

ALTA 0508 - Part Five

Asymmetric Language Trend Analysis Intelligence Report

'Changes in language precede changes in behavior.'

By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

9.28.2007

Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in *italicized bold green*, and *red* when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set.

This report in the series created from 58.924 million reads of the 0508 series.

Meta Arts - Intersections, Peak Religion, SSTC, Large Quake #3

As John Adams said, the American Revolution took place "in the minds of the people in the 15 years before the first shot was fired." In case your awareness is not Americo centric, John Adams was a famous conspirator, revolutionary thinker, strategic planner, and anti-monarchist. Unlike many of the others involved with the first American Revolution, John Adams thinking included [revolution] as a method of considering the reality which surrounds us all. As John implies, it was 'thought', not guns which constituted 'revolution'. Further, his thinking went to the point that 'once the common consensus (of the populace on American soil) as subjects of a crowned monarchy was questioned, it faded, and the revolution was begun'.

Taking John's words as a guide, we can now note that the [second american revolution] is really merely a sub set of the [global revolution] meme. Given our data sets, and the aspect/attribute accretion patterns, it seems likely that the [americans, usofa sub set] of the GlobalPopulace, will reach the [sparking] stage of the revolution just a few months before the rest of the planet. This *appears* as an intersection of the data sets within the progress of modelspace, and is directly related to the [american populace] getting on-line (internetted) before the rest of the planet. The internet being the global current 'pubic house' where the 'ideas' which are [revolution] can be discussed, debated, and then demonstrated.

What is being shown within the data sets at the highest levels of meme descriptors is that the internet [is producing/has produced] a new and currently emerging phenomena in which the [degradation/break-down/destruction] of the [consensus reality] is occurring. We can expect that since the internet 'initiated/birth' as a popular cultural phenomena within the [usofa populace] in 1993 (more/less) when we crossed significant 'percentage of population' levels for on-line activity, that, according to John Adams, the first shots of the [war/battle /conflict] part of the [second american revolution] will be manifesting in 2008. Yes, that also seems to jibe with other projections for [critical mass] being reached in other, currently emerging social order dynamics.

As the biospheric change continues to unfold, and by its freshening, also prompt awakening within humans, and as the pool of information that is the internet continues to grow, and given the inherent, in-bred networking nature of humans, [revolution] is already assured. In fact, in many demonstrable ways, it is/has started without waiting for shots to be fired. New forms of social orders are emerging globally, *all* of which [threaten] the [established power structures/order]. This is occurring *just* as the Monarchists/TPTB/Illuminati are providing yet-another-big-push toward their goal of the 'new world order with us on top of you'.

The very idea of a 'breakdown in consensus reality' is so frightening to the 'establishment/TPTB', that in a previous instance, a primary cause of the 'breakdown' was outlawed faster than any drug in history; these of course being the 'psychoactive/psychedelic' drugs of the late 1960's. In a move of stunning speed, the governments of the world collaborated in a global banning of the whole of the class of drugs

so rapidly as to defy conception. Governments do not usually work that fast, nor in such a concerted effort. In this instance, work that realistically would have taken the global governments nearly 20/twenty years to complete was managed in less than 1/one year of actual work. An example of the true motivating power of fear. At the highest levels of the global social order, the 'ruling elite' recognized that even though they were making millions off the drug trade, the whole class of 'psychoactive' substances had to go in order to stem the risks to their control structure by the 'dissolving of barriers effect' which the psychedelic drugs produced. As the barriers fell, so did the consensus reality upon which TPTB depend.

So now there is a huge problem developing, and its nature is such that an easy fix such as legislation and intense advert campaigns will not address. The core of the issue, to the TPTB, is that the internet itself is consensus reality disrupting. It spreads 'alternate views' and the supporting evidence offered. In the absence of an active 'program' to support consensus views, and in the presence of virtually no trust in the mainstream corporate media, the internet is *THE* disruptive element. But it can't be shut down. To do so now would be to blast corporatism/consumerism back to the stone age. The social fabric, as well as the corporate globalism would not survive the shut down. There are active steps being taken toward a government controlled, consensus reality supporting, Internet 2/Two, but problems exist in abundance both with the technology and the social willingness to overcome those problems. At this point, even the analysts for TPTB do not think that Internet 2/Two will provide a solution to their issues. And they know it would be so disruptive to introduce as to virtually guarantee the emergence of their basic bespoke fear of 'consensus reality' disruption.

