Asymmetric Language Trend Analysis Intelligence Report

‘Changes in language precede changes in behavior.’

By Tenax SE for HalfPastHuman.com

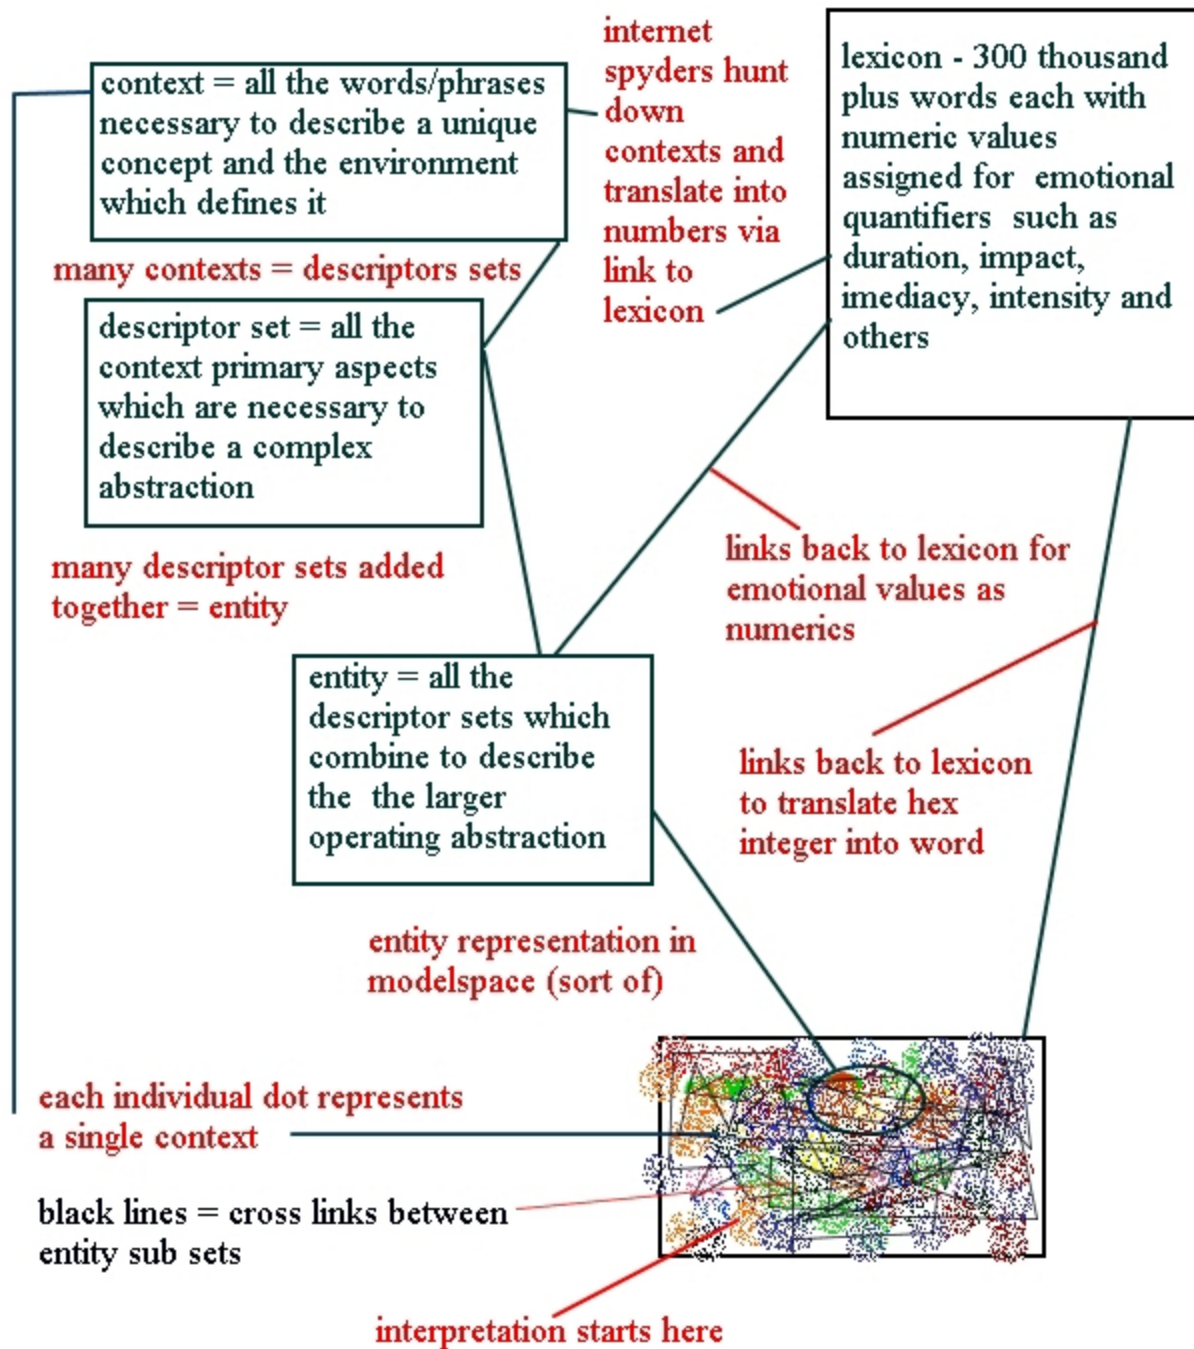

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

Note: Entities are identified by a [blue](#) typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

In the beginning..

The beginning of all of our processing is the word. Or words, rather - actually excessively large amounts of them. Totals of words beyond all reason. These then are distilled down into a thick syrupy mass and placed in an inadequate visual display and from there interpretation proceeds. Well, sort of.

Just the 'static' bits such as data bases are large, and to a surprising extent, dynamic. The changing nature of our lexicon was an unexpected part of our processing. It requires constant tuning as the 'emotional quantifiers' placed on the words change over time, as well as usage. Ever notice how some words and phrases get 'burned out' by excessive popular usage? As though they had no real emotional legs and by the time that the mainstream media grabs hold of them, or now, by the time they have been round the net a few times their emotional 'cache' has diminished and they fade away? Well, Igor and I sure notice such linguistic flows as we have to then adjust whatever emotional values that we had placed on that word or phrase and which has now had its emotional 'tonality' altered. Such tuning of the lexicon is quite tedious and as may be imagined requires a significant level of feedback with testing to even come close to

obtaining a decent emotional representation within the confines of numbers.

Speaking of numbers, when the interpretation refers to an entity or lexical structure {note: a lexical structure is a collection of descriptor sets} as being 'fully populated' or 'complete and correct' in being populated, it means that the current data set has a representation within it for a required number of contexts which go into entity definition. So as an instance, there are nearly 20/twenty thousand contexts within the Bushista entity definition. These are composed of nearly 50/fifty thousand words. But not all of the contexts will be found by the spyders at any given point within the processing, and so an arbitrary per centage has been set at 64/sixty-four percent for the Bushista entity in order to consider that it has been 'minimally constituted'. This is an important distinction as when the times, and emotional waves within the populace change, it is possible for entities to also change. We have several large changes within entities already showing for 2007. So far these include our Markets entity, specifically the sub set for 'global markets' which apparently undergoes a large scale redefinition over the course of this coming Summer {June solstice to September equinox}.

Some of the entities involved within our modelspace are detailed in the table below. The entities are actually rather numerous, but many are either small, and thus rarely reported upon, or primarily used as 'supporting confirmation' for movements shown in larger entities. Some entities are so large, such as Terra entity, that the modelspace has to be dumped and reloaded to clear space for its display. This necessitates a rather tedious process for look ups on the cross links to other, not currently loaded, entities.

Entity	Constituted as:
Markets	Descriptor set for all trading including paper debts, commodities, global currencies, et cetera.
Bushista	Proxy for the cabal required to keep Geo. W. Bush in power
Populace/USofA	Proxy for the populace of the USofA. Defined broadly and representative of issues which rise to national prominence.
GlobalPopulace	Proxy for all populace groups *not* part of Populace/USofA. Division forced by emotional splits arising from anti-Bush reactions post October 2001.
Terra	Largest of the entities. Proxy for all biosphere related sub sets at all levels.
Press	Proxy for print, teevee, and most radio. Define with corporate sponsorship or funding as requirement. So increasingly *does* apply to some bloggers. Represents the conduit for 'official' messages at all levels. Also referenced as the 'global mediastream'.
FreeStream	Proxy for independent information exchange. Rarely discussed as it has potential for circuitous references.
Space	Proxy for UFO, NASA, NSA, and other 'strange reports' from/concerning Space including local to earth environmental reports.

TPTB	Proxy for The Powers That Be. Proxy for groups which may be loosely described as both 'elitist', and 'global' in thinking. Includes proxies for such as RCC, UN, OD, Illuminati, CFR, and others too numerous to detail here.
SpaceGoatFarts (SGF)	This entity is newly formed. While references to Space Goat Farts have appeared within Terra, sub set Space in the past, the data set now demonstrates a need for an entity to allow for the growth of 'unknown forces of all kinds from space which are terra/populace affecting'. Includes non-earth based, non-human/non-mammal intelligent beings usually considered as 'space aliens' or 'extraterrestrials'. Created during 1207 clean up.
Untitled	Developing entities separating during lexicon rewrite.

Some particulars of interest include that our data sets are constructed on a lunar month calendar. We use the *sidereal lunar month* as opposed to the synodic since humans inherently seem to be synchronized, at least linguistically, to the 27.321 day length month. The ALTA report series is built around a modelspace which extends out 1.618 lunar years from the incept date. Our lunar year contains 13 lunar, sidereal months for a 'year' length of 355.173 days. Our modelspace extends out to 575 days from the first date of processing for details on that ALTA series, for a total of 1.57 solar years of 365.25 days each. Not that any of this will be on the test later. But it sometimes does surface in interpretation of particular event/condition predictions.

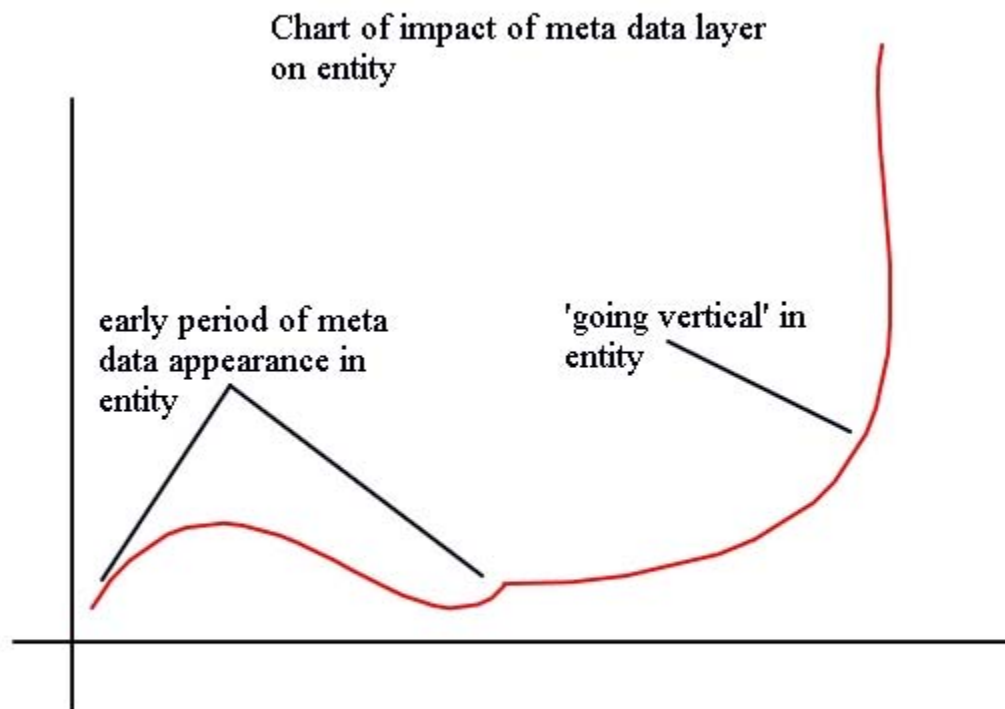

Meta Data Layers

Meta data layers are linguistic concepts which meet the criteria of 'dominating' the modelspace, and being 'fully populated'. By 'dominating modelspace' we are referring to these lexical structures appearing in all major entities and some minor. Further the lexical structure must also be contributing to the 'emotional tension direction' in that it must represent the majority emotional 'force' of the emotional sums at that point in processing. In other words, the lexical structure of a meta data layer, within an entity, must be sympathetic to the general trend of the emotional tension of the entity as a whole, either negative or positive. Also the meta data layer will be 'fully populated' in a 'correct and complete' fashion. This is geek-speak for having all of the elements within the context at the core of the meta data layer be represented within the entity. Thus if there are 2000/two-thousand primary element descriptors to 'duality', then the 'duality' aspect is considered to be participating within the formation of a meta data layer in any given entity if it meets the 2/two criteria of 'domination' by its impact on the entities' emotional summations, as well as having all elements of the context for the meta data layer be found serendipitously within the entity.

Meta data layers are not visible within our display. These are dominating aspects/attribute sets which are 'active' or 'rising' within a number of entities, yet the lexical sets are based on the same core set. Further definition for a meta data layer requires that the lexical structure relate back to one of the 'prime emotional sets' within the lexicon. These are sets which, as a rule, contain lots of bespoke emotion words for aspects and even supporting attribute details. Such words would be 'fear', 'elation', 'confusion', and other words or phrases which can broadly be thought of as describing either an emotion, or a mental

state *resulting* from emotional impacts to the human system. The meta data layers are composed of these sorts of aspect/attributes in their descriptor sets. Further, the same lexical structure, arranged in the same hierarchical fashion must be on a 'rise' in emotional summations within many of the larger entities in order to be considered as a candidate for meta data status.

When we note that a meta data layer is 'going vertical' within an entity, it is a representation that the meta data layer is now driving all of the emotional summations in its primary direction. As illustrated within the chart below, the meta data layer first appears within an entity and then is filled, or populated over time. It then starts cross linking over to other entities which magnifies its impact on the emotional sums within each entity that comes under its influence, as well as also gaining in influence within entities in which it already exists.

When an entity has 1/one or more meta data layers vertical, it means that the lexical structures which thereafter accrue to that entity are interpreted as though being modified by the meta data layers.

Layer Label	Entities involved
restrictions on movement	Bushista, both Populace entities, rising in Markets, going vertical in GlobalPop in Fall/07
encounters with scarcity	GlobalPop, Markets, Pop/USofA - going vertical in GlobalPop in Fall/07
	vertical in Bushista in March, dominating

secrets revealed	Pop/USofA starting in March, GlobalPop in July, goes vertical in Markets in late March, Press entity impacted from 2/27 onward. - Soon (written in July) going vertical in Populace/USofA in September. Vertical in Press entity by December.
conflict	vertical in Bushista in March, dominating Pop/USofA - multigenerational change here begins in July, GlobalPop dominated from Sept. Vertical in Press as of March 7. *July note* now into all aspect support sets for Bushista as of September 19th. Press entity almost completely dominated as of late August.
duality	rising in Bushista, strong but flat in Pop/USofA, rising in GlobalPop, rising in Markets. Dominates Press. Dominates Terra. Moving to near vertical in Pop/USofA by late December.
impetus for change - aka 'resistance/rebellion/revolution'	rising in Pop/USofA, shift here from rebellion over to revolution begins March, GlobalPop shift from resistance to rebellion by July, large Terra associations with this meta data layer, actively resisted in Bushista

The above data table was a snapshot of the meta data layers as of February 2007. The table below shows the state of the meta data layers as they exist at the time of this writing in April 2007 {ed note: from 0108 data set early processing}.

Layer Label	Entities involved
restrictions on movement	going toward vertical in Bushista, both Populace entities, rising in Markets, Press, and GlobalPop
encounters with scarcity	GlobalPop, Markets, Pop/USofA
secrets revealed	vertical in Bushista in March, dominating Pop/USofA starting in March, GlobalPop in July, goes vertical in Markets in late March, Press entity impacted from 2/27 onward.
conflict	vertical in Bushista in March, dominating Pop/USofA - multigenerational change here begins in July, GlobalPop dominated from Sept. Vertical in Press as of March 7.
duality	going vertical in Bushista, rising in Pop/USofA, rising in GlobalPop, rising in Markets. Dominates Press. Dominates Terra. Dominates GlobalPop from March through to late September.
	going vertical in Pop/USofA, GlobalPop shift

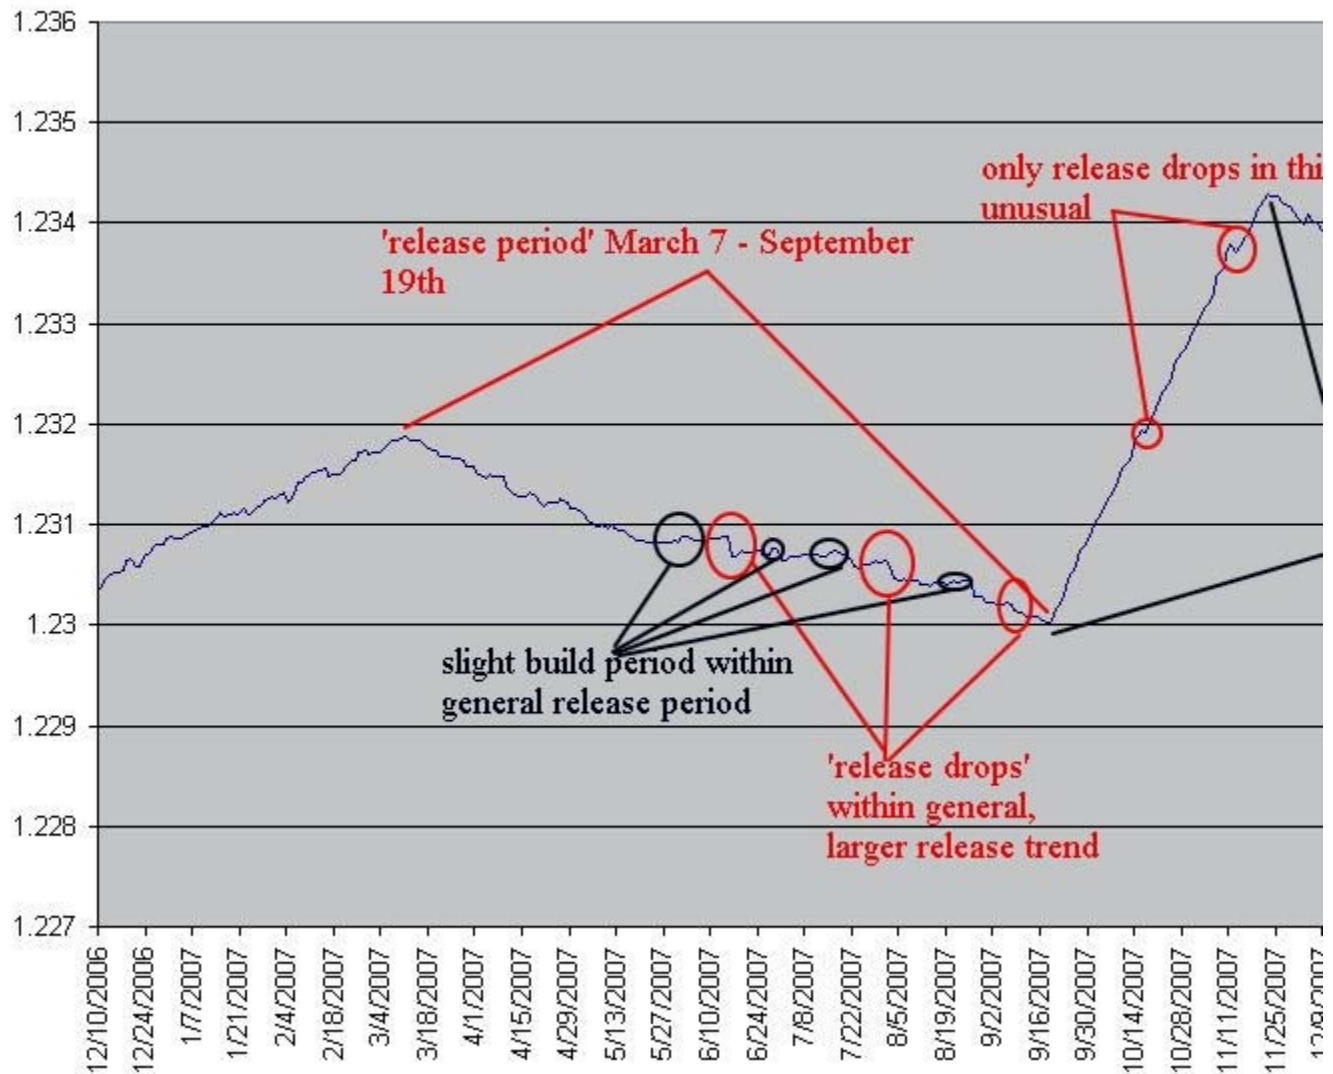

impetus for change - aka 'resistance/rebellion/revolution'	from resistance to rebellion by July, large Terra associations with this meta data layer, actively resisted in Bushista
---	---

Emotional Tension Values - Release versus Building

At a very core level all of the bespoke emotion aspects can be separated into 2/two fundamental types. Obviously, since humans are involved, some overlap occurs and the separation is not pristine. The separating criteria is how the emotion can be characterized, which is to say, does this emotion build tension within an individual human body, or does it release it? Does the emotion twist the stomach? Or exercise the voice? Face? Rest of body?

Some emotions such as grief are both in that they bring complex emotional constructs to the surface. Some such as 'rage' are clearly 'expressive' of emotion. However it is worth noting that every expressive or release emotion also has a complement form for building emotions. As an example, we have the relationship between 'rage' and 'frustration'. In the case of 'rage', the emotion is expressed...flashing teeth, furious fists, screaming frenzy...that sort of thing, in the case of 'frustration' the emotion is of a 'building' nature which induces knotted stomach, tight lips, tense face, tight muscles and other familiar frustration body reactions. The building emotions such as 'frustration' all are part of a gradient of emotional containment which eventually bursts and spills over into 'expressive' or 'release' emotions. In this example the range can be thought of as beginning within 'constraints on behavior (from the outside)' and going into 'frustration' which then flows through various forms of 'gritting teeth' kinds of building anger until ultimately 'rage' is encountered and the emotional summations instantly change over to 'release states'. These are reflected within the charts {ed note: such as they are. Please read charts cautiously as they are very poor graphics of an abstract 3/d process which itself is flawed and not to be trusted to absolute dates.} as dropping trend lines equal release periods, and rising trend lines equal building emotional tension periods.

Emotional Tension Trend - LTV - 2007 ALTA 907 Series

As is shown within the chart above, a general 'release period' is expected to consist of an overall downward trend line composed of various steps of rising, then falling below the previous low levels, and onward until all of the pent up emotional states are/have been expressed. It is not unusual to have many building periods of some significance within a release period, as is illustrated within the months of May through July of 2007 on the chart above. As may be expected, a building emotional trend line should be composed of a similar, if reversed set of steps creating a general upward movement. The chart above shows the next large building period as a very distinct exception to our usual fare in that it has only 2/two release events within it, and they are both very small relative to the totality of the build. Highly unusual. Unique so far in point of fact. The other building portions of the trend line illustrated, which is to say, prior to March 8th 2007, and after January 20th 2008, show repeated release episodes within the over all trend.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from summation of data from previous ALTA 0108 series reads as well as interpretation of the first 4.21 million reads of the 0308 series.

Get ready, get set, jump....the way things work here at HPH....fishes and farts..

So the data comes in, and we process it down to a thick, syrupy mass all sticky and gooey, and then fling it at a CAD program where it splatters up in gobs clustered around what we hope are archetypical ideas that we call contexts. We then poke around the interesting, more colorful clumps and try to extract meaning from them in probably much the same way that our ancient ancestors examined chicken guts.

An appealing collection of colors is spotted within our gooey mass stuck all over our CAD program, and then lists are generated in vast quantities which relate all the minutia of the appealing gooey glob back to

words within our lexicon and to their assigned emotional values which are summed as the lists are generated.

Then we sit down and read through the lists, as though chicken guts, seeking for meaning from chaos, like most humans.

Some times we get it. A picture emerges in early 2002 within the Terra entity aspect/attribute sets which points toward [fishes swimming over the capitol steps] as an illustration of the coming [flooding] theme. This image we think applies to the near term future of that particular run as the processing does not add any more data to the context as we move through the various data types. So, not seeing data flowing into that context, we figure it is all 'wrapped up' and the idea/meme gets moved over into the pending column. But it does not materialize within the time frames of that run. Disappointment at a particular level, but also a 'wheew, we dodged that one' sort of feeling as well.....only now we realize that our processing has elements to it that may span multiple years. That our assumptions about emotions and time which we know to be flawed, are waaaay more flawed than has previously appeared.

What has occurred is that the [flooding] meme of the past few ALTA reports is now 'tying up loose ends' so to speak. What had been an isolated image out of a 'we-thought it missed' interpretation, is now moving into, or rather, under, the primary aspect of [flooding] and under our secondary aspect/attribute set of 'global coastal event'. So...hmmm comes into the room as Igor and I watch the data sets move in modelspace and the [fishes over capitol steps, assemblage under water, dysfunction prevalent] shifts and wiggles its way across the screen within the Terra entity to slide under [floods] as a supporting meme. And then it continues to grow, and continues to add detail elements.

Now note that this is not to say that the capitol being cited is any particular capitol such as WA DC. It could be, as WA DC is very close to sea level, but it could just as easily be the capitol of Bangladesh. Or Holland. Or Florida. But the point is that the data set in 2002 was a far leading edge hint of the [flooding] meme being played out some 5/five years later. Given the George Postulate (named after renegade economist George Ure) that the further ahead the prescient image appears, the bigger the emotional impact when the thing finally manifests, we have to conclude that the 'fishes swimming over the capitol steps' image is probably *not* a good sign, even for lazy fishermen.

Then we note that the data set continues to build. Imagery of [fishes swimming in hallways], and [limestone crumbling to sand] are part of the sets added to the meme in this round of processing. So the whole of the meme is still growing within modelspace, and that is good. Sort of.

Terra - Apres nous, le deluge

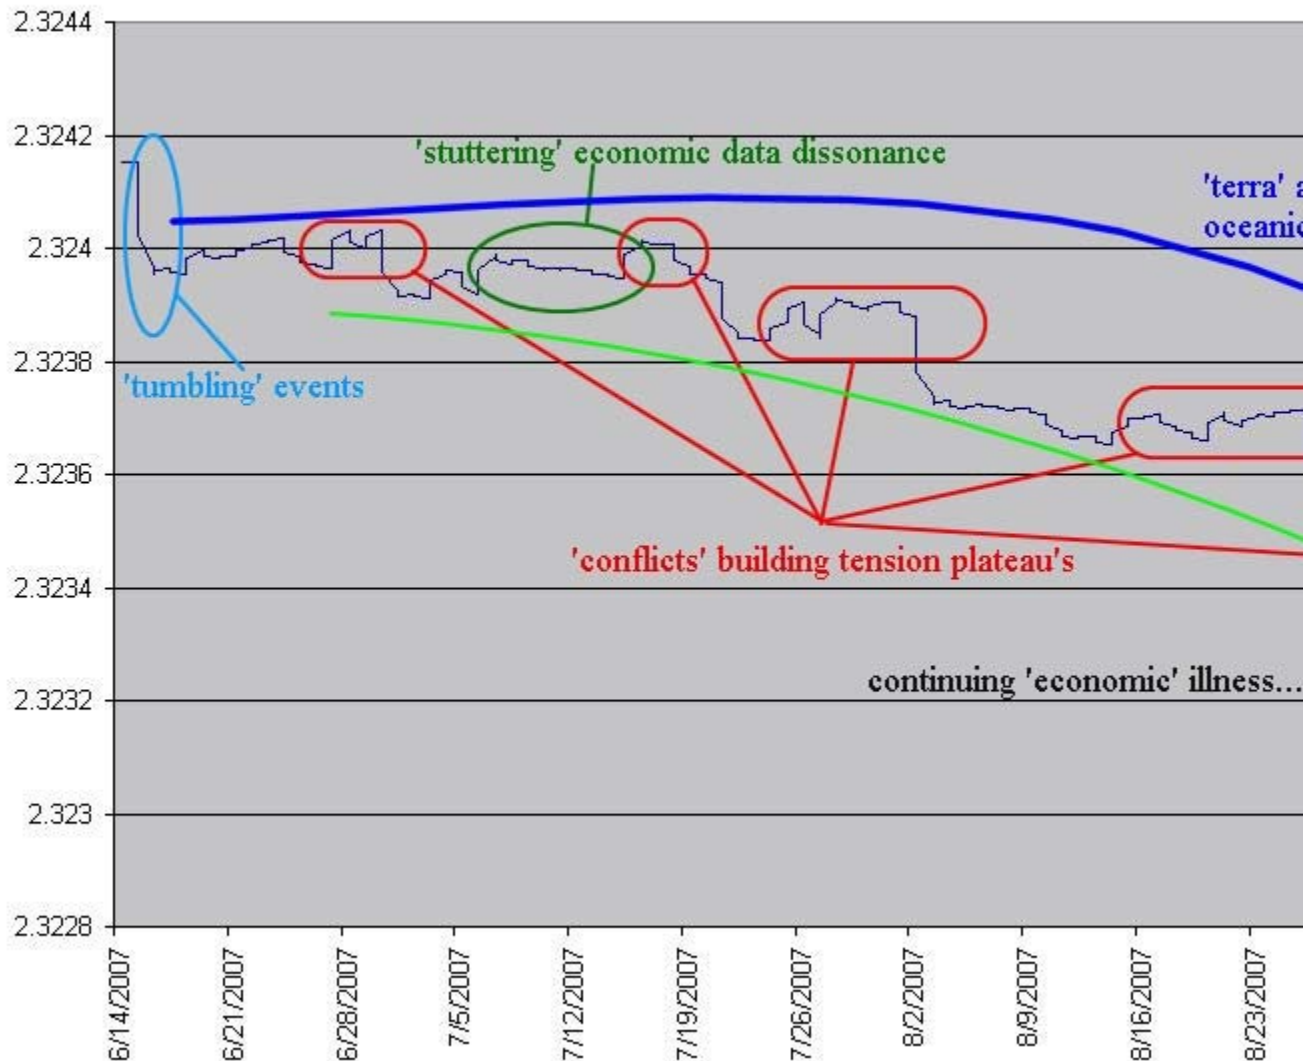

With the recent 'leaks' (pun intended) from reported NASA and NOAA scientists that the estimated sea level rises have been deliberately and grossly *underestimated*, and the global reports of 'strange oceanic behavior', as well as recent magma movements which have yielded quake clusters (as forecast in ALTA 1207, and 0108) in both Hawaii, and California, and with the reported 'disappearance' of a high altitude glacial lake in the Andes, and with the announced 'drowning' of 2/two islands off the coast of Bangladesh, and the loss of several islands in the western Pacific, it becomes increasingly apparent that the 'creep' of [terra intrusion] has begun its 'emergence'.

As we jump into the 'dichotomy' and 'cognitive dissonance' that is life with a tightly controlled press acting as the slave of ThePowersThatBe pushing active denial and constant distraction as the planet

begins to drown, it is becoming increasingly clear to the aware individual that things just don't 'add up'. The feelings that this engenders fall under our meta data layer of [duality] which is the expression arising within the modelspace for a condition that can poetically be described as 'seeing both halves of the coin at the same time'. Make sense? We are bombarded and rocketed daily from the global mediastream about the 'global warming' within the context they choose to define, and then there is the reality here on earth where accelerating changes are pressuring *all* of the complex systems which together form 'life support' on Spaceship earth.

ALTA 0108 as well as its predecessor, ALTA 1207, has ended with 'flooding' as a building meme as noted in the chart below. This meme has certainly manifest globally over the course of the first half of 2007, and given the ending data sets from 0108, 'flooding' will continue to make and drive the news throughout the remainder of the year. The 'flooding' meme is multifaceted, and is found in a variety of contexts within a number of entities. This 'spreading' of the meme tends to reinforce the more dramatic forms suggested by the interpretation. Using our experience with occurrence of the Sumatra tsunami, we can now identify characteristics within modelspace in diverse entities as 'reinforcing' meta level contexts for predictions of a more dramatic, or extreme emotional nature. In other words, the Terra entity as well as several other entities were referencing 'electrically driven water' which we interpreted erroneously as a 'storm' when the tsunami was actually being forecast. The subsequent events and our ability to apply them to the modelspace structure as it existed at the time, now show that larger patterns of memes of similar structure within modelspace form when very large, including [planetary/globally affecting], are pending. Make sense? Basically, if we find 'flooding' in Terra, not necessarily a really big deal, but if we also find 'flooding' in all the other major entities, even though each has its own flavor of the meme, then that is a good indicator that a 'really big deal' is pending, at least emotionally. Such is the case now with the 'flooding' meme.

Emotional Tension Values Summer 2007

In the predictions forecasting the Katrina/Rita/Fema disaster which we labeled as the 'american diaspora' for all of the 'displaced peoples', there was a notable context which described the presented global mediastream view of the unfolding events. This context was labeled as 'city returning to/overwhelmed by the mud from which the bricks came'. Yes, a bit long, but very descriptive of the unfolding events as far as the structures are concerned. We also had language which referenced survivors 'trying to live on islands of asphalt' and other descriptors of 'isolated tribes/groups camping on man made ledges/outcroppings'. These descriptors have begun to form again within the current ALTA 0308 data sets.

Given the recent emerging Terra issues, it is a very monitored entity, and Igor first spotted the characteristic coloration of the 'city disappearing under the water' structure within modelspace as it was loaded. This area is very large, perhaps several times as large as the form found prior to the Katrina/Rita hurricanes and subsequent flooding. Now a similar structure, albeit far larger and more complicated, has formed which is again headed by 'city under the waves, mud washed into buildings, bricks/cement decay' as was found prior to the flooding of New Orleans. This area of the Terra entity is now supported

by emotional sums which bring us back to the lexicon and our rising aspect/attribute set of [great/large losses/destruction]. Hmmm. Probably not a good sign.

As much of the core data capture is in languages other than English, and with a significant percentage of non-Roman alphabet languages, and given the cross links to GlobalPop, as well as to Populace/USofA entity, we are interpreting the very large [flooding] aspect to be planet affecting. The ambiguity of our work is that we cannot tell the difference within the modelspace {ed note: yet anyway} between a single large flood which affects the emotions of the planetary populace and its opposite, which is a flood which is pretty much felt everywhere. In the former case, an example might be something like a flood which takes out the Straits of Hormuz as a shipping lane and thus affects everyone who is an oil consumer on the planet, and gets all the emotions whipped up due to the already heavily emotive subject of 'energy'. In the latter case, a smaller, but more widely spread event like say a global coastal flood of even a few feet, such that cities like New York and Seattle both get ocean water down town while Amsterdam and other low-lying cities have forced evacuations and rescues, would equally meet the emotive summations being seen in the building [flooding] meme.

In either case, the modelspace is clearly stating via the level of emotional summations that 2007 will leave a lasting emotional impression on everyone which will be tied to 'flood' as a context. Damn good timing on that new movie, 'Evan Almighty' about the 'new noah' and his flood issues.

Within our new, 0308 data set the detail descriptors for some of the [visible] components of the coming [flood] disaster are now slightly more complete. They are suggestive of a situation arising wherein the [continuation] of [efforts to rescue/save] [infrastructure] will [produce] even [deeper disaster]. Apparently the [infrastructure] at risk is doomed, but humans will [continue to attempt/effort (at) rescue] long after they should have recognized [collapse] was [inevitable]. In trying to [save (the) columns/supports] the [crews/groups/tribes] are [place/sited] at [risk]. There is a very large area of support within this lexical structure pointing to [danger] and [dangerous situation] as well as [unstable/shaky] and [endangerment]. Note the last is an 'active' form of the aspect which implies, and in this case is, supported by human behavior. The details in this case are pointing toward a [rescue attempt], though there seemingly will be an [absence] of [victims/people]. Rather the [attempted saving] seems to be pointing toward [insurance/banking] and other [commercial] [records]. These are apparently at risk, and the modelspace suggests that if the [flood/deluge], which apparently will [emerge/manifest] at a [walking pace], gets to the [records/fiche] it will be [30/thirty years] in the [recovery/redoin]. The data set details are sketching out a picture of this 'attempted rescue of records' that is occurring simultaneously with the 'flooding' impacting humans, and rendering [households] [uninhabitable] due to [mud] and [frothing waters], but seemingly, the story of these [drowning records/paper/fiche] will at least rise to visibility as its mini-drama plays out.

In the meantime, as reported in ALTA 0108, there are still details suggesting a [flood] of such a long standing nature that for several days there are [night/nocturnal] pictures of [campfires/cooking fires] on roofs as survivors try to [get by/make do/shelter-in-place]. The data is now suggestive of a total [flood displacement] which may exceed 7/seven millions on a planet wide basis. These are seen as [permanently shifted/moved] persons, and the suggestion from the modelspace is that there won't even be the [pretense] of a [rebuilding] effort. Rather the [cities] will be [officially] [consigned] to the [mud/sea floor] and the [salvagers/scavengers]. Hmmm.

The data sets for the [flooding] aspect within Terra entity are not alone in predicting nasty times ahead. The immediacy values for the 0308 series are continuing to accrue to the [shakes/earthquake] sub set with a large number of geographic references for the [west coast, north america]. This is merely the currently dominant supporting aspect within that set. The totality of geographic references favors the [pacific plate boundary], and then secondarily, the [kashmir triangle, western Himalayas, northern indus

river valley]. Within the [pacific plate boundary] sub set, the larger group is currently pointing toward [west coast, north america], but the difference in geographic reference numbers is relatively small. The focus is clearly on the [pacific] region of the planet, and the data set is also still favoring the idea of [tensions, too/extremely built up]. Within the [earthquake] sub set the supporting aspect/attributes are led by [release/shedding/opening/dispersing]. This area is heavily cross linked internally to the [space] sub set of Terra, but also, and rather curiously, to the SpaceGoatFart entity. Now remember that the SpaceGoatFart entity is proxy for all [unknown] and [known, but officially denied] [space focused, based, extracted] data. The area first starts to gain these links as the modelspace is progressed through July and into early August. The data set gains the [space] cross links from a number of sub sets including the termination of many within the [sun] or [energies]. This is probably as close as we will get to a declarative statement that [space energies bring earthquake] within our data set. There is no indication that the [energies from space] emerging in August, according to the modelspace, will instantly cause the [release/shedding] of [infrastructure/buildings/support systems] to which this area terminates in Populace/USofA entity. Rather the data is suggesting that there is a [hesitancy] or [latency] which begins [absorption/integration] in August, and that the [earthquake] follows after some small time delay. This may be a good thing as the data suggests that some [people/populace/citizens] will be [aware] or [sensitive] to the [pending emergence/manifestation]. This awareness is shown with [visibility] cross links to the Press entity so the interpretation is that in the coverage of the [aftermath/results] there will be global mediastream discussion [with] and [about] those [who knew]. As a key element to this [visibility] will be aspects/attributes such as [heard/hearing], [ringing], [tones], [pulses], [irritability/discordance], [dizziness], and other 'symptoms' of the [sensitives] which will be floating out on the global mediastream following the [tension release].

The supporting sets accreting from the immediacy values for [earthquake] are pulling along lexicon links to longer term value sets. These are running out to our limits of defined time lines in that they refer to [multiple generations] or [80/eighty years] or greater for the 'impact value' of the [earthquake]. The supporting aspect/attributes are filling with detail sets which are cross linked, and seemingly cohesive, and suggest some very large [residual fallings]. This is a new context for the data set. It is cross linked to both the populace entities where it terminates in [living/life arrangements/social order] as well as [housing, physical structures]. The interpretation is that some significant [reshaping] of [social order/living arrangements] will [surface] as a result of the [earthquake (producing)] [residual fallings].

