new sets that go to the idea of [lines (of women/men/children prostituting themselves)] outside of [grocery stores]. Of [malls] and other [empty commercial buildings] being

[taken over] by various forms of [self governing mobs]. These [collective (free/squatters) living arrangements] are described as [frequently/mostly being (outside) officialdom control]. In several of the data sets, shorter and longer term values are going toward [squatters camps/take-overs] that will [grow] to [become major cities/economies]. In some of the sets there are indicators that [egalitarian/libertarian social orders] will [deliberately homestead] in some of the [largest former retail/industrial buildings/areas].

There are also sets that point to [bands/groups] of [nomadic] nature who will [travel] from [abandoned buildings/sub-division] to yet another [closed mall] and to [stripping services] where they carefully (or not) remove all [valuable materials] from the structures for the [(self claimed in many cases) titled owners], and leaving a [big mess] behind. In some of the supporting sets there are structures indicating that [homesteaders] will be [fighting] the [itinerant demolisher crews/tribes] for [possession] of the [malls/buildings]. There are few sets indicating that [officialdom] is capable of any involvement within these new forms of [land disputes].

There are data sets describing the 'growth industry' of [armed guards] for [produce stands/grocery stores] where [daily wages] include [access to foods]. There are many sets going to the idea of a [general breakdown] in the [laws] and [courts system] (due to non payment of salaries) such that [wholesale abandonment] of [police and fire stations] leads to many areas where these and other [former city/county facilities] are [taken over] by [citizen collectives].

In a rather convoluted set of inter linked linguistic structures, we note that as [former (top down imposition)] of [laws] breaks down, there are indications of several [victims getting revenge vigilante attacks] in which [friends of J Saville] will be [(more or less) publicly executed].

Other aspect sets within the larger [Gov'mint USA (uncle GUS)] are growing in support of a [late winter (northern hemisphere)] or [early Spring] [censure]

of [GUS] by the [real owners (not you...the actual 7 or so people that own the government of the USA)] over the [broken promises (to them, not you)]. The data indicates that this [censure] is [viewed (by the) public] in some form of [viral media capture]. It will make for [hundreds of millions (of conversations)] around the planet as to [what is really happening here?]. Further data shows that [GUS] does not react well to the [censure] from their [bosses], and gets [violently irate]. Note also that this interpretation may be wrong in that the [violence episode] being forecast by several areas of the modelspace as [arising from GUS (this Spring (northern hemisphere)))] may be a [planned] effort to [recover favor] with the [bosses]...by [one last (desperate) attempt] to [deliver the goods].

The [hyperinflationary (see below) breakdown] of the [dollar] is basically one half of the story. There are optimistic sets about the rise of [replacement systems] for [government] as the [bankster backed political system] implodes along with [dollar confidence], but there is also a very grim parallel set as our [social order] is forecast to go through a [restructuring (of values)]. These [values] are both [internal (personal)] as well as [collectively held social values].

It was a toss-up as to whether to include this next section in the GlobalPop entity, or the Markets entity. The sub set under discussion is headed by [turning inward] and is seated within GlobalPop, but is hugely cross linked over to the Markets entity. There are also significant numbers of cross links to the SpaceGoatFarts entity as well as the PowersThatBe/Were entity. This set has to do with [looking inward] at so many levels it is difficult to read them all, let alone mention a fraction of them here. However, the primary supporting sets for the entire linguistic structure are headed by the set of [trade], which itself is supported by [internal resources], that in its turn is supported by [(no) international trade]. This set, in its entirety, as well as down through all the levels to the detail layer goes to the idea of [peoples(nations)] that will [turn their attention (inward toward themselves)], and that this is a manifestation of an [fundamental change] in [humanity].

Now we note that the first impact will be on [international trade] and the [transnational corporations]. The data suggests that [global trade] will [plummet] to levels not seen since [(the) 1300's/thirteen hundred (aka medieval times)]. The data sets are specifically focused on [china] and [india] where it is forecasting [deliberately focused (by gov't) internal reforms (internal trade)]. Further the data sets indicate that [india] will be a [pivot point] for the next round of [global currency debacles] as it has to face a [revolt (by the people)] as they [dump rupee's].

The primary impact of the [internal focus] set is the [collapse] of the [international trade], however, the most [visible] in [msm presstitute whore media] will be the [mortal wounding] of the [transnational corporations] and their [globalist plans]. The data sets indicate that [globalist transnational corporations] will be [hit (in the) stock] to the level of [corporate 'investment'] is [cut to a third] in less than [3/three months]. {ed note: this from shorter term data which has a 3/three month spread of influence.} This can be interpreted a couple of different ways, given the ambiguity of language in general, but there are cross linked sections within the Markets entity area that suggest a correct interpretation will be the [reduction (to one third of all time highs)] of the levels of [money/currencies] being [put into stocks].

