**Disclaimer for legal purposes as may be required: the contents of this document are to be considered as fiction unless they actually occur, whereupon they become really lucky guesses, nothing more.**

## Introduction

The following document is based on the temporal markers extracted from the body of the ALTA and Shape reports, as well as from the last data run of 2012.

The presentation includes a section of temporal markers in as near a linear arrangement as we are able to present them. Please note that these temporal markers are frequently 'wide memes' in that they may take many weeks or months to unfold. Also note that most of these temporal markers are over lapping in their appearance in, and affect upon, modelspace, and each other. The expectation is that the forecast language for the temporal markers will appear in the various media streams, in a 'real world' chaotic fashion, in spite of any pretense toward order in these pages.

## Food

Food supply [risks] will become very visible from early in January 2013 through to mid May.

From mid May onward, while the concern is still with [food supplies] and [food costs], the latter no longer dominates. There is a very clear shift in the language forecasting a different focus for the concerns about the [food supply]. Whereas through nearly all of the first half of the year, the [food costs] sets are more than twice the total emotional numeric sum of the [food supply (at risk)] sets; over the course of the second half of the year, the [food supply (at risk)] set has risen to be the dominating point of emotional focus for the populace. Stated another way for clarity, of the two concerns, [costs], and [availability] of food, the costs will dominate through May, but afterward the [availability] is the primary concern.

The first visible [concerns] of [drought] in the planetary bread basket(s)] will be replaced over the first half of 2013 with [needs] that are described as [desperate]. Much of the [needs] language is supported by sets that describe [hunts], and [scavenging] in great detail. The growth of these sets alone is supportive of the idea of a bifurcated year in which a [shattering (of the existent paradigm)] takes place.

While the first half of 2013, as regards the [planetary food body], will be filled with language towards [costs], rather than [availability], there is a shift between the two that will occur gradually from about March onward. Over the next few months, that is,

through April and May, the language shows a definitive shift from [complaining] about [costs], to [complaining about lack (of items)].

Over the first half of 2013, the language will begin strongly with [costs] of [foods] seen as a [driving political], and [dominating emotional concern] for much of the populace off the planet. As the [costs] are forecast to [escalate] both [rapidly], and [with sporadic jumps (as specific events manifest)], the language within the mainstream media will increasingly diverge from language around the same subjects within the alternative media. This is an example of the bifurcation of the social body, as it is driven by media sources, manifesting a clear line of separation within the [body politic (social order)] of the planet. The idea that presents itself from the complexities of our situation is that a [line of demarcation], or a [visible pulling away] will be taking place over these first four months of 2013 which will allow, for those who have the will and knowledge to perceive, a very clear view of the [separation of camps] among humans. The idea here is that the dwindling numbers of the sheeple are confronted with a [leaving] in which a significant portion of the populace begins to act as though they [no longer accept 'authority' (\*from minions of tptb)]. Another way of looking at this effect is that the [awake and aware] populace has grown to such an extent that it now forms a [clearly visible (large and growing) significant minority] of the populace.

It is as though the populace of sheeple will find that in the course of their ordinary day, running into other sheeple, they stop and note “say, whatever happened to Jane and Joe So-and-So? Have not seen them for just ages?”, and the response is a rather nervous laugh, followed by “oh, I think she went 'prepper' and they ended up divorced.” This last said with surreptitious glances around as an extra few items are hurriedly put into the shopping cart.

During January, a political crisis within the [globalist agenda] will emerge such that [food prices] globally will again rise in currencies as well as in visibility within the globalist msm (mainstream media) as their slant on the [food crisis] is made apparent. There are many indications of a temporal link between the [food crisis (costs)], and a political crisis within the [the powers that be], and an [economic scandal] at a global level. These are very complex times, and the nature of these scandals is both complex and complicated.

Within the [food prices] scandal, there will emerge language that points to [individuals (within the minion class down to CFR/Tavistockians)] who will also be the subjects of investigations for their roles in the [child/women kidnapping rape/molestation/murder]

criminal gangs that are now the [titular leaders of the planet]. Our forecast is that as the [food crisis] language matures over January and February, it will begin to merge with other [crises within society], centered around a small, and specific group of individual humans (some are banksters by the way, many of whom will not live to see their names involved in these scandals as we expect a [spate] of [bankster 'accidental suicides']). Along with the [suicide wave] within the [bankster] class, we expect that there will be increasing reports of blatant [murder] as in [professional 'hits'] against [banksters], and their [close associates/families].

## **Economy/Financial**

There are a large number of temporal markers that are associated with [markets], and [money] that appear over the few months(?) which will precede the [systemic separations].

### ***Naked Queens and Really Bad Bet***

The [systemic separations] sub set includes descriptors going to the idea that the [systems] will [come separated (from each other)]. A series of growth spurts in the data sets gathered from October 2011 onward focus into the heart of the word [separation]. There are repeated references to [pulling apart], [distancing], [at odds (with others)], [self survival impulses]. These sets are all clustered around the primary supporting sets for [separation (of the ) financial systems] which include a plethora of repetition of [exposure] as a key word and concept. We have temporal markers that 'chain' off of the [fire fighters (fight) (injustice?)] word set, itself a major temporal marker, in which we note that [queen(s) (will be) exposed], and [exposure (of failure of surety (a method deemed unfailable will fail))]. These next two temporal markers are both 'wide' in the sense that we expect multiple examples of the language to appear in the msm (mainstream media whores). Both of these temporal marker sets are forecast to manifest prior to the first run up in [silver prices denominated in Federal Reserve Notes (of debt) aka 'US dollars']. \*Note that the [queens exposed] temporal marker has started to appear by the date of this publication, December 31, 2012.

