## **Introduction**

This ALTA report is something of a hybrid. It contains the usual format for ALTA reports in the first half and then paragraph sized reports of high emotional elements with some small details in the second half.

Report legend:

IM = Immediacy Data = effective from 3 days out through the end of the 3<sup>rd</sup> week (from point of publication) – Error level is 3 days out through end of 3<sup>rd</sup> week, with most IM data showing in the closer part of the range.

ST = Shorter term data = effective from the beginning of the 4<sup>th</sup> week through the end of the 4<sup>th</sup> month (from publication). - Error level is from 4<sup>th</sup> week through the end of 4<sup>th</sup> month, with most ST data showing within the first 3/three weeks of the range.

LT = Longer term data = effective from the beginning of the 5<sup>th</sup> month through to the end of the 19<sup>th</sup> month following publication. Error level is complete range, with most of the longer term data errors showing up in the latter half of the error range.

## ***Terra***

The linguistic set that provides the name for the Global Coastal Event continues to grow. It needs to be noted that the data accretion patterns are in both immediacy data and longer term data sets at nearly the same rates. The rate of growth itself has accelerated over these last 8/eight months in a noticeable way. That the data sets had provided a clear description of an 'emerging pattern of earth changes which manifest the most in coastal regions' that is indeed manifesting in the real world makes one continue to pay attention to the material. These [manifesting earth changes] continue to support the forecasts coming from the data sets. These sets, in their new growth, are arguing for a long, long, multiple generation long process in which earth expansion will (and is) gaining 'traction' as a participant in all human events.

This [earth expansion process] aka the 'global coastal event' is, within our data sets, necessarily intermixed with [weather wars], SpaceGoatFarts based [space alien and unknown energies from space] sets that add to the emotional mix. It is difficult, if not impossible to separate these influences. The difficulty lies with the mainstream academic culture that puts any, and all 'earth expansion' ideas into the realm of 'conspiracy theory' which is itself an [officially negatively sanctioned meme category]. Thus, even in the SpaceGoatFarts entity, the 'taint' within the language of the [officialdom censorship, and ridicule] are pervasive.

We do take some of the 'edge' off the [officialdom taint] by way of summation of emotional values in the aggregate to determine forecast 'ranges' of potential futures in any given meme category. Our problem with the [earth expansion] theory is that it is described by the data sets as being the [tap root] of certain of the [layers] of the [actual conspiracies (bilderberger, bohemian grove et al)] that really do

create the events and social 'tones' to a great degree.

The terra entity is very [wrapped up] in [position changes]. These [position changes] are indicated to be [both] in the [position of places on the planet], as well as the [planets' position] in space [trailing in a complex spiral behind the sun]. The descriptors in this set include [weather shifting], [weather patterns altered], [seasons adjusting], and [wind flows altered]. This last appears to suggest a [northern ascending twist] to the [winds (jet streams included)] of the northern hemisphere. This [northern ascending twist] will be the cause of the [harsh winter conditions] as the [return winds] from the [arctic areas] will be [exceptionally cold]. The data sets are indicating that the [extremes] of [temperature] at the [arctic (and antarctic)] areas will be due to [numerous magnetic poles] which in their turns will form [inward drawing vortices] that will [draw down high energy particles (from space)] that will in their turn cause exceptionally [cold conditions].

The [weather patterns altered] sub set includes many sets related to [antarctica] and the [shift of the ice (of ages)], that in its turn includes [out pouring (of rivers) of rushing (warm) waters]. There are many supporting sets for a [current scrubbing (out rush)] of waters from [under the ice] which are described as [scouring (out) new channels] that in their turn, create [new currents]. These [new currents] are supported by sets going to the idea of [shipping lanes changed/alterd] as the [waters move north] (over decades), and [ports underwater]. The [ports underwater] sets are participating in support for [coastal (population) evacuation]. These sets are in their turn participant in both the many [diaspora] sets as well as the [global coastal expansion manifestations]. In some of the [coastal evacuation] sets there are indicators that as few as a [dozen kilometers] is adequate, and that [facilities relocate]. However, in others there are sets going to [loss (of) vast tracks] of [low-lying coastal properties]. These sets are within all the data types and are very strongly represented within the longer term types. In these longer term sets, the data suggests that [significant alterations] of the [coastlines (of all the continents)] reduce [maps] to [uselessness] in [coastal areas].

Other aspect/attribute sets within the Terra entity collective paint a picture of [disruptions] that come to [human infrastructure] which [originates] within the [ocean]. This area is cross linked over to the [oil disruptions] sub sets (See Markets entity). The data suggests that [planetary expansion effects] are going to manifest in [undeniable manner] in the near term. Not only are the [new lands] sub sets gaining new levels of supporting aspect/attributes for [cresting (above waves) new islands], but we also have [oceania] sub sets indicting new [underseas formations] that will include [volcanoes], [trenches], and [fissures].

The Terra entity is NOT comforting in any of its data sets about the future for humanity here on planet terra. In the general accretion patterns there is a definite increase in all areas of the process we apply to the 'raw data'. These processes are reporting greater levels of new data, with higher levels of emotional tones, than we have yet encountered in this work. The emotional criteria used within our work for predictive forecasts are held within a very large, multiple dimensional array of values. These arrays have been purposefully constructed to allow for the potential of up to 640/six hundred and forty emotional qualifier/quantifiers. Most usually, the arrays are not filled to even a tenth of that level, however we are now encountering data items with emotional tones that have filled our arrays to unexpected depth. These fill levels have brought in longer term value sets in greater than usual abundance.

The presence of the longer term values has allowed a peak into a longer term future that does confirm

what many of the previous ALTA reports have forecast in the sense of [great changes here on terra]. These [great changes] at the [planetary level], are described within our most recent data processing as having [reached plateau's end]. This is also described as [conjunction (of) weighting/propelling circumstances]. Both of these sets, as modelspace is progressed through 2014, move into support of what we will label (dramatically) [the quickening]. This relates less to the [pace of change], though certainly that is also forecast to [increase], than it does to the [unknown (descriptors)] of what the [changes produce]. There are very large numbers of cross links from the Terra entity over to the SpaceGoatFarts entity within the area of [planet changes]. Many of these sets also link over to the [diaspora] sets within the GlobalPop entity.