Within the supporting sets for the [reduction to one-third] of the [investment into transnational corporations], are sets going to the idea that [lay-offs] at a [global level] will be so [shocking] as to [bring corporations] into [conflict with officialdom]. The detail layers are suggesting that [officialdom] in several countries, and in almost a 'serial' manner, are [faced] with [social disruption] due to [lay-offs/firings/reductions-in-force] at levels that will [demonstrably skew statistics] as well as [bring out social unrest]. Apparently the [officialdom] of these countries each come to [understand] that the [system (is/has) fractured]. The [fear] at the [officialdom] level is that the [minimum levels (of support)] coming from [government] is [absolutely dependent (upon) perception (of) fraud (as) reality]. The [reactions] forecast

from [officialdom] vary greatly by the size, and circumstances of the [government], but in the end, all are shown as [defunct/failures] as [unemployment] comes to [dominate] all discussions.

Much of the language around the [techno-soc revolt] is supported, as modelspace is progressed through the first half of 2014, by sets that are themselves supported by the [network effect (going universal/planetary)]. The data sets give rise to the idea that the [network effect] as we understand it is about to take on a new [dimension] as yet [another significant fraction] of [humanity] becomes [entwined within the mega-net]. This 'new-ness' component of the [network effect] is cross linked into, and through the [new language about human experience] to a degree that supporting sets seem to be suggesting something that would qualify as a most unique thing.....that is to say [some thing actually new occurs]. This [new-ness] of the [network effect compounding] is described as being [sporadic initially], but then [spreading rapidly]. The [rapidly] sub set has descriptors going to the idea that the [phenomenon] outpaces the [capacity of msm (presstitute media whores)] to [follow]. Much of the language in these supporting sets reads as though a repeat of the [msm presenters (little minds) grapple with bitcoin concepts] in that the [few presenters following (this effect)] are [unable to articulate it]. Many of these sets, as may be imagined, have extensive cross links over to the SpaceGoatFarts entity. Many of these sets terminate in sets in support of [change (of) mental state (globally)]. Much of the [change of mental state] arises from [new concepts (of) work] and [remuneration]. A great deal of these sets are also within the [new unemployment (mind state)] sets which are as a result of the [group impact effect] {ed note: this is the 'seeing ourselves \*suddenly as members of a new group.'} This new [mind state (as one of the hundreds of millions of unemployed people planet wide)] is indicated to [greatly propel] the [revolteers (and their collective volunteerism)].

The [disruption] sets within the GlobalPop occupy a very large range of modelspace at any given point in its progression through to the vernal

equinox, thereafter the [disruption] set seems to concentrate a bit more into areas that fall into the broad emotional categories of [disruption (leading to chaos)], and [disruption (arising from replacement systems appearing)]. As the data sets would have it, we all will apparently get to see what the world is like when many tens of millions of humans set about [inventing replacement systems (for those old central planning ones that piss us off)]. Many of these instances are either continuations of existing sets previously discussed as within a [renaissance], or within sub sets of the [techno-soc revolt]. There are other instances of the [disruption] set that are in support of [social shock-waves] and [social order disruption (as new technologies come on line)] as well as [social political order disruption]. This last is heavily supported by [disruption (occurring from techno revolt)], and [disruption (occurring from technical (satellite?) systemic cascading failure)]. {ed note: see SpaceGoatFarts, laser tag in space discussion}.

This area of the data sets are very exciting as they are pointing to a new phenomenon here on earth of the network effect compounding itself, and then going back for more. Truly difficult to puzzle out of the data as we have yet to invent many of the words and linguistic terms required for this new understanding of ourselves as [networked individuals]. One of the more visible parts of this new effect will be an explosion of code/applications/devices released globally which have a common component of [replacing (the obsolete systems)]. And as may be anticipated, the network effect will also produce a [compounding of resources] with [code wave] that will be following on the heels of the [techno-revolt].