### ***Strip Mining the Populace***

The first run up in [dollar prices of silver] is itself a temporal marker for a following [push by msm whores and officialdom] for the [Great Dishording]. In this set are supporting sets pointing to a [concerted effort] to [strip mine (the populace)] of precious

metals in a scheme to [vacuum] up the [silver] (and gold, though less focused on this) that is [resident (in houses)]. This [great dishording] is described as being [backed] by some very serious [banksters] who are even now, apparently, [building the organization] to [strip mine (the populace)]. The data sets point to the [near crash] of the [currency relationships] almost immediately following the [great dishording] such that [riots] over [theft (by fraud)] will take place around [silver exchanges]. That part of the populace that is tricked in the [great dishording] will feel [cheated] as their [dollars] are almost [instantly devalued] both by [officialdom] and [market forces].

These temporal markers, and other sets, lead us to the forecast that a steep rise in silver prices will be met by a [burst of (drawn in) selling], that will cause a [down draft] on [dollar denominated prices], but that this pressure on silver (and gold prices) will be [remarkably short], to be followed by greater, steep angled price rise that continues into the rest of the decade (or until markets end, which ever comes first). Note that the word [remarkably] is bracket. This is due to its nature as a temporal marker itself, for the [global coastal event] and other forecasts. The data suggests that even the [msm whore prostitutes] will be discussing [how rapid] the [silver (precious metals) prices] were [fluctuating]. Again, these [visibility] flagged sets about the [remark ability (of the) price changes] are themselves temporal markers for the [dollar collapse], [internal markets systemic breakdown], and the [bond bubble burst].

*The following group of temporal markers cannot be sorted as to an order. Their placement here is as the lexicon's alphabetic arrangement places them. The order of appearance within modelspace as it was progressed was so simultaneous as to not allow for adequate discrimination. Therefore, the next temporal markers are to be considered as appearing (more or less) simultaneously, is so far as the populace will have [visibility] of the process.*

### **Largest bubble burst in history**

Largest populace on planet (China) will offer the [renembi] as [global reserve currency]. And guess what? Much of the planet's financial addicts will [mob] the [offering]. The data sets pointing to this occurrence suggest that it will be within the larger period when the [american financial empire] is [reeling] from the [derivatives explosion]. Note that the [explosion] language is very specific, and has for years maintained growth in two areas that specifically related to the [explosion] descriptor: first, that [nothing remains] following the [derivatives explosion] as the [center (is) consumed], leaving only [fading smoke] after the [explosion]. The second set has continually focused on people (thinking themselves 'investors') who will be [caught out] by the [rapidity] of events such that

they [cannot recover (funds/wealth)] from the system (as it is crumbling).

This area appears to be referencing the initial wave of a [planetary bond collapse].

### **Com'in round the mountain**

Making it over the [mountain (of debt)] is going to become, perhaps the last, major, temporal marker, to come from [officialdom] prior to the [systematic uncoupling]. This [mountain of debt] is completely dominated by [derivatives], and not [governmental spending]. This temporal marker does not appear to be directly related to the 'fiscal cliff' hysteria being frothed up by the [msm media whores], rather this marker is supported by sets that indicate a [vast shock] that [stands up suddenly] causing the [officialdom] to [reel] from the [quantity (of debt)] that will be [placed squarely (ahead?)]. This marker has a number of supporting sets related to its [visibility] level that are describing this time as a period of [questioning (blank looks)], and [stunned silence] from the [msm media whores] that will [captivate attention] of the masses. These data sets are describing a period (days?) in which [repeated mental shocks] will be [displayed] on the [faces (of the) visibility whores]. These [blank stares] and [gaping mouths] are supporting sets to the [events rush past] such that the [media whores] are [caught unawares]. There are many sets in support that suggest that the [agenda makers] will be receiving [demands for directions] via [hidden communications (the little ear buds?)], and to the [consternation], and [frustration] of all the [visibility faces], will not be [responding].

### **Monetizing 'time'**

Outside of the [officialdom] sets, there are several [markets] related sets that indicate that additional major temporal markers include the [desperate hunt] for short term [churn/turn over assets]. These sets lead to [visibility] language that includes a [raid (on the) vault]. These sets appear to be about a [blatant assault] on a [gold store]. While it is easy to envision the [banksters] in yet another [raid], this data point marker seems rather to be about [honorable criminals (non banksters)] who will be [stealing gold] at a level not seen in perhaps several hundred years. There are data sets that contain supporting language for a [sophisticated criminal scheme] that will include a [journey through darkness] in which [multiple tongues (\*languages most likely somehow recorded and made [visible] after the [raid])] are [heard] to [curse (it, the darkness)]. The details describe a [cursing of the darkness] due to the [inability (to have a light –

due to risk)].

This [raid on the vault] is a temporal marker for the [presstitutes sans pimps] where the [television presenters] start to become parts of the 'story' that they are 'covering' in that they are left [without guidance] as the [financial crises escalate], and [inadvertent words] from [presenters] will begin to [influence unfolding events] in a very interesting form of a [negative feedback loop].

While the [media] is [describing the raid (crime)], the data is showing that it, the media, will also be filled with the [(faces of) market (makers/conjurors)] in a [desperate hunt] that is [visible] as they (the market addicts), are seen in a [scramble (visible bidding wars)] for [churns (???)]. The [churns], plural of the [churn (rapid turn over)], is apparently going to be a newly appearing concept within the markets areas. It would seem that some form of [monetized time] is to be [collected] and [bundled for sale]. This temporal marker has very clear visibility clues that indicate it is the last [irrational exuberance] episode of this [market's life]. The data indicates that it, the [churns'] appearance within the markets as some form of [bundled time] for [money] derivative, will be less than 2/two lunar cycles before the [underpinning (maybe under-writer is better)] is [broke]. This is very good temporal marker for the [systematic unraveling] that is accompanying the [disconnect (from each other) of the markets].