The Terra entity sets are describing a [planet] very much in [transition]. Not only will the [seasons] be [out of place], but we have new sets for a [displacement (of the fixed stars & planet positions)] that points to some level of discussion about [terran position relative to sun]. These areas are extensively cross linked over to Markets and to GlobalPop, and in both entities the majority of [first impact] sets are within [foods], and [food production].

Many of the Terra related sets that have directly held supporting values or links over to the [msm prostitute] sub sets are now gaining support from data around the idea of [msm prostitutes] having to [acknowledge] that the [planet is wonky]. This is signaling a [departure] from the [global warming scam (of tptb)], and also is a [diversion] from the [climate change] propaganda of these last few years.

## **GlobalPop**

In the anglo-american financial empire, the data suggests that the [population] is going to undergo a very [rapid] form of [reassessment] of [their position (personal) in history]. These sets are indicting that the [population] is going to [(use great effort) to shrug off] the [officialdom imposed/trained view]. This [perception] set is directly related to the [confidence] set which is the data describes as the [last thread (securing) the dollar]. The combined sets and their cross links point to a [shattering] of [confidence (in the dollar)] here in PopUSA. Part of this [destruction of confidence] will come directly from [actions (of the) federales in DC]. The [incident] being referenced starts to appear as modelspace is progressed into Fall (northern hemisphere). It is these actions from the [federalist state] here in USA that [precipitates] the [shift] into [gold/silver/bitcoin] as the [dollar] is [disparaged] from [on high].

At some point in the Summer (northern hemisphere), a [fuel scandal] is going to [erupt]. The data sets are pointing to the [events] in the background having already occurred. The data sets have a growth pattern that suggests that an [active coverup] is/has occurred. It is a [strange (form)] of a [coverup], and the data sets have many cross links over to the [unknown] sub set within the SpaceGoatFarts entity. The terminating sub sets include [space alien energy sources (aka free energy)] and [vast oil resources] that have been [deep, deep, deeply hidden]. The idea coming across is that this [scandal] will [become known/secrets revealed] just at the point when [new engines/ new energy sources] are also [competing]. The [fuel scandal] is focused around the [measurements] involved. The data sets are pointing toward a [devaluation] of the [energy involved]. This may relate to some arcane categorizing system of fuels, but as of this writing the sets are still building and so are unresolved.

As a long term consequence of the [fuel scandal], the data sets are pointing toward a [rebirth (of Tamojin (or ideals?))] out of [mongolian desserts], as the people of that country make news by [taking a

decision] (at a national level), and [inventively/creatively extending it] to the point that it is showing as [altering humanity]. These sets are 'fueled' (pun intended) by longer term sets, though the shorter term values connection shows at least initial [visibility] thresholds are crossed in 2014 so we should get some idea of what is going to come out of the [mongolian desert] at us this Winter (northern hemisphere).

Germany (and other nations) to send Warships to NY in [negotiation with Fed Banksters] over gold. The data accretion patterns suggest that the [gold claiming nations] tell GUS (officialdom usa) to [stay out of this]. The data shows that there will be [discussion] about the [claims] in the [presstitute media] prior to the [fleet arriving] under the banner of the Gold Anspruch Nationen. GUS (gov't US corp) dithers. Says [fleet] there [by invitation]. NYC rolls out [hooker parade] and [requests shore leave] for foreign sailors. Leave is [denied]. Background talks with [GUS] are going to [leak out] and [confirm] an [attempt] by the [federal reserve banksters] to [settle] the [missing gold] with [germany] in [land]. The idea is that [vast tracks] of [Federal (GUS) lands in the West] were {are to be} [offered in settlement] of the [gold debt]. There are indications that this [flotilla] will be the start of the process in which [germany] shifts [out of nato], and into [BRICS]. This shift also is indicated to be the [end] of [fraking] in [central europe].

Response by [gold claimants] is [no]. They do not want to deal with the problems created by GUS in the [western north america], and specifically do not want to [accept participant status] in the [territorial battles on-going].

As part of the [Gold Ansprach Nationen], many of the [nations] affected will [renounce] the [use of the dollar]. In some instances, the [citizens] of the [renouncing country] will be [harmed], but most of the damage seems to be to [USA interests] in these countries, including [US military (and associated 'contractors')]. Now, please note that the timing is unclear about much of these elements. In other words, some counties may renounce the dollar prior to joining up and demanding their gold. The data accretion patterns have so many new aspect/attribute sets arriving so rapidly as to press on my ability to interpret as to the timing.

Without regard to the [gold claimant nations alliance], the data continue to point to a period, likely beginning before the end of 2014, in which countries ['hosting'] many of the 1000+ [us military bases outside the usa] will [firmly ask] their ['guests'] to [depart]. In some few instances, [rapidly depart]. Much of the alternative media will be covering the [debacle] as the [military bases (are evacuated)], and [soldiers] are [repatriated (by charitable donations (to afford air fare))].

The data sets accruing around [ukraine] show that through to late Fall, from the perspective of [nato/west], the situation will get [worse, then worse]. There are many descriptors for the [persistent mercenaries (= paid ukrainian stooges)] who will be [destroyed (repeatedly) by bad luck]. Many of the new sets contain descriptors for [exploitative people] who will be [unmasked] in [social discord] within [local populations] in [western ukraine]. In one incident, a [platform] on which [scum (aka politicians)] are [standing] is described as [local population] is shown as [grabbing (one of) the legs] of the [platform] and [rip it off]. This causes an expected [spilling of politicians] into some form of [waterway/watercourse]. There are, sadly, no drownings, merely humiliation.

Some of the data sets around the [ukraine] show that [western ukraine] will have [riots] in which

[parks] and [public spaces] become [battle zones]. Some of these [riots] will have [local populations] chasing after [politicians] with [sticks and stones].

Other sets related to [humiliated politicians] who will be [breaking off (talks)] at just the wrong moment. The data sets indicate that the [humiliated politicians] rapidly build up a wall of [negative results] as [secrets revealed] in bulk put the [kibosh] on several deals as a [cache (of) secrets] is [poured out].

