## **Future forecasting can seem overwhelming...**

Even to me, and even after all these years examining data and creating reports. So if it gets to you, or you have questions about the reports, my best contact email for such will be [clif@halfpasthuman.com](mailto:clif@halfpasthuman.com). For background on how these reports are created, there is a primer in the last 5/five pages of this report. If your questions about preparation are not answered after reading these, then send an email and I will get back to you when I am able to get through the daily work (there is a lot of it).

If you have a need for yet more words on the subjects discussed herein, albeit 'live', please visit the [webbotforum.com](http://webbotforum.com). Please note I have to isolate the forum due to the language causing a circuitous reference issue for our work. For the sake of not affecting my interpretation I do not visit the forum.

Note to new readers, our work tends to concentrate on a negative view (see primer at the end of this report).

Refunds available on request, no questions asked, so do not feel you need continue into information you would prefer not, simply over purchase price.

## ***Your planet changes faster....***

There are continued growth of new supporting sets for the 'sun disease' and its effects on humanity. Some of these effects have been in the data for over 10 years and include 'stupification', and 'mental fading' that will resemble 'dementia' but will be 'brief', and 'sudden onset' and in 'young people'. There are problems in using these words other than applied at a broad level of aggregation as they are from sets that are describing 'brain fogs' that will affect large groups of people suddenly, and more or less at the same time. These 'brain fogs' are the result of 'unknown energies from space' that include 'sun influences'. The data sets are suggesting that in some areas, due to unknown conditions, we will find that 'sun disease symptoms' of 'sudden brain dysfunction' will be reported. Note that these are all described in the data as occurring out of doors, and with some 'peculiar' local 'atmospheric conditions'. These sets are still dominated by longer term data types suggesting occurrences late this year at the earliest.

The 'divergence' of GlobalPop thought about the 'global warming theory' is showing up as being 'reinforced' in the general 'populace mind' as 'cold', 'more cold', 'snow', 'freezing', 'ice', and 'more cold' show up in 'extra (outside) seasonal patterns' in both hemispheres, north and south. As modelspace is progressed through February and March, the data has 'record cold' in 'late summer' in the southern

hemisphere. This 'divergence' from 'normal summer weather' is indicated to be 'flipping' and 'thrashing' the 'southern hemisphere' with 'mountain skiing' one day, and then only a few days later, 'intense heat' and 'flash floods (from melting snows)'. These sets are also extensively cross linked over to the 'new UV (and other unknown energies from space)' where we have 'rapid evaporation (ocean fogs)' being temporally linked to 'abnormal snows (and cold)'.

Yet many more supporting sets continue to pile onto the 'Ice Age' sub set. These new sets are bringing in longer term values for 'new lands', as well as 'diaspora' to the 'new lands'. These sets are also very much multiple generations in their scope. As we have now, these sets are showing that '4/four generations' will be involved in 'new lands settlements' as a direct result of the 'Ice Age'.

Some of the 'earth expansion' sets now bring in 'lightning (from the) ground' with attendant 'ground thunder' over much of 2017. Some of these sets are forecasting that 'ground noises' and 'flashes of light' will become so prevalent over these next few years as to 'cause wrecks' and 'stop traffic dead for miles in all directions'.

Other effects tied by the data to 'atmosphere' and 'atmospheric changes' include increasing reports of 'burning' from 'mere minutes' exposure to direct sunlight. However, the nature of the 'burning rays' will not be determined for some time according to the data as the 'burning rays' will have 'physical evidence', including 'peeling paint' as well as 'sunburned humans' and 'animals and plants'. Other effects are showing as including 'softened metals', and 'destroyed plastics'. The problem that seems to be the issue is that these effects will be both irregular, and not uniformly distributed. It may be some time before the 'scientific community' understands it is a 'lens effect' within the 'atmosphere'.

New data growth provides for yet more strange atmospheric effects forecast to be 'engaging' yet more electrical systems. Such 'electrical storms' are indicated to impact 'ships at sea' with very strange results including video of 'glowing ships' on the horizon looking as though 'ghosts'. The electrical storm side effects are forecast as including 'ice flows' or 'rivulets' in the 'ice flows' that will be caused by 'underseas volcanic activities' providing 'under ocean lighting effects'.

Yet more cross links are showing up between 'UFO sightings' and emerging 'earth changes'. These are including 'swarms' of both 'earthquakes' and UFO's together. Some of these sets are for southern California and Mexico for a 'day of rocking' in which two sets of 'swarms of earthquakes' will also each have 'swarms of ufo sightings' near to the epicenters of the quakes.

In the sets for 'earthquakes', we also have 'earthquakes in Antarctica' that are showing as causing 'major freak-out faces' within the 'elites' at a 'global level'. The data sets have the 'connection' between the 'earthquake' in Antarctica, mostly not reported, other than at the woo-woo level, then being 'tied to' the 'increasing freak-out faces' on the 'elites', again at the woo-woo level. What is going to shock a larger group of the population will be the legacy media also noting the 'cross tie' between 'events in antarctica' and 'elite movements'.

Yet more sets for 'extreme weather' including 'cold', 'sudden freezes', and 'bizarre' precipitation. Some of the sets include 'ice storms', and new forms of 'thunder snow' in which 'lightning' is forecast as 'performing' in ways never before photographed. These sets are found in supporting positions for the 'weather' across most of the northern hemisphere.

New data sets continue to add support to the 'frigid life' of the northern hemisphere in this winter

season. These sets are also bringing in data that goes to the idea of an 'additional month' of winter this year (2016/2017) in the northern hemisphere that will still be having 'exceptional freezing', and 'snow fall', and 'violent wind storms' well into April and May. This will be significant in terms of 'winter damage' for both Atlantic coasts, USAPop and EUPop. Further, large levels of damage are forecast for 'northwest europe' over the last 'few weeks' of this 'exceptional winter season'. New 'records' and 'record setting duration (for the cold)' both continue to gain new data sets.

Please note that in the first years of this work in the early 2000s, the data sets were bringing up the idea of a new form of UV light that would become a real problem for humans at many different levels. This has indeed occurred. The data now suggests that the UV light is very much a participating element within the global energy changes that are part of the Ice Age narrative unfolding. These sets are suggesting that a UV 'energy exchange' is underway that is concurrent with the 'volcanic unrest' globally due to the expansion effects within the earth. The 'energy exchange' is showing as being part of the 'process' of 'sudden freezing episodes', as well as part of the 'epigenetic triggering wave' also now well underway as evidenced by the rate of species extinctions. This is showing up via cross links to the SpaceGoatFarts entity where we have terminating sets in the 'new species' of 'new animals', and 'new plants' groups.

The sudden 'freezing events' are forecast to expand in our awareness over 2017 and early 2018 to include yet more 'frozen pillars of water' that will reach up over 30 meters and will include 'forests' of such 'towers' or 'ice trees'. These 'forests of ice trees' are suggested as a 'building block' for the 'new glaciers' when they become 'repeatedly frozen' and 'partially thawed' to create very large 'ice dams' that will be acting as 'heat sinks' through to underlying rock formations. These are but a few of the descriptors for new language around 'freezing' in all of its 'wonderful forms'. These sets include yet more sets for 'strange atmospheric events at sea' that are going to include 'snow falls' that 'do not melt' but 'float upon the waters' for 'hundreds of miles'. These are forecast as being in 'video' produced by 'ship crews' and 'cruise line passengers' over late 2017 and early 2018.

More snow is forecast for Hawaii, and at such a late date as to start to 'redefine the seasons' in the islands. These sets are forecasting that 'extra seasonal currents' are also going to be bringing 'strange stuff' including 'odd weather', and 'island blanketing fogs' at later dates in 2017, and within the 'winter 2017/2018'. The 'dense fogs' are described as being really 'disruptive' of the 'general life' as they will persist for days and cause 'respiratory problems'.

Further problems for all of the Pacific Island peoples will include new 'winds' as part of the 'patterns shifting'. These new winds are described as 'unlike past patterns'. The data sets have 'extreme speeds', as well as 'variable density'. These last sets are describing 'hard cold air masses' that get 'pushed at extreme speeds' by 'warmer winds' such that 'islands' are 'swept over'. This is described as occurring to Hawaii in both 2017 and 2018 with considerable damage. Note most of the damage is at the upper elevations, and that 'shelter' will be found in 'deep valleys' among the 'roots'. Plants, buildings, port facilities, and houses are showing as being damaged. Some of the islands in Oceania are indicated to have to wait for 'months' to get 'replacement parts' due to the 'destruction of port facilities'. Various other 'mainland groups' are indicated to 'form aid packages' including 'air drops', and 'sea rescue'. The data is indicating that several years from now, some of the wind blown boats and other floating debris will become news for having traveled 'so far' in the interim.

New forecasts for 'exceptional atmospheric phenomenon' that will be occurring across the 'northern hemisphere' as part of the 'shifting wind patterns', and the move into 'ice age conditions'. Some of these new phenomenon are showing for both this winter and next, and in both the southern and northern hemispheres. These 'phenomenon' are going to include 'snowfall' at levels that at levels not ever experienced by modern humanity. These are described as 'so dense' as to be 'faster (coming down) than can be moved'. The idea is that so much snow is falling so fast that a person 'cannot walk' under the accumulating 'snow load'. These sets are showing this new 'snowfall phenomenon' as affecting both hemispheres over these next two winters to the point that 'special alerts' will be put out about such upcoming 'avalanches from the sky'. The data shows such warnings will be taken very seriously.

The appearance of the 'atmospheric rivers', and the 'atmosphere compression events' are forecast to escalate over the next years well into the 2020's. These sets are suggesting that humanity becomes a bit more 'educated' in the patterns exhibited by the underlying 'processes' such that we get 'good' at predicting where and when they will impact. There are also a number of sets going to the idea of 'glacial attractants' for the 'atmospheric rivers'. The idea coming through these sets is that humans will be living at the edges (or close enough) to 'developing glaciers' to 'witness' the 'drawing' or 'pulling' effects of the 'glacier mass' on the 'atmospheric river' such that most of the precipitation comes down 'deep into the glacier', and as 'frozen rain or snow'. The data is suggesting that it is by this process that 'glaciers grow' and 'far faster' than humans could previously understand. The 'new glaciers' are indicated to be forming in 2017, and that over 2018 a 'general understanding' and 'public discussion' will emerge about the 'process of Ice Age', and how to react to it.

Some of the new sets are hinting at a new form of the growth of 'sink holes' and 'rifts'. These data sets have the idea of 'collapsing cave systems' that will be 'causing havoc' when these occur. First of these are suggested as appearing in 'wilderness areas', then being discovered and shown on video later. Temporal connections have the video of the 'collapsed caves' appearing coincident with yet other instances nearer to human habitation, and in some instances, right underneath buildings. These sets have buildings that will drop into holes that are NOT sink holes, but rather show up as 'ruptured cave tops'. The data has 'upper stories' of the buildings sticking out of the holes. These sets are also significant for the 'sudden military activities' that will be around the cave collapse area, and the large number of conspiracy theory people who flock to the site, due to its urban location. These sets also include language for 'fights' and 'battles' that will be 'occurring under the earth' as the 'public (especially the woo-woo people)' insist on 'exploring it themselves'. In the data sets this 'contention' over access is showing as going on for weeks if not months as the 'military' local to the event tries to 'contain' the many points of 'access' to what will be described as a 'spooky museum (of) mummies'. While the tendency is to think Egypt, the data sets are suggesting either northern central America or southern north America as the location for this 'cave system collapse'.

The 'collapsing cave system' sets focus on 'systems' continuously reinforcing the idea with more sets to 'interconnected', and 'long cave tunnels', and 'caves (without) terminus', and 'caves (of) a thousand miles', and many more such sets going to the idea of truly massive cave structures, some of which are indicated to 'part (at the) ceiling' as the 'planet expands'.