## Hairy Housing

The data sets show that during the 'end days' of the [integrated markets], the [housing market] will become [chaotic] in the [extreme]. The data indicates that the [banks dump houses]. There are language sets in support that would seem to indicate that this [dump of withheld property (en masse)] is a [political statement (move in a larger game?)]. The background for these sets include some language hinting at [disruptions (between/among) tptb and their minions]. The language in support of the [houses unleashed (on the markets)] include sets that are clearly emotionally driven, rather than business motivated. The context of [political revenge] within these sets is clear, though the details do not provide a 'program' of those in [contention]. This is a wide marker and expresses itself over more than a single lunar month, though its largest growth within modelspace, is restricted to a period of about 16/sixteen days in early March.

Other associated temporal markers that appear coincident with the [houses dumped] language include sets that point to [visibility] around the following:  
**[global incomes fall (part of derivatives failing behind the scenes)].**

The 'officialdom' number of US of A residents 'living' on \$2 a day rises to all time highs. Government gains additional 1/3<sup>rd</sup> again number of 'entitlement claimants' as the student loan system grinds to a halt, impacting the 'education industry', and rippling out to 'large scale food suppliers'. This in turn rapidly affects agriculture contracts negatively and participates in the 'homesteaders' movement.

It is within the [poverty wave (systematic separation of financial systems spare no one)] sub set that we find the largest number of data sets, outside of the [food supplies] related sets, for [riots], and [social unrest/violence].

*As a warning: From our understanding of what is going to occur, the aware individual needs to remove themselves from proximate to any rioting or social unrest as the [federale's response] will be [very wide], and within their net, [innocence] does not exist.*

## **Commercial real estate collapses**

Maybe the SW (LA?) corridor initially? New 'industry' created as metals thieves begin stripping skyline (empty, or mostly) buildings in spite of stepped up security. Homesteader movement infiltrates commercial structures. Law enforcement too bogged down with social unrest, and rising crimes (against police) to attend to 'creeping movement' of families/tribes covertly converting empty commercial space to housing. In some areas the language describes the [homesteader movement] as strong enough to have its own internal 'peace officers' who will be presenting some of the more reasonable local police officialdom with the question of 'displace a functioning, more or less stable social order', and in the process unleash yet more troubles for their already over-burdened police forces. Efforts at attempts to 'enforce' (by lawyers?) foreclosure on commercial real estate that has been homesteaded are met with deafening hoots of derision (and don't work). Police too out numbered, and too poor to sustain efforts to evict.

## **'Homesteaders/tribe' take over largest 'bank held real estate' in XX state**

Law enforcement from XX state defers confrontation with msm labeled 'squatters' as internal budget woes, and collapse of the retirement funds induce labor chaos within state government. Federal troops are ordered into to [evict] the [squatters]. Media promises to cover the [battle 'royale' (hint)]. Obstacles prevent timely arrival of [federal resources] as [state government refuses to fund costs of national guard].

Homesteaders/tribe digs in with large amounts of 'outside' assistance. Siege mentality takes hold in XX state government as Federal soldiers head for the confrontation. This is just the start of a large 'homesteading' movement that becomes SOC's (self organizing collectives) in many areas as 'popular/populace seizures' of 'bank owned' properties for distribution to homeless families.

In other [homesteader news] there are a cascading series of temporal markers for such as a seizure of a [lands based asset] of the [XXXX corporation] by [citizens/ (populace/usofa)] as the [corporation] claims [bankruptcy] over a [lawsuit] in which [citizens win], but are [shafted (hint here)]. Seizure emulates the [self proclaimed 'tribe' of homesteaders in XX state].

As part of the temporal marker, the data sets have indicated that the [homesteaders] will be [unlike/different] from the [portrayal] within the [msm presstitutes]. The data sets indicate that the [homesteaders] will be [repairing properties], and [building (off-grid) infrastructure] in spite of [officialdom] warnings. The data sets are also quite clear that the [homesteaders] do not [participate] with [officialdom's game], and are able to [clearly demonstrate superior 'gaming' skills]. This is a very good temporal marker as the [msm presstitutes] are indicated to pump a great deal of [propaganda] on the subject.

This temporal marker is a precursor to the [separated nations] temporal markers. This temporal marker, in the absence of the global coastal event, would lead to a [break up] of the [american empire].

## **Perfect Storm**

Federal government institutes a spreading transportation lock-down in search for [homesteader activists (aka econo-terrorists)] they [believe] to be traveling to reinforce the [activists/econo-terrorists homesteaders] at the [XXXX lawsuit/shaft site] (or so it would seem). This temporal marker is very interesting one in that it precedes an absolute [brawl] that will [break-out] between [passengers/citizens] and [minions] from the [Touch-Someones'-Ass agency] as they [search] the [paralyzed transportation avenues] for these [econo-terrorists]. The data sets around this incident include details suggesting that some form of [organization/group] that is [traveling together] will form the [core] that the other [hundreds] of [passengers] will [ring/join] {ed note: words based on 'protection/compassion/disabled/children/molested/crying/screaming/pain/blood'} just before the passengers/citizens are described as encountering [collective blood rage]. Unfortunately for the [Touch-Someones-Ass agency], and the [tpbt and their minions],

