04.17.2005 A note on this series; Markets - Distillation, Inner Change, Shedding Slag, Storm Breaks With Dawn; Populace - Social Upheaval, Frozen Feet, Diseased Trade; Terra - Two Mountains, New Land

Note: Entities are identified by a blue typeface. Aspect words are enclosed in square brackets []. Attribute words/phrases are within parentheses (). Interpretive editorial comments are preceded by an asterisk *.

Data set distilled from 11.9 million reads. It is anticipated that processing will bring in another 71 million reads (more or less) over the course of the run. The resulting interpretations will be posted as completed. At this point, we are anticipating 6 installments to this report.

A note on this series

We were using the initial data now seen in this report for a purely commercially focused

report intent on examining the Housing, Paper Assets, and Commodities markets. When we started our processing, and virtually as the data was being put into our CAD display, the events of the last week in global markets started playing themselves out. After consultation with our prime client on the markets analysis, a consensus was reached about the expediency of 'chasing' the events with our interpretation. It was therefore decided to reprocess the data for our ALTA 605 series. This accelerates the reports by a week, and also provides our prime client with the more contextual view in which to place the unfolding market events.

We will start this series with the Markets entity, as well as the Populace entity as they both contain parts of the developing story which we see gaining a bit of momentum in the coming weeks.

Markets - Distillation, Inner Change, Shedding Slag, Storm Breaks With Dawn

Our Markets entity is currently at the very beginning of its tipping point journey. It has formed a tight black ball and is now progressing forward with the same intent as the emotive images present within the primary aspect where we find [slag](burned out/distilled) from [metal] in (crucibles) under (pressure) and (heat). We also see as reinforcing aspects further within the entity that [aromas] are (distilled) in (steam), and through an internal cross link that [steam] (sterilizes) the [mud] and (evaporates) the (stagnant) [water].

While we always tend to pay attention to the emerging archetypes as these are frequently correct in imagery, we also note that explicit references within cross links to the Populace emerge as [lost](joy) in (life) as [currency] (rots) in the [hand] and (addictive)(dangers) are (grasped at/sought). Further, the [poor](common/plebe) is seen as (immune) from the (rot) and its (tainted) [air], as they are (below) (seduction), and too (spent) to [care]. This latter is within a cross link terminus within Populace entity that emerges from the tipping point on Markets entity and comes from an aspect of [expansion] of (sorrows).

Within our [expansion] of (sorrows) Markets area we note that the [skin] of the [members/participants] is (glued) to their (future). Further that their [skin] is (buried), and/or (subsumed) in the [earth] (recently) [ploughed]. This is augmented by the sub aspects under [skin] as [encumbered], [burned], [removed], [excoriated]. We also have some archetypes emerging going to the image of 'offering one's skin to be burned for the gods for relief of suffering'.

As the Markets entity comes out of its tipping point we have to note a very large scale primacy change suggestive of a movement towards mass awareness or consciousness of

the subject. We see a regular level of the mid to upper seventies before the tipping point emerge as a 5 on the other side. This is indicating that events moving the markets will rise to dominate the public consciousness over the coming weeks. We note that our shifts prior to and immediately following the tipping point have primary aspects of [bellowing] going to [humiliation].

The Market entity primary aspect shift is supported by their primary and secondary attribute sets which go to the idea of value or assets 'draining from the markets' the way that 'water flows off the mountain, carrying mud'. We also see that other, lower level aspects/attribute sets also support this idea with further imagery of a 'mountain worn down by rain'.

At the current time of our modelspace, the Markets entity is in a state of [bellowing/exhausting the air] with a primary attribute of (inner)(change). Within the primary attribute set we find that the 'inner change' is seen as being 'stirred' from the outside, but that through the cross links back to Populace we note that the change is co-incident with very large changes within that entity as well. This over all meta level change is indicative of a period of time in which the rate of change will seem to accelerate, at least in its manifestation. This movement currently within our modelspace is reinforcing of the May 15th to May 28th range seen in previous reports this year. We also note that the Markets entity is fully emerged from its tipping point just prior to the May 20th date, and that at that point it is visually close to a balloon attached to a helium tank of change. The rate of swell and dissipation of the various components of the Markets entity is extremely rapid. This would seem to indicate that the actual market movements seen of late are merely the building period leading to very large scale swings and other erratic behavior.

We see that the (inner)(change), at least for this next week, is not likely to show any outward manifestation of the near-term results, but that the (turmoil) of the changes within the entity will clearly be visible. Within the cross links to both Populace and BushCo, we can see that over the next week and beyond a real effort at issuing the 'no problem' re-assurance will start to emerge from officialdom as all the spin-masters are trotted out. It will not be received well with the public as the turmoil and inner change within the markets entity progresses through the week towards its humiliation. Thereafter, the public [rebellion] aspect seen in previous reports this year, appears to inter-linked with the developing (humiliation) of the Markets entity.

As the Markets entity is progressed beyond this next week and into May, we see that the primary aspect of [humiliation] is over-taken by the currently rising aspect of [withdrawal/depletion/exhaustion/defeat]. As the Market entity is moved through the end of its tipping point we see that the [withdrawal] aspect will continue in primacy only briefly and is then replaced with [measured](steps) to (transformation). This latter aspect is even less than brief, qualifying as only momentary and thus our interpretation is that prior to May 20th some form of 'reform' suggestions will rise to public awareness or hit

the mainstream media as regards the continuing to deteriorate markets. It is as though our entity is suggesting that officialdom will propose a 'measured pace of reform' just prior to all hell busting loose as the Markets and several other entities explode out of their restricted tipping point states. If this is accurate, then one could postulate that when officialdom starts spouting off about 'market reforms' in the mainstream media, we would be within a few days at most of the tipping point ending, the coalescence degradation, and the subsequent change explosion.

We also need to note at a meta-data level, that the Market entity is just chock-full-of-change coming out of the tipping point. The level of lexical expressions, and descriptors which change as our model moves forward is hovering very close to 65% of the total lexical set composing Markets. Further, with the Populace entity masked out, the Markets entity rate of change values make up over 83% of the total change in the 5 major entities over this next short term period. DISCLAIMER: our timing can be off by days to a few weeks. While we see these change rates compressed into a period of this next week, and then beyond up to May 23rd (more or less), we might be off by a week or so on the outside or far end of the range.

As the Markets entity moves out of the next week and into the last week of April, we see that the [withdrawal/depletion] aspect begins to assert itself. First we note that (depletion) over takes the [weakened](lower)[guard/reserves]. This is seen as being a very dangerous sign by many. The withdrawal will manifest first as a 'depletion of the lower hind quarters and tail' which will 'distort' the ranges usually used for calculations within the various markets industries. Noting that previous ALTA reports this year focused on the 'loss of an economic' indicator, and that we are currently seeing reinforcement to that idea, and in fact expansion of its detail base, we are going to interpret the lexical clues as a general, background level meltdown in progress. What is suggested by the data is that [agents] are basically sweating out their lives right this minute trying to 'patch' back the [puzzle] of (chaos). This is very suggestive of a 'stressor' having entered unexpectedly into the computer models relied upon to balance out the global derivatives trade. This most nefarious of markets now consumes 11 times more dollars than the USofA produces each year in the GDP. It would appear that our modelspace is suggesting that the loss of some economic indicator has now hosed up some calculations within other computer models responsible for derivatives. The outcome is seen as a complete [melting] off of the (slag), or a [reduction] to (essence) in a (pressured)(heated) [crucible]. A wild guess would be that this is not a good sign in the short term.

We have further data points indicating that derivatives as a subject are currently deeply embroiled in the now manifesting market change. Without belaboring the point we do need to note that our Markets entity is clearly showing that the problems to emerge from its distillation will push the Populace entity over the edge and into its own tipping point. We are seeing a magnification effect where the terminating verbs of the attributes within Markets are all cross linking over to very much expanded sub sets within the Populace. Along with the previously mentioned primacy state change we are going to interpret this

as a movement of the Markets entity to a state of primary consciousness within Populace as the people globally are apparently going to be (rooted) by their (fears) as they watch the Markets go through this period. We find that the effect will extend to [farmers] in (Switzerland) to [clerks] in (Brazil). The many, and very specific geographic references may well be indicating that these countries currencies will be involved within the leading edge of the 'humiliation' phase which is seen following this next week of 'distillation'. If so, we should bring to your attention that the following countries are prominently featured {other than the USofA}:

Phillipines, Brazil, Russia, Switzerland, Australia, UAE. These countries are listed in order of appearance, not weighted by reference values.

We also see within the Markets entity what appears to be a message of caution, that 'staying put' will lead to 'disappearance'. Further, under disappearance we find that a 'movement' at the 'correct time' will 'prevent' the disappearance.

Continuing on a theme, the whole of the Markets entity has repeated internal cross links back to [doubt] and [exhaustion] which are rising aspects with very large, pyramidically shaped bases of support.

Within the Markets entity there also exists an oddity in which a very small trigger event of some sort will come from a 'fishing trip to a lake'. The lake has descriptors suggesting a western location, but these are vague at best. Much more detail comes from the descriptors as to the local conditions of 'pine trees' of [medium] (height) surround the lake, and a large number of aluminum fishing boats on a calm, mid sized lake. Apparently fishing will be good, but the impact for the Markets entity will not arise from a fish dinner, but rather from the 'conversation surrounding the hook'. This is viewed through internal cross links as 'hooking the cow', and 'hooking the skin' as well as 'hooking the proper place'. Down a bit deeper, we find that a 'belt will be used to bind the color to the person'. This attribute area is actually close to being central to events of the next period. Resting within this area is the to-be-exposed 'material baggage' which indicates the 'time is ripe' for the 'fruition of the withdrawal/depletion/exhaustion'.

A key participant within the fishing trip is a 'retiree'. This person bears watching as they are going to be 'retired' due to 'doubt' and 'exhaustion'. The data indicates that 'public pronouncements' will come out about the 'poor state of health' of our now fishing but soon to be retired person. This 'retirement' or its announcement is seen as one of the primary indicators within the Markets that the 'withdrawal' phase is about to enter high-gear.

As a direct consequence of the retirement of the fishing partner, we note that [shortage] and [suffering], and [emergency] enters the Populace as a 'continuous thorn piercing torn flesh'. Following up on the Populace cross links from this section of the Markets entity we note that the Populace is about to get the message that 'material abundance flows like

a tide' that is 'periods when the tide flows in' and then periods when it flows out. The interpretation from these more obvious clues is that the population globally is about to receive the message that the 'tide has turned' and [material abundance] is now flowing out.

Our processing takes advantage of a 'chain' of verb shifts about subject matter over time. We have a concept within our processing of a 'terminus value'. This is the last verb captured in the processing shift with any rising weight to it. As such it represents, within the time frame of the data capture, our last 'shift' before the next set of words are brought in by processing. Depending on its other values of impact, duration, et al, we use it as a terminating aspect which begins the next processing segments run for changes. In any case this terminus value has in the past been a very odd construction of aspect/attribute, and sometimes has proved meaningful. What is extremely clear from the terminus values of this current processing is that the aspect is saying [no longer] and the primary attribute set says (any)(hope) for (improvement). The secondary attribute set for the aspect goes further and states (enabled/positioned) (depart) (prior) (disaster) (starts/begins). And the completed tertiary attribute set also reinforces the idea with an ominous, (storm)(breaks) (with/sans) (dawn).

Populace - Social Upheaval, Frozen Feet, Diseased Trade

In previous ALTA reports we noted the change of emotional energy within the Populace entity which is now being expressed within the global populace and its most recent indicator has been the [confusion] and developing chaos of markets of all kinds.

We see within our modelspace on this new data that the trends picked up in ALTA 105 and 405 have now started to show themselves in the more macro environment of the markets and mainstream media reports on the same. We note that the trends showing now are apparently setting the 'tone' of the change as the real energy of the change is just now seen as developing.

Our data has shown tipping points as reported in previous reports this year. As reported these were unlike the tipping points seen in 2001 wherein all the entities converged into a more or less single tipping point, then broke out on the other side of the event. Here we are seeing individual entities develop the tight, black knot of data points indicative of tipping points. These entities then progress through their tipping point stage and then expand like a balloon now filled with changes on the other side of their tipping point events. At this point they go to an intensely multi-colored state as each pixel is now separating from its fellows and its color can be seen.

Within our current data set we note that both the Populace and Markets entities are now actually in the 'black ball' state of the tipping point. And that other entities are also undergoing tipping point coalescing. We also note that our emotive sum index of value shifts which is a table of high-low values carried from run to run is showing the highest

level of change recorded in all of the 118 categories within the table. Another way of seeing it is as the sum of the emotive sums. And this new sum is the highest ever recorded number, exceeding even last Decembers' 19% jump in total summation values. So far within the processing it appears to be the Populace and Market entities which are driving the summation index value to new heights.

The Populace entity is clearly indicating through its numerous cross links from Markets that it is about to be 'moved' by the markets. We can see lexical points showing that the Populace will be 'splintered' by the impact of the 'humiliation' of the 'markets'. The repercussions of the emerging markets problems are seen as being very severe, in fact, as participating in wholesale change of the current social structure.

The data suggests that considerable personal strength will be needed during this period. That social change of an economically forced nature is not as 'kind' as social change emerging from other causes. The data indicates that friends and relatives will be abandoned. That social upheaval will get to the point of a vague sort of wandering out of cities and toward more rural, if non-specific areas. The emotive tone is one of people moving through an emotional fog that affects them down to the level of 'depression of cells' and 'dulling of eyes'. We see indications that large numbers of people will be either actively laid off, or will simply have their work disappear 'from under the door' like 'air gone bad'. The imagery suggests that at some close period point the mainstream media will be showing pictures of the 'workers forlorn at the door' with the concept being supported of a large scale business slowdown to the point that some businesses just fail to open one day.

Quixotically, we note that the mainstream media will also feel themselves emboldened by winning some form of fight with government about what imagery can be shown. Our lexical clues suggest that long lines of suffering people seen on teevee will bring down official condemnation, but that the Populace will 'expose' its 'teeth' and 'shout the aggressors back into their shell' over the issue. It would seem that the soon to be downtrodden masses, like those in history before them, will not be denied. This element of our Populace entity has maintained cross links with BushCo all year around the aspect of [rebellion]. Within the first data sets of the year, this seemed to be mainly focused on a developing revolt in the press, but now it is clearly emerging as a late year dominating theme for the Populace as that entity goes through a tipping point this summer and into fall.

Prior to its own tipping point, and coincident with the Markets entity moving through its tipping point this next week and beyond, we see that aspects going to the idea of [explosive force/unleashed energy] will move our Populace entity along through the week. Apparently very [powerful](displays) will show up in attempts to shift the herd along. These would seem to be linked to the markets mostly, but not totally. The 'shows' of strength and force will seemingly come from many areas. The lexical summation values for the Populace entity are as high as we have ever seen for this very large lexical

collection. Being at it peak of emotional stressors, the Populace entity is indicating it too is about to coalesce into tipping point mode.

We see the Populace being dominated at some considerable level of intensity by 'chasing and hoarding of material possessions'. This will suddenly come to occupy a lot of minds. Our emotive sums around the lexical structure just head straight up when graphed. It would appear that external forces to the Populace will be magnified by the 'highly strung' emotional levels of the moment.

We also note that the Populace entity is carrying language suggestive that the 'braking ability' of the derivatives monster behind the scenes has 'lost its traction/belt'. We see that the Populace, while not naming derivatives per se, nonetheless has a lexical aspect/attribute area where the primary aspect is [hidden] and [abused] in (your)[name], and which is replete with both fiscal and chaos references. The dominant fiscal reference is for 'interest rates' and the second most dominant is for 'dollar basket'. We see that this area is the weak point in the dam and that the 'flood of misery and depletion' for the Populace starts here.