The data sets are indicating that new language is going to show up early in this year that will carry on for perhaps 2/two full decades. These sets are showing that the 'old planet' as a mental attitude is going to die off. The old attitude sets show that the 'mental appreciation' for the 'new normal' in terms of

climate and weather will become something of a point of contention. These sets have 'actual slug-fests' in the 'halls of power' over the idea of 'crashing global food production' due to 'extremes of cold' aka 'ice age'. The data sets are indicating that the 'new normal' as a 'meme' is going to be a 'driven phrase' over these next few years. The details within the data are showing that a 'shock' is going to hit the 'warmist movement' from the 'manifesting weather patterns' simultaneously with 'political repression being removed from climate scientists' and 'political attacks' from the 'shifting power base'. These sets are including some details from the GlobalPop sets indicating a 'blow back' about the 'large blow' that will be 'Winter in Spring', and 'causing more damage in a single storm than previously experienced'. Geographic indications for this storm are for the Atlantic coast. Boats are featured in the damage. The details suggest that the local insurance industry grinds to a halt with the large number of claims.

A significant section, almost a third part of the total 'old planet mentality leaves (dies off)' sets are supported by lexical structures for 'expansion effects' and the 'ice age overlay'. The 'overlay' sets are suggesting that 'ice age snow accruals' will be 'covering up' some 'earth expansion effects'. These are forecast as 'not' being seen or 'revealed' until after the 'snow melt'. Some of these effects are including 'new cracks' and 'fissures' in the ground and 'through infrastructure' such as 'sewer', 'water', and 'roadways'. Some of these are destined to not be 'visible' for 'centuries' in a few of the areas that will be discussed over 2017 through 2022 as 'the new glaciers'. In at least two of these spots the data has 'habitation' including 'hotels' and other 'recreation facilities' being 'trapped under the 'massive snow falls' that will become the 'new glaciers'. These sets have people 'lamenting the undone' and 'left behind' within these areas as it 'becomes apparent that no more visits' will be possible.

There are continuing growth of new data within the sets for the 'break up' and 'crumbling' of coastal 'structures' including 'roadways', and the 'landscape' itself. These sets are suggesting that very 'small', but now 'becoming measurable' amounts of 'ocean withdrawal' will be noticed in 2017 as the 'withdrawal' will lead to 'drying out' of 'land layers' resulting in 'coastal deformation' from what exists now. These sets have this effect of 'drying out of substrate layers' of the ground supporting our current coastlines as being 'noticeable' and 'reported with video' in 2017. In some areas of the planet such as the SW Pacific islands chains, the data has a 'crumbling effect' occurring as the 'waters recede'. This 'crumbling effect' will also be seen in the Mediterranean and other 'small seas'. Other effects will include 'wild cross currents' developing in formerly more 'placid ports' and 'harbors, bays, inlets', as the underwater changes begin to manifest visible effects. These sets are increasingly bringing in 'ferries', and other ships having 'difficulties' of many kinds with the actual 'docking sites' over 2017, and even more visible in 2018.

As we move modelspace from May 2017 through to 2029 we leave the immediacy and shorter term sets, relying on the longer term data sets only. These sets are less reliable, but nonetheless bring out continuing 'glacier growth' and its impact on humanity. These sets are interspersed with other sets suggesting that over these next ten years, new glaciers and earth expansion effects will be 'steadily', and 'relentlessly' involved in 'pushing (humanity) around'. These sets are showing very large movements, as well as large 'transformations' as a result. An example of large 'transformation' would be people staying in place, but everyone having to 'walk an extra mile' to get to the 'new port', or 'new beach area'.

## ***Your Global Populace changes....***

### ***GlobalPop***

The good news is that not only are a number of 'prominent' members of the 'evil ruling elites of the dollar empire' going to 'perish' over 2017, but humanity is also forecast to receive a 'slap in the face' from the ChinaPop central authorities.

The news over the upcoming months is forecast to include many many 'obituaries' where the 'reactions' are 'humor', and 'jocularity'. Further, there are sets going to the idea of 'freak-outs' by the 'former ruling elites' as their numbers 'deplete' in a shocking, and 'rapid' fashion. In the ultimate of irony, the data sets have the 'ruling elites' crying 'conspiracy' to say that they are being 'killed off' by a 'grand global conspiracy'. Of course, no one will believe them, or care.

The 'ruling elites losing it' meme is temporally coincident with the ChinaPop central authorities announcements for what we can call the 'global population five year plan'. In these statements, the Chinese central authorities will be releasing 'real science' and projections to the planetary population about the 'developing ice age'. Further, these announcements are also indicated to cause the 'western pedophilia power elites' to have such 'spasms' as to actually 'induce heart attack'. Thus the additional irony of yet another 'power elite' being rushed to the hospital with a heart attack brought on by the 'escape of truth'.

These sets appear within modelspace over February through April. These new data sets have 'excitability' as a general reaction to the 'new passions' {ed note: we are actually looking for that phase associated with 'new normality'} that will be 'flowing' along with the secrets revealed meme. These data sets have 'upset', 'upheaval', 'stunned', 'frozen', 'paralyzed', 'catatonic', 'exhausted', 'collapsed', 'fallen', and other language going to the idea of a 'complete destruction' of the 'status quo'. Further, within the data sets at the details levels we have 'status quo' defined to include elements going back to 325CE and the founding of the modern catholic church by Constantine. These sets also have elements that are referencing the 'undoing' of the 'totality' of 'academia' as the 'base assumptions' are 'rendered moot'. The 'rendered moot' sets have details suggesting that 1) the base assumptions of western scientific thinking that have persisted since the days of Aristotle and Socrates are going to be found to be 'baseless assumptions' at fundamental, and macroscopic levels; 2) that 'moot' refers to the general mood of the population in which the attitude of "I don't care if it is powered by space goat farts, and they only exist because I choose to believe in them, I want that damn flying car." In this latter, the idea from within the data is that both above are true. That is, the base assumptions of modern physical sciences are going to be shown up as being bogus, and the manner of the demonstration will be so powerful that it alone will be compelling the emotional reactions of the global population.

The changes forecast for GlobalPop that originate from the 'unleashing of science' include many sets with cross links over to the Markets and SpaceGoatFarts entity where the terminating sets are within the 'innovation wave', and 'entrepreneurial explosion' forecast to emerge over this year and through into the 2020s. The long delayed nature of this 'innovation wave' is due to the 'manipulation of the global markets, media, and population' by the 'power elites' over these last 60/sixty years. That is has been delayed has the forecast including some language about 'inspiration booms', and 'innovation explosions' in various populations around the planet. The idea is that even those people not paying attention in a

general sense are going to have their awareness pulled up by the sheer number and diversity of new products and inventions hitting the markets and media. Beginning in early 2017 with a first 'flush' of new language forecast as coming out during the 'emotional thrashing', and 'economic crashing' of March through May of this year.

The data sets have the Chinese central authorities starting a big push of 'environmental concern', and 'food crop concern' language within their announcement that will lead to the 'innovation wave' sending some of its energy into those needs. These have been showing up for years in the frequent descriptions that we had been getting for large scale conversion of big buildings from air plane hangers to malls into 'food growth centers'. We also have had consistent forecasts for all manner of 'small scale farming' in 'strange places' and 'strange ways' as being a major component of life as this century matures. The idea is that part of the 'innovation wave' brings out 'entrepreneurial solutions' at local levels bring us back to a much more distributed food production system by virtue of 'crashing credit (the credit freeze)' which causes 'breakdowns' in the Just In Time supply system which so shocks 'communities' that everywhere that is affected begins a 'scramble for local production' which in its turn causes a giant shift in emotional values for intensity and duration of many memes for GlobalPop across 2017 and 2018. The data sets are suggesting that by the end of 2019, many of the millennial and younger generations will have had personal moments that will be used to define their perception of time for the rest of their lives. These are described as being 'temporal reference' points such as 'in the winter of 2017/2018, when the snow was only 40 foot deep....'. These sorts of temporally significant event memories will be frequently used in the latter half of the 2020s according to the emerging data sets around both the 'new normal weather patterns' that will lead to Ice Age, as well as the 'shock to the system of lies' as the Chinese central authorities 'announce truth' to GlobalPop.

The data sets have a new form of 'respiratory impact' coming from 'environmental conditions' as the 'space (cold) weather' is to descend to 'sea level'. These sets have 'dusts' from 'high altitudes' coming down to 'surface levels'. Much of the data sets are also showing that 'chemtrails (aerosol metals)' will be part of the 'breathing problems' that will affect the GlobalPop under the 'descending (cold from space) layers' of the atmosphere. These 'cold plasma events' are showing as affecting weather here on earth over all of 2017 and through into 2020. The first of these 'mega cold blasts' are indicated to be felt in late January, and thereafter on a surprisingly frequent schedule. These events are showing up as affecting SE USAPop, NW ChinaPop, East coast IndiaPop, Africa, and both New Zealand, and Australia.

Yet more data continuing to pile onto the idea of a 'global gold rush'. Part of these sets are also referring to a new push from 'officialdom' to 'create wealth'. These sets are showing the 'officialdom' sets as gaining extensive cross links over to 'popular gold rush'. These sets have 'videos' and other 'information streams' that show 'gold mining', and 'gold panning' as being 'promoted' by 'officialdom' across a large swath of GlobalPop.

The data sets have 'gold rush' in several contexts including 'gold panning', and 'gold mining' at 'personal scale' in many different locations across the planet. These 'gold rush' sets also include references to 'bitcoin' as a new form of 'gold mining'. Other sets have 'gold rush' including 'crawling into vents' and 'drains' with 'vacuum cleaners' and 'fine bags' to 'extract gold dust'. Some rather strange sets are cross linked over to SpaceGoatFarts where we also have sets suggesting that some 'gold hunters' will be 'crawling in dangerous caves' where they are going to 'find hidden resources', that are not gold, and will

be causing lots of trouble for them, as well as the people trying to 'hide the resources'. There are 'space alien' sub sets connected to the terminating sets in the SpaceGoatFarts entity.

As the global investigation into the planetary elite and their pedophilia connections continues, the data sets have new growth in supporting sets for very big impacts on religions. Noticeably low in the data sets is the catholic church, though represented, it is eclipsed by the 'orthodox judaism' sets by a factor of nearly 3 to 1. The data sets are clearly forecasting a much larger amount of verbiage coming out about the 'fundamentalists' than other religions. It needs to be noted that the language here is dominated by that coming out of USAPop, and thus much of the appearance of such language is likely to be within USAPop as it emerges.

The data sets for GlobalPop, as well as the smaller population sub sets, are gaining support for the 'sci-fi world' to begin to 'creep out from under the rug' as 'new jobs' are created in categories that have never before existed. These 'new jobs' are showing in SE Asia, and India populations. These data sets are labeled as 'field engineers' with very confusing language trying to express descriptors about 'industries that don't yet exist'. These sets are showing that 'new job categories' are going to start up in IndiaPop and SEAsiaPop over mid through late 2017, as the first of the 'field engineering start-up companies' will be 'making head-way' or 'progressing past obstacles' as the data sets also have it.

The progression of the data can be interpreted as something along these lines using an invented example; first, we have an Indian manufacturer take an 'innovative invention' into production as a self rising, low distance, but heavy lifting, levitating, anti-gravity forklift for moving really heavy loads. Within a few weeks of its release, the basics are locally re-manufactured into crude hover boards, dangerous, but interesting and appealing to a global audience. The IndiaPop success is followed within a very short period by 'sharp, detailed, designed, commercial production' hover boards coming out of SEAsiaPop in a dozen competing factories selling direct to the public via internet presence. A short time further into the future the technology has spread around the planet to be re-engineered, re-designed, and re-manufactured into dozens and dozens of new products. Please note the use of hover board is an example only, not from within the data sets. We have had 'new electrics' with an IndiaPop integral component for a number of years, and now have central Asia as the site for some emerging new 'electrical generation machines' discussed in previous ALTA reports, and we have also had IndiaPop references within the SpaceGoatFarts entity associated with 'levitating machinery' and 'industrial use', such as 'floating forklifts', and 'controlled floating building cranes'.