The disruption is already manifesting. In our work we are finding examples of this in the emergence of new 'reality' descriptor sets which are robust, self forming, and emerging with seriousness in these last 2/two years. Examples include the proliferation, and networking patterns of such products as the video "what the bleep do we know". By tracking the spread of such amalgam cosmology products, the outer edges of the degradation of the consensus reality can be perceived. While these movements (self organizing collectives, SOC's) are growing, and such growth is directly at the expense of the consensus reality view, the movements as represented by the products, are what are termed "found" movements. Such "found" movements are defined as solutions which are sought *after* the problems emerge, rather than a 'solution' sold into a 'manipulated/manufactured problem'. The distinction is neither subtle nor insignificant. As more and more humans experience the internal breakdown of their participation within the broadcast consensus reality, they then go in search, in a more or less active, but certainly receptive way, and discover these new reality SOC's available. This movement toward a new consensus state is still in the stage of 'formations' in that, if an individual seeker does not discover an adequate solution for their emotional/reality turmoil, they may well invent it themselves, thus spreading the meme even further, and preparing yet another example (of a new type) for the next individual to discover. The whole of the process is the manifestation of the Archaic Revival presciently discovered and named by Terrance McKenna, a now dead explorer of the Other realms. It is this [revival] of some [spirit] from [before] which our data is now indicating will be the replacement for [organized/criminal religion].

There are pattern searching software applications, such as is used by government/TPTB to locate dissidents, often labeled as 'terrorists'. The driving algorithms of such software, when applied to the tracking of the spread of ideas such as the [archaic revival], are revealing both the extent of the breakdown of the consensus/dominator reality, and the nascent formation of the 'something else'. The phenomena is now global, has reached as far as the internet will allow {ed note: some levels of gov't/elite control are slowing its spread in some regions such as China}, and has, in our opinion, now exceeded the point of self-sustainability inherent in the 'diffusion of innovation' model of human technology behavior.

As of this point, our work shows, via internal pattern seeking algorithms, that the diffusion of the degradation of the consensus reality is over 5/five percent of the global, internet population. The actual numbers are likely very much higher than what is captured by our algorithm as the search parameters we established require "overt" or "explicit" references, rather than oblique or inferred positions within the language being tracked. So, on the same theory that government operates its various 'wars' such as the 'drug war', the idea is that we are only reading perhaps as few as '1/one in 10/ten' or '1/one in 5/five' of such illustrative examples. Without regard to numbers of persons involved, the language ratios show that the consensus reality of the TPTB/broadcast_media/governments/elite is now held 'fastly/hard' by a rapidly shrinking *minority* of persons globally. This is irrespective of which local form of the TPTB the persons are living 'under'. In the [populace, usofa] sub set, our samples would indicate the size of the 'true believers/consensus_held' persons to be less than 14/fourteen percent, and globally that number falls to less than 5/five percent. That the rest of the populace, the majority is still struggling to find a replacement is the only *prop* still available for TPTB in promulgating their control mechanism, the 'consensus reality view'.

Returning to the revolutionary thinking of John Adams, we note that his fundamental point in the quote above is that 'revolutionary wars are fought and won in the mind, not on the battle fields'. Noting that this was at least recognized by the TPTB in the War of Aggression Against Vietnam with the now infamous 'hearts and minds' policy statements, it is interesting that the current crop of incompetent TPTB 'leaders' is clearly operating under the illusion that as long as 'they control the media, they control the minds', and thus limit the potential for [revolution]. The humor in the situation rises from the irony of the 'controlled media'. It is exactly the [visible] control of the broadcast media by the corporate/political/elite which has driven the breakdown of the consensus. An example many different layers of the [visibility] of the breakdown is the [lawsuit] {ed note: we forecast these a few ALTA reports back} by Dan Rather against his former corporatist masters for their oppression of the 'news business'. The outcome of the lawsuit is not of significance; what is very meaningful is that it was filed. Other examples of the emerging breakdown of the consensus reality include the wave of 'receptivity' being found in China for the new book "Currency Wars". As an expression of the chinese populace seeking a view of the world, and their place in it *other* than that proffered by the global elite. This populace is not alone in seeking out such new views of reality; this is a global phenomena.

It needs mentioning that the previously reported [death of religion] meme which has been building steadily for years in modelspace is but an element of the [consensus reality breakdown]. It was not ascertained at first that this was the case, but now the emerging [revolution]

meme is taking its positions within the [religion] sub sets *just* as the religious-organizations globally are *all* experiencing some form of internally propelled extremism. The appearance of [peak religion] coincident with [peak oil] and [peak debt] is likely related at more levels than are immediately apparent. We note that examples of social structure/consensus_breakdowns of the past such as the global previous Depression of the 1930's was coincident with the rise of many new 'religion/cults/spiritual_movements', some of which persist to this day, and are now under attack by the very forces which begat them last century.