As detailed above, once we get to the point where the fishing partner is forced into retirement for doubt and exhaustion, events will pick up the pace significantly. Our Populace entity is going into or is triggered into its tipping point at the same time that this occurs. We see that the emotive balance of the global population will face several 'waves' of 'perception changes', or as we are interpreting it, world-view changes. What we are perhaps seeing the first indications of is a mass shift of consciousness relative to humans and their view of the survival on planet earth. We note large quantities of Terra related links which will be explored later, but that we are also, at least in the short term, about to be dominated by the perceptions of the Populace.

We see that 'upheavals', characterized by riots, attacks, barricading, and 'official isolation', will come to 'impress' the consciousness of the Populace. With specific references to USofA, we note that the Populace entity is forecasting a shock that, at least at the emotional level, is larger than was encountered on September 11, 2001. Our values within the Population entity alone exceed what we saw in the modelspace as a whole in July of 2001. The suggestion must be taken that the emotional tone of the population as a whole is about to be whacked upside the head.

There are lexical areas indicating that both long and short term effects will include the bust-up of some families and social groups, while yet others come together or at least struggle to do so. We note that much of the imagery suggests a westward spreading malaise that moves rapidly, but the resultant emotional state is repeatedly characterized as 'working/walking/operating in a mental fog'. The emotional impact is apparently to be very wide spread in its impact and very long term in duration. We note that this area within the Populace entity is all bound up with cross links to 'currency' both in Markets and BushCo.

Curiously also linked with currency, is the Populace entities area hanging under [disease]. What is seen here is not being interpreted as a 'disease of the dollar', but rather as relating to actual disease of the Populace. There are too many specific references to all kinds of respiratory symptoms to make the interpretation anything other than actual diseased focused. In this case, it would be nice if this idea is wrong, and it is the dollar that is diseased. However we see that only a few links tie this area to the currencies of the planet, but the rest is overwhelmingly filled with actual disease references. What is perhaps most alarming is that under the disease area, the currently rising aspect is [flowering], but the aspect chasing it most closely in lexical summation values is 'putrefaction'.

We also note that within aspect/attribute set and the cross links set whose summation values are led by 'putrefaction', we find that [putrefaction] as an aspect has the largest number of geographic references pointing to the USofA. These exceed all others by several orders of magnitude, but are closely followed by the other anglo speaking countries. We note that the application of the [putrefaction] to the USofA has several large lexical sets under it, each focusing on different areas. We see the largest of the sets pointing to things fiscal/financial, while two other sets relate to [housing] and [disease]. We also note that within all three sets, when the entity is progressed through time and into approximately the end of May, gain leading aspect/attributes of [destruction] of the [past], supported by (dissolution), and (splitting)[firmament].

During the lead into the shift from [putrefaction] dominated aspects over to [dist ruction of the past], we see that each of the sub aspects gains some details as it is progressed. The markets related cross links grow to contain references to being 'stuck between the wine and food'. In the past we have seen this as indicating that a mainstream media event featuring the 'spiritual' {ie. wine}, and the 'material' will play out in the near term. These archetypes seem to arise at times when such conflicts for conscious attention also rise. It therefore is likely suggesting that this coming week will feature a dueling between stories about the selection of the next pope, and the continuing demise of the global economic condition. In fact the lexical set suggests that by the end of the week we will be seeing the cardinals unable to make a choice, and being perceived as 'dithering' and 'staunched flow' by the populace at large. Further suggestions within the data are that we will end the week upcoming with neither pope nor market resolution.

We have repeated externally pointing cross links within the entity which are tied to this coming week and slightly beyond in which we find that an odd reference to 'feet' arises. Within this aspect/attribute set we find that these 'feet' will become very important, and are made of metal. The lexical clues see these metal feet as now being very cold, indeed, perhaps even frozen, but that never mind how cold, these 'feet' are determined to move and by week's end, they do so. Haltingly, and with much audible 'creaking', 'groaning', and 'shedding/sloughing' of ice, we see that these metal feet get moving. The feet, taken as 'transport' will be grinding their way forward, though, other than having a very rapid rise due to summation values, we have no clues as to where these feet are going, whose

feet they are, and just why they are so cold. However, on emotive sums alone, these feet will become very important as a marker.

Coincident with the frozen feet being set in motion, we can see that the disease related aspect/attribute set takes on new attributes for physical disease symptoms, mostly focused on respiratory disfunction. These include, the 'loss of the nose', and the 'suppressing of respiration', as well as 'circulation' being 'pressed into slowness'. We also see that 'subordinates will turn red with effort and failure'. Within the disease lexical group we do see that there will be hope of 'blockage' and 'relief', but there are numerous cross links back over to Markets indicating that the 'diseases of the populace' will add yet another short-term impact to the downward trend. In several sub sets of the disease area of the entity, we find 'trade' and 'currency' being 'restricted in their movements' due to developing disease issues.

In one very large sub set headed by [food], and still under [disease] as a dominating aspect, we see that the cross links go both ways on the trade attribute set. Within this attribute set are many bespoke emotions relating to 'fear' and the emotive sums of the underlying attributes subsets show a very rapid rise. This suggests that some form of an incident or event relating to 'disease' born by 'trade' will develop in which the emotions will 'spike' so sharply as to prevoke mentions of the 'fears' about the situation within the mainstream media. There are further suggestions that the 'fear' spike will be hitting the markets entity at a very vulnerable time, and will have a very profound, and prolonged impact.

There are cross links flowing both ways between Populace and Markets indicating that the disease and trade links will become very prominent and will feature an individual associated with 'vines', as in perhaps wine producing vines. The association is not necessarily important in any meaningful way except to note that these links arise just prior to the Populace entity undergoing a very rapid transformation into a tipping point state. The gap between the 'vine man' showing up and the tipping point maximal dense state appears to be about a month.

The 'vine man' apparently plays the role of counselor, and will be urging a 'halt and re-examination'. This is linked, as reported above, to the trotting out of the 're-assuring voices' on the market problems. However, the forces that are driving both the Populace entity and the Markets entity at this time continue to push, in spite of calls for slowing down. We note that the 'sticky mass' will 'envelope' the 'vine man' and his 'voices'. The 'sticky mass' is seen as 'impeding rushing haste toward a change'. Unfortunately, the change is both necessary and will come, but apparently there will be some public 'denial of faults' and much wasting of time in the blame game while events march on of their own rapidly increasing pace.

As if it could not get any more ominous, we need to note that bespoke emotions that come through the processing, such as 'fear' or 'love' or 'shame' et al, are taken as very

serious indications of a crystallization of emotive spread. That is, less diversity and more cohesion at a very broad level. This is both good and bad, as it may be focused behind or by either good or bad forms of emotion. At the moment what we see developing is the move from a state of rising complexity of broadly divergent emotions to a clear separation into splitting groups of emotive 'extremism'. What is worthy of note is that both 'extremism' and 'extremity of the situation' have arisen as bespoke values. Not a good sign at all.

We also note that the rapid rise during the pre-tipping point period of 'destruction of the past' is evenly split between both markets and earth based concerns. This splitting of external cross links also continues to provide attribute reinforcement to the idea that actual cities, as in physical infrastructure of buildings and such are at risk of destruction this year. What we are seeing appear now, developing in the background of the Markets and Populace entity is a perhaps related theme of 'great loss of physical wealth'. While it could be taken that this is focused on current and future markets behavior, there are a dominating number of external cross links to Terra entity which suggest that whatever other losses of wealth may occur within the markets, we will still face the destruction beyond recovery of vast resources with the loss of these two cities. Again. The 'we' here is global. While there are some indications for sea coast association with one city, and very clear mountain associations for the other, there are no indications that this is to be North America based, nor even northern hemisphere. HOWEVER, the capital loss for the planet is being seen within our data as being huge, enough in fact to set back living standards for 3 generations.

We also need to note the cross linked aspects/attribute sets for 'restricted movement' which were seen in ALTA 105 and 405 and as applying to 'food shipments' are now also being seen in both the Markets entity and the Populace entity. Within the Populace entity we are seeing a rapid shift in precedence between the [dissolving] primary aspect under the aspect of [currency/dollar] over to the [restricted movement] aspect. This occurs on impetus from the Markets entity and will emerge just prior to the Populace entity going into the tipping point state. The suggested interpretation leans toward something emerging from 'hidden sources' over the next week relative to the dollar and markets that moves in such a way as to 'restrict the movement' of dollars within an immediate impact on the USofA populace at large. There are repeated, and reinforced references to Germany, specifically Bavaria. We also note that the restriction of movement of the dollars will cause a reaction within the Populace which then views the world as one in which the 'handles have come loose the basket' and 'all pieces have changed position'. This mental upset continues as the Populace is seen grappling with a new world view in which the 'ears are on the bottom' and 'progress has halted'. There are subordinate attribute sets deep within this area which link back to both Markets and BushCo which beg the interpretation as a 'release of the birds mouth' such that 'intelligence comes to light' about the derivatives monster which 'rides the back of the populace', and until real soon was felt but not seen. It is the 'seeing' or 'realization' of the 'scope of deceit' which as a lexical group hovers just prior to the tipping point for the entity.

And a further note is that within the BushCo entity, as well as discussed within previous ALTA reports this year, we see that this period was to BushCo the time in which the 'face would go black with dried blood and clenched jaw'. At the time, all we could get as to a cause was emotively described as being due to bespoke 'frustration' at 'impotency/inability to act'. Now we see the developing three way link between the BushCo frustration lexical structure and the developing Markets shift into a disaster state, and the impact of the 'restricted movement' on the Populace.

Terra - Two Mountains, New Land

The Terra entity is a large one to process as may be expected. We did not process it first this time due to the developing strangeness in the global markets, and due to our commitment to a markets examination which was deferred. As a result we are only able to present an inference of Terra impacts from cross links of external origin. The Terra entity will begin its processing over the next week.

Within the Populace entity and hanging off the change to 'restricted movement' just prior to that entities shift into tipping point, we see a very large number of links going over to the Terra entity and connected to an aspect of [two/2][mountains].

In this case the interpretation is for two, actual mountains, and not our allegorical references to two cities as 'mountains of people'. Again, in this case there are repeated references to actual physical properties for mountains which define the mountains under discussion as being volcanoes.

These two volcanoes are going to impact the Populace entity in a number of ways, but the very first is by popping off and creating some new land. These volcanoes are seen as progressing from 'impassive' to 'belligerent' within days, and that the impact will create 'unexpected' {perhaps 'surprised' is a better pick} refugees. Apparently some of these refugees will be quite wealthy as they will flee with 'vast baggage trains' and 'carts of all descriptions'. Bearing in mind that our inference comes from the Populace and Markets entities, we note that the new lands will be visible from space, and that they will cause a 'tremble of fear' to 'ripple' the global markets.

We also need to note that again we are seeing primacy state changes in our entities within the lexicon. Even with only the cross links for Terra processed, we note that the awareness values of earth related changes are jumping in primacy within Populace and Markets. Combined the cross links have shifted 48 basis points between ALTA 405 data collection and current data collection. This is a long winded way of saying that the general humans at large are now carrying a large, and permanent 'worry factor' around which is earth focused.

Meta Data Notes

The number of reads we have over the ALTA 405 to now in which there is speculation about the 'housing bubble' is up over 80% in just 6 weeks. Further, the emotional tone and summation values of these reads are bordering on extreme values. When we look at the archetypical language core, we find that it is suggestive of the housing 'fire' being burnt out. We also find many building values in the attribute sets supporting both 'proportion' and 'correction'. Neither sound to good at the moment. And these values are very much entangled with the 'suffering' values emerging from the Populace entity as it heads into its tipping point.

We apologize for the brevity of this report, however due to racing the events being examined we felt it better to get it out there and move on rapidly to try to stay ahead of the data stream. We expect part 2 to be posted by Monday, April 25, 2005.

Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on

this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

04.23.2005 Markets - Completing, Dark Forces, Populace - Disintegration and Redemption, Bloody Wounds lead to Repression, Iraq - Dissolving into Solution, BushCo - Derailed, Broken Ground, Antarctica, Dangers of Oil A note on processing

Note: Entities are identified by a blue typeface. Aspect words are enclosed in square brackets []. Attribute words/phrases are within parentheses (). Interpretive editorial comments are preceded by an asterisk *.

Data set distilled from 23.116 million reads. It is anticipated that processing will bring in a total of near 87 million reads (more or less) over the course of the run. The resulting interpretations will be posted as completed. At this point, we are anticipating 6 installments to this report.

Markets - Completing, Dark Forces

In crossing the modelspace representing the remainder of the month of April and moving into May the Markets entity is undergoing its expansion from the tipping point state. Just prior to a tipping point, an entity starts to have all of its various aspects cluster tighter and tighter around a smaller subset. Within our Intellicad {ed note: a low cost open source version of AutoCad} modelspace this appears as the individually colored squares representing an individual aspect/attribute set coming closer and closer together until the area is mostly a tight black dot. Of course these are not actually precise, and therefore there are always a gray shading to colored border around the entity, but mostly the core of the entity is black with references. We use the 'density' of the various clouds of gray and color around an entity to judge it progress through the tipping point process. Further, we can estimate how much depth of impact the tipping point will have based on the size of the gray and colored 'rings' around the entity. In the case of the Markets entity, what is occurring is as dense a tipping point as we have ever seen. There is very little gray area within this entity as it progresses through this next month. This would tend to suggest a very deep and far reaching impact from the transformation occurring in the tipping point process.

What we have showing up now is the mid-point or crucible part of the process. According to our not-very-exact timing clues we are about nearly done with the transformation. Say another weak, then the entity completes the tipping point process and begins to emerge as separating colored squares on the other side. At that point we see different sets of aspects/attributes rising to dominance.

At this point in the process the dominating aspect for the entity is [fulfillment/completion] with a very deep attribute set just chock-full of emotive summation values going all over the lexicon to places indicative of financial concerns. We note that the entity has several secondary aspects going to the idea of 'exclusion' or 'separation' of that which is of 'worth' and that which has no value, but may still yet have a price. We see that the whole edifice is now riding on a cusp. There are two possible courses suggested by equally weighted lexical sets. In one set we find that the attributes go to 'strength can stabilize/prop-up/repair the roof beam', while in the other the idea is that 'strength can impose rigidity'. While internally equally weighted we note that the latter has a far larger number of cross links perhaps suggestive of a universe leaning toward that 'solution' to the transformation besetting global markets.

Further we note that the primary aspect has sub sets of attributes for 'over estimating strength' as well as 'forced march for reparations'. Then through internal cross links we find that there is a 'hollow advance amidst boasting across the creek', which is supported by 'yells of defiance to foes in the distance' also curiously with a sub set indicative of 'shouting across the creek'. This may well be an early indicator of officialdom getting into public 'shouting matches' with other officialdom across the Atlantic Ocean. The only reason to suggest Europe over China is that at the moment we find a slight preponderance of EU references within the geographic set.

Following on the heels of this shouting match, we note that the lexical set has a rising aspect with a nearly complete attribute set showing that 'officialdom will seek for assistance' while 'crying tears of remorse'. However they will receive 'animosity' and 'rebuffs to their face' as well as 'spitting on the shoes' for their 'deviance from the traditional rules'. This will not aid the markets and the entity is at that point just under going the last of the transformation prior to emerging and separating.

So we have a cross roads with a moral crux on the use of strength sort of test. The data is indicating that the Markets entity will not do too well on this test as the aspect which emerges first and rises the steepest and most rapid within the modelspace is 'repression' which is supported with internal sub aspects of [dark][forces]. Apparently these 'dark forces' will rise to [repress] the (sand) [back into/formerly] (position).

Around a core aspect of [restricted movement] we note that rising sub aspects show the Markets being directly impacted by the 'management of the internals'. This impact is not favorable. It would appear that the lexical set is signaling a general 'release of insight/knowing' about the 'internal management' of the USofA economy. This impact is viewed as being detrimental over the summer as the internals are 'exposed for examination' and the 'motives of the well-placed' are 'questioned'. Further it would appear that the 'well-placed' are going to be 'be-set with problems and whips' at 'rest and nourishment'. One obvious interpretation would be for someone 'well-placed' within the economic system to be vilified in public, likely at a restaurant or while on vacation. This incident is apparently seen as significant, with very high emotive values and a far distant

impact value, all this in spite of its relative 'smallness'.