Other very 'far out (into the future)' technologies that are showing up are discussed in the SpaceGoatFarts entity and Markets entity areas.

Yet more 'ancient secrets revealed' sets are connected to the 'collapsing caves' language in the Terra entity. As these 'cave systems' are revealed in a series of 'earthquake' related instances of 'ceilings (of the) caves (thinning out)', the data has GlobalPop 'discovers ancient technologies' and 'near ancient civilizations' that are 'right under our feet'. Again, yet more language shows up in supporting positions for 'reexamination' and 'rethinking' all of 'prior human history', as well as 'ecology', and 'climate patterns'. These are all within the supporting groups for the longer term data sets around the idea of 'falling into collapsing caves reveals ancient underground civilizations' under major 'metropolitan centers'.

The data sets are forecasting that 'waves' of 'repressive orders' by various 'state

governments/officialdom' will be 'colliding' with the 'blow-back (anti-wave response)' across much of the planet over the next two years as 'systems (of) governance' begin to 'come undone'. The data has two very large social waves in a 'transition' state to 'each other'. Specifically the 'long denied', and 'repressed', and 'suppressed', and 'actively opposed' emotional wave that we characterize within the ALTA reports as the 'tribal (small collective)' feeling has been described in the data sets as being 'stomped (into) silence' for over 60/sixty years. The data has held for a number of years that the 'repression' had become 'an old, weak, man' that was 'failing (from) lack of new blood'. These sets have had the 'break down (of the) political ties' binding the EU as being exposed over the last 3/three years of this decade. Further, there are pressures showing within the USAPop for 'secession' and 'break up of the states'. These sets have had a very large reduction in the rate of new supporting sets accruing in this last processing for USAPop while the sets for the break up of the EU 'experiment' are gaining new growth.

The 'repression' sets are very interesting in that they go to so many aspects of modern life in the dollar empire countries. These sets have 'unleashing', and 'unfettering' of the 'formerly repressed information sources' affecting all of life in these developed countries. The data has 'new facts' being 'let out' that will affect all the 'numbers from officialdom', will 'repeal old numbers (bad understandings)', will 'reveal secrets going back hundreds of years (within officialdom)', will 'alter (the course of) nations', and 'change how people see themselves', and 'recent history'. Further the 'truth telling' unleashed within 'current governance groups' globally is indicated to 'alter science', 'bring up real facts (about humans and earth and space)', 'open minds', 'close universities and schools (that only conveyed lies)', and restructure 'markets' and 'global commerce'.

The 'breakdown' of the 'globalist new world order initiative' has long been forecast as 'unleashing' a huge wave of 'creativity', and 'sparking' a 'global renaissance'. These sets are growing faster now than in recent processing, and they had previously gained a whole order of magnitude concurrent with the Antarctica sets growth. Yet more exciting new years for the 'inventive entrepreneur' over these next decades. It remains to be seen whether the 'renaissance' and 'innovation wave' will run its course of 20+ years in length after having been repressed for so many years, or whether it will burn extra hot to compensate and still start fading in the late 2020s. Without regard to its end, the oxygen is now available to allow all those smoldering minds to catch fire!

Within the 'global breakdown' of the 'narrative control' is forecast as leading to a 'wild west frenzy' of 'new thought', much of which will be 'rubbish' and 'discarded' over these next few years. Within these sets we have new supporting sets for the 'global backlash' against the 'media corporations' as part of the 'shifting narrative' over 2017. Of all of the GlobalPop sets, these sets have the highest level of 'duration' values with indications for dozens of generations of impact deriving from the occurrences of this year.

## ***PopWar: Technologies***

The data sets have the PopWar creation of 'new technologies' taking a few leaps and bounds over the next few years. First up are sets describing escalation in the use of 'drones' within PopWar. Not merely satisfied to use 'drones' in 'aggressive strikes', we also find that new 'networked drones' will be used as 'coordinated (civilian) patrol shields (against other drones)', as well as 'protective grids' over 'blocks' within 'urban' areas. The 'grid drones' are going to cause 'officialdom' to have 'diarrhea' and 'vomiting'

as they are discovered, and even worse 'publicized' on the net, including 'software design patterns'. These 'grid drones' are also showing as being used to 'shut down' a 'commercial (maybe military) airport' during a 'critical time' in some 'hostilities' as the 'local residents' decide that the threshold for action has been reached, enough 'suffering' has been 'endured', so they 'send in the drones'. The 'airport staff' is described as having an 'appropriate freak-out', as 'dozens of drones' are within their 'restricted airspace'. There are also hints within the new sets that the drones will be 'spraying (unknown something)' into the air that causes 'pilots' to 'flee' due to 'potential damage to their engines/aircraft'. This is indicated to be a giant media blitz period lasting for days at a global level with hundreds of videos appearing of the 'drone versus airport' skirmish.

We need to note that the PopWar sections of our data sets are dwindling in emotional values with each processing. There are new sets growing, but each new processing is bringing in noticeably fewer longer term values. Further the emotional sums are indicating a 'waning' level of 'emotional values supporting growth' for PopWar over these next three years. These sets are showing that 'environmental factors' as well as the 'reactions' and 'results' of the 'discovery in Antarctica', and the 'creeping out' of new technologies are going to 'suck energy' from the vitalizing force for PopWar. The single largest primary emotional motivator is shown as being 'ice age conditions developing' across many of the regions now hosting PopWar. The inclement conditions, within the data, are causing more emotional shifts within the situation over the next two years than all other elements. Other contributing factors showing up that are much more immediate with a larger level of shorter term impact include the 'shut down' and 'withdrawal' of American military from a large number of countries over a relatively short period of time. This is indicated to have major impacts on GlobalPop psychology as the 'global occupation' ends. Further, the freeing of resources from the 'military occupation of the planet' by the USAPop is also coincident with the rise in 'hyper technologies' language within the data sets. The implication is that the USAPop corporations ruling elites decide that their longer term survival is best bet on Antarctica and The Discovery, rather than the 'warfare and debt' model.

## ***Break-awayPop***

The Break-away populace is showing in our data as being 'very active' from about mid March onward through the year. The 'activity' sets are describing this as 'sporadic' and 'choppy', as well as 'shocking (to the sleepers)' and 'vomit inducing' to TPTB (mostly their minions as they will be the 'visible face' of 'freak out' and 'mental meltdown').

These 'activity' sets are focusing on 'UFO' and 'USO (underseas unknown objects)'. The data sets have the 'under seas activities' being the 'first visible' cause for the 'freak out' on the part of 'officialdom'. This 'freak out' is described as including 'press conferences' that will be 'wild', and 'strange' as the 'officialdom' tries to 'reconcile' the 'lies (about)' what is 'happening'.

The data sets have a new 'battlefield' showing up in which the Break-awayPop will be 'exposed (slightly)' to those whom look. This new 'battlefield' is the 'wars (between the) elites'. These are clearly 'criminals', and their 'organizations' that are going to be 'at war'. What is showing in the data sets now is that the Break-awayPop is going to 'take a side'. These sets are arguing that the Break-awayPop has decided it 'cannot be (out in the) open' with the 'establishment criminals still in charge'. The data has some hints that there are 'off-planet agendas' which will not be well served if Break-awayPop has to

'contend' with the 'establishment criminals'.

These sets are among many in differing entities that are suggesting that 2017 is going to bring out much more 'visibility' in the 'war among the elites'. These sets have the 'damage' showing up within the 'politics' and 'minion' areas of the 'ruling power structure'.

There are sets within the Break-awayPop sets that have growth in descriptors for 'space alien' that have now been getting growth under 'debris'. The details are bringing include 'debris', 'damaged material' that is indicated to be 'falling down' upon our heads. Some of the new sets are describing what can be either a 'police interdiction' or a 'collision involving a police cruiser' in the upper atmosphere. The idea is something of a 'debris field' that will be raining down on an inhabited area such that the 'inhabitants' are 'roused from sleep', and then are 'instantly drowning in debris', and 'questions'. The data again shows that the 'military local to the region' arrives, but these days, way too late in mere 'hours', and the 'information' is out and about in the wilds of the internet. With pictures and video. These sets are spread across the late Spring (northern hemisphere), and into Summer with a peak in mid June. There are a few cross links back over to the same UFO 'fly by' sets that have produced the 'space alien cruise ship visit' forecast still pending, as well as the 'fly by woo-woo experience' viewed on the Keiser Report RT TV show a number of years back. These sets are all tied to the 'strange visible atmospheric phenomena' sets forecasting a very active sky throughout 2017.

Other significant aspects of the Break-awayPop activities are showing as including a large number of 'underseas events' that will include 'collisions' with 'ships', and 'submarines', as well as at least one report of a 'collision' below the tidal line with 'an island'. This last is showing as getting many people greatly excited with 'pictures and video' of the 'predicament of the craft' being 'visible'. This is also indicated to lead to 'military excursions' to the area such that video access is removed. The data sets for this language shows up in mid Summer, northern hemisphere, though it is also within a context of 'extraordinary winds', and 'extra seasonal cold'.

The 'underseas activities' of the Break-awayPop are described as 'producing' light shows of 'shocking brilliance' such that there will be 'wild rumors' of the 'sun rising from the west', and 'a sun coming up out of the water'. In this instance the language is for a very brief event nearly 'momentary' that will later be associated with 'debris' that will be 'washing up onshore'. The 'debris' sets are cross linked over to the SpaceGoatFarts entity with terminating sets going to 'unidentifiable', and 'officially denied'. These sets have many other cross links to 'military', and few other details.

The Break-awayPop sets also have 'underground' sets for 'noisy activities' that will be 'in conflict' with 'above ground governments'. These sets are describing a situation in which a local 'village' complains about 'underground blasting' which brings in 'regional governance people' which triggers 'state level governance people' and so on up the chain. These sets are cross linked over to the 'arrested diggers' sets from previous ALTA reports in which some people will be 'arrested' for 'illegal digging at night with heavy equipment'. The puzzle for the police will be the total lack of any thing of 'value' in the area, such that other than 'trespass', no real crime is committed. Now there has been growth of new sets for the Break-awayPop to be the 'cause' for a 'chain-of-command reaction' to 'underground noises' that will lead to yet more 'exposure'. The Break-awayPop sets are cross linked to the GlobalPop sets with terminating sets that include 'UFO (UAP)' and 'caves'. Other sets within this Break-awayPop versus 'local governance people' include 'sightings', as well as 'car crashes'. Apparently the 'car crashes' will be

attributed to the Break-awayPop guys trying to 'dissuade pursuit'.

The Break-awayPop sets are also very cross linked to the Markets entity with many terminating sets within the 'innovation wave'. There are sets that include language for 'competition', as well as 'comparisons' that are suggesting that the Break-awayPop is going to have its own issues with the 'results of awakening' within GlobalPop. Many of these sets are pointing out it will be 'impossible' to control 'a billion inventive kids'. The Break-awayPop sets are forecasting that our collective 'night skies' are going to be stuff full of new visual attractions as 'stuff happens' but 'no one says anything'. The data sets have the 'video evidence' leading to 'screaming memes' online from many 'mega internet fabulous personalities' as they are incapable of grasping why 'officialdom does not respond' to what they will be calling both 'an invasion', and 'an exodus' depending on what part of which activities they happened to witness.

## ***AustraliaPop***

In the continuing growth of the 'corruption exposed by secrets revealed' meme, we have yet more data for 'construction corruption' at an 'international level' that will be 'news' across AustraliaPop. These sets have the 'victim' being 'USA taxpayers' as it will come to light about 'sweetheart deals' for 'materials for USA construction in Australia'. The emotional point of the 'corruption sets' are not the 'money making' and 'kick backs', and 'over charging', but rather the 'blackmail' that will be shown to have 'followed track' of the 'minor level corruption'. This will 'elevate' the 'corruption' in AustraliaPop 'officialdom' to 'world class status' as their 'participation in global crimes' will be coming out. Some of these sets have AustraliaPop 'politicians' crying 'they made me do it' to many new crimes, and 'spilling out' many of the 'secrets revealed' that will be 'fuel' to the fire of GlobalPop 'citizen journalists'.

