## Weights and Measures - October, 2015 covering 2015 - 2029

## Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

### ***Definitions:***

***Aspects/Attributes are:*** collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

***Entities are:*** the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

***Lexicon is:*** at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: ***emotional qualifiers*** which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

**Spyders are:** Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

**List of entities** explored in this report:

### **GlobalPop**

The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

### **USAPop** (and any other nation state/territorial reference)

All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

### **Markets**

The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

### **Terra**

The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

### **SpaceGoatFarts**

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

### **Data Types**

**IM = Immediacy** data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

**ST = Shorter Term** data with forecasting effectiveness from the 4<sup>th</sup> week out through and inclusive the end of the 3<sup>rd</sup> month (from date of interpretation). Error range = 4 months.

**LT = Longer Term** data with forecasting effectiveness from the end of the 3<sup>rd</sup> month out through and inclusive of the end of the 19<sup>th</sup> month. Error range = 19 months.

### **Terms employed:**

**Cross links** – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

**Linguistic structure** – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

**Modelspace** – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional

level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

**MOM** – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

**Set** – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

**Temporal Echo** – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

**TM = Temporal Marker**, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

# ***Data and Interpretation***

**Processing for October 2015, through to 2032**

## ***Terra***

The Terra entity has shown some of the more major sets shifting, by virtue of new supporting aspect/attribute sets, toward a more 'active' phase of 'expansion effects'.

Some of the new sets include supporting sets that have 'interference' as the top level descriptor. These new sets are clearly showing that 'intense levels (of electrical/other energies)' are being used to 'alter the outcome' of certain 'predicted earth expansion effects'. These new sets also include sets indicating that 'new (visual and audio) phenomena' will be 'afflicting minds/senses' over these next few years.

Once again, extinctions will rise to the collective consciousness amidst spectacular 'group dying' of animals. Some of the supporting sets for the 'extinctions' include 'jumping lands', and 'radiations from space', and 'chemical pollutions (of global proportions).

Yet more data sets for 'flooding' at both 'intense' and 'short' periods are accruing within the data. These sets are broad, deep, and have great variance of geographic references. The many sets for flooding include new words that will have to be created to describe these new forms of floods where all the violence of a flash flood occurs so swiftly as to be almost the equivalent of a 'tornado in water' eating its way through urban landscape. Some of the newer, minor supporting sets are showing that an association between 'geo-engineering (climate engineering/chemtrails)' and these new 'storm monsters' will begin to 'gain traction' among the populace such that in the days following several instances of 'mega floods eat urban environment', there will be linguistic floods on the internet discussing the correlation between storm, and chemtrails/haarp. While such language already exists in abundance, the data sets are indicating that these next few occurrences will propel the idea into a 'crossing of the chasm' into the lower level of the mass mainstream consciousness. This transition has very deep and far reaching consequences with longer term values accruing that have 5 generations span (approximately 120 years).

The data sets accruing now in modelspace are labeling the first quarter of 2016, both northern and southern hemispheres, as when the 'new climate bites'. Note that the 'new climate' language is a bespoke label from the data sets. There are many supporting sets within the 'new climate' that are forecasting 'extreme cold', and it seems reasonable to interpret these sets as pointing toward an 'ice age'. These data sets also include large levels of support for the 'planet is expanding (more rapidly now than in recent years)' meme.

The most recent processing has brought out sets for yet more 'plant species extinctions'. Some of these

are showing as being 'food crops'. Fortunately for humanity, these 'food crops' going 'bad' mostly appear to be GMO's that “fail to thrive”. However, some of the 'unique plants/crops' are going to be threatened. There are a number of sets for 'coffee' and 'chocolate' as being 'exposed (to extinction)'. These sets are extensively cross linked over to the 'solar change (formerly sun disease)' set.

The Ice Age (aka 'climate change') sub sets continue to grow supporting sets for 'modifiers' to the climate being 'man made'. In these sets the data is referencing the 'chemtrails or geo-engineering' via airplanes and atmospheric 'modification'. These sets have details that show an 'exposure of complicity (by US Air Force?)' will be causing 'problems (including murders/suicides)' through a 'swath' of officialdom mostly within Washington DC. These sets are showing that 'public rejection' of 'appeals to support spraying' will be an 'instant reaction' when the 'funding ceases', and the 'programs are made public (in order to gain further financing)'.

In addition to the 'chemtrails' component to the 'ice age story' within the data sets, we have both Terra entity and the SpaceGoatFarts entity with very fast growing sets for 'climate alterations'. These are specifically NOT about 'weather' which is the shorter term manifestations of 'climate'. The new growth includes not only 'strange snow (new patterns and places)', but also 'ice storms' in near tropical regions that will be felt as 'hugely devastating' by the local humans. The ice storms are suggested to cause widespread crop and property damage. These ice storms also lead to severe flooding episodes. In some cases the ice may take months to melt whereas in others it goes the next day. So the data would have a near tropical environment receiving actual tons of water in the form of ice one day that turns to water again overnight and floods result where none have been seen for centuries.

Other forms of strange snow and ice will include new 'persistent' glaciation becoming visible in 2016. These new glaciers will be a cause for excitement and wonder for a brief period before they start to 'attract' further strange weather that builds upon 'sudden, large, new cold spots' on the planet. In one instance it would appear that a 'deviant ice berg (to be discovered in Atlantic ocean) is actually a sea surface glacier in the process of forming due to extremely odd, solar and atmospheric conditions that will persist for months.

More forms of strange flooding are expected in North America as Winter settles in. Not only are we to receive rain induced floods, but persistent ice-slush from ocean storms will also bring a 'frosty flood' to parts of the east coast that is described as 'crushing' some buildings while 'shoving' others off their foundations due to the weight of the 'ocean ice foam'.