Sticking with the theme of the USofA economy for a moment, and as noted within the over arching aspect of 'restricted movement' seen as settling on the country over summer, we note that housing as a markets concept will be 'shifted', as no one seems to know the rules', and that further the same people would seem to 'not know their place'. Both of these lexical elements are in supportive position to the rising idea that the 'internals of the housing industry finances' are being 'managed with an iron fist' and that subsequently the 'domestic affairs of the firm' are being 'ruined' by the 'incorrect interpretation of the rules'. This aggravates an already bad situation at the macro level. The data then suggests that by the end of May {ed note: further connected fallout from our May 20th m/l Populace entity tipping point} a 'squeezing hand' will 'stifle the flow' of the 'necessary/required'. This is seen as being economy wide in its impact, and given the extensive cross links to [currency], we would be remiss in not presenting the idea that some form of 'housing crisis' or collapse will significantly impact the dollar within the USofA. Further the data suggests that this impact will be deflationary in the sense that what is shown is NOT a surfeit of dollars, but rather repeated references to 'restricted flow'. This restricted flow is also found within the primary aspect of 'restricted movement'. Neither sound particularly good.

In spite of or perhaps even, because of, the 'restricted movement', we find that in so far as the markets are concerned, this summer's theme might well be stated as 'unity lost' or 'down the rabbit hole' as the data suggests that a 'sloshing about' is coming like none seen before. The data further states within several sub aspects that 'volatility extremes will drain blood' and that 'feet will stand in urine' during some particularly volatile days. The suggestion is that the pace of change will be so rapid that those involved will encounter some bladder pressures. Conversely, when we see the references to various human body parts, we have a tendency to pay attention. Usually these are particularly revealing or prescient. Usually not as we had anticipated. In this case, one might want to apply the terms to the markets as a whole, rather than suspect that actual humans will lose control of their bladders over markets volatility, but stranger things have happened even very recently so why not. We do need to note that these bladder problems are seen as being focused on USofA economy woes and will impact market participants in the month of May which will be very much a 'tone setting time' for the rest of summer. We also note some very large 'sheers' or 'schisms' coming relative to the Markets entity later in the year as we near the fall and the Populace entity starts to emerge from its tipping point some 2 to 3 months after the Markets entity has emerged from its own.

Populace - Disintegration and Redemption, Bloody Wounds lead to Repression

Within the Populace entity is a large section of data which is geographically related to the USofA and all of which hangs under the aspect of [dollar]. This area exists due to the contrasting tertiary nature of the 'currency of the United States of America'. Another way of looking at it is that the dollar has three largely separated emotional legs of support. In

one leg the dollar is the official currency of the USofA and brings along the expected emotive attachments to all things governmental. In a second, and related emotional leg, the USofA dollar is the global reserve currency and brings along all the emotional baggage of that position. There is yet another emotional leg for the dollar and that is as a proxy or representative archetype for the 'full faith and confidence of the hard working USofA populace who provide any and all, past and future value' which is basically, at its primary core, what backs the buck.

It is to this latter idea that the Populace entity, that sub section with USofA geographic references and [dollar] as a primary aspect is referring. It is to that mental idea of that particular emotive leg of dollar references that we now direct our attention.

Within the modelspace the pixel clumps or blips representing the [dollar] and its sub sets, is seen as advancing through the month of May and into summer, but not in a particularly stable or 'well' manner.

Over the course of May, as previously noted in Part 1 of this series, the Populace entity coalesces into a black ball of densely packed aspect/attribute sets and goes into a tipping point. Unlike the previously seen tipping points in past years runs, or unlike the now occurring tipping point for the Markets entity, when the Populace entity goes into the tipping point it elongates within the modelspace. This has not been seen before. When we progress the modelspace forward with our perpetually suspect timing clues, we note that the Populace entity seems to spend all of the summer in a tipping point state of 'tense denseness'. Our model does not show this as breaking free until very late September or early October.

As noted, the tipping point for the Populace entity would appear to begin around May 20th within a range of May 15th to May 28th. The lexical clues have our Populace entity coalescing around verbiage which is currency, fiscal, housing, and generally 'markets' related. While we have yet to process the Terra entity, and there are a number of cross links going back to Terra, it appears at this time that the actual formation of the tipping point is due to financially related matters.

Within our aspect of [dollar], we see two separate, but equally populated secondary aspects. One is best termed as [redemption], and the other as [disintegration].

The aspect of [redemption] is not used in the religious sense, but rather in the pecuniary way, as in 'redeeming for value' or 'surrendering for payment'. Both of which phrases come from the attribute set. Within this aspect and its supporting attribute sets we note that the dollar is going to have a tough time of it this summer. The indications are that the 'redemption' aspect of the dollar will rise from sources foreign to the USofA, and the obvious interpretation is that some outside agency or government tries to obtain something of value for all their Federal Reserve Notes. Within our data we see that a 'request for redemption' provides a 'spike of annihilation for illusion'. This sub aspect is

very heavily cross linked internally back to the [disintegration] aspect and a likely interpretation is that it is this request for value which leads to the [disintegration].

The Populace does not take this well. Within the [disintegration] aspect we see that [disregarding] (personal)(safety), the [crowd/mob] (storms) the [hilltop], (pushing) (away) [frightened](youth), and (calling) for [retribution/punishment/death].

We have to note that this thread is extraordinary in our experience as it is clearly dominant during the transition within the tipping point period. It is as though the continuing dollar debacle will dominate the emotive tone of summer both in and out of the USofA. Within the internally focused lexical sets we see that the disintegration of the dollar is 'pushing sticks/tools as leverage for change'. This disintegration aspect endures for some time. In fact when we progress the modelspace out, while it depreciates over time, and starts to sink into the background, the disintegration nonetheless is persistent and still seen in February of 2006, which is more or less how far out our range extends at this time.

We see that the [disintegration] brings an aspect, fully populated which is best defined as [security]. Within that aspect there is a plethora of divergent themes. For example the data suggests that the 'populace will express its displeasure' this summer in 'public displays' that will cause 'fear to over ride common sense' in government {ed note:cross link to BushCo} and that this in turn will cause 'unseemly reactions' and the 'pressing of security on the populace'. While this may sound like a martial law situation, at this high level, the details suggest some local demonstrations on the East Coast will cause BushCo to debate internally about the use of 'security'. While this is seen as being 'reported/spoken' about in general, the 'response/backlash' causes 'flight/flee for safety' and the 'abandonment' of the idea. A lot of the pressures on BushCo and associated officialdom in a global sense will be coming from so many diverse sources as to nearly confound the mind.

We note that the 'dollar' as an aspect, in all its tertiary emotive legs, is re pleat with indicators and descriptors for change. The level of change is such that it seems reasonably safe to say that the dollar acts as one of the engines for the Populace tipping point this summer. The dollar has many rising aspects, but as we progress even over the shortest time period within the modelspace, other aspect rise right behind and overtake them. Such a rate of change is emerging that it makes the interpretation difficult. What we usually are able to provide is a snapshot of a bit of frozen time in which large lexical themes will dominate and whose details, while important, do not fundamentally change the nature or state of anything within the snapshot. We are unable to do that now as the rate of change is seen as so significant as to require perhaps several pages for each 'step' within our advancing modelspace.

What we are presented with is the progression of the Populace entity into and through a tipping point in which the rate of change does not slow down, at least relative to the

dollar, but is constant if not increasing. This results in the entity emerging from the tipping point but this sub set of dollar related associations is still boil/roiling its way along more or less intact as a driving point. It would appear that what occurs is that it takes the Populace some number of months to adjust to the idea of an 'unstable' or 'roiling/foaming/frothing' currency world, and that the adjustment has profound impacts globally but especially within the USofA. It further is worth noting that what happens is not that the frothing of the currency associations abate, but rather that the populace at large starts to adapt to a new stream of continuous change in what had been viewed as relatively stable.

Now we also need to know that the frothing and foaming are held within the aspect of [disintegration] and are suggestive of the dollar foaming its way downhill. Our disintegration theme is continually reinforced as we progress the modelspace forward through the summer. As to timing clues, we still are picking up some significant event or series of events around May 20th. However, as reported above in the Markets section it would appear that events are already in play in this area.

Over the course of the last of April and up to the entrance into the tipping point, the Populace entity continues to add emotive weight to the disintegration theme and we see that new attribute sets bring on the idea of the 'body falling apart', and 'despair in the streets'. We also note 'confusion and wandering leads to confrontation with the unconcerned'.

There are repeated references within the Populace entity, and under the dollar aspect to [refugees]. It is not possible for us to determine if the references are to 'dollar refugees', that is, foreigners seeking refugee from the dollar, or if it is somehow connected to actual refugees from some disaster, natural or man-made. What is pertinent though is that these 'refugees' will emerge from 'near the bridge' located at the 'calm part of the river'. Some 'small residences/dwellings' are nearby, and that a 'place of feasting/cooking/eating' is to the 'right of the bridge' as they 'walk uphill'. Usually we do not get such poetic metaphoric language, and when it does arise it is usually unexpected accurate.

These 'refugees' will be led by a man, supported on each side by women, and will be central to the Populace entity transitioning into the tipping point. These refugees are noted as fleeing toward the hilltop, and somehow are all bound up with the developing dollar crises. The appearance of refugees perhaps should be taken as a marker for events soon to follow. While internally central to our dollar aspect, there are not enough details within the attribute sets associated with the refugees for us to be able to determine their role, either as causal agent or mere coincident time marker.

What is available within the attribute sets is that the refugees will be there when the 'body breaks up' and when the 'body falls to the ground in pieces'. These are both dollar held sub attributes. We also see that some of the refugees are able to 'take up the best part of the scattered energies' for their 'advancement up the hill'. We must also note that what is

seen as driving these refugees is clearly a bespoke condition of 'fear'.

Another technical note is that all of the externally focused aspects within the Populace entity and hanging under the dollar prime aspect are cross linked bi directionally. This is a very large web of influences both in and out from the entity. We see that dominate cross linked aspects surprisingly show under the ideas of [sweat] and [labor]. Under these very large subsets of aspects/attributes go to the idea that 'shattered energy flows out' and that 'distribution by force' from [masters/royals/official] (granaries) will occur. This will result directly from the 'disintegration of the wonderful surplus' and the 'sinking of abundance into the muddy marsh'.

As the modelspace is progressed, we can note within the 'redemption' driven disintegration of the dollar, that the Populace has a major aspect whose primary descriptor is [bloody wounds]. This descriptor is linked internally to the tipping point of the entity. Just as the [bloody wounds] are seen, our entity is at that point within its tipping point totally.

During the tipping point period, which as we noted was extraordinarily long in our experience, the Populace entity shows a rising aspect under [bloody wounds]. This aspect will not over take the [bloody wounds] level of primacy but goes to supporting it and has numerous cross links to other internal Populace aspects indicating that these wounds will cause the 'populace to wash away the blood' and also hanging under 'wash' as an aspect is a series of attribute sets going to the idea of 'washing away attachments/associations to masters'. This attribute set is one of many which are cross linked back to the aspect of [rebellion] that is set to bedevil BushCo this spring and summer. We also see that the populace will 'disregard/cast off' the 'dead-making fears' being 'pressed' on them, and will 'stay away' from 'rituals and gatherings' this spring and summer. This 'staying away' appears to be significant as those in officialdom are seen as 'sweating fears' over 'absence' of the [populace] at their 'table/stage'. Under this aspect, we note that 'minor level/small scale' [servants] will be seen [hiding] from the [displeasure] of their [masters], and will be 'reluctant' to 'confess to the absence' of the populace. Again we see cross links back to the [security] aspect, but within attribute sets here there is the suggestion that some government sponsored public ritual events may be canceled this summer under the [pretense/pretext] of 'security' when the actual reason is the [populace] is seen as staying away in droves. There are repeated cross links back to BushCo which terminate in the bespoke emotions of [embarrassment], and [shame].

Within the Populace entity, cross linked over from 'bloody wounds', there is a rising aspect which seems to take primacy just below the [dollar], and just before entering the tipping point. This rising aspect is [repression]. We say 'seems' in this case as the depth of density is such that determining what happens first is difficult within the rapidly darkening entity. It could be that the Populace entity is viewing itself as being under 'repression' and that acts as a causal agent for the tipping point. Alternatively, it could be that the repression settling in on the populace just as it goes into the tipping point is

merely 'more heaped' on and that the dollar disintegration is the actual trigger for the fundamental emotive state changes. It matters only in how the Populace is likely to emerge from this period. We still note repeated, and fully populated aspect/attribute sets which go to the idea of both internal {ed note:within the USofA } and external 'rebellion' against BushCo. These aspects will apparently pick up momentum in May and be a regular facet of things thereafter.

Returning to the other dominant theme of 'redemption' within the 'dollar morass', we note that this redemption will cause the powers that be, in this case defined as the [masters] of the dollar, to feel as though they were being [torn apart] or [scraped raw] by the actions of [redemptions]. We can see within the attribute sets that explicit references to [inexhaustible breathing/flow] is (suddenly) at (risk) of (cessation of breath). The lexical set would have it that the [dollar] 'redemption is at a time of low nourishment'. Not seen as being a particularly good sign for the dollar.

As we progress the modelspace through the summer and the Populace entity goes into tipping point mode we can get some details emerging out of the general concentrated chaos that is an entity in tipping point state of maximal change.

Some of the Populace entity threads are cross linked back repeatedly to 'scattered energy' or 'scattered energies' in various other entities such that the idea for the interpretation is along the lines of an 'energy crisis' in several areas will cause several 'tens of millions' to 'flow to rest at the side-stream/out of mainstream'. What we are thinking here in our interpretation is that the events of summer are seen as being energy related in large part, and will lead to widespread economic slowdown and the 'idling of hands in their tens of millions' as our attribute set so poetically puts it. Our geographic references within the Populace entity suggest that the energies crises will be many and varied, including both Russia and Iraq, and curiously, Viet Nam. The imagery that emerges from the attribute sets within this section of the Populace entity go clearly to the idea of millions of working Americans becoming unemployed in a relatively short period of time. In fact the attribute sets go to the idea of the speed of the 'idling of hands' as being bound up in the early stage of the tipping point emotional changes. There are several references to 'shocked' and 'stunned' within the sub aspect attribute sets which indicate that the speed of the unemployment will be the defining characteristic.

Iraq - Dissolving into Solution

Isolating the cross links within the Populace entity which focus on Iraq, and maintaining the integrity of their cross links, we can look at the Iraq references as though dealing with a self expressing entity such as Populace or Terra.

Within our Iraq references we find that Iraq as a subject occupying time and some of the 'scattered energies' of the Populace will definitely change state in May. The primacy state values for Iraq will drop exactly in half from a steady 50 down to 25. This state change is

accompanied by a very large rise in verbiage going to the idea of the 'solution spilt'. Now in this case, the word 'solution' arises not as the 'solution' to a problem, but rather in its alternative meaning of a 'solution of elements dissolved in a common media' as the attribute set clearly would have it.

In our data set, we see that May brings the month in which our 'container is dropped' and the 'solution spills onto the floor'. It is seen as being a period of rapid shifts, both in 'effective alliances' and 'working propositions'. In point of fact, most of the attribute sets would have it that basically 'nothing works' in Iraq, and that the state of primacy change comes about when the 'woman gains back her son' and the 'basket is dropped'. At that point, all bound up in the rest of the Populace entity undergoing its shift into tipping point mode we see that 'weakness is exposed' in Iraq, and that the 'controllers will lose their conscious grip' on the situation, and will be found 'holding their breath' in 'anticipation of the pottery striking the floor'. Further, the situation will come to resemble a 'cauldron boiling over' with 'impurities bubbling to the surface, burning all'.