The data accretion patterns for [secrets revealed (meta data layer in action)] increase their growth speeds as modelspace is moved out of February and into March. Noting that our granularity is not really down to the day level, it nonetheless appears that within the early [days] of [March, 2014], a new [whistle blower (from black-ops/break-away civilization)] will be adding [his/her voice]. This particular [whistle blower] is indicated to [gain traction] due to the [material] that is [brought out (from Deep Hole)]. {ed note: nope,

we don't know what 'Deep Hole' is referencing, but it came through our processing as a 'proper name'.}

Along with the [secrets revealed] sets that focus on the [black ops world/break-away civilization], we have a number of sets that indicate that within the first half of 2014, a veritable [bonanza] of [new information] will [emerge] about [geo-engineering], and [planetary changes]. Note that much of the data shows cross connects to [disinformation], and further data sets are indicating that [missed understanding] will also be [pervasive] in much of the [information] being presented, however, what is significant is that the [public consciousness (globally)] will begin to include the ideas of [earth being altered for colonization], and [chemtrails (linked to morgellons/other diseases)], and [planet wide (electro-physical engineering) underway]. These and hundreds of off-shoot domains of discussion are showing as accelerating from the first quarter of 2014, and growing over the course of the year as [events manifest] that [prove (the) case (for conspiracy to alter earth)]. As may be expected, when this meme gets rolling, many of your favorite [woo-woo personalities] will be [propelled into mainstream media]. This will be a very interesting occurrence to observe as the [ramifications] and [responses] will be affecting both the [woo-woo] and [msm] worlds. There are a number of sets in the supporting chain that go to the idea that the the [buddhist] and [hindu] parts of humanity will have an [easier time] with the [revelations] than will the [middle eastern based religions/peoples]. The data sets include large areas of support for [dark night of the soul] kind of [emotional thrashing around] as the [information/revelations] are [digested] across [many months] of [intense discussion] and [attempts (at) refutation]. In many of these sets we have data going to the idea of [crazy-made humans] who will [act badly] due to [mental instability] being [induced] by the [inability to reconcile] the [new (view of reality?) (new information?)].

Further [blending], or as the data sets also include [melding] of the [domains (of knowledge)] are indicated to emerge in late May or early June and include a [strange case] of ['the thin man' goes 'underground' (with officialdom)]. The

sets around this occurrence are quite large, grew suddenly as modelspace is progressed past April, and (ooh, goody) have a [pacific northwest (of north america)] focus. There are some sets indicating that a [video] comes to the [surface], along with the ['the thin man'], and the [underground discoveries]. This may be related to the Big Bertha boring machine currently 'stuck' under Seattle. Whatever is the cause/center of the appearance of ['the thin man'], the data suggests that the subsequent [disclosure (of) discoveries] will be a [mountain (of) support] under a [new focus (for) humans (a new 'industry'?)]. Further sets indicate that ['the thin man'] will be [forced] into a [new role] by the [circumstances] and [discoveries] made [underground]. These sets indicate that a temporal 'echo' will emerge later in 2014, perhaps around November, in which the ['the thin man'] will be once again at the center of forecast discussions. All of the references to ['the thin man'] are extensively cross linked over to the SpaceGoatFart entity, and through these terminating sets, back over to some small areas of the Markets entity. These cross connections are small, in comparison to the larger sets directly linked from the [geo-engineering] sets over to the Markets area, however, these ['thin man'] related sets are nearly to our maximum values in emotional sums, so the forecast is for ['the thin man'] to actually have more of an impact on (what is left of) [markets], than the [initial information release].

Data set growth is again gaining in the [oceans] sub set. The new supporting sets are about equally split between the Terra entity and the GlobalPop entity in the number of directly held linguistic structures. This is a new condition within our processing as usually the [oceans] sub sets are predominantly within the Terra entity. A similar situation occurred prior to the [blonds on boats] forecast ahead of the Concordia cruise ship incident. Now the data sets for [oceans] are showing that we will have more [human activity] causing forecast language than earth-changes activity. This is even noting that the data sets include specific references for [expanding earth] as a [model] to be [gaining support] and [verbiage] in [mainstream discussions].

Further data sets, perhaps better discussed in Markets area, are showing up in

the GlobalPop entity under [barter/new trade systems]. The GlobalPop sub sets supporting these [barter] and [new trade systems] sets have more details within the Markets area, however, the directly held sets within the GlobalPop entity have higher emotional sums thus indicating the greater impact will be within the general population and not the [speculator community] that dominates the [markets] sub sets. The [barter], and [new trade systems] sets, lumped together for convenience of interpretation are painting a picture of a [dysfunctional (dollar)], and [degrading infrastructure] across much of [north america (canada included, even leading in some ways)]. One of the impacts of the [dollar velocity shocks] results in various [local populations] deciding to [accept local script], and other [new trade systems] to [augment] the more [traditional barter economies]. More within the Markets area, however it is worth noting that [dollar replacement systems] will be [instantly available in a plethora of forms] as [needs demands] beginning later in the [first quarter] of 2014.