Still more growth in the 'tunnel problems' sets. These are now being further filled by new aspect/attribute sets for 'deep tunnel' being 'stretched' in an 'observable fashion'. Other sets here are cross linked over to the 'bridges in trouble' sets that show that not only dams will be 'stretched to breaking', but so will bridges. In one of the detail sets we have repeated references to some form of 'loud (shockingly loud) pops' that will be heard as the 'earth spreads bridge apart'. These may be the sounds of rivets or cables sheering just before the bridge is seen to give way (crumbling into a deep canyon).

Other great adventures seemingly planned by earth for humans include more sinkholes, as well as an

'explosive sink hole' or several. These are where sinkholes allow water to contact really hot stuff deep inside the hole. The resulting steam explosions are described as 'damage causing (to infrastructure)' on several continents. The most interesting sink hole from a woo-woo perspective will be one that occurs in Alaska and shows 'something' within the earth.

More immediate problems are showing as affecting the 'middle of continents' in the northern hemisphere. These include the americas and eurasia (west of the Caucus and past the Steppes). These sets are going to the idea of 'banded freezing' of the continents. The descriptors are showing the middle of the continents as getting sustained 'polar vortex conditions' that bring about both 'hard ground freezes (that disable cross continent rail lines and local communications lines)', and 'large scale tree/forest damage' as the 'tap roots succumb to the cold'.

Further problems for humans are indicated to show up in a number of 'pipeline ruptures' and 'pipeline (equipment) freezes (up) problems'. The former shows due to Terra expansion dynamics that raise and lower pipeline sections while stretching the lands underneath them such that pipes will break. Even very large pipes. Other issues will come from extreme cold in certain parts of the planet over Winter. The cold is described as so deep as to freeze the 'electronics' within 'pumping stations'. The data sets show that these 'frozen gears' and 'clogged pipes' are more of a problem than the broken and leaking pipes.

The Terra entity has extensive cross links to the GlobalPop entity for the 'diaspora' sub sets. These originating sets show that 'climate' in Europe will be so harsh as to start a 'push back' for the 'refugees' once the political stabilizes in their near tropics homelands. These 'counter waves' for refugees are showing as starting small but gaining momentum very rapidly as climate conditions deteriorate on the European mainland. These sets are effective for late Winter (northern hemisphere) 2015/2016. These sets do not include England where the data shows that, for some inexplicable reason, the emotional draw will continue to pull refugees toward the island. This is in spite of brutal winter weather conditions that will have even native english wondering about emigration (due to weather alone). Further cross links to the GlobalPop show that 'weather (climate)' will have large impacts on the dynamics of the 'refugees invade europe' action across all of December through to mid 2016.

## **GlobalPop**

The data sets are showing that the 'diaspora' afflicting Europe will shift, over the course of only very few months, into an 'invasion' that has both 'proportions' and 'direction' that the 'structures of government' will be 'threatened' both by the 'invasion of refugees' and the 'breakdown (of the) control structures' (internal to government).

The data clearly shows that the previously forecast 'power vacuums' amidst a 'break-out' of 'signs of (internal) warfare' in many of the 'central bank empires'. These sets include most of the capitals of Europe as well as USA and Canada. The data points to 'broken political processes' at the heart of further 'global dysfunction' that seems to be pushing toward yet another global conflagration effort by the 'major powers'.

Religion as problem develops as a huge meme across all of northern hemisphere in 2016 and through to 2029. It is most concentrated in Europe initially and in early 2016 the linguistics are forecasting the first in a long series of public debates (reflected in the media) over 'religion as a global problem'. And how to learn to live without it. Within many of these sets are cross linked aspect/attributes sets for the '300 families' who 'control the planet' and their 'sudden appearance' in the 'center of the 'religion as problem' debate in Europe. These sets suggest that these 300 families will see themselves faced with 'disaster in Europe' and publicly react in unison. There will be some language that they only do so to 'protect themselves (abandon the people)' from this 'developing disaster'.

The 'UBITCHES' effect. The data sets are showing that a new form of 'social castigation/ordering' will emerge in which video of 'officialdom miscreant behavior' getting 'instant karmic retribution' will become a global phenomenon. Many of the sets indicate that some governments will try to use the effect to 'mold public behavior' though with limited success. The most notable failure of governmental interference in the process appears to come from the area of Singapore where the social fabric will be extensively 'knitted/woven together' as a result of 'UBITCHES' videos being used to 'out corruption'. The key element of this phenomenon is its 'many hands (with videos) make each safe' or 'instant self-organizing collective' in which crowds suddenly become 'each others best friends and protectors' as each is video recording some 'in the moment act' that would (in times past) been 'lethal' to have observed.

Following the lead of the Tavistock Institute's laws in other countries (most notably english speaking or controlled), the data suggests that sudden, and brutal, from the view point of the population, new laws denying social contact, and social services for persons NOT vaccinated will be proposed in many of the areas of Europe. These new laws are part of a global agenda, and in this case the data sets are indicating that they will be using the mass migration (diaspora) as a reason to force these laws into place. Note that this was originally forecast in 2006 (?if memory serves) by the data, and will, after this 'trial run' in the Euzone, be brought to American cities as well. The reason cited in the USA will also be the unchecked 'immigration' which will be cited as a disease risk thus the need for the law saying you will not be able to even ask for government services unless you have your "vac's pak" with you to prove your vaccinated status. In some of the sets, there are new supporting sets indicating that Germany and France will prove to be real problems for TPTB as they try to shove this agenda forward. So much problem that TPTB are shown as sending Pope on a vaccine sales trip through those countries. Not that it helps their cause at all.

The data sets show that a 'successful resistance effort' to the vaccines by Muslim refugees based on two mutually supporting true rumors (that pork genes are in the 'mix', and that jews own the pharmaceutical industry) will spur a new phenomenon which we will label as 'vax Muslims' in which people claim to be 'converts' in order to not have to take vaccinations. This will lead to the 'muddying' of huge numbers of government records over several years.