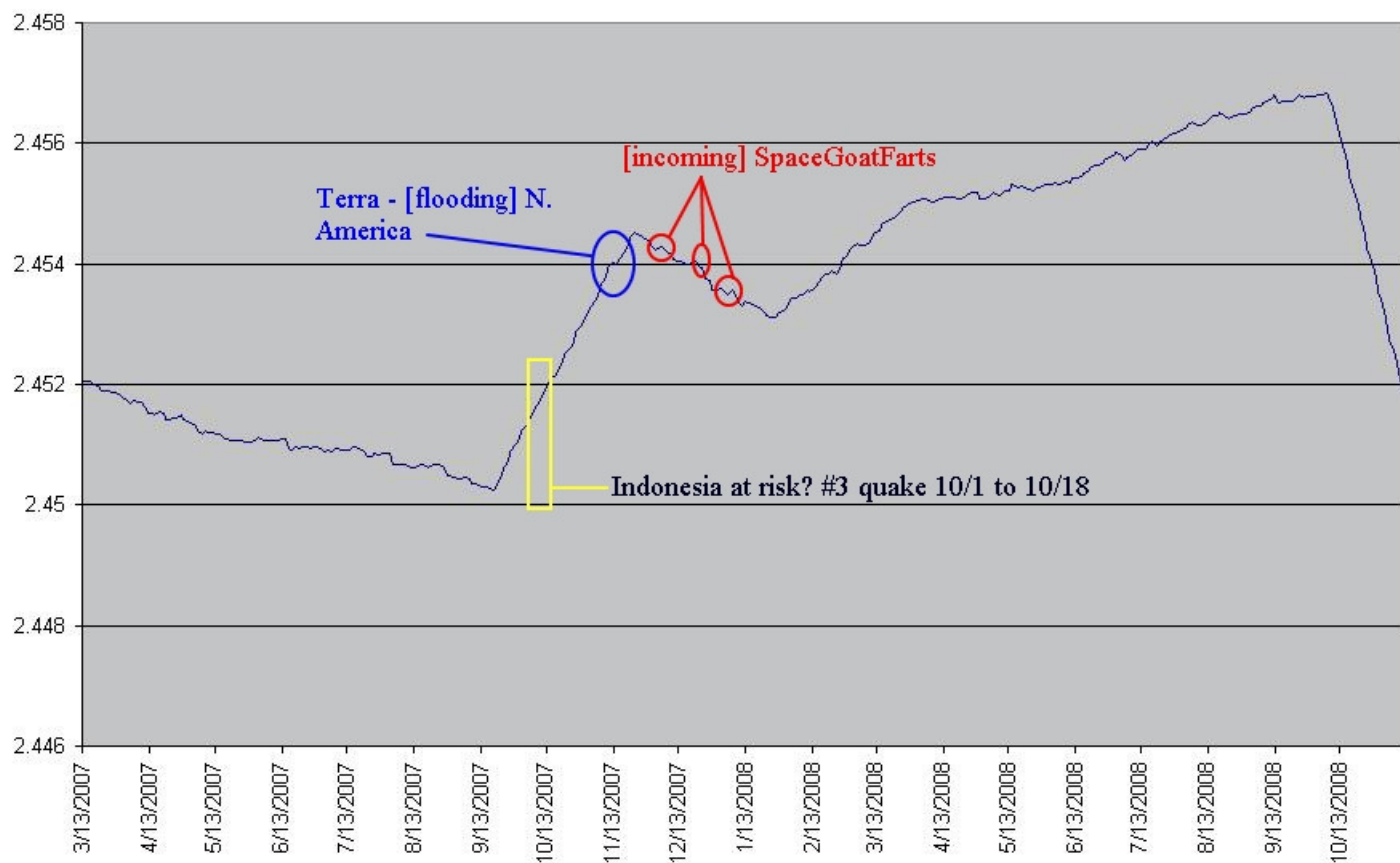

In the vein of pattern seeking, there are some apparent examples emerging of 'cycles' which are completing at this time. Some of these cycles are economic, others are social, but all are sharing the same progression toward a [completion] and a [change of state/being]. In some of these cycles, there are hints of what we are calling SSTCs or 'self seeding time cycles'. A curious concept in which the past is altered by the existence of a future-not-yet-visible, and which later, that same future fulfills the cycle which was created by it coming into existence. As an example of an SSTC, a 'self seeding time cycle', we can offer a small, but illustrative example. The 'popular culture' of 'christ cult populace' here in the USofA, usually labeled as 'evangelicals' have, within their common, central contexts, a bespoke [fear] of the arrival of a character within their mythos which is known as the 'beast'. This 'beast' is actually a person, and is associated most with the numeric representation of 666 {ed note: other associations exist, this is merely the most commonly held}. The 'self seeding time cycle' arise as a result of this [beast fearing, evangelical, cult religious] populace actually *being* responsible for the selection of G.W. Bush as president of the USofA. Then, as may be expected, their choice turns out to be the very 'beast' that they feared, GWB666. So the manifestation of the 'anti-christ beast person' is due *only* and exclusively to their actions, bringing on the very fear they held highest. Would GWB be president if the evangelicals did *not* have the 'anti christ beast person' in their mythos? Hmmm...universe is strange, and produces the self seeding time cycles for its own reasons...so perhaps the *real* question ought to be...."would the evangelicals have the anti christ beast person in their mythos if GWB did not exist?" If myths exist as archetypal representations of dimly sensed pending reality, then the answer is clear, though the 'why' of it all is still murky as the minds which conceived of dark matter.