Several of the [ukraine] sub sets are cross linked to larger sets that bring in [israel] and [gaza] into a set that we will label the ['kick the jew'] "game". Unlike the linguistics that predicted the 'knock-out game' in 2003 and in which the [msm pressstitutes] have totally ignored this social phenomenon, we now have sets going to the idea of a [mainstream media 'hyped'] response to a new 'game' that will involve [kicking jews]. The data suggests that this 'game' begins in a large east coast city in [usa], and [migrates globally] very rapidly. There are even sub sets going to the idea that [governments] in EU will [tacitly approve] the [kick the jew game], as, in their minds, it is [better than burning synagogues]. These sets are within the larger set of [pogrom] that has been in the data since 2006. These sets in total describe a period of [transition] for what we think of as the [abrahamic religions], including [judaism]. The [pogrom] is described as NOT affecting Russia, or China, or India, but other than that, most of the countries of the world have some level of geographic representation in the data sets. The data has several, repetitious references to a particular [male, tall, thin, articulate, good looking] who will [become the poster boy] for the [pogrom] in some fashion. What seems odd is that the data is hinting that this personality will be both [leading the pogrom], and be [jewish]. Not sure what country, but the personality being described will take on the [racial hatred] component of the temporal echo to [rothshield-jewish extremism] and [british plotting] of the 3<sup>rd</sup> Reich.

[People] en masse, are indicated to be [losing their minds] both actually, and as [characterized by government agents]. The data sets are indicating several moves, including in the USA, for [forced administration] of [psychotropic drugs] at the [insistence] of [officialdom agents]. While in general the supporting sets for this area are showing that the [need] does not exist, and that this is a [population control effort], there are sets with support for our 'old friend' in the data of the [sun disease]. These sets are suggesting that several [high intensity (solar) regions (such as both sides of the terrestrial equator)] will be [affected] by [extreme energies from sun] such that [mental processes are disrupted] in both [humans] and [animals]. Many of these [episodes] will appear in the [mainstream media] as [animal die offs] and ['muckers' (humans running amok with bad behavior)]. This is indicated to increase to significant levels over late in 2014 and through all of the next [4/four years] culminating in [excessive solar discharge] in 2018.

The GlobalPop is also indicated to be [reeling], and [disoriented] due to [disease], and [oil/energy problems]. The combination of factors, especially with [suddenly unstable electricity supplies] provides a background against which the data has a number of [new leaders] emerging. A few of these [next generation leaders] will be reaching [visibility] later this Summer (2014, northern hemisphere)] as [crises] in [populations (mostly linked to death of dollar)] bring about [new forms of political alliance].

Some of the new sets in support of [political alliance] include [north america] and the idea of [new (young) leaders] who will [scare/frighten] the [establishment/politicians] due to the [massive], and [overwhelming response] from the [citizenry]. These data sets include some details of at least one instance in which [professional politicians] are [swiftly (and publicly) thrown out] of a [populists

meeting]. The idea coming across is that the [politicians] will be [attempting] to [subvert] and [infiltrate] the [new political movement]. To their [surprise] and [fear], the data sets show them being [pummeled], [stripped], [kicked], [punched], and [carried (bodily) out of the arena (horse place? Sawdust?)]. At least this instance brings [msm prostitute] attention that is described as going to the idea of [terrorist organization label] being applied due to how the [politicians] were treated. These sets gain support for the [collapse] of the [mocking/accusatory tone] from the [msm prostitutes] as the [backlash against their imagery] grows to the point that [studio personnel] and [facilities] are [assaulted daily]. These [assaults] are part of the [spitting campaign] that is described as [growing around msm] here in Anglo-American empire. The details show a [woman, young, long hair] who is [video recorded] as [she spits in face (or food?)] of [msm prostitute personality] in a [restaurant]. This then goes viral on alternative media and a whole new form of [social behavior] begins. This is showing as going about a year, and leads to lots and lots of [msm prostitute discussion] and even [pleas on video] from the [prostitute whores] for the [actions to stop]. This behavior is also showing as spreading to [celebrities] in general near the end of its effective period. Near its end the [spitting] meme is shown as degenerating into [slapping], and general [punching].

The data accretion patterns have added supporting sets to a linguistic structure going to the idea of [diaspora (due to weather)] that will begin in late 2014 but that, according to longer term data, will come to dominate this decade. These [weather driven people] will also have others joining the general mill about due to both [geopolitical upheaval], and [land alterations]. The [land alterations] set is not related to the [weather driven diaspora] directly. In modelspace we have emotional hotspots around both [un-doing of seasons (inappropriate weather)], and [planet expansion producing localized land form alterations] as separate linguistic structures. These sets indicate that it is the [disruptions to infrastructure] that [create the motivation] to [relocate under duress]. There are data sets for involvement of all continents for [diaspora] within the longer term data. The inclusion of [antarctica] appears to be due to events there that alter weather and climate and coastlines elsewhere.

There are several disparate sets going to the idea of [warfare (invasion south?)] in [USA/north america] that point to the [establishment/tptb] seemingly [engineering] a series of [gang skirmishes] between [invaders] and the [local populations]. This is showing up as a minor background theme that stretches across [Fall (northern hemisphere)], but seemingly also [dies out/fails] by [mid-winter (2014)]. There are a number of supporting sets as to what will be [cited reasons] for the [failure (of population)] to [fall/be deceived into] a [civil war].

## **Markets**

The data sets are pointing toward a [pocket picking] at the level of [management] of the [student loan debt]. This [scandal] is showing as being [national], and [massive]. The details would suggest that later in this year (2014) a [deliberate sacrifice] of a [criminal] within the [student loan system] to the [media]. This [sacrifice] will also move into [public conspiracy consciousness] as a new word, created from the name of the ['victim' criminal] that will supplant the use of the word [scape goat]. This set is pointing towards a [corruption scandal] that is [so pervasive] as to [incite repudiation] and [trigger social media campaigns (for monetary resistance)].

Other [nauseating] problems relating to [north american population] and [disease] will be [exposed] by the [crashing (of the) health care 'system'] in USA. The issues relating to [health care] for [north

america] are showing as so dire as to lead to [isolation (of populations/cities/towns)], as well as [self-isolating towns/cities]. Further supporting sets include [on-rushing (people)] into [mexico] for [necessary drugs/treatment]. Exacerbating the situation will be [drug shipment curtailments] due to [economic impacts (of dollar shunning)]. Also contributing will be [sporadic electricity/water delivery], and [high incidence of climate stress (heat/cold/chemtrails)]. Other [environmental degradation] will also [produce disease conditions] for [local populations] as [sanitary systems decay] due to [budget cuts]. The data sets point to [cholera outbreaks] along [rivers] in [mid-west], and [ohio valley]. These are key [disease impacted] areas as described by modelspace and are showing as [affecting/disturbing] the [markets] in [north america]. The data may be describing a situation in which [disease] actually [prevents] some [markets] from [opening] as [people] will [refuse] to [risk disease exposure] by [crossing certain areas]. This is also showing as impacting [elections] as well. The largest short term emotional impacts are focused on the Markets entity as the [disease] 'issue' is indicated to be [repeatedly referenced] with [bizstream media].

