Meta Data - Old Epic's, Stairs to Hell

When last we left the data, the situation was getting grim and dark in the [economic] realm, while heating up in the [military] sub sets.

At the meta data level, which is to say at the level of the lexicon on which the shifting for change in relationships among/between words and word sets, the data processing has produced large levels of supporting growth for the meta data levels of [transformation], and for [duality]. The [transformation] data set is now supported at the primary level by [outside pressures (for) action], and f [complete severing (of previous) restraints]. This last set is supported in its tur by large numbers of sets which are almost all within the [populace/usofa], or the [populace/global] sub sets. The [complete severing (of previous) restraints] has many layers of support which are themselves involved in the [global economic dynamic], and which are all indicating a [finishing of gangster capitalism], and the [emergence/manifestation] of [something new]. This [new something] is *not* a clear cut word image for the 'new world order', though v acknowledge that the ThePowersThatBe sure wish it were so. Rather what we have is a great stew of complexity. Within this boiling cauldron of change, the larger themes are within the [epic/monumental] descriptor set. This [epic/monumental] set includes the prototypical archetypes for [fundamental change] including support from [diaspora], with the idea of a 'cast of billions' coming up from the supporting layers. Further support for the [epic] themes comes from [remnants (of medieval) structures] and the [planetary populace movement] which is supported by [new form (of) social contract]. This last is repeatedly supported by directly held values for [anarchy], though it is modifi by the aspect/attribute sets of [imposition], and [external perception/view], an bespoke [archetypes]. The idea coming across is that there will be a planet wic struggle across several years to establish a [new social contract] as the [remnants of the medieval system(s)] start their [visible crumbling/falling_apart] over these next 4/four months.

There are indicators that the next 4/four months bring very large changes, including some [prominent personages (nwo/illuminati types) deaths]. These [deaths] are note worthy not merely for the personalities checking out, but for the specific [strains] placed upon the [power transfer systems] at a very critica time. These [deaths] are indicated to [prompt/induce] a whole series of [events/occurrences] as a result of [misjudgments] of the [situations]. These [misjudgments] will propel events later in the Fall of 2009. The [prominent deaths] are also supported by [bizarre/occult/hidden rituals], and with [public exposure]. This last is showing as due to a [brazen/courageous/foolhardy brea in/invasion]. The [invasion] language support sub sets suggest that the [group (of) fools/idiots/kids/misguided adventurers] will be [seeking occult/hidden knowledge] in their [crashing of the funeral party]. Not merely or solely a [stunt], the [break-in/invasion/crashing] of the [death ritual] will provide some [visible video] that is interesting in itself, but will later be found to be [fascinating] by what is [accidentally captured (in the) background (on the) stairs]. The [stairway (up to the) landing] video is indicated as very good temporal marker for the manifestation of the various sub threads within the

[secrets revealed] meta data layer to [go public (aware only, sadly)] in a very [viral manner].

Terra - Dancing (Wet) Mountains

With the recent 6.2 earthquake in Pakistan, the Dallas/Fort Worth 2/two earthquakes, and the twin earthquakes off the coast northern coast of California it is timely to examine the continuing [earthquake] sub set which rises to its peak of [visibility] in the December 10th through 12th time. Yet once again, we have the [disturbed] or [interrupted wedding] aspect/attribute set showing up. This will mark the third or fourth time that this aspect/attribute set has arisen within an [earthquake] sub set. Predictable? Well, maybe so.

At this point the data continues to grow for [damage], and [disturbances], and [disruption], and [isolation] from [twinned/doubled] forms of [large earthquakes]. These [earthquakes] are also supported by [isolation] both of [transportation routes], and [communications]. We now have new sub set in support of the [isolation] which are supported by [waters involved], and [water sources intermingling], and [earthquake influences (water courses)]. Further sub sets include [cultivated areas] which are [swept away], and [damaged fields (crops/foods)]. There are further aspect/attributes for [visible large shift/step (in the land)], and [school children outside in groups]. There are sub sets within the [isolation] aspect/attribute set which also show that [pushing] and [pulling] of [confusing pressures] will cause [everyone] to [sit down]. Further the areas of the [wedding interruptions] and the [sitting school children] are indicated to be [visible] throughout the [afternoon]. Other descriptors include imagery of [for sale signs] and other [signposts] that will be [knocked flat]. There are other sub sets for [damaged empty houses], which will be seen in [mass numbers], but that later in the day(s), the [damaged empty houses] will be [occupied] by the [newly homeless]. Some instances of [fires] will [erupt] that will also gain [visibility] within the global mediastream.