Many of the SSTCs which are 'apparently' [visible] at this time are economic and have extents going back hundreds of years in some cases. These are *all*, so far, participating in the [currency collapse] meme from which the [dollar NDE] emerged.

As we have processed this last batch of immediacy and shorter term value sets data, changes within modelspace in some sets we had previously identified with the [3/three large earthquakes] are pointing to a missed understanding on our part. We likely made a very large mistake in predicting that the 3rd/third of the quakes would occur within the USofA. The data is now pointing to our [west coast] descriptor set as being applied to the [west coast] of the [indonesian archipelago]. As of this point, the detail level aspect/attribute sets correlate better than 85/eighty-five percent to Indonesia, as compared to just slightly over 47/forty-seven percent to the USofA. The miss is not as far as would be presumed on the face of it...yes, we think we were off by several thousand miles, but this was due to our american centric view of the descriptors which were/are being presented. The description of the site(s) of the #3 earthquake can be describing *either* a very specific area just slightly north and inland of San Francisco, *or* could be the more general coastline running north and west along the Indonesian archipelago. The immediacy set is pointing to a first half of October as being the timing for the #3 quake, and as the modelspace is progressed forward, the data increasingly separates by language to a preponderance of [asia based linguistics]. This, along with other data indicators as well as the recent string of Southern hemisphere sited GRB's and the recent geospatial instability of the region all are arguing against the [west coast] being related to the N. American continent. This is in spite of our initial reading toward this understanding, and derives from the now precipitously rising linguistic separations observed in recent data samples. Further, the timing issues are pointing to a point *before* the 15th of October, however we note that we are frequently off by a few days on timing clues especially as they rise within the Terra entity. Nonetheless, the surprise factor of a large earthquake in Indonesia, with great [damage] on the [west coast] occurring prior to, or near mid October will be now lost. This earthquake descriptor set is still maintaining a [whew, we dodged the big one] pause before the largest of the 3/three quakes forecast happens.

The 85 versus 45 % correlation to the linguistics is *absent* the manifestation of any north of the equator [volcano] activity which would produce [air traffic disruption]. We have had specific [volcano north of equator disrupting air traffic] as a precursor to the [isolation] sub set which *is* distinctly associated with North America, and specifically within that sub set with the [west coast]. The [isolation] sub set is shown as a result of a [large earthquake] which damages the [west to east] [communications/travel corridors]. The described earthquake is shown as following the [disruption of the air traffic] by the [volcanic dust]. The descriptor set is for the [disruption] of the [air traffic] to be roughly over the same areas which will be affected by the subsequent earthquake. So, if the manifesting circumstances here on earth produce an air traffic disrupting volcanic eruption, then the ratio shifts to a 93 % versus 85 % correlation and would subsequently favor a [west coast of usaofa] as site for the #3 earthquake of some size.