Markets entity has so many new areas of growth in support of [disruptions (to systems)] as to beg the questions of both where to start, and where to stop. These sets are participant in a number of other entities via cross links, though mostly as originating points rather than terminating sets. The Markets entity, in both dominant data types, and accretion patterns is unlike we have ever seen it before.

The Markets entity has sets indicating that the [markets] themselves are going to be [stressed to breaking] over these next [5/five months] through 2014. The data accrues around both [scandals] that [destroy confidence], but also [systemic failure]. These latter sets are interesting in that we get some level of details about the [destructive feed back loop] that will be [forming up] over Summer (northern hemisphere) {ed note: by the time you read this report, this 'negatively focused feed back loop' is indicated to already be in place and growing} such that it will be [sheering/tearing] into [markets (leverage specifically focused data set)] by very early Fall.

The Markets entity contains new growth in support of [flooding (of derivatives markets)] will [occur] as [states/republics] begin to [raise domestic interest rates]. The idea from the data is that the very first of the new BRICS Bank deals will put huge pressure on the [fake money (of the anglo empire)] and that the [federal reserve banksters] will be [forced to respond]. The data indicates that the [world] will not take the [response seriously], and the [first] of the [very public, ripples/flutter] in [global confidence (of/in the US dollar)] will occur. It will be ugly. And according to the data sets, it will get worse, very rapidly.

These data sets go to the idea of [repudiation] of the [dollar] such that [federal banksters] will be forced to [decimate (remove whole decimal places of 'value')] in their [data bases]. Our data suggests that the [federal reserve] and [government] will take this route into hyperinflation rather than actually printing new currencies. There are sets indicating a [brisk], and [dynamic black market] will emerge in [paper currency] for a brief time here in the USA as the [new digital dollars devaluation] takes place. The [brief lust] for [old dollars] is also shown as being [countered] by the [federal reserve] as it [vacuums up old currency]. However we also note that many new forms of [popular crime] will be taken up that will include [tricking money taking machines (MTMs) into refreshing digital dollar cards via counterfeiting techniques].

Some of the new sets within the Markets entity are pointing toward an [oil displacement]. These sets are somewhat unclear. The data includes aspect/attribute sets for [oil/displacement], [oil/upended],

[oil/polluted], among many more diversely pointing to a [global], and [immediate] [search for answers]. This area is cross connected to the SpaceGoatFarts entity where the terminating set suggests that [short distance sub surface oil deposits] are found to be [mysteriously empty]. The idea from the SpaceGoatFarts side of things is that the [expansion (of planet)] causes new [sub surface rifting] that [drains away] the [previously discovered], [close to surface], [capped], [natural reservoirs].

Further, cross linked both internally within the Markets entity, and externally to the GlobalPop entity, sub set USAPop, are sets that suggest that [extreme politics] in [California] and throughout the [west (of) USA] are going to [cause underpinnings (within markets)] to [crumble]. These [underpinnings] are going to lead to [failures] of [markets participants] over a [short period]. This [period of failures] would \*seem to maybe be perhaps occurring in December of this year. Maybe. The linguistics are so spread out as to impede interpretation. The data sets continue to accrue to the sub sets in support of the [extreme politics] causing [extreme problems] within the [shares] and [bonds] markets. Note that at the data is showing these sub sets accruing against a background of [systemic problems] and [geopolitical pressures] that are described as [pinching (the resources)] of the [markets controllers] to the level of merely [attempting to cope (with daily failures)].

As the [extreme politics] meme is emerging at the [national USA \*(and EU)] levels from the [states], there are a number of data sets going to the idea of a [sudden], and [abrupt] [shaking of confidence in the Federal Reserve dollar] as a [speech] at a [national level] begins to [come unraveled]. The supporting sets are filled with pointers to a [shock], and [sudden loss of confidence], and [politicians making disparaging remarks (about dollar)], and other sets that point to a [national (dollar) confidence scandal] that in its turn actually [focuses flight fears] into [action].

While the data sets accruing to [bitcoin], and [gold/silver] are indicated to be [pressing upwards (in dollar price)], the situation as regards to the [price in dollars (for delivered gold/silver)] shows as being [suppressed], and [stymied], and [held fast], until this [incident] of [extreme politics] sets off a chain of events that produces a/the [speech] in which [secrets are revealed]. These [secrets] are probably not intended to be revealed to the populace. The data sets have [exposure], and [shocking light], and [focused attention] in juxtaposition to [fear], [frightened (of outcome)], [internally shocked (bladder loses control)]. According to the accretion patterns, a [clear turn] will be taking place in the social order as a direct result of this [screw-up speech] such that it can be used as an historical temporal marker for the [liberation of gold/silver].

These data sets in support of the [gold/silver/bitcoin] are suggesting that [hyperinflation] begins in the [USA] first, and continues here the longest (of the paper currencies). Much of this language is about a [derivatives melt-down] that starts with a [demand (for renegotiation)]. This is indicated to be [set off] or [sparked], or [initiated] by a [screwed up/bad speech] by a [politicians 'slip' of the tongue].

The data sets have [silver] at a dollar per ounce price of [88.23 (to) 89.28] by the end of 2014. Note this does not mean that the price holds, is anything other than a momentary discussion of silver at that price. Within our process we cannot discern between an actual event \*usually, and future discussion about the idea of such an event. Make sense? Clear as the inside of a geoduck shell at midnight at low tide?

The above caution aside, the data suggests that [real (fungible) assets (gold/silver/copper/bitcoins/bullets/liquor et al)] will be in [hyperinflation mode] relative to the Federal Reserve dollar by the [onset (of this) shocking winter].

There are a number of cross links between the Markets entity and the SpaceGoatFarts entity where in the terminating sets are within the [markets] sub set within the Markets entity. The originating sets are within the [breaking of vow] and [exposure (of) reality (of aliens/ufo's)]. These cross links are indicating that the [ufo/alien] context will [intrude] into [markets]. Perhaps it is the [hostilities] that are [video recorded]? There are so many new SpaceGoatFarts entity sets growing rapidly that it is difficult to sort out anything close to 'cause and effect'.