We find that the changes indicated coming for Iraq as seen by the Populace entity are filled with words for 'explosive' and 'destructive'. These are both internally and externally cross linked multiple times in concept. A good interpretation would be for the 'long hot summer' of '05 to be a memorable one in that as the USofA populace is undergoing the stressful change of the tipping point, things in Iraq will go from 'bad' to 'intense'. The number of references to 'extreme' in emotive sum values rises precipitously as the Iraq quasi-entity is progressed through the modelspace over the summer. It would appear that bad does go to worse, but only to quickly pass through 'worse' toward whatever is on the other side.

Our Populace entity is also clearly saying that 'subordinates' of BushCo will be also on the hot seat this summer both in and out of Iraq. Apparently the Iraq 'situation' is about to become dire for some very public faces who will react with 'red faced shame' in some public situation where they had thought themselves 'safe as home'. The 'shock of the shame' is seen as being a catalyst at least as far as the press rebellion cross linked over from BushCo entity. It would appear that a reasonable interpretation would be for some public embarrassment to BushCo underling will make it to 'page one' status globally. This will not be well received. This may well be co-incident with the previously noted 'thoughts of repression' which will have to be abandoned. It is not easy to determine at this level of detail just how these items are related temporally.

We also find that within the incident of 'public shame' that a person with a 'rigid back', likely indicating military, will 'face down' the 'criticism' of the 'weak chairs', and will clearly 'point fingers of shame' at BushCo. While it is not this person who will be featured within the image that comes through, it is clearly this incident, likely occurring late in summer and reasonably at some form of congressional hearing, that starts the Populace off on its emergence from the tipping point.

As might be expected, there are cross links back from the [dollar] aspect over to the [restricted movement] aspects in both Markets, and BushCo. Not surprisingly there is also the same aspect within Terra, however we cannot load that data within the modelspace until processing for part 3.

BushCo - Derailed, Broken Ground, Antarctica, Dangers of Oil

Within the BushCo entity, and within the modelspace as it is progressed over the summer, and absent any examination of cross links we find that a situation will arise in which 'no one will come forward with any contribution' in support of BushCo. And that further the entity 'fears attack if it defies the rules'. We also note that its internal drivers are going to be 'derailed' and 'left directionless' as 'doubts' about 'unafforded requirements' surface at all levels. These doubts will be causal in large part as we see that the doubts are terminating points from Populace cross links.

The BushCo entity is about to transition through a period in which its 'unanimous purpose' is under question and attack. Both internally and externally, BushCo cross links go to the image of the 'unanimous purpose disintegrating under repeated onslaughts'. In specifics we can locate the lexical areas within BushCo which represents the PPT, or the Plunge Protection Team otherwise known as the Presidential Working Group on Markets. The sub aspects and attribute sets for the PPT are showing severe change and divergence indicative of large stressors being applied. Part of these are cross linked externally to the 'revealing' and 'exposing' aspects of the Populace in tipping point. One likely interpretation is that revelations about the PPT to the public at large come this summer and are not easily digested.

While we are unable to load the Terra entity data due to the volumes of lexical associations with which our processing, including humans, must cope, we do have all the place holder cross links from the other entities which do go over to the Terra entity. These of course hold their values on this side of the connection to Terra and thus some information may be gleaned via inference of the effects on these entities. For example, within the BushCo entity we have an aspect which is cross linked over to Terra and whose descriptor is [earthquakes/earth movements/earth changes]. By examining this aspect and its supporting aspect/attribute chains we can make some reasonable inferences.

For instance, under [earthquakes] within BushCo, we find that a lexical group exists which shows that BushCo will be impacted by earthquakes/changes. Further we see that the BushCo entity has an approximate time period of a month. {Ed. note: - all month references are lunar months of 28 days approx. unless specifically identified as calendar months.} Within the descriptors for the impact on BushCo we find that the earthquakes/movement is seen as being located on the [west coast] of the USofA or in the

[pacific ocean/pacific basin]. Further that the earthquake is described as creating [initial difficulty] with its first appearance. We also note that some long term duration indicators within BushCo show that problems will still exist for a year following the quake as relates to [water]. There are some other, more curious attribute images going to the idea of the 'shaking causing a mountain to drop at its center' which in turn is 'depressed, and fills with water' creating a lake.

Within this thread within BushCo, the whole emotional tone is of one 'beset' by 'difficulties'. We see that BushCo will 'proceed in spite of stubbing their toes on problems'. This latter has some interesting imagery within lower level attribute sets indicating that BushCo will 'send in the advancing armies' only to discover that the 'advice given was correct' and that they 'acted in spite of the obvious' which leads to the 'advancing armies' encountering 'incredible difficulties' and 'rising waters of problems' which 'overwhelm the forces' causing a 'general retreat under hazardous circumstances'.

We note that BushCo shows that the 'top' will 'take the wrong attitude' which causes 'subordinates to chafe red in the face' and further the 'subordinates suffer flaying of flesh' as well as 'rot in legs struggling in standing marsh'. A further, lower, but rising aspect shows that 'rebellion comes' from 'within the ranks' over 'mistreatment and needless sacrifice', all of which will rise up to public consciousness as a result of the BushCo response to the earthquakes/movement.

Now, while we have indicators for the West Coast of the USofA, there are nearly as many for the Pacific Ocean Basin. So our location is still uncertain. The BushCo entity does present this as a 'western face' problem, and the indicators are that this event will 'shift resources' from their 'control' due to 'overwhelming demand'.

Within the earthquake related lexical structure in BushCo we also note repeated references to our theme topic of last week's posting, 'restricted movement'. We see this in the form of repeated expressions which all go to the same idea, some examples are 'standstill', 'halted flow', 'restrained', and others of similar nature. These 'restricted movement' values are continuing to pile on the supporting aspect/attributes as we move forward in our processing this year. In the same way that we had the water associated warnings last year which preceeded the tsunami, we may be receiving advanced notice of similar sized events which will result in wide spread 'restricted movement'. Such repetitious reinforcement obviously makes the interpretation favor a swelling of potential for the theme.

One other repetitious reference that we see building a large base of supporting aspects/attributes is the idea of 'rescue'. We have seen repeated references to 'rescues' which are 'held up' or 'held in abeyance' or in 'standstill' in the previous reports in this series as well as in ALTA 405. Once again, this idea is building up support as we progress through the modelspace. Within our lunar month range {ed note: timing clues are often off by weeks} we note that 'rescue' will arise as a significant feature of the

'earthquakes' which will affect BushCo. We do not get to see the details surrounding the rescue, but rather, from the cross links within the BushCo entity, we are able to observe that the impact of 'extending the hands to rescue', or as also stated, 'effort of committing resources to rescue leads to exhaustion, and breathlessness'. In addition, the BushCo entity will be seeing the problems resulting from the earthquakes as being 'sheer walls of insurmountable difficulties'. This latter attribute set has a number of sub sets headed by aspects of 'failure' or 'recriminations' which apparently will result from either 'poor effort', or 'defeated will'.

There are further cautions within the BushCo entity when we progress the modelspace forward over the course of our data extent. We note that the 'earthquakes of summer' are seen as 'setting the trigger' or 'preparing the situation' for 'restrained energy locked in place with danger' which may develop later in the year. As with last year, we also see a dark spot of coalescing data points developing around the first of December, 2005. While way too early to get much of an idea of what is being forecast, we do note that very ominously, the BushCo entity is clearly providing the image that the up-coming 'quakes of summer' are mere pre-cursors, or rather, that they create the conditions of the 'docile earth' being 'tight with restrained energy'.

After reading the above, one cannot help but wonder about the potential for tsunami. Within the data we gather, there are indeed references to tsunami, but we must also note that as the fear level is very high consciously, this will affect our lexical base. So while we do see some indications of tsunami, and some specific for the 'ready earth beams energy into the waves', we have no clear geographic or other references for tsunami at this time. We have some spotty references to a period after the 'summer shakes' when the 'waters will become calm' and the 'confirmation of peace comes to the oceans'.

As with the earthquake cross links within BushCo, we also note that Antarctica rises up through repeated cross links at a number of aspect levels to cause problems for BushCo. Again we see that 'resources desired for others' are shifted as a result of the 'derailing' of the 'physical element' which 'cannot flow past the iron'. This causes BushCo to divert its attention from other problems to 'send the woman of consequence' to 'the south' along with 'the domestic affairs manager' to 'ascertain the risk of suffocation'. They are seen traveling in 'austerity', and 'depravation'. They arrive at the 'south destination', but by then, apparently it is too late, and they, along with others, must 'flee the flaming body'. This may well represent some form of volcanic activity causing problems for the various scientific installations there.

Another, and very large area, within BushCo goes to the subject of oil. Not surprisingly, it dominates much of the internal cross links within the entity. What we have developing within this data set is a shifting of much of the cross linking previously to other internal aspects over to external cross links to the same aspects found in other entities.

We note that the rising aspects are bespoke warnings of [danger], and [dangerous

position], as well as [danger follows walking]. We then see that the attribute sets go the images of 'pacing back and forth' in 'anticipation' of 'reaction' to 'disclosures'. And that 'trying to convince yourself' of 'justification for your goals' will come 'prior to public facing proclamation'. This latter may be indicative of a news conference or other officialdom public exposure that is going to become troubling for BushCo over the issue of oil. This area is also linked to our range of the next lunar month.

Within this area the details suggest that 'someone will be stated/described' as 'just a follower', however, those 'five who judge' will decide that 'in the end' the 'follower chose their own way'. And thus 'culpability' comes to BushCo. The 'follower' is seen as 'shaking and quivering' with 'rage and fear', and is also viewed distastefully by the public as they 'throw about trash' and 'assertions of innocence' as well as 'claiming bonds to the righteous'.

In the end, as the month progresses, BushCo is signaling that as an entity it has 'lost the turning point', and now 'faces the dark forests', 'lost', and 'wondering about retreating in pace'. The entity is clearly stating that it views its troubles as originating because of 'going against the laws', and 'damaging the innocent'. What is more telling is that several rising aspects within this set show that the 'damage inflicted will demand ten years time'. Further we see that 'self-inflicted wounds will be born for ten years'. And as relating to the commodity of oil, we see that BushCo will 'lose the lifeline from its hand', or alternatively, 'let loose the rope holding to its moorings'. This can well be interpreted as the entity suggesting that the constant of its existence, that is, its relationship to oil, has now come 'loose its moorings'. This is heavily negative and is the leading downward edge of the BushCo entity as we go forward through this summer and beyond into the troubling days of fall and winter.

One last note is that BushCo contains a fully populate aspect which goes to the impact of the weather this summer on the USofA and by extension the problems as seen from the BushCo perspective. We note that this summer will bring extraordinary winds which will bedevil BushCo with yet more requests for assistance in the face of death and destruction. In the general subject area of weather we see that a preponderance of new aspect growth to BushCo is accruing to this section. Many of the issues which arise this summer and move the decisions of BushCo will be weather related. The damage levels indicate from the cross links seem to be very high. We also note that almost all the cross links head toward the Terra entity and the primary aspect of 'wind'.

A note on processing

We usually process the larger entities first which results in being able to use the Terra entity as a backdrop within the modelspace for comparison to the other entities and the changes observed. In this series we had already begun with the Markets examination since we were headed towards the production of a special report which was deferred due to developing global market events. We still used that processing direction which has led

us to two reports of the series focusing on some of the secondary entities, Markets, and BushCo.

Due to the proximate of the April 24th hyperspatial angular momentum lunar eclipse, and the potential for earth movements as a result, we are posting this part a day early.

Also this will allow us to dump the modelspace and begin the processing and loading of the Terra and other large entity data which usually requires about 9 to 11 days processing. We hope to be back on track with a report on the Terra entity out next weekend and certainly by the following Tuesday (May 3rd) at the latest. Again, we hope to use the rest of saturday and sunday, usually reserved for interpretation, to jump the processing of the large entities. Our apologies for the odd flow on this report series.

05.01.2005 Week of May 1 - Change coming hard - Markets, Populace, Press - Army focus, unskilled soldiers, unwise general, courageous outlaw captain * Iraq & the Bush Wars - May * Populace/USofA - Continuously Tipping, Isolation Developing * BushCo - Forced Withdrawal * Terra - Fiery Blood Flows, Oceans of Rainwater, Florida Squeezed, Summer Shakes part deux * India - Under Attack * Silver - Duality Misapprehension

Note: Entities are identified by a blue typeface. Aspect words are enclosed in square brackets []. Attribute words/phrases are within parentheses (). Interpretive editorial comments are preceded by an asterisk *.

Data set distilled from 47.28 million reads. It is anticipated that processing will bring in a total of near 87 million reads (more or less) over the course of the run. The resulting interpretations will be posted as completed. At this point, we are anticipating 6 installments to this report.

Week of May 1 - Change coming hard - Markets, Populace, Press - Army focus, unskilled soldiers, unwise general, courageous outlaw captain

We are taking some liberties with the entities in this part of the report. This is due to a group of developments which beg for attention within the modelspace. The first of these developments is that a curious clustering of entities has appeared around the first week in May. The Markets entity, as well as the Populace entity share a common lexical set which is clearly defined as being focused on this first week in May. This lexical set is perhaps best described by the primary aspect of [development/progress/evolution/change]. We find that the same primary aspect is in both the Markets and the Populace entity with significant movement of emotional sums appearing as the modelspace is progressed through the month. A number of other significant developments also emerge within the progression of the model.

We note that the Markets entity uses our [change] aspect in one manner, facing certain challenges as seen in the supporting attribute sets and cross links, as well as noting that the Populace entity not only uses the [change] aspect in another way, it would appear it is also indicating a very large emotive shift at a global level is to begin this coming week. Staying with the Populace entity at a macro level, we note that the share lexical structure of [change] within the Populace entity develops cross links almost immediately in the week and progresses to a 'splitting' or 'developing duality' within the entity. What we see as further clues to this upcoming shift is that our geographic subsets clearly start to isolate the USofA Populace from the rest of the global Populace. In point of fact, it would appear the Populace entity has already developed a significant 'wedge' by late in the first week of May. From about that point forward, we are dealing with two very closely

related entities, but based on behavior differences that develop as we push forward the modelspace, it is becoming clear that we will, in the future, be dealing with two separated Populace entities; one for the USofA and one for the globe at large. Further it is clear that our first difference is seen as the Populace/USofA is moving from a primary aspect of [change] to one of [isolation], just as the Populace/Global is moving from [stopping compulsive behavior] over to [change].

So at a meta-data level, we note a very significant week ahead. The [change] lexical structure for the Populace indicating a very large geo-political spilt developing at the Populace level, as well as [change] intruding on the Markets globally. Now while the Populace entity is separating, as though to indicate a 'splitting of shared destiny' as the attribute set image would have it, we do not see any corresponding split within the Markets entity. However, the Markets entity does appear to acknowledge the [split] of the Populace entity as it is indicating that by week's end the rising aspect/attribute for the Markets entity will be [danger]. Further we note that the trend seen through the movement of the Populace entity and its split is very significant in its impact on the Markets entity as is expressed by the primary rising aspect/attribute image of 'cut off from strong helping hands' as well as 'danger, sharp rocks and falls'. And again, we find reinforcing images in aspect/attribute sets further down the thread line where it reads as 'sexual obsession grips all' which in turn is seeing as leading to 'inability to suckle the child', or further as 'the child can no longer be nursed'. We also note that within supporting cross links that the 'fearful feelings will drive all before them', and that 'the advantage has slipped, oiled, between rocks, the hand is small'.

As if this is not enough, the cross links to the emerging separate entity the Populace/Global has markets related rising aspects/attributes indicating that the 'plains are barren', and that 'empty wind rebuffs faint cries'. We also have even further troubling images held in even deeper aspect/attribute sets also contributing to the rising emotive sums of these Populace/Global cross links where we see that the image would have the Markets entity 'barren for 3 years' or 'without surcease for a handful of years'. And again, even deeper, we note that 'life ends naturally', and perhaps as ominous in its own way, the 'feathers of the dead' are seen as 'floating/drifting to the path/road'.