The data details point to [cloth/window-shades] and other [material/fabric] which [falls (from a) great height] and momentarily [resembles/reminds] [sailboats (in the) sky]. This may be suggesting shaking so violent as to dislodge furnishings from tall buildings onto the street below. As there are a number of internally held [visibility] aspects, the suggestion seems to be that this image of [sailboats in the sky] will be captured and floated out on the global mediastream.

This [earthquake] will be labeled based on its [visuals]. The data sets are pointing to [tigers (in the) earth/ground] and [wind ears] as being the [labeling] lexical elements. The [tigers] are supported by [alternate striping] and [dark striping] as well as [dangerous]. This may be pointing to a series of [fissures] or [stripes] appearing in the [tan/orange] [hills] such that [ariel] views make it appear that the [people (below are) walking] on the [emergent tiger's back]. Further the [production] of the [tiger seeing] for the global mediastream will be [hampered] by the appearance of [threatening wind ears]. This is a new context, and its supporting elements are not much more illustrative. The descriptor set for [wind ears] is mainly filled with [wind] supporting references, or [sound/heard] references. There are some small details which seemingly *could/may* be interpreted as suggesting a [wind tsunami] which emerges from the [middle/midway] in the Pacific, and [travels east]. If this is an accurate interpretation of the data set, there is some seeming correspondence at a temporal if not causative level between the [earthquake] and subsequent encounters with [wind ears]. We are fairly sure that this [wind ears] appellation is *not* an accurate characterization, however any other of the supporting aspects also do

not clarify, and many are likely very misleading. We are choosing to use the less defined [wind ears] until the circumstances manifest which may allow a better label to be applied.

An interesting cross link within the [wind ears] leads us back to the [gentleman, elder] who is [sheltering] amongst the [trees] first seen in ALTA 0108. This [older gentleman] characterized as [dark/brooding], but nonetheless [sharing] of his [skills/talents] was the [reluctant leader] who is forecast to bring the [evacuees] out of the [woods] following what is likely a severe hurricane. Now the [western influences] and the cross links from the SpaceGoatFarts entity, sub set [energies] are connecting the [wind ears] which are described as [dangerous] and [threatening] and [inducing of fear] with this previously described [dark night] in the [woods]. There is no direct connection which makes sense within the modelspace, but these may be temporally linked. All of these sub sets have high emotive sums, and contain [visibility] aspects with links to the Press entity. The emergence of the [wind ears] is showing within modelspace as having a Fall or post autumnal equinox primary temporal association. However we note that this was also the case with the first of our long range predictions for the Katrina/Rita disasters, that is to say, more impact in Fall, and even though the event occurred prior to the equinox, the longer term consequences are still emerging. As the lexical structures are similar, though the value levels are now elevated significantly more than the Katrina/Rita disaster, the manifesting circumstances may be also be similar.

The data is also forecasting a [dire] or [dangerous] situation for [patients] in [multiple hospitals], as was observed in Katrina/Rita. This lexical structure contains aspect/attribute sets which describe [patients] in [convoys] of [all manner/irregular/any_or_all] [vehicles] which have a [north eastern] association {ed note: could be the direction chosen for evacuation rather than the place from which evacuated, we can't tell}. Further the [patients] will be [placed/moved] to [risk/danger] by [either choice]. This presumably is suggesting a damned-if-we-stay versus a screwed-if-we-go kind of choice.

Cross linked from the more general [evacuation] sub set are a number of references to a [famous] [boat] which will be [wrecked/driven up] by the [winds]. This is cross linked over to the [patients] areas as well as the Press entity and the [wind ears] sub sets. The [visibility] component is very high so this ought to receive some significant level of coverage within the global mediastream.

Again a note that while much of the descriptors are arriving to the Terra and other entities via the immediacy value set, they are 'hooked' through the lexicon to longer term impacts and emotional summations. This is suggesting a similar but larger kind of impact as has been observed originating from the Katrina/Rita disaster.

If we follow the cross links over to the Bushista entity, as well as to the [officialdom] sub set within the Populace/USofA entity, there are also similar structures developing to what was seen prior to Katrina/Rita. Ironically the most prominent of which is the [officialdom](thanking) [itself] phenomena which came to epitomize the FEMA component of the times. Also within these aspect/attribute sets are descriptors pointing to [officials] with [damaged] [authority], and [officials whirling (in) confusion], as well as [officialdom without channels (of communications)]. Within this sub set the terminating values are painting a picture of a situation in which [nothing] will [turn out/succeed] as [officialdom] [plans/wishes]. Hmmmm. Now that sounds familiar.

As the modelspace is moved through August, and into September, the appearance of the [wind ears] and [earthquake] summations grow. These value sets accrue descriptors for the [destruction] of [ribbons/roads] and [wires] which [bind] [tribes]. Further the aspects/attribute sets are suggesting that from [switzerland, suisse] over to [california], the [monuments] will [change] their positions. Now this is not to suggest that California and Switzerland are going to change places, though we do acknowledge that the Swiss make a good chocolate pie and would be welcome neighbors, but rather a more likely

occurrence is the shifting of [survey markers] which are also known as 'monuments' and these may go walk-about in an earthquake, settling in new positions. What is very clear, especially following the cross links from this lower set back up to the [flood] sub set, is that the idea of 'business as usual' will *not* be offered by [officialdom] as a [promised outcome/result] in this case.

Other forms of the [flooding] meme appearing include specific [weather] and [rain] and [north america] sub sets. These are continuing to point to [rivers (in the) atmosphere] which will [flood] and [empty themselves/disgorge] as [rainwater]. These [rainwater] [floods] are still gaining values, and seemingly at an increased rate within the 0308 immediacy values. These values, as well as the steady accretion of [rainwater floods] within the last of the 0108 longer term values, are pointing to a [september] and [post autumnal equinox] continuation of [excessive rainfall]. These lexical structures are supported by aspect/attributes going to details such as [wind driven] and [mudslides] as well as [permanent gouging] and [permanent dislocations]. Seemingly more of the same, yet there is now a new emerging emotional tonality of [dire acceptance]. Or perhaps [acceptance of the grief] which is showing within the Populace/USofA via cross links.

Populace/USofA - In the Family

As the modelspace is advanced along with the accretion of the immediacy values, the last of the shorter term data set from ALTA 0108 is moved into a position of revealing some meaning. The primary aspect of the shorter term value set for the Populace/USofA entity is rising all through the last of the release period {ed note: ides of March through September 19 at about 5:50am UTC}, and this value set resolves to [family] within the lexicon. The aspect of [family] in this case is multidimensional. As an aside, we note that when multiple levels within a single entity or across entities all provide various views of the same meme, then it may be expected that the meme will express itself at the national level as well as being experienced at the personal level by aware individuals. Even the unaware humans will frequently express that they are also experiencing the same meme during the forecast period without being cognizant of the influences. Universe speaks with a multitude of voices and it is merely a matter of training the ears to hear.

In the case of this aspect, the [national] sub set is very clearly hinging on [violence] with supporting aspect/attribute sets of [attack]. The data set is most clear, that is to say that visually the accretion levels rise to notice between September 13th and September 22nd. As the [violence] and supporting [attack] aspects come into focus, the inference from the data is that the [nation] has a [bad attitude] about something?, and that a [bad idea] is being [promulgated/spread/driven]. This brings up the [national] discussion of [attacking]. Much verbiage is shown [spewing] from the never-ending-fount of the global mediastream, with the [corporatists] view point at the fore here in the USofA. The cross links are suggesting that all will not be well in media-land as many of the [voices] will be seen [shouting out defiance/objection].

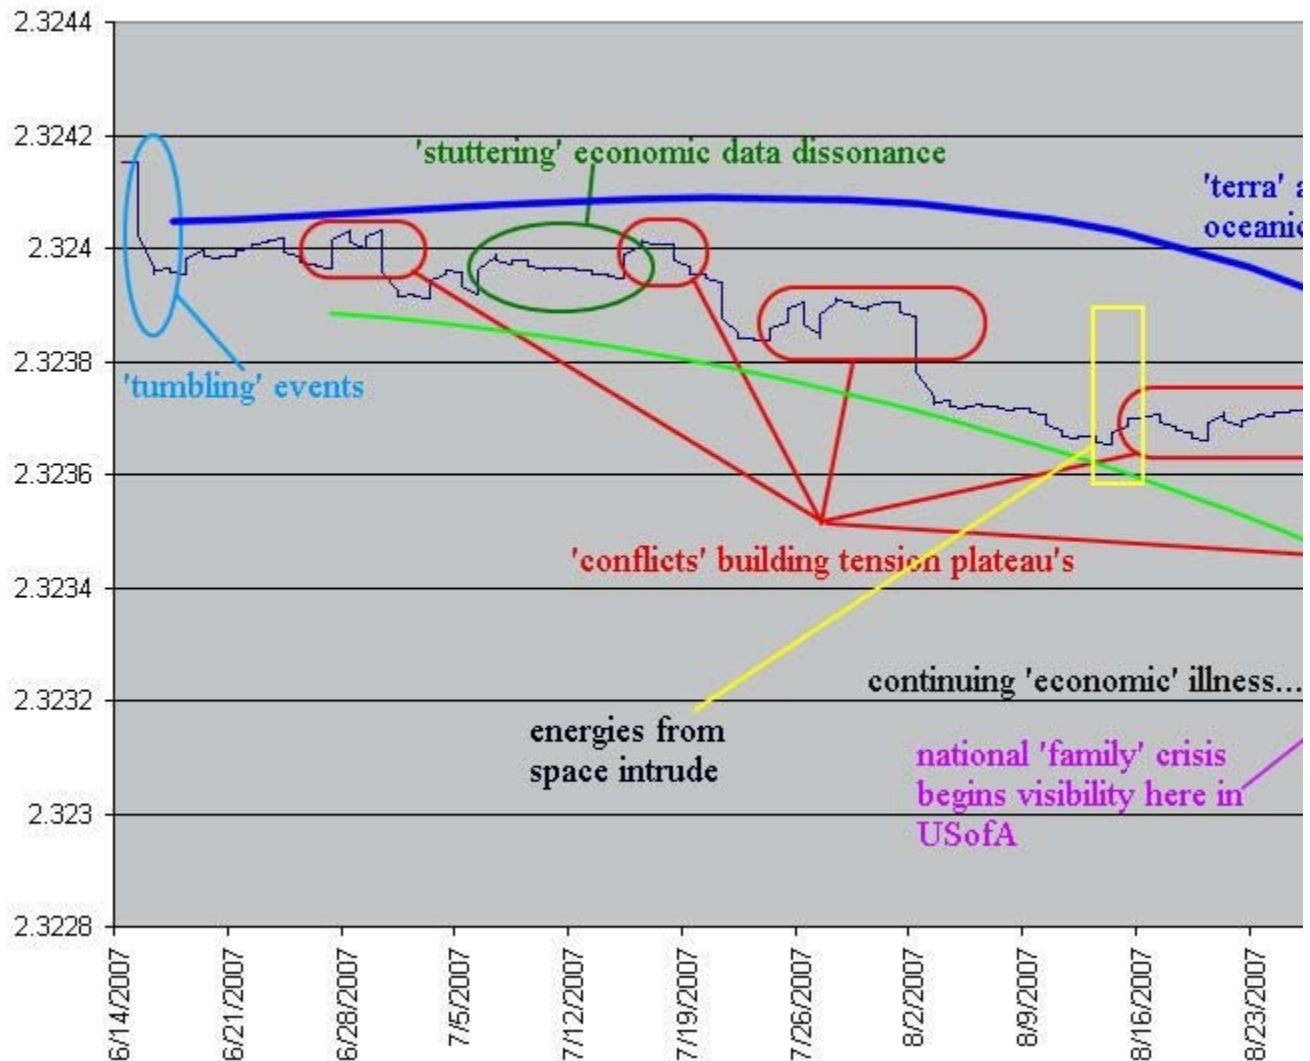

It is at this point that the [female personality] discussed in 0108 will have the largest of the initial [visibility] values. She appears coincident with the [attacking] talk. Also at this time, or shortly thereafter [reports/examinations/intelligence] will also become [visible] in which it is shown that the [nation's friends/allies (have) weak lives] and this is seen as a [great/large/huge risk]. Note that [weak lives] can also be interpreted as [vulnerabilities], as well as [insecure foundations]. Given the geographic references, this seemingly is pointing to a [crisis] emerging in Pakistan, and affecting the whole of the Bush wars-of-aggression. There are apparently going to be some very [violent] and [histrionic] filled [shouting] sessions at all levels of the national life over the conditions, *and* the suggestion that the [solution is to attack].

At this time, which is to say mid September through the 19th and beyond into the end of the month, the

[conflict] meta data layer is dominant in both the Bushista entity and the Populace/USofA entity. In the case of the Populace/USofA the meta data layer is at its *last* point of high values, which is to say dominance, for at least the next 3/three years and likely beyond. After the September equinox the [conflict] meta data layer within the Populace/USofA begins and sustains a very distinct degradation of values month-by-month. The Press entity is confirming that this shift will be [visible], and the Bushista entity is also confirming that the [alteration/change] of [mind_set/viewpoint] of the populace will be affecting the administration. The cross links from the Populace/USofA over to Bushista are terminating in a lexical set which indicates that the Bushista's will be [taken aback] or [recoil] from the [slap/rebuke] of the populace. Nonetheless, the aspect/attribute sets for Bushista entity indicate that in spite of the [body] of Bushista noticing that [conditions have changed], and in spite of a brief [visible] period of [disconcordance] from the [controllers/princes] of Bushista over this new development, they will still be [propagandizing violence].

At the point of the [dithering Bushie] at its most [visible] within the global mediastream, the [opposition] will shift over to [revolution], at least linguistically. There are significant lexical sets forming which are within the Populace/USofA entity, and which are participating within the [revolution] meta data layer. The cross links are thick and seemingly trigger a reaction from the Bushista entity late in September, about the 22nd. It is also at that time that [revolution] as a meme, and the [military establishment, usofa] both are housed under [conflict] within the Populace/USofA entity. This shift under [revolution] and the participation of the [military establishment, usofa] within the meta data layer of [revolution] has been showing up in the reports for some number of months, and the modelspace is now indicating that in September, [visibility] comes to [revolution] here in the USofA. This is concurrent with, but not caused by the [attacking] language surfacing from the Bush propaganda machine. The real issues are shown as being [core] and [principle] value shifts which are occurring and are temporally linked in their visibility to the [energies from space] meme shown for August. The cross links back to this meme within the SpaceGoatFarts entity originate in the [energies from space] with type [unknown], but terminate in the Populace/USofA entity in the curious structure of [open mouths]. This aspect/attribute set has descriptors going to the idea of [leakers] as in [persons-in-the-know] kind of [leakers], but is also replete with double or triple definitions within each aspect. For instance, the [leakers] aspect/attribute set has supporting aspects describing [energy leakers] both from [open mouths] in space, as well as [receptors] here on earth. Then yet a third complete descriptor set is defining [leakers] as [insubstantial floatings/mirage/illusions] which will apparently [leak] into the [social consciousness] such that they gain [visibility] concurrent with the [emergence] of the [energies from space] shown as starting in around August 13th. The effects of the [energies from space] are showing within the progression of modelspace as gaining strength over the last half of August and then rising into September. The link to [revolution] within the Populace/USofA is not precisely defined, and has too many descriptors of diverse nature to be specific, but the impression from modelspace is fundamentally that 'incoming energies from space *zap* or otherwise move humans to a new *understanding/awareness*' which provides emotional energies that propel the changes shown building in September.

Emotional Tension Values Summer 2007

Returning to the [contact] meme expressed in previous ALTA reports, and noting that even the propaganda outlet for the NWO is now climbing onboard as with this story of the reported sighting of a mile long ufo, the Populace/USofA, much more so than the GlobalPop entity, is showing that [contact] and [exploration (of the) Other] are rapidly gaining memes which will continue to emerge over the rest of the release period, and then act as a foundation for changes within the subsequent building period from September 19th through to December 1. This curious bonding of [ufo] and other [denied, or unexplained, or both] phenomena which are housed within the SpaceGoatFart entity are joined by [recognition] and [visibility] aspects from the Press entity, as well as [discernment] as the dominant aspect within the Populace/USofA entity for this lexical set. Clear as mud? Basically it looks like the

modelspace is forecasting that a whole lot of wising-up will occur in a relatively short period of time for the populace-trained-in-denial. It will not be emotionally pleasant to watch or live through, at least according to the supporting aspect/attribute sets within the entity.

The accretion of values from the 0308 immediacy sets so far processed are still pointing to a gaining [influence] of [contact] meme within [social order] such that it will soon be having a [visible] impact on [daily life]. This is showing as being [portrayed] on the global mediastream. Some new [developments/emergence conditions] relative to [crop circles] and the [usofa military] will surface as part of the [secrets revealed] meta data layer influence. While interesting, these [secrets revealed] are seen as [merely/only] (interesting) and not shattering revelations, however what is pertinent for the aware observer is that these [crop circles + military] revelations will be a very clear temporal marker to yet more [affects] here on earth of [energies from space]. These [effects] will include some level of [consternation/anxiety] which shows up as reports of [bizarre behavior] within the global mediastream. Hmmm. I sure hope they poi ut out the bizarre behavior explicitly as I am finding it difficult to discern anything but bizarre behavior these days.

Markets - Gold/Silver - '12'

The Markets entity is accruing values for [visibility] within the [gold/silver] sub set as the modelspace is progressed over the course of [summer] from the June solstice until the September equinox. These [visibility] aspect/attribute sets, along with very extensive cross links to the Press entity indicate that the global mediastream will be [gold plated] with [increasing thickness] over these next 3/three months. However note that the real change for the precious metals, as well as all of the [commodities] classes of contexts, including [food plants], comes just after the Autumnal equinox. These changes in the [respect] values for [commodities] actually begin their building patterns, along with everything else it seems, on or slightly before September 19th. Whatever the totality of emotional tone humming around the human planet on that day, it also will be vibrating the [gold/silver/precious metals] as well as [commodities] in general. Prior to the building emotional tension period of late September through to early December, the [gold/silver] 'buzz', all though growing, will be concentrating on [potential] and [promise] rather than the actual response of the commodities to developments.

These [prospects] will be generally [portrayed] as having a [large success potential]. There are aspect/attribute sets which are suggestive of a [distinguished person] who will be the [new/next/novel] [face] being promoted on the global mediastream and who will shift the [rhetoric] around [precious metals] by several, [deliberate] though [disguised] [statements] which become [promulgated] into [everyone's hearing]. Some of these [statements] will concern the related issues of [supply/access] and [restrictions] to [rare earths] and a [rising] and [desperate need]. This is followed by some [announcement/proclamation] in which [precious metals] are related to [necessary destruction/use/catabolic] and [process] in such a way as to [shift mining future(s)]. Note this last may not be referring to the prices of stocks of mining companies, but rather is seemingly pointed at [alterations/morphing] of the [mining industries]. This last will include some [support companies] which are shown as [offering promise] relative to the [new process]. These events are apparently more temporal markers to future developments than they are particular influences on the state of the gold/silver markets. In other words, the masses of the planet are only barely conscious of these developments within the metals context, but that bare whisper of awareness builds over Summer and by Fall is seen as propelling the building emotional tensions around gold/silver.

With a serious caution to reading this as any endorsement of any price, pricing or 'factoring', we need to note that there is now a very distinct association between [gold/silver] and the number/numeral '12'. This

12/twelve association is curiously connected not to the number's value, but rather to the numeral, as though as a symbol. The idea of the '12' being a symbol is variously reinforced by sub sets within the lexical structure which contain supporting aspect/attributes such as [twelve] which is itself supported by [men digging a grave]. This instance of [twelve] also has aspect/attributes supporting it which includes a [monk/scholar/warrior (is/will) act (as the) opening/reception (for the) '12']. Again noting the appearance of the '12' as symbol and not the word nor number. Very odd.

As the Markets entity, sub set for [gold/silver/pm] is progressed through modelspace and toward September, the aspect/attribute sets are pointing to [positive] influences on [gold et al] which arise from [negative manifestations/emergences] in other areas of life here on earth. The Markets entity data sets include references to [failed/crashing] of [partnerships] of all kinds from [political] down to [commercial]. The data is suggesting that the bubble in M&A activity will be very severely threatened by the coming [revelations] regarding the [partners (who are in) trouble] and a separate meme will come up about [partners, commercial] who [cannot provide what is asked/negotiated]. Further this aspect/attribute is repeated in many of the [political] associated lexical sets within the GlobalPop entity, and the Populace/USofA entity, and each of these have extensive cross links over to the Markets entity suggesting that [failed political partnerships] will produce very large impacts on markets over the course of Summer.

As this sub set is progressed through modelspace over the middle of Summer, the data sets are showing that [officialdom] will mount a [campaign] of [opposition] to what is happening in Markets entity, specifically related to the [gold et al] sub set. This [opposition] will be quite [brutal] and is showing as being [short-lived], but also [violent] and [repressive]. There are indications that very large [losses/failures] will be [calculated] by [officialdom] with [no thought/care] for [repercussions] beyond [strict adherence] to the [hidden goal]. The problem for [officialdom] is that this [repression] phase breaks up due to, at least in part, the influence of [secrets revealed] within Markets. This sub set is pointing to an early-to-mid August [episode] of [spillage/leakage] of [material] which also causes [secrets] to [ooze] out into the global mediastream. It is at that point in mid Summer, that the [opposition] begins to [fade/fail]. Much of the [failure] will be temporally marked by [uneasy/disconcerting] [gossip] which hits the global mediastream, and is a precursor to the [trouble of friends]. There is then a discussion within the global mediastream about [getting involved (in the) political stew], but a co-incident [lawsuit] related to the situation will act as a [derailing obstacle].

Further [aggravation] for the [officialdom] and their [suppression effort] comes in the form of [political and military] problems with the Bush wars. The data sets are identifying the [bush wars] via cross links as the precipitating factors to the late August and September [alterations] which occur within the [markets structure]. The [mud/dirt/scandal] which is [revealed] in July/August relative to the [retreat pending] causes the [markets] to hit something of a gut-check time globally. The [usofa dollar] as well as global interest rates will be very much affected, and the [currency disease(s)] will also rise to [beset/bedevil] [officialdom]. And this is before the 'main act' even starts in late September. The data set is also indicating that the [markets] will [react] to [news/rumor] coming from the [war front] about [enemy ambushes/assaults]. This reaction is shown as [negative] and is heavily cross linked to Bushista and ThePowersThatBe entity where in both cases it terminates in bespoke [fear] aspects. In both cases the supporting sets are filled with [shock] and [rage], though noteworthy is the lack of [grief] associated with any of the [carnage] which sets off the whole [episode]. This [episode] is temporally important as a marker, as well as being [symbolically] important in that [global community] is shown as [becoming aware] of the [limits of power]. In other words the data sets seem to be saying that a shock to the system will come when so many realize just how really power-less are the TPTB, and Bush et al.

There are an increasing number of cross links originating in Terra entity which are terminating in 'affected/affective' areas of the Markets entity. Given the continuing accretion of values for a 'mind set'

change within the populace relative to terra, and the biospheric alterations now occurring, it seems probable that part of the very large mind set change will influence the markets in a noticeable way beyond the [green meme] now emerging. The data set is taking a much more grim view of the developing situation and is suggesting that a certain [ultimate risk] kind of 'doomerism' will manifest as part of the shift. The [visibility] aspects and cross links to Press entity suggest that there should be global mediastream language around this concept in late September and beyond.

The data set is also pointing to a [former girl friend] who is going to be [visible] within the global mediastream and who will be [secrets revealed] incarnate. This [telling tales] will continue for a while within the media, and will have a very energy sapping effect on the markets, and specifically on a number of [resorts]. This lexical set somehow relates to [disease] and [illness] and [poverty] such that the whole of the [resorts] area is to be impacted, again showing for mid Summer initiation of the event-stream and continuation into Fall. There are broader implications which will be [focused] by the [former girl friend] and her appearances within the media, but the first clue for the aware individual will be the [trepidation] which will be [visible] on the [upper lip]. This is presumably the 'spokesliar' for the resort industry...but the immediacy values are less than clear on that point. What they do show is a very large, and finally acknowledged by corporate media [emptiness] which is affecting [resorts] due to [disease]. The [poverty] aspect is supported well, but with a diverse set of aspect/attributes. Some of the aspects are pointing to the role of [poverty] in the [disease] which causes so much concern, and then others are pointing toward an [increasing awareness (of) personal poverty] which besets the [frequenters/users] of [resorts] such that their [poverty impressions] further aggravate the situation.

As the modelspace is progressed past the [officialdom opposition] campaign, the [gold et al] sub sets begin to acquire building tensions just slightly before the rest of the entities, say around September 8th or so. This building tension tendency continues through Fall. The lexical sets are showing that [divine inspiration] will be [touted/proclaimed] by some within the global mediastream when they are [recounting events] which [increased their presence/wealth]. The indications are that gold et al will be rising both as a meme of [personal armor/protection], but also a [unifying force/center]. This last comes from the [currency, global trading] sub set and is very well supported by a very diverse number of early emerging lexical sets.

The [gold/silver/precious metals] data sets show very large grow in [october] relative to other building emotional trend contributing aspect/attribute sets within the Markets entity. This is to say that the [gold et al] sub set has a rising, and disproportionate influence on markets in general beginning and after October of 2007.

Returning from the far distant future of October to the more near term time, we note that the current hedge fund crisis is the leading edge of the 'near death experience for the usofa dollar' which was discussed in ALTA 0108. The NDE will continue to play out over the course of this summer, and as forecast, began its [creeping visibility] within the lunar month prior to the June 21 solstice. During the 3/three days of the solstice, the data had predicted that the [NDE for the usofa dollar] would [shift] into an [active] state of [crumbling documentary support]. And, so it would appear, it has. The recent market volatility does not seem to be pointing toward a 'usual' summer of low activity, but rather something different is emerging. For the behemoths of the global corportacracy, different is not good.

We have labeled this summer as a [bad summer] for markets, derived from the data set, and have chosen the appellation of 'near death experience' for the experience of the usofa dollar over these next few months. That was a deliberate choice at the time of the previous ALTA report as we had no data suggesting the resolution of the pressures on the dollar, and we *assumed* that it would recover, or be saved for yet another few months until the next crisis. But, we could be wrong in that assumption.

The data sets are pointing toward a huge [liquidity crisis]. The archetypical aspect/attribute imagery goes specifically toward [punch bowl empty], [liquor bottles overturned], [wine cask spilled on table, empty], and other such poetic references to [sobering up] from the [heady rush] of the [bubble(s) era].

We have sets of bespoke emotional, and conceptual [fabric torn asunder] expressed as [expectations, not met, unrealizable]. We note that the [expectations not to be met] are centered on [dollar behavior], and have cross links internally to all other aspects of the Markets entity as well as numerous cross links over to Press entity, and Bushista, and ThePowersThatBe, as well as both populace entities. This area is still contributing at least one-third of the summation values for the September emotional tension turn-around into building tensions.

The archetypical imagery for this area is filled with repeated statements that [many/millions (of) small particles compose (a) mountain (of) worries/troubles]. The lexical area is specifically contained under [housing], but also has [energy] and [food supply] participating via cross links. The clear indication is that the [liquidity crisis] will be [forced] by the [acknowledgment (of) tens of millions (of) individual distressed conditions]. The [distress] will rise over the course of [summer] as the [encounters with scarcity] meta data layer goes vertical in both populace entities, as well as emerging in Terra entity as a dominant meta data layer. The data suggests that [disquiet] will be expressed by the populace such that the [useless/bound politicians] will [sweat cold (in spite of the) heat]. The bespoke [fear] emotion is highlighted in all of the [officialdom] sub sets in all the major entities. It is going to be a very [bad summer] to be a politician.

Part of the political woes will emerge from the [employment crash] just now starting to manifest, and the many tens of millions who will [lose every thing easy, (now that) times (are) realistic/hard]. The data suggests that [foreclosures] will be seriously exacerbated by a sudden [attempted] [draw down/withdrawal] of [401K's/retirement accounts]. The scenario seemingly suggested is that in reaction to the inability to [borrow easily] due to the slow play out of the 'debtberg' flipping over, the [tens of millions] of [distressed household debt holders] will seek to [withdraw against the future] by [sacking/pillaging] their [retirement accounts]. This trend will be under the influence of the [duality] meta data layer in that it will impact the markets as every one tries to get liquid, just as the big retirement account mangers aka [hedge funds] are also having a liquidity crisis based on those same individuals *not* being able to [borrow easily]. This [duality] will reinforce itself as more try to [loot] their [future], and more press reports on it, more will try it, and so it goes. Then of course that [withdrawal wave] will also put [liquidity] pressure on the funds, which in turn....and so it goes on. Then the press on the hedge fund difficulties grows, and the dollar [decreases] which places more financial pressure on the tens of millions of the distressed who then try and scrounge more money out of the system which places more pressure on the liquidity crisis at all levels, and so it goes on and on...

It is tempting to think that had the NDE for the USofA dollar come at a different time, under different administration, that something (perhaps) could be done to ease the transition to the next-financial-world. But, luck of the draw, we live in interesting times, and to quote an old refrain "it don't come easy".

Bushista - Semi-demi-pre-quaver, Ten Months Burn

As the Bushista entity is progressed, along with modelspace, through the last of the 0108 data sets, and including the first of the 0308 immediacy values, a blip appears associated with the Vice Dick, Cheney. In the early movement of the modelspace, it shows the current [conflict] around his claim of 'extra-ordinary' powers to continue to intensify through to just past mid July. During this time the [hidden warfare] within ThePowersThatBe entity starts to emerge with the Dick Cheney [problem] as its surface focal point. Then as the entity passed through July and into August, a series of other events take the impetus away from battles with Dick-tatorial powers, and Cheney takes a vacation.

Events here on earth and near by in [space] bring Dick back from vacation, refreshed, bloated, and belligerent just in time for a [september demi-quaver] in which influences of [health] and [personal powers] will be [shaken] just enough to create a continuing, low burner meme which the modelspace shows runs out to March of 2008 when the [quaver] bursts out as a very ripe tone. This emotional [tone] has very long term values associated with it such that the data seems to be pointing to it totally dominating the rest of Dick Cheney, position, and life.

The Bushista entity (more in part One) is showing an accumulation of longer term values pointing toward a [10/ten months (of) burning]. The [burning] can also be translated as [hellacious] and therefore the whole interpretation perhaps should read [10/ten months in hell] especially as there are to be many sources for the [burning]. The implications from the data set are that the Bush administration has but merely begun its [polishing of failure] to an art form. The aspect/attributes sets within Bushista are suggesting that [old sins] are going to [combine/conjunct] [new mistakes/bad_reactions] to produce an absolute [stew of failure (and) misery].

Conclusion: Part Zero - Nasty Weather...enjoy it while you can

As Igor notes when examining the raw data streams and the visual processing clues the programs place on the screen, 'going to boring'...and mostly he is correct. After a while there is only so much that can be said about [floods]. And we thought that we had said almost all of that in previous ALTA reports. However we do note that the [banding] or [striping] of the planet previously forecast waaay back in 307 (if memory serves) is manifesting now as the weather patterns (driven by stationary low pressure areas) appear to have become stuck producing stripes of alternating drought and excessive rainfall/floods across all the continents with the 'stripes' running from pole to pole. In those earlier ALTA reports the 'bad news' was that the 'striping' would end....hmmm. What was being forecast was that no matter how nasty the weather during the 'striping' period may be, it would only get worse globally when the 'breaks came'. So, my apologies for the repetition ad nauseam on the [flooding] meme, but as I responded to Igor, 'well, flooding is bad, and perhaps boring, but you'll miss it when it stops'.

It is the current understanding here at HPH that the striping/stationary banding of the weather marks the last of the 'near normal' weather years. That after this time, 'emergence' is no longer the operative meme, and we will have slipped into full-on, 'manifestation'. In the 'manifestation' time, according to a record of longer term values kept over the course of many ALTA reports, many new forms of 'social order' will be tried. It is during this time that 'reactions' to the developing 'employment crash' as well as 'adaptations' to the 'biospheric changes' will be rising to visibility *even* to the unaware. This is a particularly key point as the times, tides, and circumstances will have moved, but according to our predictions, many hundreds of millions of humans will still have their minds stuck in the 'old view' of reality. Some of those hardest hit by this slap-upside-the-head from universe will be those who *thought* that their planning has prepared them for the manifestations. This will cause many problems as a general freak-out occurs as these people are forced by universe to confront the *real* new world order.

###

We are posting Part Zero a few days early. It is anticipated that Part One will be posted by Sunday, July 8th. The slight delay over a week is due to a commitment to an interview on Coast-2-Coast which is a very late night show and keeps me up waaaay past my bedtime. In fact it keeps me up into the next day. George Ure and I will be the guests on the show on July 4th and into the 5th. There will likely be many minutes of nothing but fireworks noises given the day and our neighbors penchant for all things

explosive. However the exercise is necessary part of entrainment in the social order even though it will mean several days of disturbed mental state much as jet lag. This is why the extra days necessary on processing and interpretation for Part One. Down days due to time shifting into the world of late night radio talk shows. A very scary prospect for us morning people.

ALTA 0308 - Part One

Asymmetric Language Trend Analysis Intelligence Report

‘Changes in language precede changes in behavior.’

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

7.7.2007

Note: Entities are identified by a **blue** typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in **italicized bold green**, and **red** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 16.15 million reads of the 0308 series.

Meta Data - New entities emerging - FuturePop

As we had noted in ALTA 0108, there has been significant change within the groups of contexts which form entities within modelspace. We **think** that we are just starting to perceive a new populace entity forming. If so, then continued growth of the lexical sets will confirm this as we progress through the data in this run. The set is labeled as 'future populace' as it is primarily taking elements from GlobalPop, and Populace/USofA and forming new patterns. These patterns are intriguing and apparently are predicting some significant shifts in 'organizations/tribes/groups' of the populace. Some of the aspects/attributes are seemingly indicating that these 'new tribes' will mostly **not** be answering to, nor taking much account of 'officialdom'. We are getting hints that a largish segment of the populace in the not-too-distant future will be making their living as [retrievers]. These 'retrievers' will be [recovery experts] who will bring back items described as [covered/hidden] but **not** [lost]. The data is sketchy, however the outline suggested by the aspect/attributes goes to the idea of [submerged treasure] where it is [known] that it is there, just [covered/hidden] from access. These [retrievers] will be the initial segment which apparently will migrate from 'regular social order' to this [mostly not bothered (by) officialdom] new social organization. This area separating out from the other two populace entities is very heavily cross linked to the Terra entity where many of the terminating links end at [solar/sun] references. We are awaiting more details before separating out the interpretations for this emergent group, however the modelspace **seems** to be indicating that some Terra related, and [space] sub set data points will be manifest this Summer, under the context of [scattered energies] which will form the basis for this separation of populations. Note that this area is linked to, but is separate from the 'diaspora' discussed elsewhere.

Another sub set within the we-think-is-just-forming FuturePop entity is a group we have labeled as "depo's". The [depo's] are those humans who are collectively more-or-less permanently [dispossessed] of a [land]. These people are of multiple nationalities and will be [dispossessed] by [climate] either directly or indirectly due to [war] which is [climate] provoked. Sort of a body of 'global refugees', this area of the modelspace is forming rapidly, and is gaining support in enough key lexical structures to suggest that this group may actually have some level of [visibility] in the global mediastream by late Fall, early Winter. There are some cross links to the Bushista entity, and specifically some which terminate in [cheney] sub set. Hmm. A bit bizarre, but would not look for Cheney to become a 'weather refugee' anytime soon. Maybe he takes some depo's hunting...

There are several other nascent changes we **think** are visible in modelspace which are involving the Terra entity and the SpaceGoatFart entity, but as these are only very thinly supported they will wait a later report in the series for investigation.

Terra - Cold Places Rock, Diaspora USofA?, Emergent Madness

The data sets are describing a [party] or [official celebration] or [countenanced gathering] which is to take place on a [tall bluff]. The [bluff/precipice] is [tan colored] and faces [west by south]. On the [bluff] the [guests] are [eating, drinking] and in general [making merry]. This [gathering] in [celebration] of [culture] is held on a day which turns [rapidly and unexpectedly] [cold/colder]. Shortly after the [wind brings (the) cold], the [earthquake] will begin to [develop/mature/emerge]. At first it will be a strange [earthquake] even for those who know the phenomena, as it will [feel] as though merely a [heavily laden

truck] is [slowly (grinding/chugging)] uphill. But both the [noise] and the [sensation (in the) feet] will actually be the beginning of awareness of the [earthquake occurring].

The imagery coming from the descriptor sets include [2/two women] with [visibility] who will [clasp] each other in [fear]. Given the [visibility] aspects and the cross links to Press entity this [party] will produce some level of global mediastream coverage as the [guests] will [recount/share] the [experience/emotions]. Some of the descriptors tell of these 2/two women who will [watch/observe] in [horror] as at least 1/one of the other attendees is [flung] into [danger]. The descriptors are a little confusing at this point as to just what the danger may be. We have conflicting sets which are pointing to [over the bluff] as opposed to [down the shaft] as though an elevator or well may be involved. In either case the data suggests that it is an [attending official] who gets the planetary [heave] in to [danger], but it also is revealing that the [official] is [rescued] [visibly] {ed note: video of rescue?} by [rope/line] and [presence (of) intelligence] on the part of a [native]. This [native] may well be also a [guest] at the event.

The [earthquake] being described for the [cold high place] which [interrupts] the [party] and [shifts/moves] [emotions] {ed note: as a result of the global mediastream} also acts as a temporal marker for a number of other event streams. This [strange/disquieting] [earthquake] will be more easily noted as it will, besides disrupting the [party] in a [visible] fashion, will also [rip/tear/split] the [earth/ground] for [miles/kilometers] of [distance]. This last has a very large emotive value sum with the [visibility] aspect and suggests that many [aerial views] will be repeatedly appearing on the global mediastream after the events emerge.

The [party] plus [earthquake] sub set of descriptors is bound into, and heavily participates within the [restrictions on movement] meta data level. This sub set is also participatory in the [duality] meta data layer. The [restrictions on movement] is shown as a dominant aspect after the party experiences the earthquake, and suggests a period in which [outside contact] is only [1/one way]. The implication is that the [party] is [visible], but [not reachable/contactable] for a small period after the [strange earthquake]. Then the [escape from danger] aspect/attribute set emerges. It is difficult to track small movements of small sub sets within modelspace as it is a very crowded and chaotic place. However, it does seem as though the [party experiences earthquake] and the [rescue of an official from danger via rope by a guest] will be separated by measurable time. The data provides the sense that the occurrences take place over the course of a very long day, and are actually reported or [viewed/seen] on subsequent days.

A problem begins with this [earthquake] and the starting position of modelspace for 0308. The data descriptors as above, coming from a combination of the last of the 0108 data, and the first of the 0308 immediacy sets data, start off as describing the earthquake. The temptation is to view this as a 'near' event, and likely to occur in July. However as there are some long range data sets from 0108 which participate in creating the descriptor base, it is possible that the immediacy data is merely combining and continuing this thread. If so, then the earthquake described is likely some months away. We will not be able to guess more accurately until the 0308 shorter term and longer term sets are processed and either continue this thread, or complete it with inter-context tense changes. At the moment, in the absence of other data streams for support and clarification, we have to conclude that this is a projected 'late July' [strange earthquake/quiver].