## **SpaceGoatFarts**

The SpaceGoatFarts entity is far more active in these last two years than in years before. We have had new growth in our [alien wars] sub set. This includes a related set by cross link of [revelation (of aliens here on terra)]. This latter set has had growth indicating that an [outbreak] of [sightings] will also be concurrent with a [hostile (UFO) incident]. Within the data, this set is further supported by the idea that there will be [numerous videos] of the [hostilities]. These [videos], in spite of [claims of fakery], are so many, and from so many views, that the [incident] will be [accepted] as [factual]. This is part of a set that we are calling the [initial break down (of the lie) of terrestrial isolation] set. Unlike the idea of 'disclosure', we have a set here that indicates that [open acknowledged factual alien presence] will be [circulating (among the) population] via [alternative media] to such an extent that ['mainstream media'] will be constantly [dancing around] the [public knowledge]. This is indicated to be something of a [logistical problem] for the [remaining mainstream media (as it is dying over these next 2 years)] as they will be tripping over their own lies so frequently that [games] will emerge on the [alternative media] in which [clips (of lie trips)] will be enumerated and cataloged.

The [hostilities] sub set emerges into modelspace in mid year, in August 2014, but there are no visibility sums that breach [emergent] value threshold until modelspace is progressed out to December 13. The the [visibility] sum exceeds our [emergent] threshold, and thereafter grows. At this point, it is tempting to say that the [videos] of the [hostilities] may be made on December 13<sup>th</sup> of this year, and thereafter the [controversy attempt at suppression (of the knowledge)] begins.

Further supporting sets within the [alien wars] sub set are very confusing. There are references to [aquatic (aliens)], as well as [underwater (but not aquatic) aliens], and [underwater (but not alien, but ufos)]. These data sets include details about [underwater encounters], and other forms of [hostilities] which are indicated to [become known], in a general way, to the [populace]. The data sets include rather curious references to ['a consultant'] who will come from a [engineering background] that will gain prominence during these [video releases] and [initial break down (of the lie) of terrestrial isolation].

There are several new sets within the SpaceGoatFarts entity which go to the idea of a [meeting], in 2014, between [4/four continents], that will be [transposed?inter-posed?] by way of [4/four men] and a [woman]. The data points to the [meeting] being ['busted'] later (in 2015?), by way of [recordings (taken by 'new technologies')]. However, prior to the [dissolution] of the [intended project], there are indications by cross link to the GlobalPop entity, sub set, USAPop, that the [meeting] will [produce] a [calculated risk strategy] for the [embattled powers-that-used-to-be]. The [power brokers] in the

[meeting] are shown as [devising] a [strategy] based around a [prime risk]. The data sets are indicating that the [plan] which develops from this [prime risk strategy] will actually be [used/employed (later)] in a completely different context by [successors] of [secret military organizations]. However, in spite of the longer term implications, the data sets around this meeting are most pertinent in the short term in that they are pointing towards a [release] of [energy technologies] in an [attempt] to [strategically thwart] the [freedom/awakening movement] in [north america]. The [awakening movement] is being described as being [led/fomented] by 3/three of the [charismatic personalities] previously mentioned in IDIR reports. One of these [charismatic new leaders] will develop such a [speaking ability] as to [astound himself (and others)]. The data details show that he ends up being [quoted] in [dozens of languages] yet speaks only [english].

Other sets that are also of a confusing nature include the cross linking back to the GlobalPop entity and the sub sets of [new forms of protest]. These sets within the SpaceGoatFarts entity (originators in the main for the links) have a [space alien 'idea'] that [takes hold] within [a small group] that in turn produces the [first example (of the new form of protest)]. These sets are extensively cross linked back over to the GlobalPop entity where the terminating sets would seem to indicate a [mass global populace acceptance (of the new protest form)] in a way not before seen in this civilization. The effects, as noted within the SpaceGoatFarts entity are [extra-terrestrial].

Sets within the SpaceGoatFarts entity have common support and cross links in Markets entity where the terminating sets include [materials], and [energy]. These sets within Markets entity are deriving primary support from [disruptions], and [disturbing rumors]. The originating sets within SpaceGoatFarts have as their primary support [harmonics (as material creation mechanism)], and [harmonics (as energy control/delivery mechanism)]. In both cases the word [mechanism] is likely misplaced, and is being used in lieu of a string of [unknown describing sets] that point out (to us here at hph) that new words will need to be discovered/provided to adequately describe what is being hinted at here. These sets for [harmonics] also include aspect/attributes within the SpaceGoatFarts entity pointing toward this being a [new area of endeavor/study] for humans. This needs to be clarified in that apparently this [harmonics] development will be the next [new tech] for the species.

## Data segmented by data type, and source/context:

### North America: USA:

[bifurcated currency] – IM, ST, LT

The data sets show large growth in shorter term values for [bifurcated currency] to be [enacted (by presidential decree?)] here in USA. The accretion patterns suggest that the growth of the meme will begin [spreading] in August of this year as a series of [trial balloons] that will emerge from the [FED] and will also have a [congressional cheering section]. The longer term data sets show that the [two tiered currency] will be [failing] in [excruciating hyperinflation] just as the [political process (for) presidential elections] begins. NOTE: all kinds of data sets for [upset] in multiple forms around the 2016 election season in USA.

### North America: USA:

[housing market] – IM, ST

[loosening] – the data sets are showing a [loosening] structure in support at a number of levels. The idea is that a [loosening] of [restrictions on loans] will be pursued as a [government policy]. This is indicated to be one of several different attempts by [officialdom] at all levels to [stimulate (the) USA housing market] out of its [coma]. This [coma] state is gaining further supporting sets as well as new support for [gangrene/systemic failure due to poisoning/toxins]. These new structures appear over July and August 2014 with pointers to major impacts from October onward. The initial [destabilization] of the [housing market] is described as [quaking] the [financial system] over [summer (northern hemisphere)] with an [eruption (of foreclosed inventory)] and a [destruction] of [prices] that will initially begin in the [South West] of the country. Note this may actually include California as the geographic references to [bad housing] in that state are up several fold over our last data run for shorter and longer term sets.