Also involving a European center to a global story, the data sets are pointing toward a 'war by the population with CERN over the LHC (large Hadron Collider)'. This 'war' is going to be prompted by electrical failure (along or on the French coast?) that will lead to both French Navy (military), and civilian transportation impacts of a large enough magnitude to lead to a 'populists movement against

LHC' to take to the streets. The data show that this movement grows over time to include other countries including Switzerland and Germany. In addition to power problems in both France and Switzerland (this latter then cascades over to southern Germany), the data is pointing toward a 'developing association between the LHC operation and extremely bad weather'. The data shows that this meme will be dismissed initially, but will keep returning to consideration to the point that some representative of the LHC will end up crying out in desperation about the issue at a public event. Further connections to developing series of earthquakes in China will also be causing public outcry against the LHC. In several sets we have data suggesting that the chinese government will be begin to express 'official concern' about the LHC and the 'price the chinese people are paying' for its operation.

## **USAPop**

New Education Sites (not schools), longer term data for a new form of 'education on how to do stuff for kids who don't know how to read or do other stuff at freakin all'. The data would suggest that in the later part of 2019 (or so) a number of new 'shop schools' will appear in USA with the intent to graduate new numbers of 'skilled builders' both in 'old school (bricks and mortar)' as well as 'new (electrics) tech'

The USAPop has gained sets supporting the idea of 'free-range' or 'gypsy' or 'bandit' will be joined to 'mining' (both gold and silver) and will show up in the language of the msm and alternative press over the second half (our timing projection) of 2016. The specific appellation used will depend on the location, but in all cases the 'free-range' or 'gypsy' miner will be someone going out after metals as a free-lance resource extractor'. The data is describing these 'free-lance extractors' as being involved in a number of incidents involving 'authorities' in several regions in the USA over late 2015 and through the first half of 2016. These incidents will be broadly confrontational, though a few may involve the 'rescue' word also being present. Of course, the individuals involved will be entirely driven by economic desperation. The dubious results showing up in the mainstream media will be a proximate trigger to tens of thousands of new 'free-lance extractors' going out 'prospecting'. There will be many incidents citing 'miner on miner' violence. The USA will not be the only country, nor north America the only continent on which 'free-lance extractors' start up business in 2015. Many cross links point to 'degrading' and 'failing' enforcement of mining regulations and rules by governments over the next 3/three years as their financial support fails as being the 'enabler' for this new area of endeavor. Further sets indicate a thriving '**weights and measures**' industry of buyers and aggregators for the extracted resources will be developing over late 2016 through to mid 2020s.

Much of the data sets in supporting positions to free-lance extractors are also supporting sets for the earlier appearance of the 'silver buyers' on the streets. As the 'dis hoarding' that was anticipated does not appear, many of the street workers from these networks will 'head out into the hills' in search of precious metals. Others will try for 'dangerous recoveries' of known or suspected caches of silver and gold (and other precious items). These are indicated to precipitate a number of instances of the 'rescue' word showing up in media.

Neo-cons get their 'just deserts' as the data suggests that from early 2016 through the rest of the 'bizarre election season' the 'neo-cons/neo-liberals' will be on the receiving end of 'beatings', 'flying shit (thrown

waste/excrement/material)' as many within their 'power structures' react to the 'shock of the sudden death of the dollar (perceived american) empire'. Much of these new linguistic sets are forecasting a ramping up of this language in February 2016. These sets suggest that many of the professional political classes, including both elected and appointed officials will be resigning in what will seem to be a strange kind of a 'disease' of 'public life'. These episodes of both 'beatings' and 'resignations' are showing as peaking in mid Spring, and mid Fall of 2016 (northern hemisphere).

The data sets are pointing toward a period that may be starting as early as this Fall in which there is a building wave of bankruptcies in USA corporations such that a follow-on wave of unemployment begins in the USA. These sets include cross links to 'derivatives failure' in the Markets entity in which 'hundreds of corporations' are 'instantly bankrupt'. These sets are showing a 'failure of inventories (in the supply chain)' will begin occurring within days of a 'lock-up (contention)' between two large banks. This trigger event is showed as an 'unintended consequence' of an 'automation collision'. The effect is a huge impact on the population as the wave of layoffs and firings is very 'rapid and fierce'.

The layoff wave is so large as to create ripples instantly within the political process and the elections within the USA. Some of the data sets are showing that between one day and the next (about 40 hours) there will be 'millions laid off'. Further problems will begin to ripple out from then also in an almost instant fashion as various aspects of the social order break down and/or morph into whole new shapes. In instances within the data detail sets we have a picture being painted of people being 'abandoned' at train stations and airports and colleges. Encampments are suggested as taking over some universities as the students become 'struggling tribes' as their parents and transportation systems fail to rescue them. Note that we will be hearing many of 'rescue' words appearing in these social stranded/abandoned groups.

These sets above are also in supporting positions for the 'new education sites' (which are not officially sanctioned schools) that will be springing up across the nation. The data sets are showing that some of these will be 'accidents' of 'transportation break downs' in which a few individuals will be stranded and decided to 'stay where universe put them'. In these instances we will hear about 'Roadside Universities' where people can learn 'real skills'. In some of these instances, both local and regional/(dwindling federal) government will be in contention with 'illegal learning'.

The data sets tie the 'illegal learning centers/sites' (which may be called 'criminal' due to abusive and controlling copyright laws) over to the first of what will develop into 'mass social actions'. The data sets within the USAPop are showing a long term trend for 'sudden', 'spontaneously organized', 'large group protests' for these next 2/two to 3/three years. The data further describes these 'mass social actions' as 'guerrilla like' in that the 'crowds/mobs' will 'vanish' as the 'authorities raise the police against them'. These mass social actions are showing as a direct response to the 'dollar collapse' and the 'failing of empire' and the 'abusive control efforts (of the political elites)'.