Yet more sets for woo-woo continue to connect AustraliaPop to The Discovery in Antarctica, and now we have 'pyramid language' showing up about 'australia the continent'. These sets are going to the idea that the 'pyramids' in Antarctica will be causing 'big digs' around the 'Australia pyramids'. The data sets have the AustraliaPop 'pyramid' being 'exposed by digging' as yet more 'foreigners' show up to start 'bossing the locals'. This time the data has 'local population' getting 'really irritated' and creating both 'law' and 'popular movements' that will be both 'blocking', and 'exposing'. The 'foreigners' are going to 'be blocked', and also, at one point, 'arrested'. This is indicated to cause yet more 'press' about problems that will be 'causing vomiting' by the 'legacy press' and the 'officialdom' of the 'global ruling elites'.

The 'pyramids of Australia' meme is indicated to grow over 2017 with new impetus to 'explosive news' coming out over late 2017 and throughout the first half of 2018. These sets are referencing 'technologies' again, with many of the same supporting sets as have been seen in modelspace for Antarctica. These sets are again showing for an increase in 'global awareness' as the 'pyramids of Australia' become quite famous due to 'sheer size' that will equal those found in Antarctica, and for 'old pharaoh artifacts' that will be found. These latter sets are suggesting that these 'artifacts' from 'dynastic pharaohic Egypt' will demand that we need to redefine the word 'ancient' as the 'pharaoh culture' is very near term compared to the pyramids on any continent, as well as prove that 'the pharaohs' were 'explorers of pyramids', not their creators. The data sets are showing that 'records' of the 'expeditions' by 'pharaoh dynasties' to Australia in attempts to 'recover power devices' and 'technologies and tools'.

These 'records' will apparently describe 'accidents' and 'stranding' of 'expeditions' from specific 'pharaohs' that will 'shock all academia' that has not already had their 'global historical view of reality' shattered by the developments of 2017.

Other sets are going to the idea of a 'UFO festival' that will affect AustraliaPop over 2017 and 2018. These sets have cross links that tie the 'pyramid' sub sets over to 'UFO' that also cross link back to SpaceGoatFarts. The 'festival' sub sets are suggesting that a 'party mood' will exist not only in the 'observers', but also the 'UFO/UAP' as it is being observed.

## **IndiaPop**

Center #1 for innovation in some of the developing 'new technologies' that are indicated to begin being 'exploited' by humanity in 2017 and onward. Much of the 'innovation wave' and 'renaissance' sets within the IndiaPop entity are focusing on the 'engineering of materials', and 'space sciences'. Other supporting sets go to 'software engineering' with very long term sets being brought in by the lexicon forecasting multiple decades of successful 'energy field engineering'. These sets have other, more mundane supporting sets for 'engineering' in the broader meaning also building for IndiaPop through the 2020s. There are sets that have 'roaring' and 'fiery hot' as descriptors for the IndiaPop economy in mid 2019 as the 'new power centers' begin to 'obtain commercial success'.

These 'new power centers' are not electrical, but rather 'political', and are also cross linked over to The Discovery sets from 'Antarctica'. These sets are very extensively cross linked over to the USAPop as well. There are many sets indicating 'partnerships' and 'cooperative ventures' that will be developing around both 'medicines', and 'energy science engineering' over these coming years to the benefit of all humanity. As noted in other discussion sets, the data has the 'engineering' coming from IndiaPop that will be 'taken up by SEAsiaPop for 'implementation' and 'distribution'. This level of 'regional partnership' is part of a 'three legged stool' with ChinaPop that brings IndiaPop to the 'top of planetary production' of 'specialized space engineering' within a short 10/ten years according to our current data set forecasts.

Center #1 for starvation and deprivation for 2017 and 2018. Desperate for aid from its neighbors, ChinaPop, even from Pakistan, IndiaPop is indicated to take 2/two years to 'recover' from the 'cash ban' and the subsequent 'political chaos' and 'political systems breakdown' insofar as the 'food crisis' is concerned. As forecast a number of years back in Terra entity sets, the IndiaPop involved in agriculture will be suffering 'bad money (or lack thereof)', and 'bad weather', in the form of 'flopped over (topsy turvy) weather patterns'. Added to the 'woes of the farmers' will be the 'political uncovering (unwrapping)' that will be 'fraying the social order' over much of 2017 until the early part of Fall (northern hemisphere). At the limit of our more reliable data sets are indications that IndiaPop will be 'regaining its footing' after a very 'bad year' of 'economics sunk', and 'extraordinary weather' causes its own layer of 'misery' on the population.

The 'food crisis' in IndiaPop over mid to late 2017, is indicated to 'forge' a very 'special bond' between USAPop and IndiaPop that will lead to the 'continental USA' becoming a 'major back up source' for the 'Indian ayurvedic medicine industry'. These sets have been in our data for over 10/ten years, and now are shifting into shorter term data types at a very large level. The implication is that the events that

propel the shifts in both IndiaPop and USAPop are within months of being manifest.

This is connected in the data within sets for 'cross border traffic' in the form of 'gold' that will be 'leaving IndiaPop' for 'food'. Both the crashing IndiaPop banking system and the crashing weather patterns are large sets with even larger groups of supporting sets.

While 'flooding', including 'out of season flooding' is a concern in a general sense, the 'cross border food trade routes', as well as 'smuggling routes' are all showing as being impacted by 'raging rivers', and 'streams running as rivers', and 'rivers (in Summer) running at flood stage'. These sets are all supported by 'Ice Age' sets that forecast large amounts of 'snow pack' and 'melting snow' at 'never before seen levels' due to 'wind pattern changes', as well as 'rivers in the sky'. These last two elements have large sets of supporting linguistic structures for the now familiar 'atmospheric lakes' also known as 'atmospheric compression events', that will be causing 'massive flooding'.

The data sets would have 'food needs' be such that many people will be 'risking life' to 'cross borders' during these 'Winter in Summer conditions'. Other sets bring out descriptors for 'boulders', and 'hillsides', and 'road ways' to all be 'washed down river' due to the 'continuing flood stage conditions'. These sets also have details for 'border regions' to be badly affected including 'border facilities' that will be 'washed miles downstream'. Other sets have 'joint IndiaPop and ChinaPop military rescue operations' in place later in 2017. These descriptors show up in the longer term sets as modelspace is progressed from May into June.

Note that many of these 'pattern changes' within the 'weather' are showing up as being all in the same 'directions' such that there will be very large growth in new memes online for 'space aliens warfare against humans by way of weather'. See the SpaceGoatFarts section for more discussion on these memes.

Yet more data sets for the 'cash war' coming to 'violence' within IndiaPop as the data sets forecast the juxtaposition of 'weather crisis', 'food crisis', and 'paper currencies crisis'. The base level of the emotional sums for IndiaPop are currently at very high levels, and they take a nearly 20% increase over the last few days of February and through March. By April, the increasingly 'vocal' response to 'bad management', and the 'crying out of governance corruption' over the growing mess, and 'deaths' from the 'war on cash', are forecast as leading to 'politicians rebelling against government' due to the 'chaos of the money', and the 'breaking down' of 'Indian society'.

## ***IrelandPop***

The data sets are showing that the 'banks' in IrelandPop are going to be 'searching' for 'yet more funding' as the 'credit freeze' rolls through the EU zone as 'extended winter also continues'. The data sets have IrelandPop to be less than 'pleased' about the 'rapid deterioration' of both the 'weather', and the 'reported health' of their 'banking system'.

Other new data sets have aspects of the 'water issues' spreading out into 'political concerns'. These sets may be referencing some spill over into larger 'political battles'. These sets are suggesting that 'water as a political issue' is somehow part of the local expression of politics in IrelandPop. This is showing as being a 'pivotal' component to a 'grand shift'. This last is also a descriptor set label that would seem to suggest the wording as a reported phrase following some elections.

Other concerns for IrelandPop, as noted, will include what are described as 'wild' changes in local weather. These will be such that 'concerns over local food production' will rise to the level of a national discussion, though the media, or forum is not indicated. However, the data does show that 'weasel words' from 'officialdom' just will not be finding a 'receptive ear' anywhere in IrelandPop as regards weather much past June.

We have a number of sets for 'really irritated women' in a 'small group' who will be taking on both 'national politicians', and 'international currency traders' in a 'serious distress remedy crisis' that will be 'touching home' for the 'women'. The data shows 'two days' of 'desperation' that is going to bring the 'structural defeat' of the 'politicians' and 'money men' as they are 'rattled' down to their 'core' by IrelandPop such that they are 'pissing in their cars'. Not a good time to be a 'man in a suit'. There are sets indicating that the 'women' are going to create a 'gold movement' or a 'movement into gold' that will be 'scary to politicians', and 'fearful' for 'banksters' and 'money traders'. The 'grievance' at the nexus of the 'conflict' has to do with 'inequality' coming back to 'poisoned food', and 'dead water' and 'generations affected'.

Sets show that the 'coastal layers' at a longer stretch of 'arcs' is indicated to be 'crumbling' such that 'recesses', and 'caves' are exposed. These sets are also holding sets for 'math', and specifically 'star math' will be 'discovered' as part of the 'crumbling cave tops'. These sets have detail sets that could be describing a very 'steep', as in 'vertical' wall of 'layers of stacked stones' that will be 'crumbling into the sea'. These sets are yet more supporting aspect and attributes for the 'underground discovery' of 'ancient words'. These sets are still building more growth for 'deep wells', and 'hidden books'. These 'books' are suggested by the data to be very very old, as in over '9000' years.

## **SEAsiaPop**

Center of SE Asia for supporting enterprise is forecast to develop from proximate to IndiaPop as a 'social order upheaval' goes through first IndiaPop, then briefly, SEAsiaPop in their shared experience of 'currencies crisis'. In both cases 'governance', and 'officialdom bad decisions' are indicated to be 'devastating to business'. While causing several bad years in local economies, the longer term values are bringing in lexicon references to 'successful', and 'flowering', and 'blooming', and other sets for an 'economic boom' that is an outgrowth of a confluence of events.

Other impacts on SEAsiaPop include the 'heating up' of both 'earthquakes', and 'volcanoes'. While causing all manner of 'troubles' and 'problems', the data sets continue to forecast 'new lands', and 'new mining opportunities' over these next few decades.

Further opportunities for SEAsiaPop are forecast to arise from major investments in 'local agriculture' for 'export' to both IndiaPop and globally over 2017 and 2018. The data shows much 'lauding' and 'praising' of SEAsiaPop and its individual leaders in 2019 as 'success births success'.

Many other sets for 'conflict' within SEAsiaPop are growing with supporting sets for UFO (UAP = Unidentified Aerial Phenomenon). These sets are suggesting that 'earth changes' including 'new lands rising' in the region are going to be a 'draw' or 'attraction' for UFO visits that will in turn, be fed into the global video stream. These are indicated to be 'independent' of all the 'officialdom actions' also being caught on 'video', though, less so as it will become apparent to those on the waters that it is 'safer' to 'photograph UFOs' than 'government'.

## **SouthAmericaPop**

Home of the UAP (unidentified aerial phenomena)! The data sets are indicating that 'masses', actual video captured 'masses' of 'unexplained aerial phenomena' are going to be dominating the news across much of SouthAmericaPop over 2017 especially from late May onward. The data sets accrue large numbers of new supporting sets for 'aerial battles' including 'UAP versus UAP versus TFP (terrestrial fighter planes)' that will be 'on-going for hours'. Many sets for 'damage' both to 'terrestrial fighter planes' as well as 'houses', and 'cars (other road traffic)'. Some of the sets for 'damage' are showing as 'accidents' due to the 'spectacular overhead displays' taking attention from driving, but many are also showing up as 'damage from falling debris'. Other sets have 'running into' and over 'UAP debris' due to being 'distracted driver'.