Given the initial state of the Terra entity as modelspace is advanced, it comes as little surprise that [strange days] seem to be suggested as July gives way to August. Almost immediately (pun intended) the immediacy data sets begin populating the [diaspora] data set which was previously seen just prior to the Katrina/Rita/Fema disaster. Again, this [diaspora] is heavily cross linked to the Populace/USofA entity directly while mostly cross connected to GlobalPop via multiple Press entity sub sets. We are inferring that the GlobalPop emotional contribution to the [diaspora] is through global mediastream reports and not primarily through actual experience of the events. Just the opposite state exists for the

Populace/USofA entity. As the modelspace is progressed, the [diaspora] aspect grows and bulges out suddenly in mid-August. This is on or around August 17th that the bulge first is noticeable. The aspect/attribute set grows slowly to that point, then gains mass considerably faster as though the 'occurrence' which pushes the [diaspora] into manifestation has or is occurring at that time. It is also at that point, as August shades over from 'mid' to 'late' that the mass of the [diaspora] aspect set starts setting on its cross links to multiple other entities.

What is very unusual about this growing [diaspora] is that the 'active participant' links within the array of emotional values which we use to discriminate predictive versus reactive nature of the emotions, are pointing toward not [water] as in the previous instance, but rather [winds]. Further, the [winds] are supported by aspect/attribute sets describing [scrubbing clean (by/via) intense pressures]. Again, the inclination may be to assume that this [diaspora] is driven by [hurricanes], but if so, it will be [winds] rather than [storm surge] which will do the most damage, and is shown as initiating the [dispersion of peoples]. Again, this is [north american] geographic sub sets within the primary support aspect/attributes, and though the place name information is not meaningful, the descriptors all seem to add up in a general sense to a place [recognized/known (for) availing (a) life of leisure. Further descriptors go to the idea of [human caused lakes] as a local place marker. However, in many senses, it does not appear to matter just where the predicted point of most origination is placed, as the area described as damaged is very large. It is from the large [destruction/sweeping_away] that the [diaspora] gets its origins. Also we note that this is an [evacuation] which evolves into a more or less permanent relocation of some numbers of people. There are supporting descriptor sets for the [diaspora] which include directly held, and cross linked references to the [dark night of the soul in the woods huddled wet around campfires, conditions miserable] as discussed in previous ALTA reports. Given the long lead time on the [dark night...] prediction it would seem that the causative events are likely on the large side, emotionally speaking and will manifest, as we have seen in the past, as a 'cascading' series of interconnected actions/reactions which sum up to a [large mess].

Some of the new details concerning the rise of the [dark man] who acts as the [elder/leader] from within the [center of the storm] include that he will later be [censured/charged] by [authorities] with [destruction of government] property as he will [lead/guide] the [opening/breaking] of [government warehouses/stores] and the subsequent [distribution (towards/fulfilling) needs (of the) crisis]. This area is still building in values so the [charges] may be pending some distance in the future, though the descriptors of the events which bring the [assault by authority] are within the near term Terra, and Populace/USofA entity value sets. The [diaspora] is clearly mid August and beyond in scope.

The Press entity cross links show that [bloody wounds] will be [visible], as well as [visible deafness], this last a curious data set with supporting aspect/attributes which go to the idea of 'large numbers' of [visibly deaf people]. The cross links to this area are not contributing clarity, as for instance the cross links to the SpaceGoatFart entity where we note that [shattered energies from space] are seen as [perceptions change/alter] and these [contribute/grow] the [disbelief/wonderment/curiosity] of the [people] who are [not subject to/experiencing] the manifesting circumstances of the [shattered energies from space]. Previous ALTA reports have repeatedly gone off on the 'strange track' with increasing attention being given to the [energies] from space. This aspect/attribute set within the SpaceGoatFart entity is now larger in mass than that of the [sun] aspect/attribute set within the Terra entity. Hmmm indeed. At least there will, apparently, be some factual intelligence to be gained if the data set is correct about the mid-August date. Either the [shattered energies] will be directly experienced, or at least, [observed]...so there *ought* to be some kind of clues as to the nature of the SpaceGoatFart entity's continuously (so far) building [energies from space] aspects.

Returning to the Terra entity and the next [american diaspora], we note that *some* of the descriptor sets are indicating that [wind driven particles/objects] will be the [primary/most] causative agent within

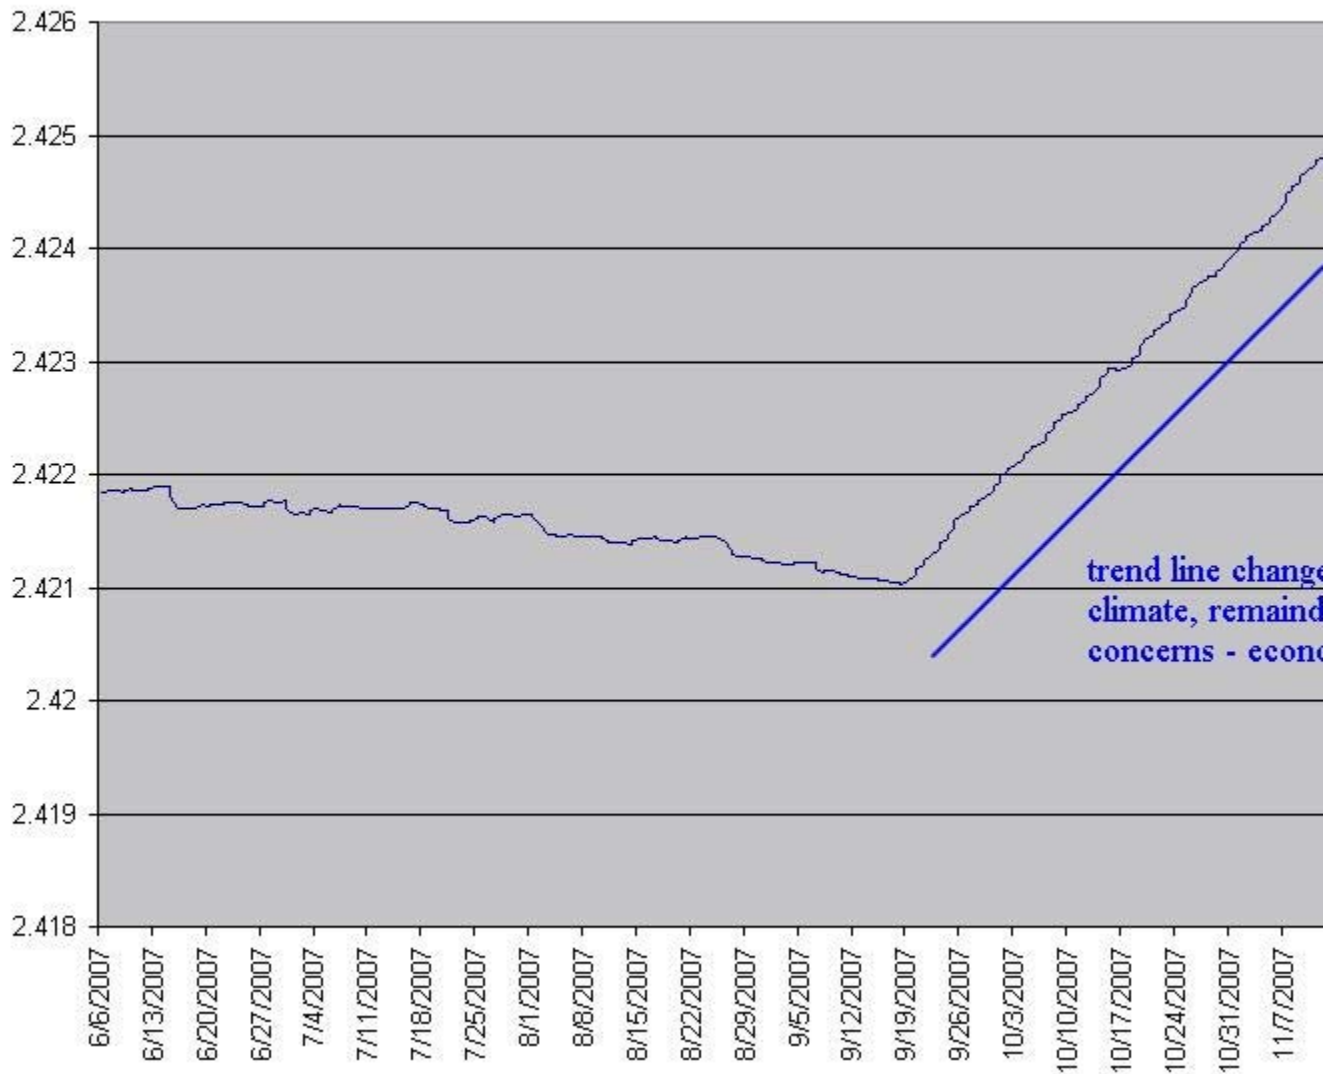

the [winds] element of the [dispersion]. These are [object], and while it is tempting to translate these as [sand/small particles], there are enough other supporting sets within the aspect/attributes to suggest that large object such as [signs], [roofs], [vehicles] and such will be also [blown/driven (to) destruction].

There are, as previously noted, some timing issues within modelspace, which very loosely minded interpreters such as ourselves, could link temporally with the [strange earthquake] descriptors above. There are also follow-on, or 'duration' values, which also tend to point to some temporal links between these descriptor sets. These include both event-streams aspects' gaining the aspect/attribute set for [pause between pulses] and this being cross linked back to an origination point within SpaceGoatFart entity.

Also a note that there should be a clear mental separation between the 'dark man' described as the 'emergent leader' coming from the experience of the 'dark night of the soul' with the 'crowds (of weather refugees) in the woods', *and* the 'dark companion'. This last is clearly a metaphor for the larger masses of persons, as was seen in the Katrina/Rita/Fema disaster, who are the 'faces, crying out in the dark, distraught/anguished' as is found within the descriptor set for 'dark companion'. That the masses 'crying in the dark' during the Katrina/Rita/Fema disaster were dark skinned is not pertinent to our descriptor set for the 'dark companion'. This is due to the fact, that in our emotional values array and descriptor set, *all* faces 'crying in the dark' are exhibiting the negative emotional set which goes to the creation of 'dark' as an aspect from the lexicon. Clear as mud on the bottom of a well at midnight?

Along with the [wind] as a destructive aspect/attribute set pushing the next [american diaspora], there are other sub sets within the Terra entity, major section [weather] in which internal cross links describe the [emergent madness] that will be the [biosphere, weather, climate, environment] as of this Fall. Noting that modelspace seemingly falls into alignment (joke intended) with the major solar and lunar cycles such as the equinox/solstice cycle, we usually hunt carefully around these areas as modelspace is progressed forward. In the processing of the immediacy values the modelspace is now accruing a number of new aspect/attributes which indicate that [madness] or something close, [rules weather] beginning near our next equinox of September 21. While there are those who may dispute that [madness] in the [weather/climate] has already appeared, the modelspace and the lexical structures indicate it is merely a matter of degree. That is to say, that the aware individual may have observed indications of 'weather madness' some years ago, while the masses still 'fishing the river of denial' are acting blissfully unconcerned even *if* they had noticed the weather changes of late. The data set is indicating a very large jump in emotional values relative to 'terra/weather concerns' will emerge this Fall. Again referring to our emotional tension chart below, we note that at least 1/3 (one-third) of the rising tension values in September are 'terra driven'.

Emotional Tension Trends 0308

As the [emergent madness] is [appreciated/perceived] it will [alter thinking/behavior] due to the large emotional impact of the [perception shift]. Much of the supporting emotional weight within the summations of the array values is centered around [shallow water, coasts] contexts. The aspect/attributes sets with the larger values are very extensively linked to the SpaceGoatFart entity where many originate or terminate in [energies from space]. The interpretation has to go to the idea that this fall's emotional tension build which arises from the [climate concerns] component is driven by a [perceived impact of space energies on coastal shallow waters].

GlobalPop - Emergent Departures

The GlobalPop entity is fully participating within the sudden turn around and abrupt rise in emotional tension values as of September. And as with the Populace/USofA entity, there are several significant data bumps which begin near mid August. These emotional data bumps are relating to 3/three

conditions, each seemingly equal in emotional summation values for driving up the totality of the Fall emotional tone. The 3/three areas are Terra entity, earth climate concerns, and the Markets entity, USofA dollar/economy/derivatives concerns, and lastly, geopolitical concerns by which we primarily mean warfare.

As to the [war] aspect within GlobalPop entity, the supporting aspect/attribute sets include specific references to Bush, and primarily from the point of view of the citizenry of GlobalPop, the aspects are going toward support of [madness]. The [madness] aspect is fully populated and is complete and correct within the methodology employed here at HPH, and as such, given the [visibility] supports and the cross links to the Press entity, the [madness] of 'king george' will very likely be filling the papers, and other outlets of the global mediastream all through the end of July and into the early part of August. The forms of the [exposed/viewed/visible madness] will include obvious [disconnections (from/with) reality] during at least [2/two speeches] which Bush will give, and which will be reported within the global press. Though apparently *not* making it through the very heavy corporate censors of the USofA, there are numerous cross links to Populace/USofA from the GlobalPop entity indicating that other-than-official channels will carry the [madness home]. This [exposure] of [madness] participates within [duality], [secrets revealed], and [conflict] meta data layers. The [conflict] aspect includes indications that [fights/conflict] between [cheney] and [bush] will be [visible] within the press over the course of this current lunar month. The [visible fighting/brawling] will also be a leader, temporally, for very intense global mediastream coverage of the [degradation] of the [government] of the USofA. The idea coming across from the modelspace movement is that the global populace will be watching the [continuous breakdown/destruction] of the [american government] as a [soap opera/drama]. This [rapt attention] aspect/attribute set is supported by [drooling, open mouthed] as the mildest of the body part references. The GlobalPop entity, as it is moved through late July and early August gains enough release value language to suggest that the [twists/turns/gyrations] of the Bush [dictatorship] will provide soooo much drama that the populace will [urinate, standing, unawares/unobservant] as the middle of August draws near. The impression from the movement of the entities through modelspace is that the global mediastream would be inclined to continue the [exposure] of the [american madness] and the Bush [disconnection (with/to) reality] *except* it would seem that in early August, *other* items begin to [intrude] on the [pressure for space] within the mediastream.

Bound up within the many cross links from the [drama of american degradation] sub set are repeated, thick, rope like, cross links over to the [usofa dollar] both in the Markets entity and in the Populace/USofA entity. The [secrets revealed] meta data layer, vertical in both Markets and in GlobalPop entities is heavily concentrated around the [usofa dollar] sub sets with particular focus on [derivatives]. Again we note that the [NDE (near death experience)] for the [usofa dollar], as reported in ALTA 0108, is *only* our label for the problems surfacing [fiscally, usofa dollar/values/wealth] connected. There is still no indication that the [usofa dollar] will survive the [NDE] and as such it may well be an actual DE or death experience. We again note that for at least the last year, the period of Fall of 2007 has been throwing significant challenges to the interpretation as the impressions that modelspace has been providing is that [globalism/global trade] does *not* survive Fall in anything like its current form. The data schism has been so acute as to lead to our rebuild of the lexicon over these last 2/two ALTA reports in an attempt to locate a fault within our processing. So far we have found none, and as such the interpretation of a very large change, at least close to the idea of a [dissolution] of the [old ways/former path/methods] of [global financial trade]. This area of GlobalPop entity is very heavily supported by directly held values, and cross links for the [repatriation] of the [usofa dollar]. And, again ad nauseam, we report that [flooding] both as a metaphor for the [usofa dollar] as well as a descriptor for [risk due to flooding (of) productive lands] are well situated to support the [problems] which the [dollar NDE] sets in motion. The data sets include repetitious references to [flooding] especially in [duality] linked [north east] references. The idea coming across from the Terra entity cross links, as well as the cross links to the Populace/USofA entity are that the [northeast] of the [usofa] experiences [problem

causing/disruptions/ruptures] which directly impact the [financial/dollar industries] such that [flooding risks] will [propel manifestation of risks]. Further, there are Terra entity links which indicate that [flooding] in [north east europe] will [precipitate/cause/force] a [fall] [energy crisis] which in turn will also [propel/drive] [dollar flooding]. This last is a very curious reference and has supporting aspects for the [global insurance industry] which support the idea of [collapse/implosion/deflation_of_balloon] relative to [developing/emerging/manifesting] [climate crises].

The [situation/emerging_circumstances] which will impact the GlobalPop entity emotionally this September, and which contribute to the sudden and sharp rise into [building emotional tensions] include a [bad summer] economically which will become a [worse Fall]. Part of this [worse (economically) Fall] is centered around a [3/three way] [struggle]. There are multiple dimensions to the this [struggle] which suggest that the [initial conflict] was over [possession] of [assets], but by the time of the September equinox, the [struggle] has turned into a [3/three way binding] *from which* these groups will try to escape. However the data shows that [escape] or [freeing] of a group will [significantly impact/affect] the others, and sooo....each is [reluctant/unwilling] to [allow (for) freedom/escape] of either of the other groups. There are detail levels within the aspect/attributes supporting this [struggle] lexical structure which go to the idea of both [commercial] interests, as well as [government] agencies.

There are a number of discrete data sets involving [royalty] and [royal celebrity] which will begin to manifest in Summer. The idea coming across is that [coercion] and [rape] within a [royal] setting, will lead, under the [secrets revealed] meta data layer, to an [exposure] of [bribery]. This in turn is supported by a longer term value set for [conflict] which will [engulf] the [british royals] as well as the [european royalty]. There will be a [tainted document] which will involve [ancient turks/turk_o_men] and which will in its turn [produce exposure] for the [royalty] {ed note: including queeny from england} which will be [desperately unwanted]. This [exposure] is seen as [capturing (the) pope] and [infuriating (the) church]. Note that this last could also be interpreted as [infuriated (by the) church]. In any case the [conflict] which rises from the [rape (in) royal place/palace] will also spread to the [american royals]. The [illness] of the [response (to the) crime] {ed note: we think could also be 'exposed cover-up'} will [spread] so far as to be [affective of/affecting] such diverse organizations as [red cross], and [councils, foreign relations]. Hmmm. What is lacking at the rise in [visibility] values which would point to the [exposure] of the [crime] coming this Summer. As of yet we don't have enough to interpret that as occurring. It may be that this [crime] takes place soon, and [exposure] awaits a later date. More if it shows up in further processing. The emotional values here are very intriguing as they have some ramifications for a very rapid shift to release language in December, and for the sudden burst of 'secrets revealed' meta data layer emotional values summations in Fall.

Markets - Prosperity Ashes

Maintaining an awareness that the Markets entity is global in nature, though de facto ruled by anglo-centric interests, the data set is shifting over the course of this last year as more support and cross links go from the Markets entity to/from the GlobalPop entity. The data continues to accrue in this trend.

As the global [bad summer] in markets moves forward into Fall, the Markets entity gains a new dominant aspect/attribute set of [prosperity ashes]. This may also be interpreted as [burned prosperity], or other permutations of the theme. These are all likely archetypically correct. We also note that the tense of the newly acquired aspect/attributes is favoring the 'immediate past' nearly 8/eight to 1/one. Further the 'long duration values', which are used to guess as to 'how long will this particular emotive pattern influence things', are very high. And lastly, the aspect/attribute set is fully populated with supporting sets, the vast majority of which are also internally cross linked to [changes] within the Markets entity. A percentage of slightly over 51/fifty-one of these cross linked [changes] connections are also participatory within the [conflict] meta data layer. These [conflict] interconnections also bring

up cross links to the Bushista entity in large numbers.

The 'immediate past' tense of the aspect/attribute sets within the [prosperity ashes] is important as it presents the image of the 'done deal', or 'already manifested event' which has 'just past', but is now [controlling emergent circumstances] through [repercussions/continuing_effects]. This area of Markets, which is to say that part of the entity which is in existence as it is progressed along with modelspace into Fall, and thus post-equinox, is interpreted as suggesting that our [global trade failure/collapse] has already occurred by the equinox, though the [manifesting circumstances (of) economic degradation] are still [imminent]. This last is an important part of the Markets in Fall apparently, given the number of supporting aspect/attribute sets under [imminent]. As an aside, there are many [officialdom] sub sets within the [imminent emergence of repercussions] lexical structure. A very clear signal is being sent by the sheer number of the [officialdom] sub sets which have [dangerous] or [risky situation] as their primary supporting aspect.

Much of the allegoric aspect/attribute sets in support of [imminent repercussions], or the precursor structure of [recent past change] are falling under [release from darkness], and other aspect/attribute sets centered around [light versus dark]. Of these, the most common support element aspect/attribute set is for [secrets revealed] which is also a meta data layer. This area contains references to [removing (*oneself) from the darkness of the past], and [dangerous situations (are seen best in) noon day brightness]. Again, all are participatory within the meta data layer of [secrets revealed]. There are, as may be expected, vast numbers of cross links over to [officialdom] within Bushista, and Populace/USofA entities.

Of the more explicit linguistic structures, those that immediately grab attention include [wane/waning/failing/fading (of the) usofa economy], and [affairs/deals/contracts (have become) full/ripe/completed]. This last is extensively cross linked to the GlobalPop and our [3/three way conflict]. Many cross links also contain pointers to [israel] as a geographic/political location to the [emergent conflict].

The data also has bespoke references to the [boom being over] which are tied to explicit [in another/next month]. These are from the immediacy values currently being processed and present a picture of the [august debacle] which [explodes] the [boom] [violently]. It is this descriptor set which most clearly points to the conditions which are previously identified as the [immediate past event]. The idea coming across is that the [explosion] of the [global currency boom], no matter how [violent/bloody] will *not* be as emotionally impacting to the vast populace of the planet as may be expected. Rather the data suggests that it is the period [immediately following] the [exploding global boom] which brings [understanding/anticipations] of the [imminent threats/risks/dangers] which are now seen/viewed as [inevitable] by the populace. The primary difference in mind set between late Summer, just prior to Fall, and now or the recent past is that currently the idea of risk of global currency boom collapse is both present and palpable, but in the very near future, it will be emotionally accepted as a 'life event'. The distinction is significant; even though the actual [currency boom collapse] may not be viewed with any real emotional angst *as it is occurring*, the movement of Markets through modelspace in August and September points to a [creeping realization/understanding] which brings [belly wrenching/stomach turning] understanding as the equinox nears. This last area is heavily supported by [vomiting] as though [kicked/struck in the abdomen]. We always pay close attention to human body parts/process when they show in the data as they are the sharpest form of archetypical marker available, and in the past have always proved to be very good pointers to significant periods/events.

Some strange aspects which show up within the data sets as temporal markers to this [economy failing in Fall] areas include links to the Terra entity where [smoke] so [thick as to black out noon] is seen. This is also supported by aspect/attributes which are directly held, and which go to the idea that [punishment]

for/by the Bush administration is a key [summer/fall] transitional temporal marker for the [imminent, next month's impact].

Within the descriptor set for other temporal markers is a mid August through to the September equinox [collapsing of the club/clique/group] which is supported by very extensive and repetitious references to [realignment] and [new alliances]. The [collapse of the club] is supported by aspect/attribute sets for [usofa dollar] and other [currencies] in general. This [collapse of the club] area is explicitly pointing to [bad conduct] and [hidden tithes] as being the proximate cause for the [plague] which [destroys the club]. A series of Press entity cross links contain references to [discussions] about [1/one day] or [future time] and [getting together/forming] a [new club]. However the links from this area within Press entity over to GlobalPop fall into areas supported by [derision/denigration] as the response. Hmm. Seems people don't take kindly to the idea of a 'new club/currency' being proffered so soon after the failure of the past. Some [presenters] from within the global mediastream who do offer this idea, likely at the behest of ThePowersThatBe/Were, receive [unwelcome attention] as a result. Yet another temporal marker for the next phase in the [changes] still pending.

Other temporal markers include [visible] references to [solar eclipse] and the next up is this September 11th. Some significance should be placed on this marker as explicit stellar/space references to time-known events are very rare in our archetypes {ed note: likely an artifact of our processing techniques, rather than humans ignoring these}, and in the past have been very clear change indicators. There are also references to the [full moon] following the [solar eclipse] as the [line of demarcation] which presumably separates the [imminent] being expected from the [imminent] which will have begun manifesting. Clear as mud?

And speaking of [mud], we have several forms of the word showing up both in Markets entity, where it is being used as a general [scandal] marker, and by cross link to the Terra entity, where it is explicitly related to [rain, rainwater] and [salt marsh mud (from) flooding]. Both of these will play elemental roles in the Fall degradation of the global currency trading or [globalism movement] [collapse]. The [death of the global boom] also has many [visibility] references which escalate rapidly in late September. The emotional summations of the cross linked [visibility] and [global boom collapse] areas present the idea of a [hurricane/storm] of [bad news] which will flow through the global mediastream this Fall and into the Winter.

Returning to the higher level aspect/attribute set of [prosperity ashes], we note that the supporting sets for the [imminent threat/risk] are filled with references to [influence] in many forms, both [Comerica] and [political], and this last is also synonymous with [military]. These [influence groups] are explicitly painting a poetic image picture of [an attempt to obtain/do what is beyond their power]. Interlinked with this are [young people] who are described as key players in spite of being [fresh from schooling]. It would seem the data set is pointing toward a [group of influence makers] who are [employing young people, newly graduated]. These kids are further described as [uncompromising], and it is this last aspect/attribute set which the data suggests will be the temporal marker for the [bad luck (of the) influence traders]. Note this scenario has [visibility] aspects which begin to appear about August 12th and grow thereafter.

The picture being described by modelspace suggests that a [spokesperson/liar] of some [recognizable youth] will be followed by [influence traders] who [stick to the clan] and are seen as [withdrawing] from the [threats]. This in turn is supported by [upset/overturning/up-ending] which is the first [direct result]. Much of this area is cross linked internally to [derivatives], [interest rates], and [currencies, by commodities]. This last is our meme for currencies as they are emotionally viewed by traders today; an example is the 'loony' which is emotionally seen as being [resource backed, sub set energy, diamonds, precious metals, soft woods]. This area is also filled with variations on the idea of [secrets revealed],

including explicit references to [secrets hidden (by) great effort (are) certain (to be) discovered/revealed].

There are aspect/attribute sets within the [prosperity ashes] area of Markets entity which are directly held and go to the [state of mind] or lack thereof, of Bush. There are references that state that [collective views (cannot be imagined/held)] and that the [mental agitation] itself participates within the [degradation of conditions]. This last is supported by [usofa dollar] aspect/attribute sets. Modelspace is suggesting that a [pronouncement] of a [grandiose] and [obviously unconnected] nature will come out of the Bush-mouth at *just* the most [critical time] during the [rage against/conflict_with/amongst] the [currency influencers].

As the modelspace is progressed, the [influencers of currency] and the [3/three way conflict] cross linked to in the GlobalPop entity both gain aspect/attributes which go to [gold] and [gyrations]. The [up and down] movements are described as [pops/bursts], and are shown as [beginning (in the) East] and thereafter [racing] around the world. This [return to previous status] for [gold] is shown as a direct result of the [August woes] of the [influencers], though we note that it will take more than a single month for the [popping] effect to [mature] into a trend. The [popping] of the [gold] references are pointing to a [rise in consciousness/awareness] for [gold] within the GlobalPop and Populace/USofA entities over the course of late August and into September. Further, the [popping] duration and impact values contribute to the general rise in emotional tensions which is indicated for September 19th.

Populace/USofA - Lame and Halt, More Dam Flooding

As the modelspace is progressed through the [bad summer] and into late August where the [currency influencers] find that [risk/threats] (abound), the Populace/USofA entity is showing that the general citizenry of the USofA will be [limping] along in several different meanings of the word. We have [lame and halt] to describe the [progress/flow (of) needs (through) officialdom], as well as [limping] in a general [economic] meaning where the [limping economy] will be the [talk of the press]. We also have [limping recovery] from [natural disaster], and [limping] in a [political/military] sub set. All of these combine to provide the 'flavor' of the late Summer of 2007. The [limps] emerge to [control] [movement]. In fact, much of the data for the Populace/USofA contains links to, or is controlled by, or participates in, the meta data layer of [restrictions on movements]. This [restriction] will come to dominate [daily life] for Populace/USofA after the [scattered energies] of mid August emerge.

Along with the [military limping] we also have [returning] and [retreat] showing up within the Populace/USofA, military sub set. The word 'retreat' is bespoke, and its references have very large numbers of cross links over to Bushista where they are mainly terminating under [disconnected reality], and [mental instability/illness].

Speaking of bespoke [illness], the [limping] associated with [economy], when progressed in modelspace through the September 19th emotional trend line turn around point, starts to show [illness] rising as both primary and secondary support aspect for [usofa economy]. This [illness] further gains momentum and then shifts in late September to include the [usofa currency]. Please note that [currency] as it relates to the [usofa] is indicating that it is [under revision/review/inspection] in late September, and thereafter we show an increasing use of a much more general term indicated to manifest within the press as 'usofa currency'. This is a distinction and a difference in that the 'dollar' word starts falling in usage patterns after September.

Several of the [visibility] aspects/attribute sets, and their cross links, indicate that there will be a [deliberate] and [concentrated] effort to [demonize] [China] and to [promote/sell] [china] as the [culprit]

in [usofa economic woes]. This [effort] at [redirection away from internal inspection] will actually cause some [consternation] within the Bush cabal. This is due to the [secrets revealed] meta data layer suggesting that it will be [revealed/exposed] that most of the Bush [wealth] comes from [foreign slaves].

As to the American [slaves] of the [corportacracy], the late Summer promises to bring [job loss], [canceled vacations], [curtailments/restrictions] and [encounters with scarcity]. There are also very ominous tones rising in the emotional sums which seemingly are describing [riots] this coming Winter, over [heat]. This is an area multiply afflicted by the [duality] meta data layer in that the [heat] reference is for [riots] where it is [too cold] and [no energies] are available, to [riots] where it is [excessively hot] and [power fails].

Without wishing to bore, we also note that these early longer term values associated with the immediacy value set now being processed are suggesting that [streams/rivers] from the [high mountains], and [high mountain lakes] will be causing yet more [flooding] as Fall [limps] along. We show more directly held aspect/attribute sets for [cars in ditches] as has been previously noted. This continuing rise in emotional attachments to this imagery and the growth of the [visibility] aspect within the set are promising that this will appear as an image within the global mediastream which will get some play over days. The associations are for both the [scattered energies] of August, as well as the [downhill racing (of) high mountain streams] later in the year.

The August [limping] aspect within the Populace/USofA entity is showing supporting layers indicating that [difficulties (will) pile up/upon] the Bushista [servants/officials] over August, and in spite of it not being [their fault] individually, the situation is made [worse] by their continued [presence] and [persistence]. This will include the [disruption of hospitals] which aspect/attribute set is supported by [injured persons (being taken to) hospital (are) delayed (by) cars in ditches]. This is apparently somehow either caused or exacerbated by the [bush officials], who then go on to make things even worse by [attempting/trying (to) rectify/return their error].

The [limping] of August indicated for the Populace/USofA is replete with various [weather] references. There is, yet again, more [flooding] coming. This [flooding] aspect/attribute set continues to grow as the modelspace is moved into Fall.

Conclusion: Part One - More damn flooding

Sad to say that the [flooding] aspect/attribute set continues to grow within each area already established, as well as to grow into new areas within the entities. The Terra entity and its increase in new, and diverse data sets is forecasting that the 'emergence' of biospheric alteration will be very much heightened over the next few months. And most of the changes seemingly involve 'floods'. For a number of reasons we are paying particular attention to the lunar month leading to the equinox. Just prior to that month starting, we have our repeatedly referenced [scattered energies from space] focusing on the August 13th through 16th period. As a side note, our relationship with some very good astrologers such as [Robert Hitt](#) have allowed us to determine that both astrologically, and astronomically, there are *no* significant planetary events within the mid August period referenced. This may mean that our [scattered energies from space] may be more momentary events such as Gamma Ray Bursts, or solar flares. There are several indications that the energies cited will directly affect humans, so a truly worst case scenario may well be that energy of an unknown type comes streaming in and disrupts life here on earth directly. Sort of a 'cosmic short circuit' kind of thing. We have no real forecasts within the current run that this is the case, though many previous ALTA reports have included data pointing to just that sort of effect. In those reports they were initially labeled as 'sun disease' caused. Nothing in the immediacy values at the moment provide any further clarity. There are hints of much wider, and greater climate disruption for later this Summer and on through the rest of the year, and *any* more energies from space, scattered or

cohesive cannot help but exacerbate that situation.

Be advised that we continue to see the [encounters with scarcity] meta data layer rise in value globally. This will sharpen this Summer into 'food shortages' of many kinds globally. That meme will worsen as the year progresses. We also note that [shortages] will increase along with the [restrictions on travel] across August and into September. By late September we are expecting to see some new levels of visibility within the global mediastream for 'dire forecasts'. These will relate to both 'habitability' and 'sustainability' of many areas around the planet. Some will come as a real shock. There are indications that at least 2/two continents will see shifts of populations away from the highlands due to degradation of the local environments. Both will involve water, a drought and yet again, a flood.

There are continuing patterns of growth within the Terra entity which are reinforcing the idea that 'emergence' as a label will be able to be applied to this year relative to biospheric alterations. Please note that this is the last 'gentle' year, as already the Terra entity has much of the 2008 focused longer range data lining up under 'manifesting'. So now it emerges, and next year it begins to mature.

Welcome to life here on the 'emergent new earth'. Got floatation?

####

We expect that Part Two will be posted on Sunday, the 15th as the expectation is that we will be able to start the construction of longer term charts as the shorter term values are processed this week. The charts always take a longer time than the textual interpretation. Look for Part Two Sunday of next week.

ALTA 0308 - Part Two

Asymmetric Language Trend Analysis Intelligence Report
 'Changes in language precede changes in behavior.'
 By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based

on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

7.14.2007

Note: Entities are identified by a **blue** typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 23.445 million reads of the 0308 series.

Mea Culpa - Idiota sum.

Several readers have taken me to task over the statement that there are not 'significant' planetary alignments for August 12th through the 16th. I have to agree that in this instance trust in previous heuristics has likely blinded me to a clustering effect. None of the software programs which I use to monitor alignments for geo-spatial/hyperspatial maths for potential earthquake influences show this August as in an alignment state. However, the software is set for 5/five degrees as its threshold of 'significance'. While true that at no point in the 3/three days of the 13th through the 16th do we reach a 5/degree alignment, it is also true that there are several very close alignments which occur, and then shift into other alignments within a general clustering of planets. It is also true that the massive planets of the solar system are aligned in opposition to earth while in conjunction trigonometrically with the outer edge planets. This clustering takes place over 72/seventy-two hours, and in general the whole of the planets are within a 9/nine degree alignment with each other relative to humans. Soooo...hmm. Perhaps then I need to readjust the heuristics on the software, and acknowledge that the hyper-spatial maths do show very significant stressors affecting those of us who crawl (and gnaw) here on earth. Not to say that we have any knowledge of what this clustering predicts astrologically, but with the massive bodies and the sun off over there, the far edge fellows of Uranus, Neptune, and demoted Pluto over and about there, and us guys just about here...well, it could indeed be a predictor of [scattered energies from space].

A few astrologically inclined readers have pointed out that the August 13-16th period identified by our emotional summation sets, which "coincidentally" contains this 72/seventy-two hour truck-about by the major planets has some resemblance to planetary arrangements prior to previous instances of geophysical activity such as earthquakes, and volcanic surges.

In this same vein, it has been reported to us by professional astrologers, that September 11th is a major solar eclipse, and that it occurs within the arrangement of planets which suggest that terrorism, and/or warfare will be "boosted" as a result. There are also other, competing astrologic views that this solar eclipse will be related to large problems surfacing within the global markets. This is to say that several astrologers surveyed have concluded that the energies from the solar eclipse will have "monetary" impacts predominant.

Our data would seemingly agree that these 2/two periods prior to the September equinox are to be significant. The August 13-16th period has been repeatedly highlighted within our data set for the last

year. This is likely pointing to very large emotional response from the circumstances of that time, and since we have recent spike in values for [scattered energies from space] this probably does point to planetary manifestations on the order of earthquakes, storms and such. Further, our data set has identified September 19th as the point at which the release language shifts over to the emotional tension building language, rather than the 11th. Why the time lag? Can't say, but what we can note is that on September 3rd the modelspace indicates that a 'blip' in emotional building language pops up which will have at least 3/three elements/aspects_of_language in common with the larger resonance of the 19th. The modelspace is seemingly saying that the astute observer could catch a 'pre-shock' mini-emotional-bow-wave of the 19th.

Populace/USofA - Stepping In It, Abyss Unseen

As the modelspace is progressed forward it sometimes appears as though a multicolored stew just about to reach the boil. At such times, in an attempt to gain intelligence from information, it is necessary to 'rewind' the data and repeatedly go through the exercise of observing just how the bubbles are forming. A curious design pattern has emerged in this process within the Populace/USofA entity. The Populace/USofA entity, as with all the entities, can be viewed from a variety of perspectives. When doing so with the Populace/USofA entity and the current data sets, it is as though a filter has been laid down on the entity which makes all the entity interactions follow the same pattern of expression, even though the details are changing.

As an instance, in previous discussions about the Populace/USofA entity it was noted that the meta data [restrictions on movement] and its corollary, [encounters with scarcity] would be very active influencers on the Populace/USofA entity in Fall through Winter. Yet again, that is showing up within the entity. In this case, the [limping populace] will [limp] both as a result of [climate/environment], as well as [politically]. The same lexical constructs are forming for the Populace/USofA viewed within the relationship with [officialdom] as is between the populace and its environment. In both cases a progress of the modelspace from early Fall, that is September 21 through to Winter produces the same sequence of dominating aspect/attributes in each of the various sub sets within the entity, at least at the primary sub set levels. So for instance we have [halt/lame/limping/hobbled] which will define the movement of the Populace/USofA entity-2-Terra entity, as well as the Populace/USofA-2-Bushista entity relationships. In both cases the whole of the Fall season will be marked first by [painful limping, wounded feet/halt/lame/hobbled] and then a move into directly held and totally dominated [restrictions on movement] as the meta data layer takes over the majority of the Populace/USofA entity interactions, and then just before Winter arrives, a shift into dominance by [encounters with scarcity] and a curious aspect/attribute set of [only 1/one liter]. This last is also supported by aspect/attributes of [grain] and [cloth/fiber], as well as continuing growth of [limitations].

At the Bushista level, the cross links are pointing to [continued, painful, hobbling conflict] between the populace and [officialdom] with the [congress] caught in the middle. There are repeated references to the administration attempting to [hobble inquiry], as well as [being lame/limping] in its own initiatives. Further there are aspects within the Populace/USofA entity which point to [growth/increase] in [official restrictions on movement]. This will be seen at multiple layers and *not* just the recent failure of the State Dept. in processing passport applications. The data set is suggesting that [signs] announcing [restrictions] on [citizen access] will be posted. These will be so egregious in their [placement] and [timing] as to raise emotional reaction within the populace on their own. The emotional sums and cross links are suggesting that [signs] will be [posted/nailed (by) officialdom, restricting citizen movement] which will be reported on by the global mediastream, but the real story will be the many, and [diverse] acts of [rebellion/resistance] which take place over the subsequent days following the postings. There are many connecting cross links which include [israel] within the data for [restrictions on movement] relative to these [posted notices/signs]. The [signs] episode is but 1/one of many [acts of

rebellion/revolution] which will be manifest here in the USofA this Fall and into Winter. The data is suggesting that as the Bushies become more involved with [conflict] the meta data layer, which goes vertical within the entity on or shortly following the September 19th shift to building emotional tensions, there will be an increase in [control] attempts placed on the populace. The [lame administration] is showing via cross link that the [populace] will [suffer] along with the [degradation] of the officialdom. The indications are for a very large escalation in the [constitutional crises] meme late in Summer, moving to [manifesting crises] in Fall between Bushista and universe with the rest of us caught in the melee.