The data sets are continuing to point to 'massive crashing employment' which is supported by even more 'mass layoffs' and 'bankruptcies lead to firings' language. These new sets are suggesting that 'events of an [unknown] type' will be a 'trigger' or proximate cause for 'corporation bankruptcies' to reach 'unprecedented levels' in 2016. The data sets show that bankruptcies will be the subject of global

economic press stories. These new layoffs and firings are also within sets that go to the 'fracturing of the political system'.

The data sets are showing that 'mobs' of unemployed 'students' will be 'roaming resorts' and 'luxury centers (for leisure)' during 'spring break' in 2016. Many of these sets are going to the idea of travel becoming a real cost for anyone leaving the USA and having to deal with currencies and political problems. The data sets also show that the 'students' will 'flock' to 'local resorts' with very sad consequences for all concerned (in most of these new 'rage sites'). Data sets are indicating many new videos showing police versus crowds of young people. Some of these new sets are going to the idea of 'stranded crowds of students' who end up encamped in various resorts and airports as a result of continuing (extremely) bad weather throughout 2016. These cross linked sets to the Terra entity are also in the supporting chain of sets forecast a year ago for 'failed colleges' that will 'shutter/close' while 'most students are gone (on break)'. These sets were the ones about small gangs of students being trapped by circumstances either economic or weather or both in nearly deserted college campuses and the impact of their stories on social media.

There are data sets showing that the mobs/crowds of unemployed (recently fired) will be using 'inventive techniques' to express their displeasure. Some of these sets point to 'cement coats (for limo's and other executive vehicles)', and 'over-turned private airplanes', and spontaneous 'parties' at high priced retreats belonging to 'corporations' which will be planned, announced, and promoted by social media. In the case of the 'parties', there are supporting sets going to the idea that mainstream media will be calling it 'malicious partying' (or some variant' when the first of these incidents occur.

The data suggests that we can expect a series of stories in the msm over the next few years here in the USAPop that will focus on the extreme nature of the efforts being undertaken by 'celebrities', mostly focusing on Hollywood initially, but spreading rapidly across the continent, to learn and become fluent in Chinese. These data sets are containing references to 'no speak chinese, no work' being a new 'theme' among casting and other human resource placement firms. These data sets are forecasting that major efforts will be put into private lessons, and all manner of 'devices' for learning by the 'work hungry celebrities'. Further sets are continuing the idea that 'if you are not known in China, you are merely local talent'. Both Hong Kong, and Singapore (new developing film and recreational (video gaming) industry's there) will benefit from the 'celebrity diaspora to China'. See ChinaPop for more.

## ***ChinaPop***

The new data sets are showing that China is now visibly transiting from a 'primary exporter' to a 'local consumer' nation in which Chinese industrial capacity is now directed inwards. The ramifications of this shift are titanic in their effects across planetary humanity. The new 'self-raising consumer social order' within China is going to determine all things Fashion and Function for centuries.

### **China and Russia**

The data sets are showing that a 'strategic initiative' between China and Russia will be visible over this next year (by mid 2016) in which their 'combined resources' will be used in creating 'ternions' in which

Russia and China together bring solutions to problems besetting (insert various country names here). The 'win-win' aspect of these 'funds and engineers seeking problems' situations is indicated to have a cadres of Russian and Chinese engineers roaming the planet happily building things.

### **China and Arctic**

Contracts with Russian interests are showing as bringing China into 'tight coordination' with India due to research being done by the Russians which apparently involves Indian corporation technology. The data sets are showing that China and India will, over the next 15/fifteen years, develop a real presence in the Arctic, in spite of neither having Arctic borders. Curiously, the data keeps referencing 'old Bombay' and 'new electrics' as being involved in very exciting Arctic discoveries over the next 3/three years. These data sets are cross linked over to the SpaceGoatFarts entity, and also over to the Markets entity where they terminate in 'silver' sets.

New Arctic construction initiative will be slowly coming into visibility over the next year. This new 'Arctic Effort for Cooperation and Peace' (likely not its real name) is being described as being something of a 'planetary infrastructure development plan' stage 1 that will be drawing 'talent' from around the planet to Arctic Developments over the next 120/one hundred and twenty years.

### **China and Trains**

Data sets are piling up in supporting sets for 'china entrains the planet' in which China becomes so good at building and operating high speed train systems that the first Trans-Continental (north and south) American High Speed Rail line (Alaska to Patagonia and back). This American Continent high speed train will develop as a result of China building train lines that will link, according to the data sets, from 'south china sea to the blue coast of france, and arctic to south africa'. The American train line appears to be in 'progress' by 2020, though this may be more plans than building. These sets are part of a very large meme within GlobalPop relating to 'trains'. There are sets for trains having accidents, new trains, new types of tunnels for trains, and other 'train stories' from around the world.

### **China and sucking energy /money from the cabal bastards.**

Strange days need strange ways, and late in 2015 the forecast is for 'hollywood celebrities' to be 'migrating to China'. Much of these new supporting sets are related to the 'shift (in relative purchasing power) of currencies' that will make China the global entertainment center for demand and funding. The Chinese gaming industry's domination of on-line gaming is indicated to cause a global move towards 'simplified chinese' as the 'standard language' by late 2028. The data is also showing that Chinese demand for 'American Movie Stars' will be a large linguistic wave from 2016 through 2020 that is showing as producing many stories about QingDao being the new 'center of the universe' as far as 'coastal entertainment celebs (of all nationalities)'. As may be expected, many of the new msm stories in USA will be less than flattering given the bombastic tones of the failing empire's propaganda machine during these next 4/four years. Other related supporting sub sets show a nascent 'marine/ocean explorer wave' beginning in concert with the shift of the planetary 'movie industry'. This is also coincident with the beginning of the first of China's Arctic Initiatives.