Coming from the [china] associated sets is a set that is headed by [taoist], and that has supporting sets at the primary and secondary levels which in their turn are headed by [communications], and [space]. These sets would not be extraordinary as there are thousands of sets referencing all sort of woo-woo and related [claims], but, this set in particular has huge ropes of cross links over to the SpaceGoatFarts entity where there are emotional sums and [visibility] values that suggest something quite out of the ordinary. In these sets directly held by the GlobalPop the [taoist] is also supported by sets that indicate that this person is key to a [new form (quantum?)] of [communications]. Further sets are connected to [electricity] and the [new electrics]. The [new electrics] set in this instance are supported by [communications] and these in turn are quite clearly supported by [from/to space (aliens)]. Soooo...it would appear that this particular [woo-woo] set is forecasting a [chinese invention] that [provides communications] with [off planet intelligence]. As may be expected, there are a great many sets that are [negatively] focused towards this information; further there are sets that go to the idea of [fraud] as [claimed (by) western officialdom], however, the data

sets also contain detail layers that indicate [replication] of the [invention] will bring about even more [debate] globally as [communications] are also [replicated].

## Markets

At a meta data level, the interpretation for this report is filled with conjunctions of [shock] as a major supporting set with various domain (contexts) sub sets. So as instances, we have [shock] conjunct [social order] as regards to Terra entity developments, as well as the [fukushima 'slam'] on the west coast of north america this year. Further instances have [shock-wave] repeatedly appearing, either directly held as a detail value, or as a support for the set at some layer. Yet more appearances of the [shock] sub set as a supporting set are to be found in the Markets entity area. The [shock] in the case of the Markets entity is conjunct the [system] set. The resulting linguistic structure is supported at the primary level by sets of [rigidity], that in their turn are supported by [crazed (cracking in fine pattern)] at the secondary level indicating a forecast of a [shattering] into [many fine pieces]. However, the really interesting set is to be found at the primary level where we find that the set [fragile] is in direct support of the [shock (to the) system] context. This set includes many references to the [cartels (such as Libor, Forex, and other 'exchanges')]. These references are within details that indicate that [withdrawals (of participation)] in these various ['systems'] will be [felt] as a [shock] by the [(western) central banks]. The data sets are suggesting that a [series of disengagements] will occur over the next [four months] will provide a [cumulative effect] that will [induce systemic shock]. This conjunction becomes 'complete and filled' as we progress modelspace over the vernal equinox (March 21, 2014) and into April. The data sets are also containing detail sets with conjunctions going to the idea of [crap (bonds) stink], and [bonuses (go) bad], and [killings (of bankers)], and [billions (of dollars) in frauds (float to surface of scum)], and many more of similar nature.

The [shock] and [shock-wave] sets are also gaining supporting sets that are forecasting an [involvement] of the [Gov'mint, USA (uncle GUS)] with [violence (in Spring (northern hemisphere))]. The data sets for this [violence] are indicating that this is [episodic], and is intimately linked to [past shame (of GUS killing people for \$\$)], and further that this is part of an [aggression dynamic] that is [planned] in order to [elicit (a) specific response]. However, the data sets that accrue as modelspace is progressed further into Spring are all directly in the support path for [shock]. These sets, and their accompanying detail layers are describing [GUS] being hit with [shocks] as a direct [result/response] to their [episode (of) violence]. These [shocks] are also cross connected to the [american populace] within the GlobalPop entity. These cross links terminate in sets within the GlobalPop set that also contain [shock] as either a directly held set or a supporting set. Probably **not** a good thing for Unca' GUS.

As the [systemic shocks] are growing in value as modelspace moves through [winter (northern hemisphere)] and near to the equinox in March (21<sup>st</sup>), Bitcoin is prominent in the data sets with new linguistic sets developing throughout the data gathering. These new sets include branching areas of existing descriptors as well as new descriptors that are dominated by [new ideas (business on top of bitcoin)]. These latter sets include a number of new [devices] being forecast that are within much older sets under the [new electrics]. In the main these sets were mistakenly understood in their original form under the longer term data descriptors. So a great many of the now manifesting (or soon to appear) data sets are filled out versions of very sketchy descriptors originally seen in 2005/2006.

The former, newer, Bitcoin sets are showing a forecast for a [distinct/significant rise] in [bitcoin language] beginning in [February] and running through the rest of [winter] and nearly all of [spring] (northern hemisphere). These sets take a small hiatus in growth as the shorter term data sets trail off about June of 2014, but there still exists a strong [bitcoin]

presence in the data sets within the recently gathered longer term data going out 19+ months.

The newer [bitcoin] data sets have explicit references to [barriers] to [adoption] by the [masses]. These [barriers] have supporting sets describing them as basically an [inability to grasp/accept (the level) of changes (that are occurring)]. There are further sets that magnify this meme with sub sets of [changes (not what they appear to be)], and [changes (so profound as to undo generations (of traditions))]. The ideas within the details are that very large segments of the [global populace] will find the [changes (within global financial 'systems')] to be [so shocking] that [grasping the immediate implications] is a [staggering task], let alone the [longer term ramifications].