the [paralyzing/shutdown] of the [transportation grid] {ed note: over Region X?} for so many hours has [cultured] the conditions for a perfect storm of [outrage], and as the [Touch-Someones-Ass] personnel become aware of the [rage incident] in XXXXcity, so do the [frustrated passengers] all over the [transportation grid]. The flurry of rumors go out on cells and pads/tablets very fast, and end up streaming into all the affected region just ahead of the [orders (by) panic stricken Touch-Someones-Ass agency people] to [shut off the cell towers]. This act, in itself, is the temporal marker as it spreads the [state of panic] from within the [transportation grid] to the [area at large]. Then the [visibility] of the [rage brawl] involving [hundreds of people] over several [hours] spreading to [hundreds of locations] and [thousands] of people initiates a [federal response] which the data indicates [fails to arrive]. Or at least 'in a timely fashion', such that the [Touch-Someones-Ass] agency as a whole is described as [beaten/broken/demoralized/defeated]. This marker has some small number of indicators placing it during April as there are [tax] associated emotional words extensively filling modelspace at this same time.

## **State Banks Rupture Fed Appendix**

The data sets have had a temporal marker for the [state of california], and then [other western states] to [form state banks]. This marker was cross linked extensively to the [federal reserve breakdown]. This marker is indicated to appear during the [western world (planetary) bond crisis]. As a marker, the [rise of state banks] is shown as a precursor to [rebuilding (here in USA)] after the [implosion of the Federal Criminal Bank System] comes unglued. This temporal marker of the language about [state banks] is shown as being a [prohibited subject] for the [msm presstitutes], and will produce most of the initial visibility within alternative, and purely [local] media.

## **End of Aid**

Some of the newer data sets from late in 2012, even though frothing with immediacy data types, nonetheless are indicating that in 2013, the US government becomes [bereft] to the point that [all aid (money going overseas) ceases]. As a precursor to this point, we have a temporal marker for [cessation/blockage (of international wire transfers (primarily to south america))]. This set is also participating in the temporal markers around the [bond bubble burst], and [banks exploding], and [dollar death], and [freak-out (extreme bad hair day) in officialdom]. The temporal marker of the [blockage (of

dollars going south)) is mixed in with many of those in which the [presstitutes participate (in) market circuitous (negative) feedback loop]. The temporal marker of the [federal government] turning over all [wire transfers (out of country)] to the [Touch-Someones-Ass group] is precursor to the [abandonment (during the bond crisis) of international aid (from the USA)]. The [shift in power] over the [wire transfers] will also indicate the [pending shrinkage (of the USPostal Service)] at levels that are described as [shocking] to the sheeple.

## **Common Law/Justice/Social Order**

### **“bring the guilty bastard in; we'll give 'em a fair trial”**

A number of temporal markers are indicating that the [msm presstitutes/media whores] will be [spewing forth] a stream of words about the [abduction] and [(virtual) torture ] {ed note: the msm will use the word torture, it is not my choice} of [prominent citizens/celebrities]. The real story on this is going to be hotly contested (apparently) in the [alternative media] as the [culprits/kidnappers] release a series of [justice served videos] in which their [prisoners] are [put on public trial] for [crimes against humanity]. The data shows that the [officialdom] will be basically [freaking] and [shitting bricks] as the [msm presstitutes] are clearly [failing] at [controlling the spin]. Note that the data is unclear in this set, such that it could be that the [spin machine] is/has lost against [videos] about the [trials of prominent criminals], but that the [actual trial] never took place. In this set, there are indicators that the [videos] will be [created images], and not necessarily 'real'. The idea coming from the detail sets is that the [video engineered image (of the trial)] is [sufficient (enough)] to [cause mental changes]. In other sets in the details of the [culprits], the data suggests that [skilled hands create (cgi?)], that [kicks minds]. The detail sets suggest that so many people view the [trials] of the [criminals (at the top)] that the [guilty (tptb)] are [in fear] of [perception change]. The data would tend to support this [fear of perception change ] in the populace as there are cross links over to the [public displays of disgust (in presence of (former) celebrities)].

## **Culture Redefines Itself**

The trends toward 'multi-culturalism' (a term originating at Tavistock, and serving their agenda) will noticeably fail over 2013 as the various forms of [engineered chaos] within the [social order] emerge over the first half of the year. The Powers That Be have put into place a series of [provocations] and [attacks (on specific groups)] with an agenda to move the [social order] to [internal chaos via contention] and [steady, traumatic

violence]. The idea from the perspective of those twisted beings controlling the agenda is to [shatter] any [social cohesion] within the [body politic] of the now-dying, [american empire].

It may be premature to think that the TPTB agenda for [social chaos] will result in the form, and flow that they anticipate. There are many indications that the [leavings], and [separations] occurring within the [sheeple] majority of [dying empire slaves], that a new form of [cohesive culture] is emerging. Thanks to the [internet], and to [vertical separation of interests], new forms of [tolerant culture] are emerging across former cultural boundaries. Thus it can be seen that [honor systems], however harsh and badly applied in the moment, are nonetheless binding systems forming a [common law] base for the [gray market social strata]. These systems have so far penetrated the larger social consciousness as to be included (inadvertently) within popular teevee. These honor systems bind such diverse, and seemingly opposing sub groups as 'bikers', and 'drug gangs', and 'islamic fundamentalists', and 'preppers', among many others.

The rise of an emerging base of [common law (human-to-human)] from the various [tribal/clan/group/religious honor systems] is becoming visible to those who have a perspective allowing them vision into these social strata. For the minions of TPTB, this trend is being noted, albeit obliquely, as 'governmental law enforcement' en masse is lumping this trend together as the emergence of the [sovereign citizen movement]. It is also worth noting that the majority of those sheeple within law enforcement at all levels will find the whole notion of a self actualizing human as [incomprehensible].....in other words, it is likely a waste of time to try to teach these particular sheeple as they are beyond reach due to heavy indoctrination, and the effort will likely irritate and provoke them.