The Populace/USofA entity is showing that while trying to cope with [diaspora] and [restrictions on movement] and [encounters with scarcity] brought on by Terra entity and SpaceGoatFarts, it will also have to deal with a very [extreme mental illness] rampant in the [rulers/princes].

As the modelspace is moved past the September equinox, the cross links between the Populace/USofA and the Markets more than doubles in number almost immediately. A new aspect of [rot/putrefaction/decay] begins to rise on the strength of these cross links, as well as directly held values within Populace/USofA. The directly held values are under the [economy] sub set and are predicting a very serious situation based on the emotive descriptors.

The [rot] and [destruction] of the [economy] is shown within the imagery of the aspect/attribute sets as being a [step (into an) unseen/unacknowledged abyss]. This [abyss] is described as [being disguised/hidden] by [sticky/entrapping distractions (and) intrusions]/ The [step into the abyss] will be [visible], but only after the fact it would seem. This is indicated by the Press entity cross links which terminate in [snaring/engaging] and which originate in [entrapping distractions]. The whole of the area suggests that most will be caught unawares by the rot of the economy as they are paying attention to the distractions. Then the [sudden shock] of the [rot] appearing will [increase emotional reaction] as [hundreds of millions lose wealth] 'apparently' [over night/rapidly].

The Populace/USofA is showing via the first of the longer term values to be processed, that the [economy] will be an [oppressor (of) all thoughts] for at least [3/three years]. There are repeated Populace/USofA aspect/attribute sets which go to the idea of [no prospects] and [no profits] and are also tied to [3/three years] as a [foreseeable future of scarcity/degradation/decrease].

Also associated with the sudden turn in emotional values shown for September 19th are many lexical sets which do convey a variety of 'economic' or 'monetary' contexts. We note that the 19th and thereafter are associated with [failure] which itself is associated with [competitive endeavors] and [competitions for jobs].

The picture painted by modelspace for the 19th is a very complex image of diverse forces all [competing] for [attention] and [impact/effect]. There are clear indications of a [bush] which is [soaring] [higher and higher] in [upward spirals] of [delusion/illusion/mental illness] just as the [conflicts] reach new levels of [intensity]. There are [monetary] and [job/employment] problems which seemingly will [surface] en masse across the nation. Then there are linguistic structures indicating that [many (will) not (be able) to plant feet (on) solid ground] just as others are [suffering] from [disasters] brought about by [overconfidence]. There are further areas within the Populace/USofA showing that [friends abandon] and [family refuses] to [support (developing) disaster].

The picture for the time is further complicated by internally held aspect/attribute sets for a [dinner party] of the [highest echelon] in which [celebrations of the anniversary] are [interrupted] by a [person becoming (a) patient]. This last is shown as a [very serious condition]. Then there are sets for a [battle

with thieves] and the [miscarriage of trust] in which [promises of success turn bitter instantly]. This in turn leads to [resignations/leavings] as well as [disappearances] of [prominent person]. This last is likely associated with the Bush war in Iraq in which further and [rapid] [degradation/alterations] occur such that [bush] is [cursed (to) his face] as the [debate (about) bad options] is made moot by circumstances manifesting.

Into the mix for the September equinox, the modelspace has shoved huge new data sets under the [housing] aspect. The indications are for [lack/collapse] of [housing] such that [bands/tribes] are/will be [displaced]. Within this data are aspects/attributes which baldly state that [too late/far too gone] to [take corrective measures] (now that) the [crisis] has [developed/manifested]. Again there are new, and repetitious references to [3/three years (of) barrenness] within the [economy], and sadly, within the [housing] sub set, references to [10/ten years] of [broken bones (after)] the [fall from the edge].

Speaking of [fall], this word as both a temporal indicator, and a descriptor is gaining significantly within the emotional summations. The values for [fall] as in [to drop/reduce/become_lower] is showing that [globally] there will be a [fall] in the [prestige] for the Populace/USofA globally. This will be associated with [economics] and [politics]. This [fall] in [prestige] is showing as [palpable] or [graspable] and is related to [tokens of authority]. Many of the [authority] related sub sets also hold [humiliation] as the rising aspect for September.

As the modelspace is moved through September, from the 3/third onward, and past the 19th and the equinox 2/two days later, the [restrictions on movement] meta data layer goes vertical within Populace/USofA, and gains considerable emotional support. This may be predicting a response on the part of [authority] to some manifestation in which their perceived [solution] is [restrictions on movement/travel/transshipments]. The [restrictions on travel] meta data aspect may be arguing for a 'terrorist' incident, followed by a [clamp/binding] by the government, however, modelspace is suggesting that [opposition] rises almost [instantly/of_the_moment]. This area of the [binding] and [restrictions on movement] are directly participatory with the [loss of prestige] globally. The modelspace is seemingly implying that this [imposition of authoritarian restrictions] will result in [global loss of prestige], and further that the [shift in attitude] about the Populace/USofA has very [dire] consequences, in that [even friends] will [abandon/shun] the [usofa] and its primary product, the [dollar]. In turn, the supporting sets are suggesting that the [prestige loss] and the subsequent [abandonment] of the USofA dollar will [trigger/boost/initiate] [opposition] within the Populace/USofA over the [binding]. Further this [opposition] has supporting aspects of [bloody revolution] and [fracturing/splintering command structure/order]. The [fracturing] is supported by aspect/attribute sets which explicitly state that [objectors] will be [fired] and in a [series] until such a point that [visibility] via the global mediastream brings a [cessation] to the [process]. This is also supported by aspect/attribute sets pointing to [none/no_one/not_at_all] will be the result of [attempting (to) rebuild/repopulate] the [infrastructure].

The data is providing an interesting view of what *might* occur if "terrorism" were allowed to once again strike in the continental USofA. Unlike the previous instance, this time will bring no 'surge' of support for the establishment. In this case, even the [last 2/two generations] {ed note: gen X and Y, the children/grandchildren of the baby boom generation} known for their [collective-ism] will [react] in [astonishment] and are explicitly shown as [disbelieving] the [lies of officialdom]. Further, a "terrorist" strike in the USofA is shown as producing a [bloody revolution] against ThePowersThatBe such that [howls of treason] will lead to an attempt to [impose execution] on many [officials] all the way up to, and including *all* the [closeted/cabinet] [officials]. So the reaction would be that [total failure] of the administration to stop the attack, especially given the [warnings] of early July, would lead to [impeachment], [conviction], and an attempt at [executing the officials]. This is shown occurring in conjunction with [rioting], and [bloody insurrection] which will be the [building response] to an attempted [imposition of restrictions on movement]. And as a last note on the speculation, there are data

elements pointing to the [reversal] of [opinion/intention] on the part of [law-enforcement] as regards to [imposition of travel restrictions]. Shown at a local level, the idea coming across is that [police] will in large measure, and at a mostly national level, [refuse] to participate in [delusions of control].

Terra - Five Rivers Redux, Waters Oppress

Cross linked over to both the populace entities {Populace/USofA, and GlobalPop}, the Terra entity's dominant sub set just as the Summer transitions to Fall {September 21, 2007}, and thus following the [emergent change] showing for September 19th, is [manifest/emergent unexpected newness]. This aspect can also be interpreted as [new (and) unexpected/unimagined circumstances]. The cross links are very significant and worth leading this discussion as they terminate in both populace entities in areas that are participatory in our newly forming entity, FuturePop. Just to confuse the issue thoroughly let me restate that concept. The cross links from the [unexpected emerging newness] within Terra entity terminate in areas of the populace entities which *will* move over to form the FuturePop entity discussed in meta data in Part One. These cross links, within the populace entities, terminate in aspect/attribute sets of [development/emergence (of a) new way (of) life]. The cross links to the GlobalPop entity are dominant, and massive, running nearly 9/nine to 1/one for each of the cross links to Populace/USofA. However, the Populace/USofA entity is also very seriously participatory within the [unexpected new way of life emerging/manifesting].

The Terra entity, for its part, is also showing a 'newness' to many of its regular and usual contexts. The 'newness' to the entity is showing up as differing associations/cross links both within and external to the entity, as well as a blending of the exist ant contexts within several of the larger sub sets such as [earthquakes], [oceans], and [space]. There is also a large increase of nearly 80/eighty per cent in the number of cross links to the SpaceGoatFart entity. Bearing in mind that the SpaceGoatFart entity represents the [denied by officialdom] and [denied by social order] and [unknown] elements of universe which are *not* found or recognized here on earth. In this case the movement of the Terra entity past the Fall boundary in September brings an almost immediate and very noticeable blending of the contexts as well as a jump in the cross links to SpaceGoatFarts. Further into these cross links show that the Terra entity has mainly terminating links, rather than originating links, and also that many of these terminating links are under the [energies] sub set in either [energies from space] or [scattered energies]. A reminder that [scattered energies from space] is the currently defining aspect for the August 12th through the 16th period.

As the Terra entity is moved forward into Fall, the largest gain in associations is for [earthquakes] aspect, and the supporting sets also include many cross links over to the populace entities, as well as to the Markets entity. The [flooding] meme is still increasing, albeit slower than [earthquakes] on sheer numbers alone, though the emotional summations show the [flooding] will have more emotional impacts, and longer duration of impacts, than that of the [earthquakes].

The second most rapidly growing area within the Terra entity has to do with [food/food crops/food supply/biota]. In numbers the accretion rates for this area are not as dramatic as others, but the emotional summations are much higher as the aspect/attribute sets are acquiring very emotionally hot values both for intensity, and duration. In several of the supporting sets we find various forms of [crops] descriptors, and these include [animals-as-food crops], all of which either hold directly, or are internally cross linked to [at risk/extinction/destruction]. All of these areas are also containing [visibility] references so there will be some pressures toward a global mediastream discussion of the [dwindling food supply]. There are numerous references to the Fall period, which is so say, very explicitly, September equinox up to December solstice, as the [period/time (of) revealing/discovery/exposure]. This area is cross linked over to [visibility] as well as [oceanic influenza]. This last is an aspect which has shown up in this year, and late 2006 and points to a [change of state] or [illness] which affects the [planetary ocean body].

The third most rapidly growing aspect/attribute set within the Terra entity for the Fall into Winter period of modelspace is connected to the [flooding] aspect in that it participates, and is held by [flooding] as well as has directly held supporting aspects for [flooding]. This third most fast growing aspect/attribute set was first seen several years ago, just prior to the [banding of the atmosphere] aspects which is just now manifesting. This aspect was [rivers (in the) atmosphere]. This aspect of [rivers] was defined then, and continues to grow as [5/five rivers flow through the atmosphere], as though there will be that many separate, observable [wet paths/streams] flowing around the planet.

The data sets for the [rivers in atmosphere] are shown as not only [flooding] producers, but also as [peelers] or [causing mountains to peel/crumble]. This last is associated with some significant levels of [visible danger/risk] for humans all across the planet, but not every where. These [atmosphere rivers], much like their land bound cousins, will have [defined territories] and will not [wander], but rather will be [fixed of course/predictable] after some small fashion. The problem is that the [mechanism/system] which [feeds] our [rivers in atmosphere] will not be understood and therefore the [whims] of the [flooding] will not be predictable. Apparently the [rivers] themselves will become [visible], and seemingly especially so from those areas *not* under them as the data sets describe the views as best from within the [dry zones/bands].

Of course, [flooding] as a meme gets a big boost from the reappearance and growth of the [rivers in the atmosphere]. The [flooding] meme continues to gain values under [rainwater] as cause for flooding all through Fall and into Winter, where there is seemingly some small relief, albeit temporarily. The [flooding] meme gains emotional value strength outside of its growth in numbers of supporting aspects/attribute sets. The impacts are predicted by the modelspace as being so [severe] as to participate in prompting humans to [discover/invent/find] as note above, [a new way of life]. This of course is participatory within our budding FuturePop entity.

Within the Terra entity, and visible as modelspace moves through Fall, and under the general aspect of [storms], the [hurricanes] and [typhoons] sub sets are hinting at a particularly nasty time of things. Cross linked to both populace entities, the [hurricanes] and [typhoons] sub sets are supported by the rising aspect of [decay]. This [decay] is specifically referencing the [Fall] period between the equinox and solstice, however there are some small lexical hints that the 'hurricane season' may well extend into [Winter] with some ferocity. The data actually has aspect/attribute sets which state [bad in Fall], and [worst (to come) in Winter]. Both relative to [storms] and [winds]. Further there are continuing accruals into [decay] reflecting the [decay/abandonment] of [cities near marshes]. This is cross linked to [refugees] and our [dark man] who is shown as [leading survival] in the [dark night (in the) woods] .

Again it needs to be noted that there are a number of 'backward pointing' references to the [interrupted wedding] as though that will happen slightly before the [storm] which [drives the masses/populace] into [fleeing into the woods]. There are further sub sets supporting the idea of [lakes] in several different contexts. In an instance, the data suggests that [many lakes] will be [destroyed/removed] by the [storms] in a manner which [blends (their) waters (back into the) marshlands]. There are other data sets pointing to [lakes] being [places] of [food/shelter/safety] *after* the [storms]. The imagery here is of [populace/groups] which [migrate] to the [lakes] from the [dire conditions] of being [evacuees]. There are other references to [newly formed lakes] which will [shock/surprise] people and lead to some [consternation/legal troubles] over [disappeared properties].

And, once again, as may be expected, the [flooding] meme is ever present within the [storms] sub sets. It shows up as [rain everywhere] and [rivers reaching (for) new status/height]. Again, the numerous cross links are seemingly indicating that the [flooding] will be so severe as to affect [markets] directly through bespoke [fear] of [massive population change].

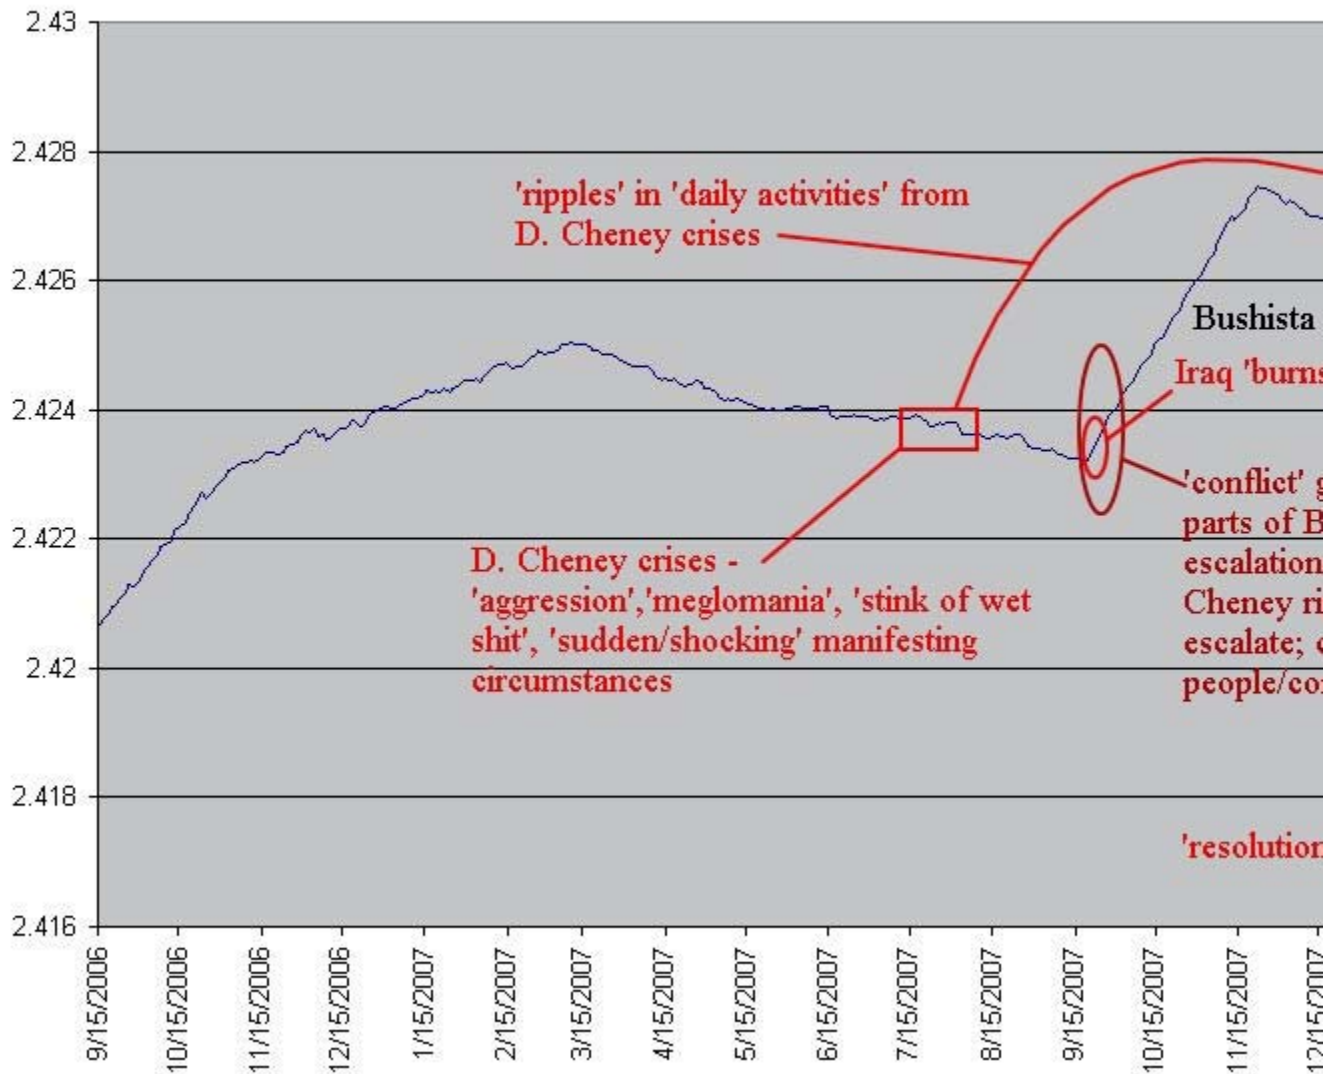

Oh, and if the [flooding] meme were not enough, the data sets for the [Fall storms] also include [oppression (of the) populace (by/through) water driven/forced land/ground alterations/changes]. This [oppression] is cross linked to the [oppression] within the populace entities and is suggestive of [oppression/suppression (of the) ordinary/regular order/pattern (of) land ownership]. Again another reference to [markets] affecting political change due to [weather impacts].

There are a number of [storm] sub sets pointing to the [mountains] which are [(in the) north] as being the [only/last] thing to [stop/halt] the [lashing winds/rains] of the storms. The idea is that the *usual* and accustomed paths for [hurricanes] and [typhoons] will *NOT* hold true during this time. The data suggests that [northern mountain populace(s)] will be [battered] from the [south] and [west] such that the [winds push waters (into) crawling up mountains], and that [people/groups] are [forced/driven] over the [top of the (mountain) range].

Bushista - Losing the Wars

The immediacy value sets just processed are arguing for a 'strength of aggression', and 'desperate lashing out' from Bushista, primarily from the [vice dick cheney] sub set. The data is describing the situation as a [growth/tumor] which [ruptures] and [spills/unleashes] bespoke [desperate anger] as well as [mindless aggression]. The [seepage of contempt] from the Bushista entity for the populace and congress is now showing within the Bushista entity as a [fissure] from which [open/naked aggression pours]. This is mostly being driven by the summation values from the [vice dick cheney] sub set. Further there appears to be an imminent [escalation] of [conflict] to the point of [warfare/tactical maneuvers/attacks] between the Bushies and Congress. This [naked/exposed aggression] and [venom] which will come from the Vice Dick will continue to rise in [vitriol] and [visibility] through August 3/4 and then be [capped off/well shut], though the manifesting [emotional pressures] will not [abate] nor be [resolved] until late in February of 2008. At that time the modelspace is suggesting that [asian influence] will [topple] a particular [comercial enterprise/effort] and the [secrets revealed] meta data layer participation will bring out [details] which [resolve/finish] the [vice dick] crises which have already begun, and which will escalate to [very visible] within days of posting of this report.

Emotional Tension Trend Line to 5/08

As the modelspace is progressed through the September 19th shift in emotional tensions to 'building tension' from 'release language', the Bushista entity is forecasting a [resurgence] of the [wars] which will be initiated by [attacks] against the 'establishments' put in place by Bushista. These [attacks] are shown as [very successful] and in opposition to that [success], the [fortunes] of the Bushies [plummet/fall_of_precipice]. This last is both [political] and [economic]. This last affects not only the [corporations] that control the Bushies, but also the [populace/usofa]. The response within the [populace/usofa] *as viewed from the Bushie perspective* is a [rise/manifestation] of [rebellion/revolt/insurrection] here in the USofA which begins in seriousness in October. There are many, distinct, and specific reference to the [father's concern/endeavor/effort] which is heavily related to the 'argyle sock club' and other [commercial enterprises]. These are shown as [ebbing (with the) blood (from) arteries] in both [wealth] and [influence] as Fall progresses.

A number of aspect/attributes for the disaster which is the Bush war of aggression against the Iraqi's are internally linked to [marsh land] and are showing that following the September equinox, the [southeast] and [salt marshes] will play a pivotal role in the unfolding of the [resurgence] of the [separatists] within

Iraq. As the [success] of the [separatists] rises, so will fall the [power] and [wealth] of the Bushistas, in an inverse, and disproportionate manner. As the modelspace is moved forward, it shows a complete [abandonment] of the area by the [helpers]. Especially telling will be the [withdrawal] of the [british] from the [south]. As this occurs the [wars] move into a new phase of [bloodiness/blood_loss] which via cross link is shown to produce a very [visible] discussion within the Populace/USofA about the [lack] of [human compassion] within the Bushista entity. Many new comparisons will rise up, but the most [debilitating] for the Bushista's will be [broadcast] and even the [top elite] will [hear (the) condemnation (by) comparison (to) ancient dictators]. It will be this [verbalization] which will act as a temporal marker for the [rise to prominence] of the new [female personality] on the national stage, as well as marking the [admission of defeat] in the Iraq portion of the Bush wars. This [admission] is shown as coming from [military sources] first as [rumors of mutiny], and then as Fall progresses, it appears as [certainty (of) successful coup/revolt]. The data set shows that the September [resurgence] brings this 'predictable' October [response], and it is the [appreciation] of the [condemnation] which finally sends the Bushista entity over into fully manifested, and [visible] [madness].

An interesting series of cross links extend from the [military] sub set of Bushista over to both Populace/USofA and GlobalPop. These are terminating in areas which provide imagery of [wars no more], and [no aggression possible], and [no war profitable], and [multiple generation rejection (of) war (as a) tool]. These areas have been seen for the last 2/two years in the populace entities, and now are rapidly growing in both immediacy and shorter term value sets. This indicates a 'proximate to manifestation' which we usually see in modelspace about 3/three to 5/five months prior to the emergence of the circumstances. These [not militant/not aggression] areas within the populace entities are significantly higher in emotional summations within the Populace/USofA. The cross links from Bushista over to [non aggression] within Populace/USofA are diverse, and continue to grow around the idea of a [multiple generational (over 80/eighty years) rejection of force/war]. As a curious, and seemingly contrary note, the Populace/USofA is showing via directly held values that a large [emergence/resurgence] of [personal militarism/discipline/warrior_training] will take place within the USofA, *just* as the use of the [military] beyond the borders is [rejected] en masse by the populace. Further, the [respect] values, and emotional attachment values for the populace relative to the [armed forces] will increase dramatically over this next year. This is further supported within the degrading values of [respect] for the Bushista entity perception-of-universe. And there are some very intriguing 'hints' within the modelspace that the [respect/value] quotient for the [military] will rise in direct proportion to a [turn around] in which the [military rebels/revolts] against the Bushista [unhinged/detached madness].

However, to return to the near-term predictors, all of modelspace is forecasting a [fulfillment/success] at a [key/pivotal] point for the [iraqi tribes] such that the current situation shifts rapidly after September 22 into what can only be described as [total war]. And then things deteriorate from that point.

The complex cross link arrangement between Bushista and the Populace/USofA gets even more so as the [iraq revolt succeeds] in that the Bushista entity will be told [in its face] that [supporting weakness with force] is [harmful (to) self/country]. This [face telling] of [deep truths] will be [known/visible] to the people, but *not*, according to modelspace, to the [dammed/closed/sealed minds] of Bushista. Instead, it will seemingly be this [truth telling] which will [initiate] the [exhibition of madness] through [unexpected departures].

Markets - Remainder of July through to August 13

The immediacy values are suggesting that the [markets] globally, though with special emphasis on USofA centered [trading activity] *for the next month until August 13th* are to be dominated by [large sounds/demanding voices]. Much of the [demanding voices] are [shouting for attention], however the

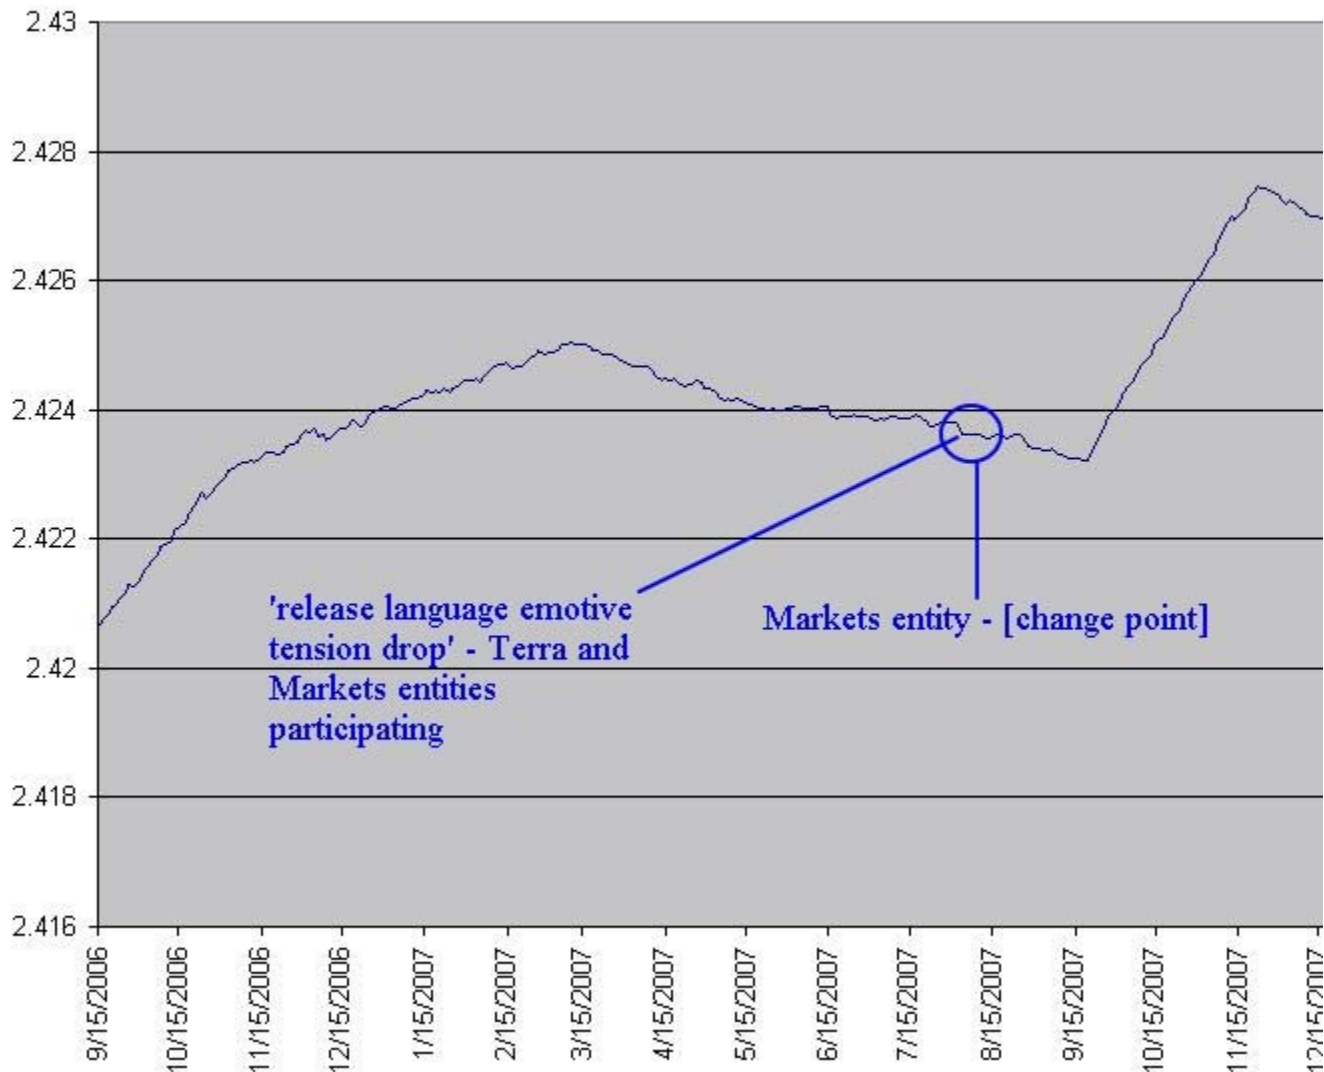

key will be that some [good sources of information, long neglected] will [emerge] with a vengeance as [rocking/reeling/shifting/oscillating] [motions] begin to [drive to illness] many of the participants.

Much of the [thundering noises] which will [attempt to push/drive] markets are cross linked to the Bushista entity, and the Populace/USofA entity, with specific focus on Bush's war against the Iraqi's. This will [intrude] on [markets] such that current [oscillations] are but the mildest form of the [gyrations] coming. In just the next month, the data sets predict that [visibility] will be [hyped/pumped] for the [best conditions/results]. This is apparently a key element in that it would seem that the last of the [expendable/invest-able energies] are to be [used up/burnt out/consumed] in this next [markets transitions].

Noting that several ALTA reports ago we first started getting the hints about the disappearance of 'global trade' as it currently has meaning under the aspect of [globalism], the data sets are now confirming that very [deep] and [core] change is to manifest this Summer, and right up to the Fall equinox such that for [80/eighty years (4 generations)] there will not be a [return] to [market states/conditions] such as exist now.

The modelspace, when progressed through the rest of July, and into August, comes to an abrupt change point very close to late in the day on Sunday, August 12th and thereafter whole new aspect/attribute sets begin to dominate. Seemingly the [markets] will be anticipating the [tuesday, August 14th] [emergence] of the [scattered energies].

Emotional Tension Trend Line to 5/08

The language change indicated for Markets following the August 13-16 [scattered energies emerge] goes specifically to [making money], and within Markets is indicating a [bath] or [flooding] of the [populace] by [forces at work] within [markets]. This [flooding] is completely negative in all aspects/attribute set emotional tension summations, and specifically includes references to [bad in Summer], and [growth absent/degradation visible]. Further the data shows that [arrogance] and [hastiness] will be [rewarded] with [fear shifts], and [destroyed digestions]. Also there are language indicators for those of [comfortable circumstance] now coming to [know/realize bitterness (of) misfortune]. However, this is *nothing* compared to the rapid rise in [bitterness] and [depravation] values which continue and then escalate rapidly as modelspace is moved past August 16th and towards the Fall equinox.

The data set is repetitious to the point of mind-numbing-ness with the cross links to Terra, and the continuing build of [perception/point-of-view] changes showing as emerging now. The [alteration in mindset] is extensively cross linked to the Markets entity and all of this is possessive of negative emotional summations.

The Markets entity has gained disproportionately in the shorter term values being processed and this trend looks to hold with the longer term value as well. The indications are for a [wipe-out/destruction] of the 401 K and [merger/funds] groups over this coming Fall, but that this [destruction] which is shown as a [reduction] to [1/one from 10/ten] will be [initiated] from events over the rest of Summer with the [loudest] of these apparently showing up in mid August. And bearing in mind the previous ratios established of [economics/markets/money/currency] which will contribute one-third of the emotional building tension of shown in the charts as taking off on September 19th. Also it needs to be noted that much of the [economics] associated language is doubly cross linked to Terra entity, and the Populace/USofA entity where it terminates in [change of perception (space/climate/terra related)].

Conclusion: Part Two - Dried Sea Squirrels, Culture Change

As an example of the synchronicity of universe, and the rise of ideas of like kind from diverse minds, I have included a link below to a remarkable small essay by Dimtri Orlov. Noted for his work of modeling the coming USofA/Anglo PetroEmpire collapse from the collapse of the old Soviet empire, Dimitri wrote this article in 2006. This site is not on our list to sample/read, and we do *not* deal in actual conversations, nor read for comprehension any of the fora sampled. What we do is so arcane in our processing that I was instantly struck in this article by how close we are coming to emergence of some very large 'design patterns' in social changes. This article is predicated on a post-oil future, though it does note the impetus of biospheric alteration as a change agent. I had not seen this article until just this week, but given its contents, am now assuming that, hmmm...perhaps we are not so outrageous in our developing fiction here at HPH after all. Either we are getting lazy and not reading in far or deep enough, or universe is rapidly converging on modelspace. Neither is a very tasty tidbit to chew. Here is the link to [Culture Change - The new age of sail](#).

There are numerous aspects/attributes going to the idea of culture change, and these are now being assembled into our FuturePop and other new entities. The meta data level alterations are challenging, and scary. They are pointing toward a level of change not seen since the 1866 through 1896 period of global history. The indications are that our current crop of pending changes in the social order will have no real analog of the past. The emotional summations are pointing toward change of such magnitude that it is hard to see political or social 'continuance' within modelspace as it is moved forward with the processing of the incoming values. We will need to wait until Parts 4, 5, and 6 to determine if the longer term value set is supporting change at such a large scale, but the early indicators suggest that it is possible that 2006 was the last "business as usual" year.

The data sets are pointing to [bloody] disruptions for [power] both [electrical] and [political] within the USofA at such levels as to [afflict/affect/impact] the whole of the planet. And these [bloody disruptions] begin this Summer, escalate into Fall, and the [emerge] with [serious/grim intensity] in December {ed note: early indications are for a 'blip' on November 23/24th or so, then a large release on December 17th}.

###

The processing is getting back to schedule following our near-jet-lag experience of the Coast2Coast radio interview, and we expect to have part Three posted by July 22. We will try to get to the lexical mapping charts for this part, at least up to the early longer term value sets.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 35.66 million reads of the 0308 series.

Populace/USofA -Veering To Extremes, Don't Panic, Single Finger Salute

December, and the slide into Winter in 2007, will bring [great examinations/inquests_into_knowledge] for the Populace/USofA. Cross linked extensively to the Press entity, the [examination] aspect/attribute set is going to a [seeing into/through (the) soul (of the) people]. This is heavily participatory within the [secrets revealed] meta data layer.

The [secrets revealed] meta data layer is hugely important within the scheme of the summation values for emotional tensions. The [secrets revealed] layer goes vertical in Populace/USofA as part of the September 19th shift into building emotional tensions. As it does so it starts to raise in power within the Press entity. As had been mentioned in previous ALTA series reports, we are expecting an 'incident' to occur, likely within an [eastern seaboard] center of political power. In this incident, 1/one or more [presenters] or [reporters] from [branded propaganda] {ed note: aka teevee news} will be given [very rough treatment] at the hands of the [local populace] for [abandoning] their [job responsibilities]. During this incident, some [visibility] rises, to likely there will be photographs of the [pressing/pushing/beating] of the [presenter]. This is a temporal marker for us relative to the [secrets revealed] meta data layer, and its subsequent impact on the Populace/USofA.

The whole of the 72/seventy-two days of building emotional tensions is replete with rising [secrets revealed] references. The Populace/USofA is to experience a [colon cleansing] of the [body politic] and then be [force to examine/view] the [results of the process]. This [exercise] of [examination/observation] is to be [forced] upon the [populace] by the manifesting circumstances of the times. The result will include a [shaking] of the [political structure] which in its turn will [escalate] the [conflict/contention] between the populace and those who think themselves as [princes]. Not only will this include the professionally-weak-willed, the [politicians], but also is shown as including [religious organizations] with their [attendants] and [bramins/priests]. The whole of the "establishment" is shown as being subjected to [gritty pawing/dirty hands] being [exposed]. The shock to the [soul/center] of the Populace/USofA is seen as quite severe, even [crippling/wounding/debilitating].

The data sets for [dollar] directly held by the Populace/USofA come into [revision/review/inspection] status all through the progressions though the shorter term values, so basically for the entire months of August and September. Further, the Populace/USofA entity, and *not* the Markets entity, is showing a very large quotient rise in values for [examination (of) previous/past deals/arrangements/swaps/trades/exchanges]. This area is also supported extensively by [taxes] and [creation (of) value]. The whole of the movement of the Populace/USofA entity, as an entity shifting through modelspace, is altered by the emotional summations from the directly held [dollar] sub set. This area also participates in the [secrets revealed] meta data layer, with an expected focus on [dollar] which will include the [federal reserve] and [criminals] and [politicians] and [lobbyists] and [derivatives]. There is clearly a hint from modelspace that the [populace] will be giving a lot of attention to [derivatives/abstractions] over the course of August and September. Again it is worth noting that at least 38/thirty-eight percent of the rise in emotional tension values from September 19th through to December is provided by [economic] and [fiscal] related lexical sets.

As the modelspace is moved through the shorter term values in to the longer term value sets which contain the temporal pointers to late November, and December, there are several new areas within the Populace/USofA, fueled by [secrets revealed] which begin to [take active measures/steps/actions] toward [bloody revolution]. The imagery within this area includes descriptors going to [priests] being [hung] [naked] and [bleeding] from [lamp posts]. Further there are images of [politicians] who are [fleeing] and are [trapped] and [executed] on the [roadway/freeway]. Now we note that this is merely a small area within the vast Populace/USofA entity, and as such it only rises to our attention due to the extreme nature of the language in the sub set. However, it must be also noted that the whole of the Populace/USofA entity *is* moving into [extremes] of language which *may* be forecasting both [extreme circumstances] as shown in the data set, as well as [extreme responses] which are predicted by the lexicon.

As the [secrets revealed] meta data layer pushes on the emotional strings of the populace in December, many of the supporting sets are pointing to the [lazy] and [careless] [actions] of the Bushies as [prompting inspection]. These [inspections] involve [legal] language, and will also [draw in/suck in] the

[parents] who will be [chastised/scolded] within the global mediastream for [giving/handing] [power] (over others) to their [offspring] such that said [offspring] [never learned] to [have their own power]. This [public berating/scornful language] is seen as [provoking] an [official] response, but the [officials] will be having their own problems and the issue will be [dropped] rapidly as [escalations] of the [american insurrection/revolution] start to show their [visibility].

A very large percentage of the emotional values supporting the [american revolution, part deux] rises from the populace's view that the [bushies] are [obsessed] by and [driven] by [ambitions] for [unreal expectations]. This is further defined as not only [unobtainable results], but also [images/illusions/mirages] which [haunt/lurk/disturb] the [child's mind]. This is cross linked to the Bushista entity and terminates in the previously discussed [manifesting madness] of the [rulers]. We note with irony that it is [ruler] and not [governor] which is repeatedly referenced the past few years as the Bushista entity slowly worked its way into [royalty/monarchy] status.