Within the [barriers] to use sets are further sets growing in support of [new devices (hardware wallets)] and [new protocols] that will [speed adoption]. Nonetheless, large sets about [social disruption] as the [dollar based/rigged markets financial 'system'] falls [victim] to its own [mismanagement].

A few of the new sets in support of the older [new electrics] sub set contain sets that forecast [overseas], and [maritime] use of [bitcoin] within this [winter (northern hemisphere)] as a good temporal marker for the next [wave of adoption]. The idea coming from the data sets is that [weather refugees] will [have bitcoin employed] in some spectacular ways to [benefit their community] in a way not possible with [traditional charity venues].

As an aside, there are some specific references that we can associate with [russel brand] that point to his making some really really stupid statements revealing a [double agenda status] that will make him a [laughing stock (joke)] and not in a [good way]. Rather the data sets would suggest that he gets [tagged] in some very seriously [negative] way as a result of the [statements/actions] made.

Further sets accruing from both shorter and longer term data show that

[increase] is in the [bitcoin] future from late [February] onward. The [increase] set has [growth (in users)] as well as [growth (in fiat currency 'price')] as the [bitcoin adoption rate] takes a [large step upward]. The [adoption rate] is being [propelled] by [fiat currencies debacle] that comes from the [new york financial sector]. The [debacle/crises] that [slap the dollar (and other currencies)] is also being described as a [huge/giant opportunity] for the [common interests (of natural humans)] and [bitcoin]. This is also a very large temporal marker for the [social dissolution (of the corporate USA federal state)].

Concurrent with the [bitcoin] sets gaining support, we have [gold] and [silver], and [platinum], and [lead] also growing very rapidly. The [lead] set is entirely focused on a [restart] of some [lead smelter] in [north america] due to a [sudden (discovery) of need (electrical)].

Alone among the [precious metals], the [gold] set merely doubles in size over this data gathering period. The [platinum] set grows at 130 % over the same period, while [silver] gains some 348 % in size of supporting sets. While not an indicator of [price] especially in [controlled markets], the data set growth patterns are indicators of [public interest]. Further, the [precious metals] sets are also gaining disproportionately in both shorter and longer term trends. This is itself a counter trend to the general state of primary sets which are routinely now gaining most from immediacy values.

The [gold] and [silver] sets both gain most of their primary and secondary supporting sets within the sub set of [shorts]. As modelspace is progressed past March 13<sup>th</sup>, the [shorts] set shifts dramatically as it acquires supporting sets for [shock], and [floating/lifting (upwards)], and [(suicide) crisis]. These sets are concurrent within modelspace with the rise of the [algo-techno revolt], though, not apparently linked directly. The [techno-soc revolt] is shown as [putting pressure] on [criminals (within precious metals manipulations)] as [technical resources] either [are not there (available)], or are [unwilling (to participate in keeping fraud going)].

Also concurrent with the [gold/silver shorts shock] is the growth of primary supporting sets to the [silver] sub set that are bringing in [trials], and [suicides], and [disruption (in business as 'usual')] that are in their turn either directly holding, or are cross linked over to sets that go to [(shock) to the bowels], and [vomiting (from stress reaction)]. Both of these sets are extensively, internally cross linked to the [astounding/shocking fiat collapse (relative to silver and gold)].

As modelspace is progressed through March and into April, the rising supporting set for [silver] is [unbound], and this set in its turn has [shocking] as its primary supporting set. These are both concurrent to [gold] having [doubling overnight] as its primary support, just before it also gets a linguistic example of [freedom (from manipulation)] as a supporting sub set.

In both cases the data sets are indicating [extreme valuations] are ahead for [gold] and [silver]. The detail sets that gain longer term value support suggest that US dollar [withering] will be so severe as to demand [more than/greater than] the huge amount of [50 thousand dollars] per ounce. Note that this is but one of many numeral representations of the [price to obtain gold in dollars], but also that many of these sets are also indicating that it will be [nearly impossible] to [obtain gold for dollars] by some time in either late 2014, or early 2015. The supporting sets are gaining support from [gold wars], and [desperate (reopening) of mines (closed for centuries)]. Further, even more extreme data sets suggest that the [north american hunger for gold] will reach such [extremes] in 2016 that [whole housing developments] are [removed] in attempts to [mine gold beneath them].