## **Chaos and Havoc**

There are a number of temporal markers that suggest that in 2013, as part of the [push for planetary feudalism/corporatism], ThePowersThatBe will [unleash] a [wave] of [social chaos] through the [anglo-american empire] by way of the [financial havoc] that will [break out] in such a manner as to [take (even the) knowledge class] by [surprise].

Please note: in this area, the hph reports disagree with such luminaries as Catherine Austin Fitts, as well as Lindsay Williams. In the case of the former, Catherine's model is of a 'slow burn' as the break-away civilization guys continue to suck the life-blood from the planet, while in the case of the latter, Lindsay's highly place criminal contact (nope,

not going to refer to an individual as an 'elite'...it just rankles) claims that ThePowersThatBe crave continuity of the system (which is understandable as it supports their lazy asses), and as such will 'not allow' a crash.

The aggregation of the data sets over the years produces a clear and consistent view of a series of exogenic events that lead to the [unplanned break-down] of the system. It may well be that the systematic unwinding of the various social systems is engineered by ThePowersThatBe as part of their plan. It may also be that the chaos and havoc of the systemic disconnect being forecast is a result of factional in-fighting amongst ThePowersThatBe. Or it could be that the design of so many of the systems were based on flawed understanding, or lies, as to create an inherent instability that was 'destined' to manifest during these days. Or it could be an effect of the sun on the brains of humans. Probably, it does not matter. The data sets over the years had pointed to a period of unknown length in which the OldWorldOwners would attempt to maintain [dominance] by the only methods that they know, [aggression], [deception], and other such tactics. This time has been forecast since mid last decade as being one in which the [last push (for power)] meant that the [gloves come off], and [officialdom] is [exposed (by its own brutality)]. Now is that time.

The good news is that [officialdom exposes itself], and only the most brain-dead (soon to be really dead?) sheeple fail to grasp what has occurred. Though the data sets have always maintained that a [shock] would go through the sheeple herd such that [separation] would occur at very significant levels, the sets have also forecast that a large number of the more stubbornly indoctrinated sheeple will not be able to [process the information], and that the [shock (of knowledge)] would [produce mental instability] that leads to [death (in many instances)].

The other good news about the [officialdom exposing itself] is that as a temporal marker it forecasts a very short period of [officialdom open brutality]. This is due primarily to the impact with [planetary/earth changes], however, the data has also maintained that [internal breakdown] was/will be underway when the [officialdom becomes openly hostile/aggressive to sheeple] such that, even if the planet were not be be reeling from major ocean problems, the [ability] of [officialdom] to [enforce behavior] on their own [stooges] was described as [rapidly waning] under the effect of the [unknown energies from space].

## Bifurcated year

Our data sets since 2005 have had growth in support of the idea that 2013 would be a [year of separation]. This [separation] theme had settled over modelspace as regards this time and is expressing itself at a number of levels. A macroscopic view of the separation also shows within the data sets as the [year itself] being [bifurcated] within [human minds]. This is a very telling set, as it goes to the idea that [humanity] will [naturally separate] 2013 into [2/two parts] in their [thinking]. These parts are describe as [before], and then the [global coastal event]. Note that the data sets do not persist in modelspace following the [global coastal event]. This period is from approximately May of 2013 onward, and at that point modelspace is forecasting that the [data goes dark], or what we have termed [silence]. In our current understanding, this most likely is pointing to a period of damage to the internet such that our processes cannot be run.

## This Changing Planet

What follows in this section is not derived from strictly from temporal markers, but rather is a summation of the descriptors from sets related to the [sun disease] set, as it is at the core of this changing planet.

The ALTA and Shape reports have consistently held that [sun disease] would/will dominate the decade from 2011 through to 2021. These data sets go back to 1997 and the [sun disease] was one of the very first data sets that manifested within our work, and has been the longest, continually growing set within all our work from that first run in 1997 until now.

In the beginning of our work, the [sun disease] first appeared with primary supporting set of [sun pulse (evaporates the) waters (from the ground/marsh/wetlands)]. This set was also our first instance of the data presenting 'body parts/processes' as a 'metaphor' for larger trends/forecasts to appear. In this first set, in the first run, the [sun] was indicated to [evaporate the still waters off the wetlands], and [turn marsh (into) brick]. Further sets in the supporting chain included sets focused on [humans (after the evaporation) desperate (for) salt (to prevent dehydration)].

Many of the supporting sets for the [sun disease] in the early years of our work was clearly focused on the [loss of balance] specifically [within (the relationship) between sun and galaxy]. These early data sets continued to grow over the subsequent 12/twelve

years to include such sets as the described as in [plasma events in the skies],[ice sheets take a hit], [Rivers of Rain mainly flood the plain(s) (globally)].

Other descriptors within these supporting sets include [Ocean levels rise, and fall (slosh)], [Ports awash], and [ports dry up (ocean retreats)]. Most of the supporting sets include either direct [ocean] references, or extensive internal cross links over to the [oceans] set. In these sets, growing since 2002, and including the forecasts for the [banda ache tsunami], the data was quite clear, with no ambiguity, and showed both [rising] and [falling] ocean levels. The mechanism for this to occur was not included. Nonetheless, both sets continued to grow over the years, and both are being forecast as manifesting, however, not necessarily in the same place, nor in any temporal relationship to each other. Also note, the language here is NOT referring to a tsunami style wave in which the waters first drain out before rushing back in to cause their damage. In these sets the data numerics show a longer lasting effect, one that may persist for days or months, in the case of the [falling/missing waters], and for [decades] in the case of the [rising ocean levels]. Also note that the [ocean level changes] are simultaneous to all kinds of [water level differences] that will manifest globally. In some of the inland areas, new lakes, and even inland seas will be emerging, and in others, new desertification and [unrelieved drought] will alter landscapes.