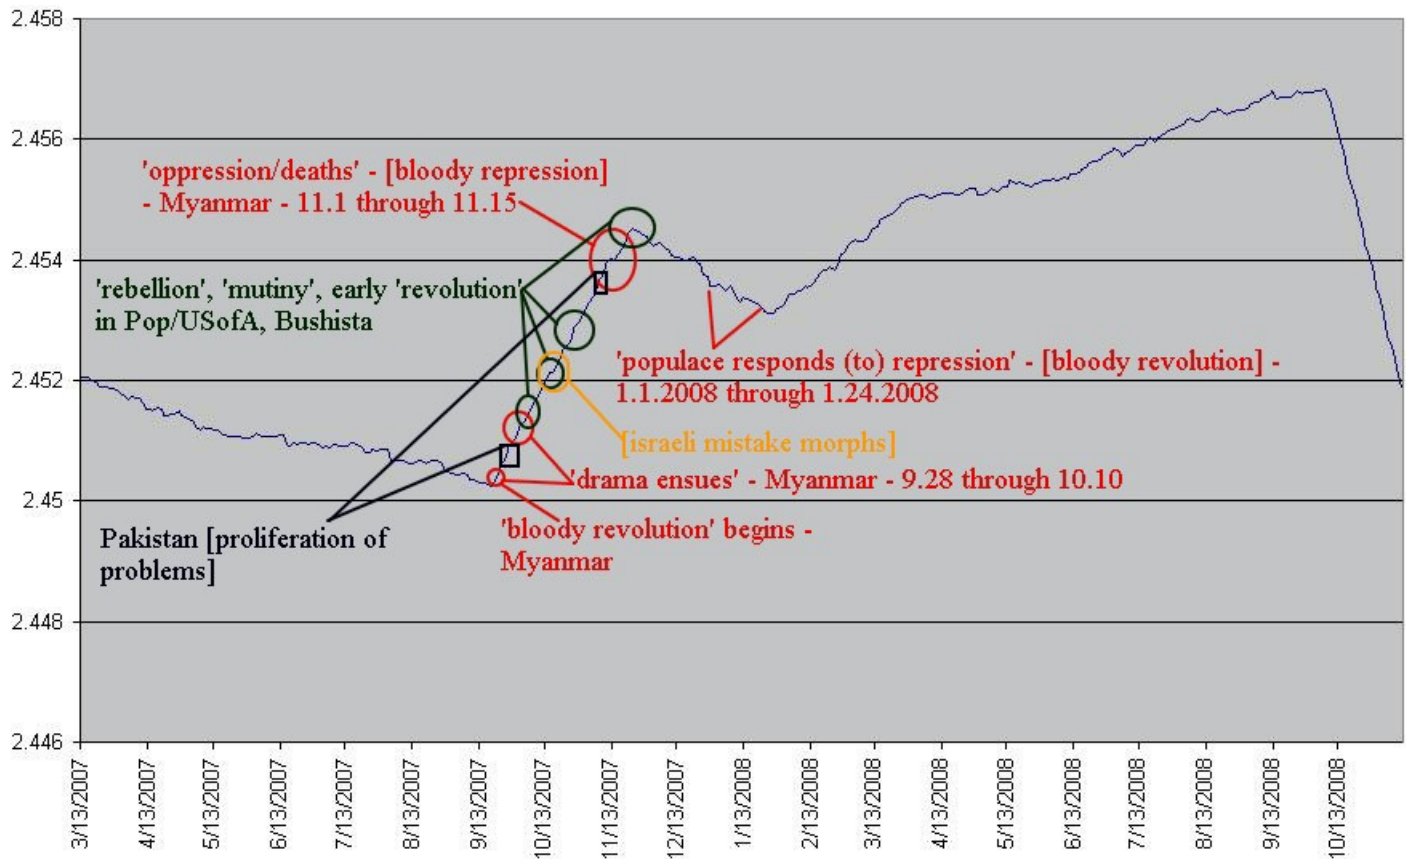

Long Term Emotional Trends

GlobalPop - Rebellion, Bloody Bowls

The recent outbreak of the calls for freedom/change within the country of Myanmar is an example of [rebellion] as it will, according to modelspace, inexorably grow into [revolution]. Currently the first of several thresholds of behavior has been crossed as the peaceful protests led by the buddhist monks has been met with violence. The [bloody revolution] meme has now emerged in Myanmar. This process, in Myanmar, has many months to [grow] as we find in the forecast from modelspace. The modelspace immediacy, and shorter term value sets just processed are suggesting that the [growth phase/spread_of_motivation] will continue until the [first/initial] denouement, which *ever so* coincidentally shows up in very late December, and then manifests between January 1 and the 24th.

Long Term Emotional Trends

The GlobalPop entity is forecasting that [peace bowls] will move into the common lexicon of the aware planet dwellers within the context of [begging bowls, seeking reform/rebellion, fill with blood from violent repression]. The emerging context of [peace bowls] will grow into a global meme over the course of this coming release period beginning in late November through to the end of January. In a similar manner to the [green death] which was a global meme manifesting over several months, the [peace bowls] will emerge as the [edge] of the manifestation of [global revolution].

The GlobalPop continues to accrue data sets under the [revolution] meme, as does the Populace/USofA. In the case of the former, the data sets are growing in diverse, and differing linguistic patterns reflective of a very large number of inflection points. In the case of the Populace/USofA the data sets are much more specific, and narrowly focused around [revenge/retribution] and [return] rather than [freedom] and [immunity from/lack of repression] which are the central themes running through the GlobalPop meme. Further, there appears to be a significant [terra concerns/anxiety] component to the totality of themes within GlobalPop. A large component of this [terra concern] or [biospheric degradation] is seemingly related to the [global warming as caused by humans] context. This area suggests directly that the TPTB, in their [global warming is caused by humans PR campaign] has created a divergent side effect which will continue to bedevil them over the next 2/two years. This side effect is best described as the [I did it for the earth] defense for acts of 'eco terrorism' or [property destruction] with an [ecologic preservation] theme. Again, these data sets are sub sets of, or are cross linked to the [revolution] meme.