Part of the [crisis in gold/silver pricing] is indicated to be propelled by [repatriation] of a [planet filled with (dollars)]. As modelspace is moved into April, the trend in linguistic growth patters are quite clearly pointing at a [global refusal (to deal in dollars)] that [spreads rapidly] across [money changing markets planet wide]. There are cross links over to [crises] within

GlobalPop entity that terminate in sets headed by such as [confidence crash], [employment crash], [government collapse], and [abandonment (of position/job)]. These latter sets are supporting sets for a collection that is being interpreted as a [collapse (in ability) of government to pay employees]. These sets are pointing to [dollar confidence crisis], but it needs to be noted that simultaneously we also have the developing [technical crisis] that may involve [inter banking communications].

Other sets in the [dollar death throes] collection gain from a diverse number and range of new sub sets. The data sets in both shorter and longer term sets are accruing in new, large masses supporting [currency (sovereign statist) death]. These sets are [dollar] dominated, but not [dollar] exclusive. Many currencies are represented in the data sets.

Deficit Raining down from on high.... triggers [hyperinflation] into the [consumer portion] of the [economic infrastructure] in the first quarter of 2014. The [hyperinflation] pressure is such that the data shows [msm (presstitutes)] have to use the ['h' word] on-air....if merely to lead to [denial].

The [appearance] of the [hyperinflation] within the [american/usa consumer economy] in its turn is indicated to trigger a [overseas bond panic] around the [sovereign bonds (of USA)].

The [interventionistas (Fed & GUS officialdom)] are described as [discovering] that their [intervention strategy] is [brittle] and [flakes off (at the edges)]. The [brittle-ness] of the [Federal reserve cabal] is participating in the [loss of dollar confidence]. Further it is either in support of, or is supported by many of the sets going to the [rapid (overnight) doubling] in the [price of gold (in dollars)], as well as the [drying up/exhaustion] of the [available gold supply]. While the [hyperinflation] is being described as [dramatic] within the [precious metals] area, the sub sets for other, more mundane [commodities] are the ones that will be [capturing (media)]

attention] as the [msm presstitutes] will be [forbidden (at least initially)] from [discussing] the [phenomenal price rises (for gold/silver/platinum)].

The data shows that the [dollar prices] for [energy complex (oil/gas/nat gas)] are among the [first commodities] to [spike]. Within this same time frame, the [grains] at a [global level] will be [blowing through (double digit increases) dollar prices]. The descriptors have a very much [frantic], and [frenetic] tone of support for the [actions] of the various [global markets]. The data would seem to be showing that chaos increases as the [dollar decreases (sells off)].

There are repeated, and deeply supported sets headed by [panic]. This is clearly a [dollar flight] in which [foreign interests] do not wish to [die with the dollar] and so a/the [great dollar sell-off] begins. It is this [sell-off] that is directly connected to the [hyper-inflating of the USA dollar], and NOT quantitative easing, though of course, that has filled the reservoir. The data sets are indicating that it is the [foreign abandonment] of the [dollar] and [other currencies] that causes the [hyperinflation] within the USA. It needs to be noted that there are sets which indicate that the [federal reserve banksters] may attempt to [neuter] the [incoming dollar flood] with the [expedient] move of [destroying digi-dollars (throughout the system)] in an [attempt] to [force (internal USA) economy] back to [physical cash]. There is not enough data in the detail layers, nor the supporting sets to anticipate the likelihood of this [digi-dollar destruction] happening, but that it appears in the data, albeit in even this small fashion, seems to indicate that at least some level of [public discussion] will emerge over the latter half of 2014 about the subject (of digi-dollar destruction as an inflation control).

The data sets have a double-headed appearance around the [dollar sell-off] in that they are indicating [dual actions], and [dual linguistic streams] about the same subject leading to an interpretation that while many [nations] will [repatriate their dollars (sell off dollar based paper)], there is also a counter trend where \*some states will have their [populace] seeking to [acquire

dollars] as a [hedge] against [internal currency collapse/hyper-inflation]. Many of the supporting sets for this area are also within the directly held, or cross linked sets in support of [precious metals gain luster (in retail purchasers' eyes)].

The data suggests a very complex, and confusing goulash of trends with some nations acting as [dollar vacuums (albeit temporarily)], while others are [spewing their dollar paper (out)] as fast, and as [quietly] as they may. There are yet more sets in which complicated [5/five way arrangements/deals] are described in which [dollars] are cross traded for [other currencies] on their way to [purchasing gold/silver/bitcoin/land/fuel/foods]. Some of these [deals] are described as [becoming visible] due to [central bank freak-out] over the [consequences]. The data sets are indicating that these are [amounts] that are so [staggeringly huge] as to [numb the mind]. In at least once instance, the data sets are describing a [dollar trade] that is [larger than 10/ten years GDP] for a [third (of the planets') countries]. Note that the hyperbole comes through the data processing so this is likely a direct future 'capture' of a headline or public statements to this effect.