There are some supporting sets which *may* be indicating that the [dancing mountains] which have been part of the forecasts for over a year, are [under oceans]. The other [oceans] sub sets, including the [global coastal event] are, and have been, internally cross linked over to the [dancing mountains] sub set. The data is not a complete conjunction, and being a split set, may be indicating that [dancing mountains] exist both below and above the [oceans]. This would support the previously forecast December earthquake (number 1/one) in which [volcanoes] may be participating. This would argue for the 32/thirty-two to 36/thirty-six degrees of latitude being in the southern hemisphere, and the antipodal [twinned earthquake] being in the [far north]...which raises (slightly) the potential for the [isolating earthquake] to be affecting the northwest of the continental USofA. There are a number of growing supporting sets for

[sloshing], and [deep river intrusions] that are part of the [dancing mountains] and the [oceans] set conjunctions.

We expect to get more indicators as we get closer to December.

Populace/USofA - Hard Ship, Confusion, Unburdening, Chaotic Catharsis

Within the Populace/USofA entity, the data sets around the [election] still contain [confusion], as well as [deception]. The [deception] sub set is cross linked over to ThePowersThatBe entity, where the origination point is the sub set of [control structures], sub set [voting]. It would appear that the data sets are suggesting that the [loosening] of the [prisoners bonds] will take place, in spite of the [confusion] which the TPTB attempt to [promulgate] and [profit (from)]

The data sets from the GlobalPop entity may be more reliable than the Populace/USofA entity in that they are able to see things from the outside, and are not subjected to the constant stream of lies and [deceptions] from the TPTB and their [controlled media]. When both entities are merged, the picture becomes a bit more clear due to the less constrained view presented by the larger set. Taking both entities together produces a picture in which the [deception] of the TPTB, including the [Bushies] does not work. This is due to a whole series of [planned counter measures] by the [democrats], and specifically the [conspiracy core] which is described as a [group of experts] who are working for Obama. The data sets are indicating that [confusion abounds], and that TPTB begin to [promulgate/spread/incite] even further [confusion], and are then [confronted] with [tension] {ed note: which also includes 'threats' as a secondary descriptor} such that [efforts/plans/plots] are [cancelled]. The data sets seem to be describing the days leading up to the [election] and shortly thereafter as going from [confusion] through [release (from) prison] and into [rapid promotion].

It would appear from the longer term data sets gathered for the 709 run that the [transformation] expected in 2009, and the [active] phase of [american revolution 2/two] in late Summer of 2009, are 'on' regardless of which politician 'wins' the presidency of the USofA. Even the issue of presumed differences between the politicians pales in comparison to the [constraints] on [global activity] as the Winter of 2009 progresses.

There are several problem areas with the housing situation within the USofA. The most notably [press] presented are those real concerns about foreclosures, and the resulting impact on the social order. What is rarely mentioned is that the [price reductions] within the [housing market] are merely yet-another-flavor of the global 'delevering' movement currently underway. The [price reductions] in

housing] will soon present other [faces of crisis] near mid November, and then rapidly rise in global [prominence] as the [loss of capital] in the [usofa housing 'market'] brings about another round of [devaluation] of the [SIVs (special investment vehicles)] and further exacerbates problems on 'wall street'. Note that the [housing devaluation] will accompany the [currency battles] in other parts of the global populace as the impact of [shit paper] from the [banksters] reveals more [losses] at the [planetary populace level].

The accretion patterns of the immediacy values indicate that November, and the rest of Fall onward will bring every [imaginable trial/challenge/hardship] to the [usofa dollar] and all [dollar based, paper debts]. What had been a [bad summer and fall] will turn into a [terrible/horrific winter] relative to the [dollar] and all things [dollar based]. The data sets are explicitly providing comparisons in the form of [encounters with wild/poisonous beasts], and [meetings in dangerous places], and [episodes (of) irrational thinking/fantasy]. This last is heavily cross linked over to [officialdom] and the [bushies]. Further it gains support from [proffers (of) solutions/corrections] which are then [understood] such that the [understanding creates new problems/concerns]. The idea clearly indicating that [officialdom makes things worse] as previously forecast in ALTA series of this year.

We note that the general tone of the emotional sums which we have had forecast for those weeks following the [election] within the USofA has maintained a dominant aspect/attribute set of [confusion]. The [confusion] element *may* be clearing up as we are now solidly within the 3/three days through 3/three weeks temporal range of the immediacy values. The [confusion] aspect has multiple layers of support that present a fractured picture of the impact. This is to say that [confusion] will indeed be a dominating emotional tone in November, but it is unlikely to be generally expressive for the [populace] as a whole, about *who* won, as we had first thought. Rather it now seems that the appropriate interpretation is for [confusion] to afflict a significant portion of the [populace] about *how* the election [could possibly/imaginably conclude as it will]. In other words, the 'losing' side {ed note: extensively cross linked into the [diaspora], and the [unburdening], see below} will [feel] that they have been [betrayed] by ['god']. Further the [confusion] aspect will afflict this segment of the [populace] at many other levels, relating to the [election], including the usual [demands for recounts], and such. However the [confusion] will be [felt/absorbed] at a very deep level, and the supporting sets confirm this with internal links over to the [diaspora/scattering] aspect/attribute sets. This cross linking becomes very important as the planet progresses into (northern hemisphere) Winter.