In general....and generally global:

### **Deforestation....**

The data sets in support of the [sun disease] have, since 1997, held many sets that related to [dead forests (on) fire] such that [major (continental)] levels of [deforestation] are indicated. These data sets had indicated that [gases], and [insects], and [unknown energies from space] were the culprits for the [mega death of trees], that will include [whole forests]. While the [continental] word was used, it did not have support for [the whole continent], but rather [across the continent], or [spanning the continent]. Nonetheless, the [mega-fires] were described as [creating (world/planet girdling) smoke].

### **New desserts....**

Along with the indicators for a series of mega-fires that cinch the [deforestation] in the minds of humans. These indicators are also associated with the [new desserts] that are described as being [spotted] around the planet. The data from our long term sets from 2003 had originally labeled this phenomenon as [leopard spots] in terms of how frequent

were these [new desserts] forming. The 'good news' in that same set also alluded to the rise of a technological approach to [desertification] that will prove very successful in remediation. This technological [development] was shown as being [in formation] by mid 2013.

## **Winds**

A more than usually note worthy data set includes many repetitions of the idea of [extremes (in) winds] that, with the appearance of the Sandy storm, are already manifesting. In the data sets, the [winds] sub sets include exceptionally long term data with some of the indicators going out [13/thirteen generations (260+ years)]. The global coastal event data has maintained an [extreme winds] sub set that continued to grow from 2003 to the present. The data sets are clear that the [extreme (to our way of thinking now) winds] will be a factor of life from this point forward. These [extreme winds] are also described as [ramping up] to the point where they [participate] in the [problems/challenges] of the [humans (fleeing coastal areas)]. These [winds] are being described by the detail layers as being [natural], but also [driven/impelled] by [unknown energies from space].

Much of the [winds] data sets over the past few years have been extensively cross linked to data from our SpaceGoatsFarts entity which houses the 'officially unknown/denied' categories of data. Within these cross links, a majority have terminating sets that include descriptors for [energies (from space)] that will [dominate (planetary) atmospheres]. This will include terra/earth. The data sets include primary support from [extreme]. This descriptor set is specifically focused on the idea of [extreme] from the viewpoint of [habitual/common consensus] understanding of the planet. So these sets are implying that the future generations will be [continually redefining (the term) extreme] as it pertains to [winds].

The data sets within the [extreme winds] sub set are greatly influenced by their cross links to the SpaceGoatsFarts entity. These cross links terminate, in the main, in areas that include sets for [unknown (or officially denied) energies from space] that are described as [draining (into) earth's atmosphere]. These energies are described as [pumping (the) wind speeds (and volumes)]. These [pumping actions] are directly related to the [sun disease] sub set, also primarily driven by the SpaceGoatsFarts entity data sets.

These [winds] are described as [forcing/driving] the [new architecture/design] that is

described as emerging over the next 50/fifty years.

## **Antarctica**

Antarctica undergoes major transformation. Even back as far as 1999, the [sun disease] sub sets included large numbers of references for [transformation] that was described as [walking (across the) antarctica] landscape. This [transformation] has been a growing set for all of our work, and is described in terms that make Antarctica a [pivotal] place for both [planet changes], as well as [human species changes]. Some of the data sets associated with the [global coastal event] that reference [antarctica] include sets describing a [underseas mountain range rising] between [antarctica] and [patagonia] that will [alter planetary weather] and [planetary ocean currents]. This data set was part of our very good longer term set from 2003.

## **Ionizing Radiations**

The longer term data sets since 2004 have held supporting sets that go to the idea of [sweeps of ionizing radiations] that will [puncture through] the magnetosphere to cause [fires], and [deaths], and [blinding/maiming]. The data shows that this condition of [intermittent days of ionizing radiations] are described as continuing for [several hundreds of years]. While showing as [deadly], there are going to be [apparent indicators] of [pending ionization events] that will make their [forecasting], if not easy, at least possible.

## **Plasma effects**

Associated with the ionizing radiations from space sets, there are sets for [plasma pseudopodia] that are described as [articulating across the sky]. These [plasma events] are described as [causing problems] when they [flicker across landscapes]. Other sets point to these as more or less benign, though they may be the indicating reference for upcoming or current ionizing plasma events.

## **Electrical disturbances**

Ancillary effects from either the plasma events, or the ionizing radiations events, is associated within the data sets with [electrical disturbances]. These [disturbances] are supported by sets indicating both [bad] effects to existing electrical infrastructure, as well as [good] effects at some point in the future when some bright human figures out

how to harness these [floating clouds] of [static-like electrical disturbances].

## **Oceans**

The data sets for the [oceans], since 1997, and independent of the sets involved in support of the [global coastal event], had shown vast numbers of changes of state within the [oceans]. A number of the ALTA reports, and then the Shape of Things to Come reports detail differing levels of ocean changes from shifts in ocean floor shapes, to changes in oceanic chemistry, and inter tidal zone location (water moves inland causing much change as stuff rots).

## **Global Coastal Event**

Up thrusting water will flood the coastal areas of the Pacific Ocean, as well as parts of the Atlantic Ocean by June 1, 2013. Again, our data, from the longer term set originating in 2003, has consistently held that a [plate rupture] will 'participate' in the global coastal event. It never has provided a 'cause'. The data would indeed support an extra terrestrial energy being the cause of the [plate rupture].