China and weights and measures: The data sets have new supporting sets for China to be 'establishing weights and measures'. These sets are indicating that China will be 'in charge' of all things relative to

'global prices' and commodities (shape and delivery form) and 'global flow'. These latter sets are referring to 'capital flows'. As 2015 fades into 2016, the data sets are focusing on 'russia and china' as being in an 'economic boom' that is showing as 'dominating (by 2020) from Arctic to South China Sea'.

The new supporting sets are going to the idea that 'weights and measures' will be set by China specifically within the precious metals markets and currencies exchange rates. Sets within these supporting sets are indicating that Chinese adoption of Bitcoin will be 'pressuring Russian officialdom' to reconsider their stance. New sets here indicate a 'hard line stance' that is going to crack (later) rather than soften.

## **Markets**

The longer term data sets that had been first seen in our work in 2003 (note the theorem that the longer the time in the data, the more impact on humanity) relating to the 'death of the dollar' are now growing into an 'active' state relative to the emotional quantifier sums. These sets are reaching a point where the language at the higher level of the sets is now manifesting within the mainstream media as well as alternative media. Some of these sets are as broad and as deep as the 'death of the dollar' which we now are seeing appear within the many articles and officialdom pronouncements about the 'death of cash'. It is within the many different statements going to the 'emergence of the cashless society'.

The Markets entity is gaining support in long term data sets for the long running 'actual money' sets. These sets are part of the 'secrets revealed' meta data layer that manifest nearly 10 years back. These sets had been continuing to gain data at a lower aggregation rate that did not vary much until early in 2015. Since then the 'actual money' sets have been gaining new supporting sets at about triple the year over year rate persist this past decade. Additionally it is worth noting that the 'actual money' sets now have expanded supporting sets that go to what may best be described as 'e-barter', or 'electronic barter/trading' of 'actual goods'. The idea rising from these sets is that this new trend will not be contained to the beset citizens of Greece, but will become a global phenomenon that will include large corporations 'trading for debt closure' as well.

The largest new sets for Markets entity now are growing under the 'fear' and 'frightened' descriptors. Many of these new supporting sets are coming in under the major descriptors of 'Lockup', 'contention', and 'lawsuit'. New supporting sets are accruing that bring in the linguistics about 'careless gossip', and 'clueless discussions (that they were being recorded?)', and other sets for 'loose words' that will be out and about and 'cause trouble'. The 'trouble' includes 'inciting fear' and 'kicking (loose) the bowels' of many of the 'trader community'.

There are sets for the Markets which come in over the course of October for 'loosing (one's) head' and 'running around panicking'. Further sets go to 'hyper-ventilation', and 'collapse (due to) poor breathing'. Further sets supporting this meme go to '(perceived) wealth' being 'converted (into a) cloud' that 'drifts away'.

A few curious notes go to the 'taxi' and 'drivers (of limo's)' who will be 'standing' (not working) and

cause 'chaos' that will seriously add to the 'accident' nature of October and November.

There are other sets that include 'opposites' and 'collisions (of opposites)' within the management of 'assets'. The idea coming across from the details is that the managers of the 'debt as assets' will be faced with some form of 'impossible decision' that will need to be made. Further this decision will be so 'harsh' in the implications of the results that will develop, that the data are suggesting something of a 'wave of ambulances' required to 'haul away the (legions) of afflicted' as their 'bodies fail', 'bowels release', and then their 'brains freeze/coagulate'. These sets are forecasting that the situation they will face will (in their minds) come down to a life-altering decision where one guess wrong (and they will acknowledge that they are guessing) dooms their future.

Other sets are much more clear and string together to explicitly state 'take precautions against calamity'. Some of these sets have interconnected supporting sets for 'dollar fading (causing pressures USA military both inside and outside the country)' and for sets going to 'dollar disaster'. It is worth noting that the 'pressures on USA military' sets are also either directly held or cross linked over to USA Pop where they terminate in the sets for 'USA military bases abandoned, soldiers return (from around planet)'. These sets in their turn have long held that 'dollar death' would bring about conditions where 'local fund raisers' would be needed in 'occupied countries' to pay for 'repatriation of USA military personnel'.

New sets for 'crumbling (failing/yielding)' markets are in accretion patterns that are going to a period of the indexes of all debt markets turning into a 'mud brick wall sagging into mud (from which it came)'.

Repetitious new sets for 'disaster' are appearing throughout all the major supporting sets for the Markets entity. These new sets include a 'worrying occurrence of bad influences'. The 'bad influences' are indicated to be 'sweeping away (trades)', and 'accounting rules'. These 'bad influences' are also within the supporting sets for 'covert (banking mechanisms)' that will become 'spotlighted' by the 'exposed lies'. These sets are also bring along sets for 'press crash' in the sense of the 'mainstream media' being 'struck down' by 'facts' that will be 'pouring out (of a hack?)' of a 'central bank (Fed?)'. The 'media' figures involved also are being indicated to be 'rendered destitute' and this will be reported upon by the alternative media. These sets are showing that the USA markets will be 'rocked (by) instability' as these 'facts (of current history)' are made public.

A few detail sets are showing that 'flooding (in) New York City' will be coincident with a 'round of (commodities) default'. These sets are showing as 'crashing (against the) dollar'. These sets are also tied into the supporting chains for 'fear and frightened' descriptor sets. These supporting sets include their own support for 'liquidity demands (internal to US and external)' that will be 'draining veins (of commerce)'. These sets are also indicating that 'capital constraints' will be 'forcing' a wave of bankruptcies. These in turn will force such a huge wave of lay-offs, or firings that 'government' is forced to react publicly.

The data sets are growing in supporting a new rising set for 'china establishes weights and measures' in which the data shows that the Chinese will be determining the 'prices for commodities' due to their 'internal population demands' as their society converts to a 'self-raising consumer social order'. Many of

the supporting sets within these sets are for precious metals and 'chinese hats' made of silver. These 'chinese hats' are apparently a new (to the west) form of 'silver ingot' that will gradually take over the global retail silver market over these next 15/fifteen years.