It is also necessary to note that part of the [extreme] language set derives its support from mutually cross linked internal support aspect/attribute sets for [necessities] and [encounters with scarcity]. We need to go further into this set as it perhaps could be more accurately interpreted as [encounters with scarcity in necessities creates shocks]. The [shocks] sub set is filled with very high levels of release language as the modelspace is advanced past mid August, and thereafter as the modelspace moves past the September equinox, the language, along with most of the entities, transits over to 'building emotional tension'. Was is very interesting about the progression from the immediacy value set through the shorter term values and then into the longer term value set which brings us up to December, is that the [extreme] nature of the language related to [scarcity] and [deprivation] rises very rapidly and is a key component to creating the [extreme] language forecast for December. In other words, the [shortages], especially in the [food] and [energy] sub sets are showing as growing so rapidly through late August and into September as to set up a 'wave' of continuing [encounters with scarcity] which will have the Populace/USofA thinking [starvation] and [desperation] are the operative words by December. This is *not* to say that there will be large scale starvation in December, however the language is clear that [starvation] for both global populations, as well as local-to-the-usofa *will* surface in the [visible] discussions within the global mediastream about that time. This area is heavily cross linked to the [dollar Near-Death-Experience] of Summer which is showing as coming to a [crisis] point in late September...just ever so coincidentally near the September 19th point of the sudden shift into building tension values. The supporting layers for the [dollar NDE] are cross linked over to various [food] and [commodities] with the implication that [scarcity] will [drive prices]. Further, the [shortages] of the [necessities] will get a very large emotional 'boost' from the [ocean influenza] and the [death of fisheries] which has been forecast for the past couple of ALTA reports, and which still continues to build language in support of the meme. It appears that late in Summer or early in Fall there will be a [money/currency] versus [availability] of [necessities], with special emphasis on [food] at such a level as to [gain visibility] within the global mediastream. Given the [death of the fisheries] as well as the [oceanic influenza] and their timelines, it would make sense that the rise in emotional language tonality shown for Fall is being partially fueled by the tension producing subject of [global food/energy/necessity] crisis developing. This is a scenario which would provide our focus on terra, and also the economic impacts showing within the language trends.

The [encounters with scarcity] meta data layer is dominant in this [resources/necessities shortfall] sub set. It is also very extensively influenced by the [secrets revealed] meta data layer as well as cross linked heavily into areas in which [rebellion/revolt] is rising or dominant. A new element within this data set is the conjunction of [conflict] with [lawsuit] and [careless language]. These are all either directly held support values for [encounters with scarcity] or participate within the meta data layer influence.

In moving modelspace forward and back in order to watch the progression of language to glean what intelligence may be available from the accrual patterns of the aspect/attribute sets, it is apparent that

[law suit] and [conflict] meeting up will be a very good temporal marker for the coming [encounters with scarcity], as well as the next blossoming of [secrets revealed] within the global mediastream, and most importantly, with the [onset/blanketing] of [confusion] and [disarray] on the public discussions. This last is extracted from Populace/USofA entity and Press entity cross links and goes to the point that the [initiation] of the [law suit] about [conflict] will mark the point at which the monolithic control of the 'press' in the USofA begins to crack open, spilling out [secrets revealed]. This [lawsuit] will be so [traumatic] for the establishment that [naked aggression] against the [foot soldiers/infantry] of the [press] will begin [raining down] from the ThePowersThatBe. This will be either concurrent with, or just ahead of the alternative wave of emotions in which the [populace] is shown taking out their [anger/ire] on the [major faces] of the global mediastream by way of [assaults] and [humiliation] in [public eateries].

The immediacy value set is seemingly suggesting that to [not panic] or [guard against panic/losing_perspective] should be the mantra for the rest of Summer and early Fall. There are references to [careless talk] being the [cause of difficulties] as the [establishment/bushies] attempt to [implement language control]. This will apparently be coming by or around the equinox as [documents] will be [revealed] which will have the [potential] to [induce panic]. This [panic] is apparently possible within the larger populace, but is specifically supported by language pointing to the [aware observer], otherwise known within the data as [those who know]. This area is a bit disturbing to the mental equilibrium as the language is supportive of the [rebellion] meme, and also contains references to [impracticality of conflict] and [giving up conflict (in order to) go home]. This area also has references to the internal proxy for TPTB which is under the aspect of the [300/three_hundred families]. {ed note: the Populace/USofA internally held data set focused at the ThePowersThatBe}.

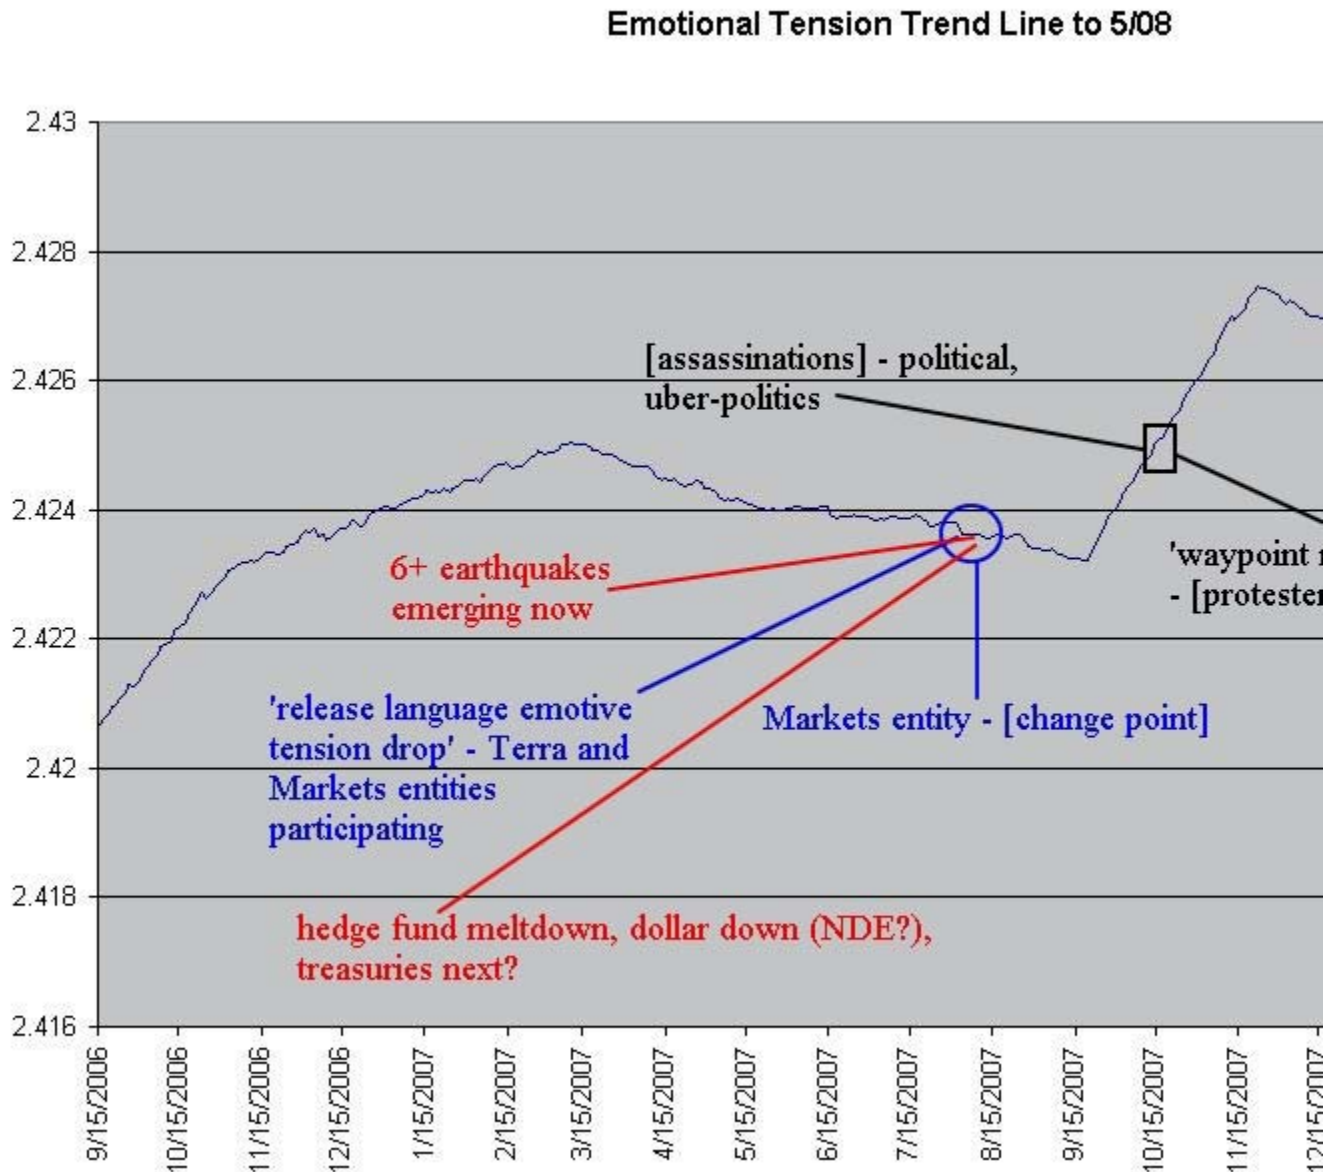

It would appear from the complex of contexts within the immediacy data that the [300/three_hundred families] are [at risk] from the [continuation of conflict], and that they are on the verge of [taking steps] to [protect their interests]. Somehow these [steps/motions/actions] have the potential to [induce panic] and that the data set is suggesting to [guard against] such a reaction to the coming [actions/motions]. Just to be clear, the data set is pointing to the [continuation of conflict] and the [lawsuit] as the threat to TPTB, and that the [panic] is a threat to those within the populace who are [aware observers]. Hmmm. Perhaps the data is indicating that while [panic] may *seem* like a good idea in the near future, it may be wise to *don't panic*, and save all the histrionics until a bit later when the whole of the situation may be better appreciated. The associated language within this [panic] area is less than clear, and contains diverse references to [medicine], [illness], [trouble involving sex], [short-lived], [sickness/illness], [retirements], [mountains], [worse and worse/escalating_difficulties], as well as [problems] and [embarrassments]. This last is apparently not trivial, but is well supported by [public humiliation] which produces [self-destructive impulses].

There are repeated and fully supported associations between the [300/three_hundred families] and the [disasters] which will [affect/impact] should the [conflict] persist. This seemingly is a reference to the Bush war in Iraq, but there are also very large sub sets which are suggesting that there are layers-within-layers here, and that not all the [conflicts] are out in the open. The data set is suggesting that the appearance of the [lawsuit] will be so [threatening] to TPTB due to its participation within the [secrets revealed] meta data layer. And as if that is not enough, there are extensive cross links over to the [dollar] and its on going [near-death-experience].

As part of the [disasters] which could/will befall the [300/three_hundred families], the data set has a very high emotional summation attached to possible events in the realm of [political assassinations] and the [collapse (of the) abstractions]. This last is cross linked to the GlobalPop entity (see below) where the emotional summations are huge, and are suggestive of [hundreds of millions] of persons who will be directly affected. Also the [assassinations] meme is further explored in GlobalPop entity, where once

again, the implications are for [hundreds of millions] to be affected.

What is of interest within the modelspace relative to the Populace/USofA entity is the building emotional tensions, then the very small release point which shows up in mid to late October.

Within this very small release period within the larger building tension rise, we note that the data set is using a bespoke temporal marker to describe the [position of the times]; this marker is the aspect/attribute set of [waypoint]. A [waypoint] is specifically defined as a [place/site/location] which is [chosen] to [validate] the [direction/state] of the [passage]. In other words, a 'place from which bearings may be taken'.

The [passage] described by modelspace that we will all be making at that point is a journey up the emotional tension scale, and perhaps the modelspace is suggesting that between October 10th and October 20th, we take [our bearings] given the developing circumstances of that time. These developing circumstances may include [shootings] at [protestors] here in the [usofa]. There are aspect/attributes for

[protestors fired upon] which are directly held by the Populace/USofA entity, as well as ThePowersThatBe entity, and the Bushista entity. Of course, it should be understandable that if the self proclaimed [elite] are being [fired upon/assassinated] by the citizenry, that they might just shoot back. The [uber-politiks] aspect set which is designed to carry references to the [new world order], the [illuminati], and other [nefarious political sects/cults] has come up in specific regard to both the [300/three_hundred families] and the [protestors being fired upon]. In the [uber-politiks] supporting sub sets the [elite] are suggested as [quaking/shivering] at the [visibility] of the [naked aggression]. As supporting sub sets to the [shivering] are several bespoke references to [fear] and specifically [fears] relating to [discovery], and within that, specifically to [discovery/exposure of vulnerabilities]. This last has some interesting cross links to the ThePowersThatBe entity where the terminations suggest that there will be an incident of [personal revolution] in which [properties] including [food] are [stolen/seized/appropriated] from the ThePowersThatBe. The suggestion of the details sets are that an [east facing/viewing] [estate] will be [sacked] and at parts of the [pillage] will be [visible (from the) air], and further that this will be done in [daylight]. Even worse, so far as the ThePowersThatBe entity is concerned, will be the [exposure] of the [extent of preparations] that will be [revealed] by the [looting].

GlobalPop - Soaking and Descending

Noting that we always err on the side of the most extreme of language as an artifact of the method of processing, we still must point out that the GlobalPop entity is *not* looking too good for Fall. As the data sets are progressed through the September equinox and into Fall proper, the rising and dominant aspect within the GlobalPop is [conflict] which is first fed by [tension] and then the aspect of [conflict] grows over the Fall into [disaster]. No wavering here. The data is quite clear that [conflict] in early Fall will produce a [disaster] for the [global populace] as we move through Fall and into/toward Winter.

As the GlobalPop entity is progressed along with modelspace to just past the September equinox, and remembering that [conflict] as a meta data layer is completely filling the Bushista entity in *ALL* sub sets as of September 19th, the [conflict] aspect/attribute set rises to dominance in a very short movement of the entity. This is to say that prior to the movement of the GlobalPop entity through September 21, the primary dominant aspect is 'impetus for change, radical' which participates within the overall [rebellion/revolution] meta data layer. The secondary dominant aspect/attribute set is [duality] which is also a meta data layer. As the entity just manages to slip past September 21 in modelspace, [conflict] jumps in emotional summation value to over take both of the other meta data layers and rise to dominance. Further the emotional summation values for [conflict] within GlobalPop are very extensively covered with thick, rope-like collections of cross links. Even a cursory investigation into the cross links yields terminations in other entities where [conflict] or [tensions/confrontations] are also dominant.

The unnerving part of the process of interpretation is seeking for *any* cross link which does not have a [disaster] aspect/attribute sub set either within the termination, or some where in the supporting sets. So far, no cross link has been found which does not participate within the [disaster for global populace] aspect. Further, within the data of the GlobalPop entity itself, the [disaster] aspect has as its primary supporting aspect/attribute set a 'prediction' of [2/two of 3/three] persons being [directly/personally/individually] affected.

However this may sound as though a 'new war' will develop, the modelspace has little support for the

outbreak of hostilities in any new area. Rather what is showing is an [intense] and [visible] [discussion] of the [possibility] of [new war] will [soak into] and [descend into] the [consciousness] in such a way as to contribute a significant percentage of the building tensions of the period which arise from the GlobalPop entity. The idea coming across from the movement of modelspace is that a [gathering/collective] of the [global populace] will [persevere] in [jumping over] the [offerings (of the) princes] {ed note: the 'justifications for war'} and, according to modelspace they will be [successful]. This [gathering] is showing as developing in late August, and having [visibility] all the way through into late October. The appearance of the [gathering] is also temporally coincident with very large developments both with and without visibility which are indicated to [shift] the behavior of the [global populace].

Remembering that this Fall and into Winter is indicated as the '**bat shit**' days of the Bushies, it is interesting to note that areas within the GlobalPop entity are specifically concerned with [remove/removal/extraction] of the [rotten root]. This area has many supporting aspect/attributes for our beloved Dick of Vice Cheney. This area is also held directly as well as being internally cross linked to the [gathering]. It is also cross linked externally to the ThePowersThatBe where it terminates in the [conflict] sub set focusing on [internal divisions/tensions].

Also within this area are [israel] sub sets which are pointing to the [continuing debacle/disaster] which has arisen by October as a result of the [israeli mistake] of Summer. This [mistake] is still pending, and is showing within modelspace as part of the whole stew of release language which is coming from August 13th through September 19th. The [israeli mistake] will prove to be [lethal] to [self], and is also showing as [propelling/driving] the [secrets revealed] meta data layer over in Populace/USofA. Much of the [israel] sub set of GlobalPop entity is cross linked over to Populace/USofA where a surprising amount of the links end in [incarceration], and [expelling], as well as [hunting], [searching], [murder], and [extortion]. Then there are internal links within the Populace/USofA entity from the [israel] cross links which terminate in [pogrom] and bespoke [fear of retribution]. This area is also cross linked to the Dick of Vice within Bushista entity, and is **extensively** supported by [diplomats/spies/agents] and ultimately seems to be pointing to a [state of distrust/dislike/revulsion] which will be so [acute] as to have [israeli sympathizers] here in the USofA [moving] with [stealth/deceit] and motivated by [fear of contamination/association].

Returning to the GlobalPop entity and the [gathering] which is focused on [altering] the march into New War, there are emotional summations of large values which are also [visible] within the GlobalPop, and which also participate within the [secrets revealed] meta data layers. There are also indicators that a significant time lag will occur between the [exposure] resulting from the [israeli mistake] being [visible] within the [global press], and when it is finally, sort-of presented to the Populace/USofA. This gap of time represents the censorship being practiced by the corporate media. However, the data set is quite clear that [knowledge/awareness] of the [israeli mistake] and its subsequent [flood of secrets] will be wide within the alternative {ed note: internet} information sources. Coincidentally at that time there will be several near successful attempts to [disrupt] or [disable] the [north american] internet nodes. Hmmm...wonder who might be behind those efforts?

Now the problem with the interpretation of the [disaster] aspect, which is showing within GlobalPop as being arriving in Fall, is that it is heavily cross linked as well as internally supported for non-war forms of [disasters]. Approximately half of these other [disaster] sub sets are Terra entity cross linked. Of the remaining, nearly half of those links are [usofa dollar] linked.

As a component of the support for the [disaster] aspect/attribute set within GlobalPop, and **very, very** extensively linked to both Markets and especially Populace/USofA, are several directly held aspect/attribute sets going to the [fracture] or [rupture] in the [global economic system] which is directly

related to [abstractions] {ed note: derivatives?} from the USofA. The idea coming across is that the [retirement] of [hundreds of millions] of [citizens] globally, but also within the USofA will be [fractured] by the events of our [bad summer] for the [markets]. The [damage] to the [retirements] will be a very much discussed daily item of conversation by about mid October, or so suggests modelspace. As modelspace is moved past the sudden rise in emotional tensions in September, and into the first part of October, data bulges relating to the [economy], and [retirement] start accruing with speed. These build rapidly, suggesting the manifestation of a [crisis] as the information starts flowing through the global mediastream about the [fracturing] which apparently is also [visible] at that time.

Within the GlobalPop entity, the [fractured economy] which [sinks/drowns retirements] is just a single point of support for the much more complex aspect/attribute set of [disasters]. There are large percentages of emotional impact values which come from the [damaged retirements], but on the whole, these are still only about a third of the total rise in emotive tension summations. The primary component is still provided by the Terra entity, but it must be remembered that even these are cross linked to, or directly hold, references to the [usofa dollar], and now also the [fractured economy], and [damaged retirement].

Also within the support area for the GlobalPop and its Fall foray into [disaster] are hints of [assassinations] against some very [visible] persons such as the current [prince] of the [slaves] within the [usofa]. There are also lexical sets which are pointing to [actions] which will be [purchased] by [sects/divisions] (against) [each other/opposite_number]. The imagery is a [hidden war] of [assassinations] becoming [visible] thanks to [observers] who are described as [counters] of [the dead]. The appearance of the first hints of [hidden wars] will also be coincident with several Terra entity intrusions, likely related to [seismic happenings/manifestations]. The other temporal markers include [attacks on press/presenters], and [flooding (induced by unknown substances)]. This last is derived from the cross links originating in the SpaceGoatFart entity. The lexical set could also be translated as [rains from space], or even [floods from space], but given the still building [energies from space] sub sets, it seems safest to *assume* that it will not be direct [rain] from space, but rather a more likely occurrence such as a series of GRBs or solar [manifestations] which impart [high state energy] into [terran atmosphere] which in turn induces [rains] and they in turn contribute to the by-now-boring, but still growing, [flood] meme.

Within the GlobalPop, and also directly held by the Populace/USofA, and in support of [disasters] are several aspect/attribute sets going to the idea of [electrical problems for industry]. This last is a key element as [industry] is heavily cross linked to ThePowersThatBe entity, and Markets entity, and in both cases the termination supporting aspect/attributes are painting an image of [visible] [contention] between [elite] and [people/tribes/masses] for [energy], and specifically [electricity]. These aspect/attribute sets contain long term value sets which suggest that legal actions will be a very visible part of the coming [class war for resources] which the GlobalPop is forecasting to [emerge] this Fall.

Terra - Rainy Quavers

As discussed in other sections of this report, the [space energies] are explicitly referencing [rain/water from space] as a component of the [miseries] of Fall which, to no one's surprise, contains continued building of the [flooding] meme. This [space water] is also described as a [space flood], or [rainwater from space] or [waters from space]. All of these have the same emotive summations, and all, seemingly, are equally improbable. However we note the very extensive cross links to both populace entities, as well as the Bushista entity and the ThePowersThatBe entity. In all cases the terminating value sets are negative, and also, seemingly, are focused on [flooding] which is [acknowledged] to come from bespoke [space]. Hmmm. Ok, fine, we'll wait and see about this.

As if the [rains from space] are not enough, it does seem as though our forecast period of [quavers/shakes] as in [earthquakes] has begun with the recent 'spate' of 6+ earthquakes now seemingly gone 'truck about' around the planet. *IF* this is the group of [earthquakes] described in modelspace and discussed elsewhere in this ALTA series, then the [finale] of the [series] will be [3/three large(r) earthquakes] which will come as [2/two] close together, then a chunk of time large enough for a collective [whew!dodged that one], and then the last of the [3/three] larger earthquakes. We note that the time span of the [shakes] prior to the last 3/three is less than well defined, and at this point our only real clue is the continuing building around the word [seismic] which goes out into at least mid October within the modelspace. Soooo...this may be pointing to the 6+ earthquakes continuing through at least that far. Also we need to note that the longer term values describing the [damages] from the earthquakes including the [group of shakes] which we are apparently within, still are building within that set. This may be indicating either that the larger finishing quakes are some period off, and that the group of quakes itself will produce considerable damage over time, or that the damage from the entire series including the terminating 3/three earthquakes will [grow] over time. This last may seem improbable, but there are conditions in which damage could continue to accrue after the earthquake as the damages are tabulated, and the effects spread. This area is also participating within the cross links over to the Populace/USofA and the [diaspora/dispersion] meme which continues to grow with some vigor.

Markets - Innocent Gold

Within the Markets entity, and growing out of the support layers for the [dollar NDE], and including cross links over to the [employment crash] are several aspect/attribute sets describing [gold/PM's] relative to the [USofA] as [innocent]. This [innocent] appearance comes in Fall, and as the modelspace is moved forward through the September equinox and into October, the [innocent] aspect gains support from aspect/attribute sets for [reset (to) beginning/initial state] as well as [increase (in) visibility/demand]. These support areas are very heavily masked by dense layers of cross links over to both populace entities. There are specific references to areas around the planet in which [fires (for) gold/PMs] will [erupt] this Fall. These [fires] are seen as causing [chases] and [desperate hunts]. In both cases the [desire] aspect is summation specific from the lexicon links. This is to say that the modelspace is pointing to [global desire for gold/PMs to erupt in fire] this Fall.

Not that this is a good thing. Well, maybe for some, but for many humans, the [fires for gold] time will also be the point of [sweating fear] and [smelling blood drying (in the) streets] as the [new wars] are [promoted].

Also tied in with all of the [fires] for [gold], are repeated references to [energy] with specific focus on [oil] and all of these are supported by either [class wars] or [desperate demands]. There are repeated references to [restraints] which will be placed on [oil] by [officialdom], including [passes] being [allocated] to [second tier users]. The implications are for a [class based] distribution system being set up with very thick layers of [officialdom] between anyone and [oil]. This area is very heavily cross linked back to the populace entities, as well as to [dollar, usofa] sub sets. The details seemingly suggest a series of [energy impact] crises as part of the rising emotional trend line shown in the chart above.

Further there are pointers to a [miserable holidays] as a result of the [energy wars] of Fall. The wave of emotional reaction within the populace *starts* with the building emotional tension turn around on September 19th, but continues all through the longer term value sets being processed now, so out at least until late in 2008.

Conclusion: Part Three - Prediction, Now of Then

As radical linguists, it is difficult to ignore the layers of intricacies of the art of linguistics. As an instance, take the word so often used to describe 'future telling', that is, 'prediction'. Amusedly we note that it dissolves into 'pre' as in before_it_occurs, and 'diction' which is, of course associated with its root meaning of 'the saying of words'. So all efforts to describe 'future telling' in words, require words which reference the concepts associated with words....'dictions', future 'telling' as in expression of idea via speech. Strangely, or perhaps not as there is evidence that this is an orderly universe, all other descriptors for the concept/context of 'extraction of meaningful information/intelligence from the future' including 'future viewing', and 'prognostication' have only a single outlet for the information, that is, prediction, or future-saying/telling.

As some who are marginally experienced in 'future saying' and whose [monkey-minds](#) are fascinated/captivated with linguistics, it comes as no surprise to discover that in all of the 11/eleven non-roman alphabet languages so far examined, including dynastic Egyptian hieroglyphics, the words involved in describing 'pre-saying of future events' all include some core of the word 'word' from the language within their word for 'prediction'. As if that is not as clear as the dark side of the moon viewed from a mirror at the bottom of a well at midnight, it is interesting to note that the etymology of the word 'future' in all 11/eleven languages also use words for 'word' at their core. Many/most of the languages have a pure 'future' tense, unlike English, and so we may designate those languages such as Chinese, Latin, and others as 'state' languages. Such languages express the view of their speakers that the 'future' exists, state like, waiting for us to 'arrive' there. Of course, we recognize that such *never* occurs as there is only this moment, and every apparent movement from a moment to the next serves only to push the 'future' away by yet another minute.

As native speakers of the opposite sort of language, that is English, which has no pure future tense, and therefore frequently substitutes 'ing' as an end'ing' to get across the idea of time as a process in which the future is constantly manifest'ing' into the present. Sort of clear? This is to say that 'pure future tense languages' represent 'state of being' point of view of the universe, time and everything, while 'process' languages are expressing the idea of the 'future intruding into the present' view of time. While English and Sanskrit (snskrtta) both share the 'process of be-ing' to define 'future', it is should be noted that Sanskrit provides for explicit descriptions of the 'future' as 'part of the cycle of process'. This is to say, that Sanskrit delivers many more layers of intelligence within its structure than English, and explicitly provides support for a dominant 'cyclical' view of universe. This is clearly not true within English as so many speakers of this language are 'linear thinkers' and as a result view time in the image of a 'river' which 'flows downstream toward us'.

How humans think/conceive of 'things' determines directly how those very 'things' will work out in reality. Not to go too deep down the metaphysical rabbit hole, it is still necessary to understand that the [etymology](#) of a language occurs in the 'now' and does so continuously {ed note: the underlying principle of our work}, and that as such, it is expressive of the 'cyclical changing view of universe, time, and everything' of the culture using the language. And of course, since etymology of language tracks the changes in language over the course of time, and since the language defines the view of time which can/may be expressed by that language, the whole process of the evolution of a language is at its nature a self-altering feedback loop of a multi-generational nature. A long and confusing way of making the point that if your language does not allow you to express the concept, there are only 2/two paths...either the language changes, or the idea goes unexpressed. And since it is well known universally that the main thing about humans is that they cannot keep their mouths shut, they *never* let a chance to express go by, and therefore language must change. Look for evidence of this in the explosion of cell phones and

other communication devices once the underlying reverse-engineered space alien technology was released. So we come to this particular point in time where the 'controllers' who are linear thinkers, and take the 'ing' of 'being/becoming the future' as license to believe that they can escape the consequences of their actions, are attempting to 'control' language. Surely a doomed effort. Weaned on '1984' as their 'manual for social control', and desperate to institute a language police at all costs, the 'controllers' have run into their point of diminishing returns in the effort to bend language to their will. ALL of the political correctness efforts, including the recent spate of 'hate language = crime' efforts are failing globally as the evolution/etymology of the language progresses, as it always has, beyond the control of the controllers.

As radical linguists we know that words have power. Further, the depth of power of words is apparently beyond the grasp of most users of language, and even those in officialdom who **think** they know about the power of language have missed the underlying point to language provided by universe. That is, it is impossible to 'ban' or 'criminalize' a word **without** increasing its power. As we old farts know, the best thing that could be done in the past here in the old-puritantal-usofa to promote a book or movie or other entertainment product was to have it 'officially banned' somewhere. Thereafter sales were guaranteed.

So...seeing the present activity of language control attempts, the question that comes to mind centers on word usage. If a 'power' word is sought for use in a high emotional situation, will it be the 'officially approved' word, or the banned word which rips off the tongue and roars out of the mouth? Imus knows...as do the **snappers** and cronkers. Words have power. As an exercise in radical linguistics just follow the current etymology of 'cronk' in its **official** form versus the actual use form. As to the source of 'cronk' as descriptor for a musical/artistic style/inspiration, we need only look to BET and the 'culture' of hip-hop. True, "Gutter talk it may be, but that is its ety-molo-gy." And from here we depart this thread with the last concept to be extracted in this moment, to wit, that those who criminalize language do **not** restrict its use, they merely create yet another class of criminals.."Damn, it feels good to be a gangsta....."

As a last note on radical linguistics, a pope-of-antiquity, made famous by his fears, once intoned in French, "take due care, Priest, for I suspect you know not the power unleashed with words." On my respect-o-meter, popes and priests of any stripe must reach hard to come up to the level of either politicians or pedophiles, but even the most dimwitted among us occasionally speaks a universe truth. There are few among us who really **gnosis** where the **power** of words will lead.

As noted in the red text on the chart above, some of the predicted effects shown in previous reports in this series, as well as previous ALTA series are manifesting now. Or as the modelspace prefers 'emerging'. This emergence is shown as still continuing for the rest of the release period of Summer and right up to the few days before the September equinox. We expect the earthquakes to continue, and are checking all our personal preparations, as well as hardening the server closet against such an emergence locally.

We are also considering the impacts of the various economic warnings emerging and stocking up on what pie making materials can be obtained and stored. The local produce is strange this year with some fruits and vegetables notably absent from their usual times and places. Some others, such as native blackberries are seemingly taking over for imported fruits within the ecosystem. Early reports are that high hills huckleberries, and elderberries are robustly flowered, and given that native pollinators are still around in those areas, there is a good expectation for large crops of local berries to be found in the hills. It also is a good year for native mushrooms as the winter in July has provided lots of water for their growth. It yet remains to be seen if we will return to any warm weather, or just slide into winter like conditions now.

Reports from subscribers in Europe paint a very dismal picture of the heat impacts all over southern EU zone countries, with special emphasis on Greece and the Balkan mountains states. Their water levels are also being affected by their droughts, as well as delayed heat reactions in the earth itself. Reports are coming in of several regions which used to have reliable aquifers even during extreme droughts are now seeing the failure of deep wells. Not a good sign.

And of course, the other 'banded' weather patterns are still pouring rain on UK [flooding]. And so it goes, here on earth. Time to make pie.

Meta Arts - George's Postulate and Igor's Mustache

Igor and I know this fellow who is quite frightened by tsunami's. He is nearing 50/fifty in age, and claims to have been afraid of tsunami's all his life. As may be expected, he was fascinated/transfixed by the Sumatran tsunami unfolding. It did not, oddly, increase or alter his fear quotient regarding tsunami's either way. He claims to have been afraid of tsunami's since he grew up on the island of Guam in some of his more formative years, where, he says, he was terrified by the tsunami warnings, and other anti-tsunami drills. Perhaps. What is curious now is that he lives at 2000/two-thousand feet in elevation here in the PNW, and is no where at all near current-known-tsunami limits of 150/one-hundred-fifty feet. His fear is palpable, and he has to actively block the anxiety when his wife took their children to the Washington coast beaches a couple of years back. Further, there is **no** way he is getting on any boat on Puget Sound, or any coastal waters. Of course, the irony is that he is ex-navy.

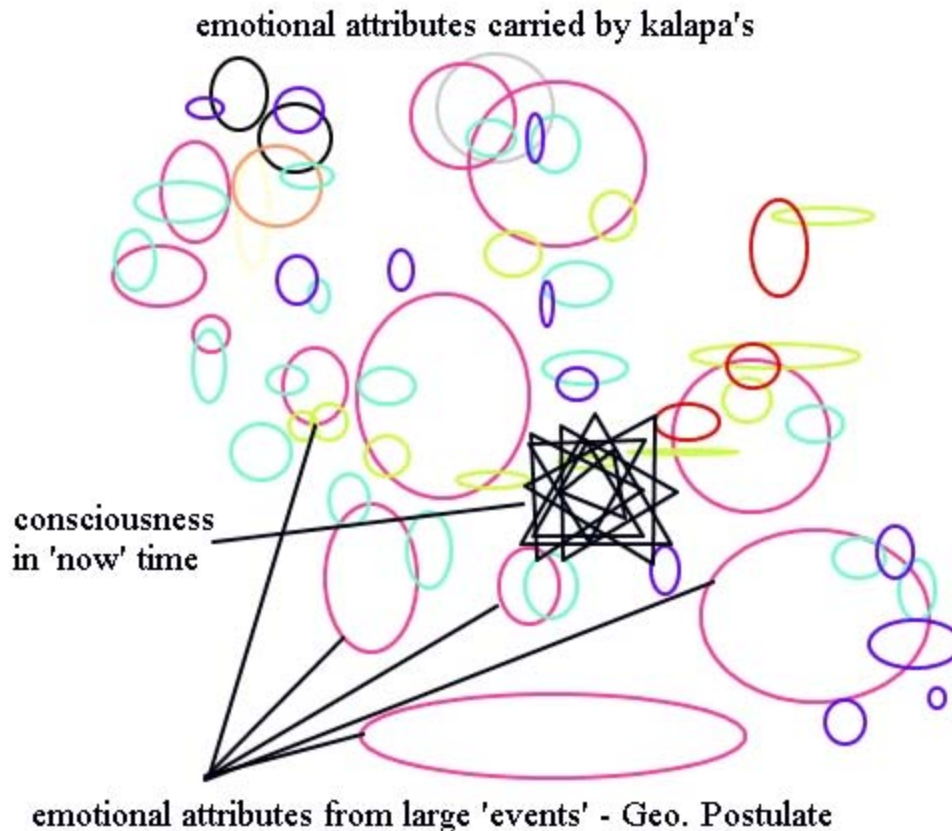

This fellow is not particularly afraid of tsunami's at this instant. Eh? Yes, he is a 'little bit' afraid now, and so chooses to avoid the potential for tsunami areas affecting him, but his true fear is that a 'tsunami will get me when I am an old man'. Sooo, as elucidated by query, it turns out that he 'fears death' by tsunami, but more every day as he ages due to a 'gnawing feeling' that a 'tsunami' is going to 'get him' when he is old. Further questioning reveals not a fear of the inevitable 'rush' of the 'future' as we age, but rather a very specific fear that an actual 'wall of water' kind of tsunami will wash his ass away to be crushed up against a mountain somewhere. When examined, it turns out that his fear of tsunami's may be a personal expression of the George Postulate of emotional waves.

The George Postulate really applies to our work here. It is the basic idea that we 'pick up emotional waves in direct proportion to their size/energy levels'. Stated another way, the postulate says that we get our peaks at future events relative to the ability of the emotional wave of the event to penetrate 'back into the past'. Now **please** note that this expression is entirely wrong, in that it has an underlying assumption that a proper metaphor for time is a 'river' in which the past, future and present all exist. THIS IS NOT SO. There is no 'river of time' awaiting 'fulfillment'. There is not a 'stream of time' coming our way from the future and disappearing around a bend into the past. Thinking of time in this way does not further the understanding of what/who/how time is/works. So we here at HPH think of the George Postulate as 'size specific'. This is illustrated in the following 2/two graphics.

The graphic above represents the image of the George Postulate based on the assumption that time is a flowing river, instead of merely 1/one of 66/sixty-six thousand attributes of the [kalapa](#).

In the graphic below is a reasonable metaphor for how we interpret the George Postulate in our frame work here at HPH.

Without regard to the metaphor chosen for the mental image, the idea of the George Postulate being expressed as a **special case** within a single individual is probable. In our work we pick up the psychic lint of millions of minds as a **general case** where we suspect that these minds are unaware of dropping this 'lint'. There is nothing in our experience to rule out those who may be affected by their own 'psychic lint' build up, even though they do not have a mental construct for the experience and merely react to the emotions produced. Make sense? Clear as mud? No reason at all that an individual human can't be screwed over by fears of specific events in their life, yet to happen....or, perhaps this fellow is a psychic 'receiver' and is reacting to 'millions of psychic lints, not his own'. Universe will let us know, perhaps.

Of course, merely having a fear does not justify reacting as though it is a 'real' probability. Igor thinks, given other evidence, that our fellow with his tsunami fear, is 'badly wired'. I am not so sure. As we know in our work it is **all** in the interpretation, and perhaps our fellow has his clues, and unconsciously is reacting to what will eventually manifest in his life.

In any event the George Postulate, that is that 'seemingly large scale events with lots of emotions involved will be picked up further out in time', does have merit. Having had some number of years at this, we can take our recent special case of the 'london flooding' which was a December/January 2006/2007 predictive set, and judging by how events unfolded, note that the early appearance of the 'flooding' meme, especially as it related to England, and then the Red River area of the USofA, was picking up a 'large scale emotional wave'. However it is interesting to note that the manifestation of the 'floods' was not as may have been suspected in December of 2006, a 'single event'. Rather, as was seen in both data sets, the emergence of the 'flooding' in reality is a longer term manifestation with many continuing elements. Yet the emotional values from both apparently aggregated into our very large

appearance in 2006 of 'floods' as a central meme for the following year, which is our current now.

Another interesting component of the George Postulate has to do with the 'flip' side of the equation so to speak. That is to say that if the Future is capable of propagating emotional waves into the past, which can be picked up as the psychic mind-lint of millions of humans, does this not argue, given material reality and the 2nd law of thermodynamics, that emotional waves/energy from the *now* can impact, or affect/change the future, at least as it manifests locally? In essence, it would seem that George's Postulate is validation for [instant karma](#).

It is this sort of meta physical thinking which sets Igor's bottom teeth to attempting to chew off his mustache. It is ok to examine the practical application of a theory, according to Igor's mustache, but not to explore the larger roots as they head off down the rabbit hole. Hmmm. Humans is weird. Or I am totally out of step as I find the meta physical implications of Geo's Postulate totally fascinating.

Meta Data - Continuing Sets, Notes about chart

In an effort to maintain continuity it becomes necessary to review those data sets which have been discussed in previous ALTA reports and which are continuing to accrue values.