The shorter and longer term sets are painting a picture of a [decay] that [sets into (the) bones] of the [marketplace (for) housing]. This [decay] is actually extensively cross linked over to the GlobalPop entity, sub set [children]. In the terminating sets for the majority of the cross links we find a pretty even split between [student debt], and [credit card/no jobs (and) debt] as being a [cancer] in the [housing markets]. The [student debt] sub set has several branching levels of support and large numbers of cross links that terminate in sets indicating a [mass repudiation] of [student debt] across 2014/2015 will set the stage for a [crash] of [housing asset prices] in [north america]. The data accretion patterns are not the same for [European populace], but nonetheless, that sub set of GlobalPop also has large numbers of new sets in support of [youth rioting] and [massive popular protests (led by) young people)]. In the case of [Europe], the driving force is the [no jobs/decaying social services/too many government restrictions (aka austerity)]. These [riots] and [walking protests (new form of [dynamic protests] in which tens of thousands encircle and walk around government offices for days at a time...sort of 'walk-a-thons')] are also concurrent with [global food price inflation]. Further, [food availability] becomes a [planetary issue] over the latter half of 2014 and into the first two quarters of 2015.

The [decay] that [sets into bones (of housing market)] is supported by [Federal Reserve Notes (in) transition] over the [Summer (northern hemisphere) 2014]. The supporting sets for [decay] include a [transition] set that has [fiat currencies] described as [dislocating (from each other)] over 2014 such

that [barter (of hard assets)] will become [significantly more visible] in the [mainstream media] to the extent that [whole buildings] will be [bartered] between [corporations]. This is a temporal marker for the next large step in [decay] of the [housing markets] in North America as the supporting aspect/attribute sets go to the idea of the [first month] with [negative sales growth (across all categories)] of [housing]. Much of the immediacy data and the early edge shorter term data have temporal markers for [September, 2014] as being the [visible edge of crash] in the [national housing market]. Further, the [dollar transition] sets are also supported by [global precious metals re-balancing] and [market price discovery].

### North America: USA:

[diaspora (23 millions)] – ST, LT

The data sets for [diaspora] here in [north america] continue to grow. These sets have been in existence for a number of years, and now new accretion patterns are showing branching growth within this very complex lexical structure. The new growth (and our current focus) has the longer term data sets creeping forward in time, and very large growth in the shorter term sets which are suggestive of the 'meme' breaking out into public discourse by the end of this year. The data sets have several shorter and longer term value sets involved that go to the idea of the [diaspora] intersecting the [housing markets/industry] **beginning** in just 1/one years time, or less. The data intersects with [housing] are showing growth in both the [material (construction)] and the [regulation/finance/government] linguistic structures. The latter has data sets in the detail levels pointing to a [long term abandonment] of [property price support] by the [Federal Reserve Bank] and the [federal government (of the USA)]. This [abandonment] will be due to [crushing], and [shredding] of [dollar support (for USA internal federal government)] over the remainder of 2014 through to mid 2015. Longer term sets suggest that by late July, 2015 (or near), the [federal bureaucracy] will have [lost jobs] in many of the [largest government agencies] as [cash flows (are) interrupted] and [employees] are [not paid]. These will include [government agencies] that are [housing focused]. The issue of the [lost jobs] is complex as the data sets show many of the [federal government agencies] will be [not (firing)] or [laying off] employees, but will instead be [slowing hiring] as well as [creating Siberia(s)] where [non necessary, no-work-for-them employees] can be [sent] to [cost as little as possible]. The data suggests that [articles] and [blogs] about [miserable conditions] of [no heat], [no water], [no air conditioning] will be [flowing out] from the [low levels] of [officialdom] as [millions] of [employees] are [reassigned to Siberia].

A significant subset of the [diaspora] conjunction with [housing] can be labeled as [the new housing] which has as rising secondary support a complex subset detailing the emergence of the [new mobile home(s) (plethora of new forms of mobile homes)]. The linguistics of this subset point to [chaos], [extreme drought] and [other debilitating environmental conditions] which will [force] the [residents] of the SW states to [consider relocating north]. The data shows that the [diaspora] will begin as a [trickle] in late 2014, and accelerate to [flood] levels as [20+ millions] of people move over the next years of this decade. Most of the [diaspora] data suggests it will be mid to late 2016 before the [true nature (actual manifestations)] of the [diaspora] are acknowledged by [media] and [government].

The data sets around [new mobile homes] are suggestive of a [renaissance] of new [forms] of (more or less) [mobile/transportable housing] will emerge over the next [10/ten years]. Described as [slowly blossoming], this meme is indicated to dominate much of the [housing] sub set over the next [30/thirty years]. The [creative response] sub set in primary support position does include a whole lot of language about [shipping containers] in many different forms. There are significant supporting sets for [new

fuels (oils)] and other technologies related to [motion] that will be an integral part of the [new mobile homes renaissance]. Further sets contain details of [water populations] both [pelagic and coastal] that will be part of the [mobile home renaissance] in their [housing forms].

Further down into the longer term data sets are details describing a situation of several [rivers] of [people] flowing out of the [american south west] and heading [north, and south]. There are further descriptors for [water populations] that will head toward [south america] and even into [south seas islands]. This latter shows as having a huge impact a [decade] later as the [resources] of the [south seas islands] become a [key prize] in some [contention]. The [resources] are apparently not yet discovered, or (perhaps more likely) relate to the [rising lands] forecast in which [vulcanism, sub sea] is responsible for [new deposits] of [rare earths metals (and new forms of metallic crystals)].

### **North America: USA:**

[commercial colleges/state universities] – IM, ST, LT

Data sets contain new descriptors that go to the idea of an [economic crash] of the [commercial colleges]. This has a cross linked [ripple effect] into [advertising], and [state/local education]. The [state colleges] appear to the most [stable (fiscally)] of the group, but [state universities] are gaining support from [financial split/crack up/separation]. Much of the problem is centered on a [breakdown] in the [financing system] including the [student loans to banks relationship] over these next [2/two quarters]. The immediacy data sets are building, shorter term are dominant, with longer term slowly growing, but within the longer term sets are indicators for multiple generations of impact. (50/fifty years or more).

Much of the data within the [crash (of the student financing system)] is supported at the primary and secondary levels by [unexpected]. However much the populace may know, or think, that this [system] is [doomed], the [demise] is being described as [unexpected], [sudden], and [swift].