Some of the newer sets for the 'debris from space causes car wrecks' has this occurring across a large area within South America. These sets have 'coastal', as well as 'inland' areas being 'spiced with debris' from 'space activities'. These areas have differing topography creating differing impacts such that 'grass fires' inland, versus 'steaming' from the 'coastal beaches'. Other sets include 'building roof', and 'public facilities' that will be 'smashed' by debris as part of these 'UFO experiences'.

## **USAPop**

BACKLASH! The data sets are forecasting the worst year ever for 'child actors' in legitimate (to some degree) 'hollywood' productions, as well as within 'advertising' all across USAPop as a 'backlash' to the 'exploitation of children', including the 'subtle sexual content' of 'messages that include the images of children' rise within the 'population'. These sets are filled with supporting sets for 'vengeance', and 'outrage', as well as 'movements', and 'boycotts', and 'social trashing'. This last is a mixed up group of sets going to the idea of 'new forms' of 'social censure' which are 'social media based'. These new forms are going to include 'trash talking (about personalities)' to the extent that it becomes something akin to 'gross public shaming'. These sets are also supported by language for 'virtual (public) whipping', and other forms of 'video abuse' of 'personalities'. Now note, the data is describing the appearance of a broad tactic, and not the accuracy of its application as many will be 'labeled' but not 'guilty' according to the new data patterns.

These new 'social shaming tactics' are indicated to have serious repercussions for many corporations. See Markets discussion for more on this aspect of these new 'social expressions'. Some of these new 'social expressions' are described in the data sets as 'outing witches'. These are not going to be pleasant incidents according to the descriptor sets, for any of the participants, nor the witnesses.

The 'backlash' against the 'hollywood pedophilia networks' sets have very large ramifications showing for the 'california power structure'. These sets have many new 'factions' emerging as the 'social censure', and the 'economic' fallout are taking the 'corporations' involved 'down' towards 'failure'. These sets have 'politicians' and 'corporate masters' being 'on the run' from 'social censure', 'shaming', and 'arrest warrants'. The new growth areas have the 'california political structure' coming under 'giant stresses' as 'resignations', and 'job abandonment' begin to be 'reported daily'. These areas have very large ropes of cross links over to the Markets entity where we have 'blame' for the 'corporations derivatives crashing' is being placed on the 'pedophilia witch hunt' in 'hollywood', and 'silicon valley'. The data sets have very large impacts for 'california society' including 'political structures' and

'corporate structures' and its influence across USAPop. These sets are growing in emotional values and the subsequent sums for 'emotional impacts'. These sets are indicating that USAPop will be embroiled in the 'pedophilia witch hunt' as much as the 'local California population' as the 'alt media' goes 'crazy' with the 'facts pouring out'. These sets have 'legacy media', all across USAPop, and to some extent GlobalPop, as 'freaking out' as the 'news comes out' about their 'masters', and 'workers' being involved.

The social and economic 'ripples' of the 'pedophilia scandal' extend deeply through USAPop and the Markets entities. These sets have 'ripples' that will be 'upsetting' the 'shares trading globally' as 'rumors' of 'high level management' being 'involved' in the 'pedophilia network'. These sets have 'big problems' arising globally as the 'algorithmic trading' gets involved in the 'witch hunt' component as it magnifies the emotional swings around the subject over 2017. These sets have 'wild swings' in 'equities markets' as a result of the 'building pressures' to 'cleanse' the 'concentration of pedophilia' within 'corporate governance structures'.

The data sets have 'new energy sources' being gradually pushed out into GlobalPop over these next 4/four years as the first response to the 'developing new seasonal patterns'. These 'Ice Age patterns' are going to be met by 'increasing reliance (on) indoor food cultivation'. Such sets continue to grow, including in the area of 'medicinal herbs' as a major export crop for Central America over 2019 and into 2020. What is unexpected are the suggestions that so many North Americans will be 'migrating' into South America that the 'balance' of the language is going to shift to 'english dominant' over only about 8/eight years.

While much of North America is also indicated to go into 'Ice Age' conditions, it will be 'Europe', and Eurasia that show more in the data for 'debilitating ice conditions'. These 'new ice lands' are going to 'remove' many thousands of acres' of food crop production. Some of that will be made up by North America, though the majority will be coming from Central America, and India, and central Asia.

The 'Ice Age' sets also have 'new delta areas' forming that will be 'increasing lands' as well as 'reducing (ports) facilities' as 'boats' will not be able to 'make it through' the 'new shallows'. Other 'land form changes' include new lands along the west coast. Other sets show that as the 'Ice Age conditions' settle onto North America, the 'population' of both USA and Canada will 'react' by 'relocating en mass'. The first of the 'large (mass population) movements' shows up for 2019 as the data has the USAPop 'crawling out of winter snows' finally in 'mid Summer' of that year.

The data sets have new supporting sets for the 'backlash' against the 'Israelis' in USAPop. The data has the 'Israeli response (attack)' against the 'financial system' becoming a point of 'contention' across USAPop. These sets have longer term values going to the idea of a 'boycott aid to Israel' movement forecast to cause 'real problems' for the 'new dynamics' that will be 'sweeping throughout' the 'global political power systems' over 2017. The 'backlash' is indicated to emerge in March in a very intense period of news as economic problems escalate to the point of 'global gridlock'. The 'gridlock' sets do not define it as a general economic shutdown, but rather a 'seizure', or 'hardening' within the 'credit arteries'.

As forecast in previous ALTA reports, the 'impacts' on 'health' of the 'dismantling/destruction' of the 'old crony monopoly health care system' will be positive. The data is forecasting that USAPop will have 'far fewer deaths' as the 'doctor system dies', instead of its 'fodder', mostly misnamed as 'patients'.

As forecast in past years ALTA reports, the data sets have had 'just in time supply system' crumbling, and that is certainly being seen in the global transportation of goods by water, rail, and air, at least at the 'long haul' level. The various 'debt layers' are showing in the data as providing a 'return to local supply chains' mentality for 'corporations' that will be coincident with, and supporting of, the Trump administration move to 'source jobs at home'. What is interesting now about these longer term sets becoming manifest is that the other sets that were growing along side these over time included our sets for 'gold and silver emerge as money', and 'gold and silver re-establish their ratio', and 'silver aims for parity with gold'. Note that these are all sets that are over 10/ten years in our processing. These sets continue to gain new growth and these new supporting sets are primarily filling with shorter term sets for manifestation, and longer term sets for impacts.

The 'renaissance' language long forecast in ALTA reports and placed at this time, is now being forecast as being something of a 'slogan' to emerge over these next few years. The data shows that the label of the 'American renaissance' is going to 'stick' as a 'period marker' much the same way we have 'historical phrases' that endure over decades. It will not be an active meme until mid May and beyond in 2017.

The 'renaissance' language is itself in a supporting, and cross linked position to the 'revolution' sets. Further, within the USAPOP sets, the 'power elites' are indicated to 'take revolution seriously'. These sets have 'changing reality', and 'altering public information'. These sets are going to the idea of a 'blitz' from the 'elites' and their 'tools' to attempt to 'seize back control of the narrative about reality'. These sets are showing up in late February as a very large clump that appears rapidly, and grows quickly.

The data sets have the 'attack' by the 'power elites' against USAPOP and its new 'officialdom' as producing a very chaotic month of March as the 'msm prestittutes' take the February 'slant' against the Trump administration to new levels. The data shows that some of the 'crimes' of the 'elites' are to be 'shifted' over to people now coming into power. The data sets have this maneuver taking a very 'low approach' that is forecast to 'fail'. This 'failure' is showing within the data as being a 'spark' for the 'explosion' of the 'blow-back' against the 'media corporations' across all of Spring and escalating to 'full scale economic (and) political warfare' in Summer. The data sets have something of a reverse form of 'culture war', or 'cultural revolution'. These sets have a very organized, and (initially) 'national' movement against the 'media corporations'. The 'movement' against these 'corporations' will be centered around 'child exploitation' at all levels. These sets are indicated to 'go global' in a stunningly fast period. The 'blow back' of USAPOPWar against the 'corporations' is indicated to be very 'involving' of the 'population' at levels not seen since the 1960s. These sets are also bound up within the 'devastating inflation', and 'economic degradation'.

The good news about the pending 'culture wars battles' over 'social roles' and 'child exploitation' is that it will be 'invigorating' to both the 'social body' of USAPOP, as well as the 'self perception' of the 'American population'. These sets have many references to a 'return to pride'. Other sets have the 'cultural renaissance' as being coincident with the 'total degradation' of the 'economic lies'. These sets are showing that the 'culture war battles' are going to continue all through 2017. These sets have the 'war' taking the form of 'popular actions' against major, international 'media corporations'.

A 'return to Americana' feeling is forecasting that USAPOP is going to go through a 'spasm' of 'focus' on

'behavior at home'. These sets are bringing up much work for 'lawyers' as the 'stew' of 'corruption' starts to 'rot' in the 'tax rolls' of 'corporations'. These sets are supporting sets for the 're-education movement', and the 'truth movement' within the ALTA reports since early in 2004. These sets have the 'purge' affecting the 'judicial system' as 'judges retire in groups in fear'. The 'fears' are related to 'crooked deals' made by 'judges' and 'police'. Other sets go to the 'fears' of a 'financial backlash' as the motivating factor for the 'officialdom'. This is due to other sets indicating a 'new mood' within USAPop that is 'scary' to 'entrenched power players'.

The 'renaissance' language shows up as being shifted in its context into what we call 'hyper technologies' or 'hyper tech' here at hph. These sets are also in supporting positions for 'revolution' that goes directly in support to the 'discovery in antarctica' that continues to grow in the new data mining. The 'discovery' cross links have the USAPop building a 'conduit' to Antarctica in a 'logistics' meaning of the word. These sets are describing a 'transformation' of the 'corporations' and their 'collective mindset' within USA 'officialdom'. Many of these sets are indicating an 'emotional abandonment' of the 'interests (of the) banking system', and the 'race toward new hyper technologies' that are forecast as starting to be 'more than rumor' at the 'upper echelon of corporations globally'. This 'upper level context change (paradigm shift within ruling elites)' is forecast as having some 'visible clues' as the 'military industrial complex' including the 'entertainment complex' all start 'withdrawal (from) global conflicts' to 'focus resources' on 'the discovery (in) Antarctica'.

Banana republic? Yet more sets for 'bad smells', but these are now receiving support from 'banana smell'. While within the Terra entity set, the richer sets of details are these in the USAPop entity where the terminating sets are focusing on the 'strangeness', and the 'public reactions' that will be 'causing political problems' locally. These sets are indicating that 'public hysteria' will be the 'announced cause' at one point, but this will be a 'miss labeling' of a much more complex 'manifestation'. These sets are indicating that 'bad smells' is something of a misnomer. In these sets, we find that the 'smells' are described as 'banana-like', 'pleasant', though they can be 'over powering', and 'sleep making'. There are many other sets for 'accounts' of the 'smells' having 'beneficial effects' upon humans, and animals. There are some sets indicating that 'old dogs' will be 'renewed' after what can only be described as 'smell ecstasy' in the region affected. There are many GlobalPop sub sets indicating that 'infirm people' will begin to 'make trips' to try to 'catch the smells'. These and other sets are describing what will be a very strange phenomenon that will include very much a 'festival flavor' as well as 'spiritual gathering' elements as it matures over time. The 'smell effects' language sets have very high levels of both intensity and duration values.