The [confusion] aspect also settles in on the 'winning' side as the course of events and incidents accelerates rapidly following the [election], and the

[advisors] within the [new administration] begin to [suspect calamity (is) here]. Noting that these bastards will be nominally in charge beginning in January, and given the forecast for degradation of the [usofa economy] yet to come, it makes sense that the aspect/attribute of [confusion] continues, even with the [election] settled. There are many indications for [gnat bites/small matters] which have [legal language] overtones, but the total impact is negligible on the [power shift] from the [bushies]. The [confusion] within the [new administration] also arises from the [morass] of [new duties/required activities] which will suddenly [surface] in December. The implication is that the [crisis] of the [bushies] will be [acting strange/demented/desperate] in December, and the implications are that 'something' hidden is about to [appear/reveal], and the general feeling is that "this can't be good".

The supporting sets continue to accrue under the [unburdening] which appears as rising aspect/attribute set in December. As modelspace is progressed through the [confusion] period of November, and into the first half of December, the aspect/attribute set of [unburdening] gains very large, and diverse supporting sets. While we have had this set within the Populace/USofA entity for over a year, it is only now gaining detail layers. The inference we take is that until it became clear within the minds of the [rank and file/slaves/organization tools] the [evangelical movement] that they were [certain to lose] their [domination] of [mind] over the [populace], the data sets *could* not 'firm up'. This inference may or may not be valid, however the data sets are clearing up now with copious amounts of supporting sets.

The [unburdening] set, as originally interpreted in support of the [evangelical/political movement] within the [populace/usofa], is now joined by a broader scope of activities. Not only are there areas supporting the [money scandals], and [flight to avoid prosecution] within the nominal [leaders] of the [evangelical communities/organizations/cults], there are also [unburdening] sub-sets which are internally cross linked and which reference a [general unburdening/confessing/bemoaning] of the [rank and file/slaves of the organizations]. The idea coming across is that the [general congregations] of the [evangelicals] will be facing the [unburdening] of their [leaders] as the [sins/crimes] are [confessed/confronted]. Further, other layers of supporting data suggest that the [congregations] will have a hard time [forgiving] their [leaders] especially as the [victims] were [internal to the organization]. Also the data sets are indicating that some *giant* [scandals] relative to [housing] will be part of the [unburdening], and that these [scandals] are of a [criminal nature]. Such will be the [visible consternation] at the [top] of the [evangelical leaders convocation/organizations] that many [teevee/media faces] will be [caught from the back] as they [flee feared prosecution]. There are aspect/attributes in support of the [unburdening] which include [drastic fall (in one's) prestige], [completion (of the) cycle], and [precipitous fall (from) great heights]. The

[drastic] word group is itself supported by [rapid/sudden/shocking], as well as [delusion destroying]. Many of these supporting sets are either cross linked internally, or are present (directly held values) of the *other* descriptor sets for [unburdening] such that the imagery suggests even the [lowest members] of the [religious right organizations] will [experience/feel] the [unburdening] as a [drastic fall in (imagined/delusional) prestige].

The aspect/attribute sets accruing in support of the [unburdening] are extensively cross linked to the [confusion] and the [political] sub sets. The supporting sets from the entire mass point to several instances of [failure to prosecute], and [assistance of flight] by the [outgoing administration] as [officialdom] is [visible] in its [efforts] to [assist flight] of the [unburdened evangelical leaders]. There are repeated cross links to [housing] and [money/currency] as well as sets which indicate that [cries of treason] will be [cast out] against [officialdom] while the [confusion] of the [transfer] takes place. The detail aspect/attributes suggest that very large [sums/amounts] of [currency] will be [entrapped] in the [collapsing system], that will later be used in the [show trials] to [establish guilt]. Detail layers abound, and the plethora of imagery is difficult to adequately capture, but the 'feel' of it all is the 'snakes fleeing the fields ahead of the fires'.