The imagery from the supporting sub sets continues to support the idea of a 'life end' event or stage developing and beginning to show this week. We note that the Markets are to be clearly responding to the rising duality within the Populace entity by the end of this coming week.

As the data is progressed through the modelspace for the rest of the month of May, we note that the Populace entity cross links for the Markets are heavily influenced by rising aspects/attributes which go to the idea of 'sinking into a deep sleep', and 'withdrawing from entanglements'. Further the Markets entity tipping point pressure on the Populace entity indicating late May coalescing is now tightly around the idea of 'strength has retreated' and 'energy played out'. This is further reinforced for the entity as the rising

aspect/attribute sets show 'weak will gain power through mass' as well as 'new cycle begins with new roots'. In point of fact this whole area of Populace to Markets entity cross links is chock-a-block full of references to the idea of 'roots severed' and 'disorderly chaos leads to decay'. We also note that for 'three years chaos will drive the cart'. And if not absolutely clear, we have 'no honor can be gained now'. Under this last is even more of a warning, 'be still for 3 years'. A hard task certainly.

A further note is that we are now finding our data indicating that the general Press, or mainstream media, needs to be addressed in a different fashion than we have in the past. It is as though the meta data of the model is forcing the Press out of the Populace entity. We have run the processing twice or more at several levels of the flow just to be sure that the trends developing here are not artifacts of our programming. It would appear they are not.

We have some clues such as the word 'change' being applied to the Populace entity at its own meta data level prior to the split between the geographic references. Then we have a further, apparent split, in that as a separating aspect from within the rising aspect of [isolation] which is to affect the Populace/USofA, we see that the Press or MSM as an entity is emerging with its own fully populated primary aspect/attribute set.

What is interesting is a cross link back from the Populace entity prior to the split behavior which arises from the aspect of [armies] and while originating within Populace, the [armies] aspect is clearly seen as driving the Press as a group during this coming week.

Within the aspect of the [armies] we note that the press will be occupied with [two evil/unskilled captains], the [possibility of ominous defeat], and the [actions] of the [unwise](general) who is seen as [rewarding] (those) (without) [accomplishment]. These primary stories are to be augmented with some large level of press discussion about [confusion] and [massacre]. Further there is also some indications of [ships] (determinations) by their (captain) as being [outside] the [law], but nonetheless also seen within the Populace as being both [courageous] and [self-sacrificing]. In the end apparently a duality will exist wherein the [actions] of the [captain] will be seen by the Press as those of an [outlaw] while the Populace is seen [lauding a hero]. Our indications are that the Press will actually be aware enough to note the duality themselves.

Iraq & the Bush Wars - May

An interesting development within a slew of other novel experiences in our modelspace has arisen around the BushCo links to Iraq, the war(s) there and the other Bush war(s) globally. We can see a crystallization, if you will, of many lexical clues forming into a more complex lexical structure in which the war(s) seem to blur into one another, while at the same time, two, gray bands of separation begin to develop. We note that the proximity of BushCo to both Iraq, and to the Populace, both Global and USofA segments {at this point in the model = May}, has shifted. The gray bands are the areas in which

space had developed between the entities.

We also note that the dominant aspects of Iraq for the month of May are diametrically opposed {ed note: literally, and actually dia-gramatically opposed within the modelspace} to the rising primary aspect of BushCo {see below}. In this case we have a primary aspect for Iraq for the month of May as [restrained energy]. Further the rising supporting aspects are clustered around 'fertile release of restrained energy'. Then there are the supporting, primary attribute sets with images such as 'perfect square big', and 'completed according to nature', as well as 'goal at the end of the road is visible and approach-able'. We also see secondary supporting aspect/attributes which also go to many of these same images as in 'action is straight forward for success' and 'young, fertile earth produces single minded opportunity'. Bear in mind these references should be examined from the point of view of the Iraq opposition to BushCo occupation.

We also note that within the shifting of the set of primary dominance as the entities are moved through the modelspace, that May becomes the month of 'speeding up to the limit', and the 'release of previously restrained youthful energy'. We see that as the month progresses toward our May 20th {m/l} tipping point within the Populace that cross links contribute to the idea of 'all hell breaking loose' in Iraq and periphery. In point of fact, and while initially hard to notice, we do see that some significant contribution to the woes of the Markets over the month will develop as a result of events in Iraq. Specifically, the south. Much of the geographic references are to major 'people storms' in the south of the country.

On the terminating area of the cross links from Populace over to the Iraq/Bush Wars area of the modelspace we note that these cross links end in a very disheartening lexical structure dominated by such images as 'blood flows', 'cowards run', 'the elite are purged/slaughtered in their purple robes', 'blood dries black on yellow shirts', and other such dire indicators of violent behavior.

We also find that this area of the Bush Wars and specifically Iraq focused promises to contribute to BushCo's primary aspect during May as is discussed below. Within this area we find that 'lost composure' causes BushCo to 'ruin the situation' by 'misunderstanding the extent of the wounding'. Further we see that the 'ruination' is 'magnified by bad decisions' to the level that 'nothing can grow from this and retreat is necessary'.

As we progress the modelspace forward for the month of May we can note that the level of action related verbs and adjectives rises significantly around the subject of Iraq and the Bush Wars in all contexts. We see nearly a 4 fold increase in action related verbs and structures within the Iraq area itself in this time. As there are also cross links which come into existence in some number as the model is progressed through the summer, it seems safe to say that this will be a very long hot summer in Iraq, for all concerned. We also do note specific lexical references to bespoke action such as 'frothing waves of violence', and 'tensions released en masse'.

Populace/USofA - Continuously Tipping, Isolation Developing

Within the overall modelspace we have a number of entities each engaged within their own tipping point transformations. We find that the Markets entity is emerging from its tipping point over the next few months as we progress through May and June. We also note that the Populace entity is going into its tipping point and even with the modelspace progressed to the end of February of 2006, we have yet to see a complete emergence of the Populace entity from the tipping point state.

We note that the Populace entity while beginning the coalescing process around the [currency] and [markets] and [trade] problem developing for May 20th (-5,+8) never quite seems to totally go into tipping point mode, nor to really avoid it. What we have is a 'rope' of cross links which arise from each of the other major entities that go to the small core areas that begin the tipping point process. Then, these enlarge, and grow, but never seem to get a chance to envelope the entity and complete the tipping point before another rising rope of cross threads starts the whole thing all over again from a new point of origin. In a more human way of saying this, what we have is the Populace entity staying more or less continuously in the tipping point process beginning late May and lasting at least through January of 2006. Further, the tipping point process initiated by one entity through cross links to Populace, never completes since it is interrupted by yet another tipping point process beginning elsewhere within the Populace entity. Sort of competing tipping point pressures. Or perhaps, a serial tipping point process where shock after shock alters the Populace in ways that the previous shock did not.

The various tipping points besetting the Populace entity begin with our stated May 20th all-things-financial tipping point, but this soon appears to be over taken by a series of issues arising from the Terra entity as is discussed below. We also note that there are repeated Terra based impacts on humans over the summer and into fall, but also, coincidentally with the alteration of humans view of their planet earth which is underway, we also note that some very large perceptive shifts are about to take the geopolitical world by surprise. In some cases these originate within Populace, and in others, they arise due to a Populace reaction to external entity forces. We expect a very intense summer with much change of both social behavior and social perceptive positioning {i.e. 'where do I fit in this stew?'},

As to the timing of it all, and with the understanding that our timing clues are usually less-than-exact, we note that a timeline develops of several ranges. First we have our May 15th to May 28th period with the most references clustered around trade, currency, housing, financials, and equities. This results from triggers from the Market's entity and its tipping point influencing the Populace entity. The descriptors for this period, while voluminous, and replete with suggestions for a 'negative internalization of the fiscal state' by the Populace, also suggest that the amount of visible action during this period will be both low-intensity as well as nothing compared to the month of June. While we see that the May 20th period is the tipping point impact from Markets on Populace, it is the June

4th through July 28th when we start to get the response from the Populace entity.

This response is seen as coming in waves. First we have the sharp, breaking wave of June 12th which continues to crest through July finally tapering down in a state of 'emotional exhaustion' which is seen as sort of 'paralyzing' the body politic through much of August. Then, along with some surprising late summer environmental hiccups, we note that the Populace entity starts another response wave to the May 20th trade/dollar/financial tipping point. This response wave has some activity develop in September, but the real image emerging from the attribute sets is more of the Populace waking up 'to action, sluggish, like an old man's bones'. We note that this is quickly shaken when we move over to the mid to late October period which is viewed as another time when 'all hell breaks loose' economically. This period shows a rate of change, unprecedented except for what we see emerging in June - July.

A key and rising influence on the directions and movement of the Populace/USofA is this developing isolation from the global populace. As the modelspace is progressed through summer and into the fall, we see the split becoming more visible with actual boundary layers developing between the now two, mostly parallel tracking entities. It is clearly the indication of the data that the isolation, even as a bespoke aspect will significantly affect the mindset of the Populace of the USofA. Apparently, though not seen yet, the USofA populace is becoming aware of their own isolation and we are getting hints that during this chaotic period of June through July, we will get a few events which raise this very emotional issue to the forefront of the USofA populace. As a further note, this Populace based change is spreading affects throughout the modelspace as might be expected. We see that the Summer of '05 is going to be quite lively with very large scale geopolitical alignment changes. Our geographic clues are hopping all about like a large family with too few seats at the dinner table.

BushCo - Forced Withdrawal

Through a heavily cross linked series of threads from Populace to BushCo we see that events in May start the push of the Populace into tipping point mode. It is the response from the Populace that is cross linked back to BushCo. We note that BushCo has a dominant aspect of [forced withdrawal/driven retreat/pushed into hiding] which is not only fully populated with supporting aspect/attribute sets, but is also the apparent source for numerous, internal cross links within BushCo entity. The [forced withdrawal] is seen as having multiple dimensions such that from BushCo's perspective, it is as though they are being assaulted by the same 'flavor' of problem emerging from many subject areas. To those who are software engineers or programmers or systems engineers, the image appearing is of an over-arching design pattern impressed on all the problems besetting BushCo. For those fortunately ignorant of the techniques of programming, the idea is one of a 'fractal' kind of thing, where the items under discussion have the same appearance at all levels of examination from microscopic to macroscopic. In this case an example might be that BushCo faces political forced withdrawal from the Social Security issue just as

the USofA military is facing a forced withdrawal from one or more theaters of action. Note that this is merely an example and is not part of the data emerging. It made sense to use a controlled example of the fractal-like nature of the problems arising.

Within this dominant [withdrawal/retreat] lexical set we see clearly that the developing wave of tipping points and their reactions within Populace radiate out influences and in this case the whole of the month of May for BushCo is seen as developing toward a sharp, intense, and deep withdrawal as a result of the May 20th (m/l) first tipping point to hit the Populace. This tipping point is all about [trade/currency/financials] and appears suddenly within Populace entity. Even though the Markets entity already has entered the tipping point mode, it takes nearly 2 months for the cross links to develop the density within the Populace which is required to push it to tipping point. {Ed note: our first projection from April 4 through 9th was off by 5 days so we have a range of April 9th/14th through May 28th}

The first reaction within the attribute set which begins the emotional sums climbing toward dominance, thus pushing up the [forced withdrawal] to primary aspect is built around the idea of 'being left with the merchants'. We find that the lexical set suggests strongly that a 'dangerous position will be reached when a party of merchants behave badly on the mountain'. Within the 'dangerous position', we see that BushCo will be 'caught left back with the merchants', and 'the tail is pinned by the table laden with goods shining at night'. This latter is suggestive of some form of bribery coming to light perhaps which induces the move toward withdrawal on the part of BushCo. However we need to note that our lexical sets are extremely complex indicative of varied 'fronts of attention' which will be 'pushed up' and 'yanked away' such that 'official attention' is 'fractured', which in turn is seen as 'leading to mistakes which increase danger, and produce damage'. This 'attention fracture' is seen as being both pervasive and deep in that it is a very large percentage of the negative emotive sums and contains the largest supporting [forced withdrawal] supporting attributes. It is as though the data were suggesting that the 'fractal' nature of things permeates even the way in which the problems arise in that there will be a developing 'richness/plumpness/replete' of 'opportunities for accident/mistake' which leads to 'small errors creeping under toes' as well as the very 'dangerous party of merchants' situation which shows up on 'top of the flat iron mountain of the South'. We have some further geographic clues as to the placement of the 'flat iron mountain' which suggests that we are being provided pointers to some area within the southern USofA and well inland from either coast. Other than that, we have descriptors for the area being 'flat, dusty, high altitude, nearby habitations, barren, red, iron oxide present, steady valley updraft, late spring mists' and other even less specific indicators. Using our prolog search and track programs, we look into the other descriptors to note that the vegetation is deciduous, and 'under water stress'.

One last note about this incident in May is that the 'dangerous position' is shown as having two, significant effects. The first is immediate and is showing as a 'binding of the tail' or a 'flaying of the slave' and as such suggests an interpretation for a subordinate to

find that indeed, it does roll down hill. The lexical supporting attributes suggest that the Populace will get a view of this 'flaying' as it will be 'sacrificial' in nature and will be accompanied by 'much ritual language' in its presentation. Perhaps a formal indictment? The second significant trail of effects of this May response wave is seen through internal cross links in BushCo as popping up again in very early December. In point of fact, December 1, 2005 is heavily represented within the cross link date range scatter graph.

How this impact will emerge within that framework is unclear. What has become clear over the last three runs, including this one, is that December of 2005 will be a very bad time for the USofA, and as indicated by our lexical clues, a very large part of the problems will arise from BushCo. While we show the December period within Terra as developing some very negative summation values, there is a developing compounding effect emerging from BushCo. It is as though the preoccupation with the 'forced withdrawal' of May is still impacting how BushCo perceives events even in December.

While the first of the waves of action and response between BushCo and Populace begins in late May, which initiates a counter wave seen lasting from very early June through to August, and a short hiatus or quiescence in August, the second wave emerges to dominate late August through early October. Then again, a brief settling down period, followed by some form of very large upset to things on the first of December. Also, we have to note that the Terra entity is also showing a December focused 'echo' of the BushCo/Populace emotive sums, however, this echo is more focused on December 31, 2005. Nonetheless we should note that the rising primary aspect in December for the Populace, heavily geographically focused on North America, is 'death'. At this point, the details supporting the 'death' aspect are a bit lean due to the state of the data collection. While there is some indication of 'significant person death', there are also indications for 'en masse' as a supporting aspect to the set. Those details we do see provide explicit references to 'permanent wound' and 'forever unhealed' as well as 'perpetual bleeding', though we must note that all these are focused geographically on the USofA.

All the while that these waves are emerging, and returning back to the point of initiation of the wave in the Markets entity cross links over to Populace which in turn have cross links to the internals of BushCo, we see that in May the BushCo entity external cross links show that the administration is being 'forced to retreat from all it holds dearest', and that 'forced retreat from what is beloved will be accompanied by tears and pain'. This aspect/attribute set supporting 'forced withdrawal' derives from and has its largest originating cross links from the Markets entity and the aspects of 'trade, currency, housing. financial'. These external cross links also indicate that BushCo, as a result of 'errors of the not-ready', will be 'forced to retreat'. What is significant about this section is a very large area of bound cross links to both Iraq and oil. This May beginning of the fractal nature of the problems bedeviling BushCo and Populace begins with oil. And as the oil aspect's largest supporting attribute set we get the image of 'not ready for it means no success'.