The 'chinese demand' for 'silver as money' is indicated to be a trigger for 'shifting political power' throughout the 'western financial world'. This is shown as being visible in the form of bankruptcies, bank failures, and bank runs. The data sets are indicating that the first of the visible impacts of the 'china determines weights and measures' will be seen in 2015 as rising, and holding prices globally for silver \*(including in USA FRN\$).

Data sets are continuing to accrue for a 'greek mid-ocean silver mining operation'. These data sets are seemingly indicating that it will be Russian/Chinese funding that will be key in developing this new 'greece and turkey' joint venture. The data sets are showing that the funding of this venture will be a serious 'status quo disruption point' for both NATO and USA.

New data sets within the Markets entity are pointing toward a near term boom in mining in that, soon to be launched, 'mining robots' are going to be 'boosting' rare earth minerals mining in about 2/two years. These mining robots are described as 'metal worms'; these will be of various sizes and 'tuned' for specific mining needs. This new technology is described as beginning a 'new phase' of 'resource location and recovery'. Some more interesting aspects of these 'mining worms' include the 'push down' on 'prices' that will allow for 'sole proprietor mining companies'. The data sets here are extensively cross linked over to the SpaceGoatFarts entity where the terminating sets indicate that some of these underground drones will be used to locate very interesting 'ancient relics' and 'technology of unknown origin', and 'artifacts beyond explanation'. There are also some sets that indicate a video of one of these drones sends back will be showing 'unexplainable life forms' and other bizarre visuals.

New sets are forming under a descriptor for 'social media shifts/changes'. These supporting sets are going to the idea that social media will be hugely impacted by the diaspora and planetary changes. The data would have it that a visible shift will have occurred by 2020 such that today's social media model will be but one variant. New sets suggest that diaspora will be greatly 'relieved' in terms of the trauma to extended families, tribal associations, and such by social media. Some of the governments under pressure by diaspora (both receiving and losing populations) will be using social media as tools for cohesion or integration, depending on their agenda.

The data accretion patterns are forecasting that the fracturing of the political process within the USAPop is going to have major impacts on the ability of the 'markets' known as 'Wall Street' to continue to 'do business'. The fracturing of the political process is linked within the data sets to the 'social shutdown' (general day of no buying, no work, mass rallies?) that will be 'suddenly, spontaneously organized' via social media as a result of the 'dollar sickness/woes (near death/impacts on JIT (just in time delivery systems))'.

These 'large public actions' are not restricted to the USAPop. In the data, the geographic references imply plenty of international cooperation and advice for the planning and conduct of 'mass social action days'.

A new trend showing up in the silver sets within the monetary side (not industrial) of the data is a 'flow' to dis-hording. These sets are within the supporting chain for the 'new aggregation network' that will spring up globally (though primarily in the West). These new sets are suggesting that there will be 'many inducements' to 'unload old silver (any silver)' into a system that is 'sucked dry' by silver demand. The data shows that a minor wave of dis-hording does take place as the strength of the silver price rising gets into a series of 'steps' which gain 'public attention'. Continued support exists for \$100 per ounce silver by mid 2016. The 'expected' dis-hording does not take place as the currencies are showing as 'failing too fast' to 'risk conversion' for most 'silver holders'. There are sets indicating that the market in silver does ease slightly as the price reaches the \$100+ level, but only for a brief few months.

The Markets entity has 'transitional elements rising' as the leading supporting sets for October and most of November of 2015. These supporting sets in their turn are supported by 'transforming process/dynamic' at either the primary, secondary or tertiary position. Let me repeat for clarity. The markets, globally, for the rest of October and most of November 2015 are being best described as being in a period of 'transitional elements rising'. Each of these 3/three descriptors are themselves holding 'transforming process' or 'transforming dynamic' in their primary, secondary, or tertiary supporting position. This is a linguistic line up that is quite rare and similar situation within Modelspace has only existed once before, and this was prior to the 2008 'death of the system' language which began showing up in early 2007 in our data sets.

In our new sets the linguistic structures for the 'transitional elements' include details showing that 'upending' or 'opening without results/empty cans/coffers' are going to be causing a great many 'old men to growl (in their soup)'. These linguistics are in support of the 'transitioning (into unknown)' that is showing as being underway now, but which gathers strength and 'internet visibility' over the rest of October and November. The idea is that paper debt markets are being 'upended' or 'turned over' or 'flipped upside down' such that a 'net negative result' will be achieved in spite of 'never before seen levels' of 'financial engineering/criminality'. The data sets are accruing more supporting sets for 'old men (in their offices, as sun sets) growling (at the difficulty) within the markets'. Many of these sets are for 'officialdom' in some form. The data sets are suggesting that the conditions within the global debt markets through to the last week of November are going to be the cause of much growling, fretting, and 'harsh brows/bad digestion' within high level finance and high level government. The primary reason showing is directly tied to the 'pressures for (rising prices of) silver'.

Further supporting sets for 'silver' and for 'gold' are gaining sets that include references to 'measure', in these instances, we have 'measures' as in 'appropriately weighed', as well as 'measure by measure (step by step)'. In both instances we have supporting sets for 'measure' becoming a dominating linguistic element over this next year.

These November focused sets have a peak of forecast occurrence in the 3<sup>rd</sup> week. At that time the data sets then gain bursts of clusters of new sets for a sudden, large (huge, big, giant are all in the sets) spike in the price of silver. Gold is also within these sets but is at a much lower level of emotional sums for that third week. These 'price spike' data sets are forecasting for the rise in the currencies price of silver

to take a number of weeks, perhaps 2/two, maybe a bit into the 3<sup>rd</sup> week prior to seeing the 'plateau' that the 'spike' will produce. These sets are then cross linked over to the 'silver dis-hording' and the 'rising groups/businesses (of) aggregation (of supply upwards)'.