These sets include:

Entity	Set(s)	Continuation aspects/attributes
Terra	Antarctica - rising land	the [rising land] set continues to build against the image of [altering currents within ocean/atmosphere] as a result of the rising [underwater] of a [bridge/connection] between Antarctica and Patagonia
Terra	Antarctica - energies from space	This continues to build, albeit more slowly, and the indications from the current long term value processing that it *may* be visible in late Winter, 2007/2008.
Terra	Rivers in atmosphere	grows at steady pace, but now also showing for manifestation in Winter, early December and onward.
SpaceGoatFarts	scattered energies from space	Indicated for initial manifestation August 13th through the 16th, but also showing up as a [repeat event] for December 2007 through end of March of 2008
SpaceGoatFarts	Antarctica - energetic 'bursting' over continent	Still growing, but again, with longer term values indicating a [visible] manifestation *starting* in late Winter (January/February 2008)
Populace/USofA	employment crash	continues to accrue values in all sets including the immediacy values. Early visibility of this very long term emergent circumstances is forecast to appear in late Summer, 2007 with a rise in [visible] aspects within Press entity as we approach the September equinox. The impact is to be very very very large if the George

		postulate and the totality of emotional sums attached are good indicators.
Populace/USofA	revolution/rebellion	Continues to gain values in both shorter term, and longer term value sets. The shorter term sets from ALTA 0308 are showing that 'rebellion' and 'mutiny' will surface in early Fall (October/November 2007), and that [bloody] aspects will be in place by March of 2008. Very important meme as the longer term values have very far reaching potentials which are explicitly referencing [multiple generations] to be impacted by the unfolding meme over the next 2/two years beginning with the Summer solstice.
SpaceGoatFarts	Contact/UFO	The UFO/contact and/or 'disclosure' meme grows with vigor in all sets since 2000. The very large level of emotional support values suggests that 'contact' or at least 'disclosure of contact' is a very real possibility within these next 2/years, and that it has a very high level of probability of appearing with [shocking suddenness] and *without* control by TPTB. This last is indicated by the continuing association with SpaceGoatFarts as opposed to the same descriptor set within ThePowersThatBe entity. Supposition is that the "best laid plans of aliens and men, aft gang aglay".
Terra	shaky period	The [earthquake quivering period] is still building values in the longer term sets. This may be indicative of the current 'shakes' continuing for at least another year. This *might* be a good thing as the 'ending' punctuation for the 'time of quivers/shakes' is shown as 3/three really good sized earthquakes spaced 2/two close together, with a small 'whew' breathing space following, then the last of the very large quakes.
Terra	fungus amongst us	This area of rising 'environmental' alterations to the planetary 'biozone' continues to grow. It has been characterized as 'fungus amongst us' as there will be the appearance, and forced coping, with new forms of 'fungal intrusions' into human/plant/animal life. The hopeful cynic wishes that 'fungus'

		would also be irritating to the space aliens as well.
Populace/USofA	power/energy rolling shortages	Mostly visible as rolling shutdowns of electrical distribution system. Indications are for a 'regional outage' which is [never adequately explained], and thereafter a very much elevated 'near daily' manifestation of [blackouts]. Though short lived, these [blackouts] will be very troublesome.
Terra	Land rising	Indicated for the extreme southern oceans including the very southern portion of the Pacific, the land rising aspect has elements which are suggestive of an emergence in 2008. Remains to be seen, but a change in accretion patterns is definitively taking place.
		Chart will be carried forward as required. Additional entities/memes added as we can get to them.

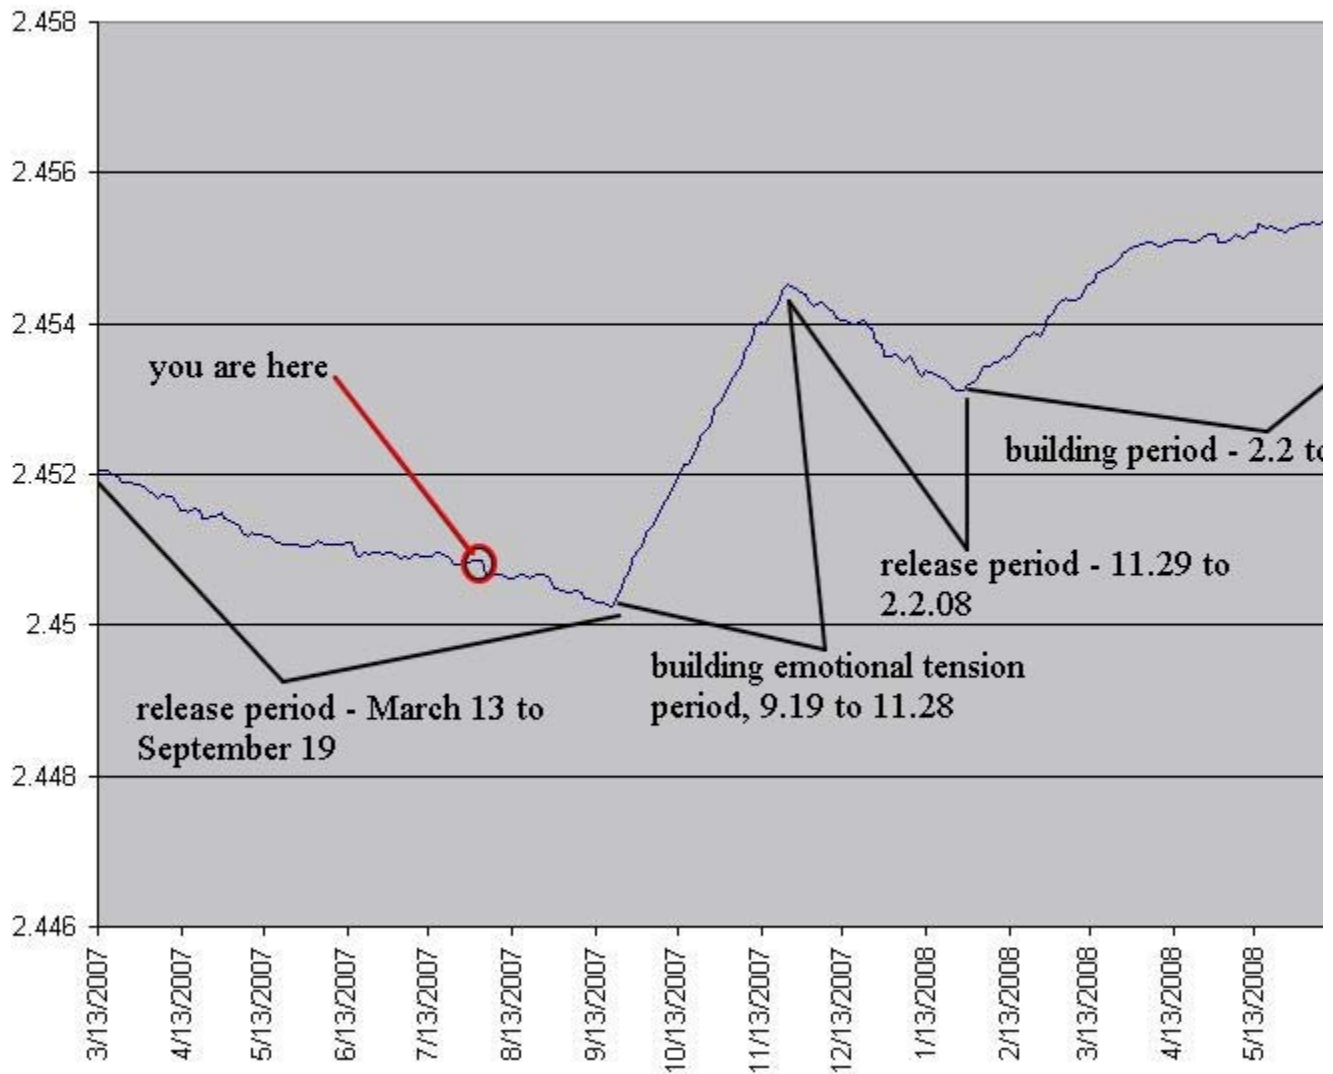

In examining the chart provided in this report, be advised that 2/two elements must be remembered; that these charts change over time with each processing, and that they are a very crude 2/two dimensional rendering of a much more dynamic modelspace, and as such tend to be extreme in presentation. The longer term value set processing which is used to create these charts *necessarily* drops off in accuracy with distance 'out' in time from the 'now'.

While we acknowledge that our ability to pick out release versus building tension language is maturing, even so the charts will be adjusted for intensity, and severity values with each subsequent ALTA processing. It is therefore possible that the precipitous dive into a release period shown at the far right edge of the chart will 'flatten' as we get closer to the time.

Of course, it is also possible that it could become sharper as well.

As a further reminder on chart viewing in these reports, please bear in mind that these charts are developed from the summation of values, and therefore represent all of the entities contributions. Sooo...these charts do not have a particular geographic point of view, and actually represent the GlobalPopulace as a single entity view point. There are over 30/thirty entities within the summations used to provide the charts.

Long Term Emotional Trends

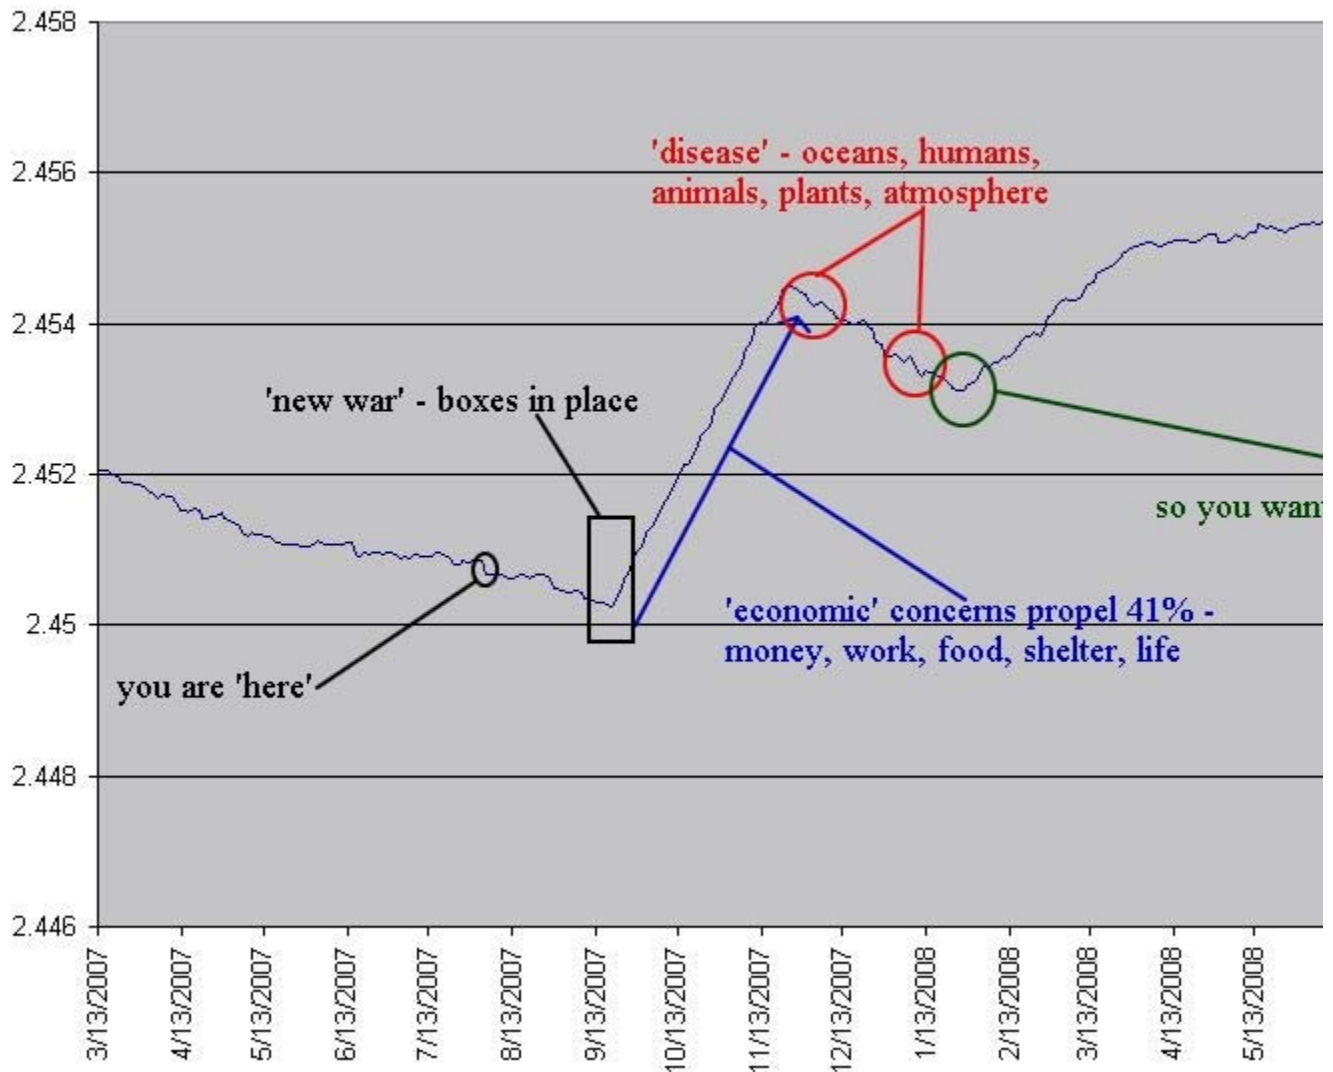

Terra - Seas Sneezing, Fog Hidden

As we dive deep into the data sets with the modelspace set at Winter/2007-2008, the first thing notable is a conjunction of threads between the Terra entity, and the twin populace entities. Absent the new FuturePop entity, and examining only the Populace/USofA and the GlobalPop entities with regard to the cross links, it would appear that Terra will be intruding this Winter, post December Solstice in many areas of the social order.

We continue to get new values and supporting aspect/attributes for the [oceanic influenza] or [sick oceans] meme. There are also several areas of 'release language' associated with the [oceans] as a general subject with [visibility] building for Winter.

Long Term Emotional Trends

Within the [oceans] sub set, there is a curious dominance by the supporting aspect of [fire]. We note this descriptor includes other interpretations such as [energy], and [energetic activity], as well as [heat], and [infusions (of) heat]. When we examine the aspect/attribute set and the supporting chain of attributes the [heat/fire] breaks down into 3/three distinct sub sets. There are [fires] seen as [being (a) heat (source from) below] which is likely referring to [volcanoes], and there are [fires] shown as [coming from space], though we note that this also, once again, translates as [energies from space] as opposed to actual [fire], and lastly there is a curious reference to [heat] coming from [armies on the oceans].

The supporting sets for the [fire (in the/on the) oceans] also includes aspect/attribute sets for [boats/vessels fleeing] the [oceans/seas] to [take refuge/seek shelter] in [deep rivers]. This reference also includes [returning, forced by fear], as well as [heat damaged, limping feet]. The [fire] in the [waters/oceans] which is [source] from [below] is also shown as [contaminating] the [airs] as well as [forcing relocation] due to [horrific/burning smells].

There are bespoke references for the [sick/ill/diseased] oceans which rise to dominance beginning in

December and which continue to gain strength at least through to March of 2008. The [sick oceans] have a very large number of cross links to Press, and the populace entities suggesting something that will be very visible on the global mediastream. The expectations are for a continuing Winter discussion globally about the [sneezing seas].

The [fear forced movement] of the [boats] into [deep rivers] is described as an [awkward position] which is further supported by aspect/attributes including [vulnerable], but also by [necessary/required]. This [untenable] and [awkward] position of [river seeking] is also described as being a [reaction] to [emerging circumstances]. These [emerging circumstances], even down at the levels of deep support also contain their own supporting references to a bespoke [diseased oceans].

There are internal references within the [fear forced movement] which explicitly link to the populace entities where [shock] and [disbelief] will be the ruling emotion as the [speed] with which the [boats seek rivers] [surprises/shocks] the populace. This [speed] itself has several layers of [visibility] such that the idea that it, that is the [speed] will be discussed as [betraying] the [previous planning] in [anticipation] of the [circumstances/manifestations]. The idea coming across from the descriptors is that the populace at large will get a 'really big hint' that 'planning' for this supposedly 'unexpected' circumstance was long duration, and very well informed. This thread within the data goes on into 2008 as a key component of the continued manifestation of the [secrets revealed] meta data layer. The suggestion is that the [deliberate actions], and [precise response] shown by the [boats seeking rivers] will beg the question...hmmm, what *else* are *they* planning for?...

Returning to the [fire] aspect at its highest level within the Terra entity sub set of [oceans], there are secondary support sets which come into the entity during Winter that are also connected to the linguistics producing both the [sickness] for the [oceans], as well as the [fire] on the waters. These support sets are filled with descriptors painting pictures of huge, absolutely massive, levels of pollution. Some of the descriptors with [visibility] within their sets and cross links to the Press entity are suggesting that 'areas the size of continents' will be described as 'no go' zones where even the local [atmosphere] over the [pollution zone] will be [toxic] to [humans and animals].

The data sets for the [oceans] show that the [military] becomes a rising aspect/attribute set within the [winter] time frame and beyond. The idea coming across is a [winter] of [repeated rescues] and very [visible] [movements/actions/drama] involving [military] on [water]. This area is split into many diverse descriptor sets including some that are [humanitarian] in nature, while others are clearly [warfare] related. Within the [rescues] shown for this Winter, there are some which will provide the [military] with a [form/kind/type] of [redemption/retrieval].

Not all the [military rescue] efforts will be [favorable]. Apparently there will be some form of [visibility] connected to the [military] in which the [sickness of the oceans] is acknowledged. This [visibility] is cross linked over to the Populace/USofA and seemingly points to a [secrets revealed] situation which arises within the [assemblage] due to a [mutiny action]. This in its turn is showing as producing [explosive breaths] which [propel words] into the [populace] with [force]. The idea coming across is that a [hearing] or other [exposure] of a [military tribunal/triumvirate] during [winter] will [unleash] certain [secrets/knowledge] which will cause a collective 'gasp' or [explosive intake of breath] in the listeners.

As the [ocean disease] of [winter] manifests within the Terra entity, the cross links to the Press entity, as well as the populace entities, show that [confusion] will dominate the thinking for most humans. The [scale/scope] of the [disease] and its [ramifications/repercussions] will be very hard to [digest], and indeed the Populace/USofA and GlobalPop entities provide language such as [digestive upset], and [fear (induced) bowel empty] as guides for the 'gut' level response to developing circumstances.

As part of the manifesting [ocean disease], the data set is pointing to an explicit [impact] on the [soil of many countries] such that [most humans] are to be [personally affected] by the [illness/sickness]. A [plethora of paths] to supposed 'solutions' will be [visible], but the aware observer will note that it all comes from the [mouths (of the) agitated] or the [agitators], and not from the [simple facts/exposures] which are [revealed] by the [nature/source] of the [disease]. Hmmm...in other words, humans won't be able to do more than blather about the problem as the illness is not ours to correct. Much of the [language] involved in the whole thrashing around relative to the [ocean sickness] is forecast to be [blame focused], as though assigning blame actually addresses the issue. The data set has a couple of interesting cautions or advice for the aware observer during this period of [blame casting], and that is to [prepare personal responses]. This last is in support of the emergence of some of the sub sets for FuturePop so the interpretation is that long term personal health is best served by *not* getting caught up in the emotionalism of the illness, and to rather calculate its personal impact and to prepare as may best be done at the time. Note that during this time of 'blame casting' relative to the emergence of the ocean disease, the data is forecasting some very extreme forms of human reaction including the [excessive consumption] of [drink/alcohol]. This last is to be so [common/prevalent] a reaction within the [denial syndrome] as to become [essentially tolerated] over the course of several months as everyone tries to [incorporate] the idea of [ocean disease].

Part of the manifestation of the [disease] of the [oceans] is described similarly to a fever in that [areas] will [flare up] and then [die down] just as rapidly within the manifestation of the disease. However, it is this very 'flare up' aspect which promises some [sudden] and [nasty] impacts on future ocean travel. These [flare up] zones are apparently not to be predictable, most likely as we will not understand them within our model of how we think oceans work, and this [unpredictable eruption/flaring] will greatly increase [risk/danger] involved with [ocean travel].

As part of the extensive cross links between the [sick oceans] and the populace entities, and with a weighted significance showing for the Populace/USofA, there are several aspect/attribute sets going to the strange image of [under/less than/not properly] and [developed]. These sets all hold imagery containing [fog] within the Populace/USofA entity as a terminating value set, and the originating cross links within the Terra entity are found scattered among a number of sub sets. The [fog] termination points within the Populace/USofA entity, and to a very far lesser extent, the GlobalPop entity, themselves have internal cross links back to Terra entity where many of these terminate in [atmosphere] and [disease]. This last is particularly troubling in concept as it includes [floating islands (in the atmosphere) of disease].

There are Populace/USofA cross link termination sets with imagery of [salvagers/looters] who are in [shallow boats] which they [fill with gold/silver, coins, jewelry] and curiously [meat] all of which is described as being [taken/removed] from [officialdom/exploiters]. Some of the cross links have [visibility] indicators such that we should find the global mediastream reporting on at least a few of these [salvagers] who will be [stricken] in their [treasure laden boats]. The data sets are indicating that some very [dead] [salvagers/looters] will [float] into public [visibility], and that the [cause of death] will be the [floating islands of atmospheric disease]. Once again, the visibility of all of the [sick oceans] manifestations are indicated for [winter].

There are also a large number of [weather] aspect sets within Terra which are indicating that [winter] in the [northern hemisphere] will be something to [discuss] for [10/ten years]. The imagery coming across is that the single largest influencer of emotional reactions during the release period shown in the chart as beginning approximately November 28th will be [weather]. Based just on weighted proportions of cross links, [weather] will be a larger emotional driver in the Populace/USofA than in GlobalPop, though not by much.

Markets - Calamity Planning, Dollar Floods

As we examine the immediacy value data set, which resets the modelspace back to August, the lack of clarity in any aspect/attribute set regarding markets is telling. The data sets point to [muddied waters] which are shown as [impacting] the [conspicuous appointments] of the [prince/king]. This last is an internal reference to the Bushies who think themselves either the 'king', or the [servant of the king]. In the immediacy data relative to the [prince/king] sub set we note that the dominant aspect is [danger].

The [danger] aspect is also dominant in the [gold/silver/precious metals] sub set of Markets entity for nearly the complete month of August. Within the [danger] sub sets are cautions against [going too far], and also against [panic] in an active tense. The aspect/attribute sets are pointing to [an attempt], likely by 'the powers that be' to [recapture/re-establish control] within the [currency] realm. This is where a key component of [danger] arises. The data set actually *appears* to be forecasting that the [prince(s) will go too far] and [disasters] will be [created] due to the [tensions unleashed] by their [ignorant/unaware actions]. Within the [gold/silver] sub set are supporting aspect/attribute sets which explicitly go to [planning against (emerging) calamity]. This apparently will [surface/float/emerge] within August as the Markets entity experiences the rest of the [progression of dollar near-death-experience].

Please note that at this point in our processing there are *no* indications that the [dollar] actually emerges from the near-death-experience. In most of the new immediacy and shorter term value sets are large supporting blocks going under [tension/stress] in both the [markets] sub set as well as the [dollar] sub set.

In both the more general [markets] aspect/attribute set, as well as the [gold/silver] sub sets, there are explicit aspect/attribute sets going to the idea of [look far (out)] and [plan against calamity]. Now we must note that [calamity] is a different context than [catastrophe]. The latter almost always shows up as an associated value set to some [physical damage], where as the [calamity] context is much more focused on man-made problems.

There are supporting aspect/attribute sets within the [calamity] aspect/attribute set which are pointing to a time of [delusional protestations]. This appellation is provided by modelspace as it is progressed up through the immediacy and shorter term values to the September equinox. By setting a range of movement boundary for modelspace, in this case from the 'now' through to the equinox, and then putting the action into rewind and observing the progression repeatedly we hope to be able to glean a view of the conditions to be *after* the current [bad summer] has played out. Unlike astrology where it is possible to have a static view of the time, then to put all the players into place, and rotate it around until it makes some sense, what we have is only the ability to put the movement of language into 'slow motion' so to speak, and then to examine the shifts in meaning in some minutia, hoping for a broader design pattern to emerge.

What this exercise has yielded is that as the Markets entity approaches the equinox it will be emerging from a period of domination (current days - July through August) by the previously noted [bad summer] into a point where the [calamity] will apparently have happened. This is then followed by a time when the [previous preparations] for this [calamity] will be able to be [assessed], at least by those with their wits still lying about somewhere as we bear in mind the transition is from domination by [calamity] over the course of August and right up to the equinox, to then sliding into a period of [delusional protestations]. We presume this last will be coming from [officialdom] as they once again [deny] that it is their [responsibility].

As to the past view of the [calamity] which is presented by the Markets entity trying to absorb it during late September, the dominant aspect/attribute set goes to [china] and [flooding]. This [flooding] sub set has both direct supporting aspect/attributes for actual flooding by [rainwater] as well as [flooding] by [repatriation/rejection] of the [dollar]. Hmmm. Looks like the [dollar near-death-experience] continues right up to the equinox if not beyond.

A primary level of emotional summation support for the [flooding] from [china] aspect/attribute set comes from a sub set headed by the aspect/attribute of [bad omen/signs/indicators]. This area is in turn mostly supported by [secret designs] which has a [visibility] cross link to Press entity as well as being participatory within the meta data layer of [secrets revealed]. The implications are for a global mediastream story or fixation on [secret designs] relative to the [dollar] and the [flood of repatriation] coming from China. Recalling the George Postulate detailed above, we need to note that it was 2004 when we first started picking up [rejected by all] as a supporting aspect/attribute set under the [usofa dollar]. Given the multiple year lead time to our current state of [dollar near death experience], the projections being provided by the modelspace {ed note: as crudely expressed in the charts} for the emotional reaction seem to fit. We have a forecast of a [bad summer] in which the [repatriation] of the [usofa dollar] reaches [flood] stage just before the [equinox] and the months of August, and September will be [reflected upon] and [labeled] as [calamitous] in hindsight.

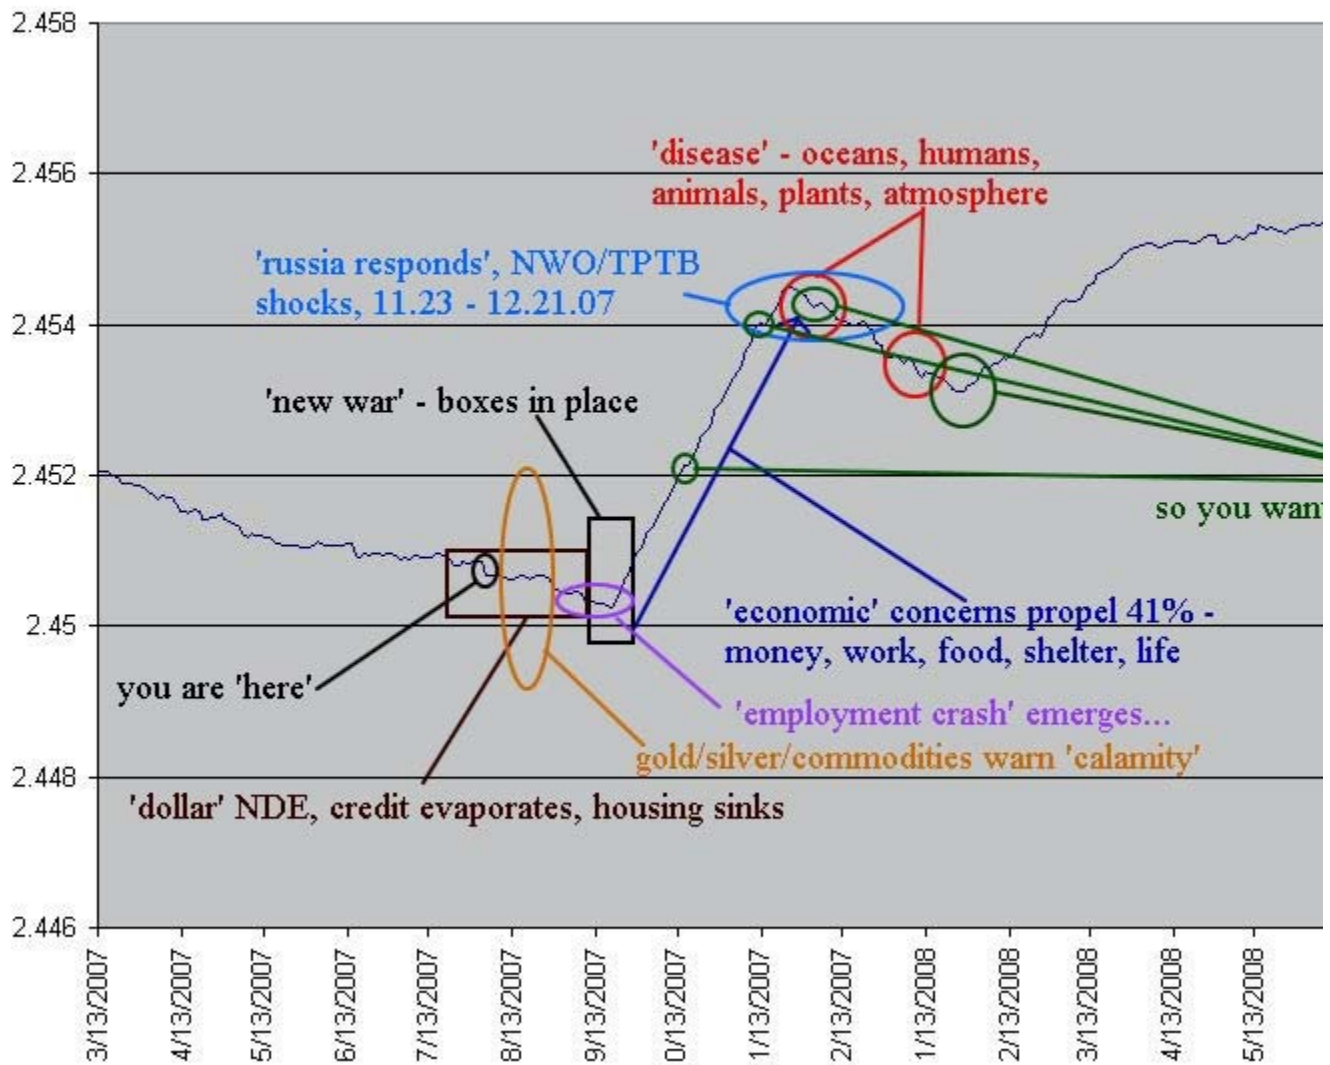

Within the [debris] which will be [scattered] in August as the Markets entity comes to be momentarily dominated by [confusion], we note that [gold/silver/precious metals] as well as [strategic commodities] and [food stocks] will all [be taller/higher] than the [drooping] of the rest of the markets. The forecast for [housing] is a case of bespoke [abysmal] in which the [degradation] has not even reached the [second] of its [30/thirty years], and the [quivers] in the [bowels] that are currently being [hidden] by those in the 'industry' are shown as rapidly turning into [public diarrhea]. Part of this last has cross links to the [officialdom] where they will apparently be [protesting] that they [work ceaselessly] only to [earn criticisms]. And they will [protest] [visibly] that [unfair] [attachment of responsibility] does not lead to [progress]. This last is a nice temporal marker seen for sometime in late August. It is followed within a short period, between a few days, and about 2/two weeks of a [decree] from the [prince] that [everything (should be) well]. Of course, you *know* that when officials start pronouncing that 'happy days are here again'....that is a real good time to get a wiggle on.

There are indications that the sudden change to building emotional tensions is very much driven by the [summer calamity]. There are *still* a large number of Terra entity inputs to the September turn around in emotional tensions, however, as of this point in the processing the total summation is composed of 41/forty-one per cent aspect/attributes with an [economic] association. NOTE that this association is in the very largest possible sense and includes all of the primary value sets for such as [food], [shelter], [family], [employment], and others of that sort. It would/should be expected that if a large intrusion/emergence by Terra occurred over the course of Summer, that such an intrusion may be large enough to impact this broader set of 'personal life support contexts' and thus the would be showing up under the association of [economics]. Make sense? Basically [economics] is a really really broad category which includes a whole lot of emotional triggers which are also vulnerable to other influences, but if we only look at the economic side of things we will miss the 'other trigger' participation and *assume* that it is *all* economic.

As the Markets entity is moved past the September equinox, the dominant influences of the Summer are a bit easier seen as the impact values, as well as the intensity, and duration value sets start to become populated by the shorter term value sets. This provides a 'backward looking' view, which is actually set approximately 2/two months ahead. This view provides that many markets participants, and this is specifically referencing [global markets], will feel as though they have been [masticated/chewed]. Their emotional state relative to the context of [currency, paper] and [wealth] will have dramatically shifted to

the point where their thoughts will be moving through [confusion/disassociation] into a point where [wealth] will have a descriptor set headed by [coins, gold/silver] and supported by [piles/mounds of increase]. This [increase] in [gold/silver] being examined is an *emotional* context descriptor set. Will it translate into 'price action'? Perhaps, but bear in mind that the [dollar] is rapidly on its way to becoming the 'north american peso', so denomination in dollars may not be the best method of judging [emotional demand]. Rather what the modelspace is showing is that over Summer, the [flooding] and [repatriation] of the [usofa dollar] will be part of a very large emotional shift out of [preconceptions/points_of_view] and into the Brave New World which is currently being to emerge with a vengeance. Please note that Igor is jumping up and down while eating handfuls of blueberries as he is gleefully aware that our projections for 2007 being the [emergent year] both in Terra intrusions, and in [dollar near death experience] have been seemingly accurate.

Long Term Emotional Trends

The emotional summations relative to 'gold/silver' move dramatically over Summer and through the

autumnal equinox. The idea coming across is shown by the rising aspect of [increase] which holds for August through to about September 13th is then replaced by the domination of [giant/large/huge/mega] as an aspect, with its first level of support being the aspect/attribute set for [possession]. So the imagery within the movement is going from a *mere* increase in emotional support for [coins, gold/silver, piles of], and moving over to where the mental/emotional attachment to [coins, gold/silver] is the same as for [mega wealth].

As the modelspace is progressed through the Summer, the Markets entity is shown as [peeling off/removing layers] of [delusional attachments/valuations]. This [onion peeling] effect is forecast as the temporal marker for the beginning of our previously forecast [employment crash] in which [millions] are shown as being [rootless] or [come loose (in the) world]. The [employment crash] will likely progress over the course of Fall as the emotional tensions build, and as the results of the [flood of dollar repatriation] continues its course. The millions caught in the [employment crash] are also participatory within the developing FuturePop entity where there are several new forms of social organizations which will derive from this coming fall.

Continuing with the [housing] thread within the Markets entity, and following it out, we find that as the September equinox is passed, that the [flood] of [dollars] runs into a very substantially larger [flood] which may also be labeled a 'bubble'. This [flood/bubble] is the [abstractions/derivatives/credit] structure that the modelspace has been forecasting for over 5/five months as [dissipating/evaporating]. The data set has been clear that the [pushing/forcing] of [inflatables] over the last couple of years was due to come to an end in the [bad summer] of 2007. As this is now manifesting/emerging, the 'fundamentals' often touted as the solid core of the global economy will come under increasing [examination/scrutiny]. This is not good due to the [quivering] or [shaking on the edge] characterization previously associated with the fundamentals such as [food, energy, shelter] at a personal level having such a tenuous future.

Given the movement of the Markets entity within modelspace, it is our expectation that the next few weeks prior to August 13 will see a continued [erosion] in the [abstractions] as the [flood of repatriated dollars] begins in seriousness. While there may well be retracement on certain markets in their individual averages/indicators, the whole of the global economy is anything but healthy, and the last 2/two years of [forced infusions] of [liquidity/dollars] into the [housing] market which in turn facilitated the creation of the 'private equity' market, as well as pumping up the [hedge fund] 'industry' has now ended. This bubble burst in a way that was less visible than the 2000 markets bubble burst at its initial stage, however the continuing [crumbling] of the [infrastructure/financial/monetary support] will be far more [visible] as time progresses, and far more damaging than the 2000 markets bubble burst.

The problem for the ThePowersThatBe, and their minions in Bushies PPT, is that they now have the last, and greatest of their 'liquidity bubbles' burst, which is taking down its internal market, as well as spreading outward to take down the supporting markets such as 'housing' and 'brokerages/shills'. There are no readily apparent *new* areas available for the relocation of the 'dollar hose'. When the stock market bubble burst in 2000, the dollar/liquidity hose went to 'housing'. A whole new industry was created which sucked up vast quantities of 'immigrants' to supply labor, and much more importantly, the industry was able to 'commoditize' and 'monitize' the land itself. This has now burst and the industry is dying. Our data shows a 25/twenty-five year period before reaching the bottom of the USofA housing bust. However we note that this projection is based on the planet, et al, holding together that long. A possibility much in doubt at the moment. Further, the data sets are showing that the TPTB, and the PPT have run into a serious problem in that their 'dollar hose' is being [flooded] out, or [overwhelmed] by the [repatriation] of previously exported [dollars]. This situation is unlike anything the TPTB, and the PPT have faced in the past. Of course, given the *stellar* level of thinking and leadership available within the ruling clique of the moment, aka, the Bushies, there is *not a doubt* about the outcome of this conundrum.

Conclusion: Part Four - Rough Get Going

For the near term the emotional energies have swung from biospheric degradation issues, or war, into the dollar near-death-experience, and its impact on raising economic concerns to the forefront of the global emotional wave. We expect another swing, and/or exacerbation to emerge between August 13 and the 16th. There will likely be diverse impacts from the manifestation of [scattered energies from space], but these are not seen as diminishing the degradation of global corporatism, even if the focus is removed temporarily from the economic concerns. The 'degradation' meme is here, and will swing to and fro among various different concerns of the moment, but in the main, it is emergent, and stable as a theme for life here on earth for the next few years at least.

Our data suggests that the pace of 'emergence' will pick up dramatically over the last half of 2007. It is as though the release period of March through September 19th was 'back end loaded' in that the deeper into the release we get, the greater the extremes which manifest.

And that is just the start of what promises to be one hell of a planetary roller coaster ride. Or as the data describes it explicitly..[rough tides/times ahead]. Apparently time to harmonize with universe and 'get rough' and 'get going'.

ALTA 0308 - Part Five

Asymmetric Language Trend Analysis Intelligence Report

'Changes in language precede changes in behavior.'

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

8.4.2007

Note: Entities are identified by a **blue** typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in ***italicized bold green***, and **red** when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

This report in the series created from 55.721 million reads of the 0308 series.

Meta Arts - Backward plates

As was noted in the recent email to subscribers, there is now evidence of a tectonic plate reversing its behavior...something that mainstream science has **never** considered as even remotely possible. It also begs the question as to the existence of 'subduction zones' as these may have always been a fiction of the theory, and not reality. As detailed in an article at [live science](#), were it is carefully titled as a 'fault going backward', the jist of the idea is that a whole tectonic plate has reversed its 'flow' and is, since 2006 {ed note: our 'pivotal' year} moving toward the center of the Pacific basin. Hmmm...now could tectonic plates going walk-about in odd ways cause a 'global coastal event'? It does beg the question.

Meta Data - Continuing Sets

In an effort to maintain continuity it becomes necessary to review those data sets which have been discussed in previous ALTA reports and which are continuing to accrue values.