We also note that the [global revolution] meme is accelerating in Pakistan, and as forecast a number of ALTA reports ago, the emergence of [revolution] within that country will [alter power ratios], or alternatively [affect the balance of power]. The Pakistan situation will become increasingly [tense] as the building period continues, with sporadic, though small release bursts of emotion. However the data sets are pointing to a post [solstice, December] [burst] of both [activity/revolution], and [change, social order].

Populace/USofA - Employment Crash 2nd Phase

Once again, the dominant theme emerging from the processing of the immediacy value set for the Populace/USofA is [dollar death]. The primary driving aspect/attribute sets are *all* being moved by greater than 64/sixty-four percent of their values in contexts associated with [economics].

As the last of the Summer release period ended, there was the manifestation of the [employment crash] that we had been forecasting for some number of ALTA reports. This [employment crash] had 2/two phases to it with the first being the [invisible] phase. This has begun

and is accelerating. In this phase, those who are fired or lost work mostly fell into 1/one of 2/two categories; either they were a form of 'self employed contractor', or they were 'illegal' and were working 'off the books'. In neither case could such newly unemployed people claim social benefits, and therefore were not counted. This lack of [visibility] led to the [shock] component when the [employment crash] process started hitting Wall Street, and all the 'fixed income' sections of the paper debt markets.

The [visibility] component of the [employment crash] is about to gain significant exposure over these next 2/two months. While the immediacy values are characterizing it as a [bloom] or [flush], these are perhaps a bit too positive in connotation. Rather the tertiary aspect within the context's descriptor chain should be the label for this interpretation as it graphically goes to the idea of an [eruption] of [employment crash]. The immediacy values are showing that this [eruption] of [unemployment] will emerge over these next 2/two months as though a [sudden illness] is sweeping through the [body economic]. The [spread/contagion] of the [employment crash] is showing as moving out into very visible categories of activity. Soon the [visible] [faces (on) global mediastream] will be referring to the [employment crash] as it affects everyone from [restaurants] to [government]. The data sets are pointing to the [confluence] of 2/two very large social patterns which each have the same root cause at their core. First we have the cascading [crash] of [employment/work] as the [flow of money dampens/ceases] and [terminations/firing/lay-offs] begin showing everywhere. Then the second element of the [dying dollar] mixes in with [escalating commodities/foods/energy] prices such that even more [dampening effect] emerges as a force within the [economy] and thus more [employment crash] is spawned as further [restrictions on movement/flow] of the now [dying dollar] occur.

Markets - A Big Noise, Flesh Feelings, Hard Cash

The Markets entity has had significant rises in the [gold/silver] as well as [commodities] in general over the processing of these last immediacy value sets. The rising aspects/attribute sets within the [gold/silver] contexts are dominated by [movement]. This in its turn is supported by sets for [great sound (propelling)], as well as [moving (toward) full bloom]. These are both sets within a larger group of very positive value data sets. The whole of the supporting data sets for [gold/silver] have also been impacted by a near doubling of the emotional values associated with the [commodities]. The emotional summations within the [gold/silver] sets are [doubly] positive in that not only do they sum to a positive emotional value within the lexicon, but they also contain 'double negatives' in the form of [removal (from a) dangerous place] sorts of references. So the 'negative' associations within the data set are now acquiring values which reverse their contextual meaning as well as deflate their negative values on the whole of the data set. Clear as mud? Basically, lots of new, positive focused words associated specifically with [gold, silver]. Also a very positive sign is that the [gold/silver] data set is now dominated by supporting sets under [coins, bars, wealth] aspects rather than [jewelry] or [industrial] associated contexts. So the total read is that a larger portion of the populace, with special focus on the [populace/usofa] will be thinking of [gold/silver] as [wealth/money] rather than in other contexts.

The total summation of the [gold/silver/commodities] sub sets goes back to the lexicon where it links to [startlement/shock/awe]. That the data set also contains [doubling] at a meta aspect level is pointing to a [visible] [shock] at the [noise of movement] within the [commodities]. This is, of course, cross linked back over to the [dollar dying] meme, and shows that our next release period will be filled with [visible language] relating to the currently emerging [shock/startlement] about the [big noise] surrounding [gold/silver/commodities]. During these next 2/two months the data is pointing toward a [doubling of pressures] on [commodities] as well as instances of [visible restrictions on movement] both of [humans] and [goods]. Some of these [visible restrictions on movement] will emerge as the [revolution] meme manifests around the planet, and in turn the [chaos in social arrangements/order] at various localities will combine to impact [global trade]. Again though it is worth noting that *all* [global trade] will be impacted by the [dollar dying] meme as new arrangements for a [global reserve currency] are [attempted].