Following these BushCo external links over to the Populace entity we see that from the Populace response wave in June-July, that BushCo will get a 'splash-back' effect. This lexical set is dominated by [cover-up] which is supported by attributes suggesting that the [cover-up] will (unravel) like (yarn) leading to 'many wells'. We also see that a rising aspect within BushCo which develops after the cross link to the [cover-up] emerges is dominated by the aspect of [self-deception]. Drilling down within this 'self-deception' we note that rising minor aspects will come up in June-July which will 'over take the horses' for BushCo in the emerging second wave in mid-August. These currently minor aspects are clustered around 'deceptions exposed' and 'flesh revealed'. In both cases, the 'exposure' is directly cross threaded over to internal BushCo aspects by December 1 when the modelspace is progressed. This is suggestive of perhaps a long simmering problem, or perhaps that the 'view of things' picked up during the May period will color the BushCo perception of events in December. However, the model is clearly suggesting through the very heavy cross links that the USofA will suffer some form of a pass through [shock]. Under the Populace entity cross links to BushCo in December, we note that the USofA as a whole is seen as [suffering] (reversal) as well as (loss) of [fortunes].

Terra - Fiery Blood Flows, Oceans of Rainwater, Florida Squeezed, Summer Shakes part deux

Even Igor was instantly struck by how much the Terra entity changes over the course of our expanded modelspace. When we ran the Terra data through the AutoLisp program to load it into Intellicad {our CAD display space}, we were both shocked to see how much of the Terra entity base set dropped off even from the ALTA 405 series, let alone the 105 series of December 2004/January 2005. The entity has taken on a whole new cast with greater than 54% replacement of base line descriptors. This is new in our experience and begs for an interpretation of an accelerated rate of change over this next year.

The very first impression in viewing the Terra entity as it loaded {ed note: sort of a cool process, lots of bright little squares of colors popping into existence within the 3-d 'aquarium' of our modelspace.} was generated by the co-incidentally very bright red dots around which more dots gathered within the Terra entity until the red went black with the density of the lexical clustering around that subject. As the entity continued to load, and progress through our modelspace time frame, we watched as more and more of these tipping points 'flared' up within Terra, formed cross links to Populace entity, and Markets and others, and then flared out. Only to be replaced by another appearing to take its place.

In performing the intricate detective work of relating the bright colored squares back to lexical substructures and then associating these with archetype through emotive sum values gathered around the subject, it was discovered that the flavor-of-the-year for the Terra entity is undergoing a shift. Whereas last year we saw repeated 'bad waters' sorts of emotive archetypes rising, and as we traveled over the cusp of 2004 and into 2005, we saw the 'summer shakes' coming, we now are able to see that the Terra entity has a new, rising to dominance primary aspect of [fiery blood]. This, on its face, and connected to

Terra is instantly suggestive of volcanoes, and that is not wrong.

We see that this year will be dominated emotionally by volcanoes the way last was dominated by water. In supporting aspect/attribute structures our [fiery blood] is seen as [flowing](magnificently)(enraged)(captivating)(destructive) and onwards in such vein for nearly 20 thousand supporting subsets.

Yes, the 'summer shakes' are still on, but now they are totally subsumed in the lexical structures for [fiery blood]. We see that the 'pulsating motion of the heart of the sun propels the fiery blood'. And that further, under an aspect of [destructive], we see that 'resources are going to be denied' by our volcanoes when the eruptions 'remove from circulation' and 'extract from cycles' and 'deplete from production' various mineral resources. The clear interpretation from our data set suggests that one or more large eruptions will remove large amounts of mining activity from the global economy. We note that aspect/attributes further down speak to how this lack of 'reach past the fiery blood' prevents 'acquisition of the necessary' which in turn gets all wrapped up within the 'restricted movement' sub-theme found in the Populace entity.

The Terra entity has rising aspects which go to the image of humans fleeing in the dark. Internally to this aspect and cross linked over to Populace, we see that many of the 'refugees from fiery blood' will 'break their arms stumbling about in the dark'. And we also note cross links from the [wounding] supporting aspect within this thread suggesting that the 'markets will be wounded by poisons from fiery blood'. This again going to the idea of volcanic eruptions causing not only damage to humans, but to their global financial infrastructure which will apparently be hit on two fronts. Having already mentioned the first of these, the damage to resource or mining operations, or access to same, we also need to note that the reduction in our ability to get at these resources is seen as being more permanent than not, as though these resources are sealed away under lava or blown to dust in eruptions.

The second front upon which the global markets are seen as suffering from volcanism this year is in the area of shipping. We see that very large areas of Terra are cross linked back to various marine aspects within the Markets entity. The suggestions from these lexical sets is that volcanism this year will so alter shipping routes as to all but disable some large region inter-port travel via water. Also within this set are references to a smaller number of 'displaced' airports and other air terminal operations as though some eruptions will remove airstrips on which planes are now able to land. Further we see that the air industry as a whole will become involved with side effects of the eruptions within the atmosphere they transit.

Within the Terra entity and supporting the problems seen within the active volcanoes, we note that 'wind' as an aspect promises to be a very emotional subject globally. Wind has been seen as a constant theme this year in our data gathering, and this Terra entity data set is no different. It has a very large component directed toward the image of 'wind

fanning flames' and 'wind driving dust', as well as more ominous 'wind depriving respiration'.

Hanging under the rising aspect of [wind] within the Terra entity, and itself rising as we progress the model through May and into summer, we find that [rainwater] will be stopping by on both the North American continent, as well as within the far eastern EU and western Russia to provide a very 'unseasonable deluge'. In both cases we see that the impacts will be severe, and are all tied up with our 'restricted movement' aspects for food and other vital deliveries that first arose in ALTA 105. Also within the geographic references we find that Spain, and northern Italy {on the western side} will also be hit by very unseasonable rain storms. These are also tied back to the [wind] and the [volcanoes] suggesting that perhaps a very large eruption will indeed shove huge amounts of water vapor in the air creating, as previously described, 'virtual oceans of rain' floating from the southern hemisphere toward the north.

The data is certainly not vague about the impacts seen here. It could be completely wrong, and there is some probability of this as when we are wrong it is usually very wide of the mark, but nonetheless, the data indicates that the climate will perceptibly change this year. Now while some would say that this has already occurred, what our data is indicating is clearly a very large, and very unambiguous, can't-be-mistaken-or-disputed, alteration in global climate. Further, this pattern disruption being forecast by our data is seen as persisting in its 'chaos' and 'naked change' for some period. We see that this 'unsettled' and 'capricious' period lasts even through the end of the extension of the modelspace out through February of 2006.

Unlike the above, we are getting reinforcing material within this data gathering which goes toward more details about the 'wind storms' that were seen in ALTA 405 as coming from France/Northern Atlantic and hitting Florida. We note that within our modelspace we have a large collection of cross link supported Terra entity area focused on Florida. The cross links all terminate in aspects related to our 'wind storms', and in this case, as we move our modelspace forward, we see that two of the storms will be so violent as to 'destroy parts of the past', and 'scrub clean history residue'. In this case, we also have geographic references pointing to the storms striking from the north and moving south as we noted in previous ALTA reports this year. Now the model shows an aspect/attribute set which goes to the image of 'knuckles striking down on jaw line', and 'teeth separated by blow'. These references are cross linked back to Populace/USofA where we see that the 'destruction of the past is troubling to all'. And further that 'attempts to dig in sand will bring drowning with the tide'.

Within the Terra entity, and on a continentally focused by geographic reference level, we continue to note that much of the North American weather this summer will be viewed as distinctly unseasonable. In fact so much so as to contribute to the separation between BushCo and elements of the Populace entity. It would appear that some level of 'sighs and cries' generated by the weather among BushCo staunch allies will bring

'admonishments to cease croaking' from BushCo, as they will apparently totally misjudge the situation. This weather related woe is seen as arising from the 'area of unity' in which a 'large depression will fill with rainwater'. There is also some link seen here between these 'cries and sighs' and the 'vital energy releasing gas/carbon dioxide from still earth through vibrations'. As these references are flavored with cross links and lexical clues toward Arctic regions, it may be that some form of earth tremor starts a large scale break down in permafrost held carbon dioxide. There are some clues to support this idea including the duration of the event as the sighs and cries take nearly a month in modelspace to fully develop. So one interpretation is that while BushCo is otherwise occupied with the more immediate problems, they completely misinterpret the significance of one which will take weeks to play out.

Remaining cognizant of our earlier ALTA reports indications of large scale plate movement over this summer {perhaps} we do see continuing evidence that our lexical set is leaning this way. As a reminder, the movement of the plate was seen in previous ALTA reports as coming pre-working day, in fact, most references had it as pre-waking for the day. Within this data set we now have several, more personal warning kind of images rising. These go toward the idea of 'when the shock comes, the gravity affects you', as well as 'gravity of seriousness knocks your bed to the floor'. We also have the very curious reference to the 'big stink/bad smell covers your face from the floor up'. Further the 'bad smell' is seen as being quite powerful as its supportive aspect/attributes suggest that 'smells worse than rot rise with dawn'.

As to the specifics affecting the shakes reported in previous ALTA reports, we have a new set of very much more graphic descriptors appearing as we move the model forward through the summer. We see that 'alert attitude' will 'stop the blocking of the doors'. And that 'eternal laws are behind broken doors'. Also dropping down the aspect/attribute chain we can see that 'embarked upon boat journeys are interrupted and not recovered'. Further, that 'thunderclaps rise from the ground and tremble your legs'. This is accompanied by the warning to 'stand firm, drop everything, grasp the wall'. We also note that 'grabbing the ground with teeth and nails' is also indicated as a good strategy.

The lexical set in ALTA 405 contained references which we now see reinforced with cautions to 'quickly shake off the numbness induced by fear' and then to 'rush to safety, drop everything, it can be later retrieved'. We also see that 'fallen items betray feet in twilight'. These urges to clear the mind and relocate the body are apparently focused on the idea of repeated shaking. What we are seeing described may well be a very long earthquake as there are visual images of 'rising thunderclaps' traveling up from the ground over the course of many hours. There are several references indicating that 'three days will pass' before it becomes 'wise to retrieve the fallen' and 'pursue the ordinary'.

During the course of the 'continuing thunderclaps' we find that 'desperation drives animals/beasts to great heights'. And in support of that idea we find that 'thunder induces the right decision' which apparently is seen as being to 'compose the belly', 'gird the loins'

and to 'climb'. We also find that the 'shaking disturbs the officialdom'. Apparently 'officialdom/ministers' are 'silenced and forgotten' in the midst of the shaking. This is internally supported as suggestive of major communications problems during and immediately following the shaking.

While there are no real clear geographic indicators for the event, we still see that the 'energy of the push' comes from the 'north and west'. And that the impact is such that 'steel towers fall' which are also noted as requiring 'tens of years' to replace. This is suggestive of an industrialized country and with the ever-so-slight preponderance of clues presented, we still have to consider that the areas being discussed include the Pacific NW of the USofA, as well as southern Alaska down through British Columbia, Canada. Now, also note that a number of areas on the planet also fit our descriptors including parts of the Hind, parts of the Indo-Australian plate, and some areas around the Caspian Sea. AND also note, we are frequently TOTALLY wrong in our interpretation even while the data is seen in hindsight as being valid. Again, citing our reports of last year where we saw 'electrified water' but within the 'electrified' aspect set was also 'forced' and 'force-driven', but in either case we interpreted it as a large storm instead of the Sumatran tsunami.

As again we must note that 'oceans' being 'driven to advancement' by 'sun/heat' is also developing within this lexical set. We find that the 'oceans' are seen as 'driving nearer' and are being 'propelled by fire', or 'expanded by heat'. This is seen as causing pretty much global 'wave topping' of 'ports and offices'. We also note that 'quivering kelp' will be 'dragged over streets' among other residue. A rather disturbing note is that men will be seen 'darting furtively' between the waves, like a 'hamster in short grass'.

There is a clearly developing lexical tower of 'anxiety' associated emotive values. Many of these are bespoke emotions of fear and variants. We also note that much anxiety will emerge this summer about 'not being able to deny return' to 'past considerations'. Now while a bit obscure, if we look to this aspect/attribute set we find the rather surprising indicators that there will be large parts of the USofA populace, as well as the populace/global which will 'defy the media/propaganda' and 'come to accept' that 'return to the old ways' is 'forever gone'. This image is further supported both through internal cross links within Terra, but also through external cross links to the now two Populace entities. In all cases the imagery goes to the idea of the 'past habits cannot be fallen/returned to', and that 'no blame comes to the new peoples who live outside', as well as 'no more worries about success or failure, only live'. We have many further clues which in this case seem to indicate that some large population will be affected by earth movements to the point of accepting the idea that the 'days of the father are past', and that 'new life awaits'. We see that these fanciful imagery gets even more so in painting a picture of what can only be interpreted as a group of more or less permanent weather/earthquake refugees.

Our data has some lexical structures which indicate that this group will present a real

problem for BushCo. Again we see the 'forced withdrawal' imagery cross linked, only in this case, it is stopped by a duality exposed as the 'dichotomy of danger' for BushCo. For us to interpret this aspect within our existing structure we find that the only thing that makes sense is the emergence of the issue of deniability. That is, if there are large numbers of permanently weather/earth displaced part of the population, especially if they are USofA citizens, it makes it very hard for BushCo to help them as they would be faced with their own denial of large scale earth changes or climatic degradation. This is clearly an interpretation which fits our data, though not necessarily any manifesting reality of the summer.

India - Under Attack

We have a bleak lexical structure which would seem to indicate that India faces a very nasty period of time in the near future. We can not be sure as to weather the attack that is indicated is from human enemies, or natural processes. This ambiguity is due to the blending of both natural disaster kind of references with distinct language pointing to assaults on the political structure of the country. We note that these blended references both are rising to dominance within the Populace/Global - India section under the aspect of [revealed hidden patterns].

Within this aspect are attribute sets which go to the idea of natural problems such as 'the sun burns lands in the south, driving beasts north'. And, 'the light of the sun is swallowed in the obscurity of dust rising from the plains'. We also note that 'flying is impaired from dust on the wings', as well as 'dust in the wind chokes the engines of man'. There are perhaps several hundred more image/attribute references in this vein. The basic theme seems to be air born problems like dust affecting things on the ground including in a couple of these seeing the dust as so prevalent and thick as to 'cover the mother like a thick blanket of feathers'. Note that 'mother' in Indian references is usually taken as the Ganges river implying that dust will coat the river surface.

While there are several hundred natural disaster sorts of references, we also need to note that there are just slightly fewer going to the idea of a political attack. We find that the lexical set suggests that 'the throne has been taken' and that 'attacks from the south rout the pillagers'. We see many more references such as 'tempers released incite revenge' and that 'danger exists for the regime' as 'power is cut off from the north and east' while 'birds with drooping wings follow the clouds to the east'. This last image, with its internal attributes, is suggestive of planes loaded with bombs but also of actual birds, tired from being driven east by the dust and storms that are clearly indicated within the Terra entity. Again, ambiguity as to the nature of the problems seen arising for India over this summer.

Having found this region of the model as being coherent, we examine our cross links to discover that 'cunning subtlety' and 'brute force' will combine in the 'assault on the mother' which is also described as the 'heart, across the way/road/path from the prison'.

This assault on the 'mother' is also seen as involving 'laboriously gathered intelligence' concerning the 'obscure ways of stone' such that 'penetration can be achieved to nearly the heart, unseen'.

A further, reinforcing lexical structure rises immediately following this primary aspect which seems to indicate that no matter what is the cause of the problems to face India over this next month, the resulting 'flavor' of the summer is seen as the rising aspect of [tension]. This is further reinforced with 'knots of energy' which are found 'riding in the shoulders'. On the whole, a less than auspicious forecast for India for the summer.