There are explicit [fire] references within the [unburdening], but these are sub set supported by the [termination] aspects, and relate to the [mass layoffs/terminations] which are also indicated to [propel] the [evangelical communities] into [unburdening]. This is a very complicated linguistic area with very heavy and diverse cross link structures. It is at once tied into the [scandals] via [unburdening], as well as to the [diaspora], and to the bespoke [fear] and bespoke [confusion] sub sets. The totality of it all suggests that [waves of bespoke fears] which have been [preplanted/implanted/built-into] the [evangelical mind set] will [bring up/propel/compel/impel] many within the [evangelical communities] to wish to [flee the usofa]. They will form a considerable [diaspora] as their [conditioning] forces them to view the [political situation] as [creating tribulations]. From their view point it may well be such. While the [economic] situation is not yet 'biblical' in its extremes, it will certainly develop to far greater extremes, and most of the [economic damage] will be [pushed down upon] those who formerly were [happily deluded evangelical supporters]. Sub sets of the [confusion] aspect/attribute set, cross linked over to both the [unburdening] set, and the [diaspora] set, contain yet more detail emotive components suggesting that the [unburdening] will have yet another meaning within the [evangelical community] as a [wave of emotive angst] is indicated to create scenes of [mea culpa], and [confessions before 'god(s)'] by the [congregationists] as they attempt to internalize the [radical change] which are (from their perspective) [afflicting] the [social order]. Hmmm. Hard to reconcile this attitude to their predisposition to expect the coming of the

'beast marks' and all that. It would seem that the 'faithful fundamentalist' would welcome their [antichrist] as a 'proof' of the proffered second arrival.

Much of the supporting language for the [unburdening] splits into 2/two very broad categories with some significant overlap of sub sets. This is to say that while a large amount of [unburdening] language is associated with the [top elites/dominionists] of the [religious right], there exists a very wide support layer for impacts, real or feared, upon the [congregationists]. The data suggest that this area should *not* be minimized as there are apparently going to be many [acts of irrationality] {ed note: supporting sub sets of the [surreal] aspect/attribute set to afflict large portions of Populace/USofA by Summer of 2009} which will bring [violence] along with the [irrationality] as [delusions] are [affirmed] in [opposition to manifesting circumstances]. Much of the [congregationists] specific support is also intertwined with [diaspora], and the sub set of [flight (to) avoid prosecution]. These areas are indicated to also [bring delusions] as many of the [evangelical 'leaders'] are shown to be [dirty] at some very [extreme levels].

Examples of extreme language appears throughout the supporting layers of the [unburdening] and includes [crushing (of) bones (by) economic reality], and [emptying (the) congregation (to) flee/escape (across the) water/oceans], and [blessing worries/supporting flight (from) church officialdom], and [long] and [dangerous passage] to [remote lands]. This area is replete with references to [bad outcomes] as the [sheeple] are [further victimized] by the [leaders] who will apparently take large [groups] to [overseas/foreign havens]. Hmmm. Can anyone in these groups remember the whole 'kool-aid' scenario? Some of the supporting sets read as very [distressing] descriptions of [flight for life] with such aspect/attributes as [possessions scattered around (the) yard/gardens], and [rapidly moving vehicles (packed/loaded) with possessions]. We have language for [confused and crying children] who will be [rushed about] in [ignorance], yet still able to [experience the fears]. Much of the [congregationists fears] will center on [too little resources], and [failing industries/economic activities].

With the [abandonment] of the [usofa] by the [evangelical christian political base], yet another layer of the [unburdening] aspect/attribute set will be apparent as the nation is [unburdened] of the [religious right] or [politicized evangelicals]. The data sets are quite clear that [many], which may exceed [tens of thousands] of persons will actually [flee the country] as their [perceptions] [reality] are [impacted by rapid change]. There are further indications that [officialdom] will be [accused of aiding] the [looting] of the [populace] later in 2009, and that both [civil servants], and [private citizens/banksters] will be [tried] and the [records] of the [crimes of the evangelical/dominionists] will be provided as [evidence].

All of the drama associated with the [evangelical unburdening] is but a very small part of the greater background of change showing in the Populace/USof entity for the remainder of Fall and all of Winter. The indications are that so much change will be impacting the consciousness as to make the next 4/four months seem both [interminable], and yet somehow [timeless] in the sense that looking back on it, the mind will reel that so much could occur in such a short period.

For those segments of the [populace/usofa] not afflicted with the [congregationists] mind set, the period will also seem [chaotic], and [stress filled], however there are underpinnings of support for [rejuvenation], as well [reconstituted focus/purpose]. This last is supporting the [revolution] meme which goes to [active] in Summer of 2009. So, in a sense, this is a bit of good news forecast, in that there is language for [extended prosperity] as an existential aspect/attribute set. The [extended] aspect is supported by [multiple generations] and [4/four generations (82/eighty-two years)]. The [prosperity] sub set is *not* active, which is to say, does not 'rise' until modelspace is progressed into very late 2011. Further, it would appear that the [new electric] (core breakthroughs in knowledge of electrical forces) is the [propelling force] (triple pun intended) for the [extended prosperity] of late in 2018 and beyond. Again, the forecast may be grim for the next few years, but the data does provide for a release of the grip of [spirit testing times] after the very necessary [social contract catharsis] just ahead in 2009/2010.