Yet more sets arrive in supporting positions to the idea of 'political fracturing' continuing as the 'media battles' also continue. The new 'battlefield' for the 'media' is indicated to 'shift daily' as the 'skirmishes' seek to 'locate weak spots'. These sets have 'bitcoin' coming up as a subject within the 'media wars' over late February, and throughout all of March and into April. The data sets are showing that 'panic' that is developing as the 'legacy media' begins to experience both 'defections' of 'former stars', as well as 'deaths'. It is the latter that is showing as propelling the former. As the 'mysterious deaths' of 'legacy media stars' is showing as almost instantly coming up as a major 'conspiracy' hot spot leading to speculations that 'someone' is 'cleaning up the loose ends'. These sets further bring up details for 'panic' and 'freak-out' as 'former legacy media stars' begin 'defecting' and 'quitting' the 'dying media empires'.

Other 'dying empire' sets are accruing supporting sets for the 'pedophilia investigations' that are now global. The data sets are gaining new values for 'crumbling security' on the 'crimes' and the 'criminal cover ups'. These new sets are going to the idea that 'software systems' are going to 'spew out' all sorts of 'damaging evidence' that is described as 'reshaping society'.

New growth is steady in the 'unraveling' of the 'criminal empires' that had been described as getting to the level of a 'sport' as many people 'piled onto the investigations' into 'hidden wealth', and 'abused privilege'. These sets are now gaining support from sets headed by 'bounty', and suggesting that a 'local (or state) bounty' on 'hidden assets of corporations' will be 'let out' over 2017 by a 'government' in 'desperate need' of 'revenue'. However misguided the 'release of the bounty', once out on the internet, the data shows it 'will not be stopped' in spite of the 'issuing authorities' having major 'freak-outs' on media 'repeatedly'. The idea coming out from the new sets is that the 'bounty concept' was that 'citizen investigators' could 'make money' helping the 'state (or local) government' in an effort to 'track down corporations owing taxes'. As these sets have built up in the data, a picture has been formed of a 'tax system break down' and the pressures it places on 'institutions of government' getting 'out of control'.

The data has the 'knowledge shocks' being felt in USAPop at levels far higher than any other populations. These 'knowledge shocks' are forecast to be 'exploding in the brains' of 'academia' and other 'mainstream paradigm' people over much of these two years. The data suggests that the level of shocks to be sustained to the 'consensus paradigm' within USAPop over these next two years is such that 'school teachers' and 'professors' will be 'resigning', and 'just drifting off' as they discover that 'everything they ever taught was a lie'. These sets have a 'hierarchy of the afflicted' with both 'history teachers', and 'physicists' at the top. Many of these sets are showing that the 'breakdowns' within the 'schooling system' within USAPop over these next 10/ten years will be able to be traced to events forecast to be mere months ahead. These 'secrets revealed' sets continue to pile new data into the growth pattern such that the total effect is a giant lake too long dammed up emptying in thousands of ways once the first crack appears in the edifice. These sets have many new forms of 'truth and reconciliation' as well as 're-education efforts' being described as has long been forecast within the ALTA reports. Our data sets have been focusing on the 'death of the dollar' days since early in 2001. These very long term sets have now have much of their new growth coming from immediacy data.

The spread of the data sets along the continuum of modelspace moving through 2017 has a general shape of things emerge that has 'confusion' dominate for the first two months. As 'confusion' fades in March, it will be replaced by 'chaos' dominating April and May to be replaced in June with 'response' as the various interest groups push back against the 'chaos' threatening their position. The 'responses' by these groups dominate through into September when 'snap-back' rises into primary dominating position for USAPop and continues through to early 2018.

The 'snap-back' period is when we have the most language for 'hyperinflation' within USAPop accruing to modelspace. The 'hyperinflation' language starts as modelspace is moved through April and May, but its main impact does not show until later in 2017 and beyond. During the 'snap-back' period of Fall and Winter, the data accrual patterns have very large levels of 'debate' on-going at all strata of USAPop. These sets have some hints that a 'deliberate release of secrets' by the 'administration' is at the center of

the 'debate'. It would appear....so there are some small amounts of emotional sums that support this conclusion....that as a 'strategy' the 'administration' is going to 'unleash turmoil' with 'knowledge' to be 'declassified' that is described as being 'so shocking', and 'so absorbing' as to take 'months' to both 'read through/acquire', and to 'integrate' in to 'personal world view'. These sets probably should be in the SpaceGoatFarts area as there are many 'unknown' sets that make this area read like a CIA redacted briefing, however the focus is clearly on USAPop, the period of 'chaos' in the year that causes the 'Strategy 3' approach to be chosen. As these sets appear in modelspace in early March, though with no 'visibility' values indicating publicly available language, it would appear to be safe in projecting that some point between late March, and September, there will be a 'deliberate', and 'planned strategic release' of woo-woo knowledge as a 'third strategy' to 'destroy (the) mind-set' of the 'rampaging opposition' within USAPop. The data sets have this 'strategic release' taking place over several months in 'tranches'. There are sets indicating that 'globalists' and 'power elites' will get the 'wind up' about the 'release' ahead of its planned 'outing to the public'. The 'power elites' are then shown as 'going on the offensive' with the 'pre-release defense of themselves and their pedophilia/crimes'. This itself is indicated to 'backfire' as the 'secrets revealed' will not be about their 'personal crimes', but rather go to the 'collective crime' of 'history alteration', and 'deep woo-woo crimes'. Further, the data sets are indicating that as the 'Strategy 3' information spreads throughout USAPop, the 'fascination' factor is going to be such that 'energy' will be 'sucked out of the rebellion' by the triple effects of 'hyperinflation' ruining the consumer point of view, 'Strategy 3' ruining the rebellion point of view, 'backlash' against the pedophilia cabal gaining strength and diverting 'young rage' toward more salacious crimes.

## **Markets**

The data sets have the USA Federal Reserve Bank becoming under 'stress' at so many levels, 'political', 'informational (truth)', 'economic', 'fiscal', and 'financial' over 2017. These real 'stress' factors are indicated to 'bud out' in March through May, then to 'bloom' across June and July, as the 'stresses' get a 'push back' from the 'bad decisions' already in place. The data has the 'global markets' in 'turmoil' from mid year onward. These include the 'Euro', and 'Yuan', as both major currencies are described as 'sick', and 'ailing'.

The 'bud' period of March is described as being 'prolific' and 'wild'. There are also sets for 'wildly unpredictable', and 'scattered crises', and yet more sets that include 'growing crisis', and 'escalating crisis', among others. Much of the new emotional language goes to the reaction of people forecast to arise from the 'headlines', and 'constant stream of wild new numbers'. In the main, the data sets are providing more focus on numbers than words within the headlines coming. So the implication is that the 'shocks' being forecast are due more to these headline numbers than the words in any story. Another way to view it is that the 'numbers will be the story'.

These 'stress' factors have been forecasting 'hyperinflation' within ALTA reports over the last year. The 'hyperinflation' sets have a focus of mid 2017 through into 2018. These sets are clearly forecasting that the Federal Reserve will be forcing 'currency growth' in a very 'desperate attempt' to 'hold off collapse'. These sets are indicating that 'solvency', and 'bankruptcy' are going to be THE terms over the second half of 2017. This language is showing up for both 'governments' and 'corporations'. As modelspace is moved through September and beyond, this language is being pushed down to most of the 'population'.

The longer term sets that are in supporting positions for 'hyperinflation' have a very curious situation

where the 'markets' are clearly non-functional with 'food prices soaring', and 'housing prices collapsing'. These set have this condition of 'rising costs', and 'falling credit capacities' as existing simultaneously over the last half of 2017 and most of 2018. These new data sets include 'collisions' between the 'credit freeze', and the 'hyperinflation of consumable prices'. Within modelspace we have 'housing prices' in most of the 'developed world' including China, as 'deflating' over these next few years. The 'deflation' is described as hitting 'over 80 %' in some markets in their local currency. The downward pressures on 'prices' for such things as housing, and vehicles, are reflected in 'soaring prices' in 'necessary goods' that is also forecast as rising '80 %' in the same period.

Over this period, the data sets have the 'chaos' of the USAPop 'infecting' the global 'shares markets' as well as 'bonds', and 'derivatives' as many 'global traders' become 'convinced' that USAPop is heading into 'violent cultural revolution', and 'inter generation warfare'. This 'conviction of destruction' is indicated to be the prompting factor for 'capital flight' that accelerates through April and May to a noticeable level that requires comments by 'officialdom'.

In a brief bit of prescience and forecasting, let us note that not the US dollar, nor any other debt based currencies will work off-planet. Bitcoin does and according to the data sets, will be used in a public way (demonstration) very soon. While the 'demonstration' is indicated to be for 'effect', and a 'marketing idea', the result is showing as a real 'showing of power' of bitcoin.

Markets entity is still filling with 'confusion' as the dominant supporting set for the entity as a whole. The 'confusion' word is also the primary rising supporting set, meaning that the 'confusion' now being expressed will be joined by yet more examples of 'confusion' as we go forward these next two months into March.

The 'confusion' sets are supporting the rise in 'bitcoin prices' in US dollars as they have 'markets confusion', in the midst of 'scary new highs' with 'shaky fundamentals' causing 'jitters'. Some of the 'jitters' language is in supporting position to bitcoin sets. Again these sets have near term peaks of emotional values for intensity in mid March. The emotional levels within the building tension values, think tightening stomach muscles from tension, remain high through into nearly the end of May. There are two large dips from building tension to release of tension within this period from mid March through to June. These sets are extensively supported by 'currencies crisis', and cross links from ChinaPop. These sets also have support from 'bitcoin frenzy' as a GlobalPop phenomenon. Much of the 'bitcoin frenzy' language also has cross links over to the 'cash withdrawal' language.

Not only 'bonds' and 'derivatives' markets, but also the 'real estate markets' across most of the 'developed world' {ed note: those areas under control of US dollars} will be 'confused', and 'reeling', and 'wondering (about what is happening here)'. As forecast in September 2016 ALTA reports, the 'confusion' language is going to be dominating 'global markets' through all of this year, and well into 2018. These data sets in the supporting chain for 'confusion' bring up several sub sets for 'shifts of wealth' in contexts for 'wealth transfer from hand to hand', as well as 'wealth shifts' from 'asset to asset' as well as 'wealth shift', from 'nation to nation', as well as 'wealth shift' from 'currency to currency'. All of these contexts around our 'wealth shifts' descriptor set have supporting chains dominated by immediacy language types. This implies that the 'frenzy' word, as well as the 'frequency' word within the supporting chains and the data type are suggesting that a real 'trading frenzy' is going to develop. These sets begin building over late February, and form a plateau of new values around March 12<sup>th</sup>, that

thereafter acts as a base from which greater growth appears in specific sets as modelspace is moved through the rest of March through into May.

The 'frenzy' descriptor set has matching growth in the set for 'frequency' albeit without the emotional intensity levels. The 'frequency' sets are filled with support from 'turn over', 'trying to find', 'hunting', and many other variants that all include 'frustration', and 'failure', and 'worth less (than anticipated)', and 'empty', and other language indicating that the 'frenzy' values, as forecast within the emotional intensity sums tracking over these months in modelspace, will grow into 'desperation' as 'trading vehicles get jammed up', or 'break down'. This is the language that one may expect from a crack up boom period. This is also the language one may expect from a period of hyper inflation.

Within the USAPop sub sets are new linguistic structures for a 'backlash' against perceived and actual 'child abusers', and 'child exploiters'. These sets have many of the 'top tier corporations' that are going to be 'erased' in 'value', 'earnings', 'presence', 'prestige' by the 'secrets revealed' about the global pedophile network and its control of much of the 'media space'.

Within 'real estate' the data sets have the 'commercial sector' across much of the 'developed world' (western dollar based empire) as the 'office space' markets start to 'visibly crash' in both 'prices', and 'rentals'. This is showing as leading to attempts to 'live in' the 'cheapening office space', and to a lesser extent, 'retail space'. The data sets have the 'depression' deepening across much of the 'consumer economy' in the 'dollar world'. These sets have 'office space' going into 'free fall' in terms of 'rental prices' just as the 'sales' start up as 'commercial building owners' attempt to 'bail out' of their positions.