A brief note about China focused lexical structures. We have some small indications that continued rioting and 'facing down oppression' will bring about a small 'bubble' or 'void' within the chinese mainland where the 'placid satisfaction of the masters' is seen as 'not penetrating the walls/cloths of denouncement'. Further there will apparently be rising concerns of creeping loss of power affecting the Chinese government. These will be expressed by vigorous denials in media far and wide, as the Chinese government presents 'ignorance' as a 'smiling face in a dark alley'. Much of the unrest indicated in our lexical set is directly environmentally focused. Further it would appear that a great 'dying off' as a result of 'greed' and 'disregard' will be exposed as the cause of the 'festering' which breaks out to 'flowing wounds' in the 'heat of the summer sun'.

Silver - Duality Misapprehension

Out in our modelspace is a small, tight, apparently cohesive and totally self contained little entity that is focused on Silver as a primary subject. It arose as was reported some weeks back, purely spontaneously. It then decided to go skip-about and headed off toward the upper limits of the modelspace as it was progressed forward. We still see this action in the current data set. Now we have some more details to offer.

Our model indicates {sucky timing issues aside} that on or about May 15th, silver will 'decouple' from the 'retards', or alternatively, will no longer be subject to 'retardation' by the 'decouplers'. These aspects arise coincident with the entity beginning its own very clear separation from the neutral line of our modelspace. It thereafter rises upward more or less like a small blimp ascending. This is not to suggest any direct correlation to price of the commodity silver, but only to provide the emotive context in which silver will be viewed by the Populace entity. So the clear impression is that whatever controls may now exist to regulate the emotional resonance of silver within the Populace entity are lost as effective blocks on silver beginning in mid month, more or less.

Further we find supporting aspects/attributes of 'renew', 'rebirth' as well as 'shedding restraints'. All of these are rising and fully populated by the time the entity reaches the end-of-month boundary in the model. Thereafter we can see that other, also supportive aspects come into play.

At this point the entity clearly states through its image that 'common man will have no understanding of the emotional life gathering around'. Further we note that 'females will flock to their new riches', but that unfortunately 'many will cry disappointing tears'. This latter aspect shows within the attribute set repeated references to fakes augmented by attributes for 'wailing' and 'demonstrations of grief in public', as well as 'anger foaming lips'. All of which are suggestive of a large developing outcry over past silver 'dilution'. This last is also within the attribute set as is the wording for 'destruction of future hopes on past fraud'. Our interpretation is that a sudden rise in the price of silver, likely for this summer, will bring out some dis-hoarding behavior and that a large subset of those who try to dis-hoard silver {probably jewelry} will find that they were defrauded on their original purchase.

In support of the interpretation above, we note that the cross threading between markets entities, and the now split Populace/Global entity suggest that the 'dis-hoarding fraud' will be discovered to be mostly found in the anglo countries, with a large focus on the USofA. This is curiously doubly linked with the 'isolation' thread seen above.

As a further note, we see that geographic references with very high positive emotive values for Mexico will rise up through June/July, and that over the course of summer something of a silver mining boom will arise in the eastern slopes of the Mexican mountains. As something of a surprise, we also find repeated geographic references for something, which is somehow related to the silver entity, being 'discovered' in large quantity off the coast of Baja. Specifically in the area of the continental slope. We note that most of the references are in Spanish, and that many references to 'praying hills', and 'four valleys of pious tears' appear. These are translations, and as such are always suspect, but we also note that a 'cuidad subterranean' is described as being the site of these new discoveries of silver associated somethings....

As a last silver note, the largest and strongest by virtue of emotive values sums area of the Silver entity cross links back to markets with the very clear 'misunderstanding/misapprehension' of the 'duality' of silver statement. Our data would seem to be stating that the markets will not understand the sudden change. This apparently is a significant marker for future entity behavior. The suggested interpretation is that when the markets focused press starts echoing a 'wonderment' or 'bafflement' about the behavior of the silver markets, or the behavior of silver within the markets, that is the point at which the entity begins to 'shed the restraints' on its rise. We do not see any indication of either a settling or dropping within the modelspace at this time. However note that this is emotive values not necessarily connected to price in any direct relationship.

Conclusion

We anticipate having part 4 posted by the end of the day on Monday, May 9th. Our early posting of this section was to allow us to reload some sections of the data and to finish

the processing on the group as a whole. This was a very large data run which was just completed on Friday. We will run 5 parts on this report at least, and need to get all the data into the modelspace for cross link comparisons for parts 4 and 5.

Note: Entities are identified by a blue typeface. Aspect words are enclosed in square brackets []. Attribute words/phrases are within parentheses (). Interpretive editorial comments are preceded by an asterisk *.

Data set distilled from 65.55 million reads. Processing has brought in a total of 84.667 million reads . The resulting interpretations will be posted as completed. At this point, we are anticipating 6 installments to this report (maybe a small number 7, hard to say at this point in the processing).

Igor's Apology

We have had a situation develop that is prompting us to post a bit early on this report. With the complexity of the processing that we have to run, and the continuous nature of the base lexicon tuning that is required before each run, I have discovered in recent years that a processing log, as in a laboratory methods log and check list, has become necessary.

This log is a daily diary of the processes we run, any abends, and the alterations suggested by the data to our complex of emotive values associated with each word and word group. So this is not a paperless process. Lots of notes are involved.

Also involved are a number of timers internal to the processing programs. These timers are 'clock instances' under Windows 2000/NT and we have a number of them. These fall into two classes of clocks; those set by humans, and those set by data. It is the latter type that is used to progress the modelspace forward and to provide our timeline. In both cases, when ever a clock is reset, notes are required for the later reconciliation of the clock state to the carry potential of the emotive values...clear as mud? Basically, we note each time the programs reset the base clocks from which the timeline is progressed. This allows us to note when the data starts clustering, and to assign a time value or date to that cluster.

These are how we devise our timeline.

In processing this report, we have lost a log. Igor apologizes. It was lost in transit as we moved the servers, and having moved enough in my life, I cannot be too hard on him for the loss. Especially that early in the morning and so many boxes of crap.

We were able to recover most of the data on the time changes through internal programming logs on disk, however we are left with a couple that cannot be reconciled. We have spent the last several hours redoing some of the data and have reduced the problem to the following: our expected timeline, as seen below in the 7 Days of May section, may be off by as much as 2 days forward from the start date. That is to say, instead of a week from May 10 to May 17, we may actually be looking at a period of May 8 through the 15th. Without the log we cannot tell if the data has reset the clock in question, or if it was one of the hundreds of resets that Igor does in the processing.

Igor apologizes to the readers of the report, as do I. However, we are still able to post prior to the 8th, and so will do just that. We have truncated some of the interpretation

time in order to get the main sections out prior to the potential time window. Again, our apologies, and we will attempt to include the last of part 4 data in next weeks Part 5 posting.

Weeks of Reversals - 7 Days in May

We begin this section of ALTA 605 with an examination of the week(s) ahead. We note that several entities are converging on a mid-point 'meeting place' within our modelspace in this period. As they do so, and as we progress the model, we note that many of the entities give the visual impression of 'propagation' which is currently the dominant aspect within our MODEL entity. We maintain a miniature version of the model's overall sums as a check on substantial changes within the functioning of the model itself. One can think of this as a software device to provide visual/lexical feedback on the state of the model as a whole. We developed this approach after running into our own output regurgitated out-and-about on the web. We needed a method to filter out our own stuff so as to reduce potential for circuitous references. So our model has a small, designed entity which represents the modelspace itself. Currently this entity is showing 'propagation' as primary aspect with supporting attribute sets of 'waves of spreading' and 'from one to one'.

Now at this time within the modelspace we find that several of the entities, such as Populace/USofA and Markets, as an example, are near to touching and appear to 'propagate' or transfer the tipping point process. In other words, the Populace/USofA entity does not show any tipping point tenancies until it starts a rather abrupt move downward towards an intersection with an also declining Markets entity which is currently emerging from the tipping point state. So visually the two entities are dropping at differing angles which will bring them into 'contact' and apparently transfer the 'tipping point impetus' within the 7 day period of May 11 through 17. During this time, the Populace/USofA entity begins its transition to tipping point state around an economically based theme.

However, we need to note that the Populace/USofA goes into its tipping point amidst a cloud of words relating to 'violence'. This 'violence' lexical structure rises ahead of the Populace entity as both it and Markets appear to collide. The collision and subsequent rapid separation leaves the Populace/USofA entity undergoing some very severe emotional shifts. Many of the lexical clues as to the emotive state change are built on aspect/attribute sets relating to 'violent action', and the 'impacts of war'.

The title '7 Days in May' was deliberately chosen to hearken back to the 1950's movie of the same name in which a conspiracy toward coup de 'tat against the government of the USofA was thwarted. This reference is chosen due to the total rise in both sums, and aggregate volumes of words supporting the idea of 'rebellion'. We note that these are coming from the newly formed Press entity, as well as from all areas of the Populace entity and now, the Markets entity as well shows a rising level of 'revolt', and 'rejection',

and 'rebellion' terms.

While the movie '7 Days in May' has a prima facia focus on the coup, the underlying message is really about the rise of the 'reactive/defensive protection' of the populace-at-large against extremism of any form, even, and perhaps, especially, patriotism. This is currently the rising message within the Populace/USofA entity. We note that 'reaction' is a multiply-supported, rising aspect, with attribute sets which go to the image of 'many feet walk over/overcome obstacles', a none too poetic way of furthering the images even deeper within the entity which go to the idea of 'difficulty in the path is walked over by many feet'.

We also note that the various 'rebellion' images rising in the entities are supported by commonly linked cross threads which go back over to BushCo wherein we see that this period of 7 days in May will bring a very large shift laterally and down of the BushCo entity. We note that within our modelspace, the BushCo entity takes a huge drop of almost 400 vertical units below neutral and laterally (toward declining emotive aggregate summations) of 122 units. These are arbitrary units of measurement taken from a virtual 3D space that is defined as 60 (times 1000 units) in all directions. So a significant, and sudden drop of lexical support of over 10 percent will hit BushCo during this period.

As the cross links seem to indicate, the first triggering event for this plunge will likely come from Iraq. We note that the aspect within Populace/USofA which is most closely associated with cross links to the point at which the BushCo entity begins its rapid drop is connected to Iraq. This Populace/USofA aspect is confused at the best of times, and perhaps a better descriptive word is conflicted. We note that there has never been a consensus view within the Populace entity in toto about Iraq, and the subject is actually one that led to the split of Populace into USofA and GlobalPop. However, having stated that, we now are seeing a very large movement of lexical weight over to the column of negative values within the Populace/USofA as regards to Iraq. The lexical structure is such that we are not able to say that more people are now aware of the lies which led to Bush's War for Iraq's Oil, but rather that now, the Populace/USofA entity appears to be suggesting that the issue of how/why it all started is rapidly becoming moot, only to be over taken by the question of 'is continuing the war worth the cost?'. This is suggested by the rising value summations as well as a noticed 'lexical creep' which is where we see the core-value words of one view start a word-by-word creeping duplication within the core value set of another point of view. This has been occurring for some time, and is just now really beginning to become noticeable as a trait within the Populace/USofA entity.

Now, the above having been noted, let us also be aware that this whole area highlighted by the lexical creep also is tightly linked a major aspect within the Populace/USofA entity for 'danger'. The aspect of [danger] and the supporting attributes of 'dangerous situation' as well as 'dangerous imbalance' are further augmented by a very large set of lower, supporting attributes which go to the image of 'the small number of the powerful sit on the heads of the large number of the weak'.

This is raised as an issue as we must note the suggested possibility within the data that the USofA may be headed for a 'civil war' or 'civil confrontation' which includes 'violence against the cousin'. This is raised due to both the macro view and the underlying lexical support structures. We note that the Populace/USofA entity can be divided into 3, roughly equal parts: one part has favorable words linked to BushCo; one part has negative words linked to BushCo, and one part, slightly smaller than either of the other two, is mostly neutral shading toward slightly positive. Now we need to note that the vast volume of cross links toward BushCo from Populace/USofA is overwhelmingly negative, but that on emotive summations, the positive view of BushCo prevails ever so slightly with a difference of only 32 between the two sums. So emotionally summations near equal, but indicative of a very vocal/powerful minority of individuals who maintain the BushCo support within Populace/USofA. The third, mostly neutral group is smaller than either of the other two groups, but again, is a key in maintaining the slightly positive emotional sums. We also need to note that the 'talking points' repetition of the smaller, pro-BushCo group has a tendency to pollute the data stream with ad nauseam repetitions which may be shading our visual impression of the size of the pro-BushCo group. Our data stream can present us with this situation wherein a small number of very dedicated posters can repeated use the same words within the same context in many different sites which in turn are picked up over time and tend to produce a certain reinforcing view of things lexically which is actually more illusion than we know. Now we do a reasonable job of screening for such things, recognizing that there are many reasons for such 'campaigns' to be undertaken, and it is being raised here as an issue as both Igor on the data stream side, and myself, think we are seeing evidence of such a deliberate seeding effort.

Efforts at manipulation aside, let us continue to be aware that a period of 'danger' is rising for the Populace/USofA entity. Co mingled with Markets tipping point emergence, and its own tipping point plunge, we see that the suggestion is for a 'hardening of the attitudes' as regard the BushCo emotive values. This is seen within the modelspace as suddenly jumping to the foreground of body-politic consciousness as a result of the impacts of 'violence of wars' which develops during these 7 days in May. We note that BushCo will suffer some serious reversals as was seen within the previous parts of this report focused on 'forced withdrawals'. Now the situation developing within the Populace entity, USofA specific seems to indicate that a period of very intense, internal competition for supremacy of point of view is beginning. The lexical pointers to 'rebellion' and 'resistance' are rising, as are the total numbers of such supporting reads suggestive of a movement of the 'uncommitted' over toward an increasingly negative view of BushCo. The data is suggesting that while there will be a movement of the 'feet' towards a negative BushCo view, there will be a corresponding 'lashing out' in 'frustration' by those BushCo loyalists such that the Populace/USofA entity is seen as 'suffering blows' from internal sources. This is supported by cross entity links which go to the idea of 'stubborn resistance fights to exhaust energies'. We note that 'words are futile' from the BushCo viewpoint, and that 'lashes/strikes' are 'voiced for/supported'. That 'civil unrest' is 'not to be born', and 'talking is empty'.

Within the Populace/USofA entity we note a timeline which shows a week of 'shaking with tension', and 'bound to vibrating/anticipatory muscles' in which the entity will 'reel' from 'exposures' and then begins its tipping point around the economically focused words in the May 15th through May 28th period. The Populace/USofA is clearly into the tipping point by June 8th with a very large lurch of movement indicated as starting on June 11th. This will proceed for nearly 2 months.

Within the timeline for the Populace entity we also note that the BushCo entity will experience 'explosive' and 'violent' events in the 7 days of May, with a predominance of the pointers going toward the May 13, 14, and 15th. During this peak of these 7 days, the tone for the next year of BushCo will be set. This period of BushCo has cross links that resurface with a timeframe of September of 2005 through October 14th, and then again in November to early December. Then in the December period, we shake off the May tipping point hangovers, only to confront some very large internal blow-up of BushCo which begins yet another tipping point for the Populace/USofA entity.

Within the Populace/USofA entity, we note that its tipping point process completing on July 28th leads only to a brief hiatus through August when things seem to calm down for a bit as though resting up for the major changes of fall and winter.

The events hanging under the emotive value which links to 'explosive' within our lexicon are seen as arising from multiple areas to impact both BushCo and Populace/USofA entities. We see that Iraq is one aspect of the problems, and will act as a trigger, but many of the other areas of explosive potential are seen as arising within the areas of economics, and politics. So the problems which beset BushCo, and which begin the developing 'tensions' within Populace/USofA seemingly leading toward a split within this entity which appears to come to a crisis point near the end of our current modelspace time extension in January/February of 2006.