The [planned/ordained] ascension of the [euro currency] to the position of [global reserve currency] is *not* assured. Following the cross links from the [euro] and the [dollar dying] memes within the Markets entity over to the ThePowersThatBe entity, we find that the termination points are in [consternation/alarm]. This sub set is replete with data sets pointing to [alarm/insecurity/anxiety/worry] and these are in turn heavily linked to the [euro as global reserve currency] meme. Given the level of bespoke [alarm] within the TPTB entity it is difficult to forecast that the [euro] will survive even marginally as the [dollar dying] meme manifests as [crises] and [chaos] within the [global banking/currency] system. The data within the combined cross linked TPTB and Markets entities sets suggests that a [popular desire] will [circumvent/avoid] the [plans] of TPTB in that the [populace] is seen as [not accepting] yet-another [paper debt/currency]. Rather the [emotional attachment] for [precious metals, commodities], once re-linked as [monetary/wealth] in the [populace] mind will *not* be easily removed. The TPTB entity is pointing to [uncontrolled] [markets] as their primary bespoke fear arising from the coming [dollar death throes chaos], but the data is pointing to the bespoke [emotions (in the) hand] as being much more powerful in its persistent effect on Markets. This [emotions (in the/from the) hand] can also be interpreted as [emotions, felt from having held], or more generally, [expressions of emotions arising from flesh contact]. In this case the Markets entity is showing that the [gold/silver] in the [hand] will trigger [emotions] which will [threaten] the [defeat] of the plans of TPTB relative to [supplanting the usofa dollar].

It must also be noted that there are both directly held sets within the [gold/silver] sub sets as well as extensive cross links from this area over to the [employment crash] sub set of the Populace/USofA entity. The combined effect is pointing to a [combined effect] which is to say that the [employment crash] details are supportive of the [dollar dying] and impacting the [mindset/point_of_view] of the [recently unemployed] such that the [emotions/emotional attachments] generated by the combination of the [employment crash wave] rocking the social fabric, as well as the [dollar dying] will create a [doubled/redoubled/reinforced] emotional attachment within the [populace, usofa] to [commodities], or as this area would have it [hard cash]. We note also that the Populace/USofA entity cross links from this area terminate at the highest levels in [dangerous situation] and that this is heavily weighted to [chaos follows currency crash] emotive

summations. Therefore the forecast showing in modelspace is toward a time in which [trivial things] are [swept aside] as [chaos emerges] which will be highlighted by [groups *not* wanting to live together/diaspora by mutual oppression/segregation] will be emerging over this next 6/six months here in the USofA. The rise of [disruptions/deviations] within the [social order] will be behind, but in [tandem/linked_to] the rise in [emotive potential] for [gold/silver/commodities]. Much of the language is pointing toward a reaching a [plateau] of [emotive attachment] toward [hard cash] this Winter *just* as the [revolution] meme takes off with a [bang] here in the USofA.

ThePowersThatBe (TPTB) - Space Adventure, Grim Satisfaction

The ThePowersThatBe entity is indicating that a point of [completion] within the [plans/schemes] of TPTB will manifest this Fall. This particular area of [completion] is supported by [space] as in [things out beyond terra] kind of space. Further this area within the entity is building emotional values faster than any other area with the exception of the [dollar dying] sub set. The [completion] is indicated as [bringing grim satisfaction], though not without a [nagging/irritating small doubt/problem/entanglement]. The [space] sub set within the [completion to satisfaction (almost)] context is supported by details pointing to [pulsation] as a key component of the point of it all. This [pulsation] *may* be related to [signals] as it contains aspects/attributes for [waxing/waning] and [growing] and [fading] as well as [irregular bursts out/flares out]. Further the data is pointing to [risks/dangers/dangerous_situation] as being at the core of the [satisfaction] sub set within the [completion] of the whatever? that TPTB have going on in [space].

The [completion to grim satisfaction] sub set also contains details pointing to an [impromptu partnership (with the) old man/wizened fellow]. The [space] aspect/attribute set is supported by [secret searching/fishing area/location] and [enormous thoughts/implications]. Further support for the [space] sub set goes to the image of [fated king] and [10/ten days (of) nerve destroying tension] as well as [visible recognition]. This last is *not* a good thing within the TPTB, and is shown as [producing/inducing breaks (in the) steps]. More support for the [space] sub set shows that a [curtain (of) darkness] is [so thick] as to [permit polestars] to [shine at noon], and that the [ten days] of [tension] will include [intercine rivalry/war] much of it apparently focused on this [space adventure].