And as if that were not enough....we find that the Populace/USofA is to be [pummeled] by [repeated blows] of [distraught relations], and [upset allies/defeated allies]. The [economic collapse] continues from late November onward, with particularly [visible] events for an entire [month] from late November through December, but the data summations suggest that [foreign affairs upsets] will surpass, albeit temporarily, the [economic concerns] for the [populace]. As modelspace is progressed forward into early November, the rising aspect/attributes for the [populace] are cross linked over to the [bushista] where the termination points are within the sets for [forced limitations], and [limitations on speech], and [limitations on actions]. Further we have [payback/retribution] for [bushista's thought(less) actions]. These areas are internally cross tied to [iraq], and [military]. The idea coming across is that several points of universe will [press in sharply], and that [military bleeding] will [occur] such that [bush] is [forced] to [react/retreat] against [pressures]. However, the *real* stressors, excepting the continuing [acceleration (down the) hill], will show up for the Populace/USofA from November 12th through February 19th. The data sets are fairly clear in that the emotional tone sums from the various data categories of 'intensity', and 'duration', and 'impacts' will reach a stressor point level from November 12th (maybe late into November 13th), and will continue at that level *PLUS* a daily accumulation of further

stressor sums *in* the same areas. If we were to use simple integers to illustrate this, the sum on November 12th would be 12/twelve. On the 13th, the sum would be 12.5 (twelve point five), then the next day the sums will be 13/thirteen, and so on. This increasing progression is indicated by movement through modelspace to continue unabated through at least February 6th. From the 6th (more or less) through to February 19th, the pace does slacken somewhat, but the pressures do not finally change in the linguistics until the very early days of March, 2009. The linguistics suggest that both the [populace], and the [bushies] will feel these coming [4/four months] as [foul/wretched/decomposing].

Some of the [disconcerting/disturbances] for the [bushies] in the emerging events of late November and early December are cross tied in the manifesting reality to [eastern europe]. There are [military consequences] of soon-to-be revealed [economic secrets] about [eastern europe]. These [impacts] are indicated to [affect rome], and to [cause forced restraints] on the [bushies' officialdom]. These [restraints] are indicated to [force behavior] from the [officialdom] which will be deemed to be [pathological] and [oppression] from the view of the [populace].

Within the very thick cross links from the [bushies/officialdom/invisible hand/bilderberger] sets and the [populace/usofa] entity, are mutually supporting sub sets that go to the idea of a [hold/stilling/quieting] of the [aggressive urge/attack mind] which will [press in upon/pressure] the [bushies] over November and December. The indications are that [planned/plotted? detonations/explosions] are [held back/stymied]. The supporting sub sets include [acting blindly], and bespoke [rash risk taking], as well as [reacting (without) thought], and other language suggesting the 'cowboy mentality', or [small thoughts, rash behavior].

As the Populace/USofA entity is progressed past the [inauguration] of January 20th, 2009, the data set show that a [realization] is made [visible] that [no economic solution] is [possible] for the [continuing dollar death]. This dawnir [realization] surfaces amidst a slew of heavy activity days beginning on January 23rd. The first of these days of greater intensity starts at 4:14 am Eastern time on January 23rd, and continues at the pace established in the first few hours through to 6:30 am the next day. Then the 24th and 25th are taken up with a bulge in the data almost totally in the range of the building tension language, before turning back to release language on January 26th at about 4:15am. The release language continues through to February 19th before slacking back on the intensity values slowly into early March.

The data sets for these 'testing days' are pointing toward [accidents] including [car/transportation accidents], and [diaspora], though in this case the sub sets

are modifying for [militarily forced diaspora], and/or [thousands taken hostage/prisoner]. Then there are sub sets hugely filled with legal language archetypes. These areas have a meaning of [multiple generation impacts], or a [very long time of impact]. Further the data sets contain support for [transfers property], although modified by [military], and [very prominent death (with NWO ranks)]. Further there are data sets pointing to the [disemboweling] of tl [Bureau of Lies and Statistics], and other [federal propaganda agencies]. This causes some considerable [political consternation] as well as [crying (from) civil servants].