As modelspace is progressed through the last of the 'tax troubles' of April and into May, we gain sets for the 'shares markets' globally, and within that larger group, sub sets for 'equities' in both USAPop and the 'developed world' showing that a 'prices drop' of over 'twenty eight percent' will be developing just before Summer (northern hemisphere). Combined with the 'new patterns for weather' and 'sudden (abnormal) freezes', as well as 'sinking ships', and 'wandering ice', the 'shares markets' sets are indicated to 'drive' the 'news cycle' globally as 'prices (crash) down' across 'whole markets'.

The data sets have a dichotomy developing globally as the 'old paradigm' is forecast to 'crash', 'crumble', 'break up' over 2017, and the emergence of the 'new global paradigm' over that same period and into the 2020s. The 'economic failures' of the 'crashing stocks', and 'hyper inflation' of the 'credit created cycle' are indicated to accelerate into Summer (northern hemisphere)

Other sets are offering some interesting forecasts for 'sudden', and 'rapid', 'increasing rate' in 'break-through technology' in the field of 'robotics', specifically, two areas, 'energy packs', and 'brain packs'. In the case of the latter, the data has the emergence of a new technology related to 'quantum uncertainty' that is forecast to provide 'robot brain cloning' at a level where the 'whole brain' is more or less 'cooked' in a 'pressurized vat' such that costs for 'brain space' in 'traveling machines (of all kinds)' will 'crash', thus 'exploding the technology' throughout GlobalPop.

The 'exploding technology' within GlobalPop has big impacts showing for the 'oil industry' as 'energy sector' starts 'unraveling' as the 'disrupting technologies' begin to 'spread out from Central Asia'. The data sets have a strange sort of conjunction within the sets for 'jobs' within GlobalPop in that we find the 'oil sector' as 'dwindling rapidly' just as 'new electrics (technologies)' and other sectors begin to 'grow unexpectedly'. These 'other sectors' are where we get a slide over into our 'woo-woo' categories of 'officially denied, actually unknown, and WTF?'. In these 'other sectors', we find 'organic herbal

medicines/formulas' as being a very large, and 'persistent' over time growing 'jobs source'. Other sectors include the 'ocean clean-up business'. This sector apparently has JUST been 'created' according to the data sets, although there are not yet 'visible' points of its activities. Some hints exist in the data showing that there will be a 'profit motive' in 'ocean clean-up' that will be both 'surprising', and 'compelling'.

The 'herbal organic medicines' business is peripherally connected by cross links over to the 'woo-woo' previously discussed as The Discovery from Antarctica. These sets are suggesting that some information from The Discovery, indicated to appear over 2017, will cause humanity to 'adopt' the 'herbal based health methods' in a mass 'wave' that will go through the global population. The idea from the data sets is that this 'new information' will 'overturn' many, if not most, of the 'principles' and 'laws' of both 'physics' and 'chemistry'. As a 'natural reaction', the data has 'herbal medicines' becoming the 'go to response' for 'any health concerns'. Whether there is specific 'human physiology' information for 'herbal medicines' cannot yet be determined. While there are hints of that within the data sets, it may also be that the 'natural response' is in reaction to the 'underpinnings' of 'physics and chemistry' becoming 'undone'.

As modelspace is moved through the end of January into about the 12<sup>th</sup> of February, the immediacy data sets grow in support of a 'fight' around the 'global view (of) Israel'. These data sets have this being a 'full on battle' between the 'propaganda presstitutes (former msm media)' and the 'new media'. Within these sets there are numerous sub sets in support of the idea of a 'coordinated (Israeli led) effort' within 'global markets'. The details suggest that within this 'background action', primarily indicated to be 'algorithmic trading battles', there are to be 'emergent price moves' for 'bitcoin' that will be slightly 'divergent' from, but in the same upward direction as 'gold and silver'. These sets have the 'msm' versus new media battle being a very pivotal temporal marker for both bitcoin, as well as the 'evolution' of the 'new media' within its role as 'markets analysis'.

As modelspace is moved forward into February, we continue to have growing new supporting sets within 'currencies crisis' as well as 'bitcoin, gold, silver' as a 'positive response'. These sets are now showing growth arriving in spurts on the 3<sup>rd</sup>, the 5<sup>th</sup>, and again on the 10<sup>th</sup> of the month.

The new aspect and attributes sets that accrue for February 3<sup>rd</sup> are for 'silver', and specifically include sets for 'silver traders', and 'silver (exchanges)', as well as 'silver suppression', and 'silver supporting', and 'silver demand'. All of these sets in total are slightly more than half of the gain for the day in this tranche of new emotional values. These sets bring in details for 'sweaty palms', 'fainting (grown men)', and 'heart attacks', 'aid cars', 'emergency rooms', and 'vomiting', and other sets that will NOT be due to the 'influenza outbreak'.

The growth spurt on the 5<sup>th</sup> of February is dominated by 'bitcoin', but also has significant support for 'silver'. These new sets bring in temporal markers for 'positive announcement (about bitcoin from some officialdom)'. Along with the 'positive announcement', there are some sets for an 'example of justice' {ed note: rare these past few years} that will also be propelling 'bitcoin enthusiasm (passion)' higher. The 'justice delivered' sets are supported by 'stunning surprise', and 'weak knees release tension into strong legs'. This last is a poor transliteration of 'happy surprising shivers' and other sets from non english sources, and thus may be poorly rendered, but is nonetheless expressive of the emotional tone of the data.

These data sets for the early days in February have the 'markets' as in the 'shares' and 'bonds' being in a state of 'flux' as there is going to be evidence of 'breakdowns' within the various control structures for the 'paper debt' markets. These sets have cross links over to our bitcoin patterns discussed in the Riding the Dragon Bitcoin/Silver/Gold report attached to this document. These sets have our new 'bitcoin prices' beginning in early February to 'scale up' as the 'currencies crisis' begins quite seriously.

The data sets have 'markets' going into 'turmoil' that arises from the 'currencies crisis' and the 'bonds crisis' both reaching global growth simultaneously in mid February that continues through into May. These sets have 'gold', 'silver', and 'bitcoin' gaining relative value due to the 'increased demand'. These sets have several sources for 'chaotic conditions' around the 'demand' such that 'coin dealers' and 'bullion sales (retail)' will be 'closing doors' behind 'bouncers' and 'guards' as the 'demand hits the streets'. These sets have 'surges' of 'purchasers' going through 'hours long lines' and purchasing 'to their limits of currency'.

These data sets are within a larger linguistic structure that is indicating that 'destruction of the past' will be the dominating meme for global markets over the last of Winter and through Spring to Summer (northern hemisphere). This 'destruction of the past' has sub sets that explicitly are stating that 'no niche will be unscathed'. Further sets are filled with new aspect sets for 'systemic rot' at the 'lower levels'. These sets are also supported by aspects for 'algorithmic problems'. There are many 'unknown' sets in supporting positions for 'unknown', however there are also sets for 'ripple effect', and 'server reboots'. This latter may be referring to the 'markets servers' as there are a number of aspects that include 'political' and 'economic chaos' as 'shutdowns' bring up the language for 'locked out', and 'caught out'. These sets are including some very long term sets for the 'caught out' language. Now new supporting sets are suggesting that 'silver players (speculators)' will be 'throwing fits' as they are 'unable to get out' of their positions. This will apparently occur as the 'silver market comes unglued'.

Within the 'silver players' get 'caught out' sets, the new growth brings along the idea that the 'framework' of the 'manipulation' is 'pulled apart' by the 'twisting of counter forces'. These 'counter forces' sets include 'demand', as well as 'crashing computers', and 'run-away algorithmic trends'. There are growth areas within these sets for 'adroit movers' who are apparently going to 'reap and reap and reap' as their 'foresight' will prove so 'astonishing' that they will be making the 'headlines' and 'cover stories' of the legacy media, as well as becoming 'mega internet fabulous'.

Other 'heroes of the day' are going to include 'summit speakers' who will be seen to have been 'fighting for decades' to get the 'public attention'...which of course will be arriving too late and the midst of the 'rocketing markets' as the 'currencies chaos' sets fire to 'old illusions about money'.

There are sets indicating, also explicitly within the data, that 'the situation is saved', however, this language is also supported by 'lower' and 'lowest level', and 'at huge cost', and 'large investments'. The data would have this 'saving of the system' being undertaken in June, after the 'severe damage' is 'so visible' that it 'elicits public condemnation (of) Fed members on the street'. Think 'green tomatoes', and other 'inedible unripe fruits' being hurled.

The 'Antarctica Play' is showing up within the data sets as beginning with seriousness as 'currencies in crisis' propel yet more 'political freak out' by the '(formerly) ruling elites' in some key areas within the 'US dollar empire'. These sets include descriptions of 'new corporations' that will be forming to 'compete for antarctica contracts', or 'provide supporting services/materials'. These sets have multinational corporations being seen 'scrambling' to 'hire talent', and 'acquire materials' in such a manner that their 'actions' are described as 'putting a buzz onto the subject' of Antarctica over the last half of 2017 in a way not seen since the 'gold rush' period of the 1800's in USA in which 'global excitement' reached a 'fevered pitch'.

Sets within our Markets entity are suggesting that a revaluation of the 'fiat currencies' will be taking place from mid Summer through to Spring of 2018. This revaluation is described as 'unsettling' to many within 'western power elites', and **may, just ...may** be referring to a 'revaluation by edict of gold holders'. There are indications of interest rates also being a causative factor in the revaluation of the currencies, but the primary one showing up is 'gold holdings'. This is specifically referring to the 'holding' of the gold as being a separate attribute to the aspect. This calls into question whether the 'holding' at a national level of 'gold' will be the issue in trade settlements, language that is also within the sets.

There are new sets that are now separating into split growth patterns. These sets are taking the 'resources industries' sets and dividing them into the 'biologic resources', and the 'extracted resources' such as 'mining' and 'water' and 'oil'. This latter is shaping up with a large number of sets that are cross linked over to the SpaceGoatFarts entity where the terminating sets are within 'new electrics'. These sets are describing a long term change for the 'extraction industrial complex' over the next 20+ /twenty plus years of 'transformation' into 'base materials creation industrial complex'. These sets are suggesting that 'mining' will go through a period of 'radical reappraisal' of what they 'thought they knew' about 'mineral formations' in the planets such that 'frequency sciences' are forecast to emerge over the next few years to the point where 'mining' for minerals including precious metals, and especially silver, will be literally, and actually 'conducted' by way of 'tuned frequency electrical energy' such that the 'metal melts in place', conveniently pouring itself out of the vein in the rock. Note that initially the 'frequency science' is described as being operated 'underground' and 'requiring seams of dense ore' to be 'cost effective'. Over the very long term sets out into the early 2030s, the maturation of the science would suggest that 'creation' of 'pure chemicals (minerals, compounds)' will become possible through 'frequency manipulation'.

The 'frequency manipulation' sets are described as 'containing' the 'labor shifting meme' as it requires that 'skilled artists' work the 'fields' locally. Thus the data sets are arguing that such as 'off-shoring' will not be possible for some time with these technologies due to the requirements of the new understanding of the 'consciousness elements' involved within the 'field control mechanisms'. These are growing sets likely to be further discussed within future ALTA reports, probably SpaceGoatFarts entity areas.

Several sets, with cross links over to ChinaPop, specifically sub sets with Mongolia geographic references, appear in USAPop that have 'disclosure' aspects. These sets are reinforcing the idea of 'low capital investment, virtually no operating costs, electrical generation machines' are going to be 'part of disclosure' that will be 'released' on the actual 'fringe of ChinaPop'. These sets continue to grow new

supporting values for 'corporations' sending 'flowers' and 'gifts' to the 'cold desert' in hopes of making deals.