The resulting [chaos] within the [financial system] is itself described as [competing (with) scaling/ramping upwards systemic lock-down].

### **Europe: Northern, Western**

[energy] – ST, LT

The data sets are hinting at a very [brutally cold Winter] to be affecting the [northern (and) western] regions of [europe] in 2014/2015. These same sets have accrued against a background of [exceptionally wet], [extremely windy], [flooding], [cold/sleet/hail], [destructive waves]. These weather related sets are further supported by Markets based sets pointing to [exceptionally strong demand (for/on energy supplies)].

### **Greater Britain**

[energy] – ST, LT

The data sets are providing a very grim picture for the [british populace] this [Fall/Winter]. First, not only will [Fall] arrive [early (nearly a month?)], but it will bring [exceptionally harsh weather]. Then, to increase the problem, [Winter] is showing as both [early], and [long]. The supporting sets include [harsh], [bitter], [wet], [flooding], [coastlines destroyed/destabilized] {ed note: the destabilization will remain a problem well into 2015 and cause a number of train derailments/wrecks.}, and [wind scoured]. A particularly alarming set has descriptors for very large [glass buildings] along the [thames]

river center (not the estuarine part)) which will be [severely damaged] by [winds], [debris], and what is being described as [whirling windstorms (tornadoes?)]. Further, the [damage] is so [severe] as to [remain visible/in sight] for a number of [months] after the [storms]. The data sets are also providing details of [disruptions] to [regular life flow] that include [food shortages], [power disruptions], [gas shut downs] {ed note:detail sets suggest a pipeline rupture along the coast due to loss of supporting ground will shut down a large regional or national gas delivery system for weeks.} and [loss of residential integrity (broken windows in huge numbers)]. The results will be a [winter] of such [suffering] as to enter the local lexicon as an emotional marker for bad weather.

### **Asia: China:**

[base commodities] – IM, ST, LT

The data accretion patterns are centering on the [damaged documents] scandal that is just rising through [mainstream media] as this report is being prepared. Forecasts include [base commodities] being in a [confused] state through at least Summer (northern hemisphere). There are sets relating to a [quiver] of [insecurity] within the [authority]. The data patterns are clear about an [ambiguity] in [prices] that will [persist] due to the [spreading (of) bad paper]. This is augmented by data sets pointing to some form of [control] that will be [exerted] to try to keep the [range narrow]. There are further sets going toward a [conference] in which [reconciliation] is [managed (by) optimistic manager]. This set is still building, and shows no sign of a resolution. The sub sets in support of the [damaged documents] contain language that indicates the [flood (of) missing collateral] and [spreading impact of the damaged documents] within the [Chinese banking system] will reach a [minor peak] in early August. The sets are also containing some support for [those in superior position (holding possession)] will include individuals who will [rise suddenly (in prominence and wealth)] as their [holdings] will be [actual], and [untainted] in the [damaged document (loans) scandal]. The minor peak in early August will be associated linguistically with [silver moon], and [red sun].

### **Asia: China: resources**

[rare/precious commodities] aka [hot metals] – IM, ST

Both the immediacy data sets, and the shorter term sets are pointing toward a [global upheaval] within the [metals] and [rare earths] commodities. Further data sets are cross linked to the [platinum group metals] and [oil based fuels]. The data sets have accretion patterns that have pointers back to [new lands rising] that will provide both [doom (see regions)], as well as [new resources/wealth]. This latter is in the form of [new rare earth deposits] that are described as being [vomited] from [volcanoes] in [purity/condition] that will trigger [marvel], and [wonder] feelings in the [metallurgist humans]. There are expected issues getting at these [hot metals], but once the [bonanza] is [recognized] the data sets point to a [rush (of nations)] trying to [lay claim] to the [new places/mines].

### **Asia: North Korea**

[rare/precious commodities] – ST, LT

the data accretion patterns for [rare earths] have a very large sub set that is dominated by [north korea]. This set is extensively cross linked over to [russia] dominated sets within the [markets] entity. The data sets suggest that the [russian government] will [facilitate] a [trade corridor] with [north korea] with special focus on [rare earths]. The shorter term and longer term sets are indicating that a [significant 'find' (discovery)] of [rare earths] will be made in [north korea] by [russian resource mapping]. The data sets point to an announcement of this [discovery] later in 2014 (3<sup>rd</sup> quarter), and a [significant

road/infrastructure building effort] commences in mid 2015. Note that the data sets have a [local tsunami] indicated as providing [obstacles] that have [engineering requirements]. Thus the interpretation will be that before the [russian/sino engineering teams] can complete their work, a [local tsunami] will affect [several port cities] in [north korea] that will add further to the infrastructure build-out.

### **Pan-global effects**

[commodities] IM, ST, LT

[agricultural, food crops, industrial crops, medicinal crops]

The data sets are very clearly indicating that language around a [mass die off/extinction] of many of the [commodities crops] planet wide will be hitting the [mainstream media], and [financial press] over the the last quarter of 2014 and then ramping up through all of the next 3/three years. Much of the language in supporting articles will focus on [planetary phenomena], but the data sets do show that some press will come out about [energies from space] and their effects on [life processes] here on terra.

The data sets accrue around a [dichotomy] of [viewpoints] that will [erupt (violently in some areas)] as a result of [new information] that will emerge from [scientific observation] over 2015/2016. These [observations] are indicated to be [simple experiments] conducted and [repeated globally] via [alternative media]. This [visibility] in [alternative media] will be what forces the (remaining) msm/propaganda press to provide coverage of the [developments]. The [dichotomy] is shown as being [business model unto death (of planet)] opposed to [react, adapt cyclists]. This last is a very poor characterization of the [new coalition] of [supporting viewpoints] about [humanity future]. The data sets have [chaos] as the primary supporting attribute with its support coming from [emotionally effective], [motivation provided], [collective (chaotic) discourse], [personal actions], and [personal responsibility]. The descriptors are painting a picture of a [dying (corporate) empire] being [replaced] by [something else]. Note that the [something else] is perhaps of such long duration self-forming, and adaptive as to resist naming/labeling at this point in history. Nonetheless, the data sets are clear that the [corporate drones (both human and machine)] will [persist] in [self destructive initiatives] for a [number of years (waning over next 10/ten years)] with several large [downward steps].