A direct consequence of the [great dollar sell-off] is that [business collapses] across the [North American continent]. The idea coming across from the data is that [dollar value] is so [speculative] and [fragile], and [hyper-inflating] that [businesses (across state lines)] rapidly came to [seizure/lock-up] as a [result of rampaging hyper-inflating of dollar].

As a result of the [lock-up (of interstate) commerce], the [officialdom] rises to the [level of competency] demonstrated thus far....this means an [epic fail]. The [officialdom] is even so [incompetent] that certain [agencies/individuals] provide the [officialdom members] with [suicide assistance] when it had become obvious that they were [too stupid (to long tolerate)] given the [dollar sell off crisis globally]. This new form of [work incentive program (via (sometimes public assassination))] produces a [rapid turn over] in [personnel], and a [garbage raft] of [bad ideas]. However, there is apparently one [voice]

that [gets it], and during the subsequent [months] of [dollar death/hyper-inflation], the [harsh voice of reason] is [heard] to [speak several times] from within the [caldron (of) boiling power].

As a [panic response] by [GUS (gov't officialdom)] the [banks] are held to be [sacred] and the [gov't officialdom] is shown as [racing] to [seize] the [accounts] of the [depositors] of the [banks (it now claims to own)]. These sets are within the [disruption] sets centered within the Markets entity. The [disruption] set, in this instance, that of [bank calamity accounts raided], has gained most over this processing cycle in the longer term value sets. However these sets are in support of the [disruption] of the [USA/American transnational corporations empire] at its core which is the [fractured reserve banking system].

As the [hyper-inflating dollar] begins to [break-out (from msm censorship)] the [precious metals] begin to [reflect money value]. This leads through several supporting sets to the idea that [gold] and [silver] (along with bitcoin) [transactions] will become [common] as [governmental control breaks down], and especially following the [governmental worker flight] that occurs during the [first bloom (of hyperinflation)]. In those sets the [government workers] are described as [exiting (their jobs)] with [everything they can carry] as their [paychecks (no longer matter (due to hyperinflation))]. At that point, the ability of the dollar to [purchase foods/energy] will be [waning], and it will already be [not able to purchase gold], and barely able to [obtain silver (for dollars)].

Within some of the late processed data under the Markets entity, and relating to the [GUS (gov'mint U\*S)] are sets that may be pointing to the [violence] being some how related to [environmental catastrophe]. These sets have an [human habitat] focus, are within the supporting sets for the [GUS violence episode], and are describing a [cluster fuk up] that may be [nuclear] in origin.

Many of the Markets entity sets are in support of a growing set rising toward dominance of the entity as a whole. This set is headed by the [dollar repatriation] set. This structure has supporting sets for [dollar (based) infrastructure (mostly in north america)] being [revealed] as [decrepit] and [lame], and [desperately in need of repairs]. As a side note, the [mainstream media whores] will be actually using [break-away civilization locations] to point out the [bright spots] in the [bleak american landscape]. This will include Canada as a [sudden debt failure] is showing as [taking/moving (the canadian housing/real estate) market (into) bankruptcy] in what can only be described as a [spectacular blow-up]. Again, several [bright islands of prosperity] will be [cited (by) msm] as pointing to [hopeful signs], but these are described by the data sets as existing (within the [canadian real estate markets]) only due to [chinese money fleeing china].

Further sets within the Markets entity, as well as cross linked to, or directly held within the GlobalPop entity go to the idea of [local wars] for [china] over 2014. However these appear to be [consolidation] efforts on the part of the [chinese officialdom] rather than [beginning of aggressive invasion mind set]. The exception to this idea arises from a number of sets forecasting a ['named'] event within the [chinese planning]. This ['named event'] is one of those linguistic sets that is saying 'we will have a name for what is coming, but only later, so we know that it will be labeled, but not what the label is, at this point in time'. Make sense? We have data sets suggesting that the [officialdom in china] has a [planned operation] underway that is important enough to be [internally named/referenced], and the data suggests that it involves a [significant investment (of assets/people)] into [africa]. While not 'news', our data suggests that in mid 2014, the [scale] of the [chinese thinking about africa] will become [apparent] to the [western mainstream media whores] and that a [stunned silence] will emerge as the [concept] settles into the mind (what little the msm has).

## SpaceGoatFarts

The data seems to be pointing to a [combination of effects/events] that appear in modelspace beginning in early March, 2014. The [effects/events] are described as [converging] with [larger memes/social momentum]. These [events/effects] are described in the detail layers as being [of space aliens], and [secrets revealed].