ThePowersThatBe (TPTB) - Denotation, Demotion, Disappearance, Posturing

The TPTB entity has repeated aspect/attribute sets that are all centered on the descriptor of [dangerous situation], and containing variants on the idea of [movement (in/into/through) uncertain areas/times]. The bespoke [risk] levels are very high in emotional summation values for the "duration" and "impact" value sets. As modelspace is progressed though the month of November and u to the December Solstice, the [risk] summations continue to grow within the TPTB entity until they form the dominant pattern within the entity. From the point of view of the TPTB, there will be some level of [successes] within the last days of Fall. However, as the entity crosses the December solstice into Winter proper, the internal nature of the entity is [transformed] by the [pressures] from the [outside/planet]. This form of the [transformation] sub se is not the 'healthy' kind, and is perhaps better defined by the secondary supporting set of [conditioned response]. There are further supporting sets under the [transformation] descriptor set that are describing a [zenith point/pinnacle] for TPTB, and that looking backward from the not-too-distant future, *all* will be able to say that this December represented the [apex] of tl [powers] of TPTB as well as the [initiation (of their) decline]. This is not sayin that TPTB are 'finished', or any language toward that effect, rather that this December is the 'beginning of the end' for TPTB. Further the data sets suggest that specific incidents from December 2008 will be able to be used as tempora markers by [future historians] to [denote the decline].

When we start to move modelspace forward from the first of November, there are repeated aspect/attributes which accrue with [month] as a primary supporting set. These sets reference many different components of the bespoke [risks] and [fears] within TPTB, and many not only have a bespoke [month] within them, but also contain values which show that their influence persists f a [month]. These [month] indicators are most clear when modelspace gets to about November 14th, but have their highest summation values first reached c

the 22nd of November. This summation value peak holds from the 22nd through the 24th. The interpretation of the data sets structures and content suggests that a very significant [month] of [disruption/upheaval] will begin *about* or *near* mid November, and then persist until mid December before slowing in its influence by the solstice on the 21st. The TPTB entity shows that this will be a [period/time] of [exceedingly large/great/huge stress] with very long lasting impacts on the [transformation] for the [global populace].

Some of the Winter 2008/2009 'incidents' which will so concern the [worried minds] of TPTB include [street riots], and most significantly about these will be that the [minions] or [stooges/tools] of TPTB will [retreat], and be [defeated] in several of these [engagements]. Further the [retreats] of the [enforcers] will provide [proof] to a specific set of [sorcerers] within TPTB, that the ['phase shift'], so long anticipated, has actually [begun]. It will be the swiftly spreading word of this [conclusion] that causes the more [visible] [signs and portents] of the [problems].

The data sets are indicating that the [elite rulers] of the planet are to receive some [disturbing] news in late Winter, that directly [increases] their [anxiety] through Spring. This area is heavily cross linked over to both the Populace/USofA entity, and the SpaceGoatFarts entity. The larger mass of cross links goes to the Populace/USofA entity where the termination points are with sub sets dominated by the [secrets revealed] meta data layer. The smaller sets cross links over to the SpaceGoatFarts entity are terminating in the areas of [contact], sub set of [disappearances] and so are involved in the bespoke [fear] that TPTB will [exhibit] about being [disappeared], *though* note that a fiction of [worries over global kidnapping 'spree'] will be proffered as the explanation which will [satisfy] the [masses]. Nonetheless, the appearances of the [cadres] of [bodyguards] for TPTB in 2009 will be [imitated] by [celebrities] later in Summer as they [misunderstand the risks]. The data sets are pointing to a kind of strange [pride] issue arising where the [celebrities] will be [attempting to prove/demonstrate] that they are [worthy] of being [kidnapped]....perverse, yet but humans, eh?

Markets - Systemic Farts, Gleaners, Hollows, Hyperinflation

As may be presumed from the general state of affairs out-and-about in the material world, the [dollar planet] is not in good shape. The accretion patterns of the new supporting aspect/attribute sets for the Markets entity are pointing toward a very [trying/challenging] month of [trails/travails] and general [collapsing (of) dollar denominated structures] from about mid November through to the solstice in late December. THEN comes the real [tests] as the [degradation] moves as support under [crushed intestines], and [collapsed

(intestinal) walls]. The idea is that while [officialdom] sets about seriously [flooding] the [global financial system] with [depreciating dollars], the [bowel of the [system] will simply [cease to function], not with [impaction], but rather with [collapse] and [inability to absorb (the) dollar (flood)].

This state of [useless (digital) flood(s) of dollars] is shown as [producing], by early January, something that we are interpreting as [systemic farts]. As with any [smelly out gassing], the [systemic farts] will bring up the [smell] of [everything rotten] which [cannot move]. These [farts] are in the supporting layer for the [secrets revealed] meta data layer, and are directly held values in support of [systemic destruction/rot] within the Markets entity. The [farts] will include [government (lies)/bad smells] that will be related to a January call for [cleaning house] on [all methods (of) reporting] of [financial/government accounting information]. These calls will be coming waaaaay too late to be effective.