In the Farsight.org study of 2013, both the Pacific and Atlantic oceans are participating in the occurrences that the remote viewers perceived overtaking humanity in this year.

From our longer term data set that originally appeared in 2003 under the label of [(oceans) sloshing (drawing back/moving forward/upward)], within our Terra entity (collection of data sets relating to planet/climate et al), has grown the total collection of data sets that have been labeled as the [global coastal event]. What had been puzzling were the repeated references to [ports dry], and [oceans withdrawing]. These sets grew in support along with others indicating exactly the opposite, that is, [ports underwater], and [lands (coastal regions) covered with water]. Of course, after the Band Ache earthquake and tsunami, the wording became a bit more clear, in that it is likely references to a momentary loss of water, prior to the [inundations] that were/are also part of the set. Further sets seem to confirm this view over time. Some of these included interesting descriptions of [fish swimming over the capital steps], and [jellyfish pulsing in offices].

This set also was the first in a number of sets going to the idea of streets flooded over

several floors. Many of these sets, over the years since 2003, have continued to support the idea of [flooding] at huge levels, and very much globally. Not only the [coastal cities], but also [inland areas (cities)] are also flooded. In this case however, almost all of the flooding is due to [rain inundations]. These [inundations] are also described as being [beyond/excessive (to anything) previously encountered]. These sets also produced the 2004 forecasts for [river in the atmosphere]. The sets have gained supporting sets for [mountains eroded (by the rains)], and other sets of similar vein. In these sets, the [rivers of rain] are described as producing [tens of inches (of rain) per hour] as a direct result of the [cause (whatever that may be)] of the global coastal event.

There have been a number of sets in the supporting sets for the [flooding] that affects not only the coastal areas, but also most of the northern hemisphere of the planet, albeit not simultaneously. The data shows that [displacement rains (ocean water inland?)] will flood out major inland cities (especially those near rivers). Some of these floods will not be concurrent with the global coastal event, but rather result days and weeks later from rain and mud flows that alter the landscapes up river of them.

In some sets the data describes new [inland seas], and [new lakes] that will manifest. Some of these are not associated with low lying areas that exist now, but are rather described as being the result of combination of [land formation sinking/sink holes], and [torrents of rains]. In several areas of [inland production/industry], the data sets describe whole [populations (of cities) inland] being [put to the foot] as they [flee flooding] in which their [habitation/city] is [flooded by muds/rains/brackish waters] that will [rumble/roar down mountains] several days and weeks after the global coastal event.

The supporting sets for the global coastal event contain sets that are geographically associated with inland areas in the vast Eurasian plains. These included many sets for [flooding] that will affect both sides of the [caucus mountains (a key division line for effects)]. The data suggests that the [torrential rains], as well as [winds] will be [clashing over the caucus mountain range]. The idea is that forces from both the [atlantic ] and the [indian ocean (eastern)] sides of the [caucus mountain range]. It is as though the data sets are describing a [winds battle over the caucus] where the winds generated by the global coastal event from different sides will [collide]. This is seen within the data as being an area of [downpours] of quite staggering proportions as water from both Atlantic and Indian oceans are condensed out of the atmosphere.

Within the Eurasian continent, there are several areas that are described as [hosting] whole new inland seas. These low lying areas are now dry, but will be [fresh/brackish

water inland seas] that will persist for [decades] after the [flooding] event. Other areas, now served by rivers, are described as being [rewritten/redrawn] by the [inundations] that will [move mountains (to plug rivers)] that then [shift river flows].

A planet wide component of the [global coastal event] has been discussed in previous reports as coming from the [nuclear energy production facilities]. These include not only the [known] nuclear power plants, but also a number of [secret (perhaps hundreds) production facilities] that are being [operated by government] AND the [break-away civilization]. Many of these [secret nuclear facilities] will [never be known (for what they are)], but will nonetheless be [known], to future generations, as a [place of contamination].

Other nuclear energy (or other) production facilities, such as [coastal generation plants], are described as being [swept away]. These sets include language about the plant, in a destroyed way, being moved [hundreds of miles] away from their point of origin.

A significant portion of the [global coastal event] data has been supported by the various sets for earthquakes that we have had over the years. The [global coastal event] itself contains a supporting set for a [planet affecting earthquake] at the time of the [global coastal event] itself. In this earthquake set, there are descriptors for [down/destroyed bridges (in a range of over ) 1000 miles]. This is concurrent in the data with planetary electrical distribution problems, some of which persist for decades thereafter.

Other, more ancillary effects of the global coastal event include [airports blown away], and [airports underwater]. There are also [ports underwater ], in this set the water levels are described as [higher than cranes]. There are also descriptors for [ports] in which the [quays] are [gone], or [ground to rubble].

## **Strange 'Things' From SpaceGoatsFarts**

From the inception of the SpaceGoatsFarts entity as our bin for all things officially denied, and all things unknown, the data sets have pointed toward a period when the [strangest (of) sights] would become [frequent]. This seemingly includes some form of interaction with non-humans, as well as non-terrestrial humans. Many of these sets were tied to sets that are associated with the [global coastal event]. Many of the [space aliens colonize earth] sub sets were showing as manifesting after this event, as the data was also providing the descriptors for the [humans rebuilding (after fleeing coastal event/climate slam)]. These two memes had been concurrent to each other since even

before the emergence of so much [officially denied], and [unknown] data that the necessity of the SpaceGoatsFarts entity became apparent.