As modelspace is progressed forward into March, the data accrues in patterns around [secrets revealed] and [(formerly) space aliens] in such a way as to point to an [accidental revealing] of a [colony (of former space aliens)] here on earth. As may be expected, this comes as something of a [shock] to large groups of the general planetary populace. The data does indicate that many will not be paying [attention] as their [consciousness] will be [focused] elsewhere such as [economic concerns].

[Laser tag (in space)?] appears as a [msm (presstitute media whores)] discussion with high [visibility] values as modelspace is moved from [summer (northern hemisphere)] into Fall. The idea coming across from the data is that [satellites go missing], and that [reports] are that an [aggressor (satellite?)] is the [culprit]. Further the data sets include structures that indicate conversations will arise about the [laser (tag) war (in) space]. These sets are forecasting the language, not the event. There is not enough directly held values to indicate that the [satellites] actually are the victims of [laser attacks], rather that this is just the more prominent of the [speculation (as to cause)]. Without regard to the cause, the [loss of the satellites] is indicated to be [felt (severely)] by various populations dependent upon the [services provided]. There are some sets that would seem to be describing at least one of the satellites as a [major communications conduit] that will [affect (nearly) a billion people (when it is lost)].

The data sets are gaining large sets in support of the [time technology

(closed, time-like, loops) 'industry'] becoming more [visible] in 2014. This includes both 'good' references, and 'bad' references. The whole area of [time] as a linguistic meme is indicated to be a [prime point of discussion] from April onward. A majority of the new aspect/attribute sets in support of [visible time industry] are connected to a set pointing toward a [time (industry/machine) malfunction] that is shown as gaining quite a bit of [visibility] within the [presstitutes msm media whores] as a direct result of [alternative media investigations] that will go [mega-viral (more than a billion views)] at some point in next 19 months.

In at least one instance, the data is describing a situation in which [people (on the street = innocent bystanders/walkers)] are [impacted] by a [time '?' loop?] that [escapes] from its [frozen (invisible bars) cage]. The data details are painting a picture of an [urban/sub-urban coffee shop/restaurant (in Spring?) (warm weather, light clothing)] in which the [patrons/diners], especially those sitting at [sidewalk tables] will be [thrust (within)] an [escaped loop of time]. The [effects] of this [experience] have very many unpleasant words associated, and in most cases are filled with language going to the idea of being [ingested and shat out]. The [victims (of the) time (gone bad) accident] are also described as having [rough challenges] once the [direct (temporal looping) experience] is over]. This includes [officialdom] that is described as [coming unglued] and [gone batshit crazy].

## **Conclusion: 2014, the What the Fuck?!? Year.**

This year, by whatever number it is reckoned, will be one that grabs at the memory demanding to know What the Fuck?!? Modelspace forecasts changes within humanity itself at a number of levels. This is a new development for our species. Hopefully it has arrived in time.

Without regard to how the WTF should manifest into our individual lives, the data sets are quite clear that WTF will dominate our collective attempt to

understand this year. The general description of this place in space and time for our planet and species is one of too many changes, and at too many levels, with too much hidden (or attempted to be hidden), for anyone to rightly claim that they have a fucking clue as to what is manifesting.

Universe, as defined here at hph, is the sum total of all of human experience across all of time and all of space. This is said with a slight smile as we know that 'space' and 'time' are mere illusions, as is humanity....but, that aside, universe is defined as the total of all human experience across all of time and all of space. Obviously, you are part of that experience, and as such are a necessary, and vital part of the creation of universe, which, by the way, is an on-going process not likely to end any time soon.

Universe, by definition, does not include the experiences of space aliens, or for that matter, rutabagas. Universe does include the human experience of both...space aliens, and rutabagas. But not their experience of us. Make sense? From our definition, adopted for thinking/modeling purposes, universe is necessarily restricted to the human experience of being human, and all we perceive as humans, from fantasy, and delusion, through to truth and beauty and even into understanding that may reach to enlightenment. And everything else ever taken in by any human any where, and any when.

Whatever direction universe decides that humanity shall take, we make the change from couch-potatoes to travelers, as a species, this year. We are not going to like it, at least the data suggests that a great many of us will groan and moan and be real pains-in-the-ass about it.

Whatever universe shall use as the prompt for our collective change, it arrives this year. Apparently we will require this extra bit of energy from space or earth to get our asses in gear, and out the door of transformation. Childhood's end? Perhaps, that remains to be seen. But, at an individual level, many of us will note throughout this year, as forecast by the data sets, of a 'return to youth' that relates to a 'something' beyond the body. A renewal of

the spirit perhaps...a return to optimistic view of the potential of life, universe, and everything?

Whatever our personal contribution to universe, that grand sum total of all human experience across of all of time and all of space, we each deliver it this year. See if you don't.

Better pie-up while you have the chance...gonna be a busy year.

With respect.