The immediacy data sets are pointing toward [medicinal (extraction) crops] being very hard hit by [developing climate/solar problems] over 2014 and 2015 such that by mid 2015, a [scramble] is on for [replacement herbals] as [industry standard crops] are noticeably absent from [market place]. Further due to [dollar and other fiat currency issues] over 2015, the [availability] of [wild crafted] and [small scale production organic sources] will also be [failing], though this will be due to [rapidly escalating prices] that are shown as [destabilizing (the) marketplace].

The [demand] for [food crops] globally over the [lean years (of reduced availability)] are also showing as being [catalytic] for a large range of [inventions] for [food production/creation]. Many of these new [catalysts] will take on something of [religious emotional tones] as various [movements] sweep across the global [body humanity] via [alternative media]. These will include [permaculture], [small scale animal husbandry], [experimental crops], and [experimental growing methods] including a [resurgence] of interest in [aquaculture in many forms]. The cross links from the majority of these sets have termination points in the [new climate], and/or the various [solar system changes] sets that exist in both the Terra entity as well as the SpaceGoatFarts entity.

## **Oceania (Pacific Ocean basin)**

[water] – ST, LT

There are a number of very disturbing sets gaining support for a [massive] level of [ocean pollution]. This, near as we can discern, is NOT referencing [fukushima] or [radioactive waste], but rather appears to be a case of [non-saline water (bad for sea critters)] that will [pulse up] from a [rupture] in the [ocean basin floor]. This [rupture] is showing as [producing] a [bolus] of [hydrogen saturated water] that is described as [rushing up from] the ocean floor. Further sets show it acting as a [scrubber] of the area in the sense of [scrubbing out] all [oxygen breathing life]. These sets are further linked over to the [new lands/rising lands] sets, as well as the [new (rare earth) deposits] sets. There are a number of ancillary sets pointing to [waves (of) pollution] that will also [accompany (the) rising lands]. In some areas, the [beaches] will be [turned black (and) red] with [floating particulates].

It may well be that the [dynamic bolus (of water)] that [alters the ocean saline balance] comes not from an underground source, but rather from the expulsion of millions of tons of fresh water from [antarctica] as a result of the [increase] in [sub ice volcanic activity]. Much of these sets are 2015 focused. The data sets indicate that the [weather impacts] begin in mid 2015 or later.

## **Antarctica**

[continental changes] – IM, ST, LT

The data accretion patterns for [antarctica] have very large spurts of growth in the areas of [continental changes], and [flooding], and [earthquakes]. Further sets are showing that [disruptions] in [shipping] and [transport] to and from [antarctica] will be hitting the [mainstream media news] over the latter half of 2014 as the continent emerges from [winter (southern hemisphere)], into what **should** be [Spring]. These sets have links over to [markets] where [ocean currents] will be [affected by antarctic melt], and [Southern Ocean underseas volcano induced land changes]. Apparently the primary impacts will be felt first in [shipping] as [traditional routes] become [too costly], and then later in [weather] as the [ocean current changes] make themselves known in the final quarter of 2014, and over all of 2015 and 2016.

Sets with [antarctica] as a central geographic focus include those indicating that [catastrophic change] to the [ice pack] on the [continent] itself will induce an [exposure] of [hidden (nazi?) social order] with [technologies] that will [be frightening] to the [general population]. However, these same sets are part of the [general population acceptance (and discussion)] of [space aliens] that will cause such headaches to the [msm presstitutes].

## **USA (brand)**

– ST, LT

heavy equipment:

Data sets are suggesting emerging trends are [new engines], and [new control mechanisms] will result in a [downsizing] of the [machines] for [closer (more urban, small scale)] working conditions. There are indications of [large sales (of heavy equipment (earth shapers))] in Asia and Scandinavia and (northern) Russia. The [sales potential] for [large equipment] in China is indicated to be both [closed] and [chaotic] as a result of the [currencies (globally) crises] of 2014 – 2016.

American identified brands are shown as [seeking disguise] in order to [seek sales] as a result of

[global embargoes] against [American made goods] that will grow through 2018? or so. Further complicating international sales are the many [settlement issues] arising from [political problems and the failing banking sector].

### **USA (products/commercial)**

– ST, LT

The data sets have very large growth in supporting sub sets for [product (famine)]. The supporting sets for this in turn make the idea a bit more clear in that these sets are describing a [dollar destabilization] induced [destruction of retail product availability]. These sets go to the idea that [basics] such as [linens], [fabrics\clothing staples], and [food staples] will start/have started to have [reduced availability]. There are dozens of sets that show various reactions at various levels to [sudden products unavailability], however these have to be reserved for another report. Suffice it to say, [ersatz] and [replacement] become key words in the new american reality.

### **Germany**

resources – ST, LT

In a surprising [turn] of events, [Germany], by way of several [young(ish) entrepreneurs] and [one seasoned veteran] form several [extra EU alliances] and create a [arctic ocean resources conglomerate]. This [organization] is seen as [so threatening] to [other arctic interests] that it is [pressured] to [merge] with [russian competitors] by [politicians] and [officialdom]. There are a number of sets pointing to a [norther tier alliance] which will use a [seal (sea lion?)] as its symbol. This organization is indicated to become a real [power house] of a [commercial success] in the areas of [alternative energies], and [new materials/technologies]. There are sub sets for a [cheese and crackers (commercial launch) party] for this endeavor at a [private] level this year. So somewhere in Deutschland in very late November or early December, the world will change at a gathering around a [kitchen table] in an [old farm house] of many [jungen], and [1/one old scientist]. The data sets have a great deal to say about this area which will undoubtedly be recurring in future reports.

### **Russia**

resources – ST, LT

The data sets are indicating that the [nato/western 'currency' union] will [shatter] in 2014 as the [Russians] begin using [new technologies] that will be [applied] to [resources]. Further the [crystals/diamonds/gemstones 'markets'] are going to [come apart/unglued] as [russia] introduces [monetized (cheap) technologies] for [crystalline construction]. Note also that there are several new sets about a [german/russian/chinese effort] at [glass production] that will provide [shocking] results to the [anglo-american empire]. Some of these sets in the [german] language suggest that these new [glass forms] will include [transparent (to light)], but [impervious (to gamma/alpha beta radiations)]. Other aspect/attributes of this include the idea of [extruded] and [energy template formation] techniques for use of the [new glass] that will allow for [growing] structures that are (today) crafted of multiple parts.