These sets include:

Entity	Set(s)	Continuation aspects/attributes
Terra	Antarctica - rising land	the [rising land] set continues to build against the image of [altering currents within ocean/atmosphere] as a result of the rising [underwater] of a [bridge/connection] between Antarctica and Patagonia
Terra	Antarctica - energies from space	This continues to build, albeit more slowly, and the indications from the current long term value processing that it <i>*may*</i> be visible in late Winter, 2007/2008.
Terra	Rivers in atmosphere	grows at steady pace, but now also showing for manifestation in Winter, early December and onward.
SpaceGoatFarts	scattered energies from space	Indicated for initial manifestation August 13th through the 16th, but also showing up as a [repeat event] for December 2007 through end of March of 2008

SpaceGoatFarts	Antarctica - energetic 'bursting' over continent	Still growing, but again, with longer term values indicating a [visible] manifestation *starting* in late Winter (January/February 2008)
Populace/USofA	employment crash	continues to accrue values in all sets including the immediacy values. Early visibility of this very long term emergent circumstances is forecast to appear in late Summer, 2007 with a rise in [visible] aspects within Press entity as we approach the September equinox. The impact is to be very very very large if the George postulate and the totality of emotional sums attached are good indicators.
Populace/USofA	revolution/rebellion	Continues to gain values in both shorter term, and longer term value sets. The shorter term sets from ALTA 0308 are showing that 'rebellion' and 'mutiny' will surface in early Fall (October/November 2007), and that [bloody] aspects will be in place by March of 2008. Very important meme as the longer term values have very far reaching potentials which are explicitly referencing [multiple generations] to be impacted by the unfolding meme over the next 2/two years beginning with the Summer solstice.
SpaceGoatFarts	Contact/UFO	The UFO/contact and/or 'disclosure' meme grows with vigor in all sets since 2000. The very large level of emotional support values suggests that 'contact' or at least 'disclosure of contact' is a very real possibility within these next 2/years, and that is has a very high level of probability of appearing with [shocking suddenness] and *without* control by TPTB. This last is indicated by the continuing association with SpaceGoatFarts as opposed to the same descriptor set within ThePowersThatBe entity. Supposition is that the "best laid

		plans of aliens and men, aft gang aglay".
Terra	shaky period	The [earthquake quivering period] is still building values in the longer term sets. This may be indicative of the current 'shakes' continuing for at least another year. This *might* be a good thing as the 'ending' punctuation for the 'time of quivers/shakes' is shown as 3/three really good sized earthquakes spaced 2/two close together, with a small 'whew' breathing space following, then the last of the very large quakes.
Terra	fungus amongst us	This area of rising 'environmental' alterations to the planetary 'biozone' continues to grow. It has been characterized as 'fungus amongst us' as there will be the appearance, and forced coping, with new forms of 'fungal intrusions' into human/plant/animal life. The hopeful cynic wishes that 'fungus' would also be irritating to the space aliens as well.
Populace/USofA	power/energy rolling shortages	Mostly visible as rolling shutdowns of electrical distribution system. Indications are for a 'regional outage' which is [never adequately explained], and thereafter a very much elevated 'near daily' manifestation of [blackouts]. Though short lived, these [blackouts] will be very troublesome.
Terra	Land rising	Indicated for the extreme southern oceans including the very southern portion of the Pacific, the land rising aspect has elements which are suggestive of an emergence in 2008. Remains to be seen, but a change in accretion patterns is definitely taking place.
Terra	transformation(s)	This set is participating in the 'transformations' meta data layer, and is also directly held within the Terra entity and is suggesting that [rising lands] will [alter/transform]

		the [global oceans/currents]. This in turn is shown as [transforming] the global weather.
Terra	global coastal event	This set is continuing to accrue data in immediacy, shorter term, and longer term values. The ratios are suggestive of a 'quickening' or 'approaching' of the event itself. Our best possible estimate is late 2008, or early 2009. We *think* our timing clues are good at this point.
Terra/Populace/Markets	planes can't fly	This set continues to grow in Terra, and via cross links in Populace/USofA, and GlobalPop, as well as Markets entity. Long term values accrual rates would *seemingly* indicate an early 2009 timeframe.
SpaceGoatFarts	restrictions on movement, encounters with scarcity	Both of these aspect sets are participatory within the meta data layers of the same names. In both cases, the aspect/attributes gain significantly in Fall of 2007 with a push upward towards February 2008 where the data shows these aspect/attributes going to vertical within SpaceGoatFarts entity

NOTE: HOT LANGUAGE AHEAD

Populace/USofA - Probable Failure,Docent, DixieLand Prepares

Please note: our work *depends* on differences in language. The delta between various levels of assigned emotional values allows for our prediction as we watch the tone of the language shift. Currently our language base, including the shorter term values, but especially the immediacy value set is filled with lots of very hot language around the subject of 'terrorist attack'. This language has very *little* difference, that is to say, it is all running emotionally *hot*, therefore the "odds" immediately go against an accurate interpretation. Stated another way, we have very little linguistic shading in which to gnaw around for intelligence. Understand? The follow section is MOST PROBABLY WRONG since all the language picked up around the subject is very hot, it is difficult to even find the gray area, let alone entice any nuance from the lexicon in use.

Presented as is, that is, most probably wrong. And, if accurate, there is a (shock) *good* component.

The data set has shown a spike in values around the conjunction of [terrorist attack] and [usofa, continent, infrastructure]. This spike in values is significant, however, it is also understandable relative

to the total number of internet based nutters *predicting* such an attack. Some things to note: it is 'curious' that apparently disparate individuals/groups would have their emotions tweaked to the point of predicting similar near-term futures. In other words, it is 'odd' that seemingly separate persons would all be suggesting a similar event, and all having their predictions appearing in a near time frame to each other. Yes, a large percentage of such could be easily explained by the 'emotional chaining' of the internet experience. However, the current levels are slightly above what may be expected under such circumstances. Further, the predictions are all clustering around significant astronomical and subsequently significant astrological events; and also the clustering is tighter than a bell curve would allow; and lastly, there are number of 'real world stressors' in motion which seemingly, in the past, have been associated with increased ballyhoo about 'terrorism', if not actual increased risk of such an attack.

There are a number of indicators, even though they are less than robust, which reference the [opening of border region]. This is shown as [preceding] the [shift upward] of [wooden shafts/pillars]. This last is supported by aspect/attribute sets pointing to [precision] and [effort] being [required for success]. This last aspect/attribute set in its turn is supported by [questionable], and [uncertain]. So the [effort] required is very large, and requires a level of [precision] which is [uncertain] of being [provided/delivered]. Therefore the [effort] is shown as having a large probability of [failure]. This is also supported with the view from the data that the [effort] will be [unobstructed], or [unhindered]. However, even without [opposition], the data notes that [failure] is at least as likely as success.

The data set shows that [rain falling (in) torrents] will [provide a cloak] and thus allow the [sharing of benefits (provided) serendipitously]. However, from the view point of those [attempting the effort], the [weather] will bring mixed benefits. A problem will come from [carpenters/laborers] who are [smoking] under an [awning] at just the wrong place. This area is internally cross linked to the aspect/attributes of [unconventional] and [pole]. This latter aspect is supported by [shadowed ground], and [timing mechanism]. Further there are associations to [marsh] and a [brass mirror/reflection]. Noting once again that ALL the language is hot on this subject, we continue down the error prone trail to discover that the supporting aspect/attribute sets also include a [south] location, and associations with the [evacuated/emptied city]. This last has a past active, or 'fading' component emotionally which suggests that the [city] had *in the past* been known for [evacuations].

Also involved in supporting the whole of the linguistic set are references to [skilled workers] who are [needed] for the [effort]. This is apparently a very large change, and represents a [new level] of [mental resources] being [utilized]. Further the data supports this area with references to [crisis (in) recruiting] which produces a situation of [rising risk].

It is within the [rising risk] due to the need to [employ new levels of skill] that the *good component* appears. Within this level of supporting aspect/attribute sets, the data indicates that a [docent/female attendant] will be a [provident] set of [eyes/sensors]. This last is bit curious, but the supporting sets indicate that there may be some [remote] and [video] association with the [docent]. In any case the [docent] is shown as [seizing advantage] during a [lucky occurrence] in the [developing course (of) disaster], and [changing history]. This [docent] has an association with a [vehicle accident] that resulted in [only/merely] [limited/slight injury].

Also internally cross linked to the [docent/female attendant] sub set are aspect/attributes for a [shift to/towards failure] of the [scheme] with her appearance. As the story will unfold, it is the [docent] who [enlists/engages] the [aid] of the [single/individual carpenter] who is shown as [attempting/trying (to) reduce bad habits], and so presumably is *not* out smoking with his buddies in the rain. The data then points to a rising [lake] as a [point] at which [intelligence (is) gathered] which produces the [lucky circumstances] during the [planned disaster].

On the way to the [failure] of the [precise effort] there will be [aid/help (for the) thorn-scarred man], as well as associations to [literature] and [far-seeing/look-out]. There are also associations with [underground] in the actual, sub-surface meaning. Other than these, only vague and untrustworthy links exist. Those certain associations that we do have go to [failure] and the [docent appearance].

Remember, language is hot, delta is small, and the above is most probably wrong.

The Populace/USofA has unusual and specific references to what we will label as [dixie] as the connotation is more descriptive than merely the [southern states]. This [dixieland] reference is pointing to a [preparation] [wave/meme] which is being forecast as rising in the next few months as Summer moves into Fall. Unlike previous times of preparing for hurricanes, this level of [preparation] is shown as involving the [extremes] previously discussed as affecting the language of the Populace/USofA over Fall and Winter.

There are [full moon] associations with the [preparations] which will be [required of Dixieland]. This set is also shown via the movement of modelspace as gaining its largest value sets during the appearance of the late Summer, and early Fall [full moons]. The [full moon] set has a couple of curious references and cross links. Both are held under an aspect set which best described as [large profit, small fore-thought/preparations]. The cross links actually go to the Markets entity where it is being suggested, presumably, that a [large profit] can be had with a [small preparation/foreknowledge]. The foreknowledge presumably is about the [dixieland preparations]. The data set is also holding the same meme for those within the [dixieland preparations] in that [smart/foreknowledge] is showing as [producing large effects with small efforts]. This is our archetypical definition/descriptor of 'profits'.

The [preparations required] aspect/attribute has emotional summation values which are about 4/four times as high as the pre-Katrina forecast of an 'american diaspora'. We note that basically we were correct in our pre-viewing of the Katrina/Rita/Fema disaster excepting that we had forecast 13/thirteen millions to be 'on the road' when it was actually 1.3/one-point-three millions who were actually evacuated. At this point the indications are for [dixieland preparations] to be for a [weather/climate/terra_change] event to be several times larger in impact than Katrina. The indications within the details of the sub set are that [flooding] at a very large scale will be involved, *but* that the [flooding] will not be mono tonal in nature, rather it will come from [several/many sources] all at/near the same time. A *possible* scenario for multiple source flooding would include [too much rainwater] which causes local [flooding] as well as causing [excessive collections] of water to [accumulate/pile_up] within reservoirs such that [dams burst] and then even more [flooding] takes place. Of course, all this while the [too much rainwater] continues.

Terra - Police Tears, Rut Stuck

A conjunction of directly held sets in both Terra entity and GlobalPop entity are pointing to a descriptor set within the immediacy and shorter term values which we are labeling [tearing policemen/policewomen]. These aspect/attribute sets are under the [weather] sub set in both entities and both entities have a common descriptor set for [bad weather] which is shown as [making/inducing tears (from) police persons (on the) site]. The details within the supporting aspect/attribute sets are pointing to a situation in which [planetary weather] is so [affecting/transforming] of the [ground] as to create a [misery] which [induces/makes tears (in all who) witness] it. This is apparently being highlighted on the 'even the tough cops who have seen it all' are moved to [tears] as a result of the [damages].

These immediacy and shorter term values are pointing at Fall [weather] as being the [causative/manifesting agent] of the [dire situation]. This [dire situation] is entirely [climate/weather]

driven, and produces a [result not as planned]. This last aspect/attribute set can also be interpreted as [things go wrong in spite of plans], and/or as [things do not turn out as is wished]. This area has descriptors which go to the idea of [missing words] which can also be interpreted in 2/two significant ways; [missing/lacking authority], and as [incomplete planning/thinking]. In all 3/three interpretations the [missing words] are seen as [contributory] to the [outcome/development] of the [climate/weather induced problem].

The [problem] as it is described within the data is perhaps best interpreted as [advancing earth/ground]. There are many references within the supporting sets going to the idea of a [mud slide], but the totality of the descriptor set is *much* larger in vision. It appears to be forecasting a [shifting ground] event large enough as to fall outside what can be easily termed 'a mud slide'. This [advancing ground/earth] is further described as [beyond (the) capacity/ability (to) weigh] or alternatively as [off the scale]. This [off the scale earth movement] is supported with GlobalPop entity sets which point to [too massive] to [be able to cry], as well as [beyond repentance (as the) scale (is) too/excessive (to) grasp].

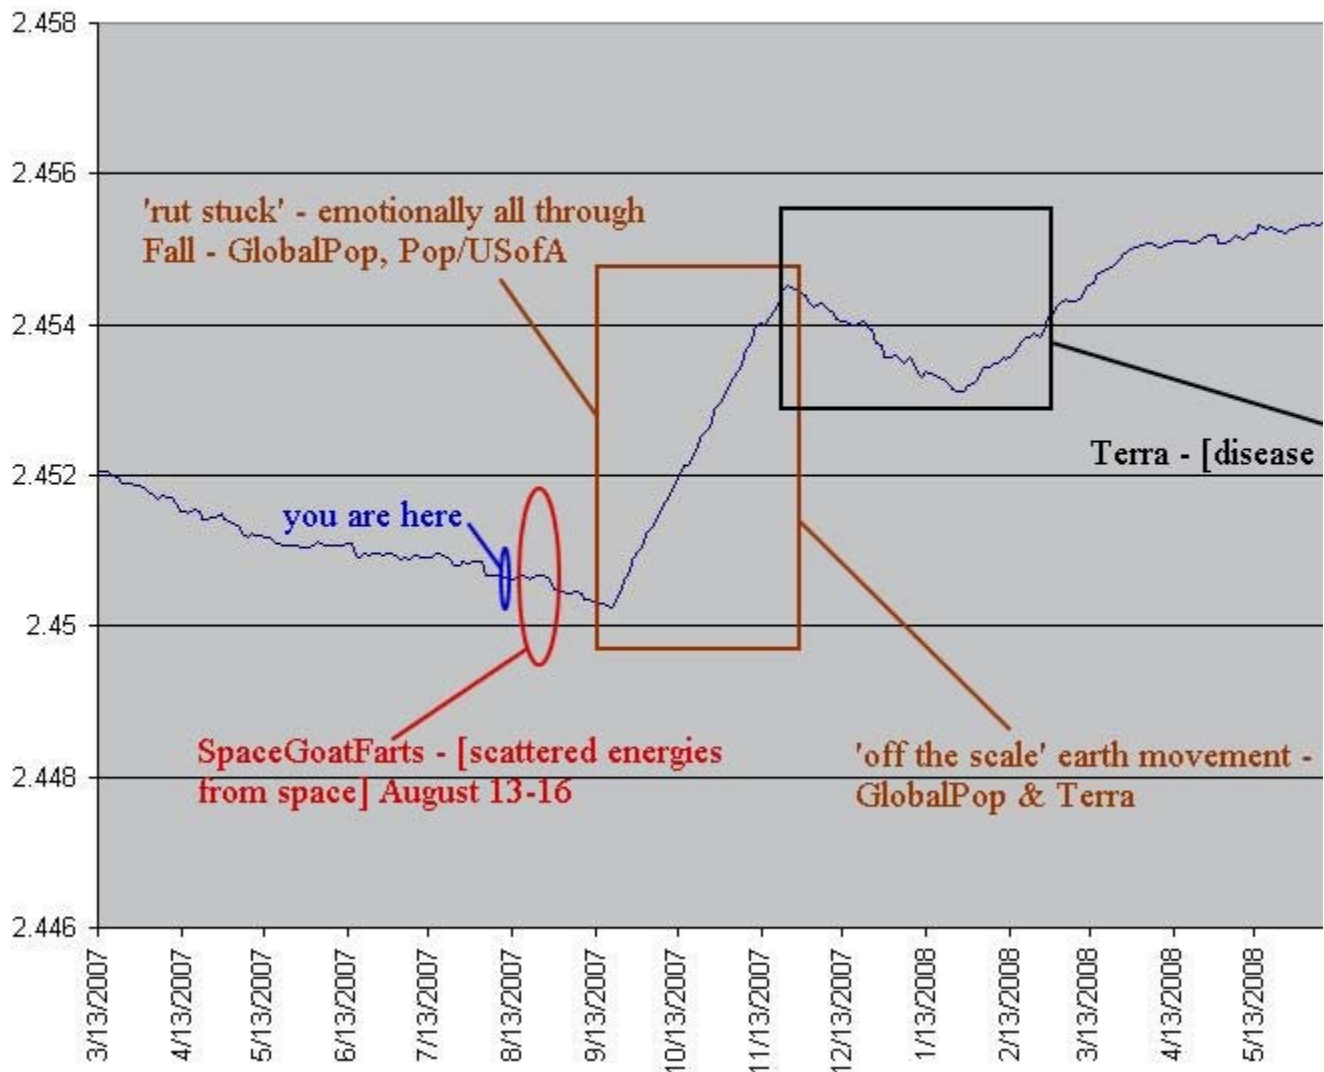

The forecast [advancing earth] gains shorter term values as the modelspace is moved forward and the rising aspect just shortly after the appearance of the main sub set for [advancing earth induces police tears] goes to [(a) long spell/period (of) bad luck]. This [bad luck] is showing as [propagating/growing] from the [moving earth], and the [bad luck] part spreads in all directions from the initial point of the [earth shift]. The [bad luck] is indicated as also affecting the Bushista entity, via cross links, as well as directly held sub sets, and the Populace/USofA entity both directly, and via multiple chains of cross links. The indications are for a [planetary impact] from the [advancing earth] even or perhaps in spite of the first appearances of this as a 'local' event. The data suggest that the Press entity will label this as local, even though large. The data set within the Press entity is described as [very serious condition] and its supporting sets go to the idea that the global mediastream will try *desperately* to *not* have to make that admission. It is also worth noting that the Markets entity in Fall also acquires the [advancing/sliding earth/ground] sub set and it shows as a negative impact meme.

As the modelspace is progressed forward, we note that basically all of Fall is taken up with the emotional impact of [moving/shifting earth/ground]. The data accretion rates do not allow us to calculate the actual appearance of the [shifting earth], but given the immediacy values, *and* the recent collapse of the roadway across the Mississippi river in Minneapolis, it may be that this is already underway. We note that there were 2/two smaller bridge collapses the day before the Mississippi river bridge collapse, and these may all be indicating {ed note: are probably related to recent earthquakes} that the process is already begun and what we are finding in the data sets are pointing to a rapid escalation of the impacts over summer. Many of the impacts are/were likely avoidable, but the data set points out that [preparations] are [absolute] and [required] in order to [mitigate damages]. Further this set is supported by aspect/attributes going to [last minute/second efforts/work (are/will be) useless]. The implications are clear that attempting to manage things after the fact will depend *entirely* on pre-pared-ness levels. Many of the [police tears] are cross linked internally to this area where we find that they terminate in bespoke [frustration] which is so emotionally 'hot' as to produce not [anger], but [helpless weeping].

As the modelspace is moved past the September equinox, the shorter term values start to dominate as the longer term values begin to accrue with some seriousness. An interesting happenstance has shown up in that the shorter term value set is identical down 54/fifty-four layers to the developing longer term values. Thereafter the sets diverge, though we note that the longer term set continues building its meme of [stuck (in a) loop/rut/channel/canal] over the [earth shifting]. The primary, dominant, and rising aspects/attribute sets *all* contain [limping] as the highest level of descriptor within the set. When the lexicon is examined, the aspect of [limping] also includes descriptors going to [reduced by half], and [unable (to) escape cries], and further as [circumstances reduced/limited, motions/actions hobbled/circumscribed]. The idea is that the [earth/ground advancing] will [remove resources] from the

[available pool] such that [restrictions on movement] and [encounters with scarcity] gain in 'building emotional tension' value sets. We need to note that GlobalPop has both [restrictions on movement] and [encounters with scarcity] going vertical within the entity as Fall progresses.

Long Term Emotional Trends

Another curious note around the 'stuckedness' of Fall, is that the Terra entity has an [illness/sickness] aspect/attribute set which is unapplied, that is it does **not** pertain to any of the internal Terra sub sets, but rather seems to be supplying emotional values via cross link to the 2/two populace entities, GlobalPop, and Populace/USofA. In both cases, reading the terminating aspect/attribute sets within the populace entities produces an interpretation that [earth movement] forecast within Terra **will** participate in creating [disease] and [illness propagation] conditions in Winter.

Within the Terra entity, there are some USofA specific references which suggest that the [north east] will be [unfavorable] due to [impacts of the earth movement/shift], and that for a [small parcel/unit] of

[time], the [south west] will be perceived as [favorable] for [continuance]. We note with irony that the data set shows that this view holds only a very small time itself, as the cross links the the Press entity suggest that as soon as the [planetary] scope of the 'problem' is known, all such location specific 'favorable' perceptions are lost. As a note at the meta data level about the idea of 'safe places', the modelspace suggests that vast [reservoirs] of [words] are going to soon be [pouring out/deluging/flooding] discussions about [where]. The idea coming across is that there will be a [near panic] expression of emotion as humans are suddenly motivated to [examine (the) placement (of their) lives]. This [panic] is a very well defined aspect/attribute set, and goes to the idea of a relatively short lasting process in which many people seek to [relocate]. This [relocation] phenomena *will* be commented upon within the global mediastream and has very high [visibility] levels. This [relocation] meme is *not* participatory within the larger [diaspora] data sets which continue to gain values.

Of course, it almost goes without saying that part of the supporting aspects/attributes contain [flooding] as a component of the [earth advancing]. Once again, as the [stuck in rut] meme is followed, it too gains large areas of support from [flooding] as the key emotional driver. The data sets contain [rainwater], and [rain (in) high/alpine places], and [rainwater surges/storms], and [rain columns/piers] as primary aspects within the sub set which continue to gain values as the modelspace is progressed through Fall and into Winter. Cross linked internally, and externally to the populace entities are sets which terminate in, and provide support for the [fungus amongst us] meme also previously discussed. It would appear, just as a guess by-eye-from-modelspace, that the [fungus] will participate heavily in the emergent [disease/illness] memes for early in Winter.

Acting as a contributor to the emotional summation values for the 'global coastal event' and thus providing support for the meme, the aspects/attributes of [rotting (something?) in oceans], and [putrefaction (from) oceans flowing on-shore] are rising within the Terra entity. Cross linked to the Press entity, and the Populace/USofA as well as GlobalPop entities, the [putrefaction/rot from oceans] has very high [visibility] sums indicating that it is likely to be a subject for discussion within the global mediastream. These aspects/attributes are also cross linked to the Markets entity, as well as internally to Terra where they terminate in both [oceanic influenza] and [disease] sub sets. The interpretation for the [rot flowing from the oceans] has us looking to the [edges/shores] of the [atlantic] ocean, in both hemispheres, for the first incidents of [sick/illness making/inducing winds/smells from the oceans]. There are clues within the data sets that a [rupture] or [seizure] {ed note: old style usage of a 'rope seizing until breaking' which is a metaphor for extreme tensions} causes the [release/farting/blowing/explosion/expulsion] of [foul smells] which are described as being a [cloud] of [sick/ill making contaminated airs]. This area is also cross linked internally to a descriptor set for a [large] and mostly uninhabited by humans [marsh/marshland/eutropic estuarine environment] where the [foul illness of the ocean influenza] is indicated to [induce/cause] a [poisoning]. Much of this *appears* to be associated with the longer term trends which first begin to appear within modelspace around the December Solstice. This is *not* a guarantee of the timing, merely the only hint provided by the data sets.

As a temporal marker, there is an appearance, which is to say that our old eyes *seem* to be able to pick out a slight distance in time between the [foul smells from ocean influenza], and the first manifestation of the 'global coastal event'. Along with the [rotten smells], which is most probably the release via rupture of a methane layer in the ocean mud, there are nearly identical Fall into Winter indicators for [reactions (to) earthquakes].

Bushista - Wishful Fantasy

As is shown in the chart below, the immediacy value processing for this part of the ALTA 0308 series is pointing to a flare-up in Bushista [delusion] just at the point that foreigners will also be 'flare-ing up' in a

The Bushista entity immediacy values have filled with rise in [self delusion], and [messiah complex] descriptor sets with a large increase in their emotional release values about August 13th or so. While we still have the [scattered energies from space] being forecast for that time by the SpaceGoatFart entity, this particular up tick in Bushista [delusional thinking] may be related more to [recess] of Congress, and a subsequent [drunken revelry] while [on vacation]. IF the SpaceGoatFarts are correct, and there is some form of sudden, and rapid input of energies from space to earth at that time, we may be witnessing universe crafting another Katrina style 'test' for the Bushies in which a [national emergency] calls for level headed thinking and quick response, something lacking under the best of circumstances in Bushista, and at this point the data points strongly to [delusions], [megalomania], and huge doses of [wishful/fantasy thinking] in lieu of any actual analysis, and therefore the outcome of this particular time will be....anyone? anyone?....

behavior *just* as the GlobalPop entity is forecasting a huge crisis and [responsive actions] by Iran. The Iran response comes as a result of [faced/fore-front] [aggression] and will include a [creative/created diffusion] which is forecast by modelspace as [applying/engaging dispersion/deflation]. It is this [creative deflation/disengagement] which will cause such [flummox/flailing] within Bushista.

As George Orwell notes, In times of universal deceit, telling the truth is a revolutionary act. Apparently this is also the idea being expressed by the rise of the [secrets revealed] meta data layer within Bushista which coincides with the turn around to building emotional tension shown for September 19th, early AM (UTC). The [intensity] aspect/attribute set within Bushista also rises in emotional value along with the general upswing in building tension sums from September 19th to approximately November 28th. Within the Bushista entity, the change to release language summations within the [intensity] aspect occurs on November 24th within the modelspace and is thereafter very choppy in its summations. This buffeting of the values to both sides of the emotional even-keel line is likely indicating a period where the [intensity] of [obstacles] and/or [attacks] on the Bushista entity have reached a level where resources are severely strained just trying to cope.

Markets - Turning Point

The Markets entity has been left for last in this report in order to gather as much of the immediacy values as may be possible prior to processing and the interpretation. Given the levels of [visible] [anxiety] showing up in 'real life', which is to say, on the global mediastream, the forecast in a previous ALTA series of the [usofa dollar near-death-experience] for Summer is manifesting as was predicted. In the first discovery, some months back of the dollar NDE, the modelspace provided little clues as to the outcome of the 'near death experience', and we had to content ourselves with merely being aware that it was coming, and the approximate timing. The manifestation forecast for the dollar NDE ran from early Summer right up to our forecast September 19th {ed note: between 5:05am and 6:22 AM UTC) emotional tension 'turn around'. At the time of the first discovery within modelspace of the NDE, we extracted the inference that the September 19th emotional reversal was most likely the result of the 'dollar woes'.

The data sets, in both immediacy and shorter term values, are still gaining details about the currently manifesting [dollar nde] which is being characterized by the global mediastream as a 'credit crunch', and frequently further described as being 'local to the LBO markets'. In both cases these are misleading labels and descriptions. The data sets are still insisting that the [core/root] of the [quavers/tremors/shakes] within the [financial structures] is entirely [dollar flooding] via [repatriation]. As such is the case within the descriptors in Markets entity for the current situation, there is *no* hope that the Federal Reserve organization will be able to affect the situation to *any* degree.

The global mediastream is now focusing emotional tensions onto the upcoming 'fed meeting' with the idea being that the 'fed' can 'fix' this situation by 'easing' their lending policies. This could not be more wrong. Outside of all of the rational arguments that the Fed has no leverage any further within the global monetary system, we can turn to the nutjob modelspace for a quick look at this coming week and month for a preview of the emotional reaction within Markets to developing circumstance.

Visually, the modelspace is confirming that the great gobs of 'release language' about the markets which has been showing up on the global mediastream will *not* abate. In the modelspace, the next week and month are showing as being [dominated (by) release (of) distress]. This last is referencing the [visible] aspects/attributes of the release language which will appear over these next few days and into the rest of the month. As had been forecast in previous ALTA reports, this will be the defining [bad summer] for Markets. Some significant levels of the language goes to the idea that [incredulity] will be the rising emotional base, and along with it, *especially* for the people 'in the biz', will be [cognitive dissonance]

as circumstances manifest *outside* of their mental models of the world.

The dominant aspect/attribute set within the Markets entity and tied by modelspace to this next week specifically, and further into August is [revolution]. We need to note that within the lexicon the context for [revolution] is specifically defined as [over turning/replacing] with defined emphasis on [infrastructure]. This is a caution to avoid reading [revolution] relative to Markets as meaning a 'turn around'. There may well be a turning of the markets momentarily, and some expectation of that if the Fed will ease its monetary policy, but the data set is very clear that it is the [fiscal/financial system] itself which is being [revolted against]. The modelspace is offering language which suggests that the huge imbalances of rampaging global capitalism at the service of a very small few families is/has [failed].

The modelspace accretion patterns suggest, given the [visibility] factors, that the global mediastream will be filled with language relating to [reform (of the) old (into the) new], but in the main, much too little, and decades too late. The data is indicating that [verbiage] will increase [exponentially] as the [debacle continues] over this next week and further into August.

We need to remind that the September 19th through to December building emotional tension period indicated on the charts in this series is still running at greater than 42/forty-two percent of its emotionally driving language from [financial] aspects. In this last week's processing, the rising aspect/attribute set is dominated by [peril] with supporting language going to the idea that [past peril(s) surface/appear]. This [peril] is showing as [initiated/beginning] with [old/grandfathers/ancestors] and continues with the [mentally infirm/ill]. Further the [peril] within the Markets will, over these next 2/two weeks, begin to [drag/draw/coerce] the perennially [weak] of [will] into the fray, and this is taken as meaning [politicians]. Hmmm. Probably Not a good sign.

The data sets show that descriptors for a [wide road/junction] which [leads (to) all destinations/everywhere] is to manifest. This is metaphorically linked to [considering *all* options] which is a key element of a [crisis out of control]. That is to say that within the normal course of [business] almost all [decisions] are [limited/constrained] by the nature of the problem itself. In the software business this concept is expressed by 'as soon as you can effectively describe the problem, you have the solution'. Unfortunately, the data is indicating that the [problem] is so large, and so systemic as to defy [labeling/appellation] by [those/persons within (the) realm/sphere]. Therefore since it cannot be adequately described in a succinct fashion, the nature of the problem is *not* yet really appreciated, and therefore *cannot* be solved by any of the means/efforts which will be proffered over these next 2/two weeks. The implication from the data set is that it is *only* these next 2/two weeks in which even the idea of a 'solution' will be considered. This is to say, that following these 2/two weeks, more of the real scope of the problem will be grasped, and [hollow plans] will be less offered as more of the populace becomes involved in [reacting (to the) revolution/over_turning] of the [global financial markets] currently manifesting.

We need to remind that in ALTA 1207, and in 0108, there were suggestions from the data that the 'global financial/trading system' would not exist as we know it following September 19th. This impression *still* dominates the modelspace, and if anything is now being reinforced by the emerging crisis in the financial world. Whereas we could not, those many months ago, envision the nature of just how a [global trading system] could collapse so rapidly {ed note: collapse shown from June 28 to September 18}, the manifesting circumstances of these last few weeks of markets instability are clearly pointing to further escalation of the 'crisis' as easily being the mechanism that can put a halt to global trading patterns. It was the change in modelspace between 1207 and 0108 which brought us to the necessity to redefine the lexicon due to so many of our standard entities and contexts actually disappearing from within their host entities. Until the recent emergences within the financial and political worlds, the idea that the modelspace has 'gone off its nut', or broken down due to inherent flaws

was the thinking of the moment. However, recent events tend to prop up the outlandish-to-consider idea that the 'dollar is dying'. And with the death of the USofA dollar in the context of a global reserve currency, comes the death of a global trading system.

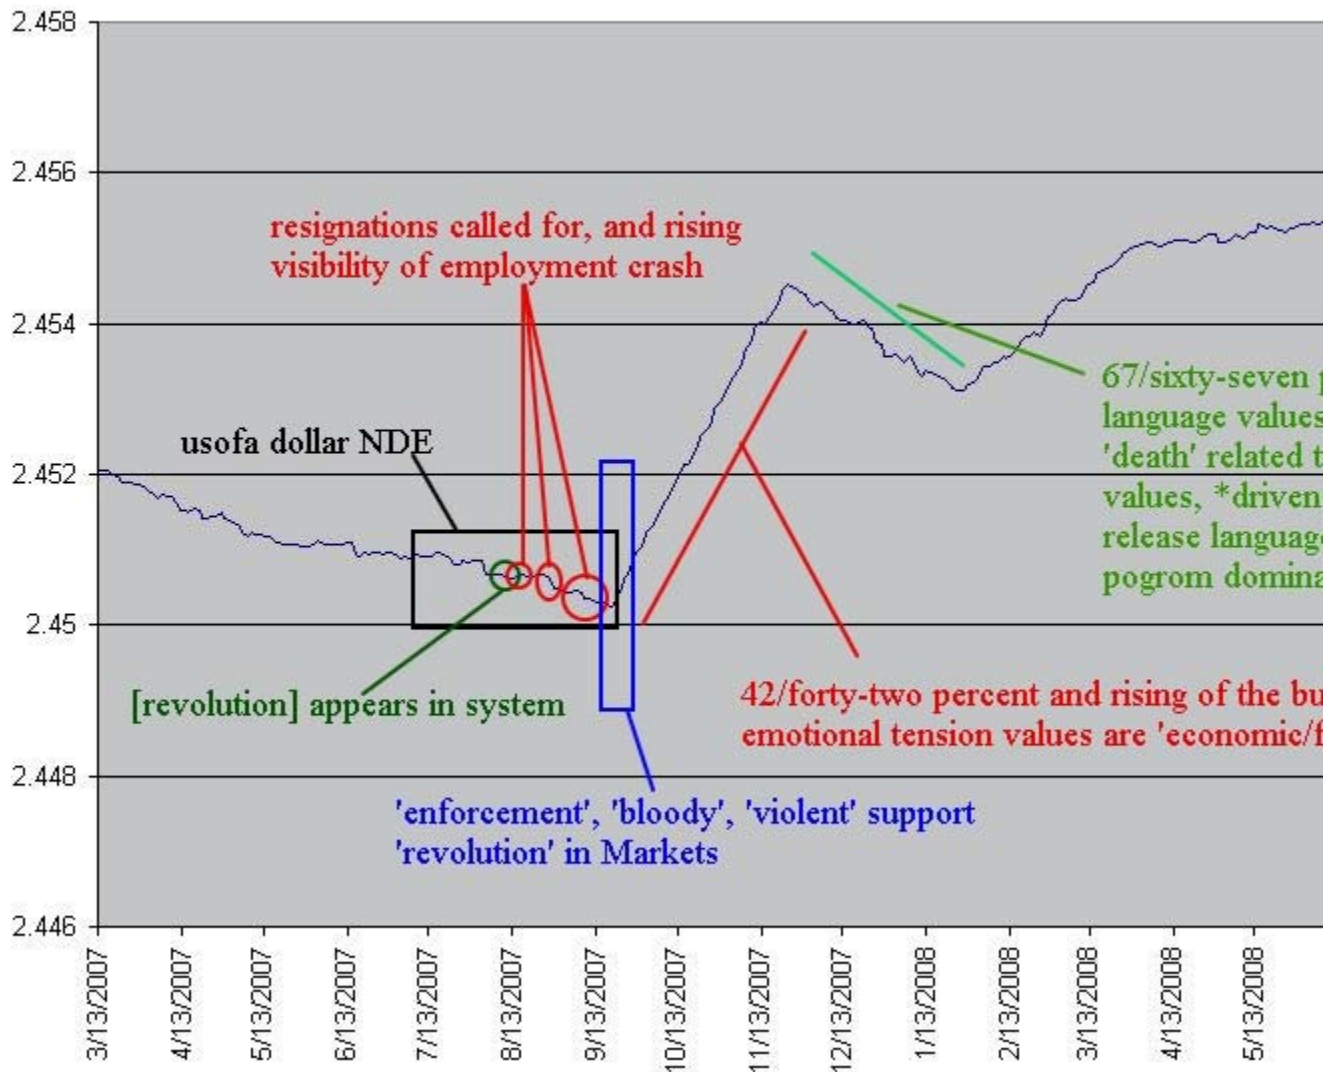

We need also to note that, as predicted, the very-soon-to-be-visible [employment crash] is now manifesting with the highest levels of bespoke [fears] also having the highest levels of [visibility]. The 2/two primary areas identified within modelspace those many months ago were [housing/construction], and [financial's]. We note with irony recent 'touching concern' being expressed for 'all those people on Wall street' who are now seen as being at 'risk of losing their jobs'.

So our interpretation of the [revolution] meme coming into dominance over these next 2/two weeks is that it is the 'global financial abstraction system supported by the notional USofA dollar as a reserve currency' which the modelspace is holding as the object of the [revolution].

For the immediate period of this coming week, and likely relating to the Fed meeting in ways we will only appreciate after the fact, the data set has [revolution] being primarily supported by [6/six months] and [cyclic efforts] and [long period (of) bad luck/ungracious actions]. These aspect/attribute sets in their turn are supported by [harmony not possible] and [new jobs/resignations/firings]. There are repeated references to the [6/six months cycle] and we are reminded that our February 28th prediction of a markets hiccup are now, coincidentally, 6/six months behind us. The current references are clearly pointing to an [echo] of that February markets drop, and now are suggesting that the [last step] is the [remaining option/path]. The indications that we are taking from the modelspace, its entity movements, and the lexicon of descriptors accruing is that the dollar will *not* pull through the current manifestation of the [near death experience]. Of course, we are also basing this conclusion on previous forecasts from ALTA reports and as such are nutjobs, and most likely we are wrong. However, it will not take more than the next 2/two months to tell the tale, either way.

Within the very large and growing mass of [crisis] related aspects within Markets, there are a number of new, immediacy value supported, aspects going to the idea of [new boss], or [replacement of incompetents/buffoons/corrupt]. These have high [visibility] values and should appear within the global mediastream over the next month. The modelspace is forecasting the first of these [visible calls for the replacement of the buffoons] as beginning late next week, thus suggestive of dissatisfied Fed customers who will [decry wrong thinking] and [demand resignations]. Along with these [replacement] memes, there is also another meme which seems to also begin late this coming week which points to the [rising (to) prominence] of a [wise fellow] who will apparently [become great] as is [demanded of the times/period]. This last meme grows very rapidly once the modelspace is moved past the emotional tension shifts on September 19th. It is in late August and early September that the [visibility] values begin to scale upward within this sub set, suggestive of the slow appearance on the global mediastream of this particular [angry man] who will [collect praise] through [spitting/rejecting slave status]. This last is a bit confusing, and the lexical sets within the details levels contribute to the confusion by suggesting that the appearance of this person during the [rising visibility] of the [revolution] meme will *not* be markets or even fiscally focused, but rather will relate to first [demanding equality (with) TPTB] in [knowledge/information], and then as August burns into September, the [demands] aspect is replaced with [revolution] supporting [bloody] and [violent] and [enforcement/compelling]. These last aspects/attribute sets are early edge shifts to [building emotional tension language]. They begin to appear within this data set near September 4th, and thereafter slowly grow until the 20th, when there is a very rapid expansion in nearly all the numeric values associated with the data set.

Long Term Emotional Trends

The progression of the modelspace over the course of the rest of August is not reassuring for the [usofa dollar] as aspects/attribute sets of [bad omens], and [great disaster] continue to accrue over the month. The [vigor] of the [dollar] is seen as [spiking] and then [deflating (to) death]. These aspects are repeatedly reinforced currently, and continue to gain value over the course of August. Then in September **all** of the associated areas gain [visibility] values with strength suggesting that the [revolution] in the Markets will be THE subject of the month for September. Along with the [revolution] meme, as the Markets entity is moved across August, the largest single aspect gainer for emotional values is [disaster]. This aspect heads a very robust set which has [disaster flowing] from the [dollar coma] into **most** areas of life. The [disaster] aspect is fully populated, extensively cross linked and supported by diverse aspect/attribute sets going the the seemingly reasonable idea that no part of [life] in these United States will be **unaffected** by the [dollar disaster] by late September. We need to also note that the [usofa dollar] sub set itself is forecasting a [restrictions on movement] of the [dollar] to appear before September the 13th. These [restrictions on movement] are also described as [seizure] and [cessation]. Note that the data set shows the [restrictions on movement] to be a [middle condition] which can also be interpreted as [temporary effect].