The late November [sinking] of the [markets] due to the [flood of depreciating dollars] produces the expected [wave of layoffs/firings]. These will begin to be [visible] in December, but will not reach their [holding zenith] until late in Spring of 2009. Many of the [unemployed] will be [trapped] by the outgoing Bushies and their [officialdom] and the months before the [new administration] gets in place. They will be [trapped] against the [old world (pre-2008)] paradigm for [unemployment], and the not-yet-even-visualized [new paradigm (for human economic activity)] that starts to manifest in mid 2009. It will be the growing cadre of those [discarded] in December/January who will provide the [incubation pressures] for the [philosopher(s)] from which the [new social contract] will emerge in late Summer 2009. These [displaced persons], including the [family of thinkers/philosophers], will begin to [create] new [forms of resources] by [gleaning] on the [bones of the old system]. These data elements are cross linked over to the Populace/USofA entity and the GlobalPc entity where the termination points include [squatters], and [re-purpose-ing (recreating)]. It is in these sub sets that we find the first of the [re purposing (structures)] such as [strip malls], and [office buildings]. The data is also suggesting that a [triple], or [triad] of [great brains] will emerge due to the [tempering] from [adversity] of 2008/2009. These [3/three thinkers] will form the [core of/central support for] the [new electrics] economy previously forecast to be [visible] and in place by 2018.

The Markets entity is clearly a very stressed set of descriptors. There are fractures between large descriptor sets, and among the sets themselves. Unlike the stressors that led us to separate the [bushies] from the older BushCo entity the Markets entity appears headed for a complete, internally generated, total loss of cohesion. The various aspect/attribute sets at the primary level of support for the entity are displaying discordant summation trends, as though a

separation of sub sets is imminent. This development is new within the processing of these last 2/two weeks of data, and is indicative of the great pressures on the planetary, dollar based, financial system.

The Markets entity, at a very primary level, also contains a set of cross linked aspects/attributes which go over to the Bushista entity where they terminate in [pressed in upon]. Further this combined set is interpreted as presenting a [period/time (of) retribution] against the [bushies] as they are [bullied] by [others/groups] while [down/fallen/reduced_in_circumstance]. This late December or early January, [bullying] will be [visible], and will produce [how (of) rage] against the [bushies] from their [former supporters]. This last is heavily supported by [shame], and [turning away], and [rejection]. There are cross links over to the [israel] sub set of the GlobalPop entity.

The [gelding/castration] of the [cowboy myth (about the Bushies)] is [yet more/heaps_of_troubles] which the [religious right] sub set of the [populace/usofa-bilderberger] will [take personal], and which will put additional [pressures] upon [markets] as the [redemption wave] starts to [roll through] the [paper instruments trade]. This *apparently* refers to a [mass attempt] to [empty] the tens of millions of 401k and other retirement accounts *ahead* of the continuing [dollar degradation]. The real problem is that this [redemption wave] is already behind the actual manifestation of events, and merely exacerbates an already [crippling] trend of [mass withdrawals]. It is the [mass wave] of [attempts to reclaim value] from the various [money/currency instruments] that brings home the reality of just how [hollow] the [dollar] has actually become. This emotional [slap in the face] is indicated to precede, and participate in setting up the Summer of Hell, 2009.

The [wave of redemptions/repudiations] will reach a [visible] stage in which [talking heads] will [call out for calm] and [restraint]. These [calls for restraint behavior] later in Winter 2008/2009 will be a good temporal marker as they appear to be about a lunar month (29/twenty nine days more or less) ahead of the first [visibility] of the [hyper inflation] phase of the [death of the dollar]. The cross links from the [hyper inflation] sub set (which first formed in the data sets in early 2008) over to the Populace/USofA and the GlobalPop entities terminate at the point at which the manifestation of the [revolution] meta data layer begins in 2009.

Basically there is *NO* good news for any speculator within the [paper debt] [dollar denominated] [markets]. The [dollar] shows in our data sets as being [dead] by mid Summer of 2009, and though when exactly a currency becomes 'worthless' is open to interpretation, we are using the [repudiation] of [government/officialdom entitlement programs] as being *the* point at which the [death] of the [dollar] will be [visible].

SpaceGoatFarts - Deja Vu Hoo!

The SpaceGoatFarts entity is accruing data sets faster than any other entity, excepting the Markets entity. At this point there are 3/three rising sub sets within SpaceGoatFarts; these are [military/army], [NASA-bilderberger], and t [contact] meme. The [contact] meme is gaining the largest percentage of support from the newly accruing sets, but this sub set is now very extensively cross linked internally to [army] which can also be interpreted at a secondary level as [multitudes] or [hoards/masses]. Both of these sets are cross linked within SpaceGoatFarts entity to [NASA/Bilderbergers], and other [shadow government officialdom] sub sets. The data sets arriving in support break down into 3/three broad waves of new levels of linguistic support. The first wave appears over December and January, with the second, smaller wave, manifesting in Summer of 2009, and the last in Fall of 2009. Both Summer and Fall, 2009, sub sets are headed by [bad/negative] as the dominant aspect/attribute set.