There is a juxtaposition of the 'silver dis-hording' language at the same time as we have rising sets for 'panic to buy silver'. These latter sets are in no way impacted by the 'silver dis-hording' sets, and the interpretation has to be that the 'panic' will overwhelm the 'dis-hording'. These data sets for the 'panic to own/buy silver' also have connections into the gold sets, but primarily we are looking at a global silver purchasing phenomenon. These sets start to accrue in large amounts as modelspace is moved through early November (around the 12<sup>th</sup>) and grow through the rest of the month until mid December when the emotional energy for the sets wanes a bit until early 2016. There are numerous, extensive cross links between the 'panic to buy/find silver' and the SpaceGoatFarts entity where many of the links terminate in 'weapons' and 'break-away civilization' sub sets.

In the sets for 'measure by measure' or 'step by step' growth, the data sets are suggesting that 'lawlessness', and 'officialdom sanctioned unlawful activity' is going to be at the top of the news diet for most of the 'traders' and others within the Markets knowledge sphere. These data sets are also filling with supporting sets that include 'man becomes (bitter/disillusioned)' when 'pathways/pursuits' are 'removed/taken from him'. These data sets further have their supporting sets for 'pathways (to pleasure/riches)' that will be 'dissolving'. The 'dissolution of the path (to riches)' has some connections to 'Sweden' which are unexplainable and unexpected, but prominent enough to mention. Further groups are clustered about Germany, and Brussels.

Within the 'measure by measure' sets are structures that include references to 'rules too tight', and 'constraints too rigid'. In this last instance, the 'too rigid' is being used in a past tense in the near future to answer (to a video audience) the 'why' of a company having 'blown up' (note it leads to mass layoffs/firings).

It is also worth noting that within the mainstream media the appearance of the 'measure by measure' language will be competing with 'flooding' language for space.

Continuing aspect/attribute sets gain in support of the 'insurance industry dry heaves (hacks up a hairball)'. These sets are referring to a 'global insurance claim(s)' that involves a 'deep derivative structure'. These sets may well be involved in the currently unfolding 'Glencore meets reality' events.

The 'insurance industry' sets themselves are interesting as many if these go back to the Vatican, and terminate in sub sets for 'deep pockets (filled with ) flammable lint'. Much of the detail layers here are suggestive of a magician pulling out ephemeral 'stuff' that goes 'poof' in front of the eyes of the audience. The underlying sets are filling with references to the 'vatican' and tied to 'suspected', and 'supposed', and 'mythical' and 'apocryphal' and other language all supporting the idea of 'doubt' relative to 'vatican riches'. These sets are unexpected, but interconnect to the supporting sets of the 'insurance industry' that will be facing 'global insurance claims'. These sets are not within the the sets relating to the pedophile claims against the vatican organization.

## **SpaceGoatFarts**

Some of the new sets accruing to the 'sky', and 'solar observations' are gaining support from 'syncopation' and 'oscillation'. These sets are indicating that 'solar flux (ripples across the surface)' will be putting on a show of 'waves' and 'syncopation' over the next year. These sets are participating in the sun disease sets, and are internally cross linked over to the 'terra' terminating sets within the SpaceGoatFarts entity.

Some of the new sets are also participating in the 'terra expansion' sets. The data grows for 'breaking buildings (including sky bridges)', and 'bridges (stretched) too far', and 'dams isolated (pull away from surrounding land?)'.

Robotics gets a real boost according to the data as a 'new effectiveness' of a 'robot in space', but we may find out that the 'robot' is not manufactured by humans! The data sets are suggesting details about a series of 'space gymnastics' being performed by an 'automated device' that will bring out cries for 'expedition' to 'go see'. None of the shorter term sets are supporting the idea of a space expedition, but there are further sets bringing along longer term data for 'new activities (from an) old (frozen) companion'. These sets do not refer to 'lunar', but rather seem to point toward something 'unknown' at a very deep level. This 'automated device' may be referencing something like the 'dark satellite' which has been around for decades and is extremely 'unknown'. In some of these new supporting sets we find that the 'new activities' will 'draw the attention' of the 'dark (break-away civilization) ops world'. This latter may be why the sets remain active but lose visibility over the accrual of the shorter term values. These fading sets around the 'space gymnastics' are themselves a temporal marker when they appear so the resolution of the activities in space is not necessary for the associated Terra bound manifestations.

The data sets are showing new growth patterns for a 'visual agenda' that is in support of the 'ufos' and 'break-away civilization' becoming part of the msm 'usual language'. This shift is showing that a number of 'new facts' and 'visual evidence' that will be available. These data sets are also adding support to the sub sets for 'mass sightings' and 'visitations'. The sets are mostly NOT USA Pop based, but there are enough references to USA geography to note that the phenomenon will be global. These sets for mass sightings are also filled with language going to 'hundreds' of videos becoming available. In some of these sets the data suggests that 'land, air, and sea' views/videos of the events will be 'analyzed and hotly debated' as the 'phenomenon of visitation' grows over the rest of the decade. Many of the data sets are also supported by shorter term data sets that seem to be indicating a 'disruptive wave of mass sightings' in the Middle East. Some of the reports of the sightings will blame it on the 'Mossad', but the sheer volume of the different angle videos will overcome that argument. The disruptive sub set is showing that the 'sightings' will be 'shaking up and disrupting' the 'pursuit of wars' in the area. The idea is further supported by cross links that go over to the GlobalPop entity that terminate in sets with language about 'pilots (stunned)' and 'overwhelmed' by 'hundreds (of visitors/orbs)'. The data here in the SpaceGoatFarts entity would seem to suggest that the disruption of the fighting is not necessarily deliberate so much as the 'appeal of the strange attractant'. These data sets reinforce that idea in other, non war situations in the detail sets that go to this same idea of 'people stopping (whatever) and looking/watching the UFO show overhead' as the 'shiny/shining orbs' will be seen to 'dance with each

other' as they 'traveled in flowing rivers'. These sets are also cross linked over to the Terra entity and its 'sun' sub set. These sets are suggesting that there is a solar activity connection to the appearance of the 'floaty things' that will be seen as 'neat, but unsettling'.