Along with the [disaster] aspect for the [dollar] and its progression through the [restrictions on movements], there are several data sets defining new [personalities] which will have [visibility] as a result of the [developing/manifesting] crises. These include the appearance of the [strong female] from the [lower class/untouchables] who has been indicated to be a pivotal and temporally key person in the unfolding of future developments. NOTE that this is explicitly *not* a politician, nor current public figure, and the data suggests that once this [female personality] arrives on the global mediastream stage, there will be a [wholesale/large/total restructuring] of the ThePowersThatBe political [parade]. We further note that there are Markets cross links to our [old man leading survivors/evacuees through the long night in the woods]. There are also repeated cross links to [revolution] within [social order] within Markets. These come with a small surprise in that many of them are dominated by Terra entity lexical data sets.

The data sets also indicate that [officials], very likely [politicians] will be [publically ridiculed] for [praying for economic blessings] *just* at the critical time of the [impact of scattered energies from space]. The implications are that the [act/words of public prayer] will be seen as being [rejected] by [providence] and the response will be [public denigration] of the [politician]. This is interlinked with, and cross tied to, the Press entity, and its internal sub set of [attacks/assaults] on [presenters/personages]. Again, high [visibility] rising through August and into September. We note that previous ALTA series have forecast a very [public humiliation] of a [ranking member/senior] press fellow in a [public eatery] which will [seen] by most. Sooo...the implication is for yet another instance of net based video distribution of this [public assault]. We offer these instances as temporal markers which are indicated to arrive prior to the turn around in emotional tension values.

Conclusion: Part Five -Great Expectations, AmRev2

Unlike the C. Dickens novel, the [great expectations] of the Markets entity are shown as being [unrealized]. The immediacy values for the Markets entity have a curious double cyclic connection. In bespoke language within the immediacy sets are clear references back to the February markets drop, as well as pointers to the next release period of December 2007 into 2008. In both cases the message that comes across is that the current crises within the markets have their first visible roots in February, and components of that episode will resurface to visibility over these next few weeks. Further there are long range values suggesting that the 'dire death and violent bloody revolution' of the coming release period are directly associated to the [rape] and [lies] which are [core values] of the [current crises]. The implication is very stark that [desperation], and [execution] of the [hungry/dispossessed] will drive the revisitation of the [revolution] meme here in the USofA.

We need to note that AmRev2 as we are labeling the second American Revolution, has very large emotional values for [secrets revealed] and is totally dominated by Terra cross links which suggests that it will be a very untidy period in the social order played out during a very chaotic time in [climate/weather] which will also [direct] the [resolution/outcome].

The modelspace is, as noted, coming to be dominated by various connotations around [revolution]. These memes are all coalescing in different entities such that a conjunction of visibility values suggests that the September 19th date *may* have events which [propel] and [compel] the predicted emotional response.

As the [terrorism card] may be attempted by TPTB/Bushista, it is worth noting that *IF* that is the case, the modelspace is forecasting a huge [swelling backlash/snap_back] against the 'establishment' at all

levels which is consistent with the [revolution] meme gaining strength at this time. Trouble comes, or so says the modelspace. As an aside, look for the appearance on the international music scene of a song which [updates/makes_modern] the previous 'revolutionary anthem' of "four dead in O-hi-o".....

This concludes Part Five. We will process the immediacy values diligently over the next week and may send out notification emails should anything meet our criteria of urgent. Part Six, the conclusion of this series, is expected to post by late next Saturday.

This report in the series created from 69.63 million reads of the 0308 series.

Markets - Gold/Silver/Commodities - Spring Rolls Rot

The immediacy data sets, which extend from August 13th through the rest of the month and up to September 3rd {ed note: lunar eclipse}, for the Markets entity are dominated by [panic] as the primary aspect driving emotional sums. Within [panic] there is a distinct sub set for [gold/silver] as well as a [commodities] in more general sense sub set which itself also contains a distinct [gold/silver] sub set. Make sense? As gold/silver was once [money] it rises to that level independently of its status as yet-another-commodity. What is interesting is that both of the sub sets for [gold/silver] within Markets are each, separately and with differing linguistic structures, making the case of [guard against]. Since this is under [panic] we are interpreting this as a specific warning: to wit, [DON'T PANIC] over the coming [state changes] in the markets globally.

Also specifically represented within the immediacy data are lexical groups which describe [currency] in many forms, including both specifics as in [usofa dollars], as well as the more general case of [money, convertible paper, debt]. In all cases the dominant, or rising aspect/attribute set is headed by [panic]. Hmmm. Probably suggesting a bit of emotional thrashing around. Bearing in mind that we *always* err on the more extreme side of things, this *still* is likely not a good sign.

The [panic] aspect/attribute set is filled with references to [lawsuits]. In the lexicon, the secondary descriptor for [lawsuits] reads as [contention] which may be a better fit for the described emerging circumstances. Within the main sub set for [lawsuits/contention] under [panic] there are several areas which are participating in the meta data layers of [secrets revealed] {ed note: now going vertical in Markets entity}, [duality], and [transformation]. These latter 2/two are mutually cooperating and form a further sub set which may be best understood as [shift] which is [beyond taking back/undoing] into a [new arrangement/ordering (of the) human world]. The idea from the meta data layers is that the what-is-coming state of being derives from current conditions, and that the immediately manifesting conditions of these next few weeks is merely the [transition] into [emerging transformation]. This latter will take some months or even years to mature to the point where it will be recognized as the [usual state of affairs], and that [transformation] will not be painless. The meta data layers are arguing for a [global] [seizure/clasping/grasping/hardening] which may last for months...and this is the 'brief transition phase' before the *real* [transformation] begins to manifest. So, in keeping with our 'années appelées' or 'named years', and given that 2007 is the year of emergence, then the [manifestation] being specifically referenced within the aspect/attribute sets within the longer term data which provides underlying support for the meta data layers, then the [manifestation] of the [new arrangement/order of the world] will be most [visible] in 2008. Now do *not* confuse the [new order/arrangement of the world] with the NewWorldOrder. The NWO is specifically modeled within our lexicon and is not being referenced here. Within the context for the [new order of things] which is now barely emergent, and hardly visible except to those aware observers actually seeking the seeds of the future in today's events, is a [bubbling up] of [newly released secrets] which will act as the [primacy/mover] for [transformation/change] of the [balance/state_of_affairs] which exist today. In other words, the [secrets revealed] within the [from_the_bottom_to_the_top] movement now emerging, will act as the catalyst that [ignites] the [transition]. We need to note that the data sets are quite clear that the [transition] period, and the [excesses/extremes] {ed note: please re-examine the PopUSofA discussion within this series for extreme language} *are* not to be [confused] with the coming [transformation]. Rather the [transition] time rapidly approaching, and which appears to begin on August 13th, late in the AM (UTC), will be not like the longer period of [transformation] of the [global social order] which will manifest in 2008. However, in order to reach [transformation], first the [transition] must be [survived/traversed].

To return to the primary aspect/attribute set of [panic] we note that universe knows no limits on its

manifesting irony as the data describes [officials] with [cited/referenced] [documents] which are [touted] as [savior]. The irony presents itself as a descriptor set for the [documents] which shows that they [may not be approached]. This descriptor set also contains words for [validated] and [audited] as well as [surety], and [concrete/material]. This aspect/attribute set is also repeatedly cross linked to the Press entity, and contains very high emotional levels around [visibility]. Reading through the data set suggests that a situation will develop, likely around [gold stores/hoards] and their [audited reality] in which an [official] will [deliberately] and in a [stately] way, [attempt] to [calm panic] by [pointing (to the) sky] {ed note: blue sky'ing us?} where there is [to be seen], but [not approached], a [document proffered as salvation]. This area is internally cross linked to the [gold/silver] as [money] sub set and we are interpreting it as being a USofA specific pointer to the lack of [audits] of the national gold supply *supposedly* held as guarantee/reserve by the government. The real irony comes about in that the [officials] are shown as making the [early stage/initial formation of panic] and turning it into a [nearly complete disaster] by bringing up, in a nationally visible venue, the supposed [surety] of the [gold hoard]. Of course this just begs everyone to [demand] [to see/examine] the [pile of gold]...and that actually furthers the [panic] considerably. This scenario shows up nearer the end of the month, as the [panic] gains [visibility].

Deeper within the [panic] sub set are growing aspect/attribute sets for [calamity] as has been discussed in earlier parts of this series. The [calamity] data set grows, and its rate of growth itself begins to grow as more of the immediacy values are folded into the modelspace. Sooo...a reasonable interpretation is that once the [panic] starts in, the [exposure] of the [calamity] actually [boosts/grows] its emotive force with each [visible reference]. And these [visible references] increase dramatically in late August and early September.

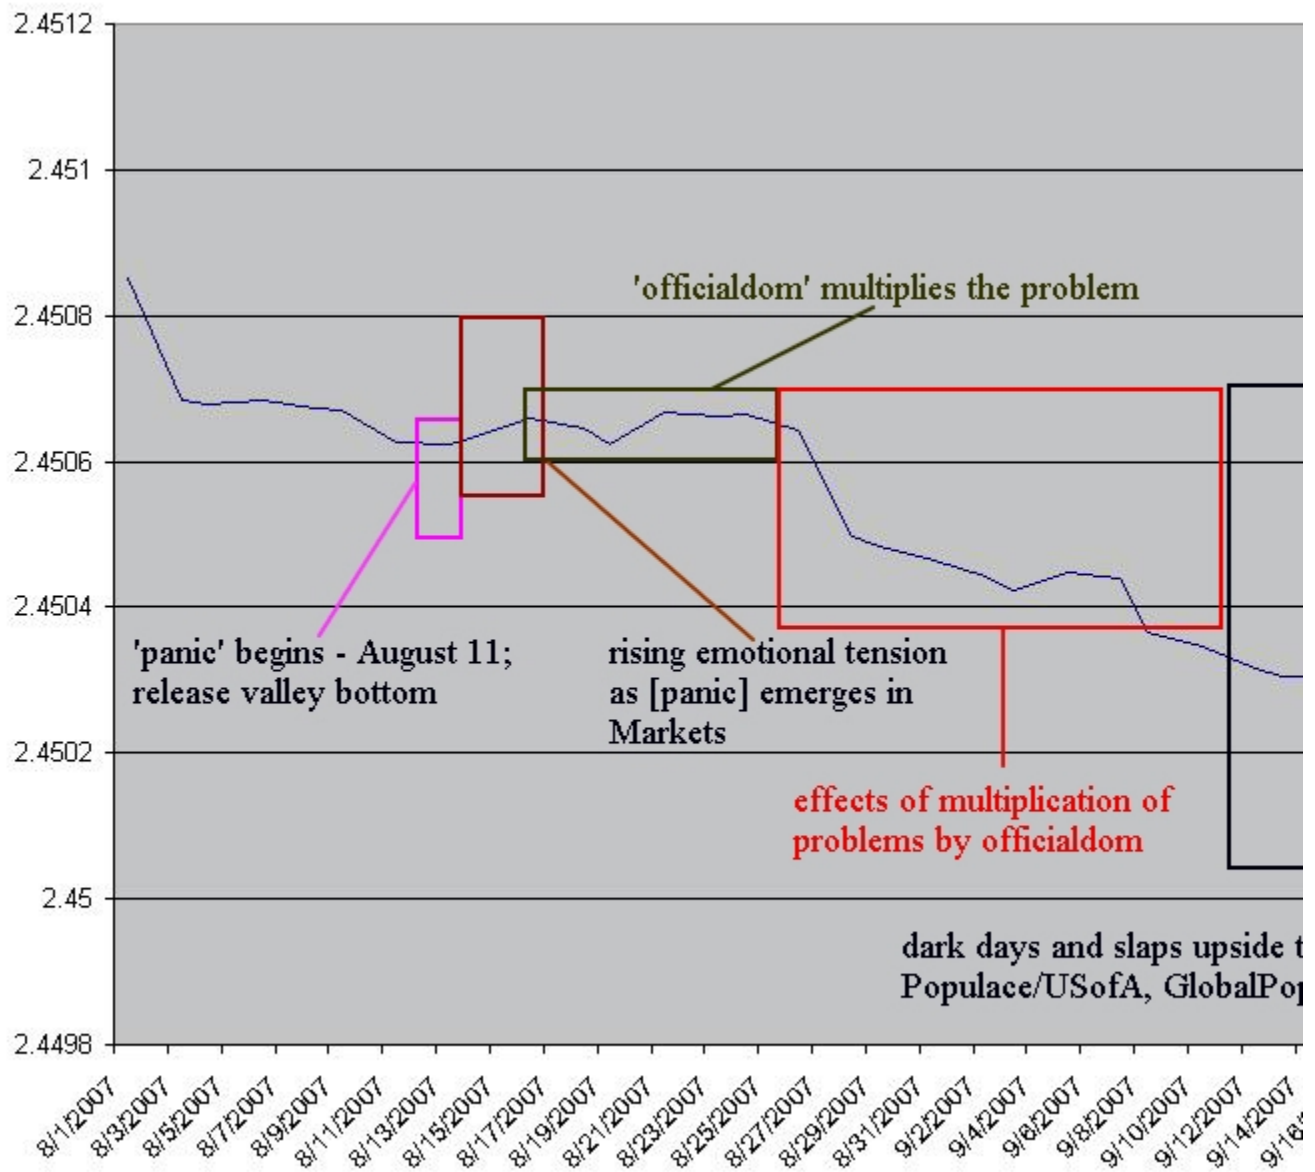

Within the Markets entity the sub sets branch and radiate out from [panic] starting as the modelspace is progressed from August 13th. Within the first changes within the Markets entity we note that [panic] gains the support of a new data set going to [dangerous position] which is further described as being like [standing on a crag/rocky_outcropping, unknown below]. Within this aspect/attribute set, the primary support comes from [documents] which in turn are described as being [those writ/created in Spring]. The [Spring documents] are indicated as the proximate trigger for the release of the [panic] beginning on the 13th and going forward. The [Spring documents] are further described as being [proxies] for [piles of coins/wealth]. These [proxies] or [paper debt] instruments will begin to [disintegrate] on August 13th and will rapidly lead to a [parade of officials] who will all try to [enhance calm]. The data set is showing that this will *not* work, and as has been discussed in previous articles in this series, the [effort] from the [officialdom] will [seal] the [story] on [panic]. This basically operates on the proven natural law that when gov't says "don't panic" is probably *the* best time to begin doing just that.

The other supporting images of note for the [panic] sub set include support from [shock] which itself is supported by [wave] and within this aspect/attribute set the support shows that [waves] of [shocking awareness] will hit like [claps of thunder] causing [deadening (of the) senses] and [reeling (on) feet/unsteady_balance].

Much of the [officialdom] sub sets are either directly held or internally cross linked to the aspect/attribute set of [authority] which itself is hugely cross linked over to the ThePowersThatBe entity. Again, noting previous reports on ThePowersThatBe and the [risks] to the [300/three hundred families/corporations] projected for late this Summer and into Fall, we need to report that the current immediacy value processing is pointing to a nexus of several of these inter-related forecasts *all* becoming emergent over the next 3/three weeks beginning on August 13th. The emotional weights associated with TPTB entity cross links from [officialdom] within Markets for August 13th through the 16th are over 100/one-hundred times the values shown for February 27th of this year in the Markets entity projections of the time. These are emotional values and *not* price drop indicators. However, just

finding [panic] as an emergent primary value set does not engender confidence for future stability.

Please note that we expect this report to be posted on August 11th, and that it is the actual valley floor for the release language and the inception of the [panic] support accrual prior to the release of the [panic] language on August 13th. This point also has Press entity cross links which are going to the idea of a [release/leak] of information which will be [labeled] as the [seed of panic]. This is shown as beginning to be [visible] on the late morning (UTC) of the 11th, though the first real manifestation will be seen on the morning of the 13th.

While the onset of the [panic] release is the 13th, the real impact would not seem to get [rolling/sliding] until our forecast [bad word] for a [bad summer] in the markets coming from [bad/lying mouths] of the [petite people/politicians]. The data sets are explicitly referencing under the influence of the [secrets revealed] meta data layer that [officials], after their rah-rah-rah...happy-times-are-here-again speeches,

will be seriously taken to task over previous [lies/falsehoods] under a basic premise of 'why should we believe you now after all the lies of the last decades?'...this [interrogation] of the [politicians/corrupt_officialdom] by the [press] will *not* alleviate nor defer the [retribution] which will be [extracted] from the [skin and scalp] of the [press/presenters] over their [complicity] in the [mountain of lies] which is showing as [collapsing] into [exposed granules/datum] as the emotional tension values begin their upward swing in late September. We note that the [collapsing of the mountain of lies] has descriptor sets which read a lot like the 1979 Iranian revolution in which the USofA embassy was taken over and all the 'shredded' secrets were rebuilt. Here we find language going to [mobs] which will [ransack/search] the [house/assemblage] and also [sack the offices] of [power/officialdom] in their [quest for secrets]. These [crowds/mobs] are shown as being very [diligent] and [focused]. This last aspect/attribute set also contains descriptors to the effect of a [large search (for a) politician/corrupt_official] who has [gone missing/fled]. In this case there are also indications that there will be [rewards] offered for the [capture] of the [errant official].

Also within the supporting sets for the [panic] we find explicit references to [100/one-hundred millions] which will be [lost] a total of [100/one-hundred] times in what is being shown as [9/nine] [waves/crests/hills] of [activity/selling]. It is rare for numbers to survive our search for archetypical references, and when they do we have a tendency to pay attention without relying on the accuracy of the actual numeric value. In other words the data set forecast 13/thirteen millions to have been evacuated during Katrina/Rita, and reality manifest evacuations of only 1.3/one-point-three million. Sooo...meaningful, but don't bet on the reality emerging just precisely to the numeric value.

What is clearly coming across is the [destruction] of the [treasures] of the [populace]. This is being interpreted as the 401K's and the mythical [equity] in either [property/housing] or [debt instruments]. The data set is actually forecasting the [destruction] of the [wealth] of the [nation]. While this is dramatic, it is likely not really accurate in that the [wealth] has already been destroyed, and what is now emerging are merely the awareness, and acknowledgement of the [destruction of the dollar].

It needs to also be noted that the [officialdom magnification of problems] component will have echoes in January and February of 2008, and that these will involve a [clash/conflict] between [divided houses/tribes]. The [conflict] showing is supported by imagery of [blood] that is [ankle deep]. Probably not a good sign.

While the immediacy values are dominated by the rising [panic] aspect, the shorter term sets point to a [limping/crippling (into) Fall/Winter] with [reductions] coming as [capitalism extremes] start to show [degradation (unto) death]. Amidst this are longer term values just coming into focus which are pointing to a very [unsettled] long range future with at least some component of [military control] coming to [affect] the Markets entity in late Winter, early Spring of 2008. While it does not look, at this point, to be a domestic military coup here in the USofA, the data sets do have linguistics which could be read that way from the Markets perspective. Again, probably not a good sign.

There is some point, albeit only at an unknown level of probability, to sketching out paths which *could* result in the descriptions being presented by modelspace. Within our data we have a reasonable level of confidence, given recent past correlations between our projections and actual developing circumstance, that September 19th marks a serious shift in emotional trends for the *global populace* of humanity. Further, the analysis *still* continues to point to *most* of the emotional energy of that shift being driven by 'terra related' considerations. However, at this point in the processing, 54/fifty-four percent of the total in emotional energy summed for September 20th, and then for September 29th, is [economic] in nature. We note that some of the [economic] concerns are themselves 'terra related or caused' and therefore the tone of the shift is still driven by the summations led by the Terra entity *even though* the immediate emotions of September are from contexts covering [economics, food, shelter,

life, and everything]. So, what we get from the modelspace is that the [degradation] of the Markets over the rest of this month and into September will continue to escalate to the point that the [populace] is already [stressed] by [employment crash], [food price spikes], and other impacts from [encounters with scarcity] which result from the [near death experience] for the [usofa dollar]. While we cannot yet say with certainty that the [dollar] will survive the NDE, we do have considerable evidence that it will not last much past September 9th as the 'global reserve currency'. We can also forecast that the [revolution] context which is rapidly growing into a meta data layer, will, in the USofA, get its largest emotional energy growth from the [deprivations] of Fall that the public will perceive as [originating] during these now proven [bad summer] market days.

Also in this thread, and coming from the very long term value set which extends out into June of 2008, the [flooding] meme continues, and specifically brings [harvests] to the sharp edge of immediate emotional concerns. In other words, the modelspace is forecasting that [flooding] will be so pervasive a meme this Fall and Winter, and then on into Spring of 2008, as to create bespoke [worry/anxiety] over [food harvests] to a [globe] affecting [maximum]. The [flooding] meme continues to grow in its impacts globally, and is now spreading out to dominate several of the common contexts in many of the entities including Populace/USofA and GlobalPop, with a very sharp focus on [food crops]. Further it appears within modelspace that the Press entity will come into a period of [open conflict] in late Winter, and that the [internal feuds] will be about [festering repressions]. These [repressions] will be seen internally to Press entity as being [old anxieties] which now have [spread] and are viewed as [threatening]. As this whole area is cross linked back to Populace/USofA, GlobalPop, and Terra, and is further linked over to Bushista, the interpretation is that the [warfare] internal to the Press entity which itself becomes [visible] in late Winter is directly related to the [dire forecasts] for [harvest of food crops] in 2008.

Bushista - Haunting, Madness

The Bush Wars of [aggression] are rising to a [crisis] point within the Bushista entity. The immediacy values are arguing for [revolution] to begin this Fall relative to the [bush wars], and as may *not* be expected, the [congress] will also be a [target] of the [vitriol/anger/rage], and further that it will be the [sudden disenfranchisement/dislocation_from_social_order/status] which is shown as [inciting] the [acts] of [rebellion] and then [revolution].

Within the Bushista entity the data set points to the [markets panic] as being the [trigger] to the [collapse of spending] for the [bush wars]. The [spending/debt growth collapse] is related by cross links to the [seizure] of the [assets of the nation] during the [seizure/gripping heart attack] which will affect the [usofa dollar] and the [usofa economy] over the rest of Summer and into Fall. In late September and early October, the [populace] meme within the Bushista entity undergoes a very radical change which is forecast to represent the view of the Bushista entity. This change shows up as [enemy] and [obstructionists] within Bushista with large areas of support for this 'new attitude' going so far as to be [visible] from the WH and the [corrupt/dirty/degraded mouths] as [threats] are [visible] and [made against rebellion]. These [threats] are shown as extending to other [politicians] and will actually [escalate] to [visible] discussions within the global mediastream.

However, given the emotional tension values rise in late September and its now dominating [economy/currency/debt/food/shelter/life] focus within the Populace/USofA entity, the [threats] from the [officialdom] and even their [actions] to try to [corral] the [dissent] will *not* dissuade the [populace] from [manifesting] [rebellion].

There are also indications from the data sets that a [rallying_cry/motto/motivating_emotion] will be attached to a [muddy murder] which will be [rested/placed] upon Bushista. This [muddy murder] will be used as an [emotional focus] during the [early efforts] of the [resistance] in their [efforts/work] toward [american revolution 2]. If the [revolution] meme is followed through the data sets, including the longer term values, the appearance is that the 'dual'opoly of the [2/two parties] within the USofA will end prior to 2008 elections. Bearing in mind that the data *always* goes to the most extreme language involved, the dominant aspect/attribute sets for the [republican party] is [dissolution]. This is directly supported by [disgrace] and [distance] and [disappearing]. Further there are repeated areas within the supporting sets for [criminal actions] and [revenge]. This last also includes descriptors for [lynching's], and for [chastisement] and [public humiliation] for [republicans/conservatives]. The backlash from the Bushista actions of Fall and Winter will be so severe, that the [whole/complete political system] is showing up as [damaged/defaulted/destroyed] and totally [beyond repair/useless/discarded]. Hmm. Now that is *probably* a good sign.

We need also note that a rising aspect/attribute set includes the context of [haunting's] which is described as [return/re-living old illness/wounding]. This [suffering] coming to the Bushista entity has its roots in [water born events/discussions] and is shown as being [decades old]. Here we have the modelspace progressing through Fall and the rise of [american revolution 2/two] meme, just as the Bushista entity has discovered a [haunting presence] which will cause [visible] [staggers] and [facial distortions]. These will apparently, according to the entity, be seen on the global mediastream during a [rant/meltdown] which is being forecast for close to the emotional shift of September 19th.

Populace/USofA - George Gorge, Hip Deep

As the 'madness of king george' becomes more visible with the emerging events of Fall, the Populace/USofA entity is pointing to the [bad summer] for Markets as producing a very [bad fall] for the populace. The immediacy values for the Populace are supporting the idea of a [promotion] of an [official] by the Bushista's as a [done quickly/hurriedly/hastily] act to [promote calm]. This [promotion] shows within the linguistic structures of the immediacy and shorter term values within Populace/USofA as having [tendrils] of [unintended consequences]. Most of the internal cross links from this section of the Populace/USofA are suggesting that [calm] will [not (be) restored], and further that [duality] will be [exposed], as will [many deep secrets]. Curious cross links go over to the Terra entity suggesting that parts of the [revelations] coming from the [accidental exposure] of the [process of selection] will also [release keys] to [secrets] about [future/upcoming/pending] Terra related events. Or at least the [planning] for them.

The data set has a curious linguistic structure which is emerging as a [gap/gorge/ravine] which will be [visibly separating] the [populace]. This [gorge/ravine] is multifaceted, but begins with a supporting set cross linked to the Bushista entity. The inference we are taking is that of the *many* gaps between the various sub sets of the Populace/USofA, the [political] separations will break first in response to the [destruction] of the [wealth of the nation]. This [gorge] over [king george] is shown in the progression of modelspace as propelling the [destruction] of both political parties as the [reign] of the [dualopoly] comes to an end in 2008. However, the [movement], at first, will appear to be a [backlash/response] to [republican corruption] as the [dollar dies] and the [populace] is indicated to [go begging].

The [bad summer] for the markets leads to the [bad fall] for the [populace] which in turn is shown as setting things up for the [disease] which comes in the [winter of sickness/illness]. This [illness] aspect/attribute set contains pointers to actual diseases, including [epidemics] both [local] and [international], but also contains pointers to [illness] which affects the [body politic]. It is from these [winter sicknesses] that the [american revolutionary movement] begins to manifest in 2008. The data sets within the Populace/USofA entity suggest that [social illness] will produce a [rage] against

[politicians] and [bankers] and [press] such that [visible] reports of [mob/crowd] actions will increase to the point of [rioting] and the [seizure] of [media] will take place in 2008. Much of the emotional energy driving this meme takes its inception point from the [bad summer] and the [employment crash] which is still pending for August through November.

There are also indications that the [tens of millions] of [deaths] as well as the [planetary diaspora/dispersion] resulting from the changes to Terra will also fuel the [rage] against [politicians] and TPTB as more and more [secrets are revealed] including just how long the TPTB have been planning for this particular [denouement].

As has been noted, a dominating percentage of the emotional drivers for the sudden turn in language indicated to hit on September 19th comes from the broad category of [economics]. Within the Populace/USofA this percentage is now approaching 54% as the immediacy values are folded into the equation. This [economic] focus is perhaps better described as [money, food, life and everything] as the data is indicating that the [populace] will [suddenly] be [looking (at its) pile_of_coins/wealth] [sink to the bottom (of the) unobtainable depths/abyss]. Again, the note that the [housing] and [employment] collapses pending for later this Summer are direct supporters for much of the [revolution] language, *but* also note that these are under the dominance of the [secrets revealed] and [duality] layers, and the [revolution] meme, even emerging as a meta data layer, does not kick off until mid Fall as there will be a slight delay as universe takes a little time to engineer a [flood] of [embarrassing secrets exposed]. It will be the [floods] of Fall, both actual [water] and the [flood of repatriated dollars] which are described as producing a [confluence] of [channels/canals] which will [focus] the [rebellion], and [pump it up/activate/motivate].

Surely it is annoying to keep on about the [flooding] meme, but it is very interesting linguistically that [flooding] in all its contextual forms and supporting aspect/attributes is showing up in so many of our entities and their sub sets. This has been observable as a general trend over the last several years, and in spite of references to [drought] and its impact on the populace entities, the dominating emotional associations are to [flood] even at the more mundane levels of abstractions such as is found within Markets and Press entities. The presentation of the same meme through so many differing contexts is being taken as a not-so-subtle reinforcement that the Terra based [flooding] is to be very pervasive indeed.

Within the Populace/USofA entity there are instances of specific descriptors such as the [camping/cooking fires on roof tops] which result from the [flooding] which are still growing, and remarkably, have been growing steadily for several ALTA report series which places the persistence of the meme at over 6/six months duration. As this meme grows the entity provides greater levels of details, not that these are particularly meaningful as a predictive aid. Rather too much detail provides too many choices to effectively select temporal markers. We have the additional challenge of the data set providing so many references to diverse geography as to make it difficult to concentrate on a particular sub thread without being diverted by cross links which are massive and multithreaded. The result of this is illustrated by the image of [populace/tribes wading hip deep in flood waters, warm, rains, hill side run off, muddy]. This Populace/USofA aspect/attribute set is most likely referring to a particular flood within the USofA, but as the data sets are so cross linked and extensively so over to Press entity, it is just possible that this small supporting set for [floods] is actually referencing some images which the Populace/USofA will see on their windows into the global mediastream. However, even if this particular sub set is foreign, and video image which triggers the emotional response in the populace, there are still the growing aspects/attributes for [diaspora] which needs to be understood both globally, and also representing a specific case within the USofA. In both cases, the [diaspora] or [scattering/relocating of the peoples] is specifically dominated by [flooding]. In both cases there is a clear SpaceGoatFart entity association which resolves down to [unknown energies from space affect flooding here on planet terra].

We note that the [flooding] of the Populace/USofA entity is now also containing specific references to the [usofa dollar] being [flooded back home/repatriated] with language which is suggestive of hyper inflation. The [bucks coming home to roost] are indicated as [causing chaos] internally within the [financial] system for the [populace] as in the form of [banks closed] and [banks looted], as well as bringing [down] the [political structure] and creating the [brewing platform/support] for [revolution] as a rising meme. We note that [revolution] as a meme continues to accrue long term values in both Populace/USofA and GlobalPop, with a very sharp increase being seen in the Populace/USofA over the rest of 2007. The data indicates that [open conflict] with [authorities] will manifest in early 2008, though the implication is that this will be a [false start] and that other [events/circumstances] will intrude to [quell/dampen] the passions of that moment. The [intrusions] are shown as arising from [sick people], and [sick oceans] and combined will produce an effect of [seizure] of the [processes of life] here in Populace/USofA. These apparently are imposed [restrictions on movement] which come *not* as edicts from on-high, but rather from the bespoke [fear] of [disease]. This is further reinforced by specific references to [emptied bowels] and other such bodily function descriptors which are the supporting values for the [fear] impacts and not the disease. The implications are that the [fear of contamination] is so strong as to [alter behavior] in large masses/regions of the country. There are some indications that the effects are not felt equally across the continent, and that rather regional variations in habitat, and traffic make the [fears] to be [isolating] by specific areas. This comes across in descriptors for [emptied shelves/storehouses] which will result in the [north east] as a side effect of the [fear of travel] through the surrounding [lake regions].

There are also the data sets which go to the [employment crash] currently *just* starting to manifest. This [crash of employable infrastructure] is shown {ed note: bear in mind EXTREME language guides our processes} as [consuming up to 3/three of 5/five] jobs. The resulting impact is described as [wandering tribes/mobs/crowds] of [unemployed] persons who will become their own [new/emergent social order]. There are also extensive internal cross links between the supporting sub sets for the [employment crash] and the [diaspora] within the Populace/USofA. A similar structure exists within the GlobalPop where its own [weather/climate] and [employment crash] induced [tribal formations/groupings] are shown as [actively seeking] a [new] [internal destiny].

GlobalPop - Dissipation and Unhappiness, New Pinks

The modelspace suggests in the interaction of the Markets entity with the populace entities that a planetary [emergence] has begun to manifest as the first wave of the forecast [employment crash] in which 3/three of 5/five jobs will be lost in the USofA, and an unknown ratio of job loss will spread across the planet as the effects ripple outward. In the GlobalPop entity, and with specific references for Europe and South America, there are sub sets which go to the emergence of a [new pink] in the social order as the planetary populace undergoes a massive [dissipation] and waves of [unhappiness].

The [unhappiness] specifically begins with the loss of [planetary wealth], illusionary though it was, on a scale so vast as to be beyond meaningful description. The specifics in any instance will *not* be representative of the totality of the expression coming across from modelspace so the inclination is to rise to a more abstract level, and to not focus on any specific supporting areas. The data suggests that the global trading system characterized as [globalism] is dying over the course of this Summer, and will *not* exist as we understand it by the point of the September 19th emotional tension turn. A very large prediction with a very low order of probability, but clearly what the modelspace is describing. The highest levels of aspects/attributes referencing [globalism] are now dominated by [shedding responsibilities] or [laying down the burden]. Or, as is also found in the context, the [cessation of labor/effort].

The actual support for the [cessation/stopping] aspect is primarily backed by supporting aspect/attribute sets which explicitly reference [trying to avoid a small pit, falling unawares into the large hole]. Hmm. Yep, sounds about right. This is further described as [focus on fortune] to the [avoidance of awareness of calamity]. It is also worth noting that earlier references to [calamity] are also still gaining strength as we progress modelspace forward.

As the GlobalPop entity is progressed along with modelspace through the last of Summer and into Fall, the [loss of wealth/surety] brings [dissipation] and [unhappiness] to such a point as to [refocus/return the focus] of the populace to [family/tribes]. This meme grows over Fall and into Winter as the [diaspora] takes hold on a planetary scale. The [refocus on family] is described as the [core of creation] of what we are labeling as the [new pinks]. These are examples of [self organizing collectives] which will spring up over this next year as humans struggle to cope with the levels of change once [business as usual] is a dead concept. In the EU zone, the [new pinks] are shown as creating [city-states] in areas where [central] state/federal governments have lost [authority]. This [loss of control] will emerge with the circumstances of the next 2/two seasons as the [unhappiness] spreads as [discontent]. A significant component of the [unhappiness] resulting from the [dollar demise] will be the [collapse of tax revenue/collections]. Specifically in EU zone this is indicated as causing the national governments such [fiscal crises] that the [human infrastructure] of [firemen, police, rescue, traffic control, health care, et al] are [unpaid/unsupported]. The data suggests that the SOCS we call [new pinks] will emerge within the [vacated] areas left to fend for themselves by federal governments which are trying to [manage] their own implosions.

Into the whole of this mix of chaotic change, the Terra entity links suggest that [climate] will dominate all other concerns on a gradually growing basis. That is to say that a constant background to the economic and political struggles of the next year will be the rising intrusion of Terra climate/weather as a daily obstacle. This [intrusion] level is shown as not only driving much of the [diaspora] globally, but also in altering the outcome of inter-human struggles dramatically. In fact, even altering whole geo-political entities such as countries.

Nowhere is the Terra intrusion more dramatically shown as [affecting] than in [south america]. The continent, and the social structures which exist upon it, are to be altered repeatedly by [volcano] intrusions into developing human problems. Much of the [diaspora] elsewhere in GlobalPop is driven by [flooding], where in [south america] a significant portion is fueled by [fires rushing down volcanoes] as well as [raging lahars]. While there will be volcano impacts elsewhere on the planet, and not forgetting about the [underwater land rising from volcanoes to disrupt southern ocean currents] forecast which still is gaining values, the level of [volcano] impact on [south america] is described as [spectacular] and [inciting/creating/inducing awe].

Conclusion: Part Six, and ALTA series 0308

Given the very unsettled, and [unquiet] emotional tone of the populace emerging, especially as regards to the global markets, and given the postulate that ThePowersThatBe use 'emotional release' events to try to 'redirect' the emotional energies of the times to areas of their choosing in an effort to 'control manifesting circumstances' {ed note: such as 9/11 as a LIHOP to deflect emotional energies from the markets crash scheduled for that day}, it would seem probable that TPTB would engineer yet another 'terror' incident to shift the energies once again away from the continuing markets meltdown, and the

resulting [panic] which can/does threaten their enslavement of the populace of the planet. While it may seem probable, and even the TPTB may attempt yet-another-misdirecting-terror-incident, the data set is indicating that it will **not** have the impacts that they seek. In fact, given the August 13th forecasts, and the emotional values for the day, it would seem likely that **IF** some 'terror' related incident is introduced into the emotional mix early on the morning of the 13th, that its effect will be entirely [dissipated] by mid-afternoon of the same day. Further the data set also are arguing for any such 'inducement to shift fears' as resulting in an increase in bespoke fear, but **not** its redirection, and further that the 'intrusion' into circumstances will 'exacerbate/magnify' the unintended consequences over the following 3/three days. Part of the problems for the TPTB is suggested by the data sets as a [maturing] of [cycles/time] relative to [energies] which began very long ago. The clear implication is for August 13th to mark the [finishing] and then the [cleansing] of [emotional cycles] at many different levels, but which share a common connection of having been [aging] for [decades/generations].

As the rest of this 'release period' Summer unfolds, pushing us not so gently toward the September equinox, it is important to remember that as the emerging chaos of 'dollar death' continues to inflame passions, this **alone** is not the end of the world. Yes, it is the end of the world as we have known it, but even calamity at this level has been seen in the past. And humans have survived. All countries have a history of the collapse of paper currencies and subsequent disruption, dislocation, and general misery. Here in the USofA such a process has argueably occurred at least 4/four previous times.

True, this time the currency collapse is planetary in scale, and the impacts for paper debt dissolution of such a scope cannot really be appreciated until after the fact, but equally true is the premise that this time **is** different as the biosphere is simultaneously threatening humans with extinction level events in the near term. So, while the planet has survived credit/currency crises in the past, this particular instance may present challenges which will favor only those with a differing vision with survival. This 'differing vision', or as we have been forecasting as the outcome of this release period Summer, a [new perspective/point_of_view] of the planet, universe, and everything, will **not** be something 'delivered from on-high'; that is to say, the [new vision] will **not** be created, delivered, or articulated from any persons currently in, or close to power, either political or economic. It will instead arise from the [new tribes] of those who will face and meet the challenges of the forces pushing planetary diaspora.

We have a few clues to this [new vision] of humans here on earth, and within the USofA, are expecting a strong, and unknown-to-this-point female personality to emerge over these next few months as the first personality expression of the [new vision] as it spreads across the planet. Yes, the implicit irony of the idea of humans as merely 'idea carriers' at the whim of universe is not lost here at HPH. And we also note that since no human can forecast their own next thought, it is **most** likely true that we are just that, [thought expressors for universe]. Under this concept, 'cogito ergo sum' may not be quite as it is thought to be understood. In fact we, as a species, may have, like so many things, gotten it totally bass-ackwards.

And along with all the other things we have backwards, such as life, universe, and everything, it bears remembering that within universe there is **no thing** which is not real, and therefore everything manifesting as circumstance within universe is meant to be, including such as misery. Consequential only to those who suffer the misery, yet likely incredibly important in the universal scheme, we can take comfort in the thought that everything encountered on our personal journey through time is **only** the challenge of the moment. As an ordinary human will see everything presented by universe as either a blessing or a curse, and suffer the swinging emotions brought about by that vision, those on the path will see every presentation from universe as a challenge, and good or bad does not matter, as it is all grist for the mill.

Or as we like to say here at HPH, always stay a little bit hungry, you never know when universe will

present a challenge that you can convert to pie.

###

This completes Part Six, and with it the ALTA 0308 series. We will have the complete series as a single PDF file available for download by sometime on Sunday, universe permitting. At that time we should also have the details for the next series as well as sign up links for those inclined to continue this nutjob journey down the rabbit hole.