One of the sets relating to the [ufo's] now, within the last two years, has growth in supporting areas for [time travelers]. The idea now coming across (since the addition of the last data set collected in Fall of 2012) is that a series of very intense [local occurrences] will be happening from early 2013 through to nearly its end. These [local occurrences] are described as being the [nexus] of a [vehicle (containing) life] that is [transiting time (at vast levels)], and will become [visible] here on earth as it [moves through] our [local time system]. The descriptors include a [consistent flashing object] that will be [viewed] by the [masses] as it [appears daily]. The [masses] will become [enthralled] as the [giant object (with life)] is indicated to become something of a [sensation] over several months. Apparently this object will be able to be viewed across many parts of earth. This may have something to do with it being [spread through time]. The data sets indicate that some [humans] will be able to [interact] with the [giant object/time traveler], and even though it will be in our [local time] for only those few months, it is indicated to have a very long, multiple generations impact on the social order.

Within the SpaceGoatsFarts entity, there are huge levels of cross links going to the [global coastal event]. In most of these, the SpaceGoatsFarts entity contains sets that 'view' further out into the future than do the other sets within the larger [global coastal event] sets within other entities. In these further sets within the SpaceGoatsFarts entity, the [global coastal event] is followed by a [colonization wave] from [space]. This [colony earth] effort has been described for years within the data as an element of the future that the [remnants/rebuilder humans] will be [living around/among]. We have had data sets, growing in support over the years, that show that several areas of the [gulf coast of north america], and [mediterranean], and [black seas] will have [colonies] from [space] that will [settle] while the [local human inhabitants] are in the [process of recovery] after being [moved inland (by instability) in coastal regions]. Some of these populations will then be forced back toward the new coast lines by the [pollution], both [nuclear] and [industrial] that is described as forcing [yet another evacuation]. Many of these regions are described as being [uninhabitable for generations]. In some of these sets there are smaller, detail sets that provide for [excursions] into these areas in [special suits].

## ***Conclusions: Humans are a tough species.***

Humans are indeed a tough species. We have been kicked down to 2000 breeding pairs by circumstances (or our own damn foolishness) in the far distant past (70,000 years back), and yet, look at us now, a full blown danger to ourselves and the galaxy.

So, in spite of the pending challenges in our collective future, we will do it again. In fact, it looks as though this time may be 'easy', or at least 'easier' than some of the cycle end states of the past. Yes, we are going to get slammed by the solar system. Yes, the new world order bastards are a real problem (even hiding in their holes). But, we are here, the lungs fill with air, the blood and ki flows, so we will be able to pick ourselves up, and rebuild.

Can we change the future? Will knowledge alter the potential? This is exactly what we are determining at this moment, with this work here at HPH, as well as the efforts of the Farsight.org, and other remote viewers. Will it work? We discover this by June 1, 2013, a short few months from now.

The urge toward prepping IS a remnant of the old world order...the materialism and acquisition of 'things'. This will not work in This Changing World. After all, it is the 'enlightenment/knowledge' that is represented by the 'age of Aquarius' to which our solar system is moving over these next 72 years. Universe seems to be determined to kick humanity out of its complacency, and its dependency (on the 'system'). It will do so, according to our work, suddenly, and without any more warnings than we have already encountered. To this point, we are not able to locate, within modelspace, any sign that the populations as a whole take heed of the many warnings that are available as to the upcoming global coastal event. Thus, to most, the pending disruptions will be perceived as [sudden], and [without warning].

Those currently unaware humans who survive the local manifestations of the global coastal event will be in a state of extreme shock. This condition will impact everyone's ability to recover from these events. And as the [global coastal event] is, from the human perspective, something that will persist for years, 'recovery' will mean different things at different times of the process. In a meaningful sense, our data would suggest that 'recovery' will take over 40/forty years, and 'rebuilding' will span the next 100 years.

Now, the good news in all of this, is that there is no sign of [government], nor [officialdom] within our work, or that of the Farsight.org study for the period following

the global coastal event. In our work, a great many temporal markers are supporting the idea that [government] and [officialdom] will be [reeling] before the [global coastal event], and this may partially explain why there is not a governmental presence noted in any of the views of the future following June of this year. It could also be the officialdom populations go into their hide y holes at just the right time to become entombed by developing circumstances. It is not possible for us to determine this from our data sets. So given this information, we just need remember that, after the global coastal event, it is our turn.

So, get as prepared for upset in your local conditions as you are able, but note that universe wants us to know how to accomplish things, not possess things. We who rebuild will be living off the remnants of this past, old world order, for decades, so there are going to be plenty of 'things' around, but the data suggests only a few who know how to make things work.

Try to be one of those who shows the way, there will be crowds who will need the path cut for them.

### Immediacy Data Intelligence Report

a subscription service of audio discussions on immediacy data intpretation....

Halfpasthuman is offering a subscription service in which we will provide audio reports on the immediacy data. These are copyrighted audio reports, delivered before noon each Thursday Pacific coast time, detailing the immediacy data forecast for the upcoming week.

Note that this is a calendar month subscription with non recurring charges. Each month it will be necessary for another subscription to be purchased in order to get the latest access codes. Access to any month is \$30 US. Individual reports will be made available for \$15 on the weekend following their creation.

Note that we expect this service to be terminated by circumstances beyond our control at some point in 2013. This service is provided on a 'for as long as it lasts' basis, and we are to be explicitly held harmless if universe intrudes on our ability to provide continuation in any given month. It is for this reason that we are structured on a monthly, manual

renewal format.

Note: Immediacy data produces forecasts effective from 3/three hours, out through the third week. The peak of this data type performance has been 3/three days out through 8/eight days.