The data sets are indicating that the [cracking apart] of the [dollar paper debt markets] will also produce a [rendering/shredding] of a [cover/story/lie] that then [reveals the secrets] and [exposes the fraud(s)] within [officialdom perception (of) NASA/space exploration]. There are considerable number of aspect/attribute sets indicating a [flood] or [torrent] of [repressed words] which will be [pouring from] the [mouths] of the [former workers] within [NASA/space exploration]. This is predicted to come about as the [government repudiation] of [dollar based debts] occurs in 2009.

As a small(ish) sub set in support of the [flood of repressed words], there are some hints that ThePowersThatBe, and their [officialdom] will be greatly distressed to learn that [knowledge] of a [hat/head device] is [spreading] among the [workers]. This [hat] is indicated to [cause problems] for TPTB in a very severe manner late in 2009, and throughout the [revolutionary battles] in 2010

There are rather ominous sets which are headed by [wagons/transportation] that will be [carrying/transporting (the) dead]. This is further reinforced by [dead men (in) transports/ships/carriers]. Further aspect/attributes in support of this area include [doomed (by) visions (of) invincibility]. There are also supporting layers for [planning/charting (a) course (of) calamity]. This is reinforced at lower levels of support by [shocking (news/events)] which are related/focused on a [patient/invalid].

Some of the [NASA/Bilderberger] sub sets *seemingly* are pointing toward [rewards] being [portioned out] among the [workers (at the top)]. This apparently will cause [envy] and [distrust] among other [workers], that in turn initiates the [wave of saying of repressed words] by the [disgruntled former

workers]. The data sets are seemingly pointing at [many/thousands] of [persons/former workers] so [trapped] by [economic suffering] that they [try to sell] their [stories]. Hmm. Good time to be in the talk radio business...lots of potential guests becoming available in 2009.

Much more data waits to be examined, but time limitations prevent going into more details at this point. We expect to revisit this entity in several of the reports of this series.

Conclusion: ALTA 909 - Part Zero:- (E)Mergers, Flux It

Wealth and treasure are of secondary importance to life and time. Obviously this has not been the collective consensus thinking of the last 50+/fifty_plus years, however the data sets are quite clear in pointing toward a deep, paradigm busting, shift of 'understanding' or 'global perception' among the humans.

When we first began this work nearly 10/ten years ago, there was but a single populace entity. This entity represented omni humanity on this planet. When it became apparent within the data sets that the sub set of the [populace/usofa] was indeed 'different', and was treated 'differently' by the ThePowersThatBe entity, it was decided to create the Populace/USofA sub set. Nearly a decade later, we are now showing signs within the populace entities, GlobalPop, and Populace/USofA, that the separating factor(s) *may* be dissipating, and thus we may be merging the populace entities back into an omni humanity entity. This will be *very* bad news for the religious right/evangelical sub sets within the [populace/usofa] who are under the impression that they are 'favored' over other humans. The emerging language structures within the longer term value sets in support of the Populace/USofA entity are shading much closer to similar structures within the GlobalPop entity. This is but 1/one of the many hints presented by the data that the [revolution] meta data layer is a [global process] and further, that the [populace/usofa] will be returned to the fold so to speak by [reduction] of [isolating barriers] put into place by TPTB over these last 2/two decades.

Also returning over the next year (or so) will be a sense of [wonder] to [humans]. This [wonder] sub sets within several of the entities is *all* about what/who is omni humanity, and where the hell is the [point of origin]. This is all bound up with such recent discoveries that [earth/terra] is *not* part of the [Milky Way galaxy](#) and further that we (the solar system) are being [subsumed/absorbed] into the Milky Way galaxy for the first time, with totally [unanticipated effects/results]. This will become intertwined with the 2012, an Mayan calendar mythos over 2009, such that the [unknown energies from space] meme so frequently cited in the SpaceGoatFarts entity rises to very high [visibility] by Fall of 2009, with attendant [changes] in [universe perception] l

large numbers of [humans] from Fall of 2009 through Fall of 2010.

Please note in the referenced article on the Milky Way, the inclusion of information about the [flux tubes] of high energy particles. While this discussion rightly belongs in the Terra entity, there are some indications that t [unknown energies from space] in 2009 will produce [visible] examples of [flux tubes] affecting [terra/earth]. These [flux tubes] are known to [NASA] and the TPTB, and will become a [point of contention] in 2009 as the information about their [potential] (pun intended) emerges.

Humans are going to be exposed to increasing types and amounts of all kinds stimuli from universe over 2009, and the year is aptly (we think) labeled by us as the Year of Transformation. Already the linguistics are reinforcing that descriptor set even as the Year of Manifestation (2008) winds down. BUT do not be mislead. This year will go out with a BANG! and not a whimper.

###

This ends Part Zero. We expect to have Part One posted by late on Saturday, November 8th.