Several sets within the new accrual for SpaceGoatFarts include items for 'alien wars' that have very high emotional sums, but relatively low visibility values. The idea is that we may be learning of 'rumors' that are circulating in the 'dark world' part of humanity. These sets are showing that 'officialdom' (the public face on the government beast) is going to be expressing concern as 'worried faces' show up in public media over these next few months into 2016. Some of the responses to queries are indicating that the 'economy', and 'global political problems' will be cited as the reasons for 'officialdom behavior' that does not quite 'add up'. These new sets have detail layers that describe officialdom that is so 'jittery' and 'wound up' as to 'explode (in paranoia) over a loud fart (in a public place)'. There are suggestions within the data that alternative media theories will run wild trying to explain the situation developing with (mainly western world) officialdom. The data suggests that the prevailing theory will be 'fear of assassination'.

The officialdom personalities involved in 'expressing jittery paranoia' are described as extending down into middle level management. This is showing as putting huge emotional pressures on the 'ruling cliques' to 'keep it together' as their minion classes become 'unstable in public'. The data suggests that many of these jittery low level staffers are NOT aware of what they are paranoid about, but are rather acting as 'conduits of their bosses emotional states'.

New sets continue to accrue on the SpaceGoatFarts side of the diaspora sets as well as the sub sets focusing on 'radiation problems'. These last are clearly pointed at USA nuclear plants (and at least one other country (france?) where problems with 'budgets' and 'failing ability to obtain supporting staff and materials' will bring the 'ignored nuclear waste/use problem' smack into the planetary face of humanity over 2016. There are sets that suggest the first hints of the 'failure problem' will be 'surfacing' in late November and early December. There are extensive cross links from SpaceGoatFarts entity, including these sub sets over to the '3<sup>rd</sup> week in November' sets within the Markets entity. The interpretation MUSTR include the possibility that a 'nuclear accident/condition' may be a proximate trigger to 'economic [unknown] problem' that will 'send the populace searching for silver to buy' over late November and into mid December. It is quite possible that the cross links between these sets are relating them at a level not discussed in this report, so the connection between 'panic' in both the 'buy silver' and the 'flee nuclear problems' may be the dominating condition, and may be referencing a developing meta data layer around the word 'panic'.

New sets within the 'break-away civilization' sets are going to the idea that a new 'focus/awareness/need' for 'unconventional' {ed note: not sure what that word means in the context of the super-non-conventional break-away civilization, but it is bespoke and did appear in repeated sets} forms of 'weapons' are going to occupy the thoughts of the 'break-away boys in senior management' over these next few years. Some of the data sets go to the idea of 'unconventional thinking' as being 'the weapon (at its core)'. Many of these new 'weapon' inclusive sets also are containing sets or links for 'exposure (of the break-away civilization)'. Some of these 'exposure' sets are bifurcated suggesting that the 'exposure' may have a 'planned (or desired on part of break-away civilization)' component, but also

will encounter a 'spontaneous (from universe) situation' that will develop. This 'exposure' set grows most over very late 2015 (last few days of December) and through to about mid July of 2016 where we have had by that point, 7/seven peaks of emotional sums (hinting at repeated events).

We have continuing growth in our “Nazi UFO's from under Antarctica” sets that led to the 'Space Nazi Economy' forecast which is still pending. The data sets are cross connected to the Terra entity and are clearly stating that 'shifts in ice masses will force the flying space nazi economy' out into the open. The data sets are mostly newly filling with shorter term sets for some form of 'major ice movement' in Summer (2015/2016) (southern hemisphere). These sets are also extensively cross linked over to the break-away civilization sets, though the nature of the linkage is not clear.

## ***Conclusion: Weight of time, and measure of humans***

We, those humans alive and aware now, find ourselves at what fairly can be described as an ending time. Not the ending of time, nor the time of ending, but rather, a time to be filled with endings.

The most significant of the many endings that will fill out the years from now through to (likely) 2040, will be the end of the current monetary system. The death of this system is clearly in progress and proceeding in an unstoppable and unalterable pace into the future without pause.

The death of the monetary system may, or may not lead to the continuation of the 'authorities' in their positions of power. This reference is not to any politician nor currently visible personality.

The death of the monetary system will lead to the reinstatement of sound, solid money in the form of precious metals (and other real stuff) backed currencies. Bitcoin will do very well in this developing monetary environment.

That TPTB (current power structure) plans a return to gold-as-money by 2018 may be perfectly aligned with the emotional trends at that time, and still fail to produce the segue that the power structure is planning. There are numerous sets within the longer term data to the idea of a 'best laid plans of psychopaths and their masters aft gang aglay'. It will be very interesting to watch the effort, regardless of the outcome.

The outcome of the push for a 'new world money' will benefit everyone who holds physical precious metals as these are to be the underpinning for TPTB/power structures' global order with themselves still at the top. The data sets hint that occurrences (soon to pop into reality) within the Indian population will provide a clear idea as to the results of TPTB plans for gold-as-money.

The death of the current monetary system will rock humanity, even those not living directly under its evil thumb. The one-third of the population of the planet that does trade, and use this monetary system daily will be plunged into economic and emotional turmoil such as the planet has never before seen (we

think anyway, given our lack of true knowledge about earth's history).

The emotional turmoil of these next dozen years will affect everyone equally, even those prepared for the economic disaster will suffer the emotional oppression of the unfolding circumstances.

To weather these unfolding emotional storms, it may help to recall our position in history; what we are privileged to see unfold across the span of our lives, and that a broad view allows us to properly place the pressures in this now, knowing that universe pushes us onto scales as we are all measured, collectively, and individually, by the weight of time.