At the core of the [rivalry] within TPTB there is an element which is labeled as a [sports club] within the data sets, but it is perhaps something a whole lot more meaningful as the data shows that this [sports club] is the location where the TPTB [let out (the) bickering] and [perform ascension]. As described by the data set, this [sports club] is a place filled with [distrust] and [hate].

The whole of the [space adventure] for the TPTB is generally considered to be [good], at least internally. The [visibility] of the [space adventure] shows as [bad] within TPTB and some [murderous/ruthless/antagonistic effort] will be extended to [clamp down] on the [visibility]. This effort is shown as being short-lived as [events/manifesting circumstances] will rapidly, which is to say, by mid Winter, have shifted their focus about the whole outcome of the [space adventure], and previous concerns will have [faded].

The dominant aspect/attribute set within TPTB in Winter is [neglected matters] which is supported by rising emotional values for [action]. The detail sets support the interpretation that [loooooong neglected matters] within TPTB will fill their [winter] activities schedule as [global progress] is indicated to [go awry/left_turn/out_of_the_blue/happenstance]. Though this last contains [happenstance], the TPTB do not accept [unrelated coincidence] within their cosmology, and so the [go awry] aspect is selected from the context as the more meaningful label for the emotional sets being described.

Conclusion: Part Five - Energies Expand

As the [revolution] meme emerges globally, there are certain effects which will be predictable. These will include the disruption of communications, at first by governments, and then by chaos factors. Other effects will be felt in trade patterns globally. With a global Just-In-Time shipping and manufacturing system, the expressions of [revolution] locally will affect shipments regionally which in their turn will impact global goods availability and prices.

Our data is indicating that the [encounters with scarcity] meta data layer will be globally emergent with the next release period in very late Fall. Currently the modelspace has us entering that release period near November 26th. Perhaps as late as the 28th. We will be able to firm up projections with the last of the processing for Part Six due next week. As we enter the [release language] period, many of the rising aspects in toto within modelspace are under the influence of the [encounters with scarcity] meta data layer *or* its analog of [restrictions on movements]. This last will include goods and services as well as humans.

Into this stew of [unfulfilled expectations] the data is pointing to the Terra entity which has aspects suggesting that [elevating/expanding /emerging/filling/overwhelming energies] will be a Fall [phenomena]. Within the [expanding energies] meme are several supporting data sets going to [space based/from space] energies. We also find that [energies] includes [human energies] in the form of [emotions emergent/expressed], but in this case the [emerging expressed emotions] are described with [building tension] language, sooooo.... the likelihood is that we won't much like these [filling energies] which will [expand into our space]. Nor will we much appreciate their addition to our stew of emotive releases in Winter.

However, to just get to Winter, we will have to endure [turmoil, upset, chaos, rebellion, tumultuous movements (social), and unpredictable releases (in) revolution]. Then as if that is not enough, there will be [disruption], [shortage] and [destruction] as a result of large scale [shifts] within [terra]. This last will be accompanied by [flooding], and numerous [annoying wind/rain storms] at just the [wrong] times, also all contributing to [restrictions on movement], and promoting [shortage] as a meme.

The [expansion] of the [energies] meme will continue through the building emotional tension period up to late November, then will be expressed within the release language of the following period which runs out to the end of the first week in February, 2008. There are curious markers pointing to that particular week [rapidly/suddenly/surprisingly] being perceived as the [end of winter(s)], but without regard for modelspace 'resetting' the seasons, this end of the first week in February is also the beginning of the next building period which proceeds until the end of the first week in October, 2008. The modelspace is indicating that this particular building emotional tension period will have a [10/ten times] increase in [expanding energies] over the [expansion range] which we will experience over the current Fall building period. The data sets are also pointing toward the 'themes' which emerge over this Fall being [expanded] along with the [energies] behind them in the subsequent building period of February to October of 2008.

As the [dying dollar] and [emerging new orders (in the) world (via) revolution] are major themes now, we can expect a 10/ten times increase these same memes to build up. Then comes a very scary release period.

As with all things scary, a little pre-scare pie helps out. A consistent pie consumption routine is suggested over the course of this Fall as all of the 'nasties' within the emotional tension building period begin to emerge. However please consider this Fall to be a training period for next Spring/Summer/Fall when you will have to increase your pie consumption 10/ten fold *just* to keep up with manifesting circumstances.

So, for all those of us aware observers who have to do the heavy (pie fork) lifting, all together now....a'one, a'two, and fork....

#####

Part Six of the ALTA series 0508 is expected to be posted by October 6....assuming the pies hold out.