The data sets have many ties between the 'silver markets', and 'hyper technologies' as developing over 2017 and then 'exploding' in early 2018 as the 'hyper technologies' begin to be 'distributed' across many areas of ChinaPop as new classes of devices are introduced. These sets also include references to previously discussed 'DIYBiology genome sequencers', and 'genetic analysis devices'. These devices are indicated to require silver. There are going to be millions of these created according to the data growth patterns.

## **SpaceGoatFarts**

The data sets are gaining new supporting values in both immediacy and shorter term types for 'Antarctica (secrets) revealed' forecast to appear in 'clumps' by the end of March 2017. There are apparently 'reasons' for the March 2017 'revelations date' on the part of 'officialdom'. While noted in the data as existing, we don't have any of the 'reasons' themselves showing. The accretion patterns (how the data comes into modelspace) are further reinforcing the idea of a 'tightly held (closely held)' knowledge that 'officialdom' is determined to 'keep hidden' until the 'actual release date'. Noting that this is a motivating factor for 'officialdom', the data still shows that it won't succeed, as greater amounts of 'real information' are 'leaked' from 'sources (not able) to be found' by 'officialdom'.

Acceleration of the 'woo-woo personalities' into what we call 'mega internet fabulous' status is indicated to grow very rapidly over 2017 with much of the growth in two separated periods, the first in late February through into May, and the next from September through to the end of the year.

Data sets have the 'Antarctica The Discovery' showing up as 'altering christmas' in 2017 for most of those in GlobalPop who involve themselves in that holiday. The 'alteration of christmas (holiday)' is not alone. The data has 'Antarctica revelations' being so 'affecting (of religious humanity)' that jewish and islamic (to a lesser extent) holidays are also 'changed (profoundly)'. The language suggests that we will all be reading speculations about 'is this the end (of religions, and their holidays) as we knew it?'.

The data is describing the 'process' or 'path' to this 'redefinition (of the) global narrative' about the 'origins of humanity' being some months in its unfolding. The data sets pick up in late December of 2016 and continue to gain new supporting sets for 'antarctica revelations' as modelspace is progressed through to late September 2017. From that point onward, there are diverging memes with a large segment of GlobalPop that will be 'accepting' of the information coming out of Antarctica, and a smaller sub set that will begin 'revolting' against the 'perceived assault' on their 'religion'. These latter sets have a very strange grouping of 'like minded peoples' which are to include 'radical christian adherents' with 'radical islamists'. The 'radical judism' faction is also represented, but to a far lesser extent while being described as 'isolationist', and actually 'taking to caves' in hills in the desert. This last forecast comes about as there are sets describing 'military' and 'police expeditions' to 'remove (the) cave dwellers' as they are apparently 'causing problems' and 'preying on tourists'. Other sets in supporting positions have 'protests (against)' the 'release (of the) information' as part of a 'plot' to 'create' a 'one world religion'. These sets are only briefly visible as the developing 'blooming' of 'new expressions (of human) spirituality' are anything but concentrated into a single 'one world religion'. The data has the

'release' of the information about The Antarctica Discovery as being a 'flame' in a 'firecracker factory' in terms of the diverse, and expanding number of 'interpretations' and 'points of view' about the 'revealed (new) human history'. These sets contain many supporting sets of complex lexical structures for the 'explosion' of 'new interpretations', and 'new personalities (doing the interpretations)' as being a primary 'problem' for TPTB and 'officialdom' as they 'fruitlessly' try to 'regain control (of the narrative)'.

The data also has sub sets going to the idea of a 'boom (for) middle east tourism' due to the 'antarctica The Discovery' information. The reasons are plentiful and vary from 'renewed look (into) ancient history', as well as 'viewing (pious) frauds (as relics themselves)'.

The data sets are accruing under new linguistic structures that are labeled as 'awakening', and 'burst'. These sets are interpreted to be describing the 'current awakening wave' that is going through humanity, and at this time is expressing in the 'western world' as 'political awakening', and in the 'eastern world' as 'engineering awakening', as being actually 'boosted' in its 'burst into visibility' by the 'withdrawal' of the 'dampening forces'. As the data is suggesting, the idea is that 'humanity' has been 'dampened' by a 'capping (of mental/emotional connections) field' that has been 'withdrawn'. Note that the data shows that the 'capping/dampening field' is being defeated by a larger 'awakening wave' to the point that it was 'overwhelmed' by the 'awakening wave', and its (dampening) effects were 'shutdown'. The 'shutdown' is being described as 'rather sudden', and was a 'surprise (to its) operators'. The data here has the 'dampening field' being shut down only very recently. These sets are forecasting that the 'burst' or 'boost' of the 'unrestrained awareness wave' is going to manifest such that 'hundreds of millions of people become suddenly 'surprised' at what is happening to their individual awareness' of themselves and their world. These sets indicate we are 'in the wave' now, and will be so for nearly a whole generation, or about 21 years.

Yet more 'Antarctica' sets that are now showing up for 'green' and 'greening' of the continent. The idea coming across from the data is that yet more 'green patches' will be appearing in photos from Antarctica, as both 'plants', and 'minerals' are exposed by the 'shifting ice'. Note that we also have more sets for 'ice shelf growing' into the 'ocean' off of Antarctica. The data has it that, over this developing new 'ice age', the 'ice mass' currently on Antarctica will 'creep' off the land until totally 'floating' some distant number of years from our days.

Other sets that are linguistically linked to 'Antarctica', include a number of new sets for a 'sound revolution' that is described as being an 'outgrowth' or 'side effect' of The Discovery in 'Antarctica'. The data has the 'sound revolution' expressing itself in many forms. As an instance, there are going to be very large levels of new interest in 'monk noises (including chanting)' as these 'monk noises' are to be discovered in our 'exploration' of The Discovery. Apparently the data is describing a 'cache' of 'recordings' of 'ancient monk noises (music/chanting/instruments)' that will be 'complex harmonics' of a 'staggering number (tens of millions)', and, as described by the data, when taken as a whole will form a 'fractal representation' of the 'human body' which is but the aggregate of 'tens of millions (of) healing sounds'. The idea coming from the data is that a 'library' of 'specifically focused healing sounds' will be located with The Discovery. These 'tens of millions' of records are described as first being thought of as a 'medical record (of people, such as their illnesses and such)'. The 'missed understanding/impression' is shows within the data as being 'corrected (by) an outsider' as part of the temporal markers that appear about the 'release of the monk noise'. The really excellent part of these sets are that these noises are/will

be showing as being 'instantly superior' to any form of 'remedial care/medicine/drugs' for the 'care of the human body'. This new form of 'vibration therapy' is part of the many sets that are indicated as 'affecting (and ) altering' humanity's relationship with its 'own bodies'. This last set has been in the data and ALTA reports in the past as was expressing in the longer term values.

As modelspace is progressed through March and into Spring, northern hemisphere, the data is forecasting a number of 'frightening weather pattern changes' that will seem to be placing the 'seasons' in the 'wrong part of the year'. These sets are showing impacts on large masses of humanity in many diverse areas of the planet. In India we have extra seasonal winds, and snow melting all the while yet more snow it falling at a time when usually the concerns are for Spring planting. In Australia and New Zealand, after wet, and harsh Summer with extra seasonal snow, the population will be digging out from deep Fall snow and ice storms. All of this while very bizarre, and frightening clouds, and atmospheric phenomena appear across whole continents. These and many other specific elements of the developing weather story are showing up as being the descriptor sets for a 'pending space alien invasion' meme indicated to develop in May or June such that by the end of August, something of a 'crisis hysteria' or 'mental instability' is forecast to manifest. The 'crisis hysteria' descriptor set includes aspects such as 'weeping', 'emotional paralysis', 'raving paranoia', and other language of 'acute mental instability'. These sets are describing instances that will apparently be growing over 2017 to the point that 'authorities' will be wondering 'what the hell is going on now?' in exasperation over what will be called an 'outbreak' of 'unwarranted fears'.

These sets are necessarily cross linked over to the Antarctica sets, as well as the Break-awayPop, but are appear to be indicating a separate cause for these 'space alien attack and soften us up with bad weather' memes. These sets specifically are appearing as shorter term and immediacy sets with out a longer term set existing. This usually indicates a rapidly appearing set with large impacts, large spread throughout the population, but not necessarily long duration impacts. There are forecasts that some very well known vloggers will be participating in the memes as a result of being 'caught up' in an 'unusual weather episode' to be described as 'straight out of sci-fi movies'.

A large part of the supporting sets for the 'space aliens take over our weather and beat up humans with it' memes derives from the 'new manifestations' from our sun. The data is forecasting new forms of 'human (and animal) reactions' to the 'sun' and its 'manifesting changes'. These changes in the sun will include 'burning rays' across most of the day, with very 'sharp increases' in 'skin reactions' to the 'sun', all this while the total energy levels emitted by the sun will be less. These 'burning rays' are showing as a problem for the 'airline industry' globally across 2017 from March onward as the reports of 'skin burns' from the sun while in airplanes is going to increase. The data shows the effect to increase over time such that windows become permanently blocked 'for safety' on commercial airplanes. These sets also have major problems for helicopters from the sun and the 'concentration' of the 'burning rays' by 'arcs' within their structure. There is still growth in supporting sets for 'humans' of 'new colors', and 'old colors' such as 'green and blue'. These reactions within humanity are also showing complementary effects within 'animals', 'plants', and the 'oceans'.

## ***Conclusion: Narrative War!***

No sets with our processing over these last few years have had the emotional intensity or duration values that we have now from the 'narrative wars' sets. These new data elements are highlighting the importance of the 'control of the global narrative' as THE critical part of the 'agenda of the power elites'. These sets have 'narrative control' being the 'goal' and not merely a tool to be used.

Modelspace is supporting the idea of 'narrative wars' breaking out into the open in 2017 in a very visible and public way over the Summer in USAPop. The developing memes describe a period of chaos we have simultaneously the 'destruction of the old', and the 'creation of the new'. These sets have emotional sums within USAPop sets that are at extreme levels not before encountered within our work.

There are sets going to the 'spooky', and 'weird' within the 'narrative wars' that are forecasting the emergence of some very very strange stuff from which we will all define woo-woo for the next decade. There are hints of things coming out that will take 100 years to integrate and understand. There are forecasts of mind shocks so deep and troubling that we will have to 'formalize' in order to cope with our emotional reactions.

It promises to be a deeply disturbing year.

The central meme forecast for this year is our 'narrative war'. As the year progresses, the data sets are showing that the only way to regain control of our personal narrative is to burn out the offending implanted control stories placed there over a lifetime's exposure to mind control.

As we all know from experience, once the fire is lit, you have to stoke it!

## About Predictive Linguistics and our methods

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM (immediacy data) primarily, and then within ST (shorter term) data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as

millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

### **Definitions:**

**Aspects/Attributes are:** collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

**Entities are:** the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

**Lexicon is:** at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: **emotional qualifiers** which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

**Spyders are:** Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

**List of entities** explored in this report:

### **GlobalPop**

The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

### **USAPop** (and any other nation state/territorial reference)

All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

### **Markets**

The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

### **Terra**

The Terra entity is the master set for all structures that relate to the planet, and the physical environment of planet earth. This master set frequently and increasingly has

extensive cross links to the SpaceGoatFarts entity.

### **SpaceGoatFarts**

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

### **Data Types**

**IM = Immediacy** data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

**ST = Shorter Term** data with forecasting effectiveness from the 4<sup>th</sup> week out through and inclusive the end of the 3<sup>rd</sup> month (from date of interpretation). Error range = 4 months.

**LT = Longer Term** data with forecasting effectiveness from the end of the 3<sup>rd</sup> month out through and inclusive of the end of the 19<sup>th</sup> month. Error range = 19 months.

### **Terms employed:**

**Cross links** – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

**Linguistic structure** – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

**Meta Data Layer** – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

**Modelspace** – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

**MOM** – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

**Set** – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

**Temporal Echo** – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

**TM = Temporal Marker**, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.