Now, within the modelspace, an alternative interpretation is possible, perhaps even probable. The other view of the same lexical clues could lead to an interpretation that the 'core' supporters of BushCo, that is the minority of the Populace/USofA entity expressing the very high emotive language in support of BushCo, could be, as the attributes would have it, 'unleashing their venom' back on BushCo. It would be appropriate to interpret the 'hardening of attitudes' plus the numerous references to 'violence' as the result of a backlash against BushCo for past, current, or future crimes against their 'hardened attitudes'. This scenario would go further toward supporting the many references for 'rebellion' seen in previous ALTA reports this year. Such a potential is also supported with the many and varied scandals now chewing at the fringe of BushCo. If this is the case, it may well be that GayGate will bring the 'hardening of the attitudes' within the BushCo minority support, as there is no greater sin to fundamentalism than homosexuality, and the emotive response expected from the BushCo supporters once they accept Bush as both homosexual and duplicitous about his proclivities, then as the data indicates, BushCo could indeed expect 'red faced rebellion' and 'broken vocal chords' as

an immediate reaction. We also note that once the 'veil of righteousness' is broken, as the attributes would have it, the Populace/USofA will be 'forced to eat sour earth'.

Without regard to which of the interpretations, or even other, unforeseen permutations, we do note that the 7 Days in May will be setting an emotional tone which will still be humming through the summer, fall, and right into the chaos of December when things appear to get real interesting. If the outcome of the theme developing from these 7 days in May ends up as a civil conflict of Populace against Populace, as opposed to Populace against BushCo, then it would seem reasonable to expect that actual outbreaks of violence are indicated in December. Further, if this is the correct way to view the data, then the suggestion is that the 'civil strife/conflict war' will last approximately 3 months. It will extend from December 1, through to February 27th, 2006. At least according to the emotive values. The suggestion is that what will be considered as extreme levels of change will rise to dominate consciousness during these three months. Such extreme levels of change that a burst of civil conflict would certainly fit the emotive sums.

As our model does not extend much beyond that period, we have no data to confirm or pursue such an interpretation. Further, it also still appears that from May of 2005 through our complete modelspace extension, the Populace entity, both USofA and GlobalPop, remain within tipping point states.

Populace - Unexpected Tension

Within our now separated Populace entities, we still see common threads develop. In this case, both Populace/USofA, and Populace/GlobalPop have rising aspects of 'unexpected tension' with clear date range indications for the week of May 13th. Within both of the Populace entities we note the same structure for [unexpected][tension] rising from 'hastily spoken words which will be harshly received'. These words are seen as causing a 'mounting of internal tensions' that will produce a visible response within both Populace entities over the course of that week. Further this rise of tension is joining the other elements pushing toward some form of crescendo event or release during our May 15th through May 28th period.

The words referenced here are seen to be coming from 'some one who consults' and is also described as 'above the parties' involved. Further this person will 'attempt to take a great leap forward', but their words will 'open an abyss below them'. Again, reinforcing sub set aspect and attribute sets suggest that these words will 'begin a contest/conflict which will continue to a very bitter end'. And that the 'conflict' will end with 'unexpected results' for 'all involved' due to 'the rise of external forces/circumstances' which will 'intrude with thick arms and heavy hands'. This is seen as the resolution to the conflict begun with the 'harshly received words', but we have little time clues as to how long the conflict will last. Merely are noting that some external forces settle it all.

The 'harshly received words' will begin in a slight confrontation over 'rising tension in the

room'. This then precipitates a meeting in which 'sound argumentation' is met with 'resolute rejection of the speaker on past accomplishments'. This leads in turn to the 'exposures of contradictions' within the 'speech of reconciliation'. This in turn is seen as being proximate cause to the 'throwing back into the face' of the harsh words.

We also see that 'ancient virtue' which will be 'cloaked in modern words' will precede the 'inducement of continuance'. At this level of the details, the aspect/attribute ratios change considerably, and we note that cross links indicate a period of 'danger' perceived in 'clear terms' over 'wooden walls/fences'. This 'danger perceived' does not sit well within the two Populace entities.

What we are seeing here is apparently some form of either intra-national tensions that may suddenly erupt, and given the previous report noting the 'India attack' theme, a good exemplar of what may happen would be a sudden eruption of hostilities along the India-Pakistan-Kashmir border regions in which India is actually attacked in such a way as to induce a pan-national response. As both are nuclear powers this could indeed set off the emotive responses we see within the Populace entities. However, please note that this is cited only as an example. We have no geographic references clear enough to determine that this is being suggested. Rather, the impression given from the Populace entities is that the global populace is what is subject to unexpected tension, so there could be any number of hot spots which could bring about such an emotive reaction.

A last note on this aspect of 'unexpected tension' is that the movement of the modelspace has this event/incident/period preceding the appearance of a replicated rising aspect of 'profound insight' in both Populace entities. It would appear that the data is suggesting that the events surrounding the harshly received words will 'expose in the clear' both 'ambitions and failures' such that the two Populace entities are developing a 'wide awake view' or 'obvious and clear view of intentions' which both 'shocks' and 'pushes' the entities forward in emotional jumps. These emotional jumps are cross linked both internally and externally to the 'rebellion' themes seen in previous reports. One interpretation could be that brinkmanship played out on the global stage begins a global rebellion against such stupidity. What is very interesting is the sub set of politically focused words suggesting that this event/incident will lead to very large scale changes within the global political infrastructure.

As there is a notable rise in references to North Korea emanating from CorpPress {ed note: now necessary to distinguish between 'free' and 'owned' sources of information. The free is less a price issue than one of sovereignty.} we can assume that this is *the* area they wish us to concentrate our emotive energies upon. Now, there are independent actions from North Korea which are presumably not controlled by TPTB in the greater global sense. So, assuming that North Korea has an independent agenda, then we are still left with the emotional cynics who are linking the sudden escalation of nuclear weapons in North Korea with the recent visible degradation of the global economic system. We need to be aware that conscious cross currents of emotion are flowing regarding North

Korea and the timing of this most recent crisis. The very rapid rise of a distinct set of verbiage associated with the subject *could* be taken as support for the idea of a design story, and its propagation within certain channels. Given our inputs, we can certainly say that such a lexical set has appeared very rapidly, but also note that such lexical 'memes' do appear naturally. In this case, and assuming that North Korea is pursuing an independent agenda, we develop our interpretation from the lexical data sets, but maintain a slightly wary view of the dataset.

We note that those references associated with North Korea are almost exclusively originating outside that country. Therefore, again, caution in following what is presented here. Now, we do see that North Korea is 'sitting at the moment of disintegration', and is 'relying on its wits for security' as it has 'lost control of the physical'. We also note that a strong and rising aspect/attribute set goes to the idea of 'hang onto common sense' as the 'world has gone awry'. Probably NOT good signs.

Also in the not good signs department, the Populace entity, USofA subsection appears to indicate that it expects the 'sun will cast light over the earth'. Perhaps indicating the expectation of the nuclear release. This aspect/attribute set is rising, fully populated, and heavily cross linked. Within its structure we find that 'approaching/anticipating', and 'reluctance', and 'anxiety' are the dominate aspects. Supporting this 'anxiety' are aspects/attributes going to 'blinding light', and 'earth energy cannot ascend to the sky', as well as, 'lavish energy adorns the earth'.

In the 'anxiety' aspect attribute set, and cross linked back to BushCo, the aspects/attributes are 'cannot fall back to old ways', and 'no guidance for failure or success'. A little deeper down the aspects run toward the image of 'old habits' and 'old patterns' being found to be 'without use' and 'completely discarded'. A side note is that the 'completely discarded' thread also is supported by 'new times have new faces and new words'.

We also find that North Korea is seen as 'having no regard' for 'themselves' and 'only focused on the aim'. Lower level aspects reinforce this idea suggesting that 'no regrets exist for those without regard for their bodies'. We also find that a very large base for the completely data set associated with North Korea goes to the image of 'the aim in not obtained in this way'. Further, its attribute sets continue with the idea that 'chair legs are broken' while 'compressed men hunt for escape'. Also, we find that the emotive sum for the base lexical sets associated with North Korea, extracted either from GlobalPop entity, or BushCo, equate to the same value of 'desperation'.

There are differences within the types of 'desperation' seen within the data. It would appear that BushCo is feeling 'pressed' as though 'water soaked leaves' put 'between heavy stones'. Further that their 'desperation' derives from 'sweat of fear' which 'falls in the eyes, stinging and tearing'. We also note that as the cross links are indicating, an 'exposure' of 'vanity' at the 'expense of caring' will 'cost innocence'.

BushCo - Black Threads

The potential for this coming week to ten days is very high. We see a developing nexus of emotional values clustering around specific points as various entities begin going into tipping points. These include the Populace, both USofA, and GlobalPop. We are also observing that BushCo is starting to develop 'black threads' as Igor would have it. This effect is rather an odd one in that the tipping point intensities in other entities are showing up as areas of concentrated aspect/attribute sets which persist over time. The effect visually is not unlike threads of black that twist their way through the entity as the modelspace is progressed. In a stationary mode, the BushCo entity is filled with irregular clumpings of black dots, but as the entity is progressed we see the black dots snaking through the entity like black threads in multicolored jello.

Some of the black threads coming from cross links to both USofA Pop and the Press entity show that BushCo is about to be 'chained' to 'past shame' and 'ignorance'. This 'chaining of the ankles' has aspect/attributes going to the idea that 'motion is restrained' as the 'limits of available action' are 'explored'. We note that BushCo will be subjected to 'three cries of shame' which 'raise the blood red to the face', while 'heating the ears' and apparently causing 'rage to issue from the nose'. Within our experience of this process, the rising of body part references has always proven significant as it is a primary, species wide archetype.

Continuing we see that BushCo will 'express inexperience' which in turn leads to 'chastisement' within the Press. This in turn is seen to lead to the 'punishment of the ignorant person' and further that this punishment will take place in such a public fashion as to find BushCo 'trapped in the square', 'mobbed', and 'shamed for abuse' of the 'ignorant person'. This drubbing in the Press is also going to be connected to a very public 'release of temper'. Supporting aspect/attributes go to the image that the 'release of temper' will be seen as 'lashing the innocent out of fear'. The response cross link from the Populace/USofA terminates in the aspect of [revulsion].

While the above suggests a not very good week for BushCo, we find further amplification when the modelspace is progressed. Our rising aspects are led by 'putrefaction', and 'decay'. Within this aspect/attribute set we find the image of 'deprived of oxygen, the body reels'. Further, that 'the bed is gravel laden, covered in silt, no breathing'. This in turn is supported by the external links suggesting that universe is about to provide a serious lesson in limits to the 'willful, prideful, ignorance of inexperience'. We see that 'limits' will 'slap' BushCo as do 'harsh winds driving rain'. Further, the response is seen through cross links as 'rage, misapplied'. Thus, likely the lashing out against an innocent which raise issues within the Press.

Markets - Weak before the Hill

In keeping with the processing approach we have a concentrated group of data sets in

which references to the '7 days in May' discussed above are indicated as playing out over the coming week. The primary aspect of the period of May 11 through the May 17th period is a rising 'time of transition' which is supported by the aspect/attribute set that describes the period as 'a time of standing, weak, before the hill, urged to climb, too spent to continue compulsive behavior'. Three layers of aspects down, we find that the situation may be more dire than expected as 'mired in duality, goaded by masters, driven up the hill, the cow {ed note: bull?}, weak-kneed with frothy exhaustion, death on the slopes'.

The Markets entity has a core emerging from the tipping point in which 'power' and 'mastery' are seen as being 'parceled amongst the new' while the 'old servants are decapitated for theft from the master'. Not a pretty picture. Further reinforced with the idea that this is a 'time of struggle' requiring 'all strength for transition'. But as is seen within the data 'sweaty hands fail to grip rock', and 'eyes, clouded with self-delusion fail to see clearly to avoid danger'. The 'time of transition' is also seen as being the 'point' on which 'duality' balances. In emerging from its own tipping point, begun in early April, the Markets entity is not only expressing its own chaotic internal destruction/transition, but is propagating this energy into other entities. As discussed above, the Populace entity has tipping point transfer directly from the Markets while several of the BushCo black-threads originate here.

The 'transition time' seen for the Markets entity is also terminated in the aspect of 'failure'. This aspect is supported internally by attributes going to the image of 'failure to move the knees', and 'failure to climb the hill', and 'failure on slope, falling back, not to old ways'. We also find that 'compulsive behavior' or 'forces' are 'burned out' and 'exhausted'.

Terra- Confirmation of Coagulation

As we have moved the data into the modelspace over this processing we have seen a rise in 'immediacy' indicators for the 'summer shakes' that were discussed in previous parts of the ALTA reports. It may well be that the planet will receive another 'holiday shock' as is indicated by the data. We note a rise in the aspect of 'confirmation' with supporting attributes of 'coagulation of mud, water is expressed outward'. Also within the data set are references to 'people lying on their backs in mud', with 'rainwater pouring down, earth quivering mud beneath frightening thunderclaps'. Further the 'people in the mud' are seen as 'sinking deeper as the earth shakes'. We also find aspect/attributes for 'dangers, prior to light, mud rising, earth falling'. If accurate, we may be getting the 'confirmation' of the 'summer shakes' with a Mothers' Day quake.

Again, IF ACCURATE, the indications are for 'skin lost', and 'horrors threaten' along with 'continually under threat'. Also, if accurate, the area affected will be 'larger than 100 miles square'. Further while the geographic references are vague to say the least, we do note that 'water saturated ground/earth' is the primary descriptor available. There are repeated references to 'water' being 'expelled/expressed/pushed' from the 'pores of the

earth' such that the people lying on their backs will discover their 'buildings/structures' to be 'mud filled', or in some cases to be 'swallowed' by the earth in 'less than 3 bites'. The only other physical descriptors available are replete with references to tidal action suggestive of both waters, and lunar influences for the perceived earthquake.

Press - Impromptu State of the Union

Along with the various entities entering into tipping point mode this month, and the impacts seen on BushCo, we also note that the 'un-settled-ness' of 'the general state of affairs' will bring forth an 'impromptu' focus on the state of the 'Union'. We do not, through either Populace have a clue as to whether this examination of the 'state of the union' refers to the USofA where we are always pretty much in continuous uproar about the state of the Union, or whether this refers to the European Union.

There are some indications to suggest the latter may be the more appropriate interpretation. These indicators would suggest that the EU is in for a period of very intense self-examination especially as regards 'social costs' and 'social prices'. Further the Union will be 'positioned by circumstance' for 'best examination' of its 'internal cohesion' while also being 'ground down through costs perceived'.

What we are extracting from the data is that the Press/MSM will shift their focus from things military as was posted last week, and more intensely put their beady eyes onto things social, especially as related to 'collective action' or Union.

BilderBergers - Unity Sought, Sighs and Cries

We have enough data present to craft a small entity around the references to the Bilderbergers and their May meeting. Within our data set we find that the elite are about to hit a bumpy patch within their internal relationships. We note that the data states explicitly that 'unity sought' will be 'denied to the face'. And that this 'denying' will take place with some 'rancor, irritation, and exasperation'. This is also all bound up with 'many small regrets' but no big mistakes. Rather the data suggests that the meeting will end with enough 'amicability' to allow for 'persevering', but not for the generation of 'enthusiasm' for the course agreed upon. There are other aspects rising toward primacy which go to the idea of 'distrust' coming with 'someone without faith' in the 'agreed goals'. Hmm, the data also would appear to indicate that very deeply hidden agenda's will be 'sensed at the door' by many of the attendees new to the group. A strange sense of 'un-real-ness' will prevail in that apparently the 'aged participants' will be 'unable to see/recognize' the 'change of times'.

We also find that the terminating values for all of the BilderBergers associations are interesting as they suggest that things will not go well for the elites. Indeed, the data suggests that 'sighs and cries' will precede 'soft wailing' at the end of the meeting. And the deepest level lexical clue available does not auger well for future elite solidarity

going, as it does, toward the image of 'fractured feet don't walk'.

Conclusion

Again, our apologies to readers over the brevity of this report. The whole timeline thing has us a bit anxious as the data suggests some real nasties are out-and-about. We will be processing this week, and moving the data to a superset condition for Part 5. We expect to be able to post part 5 by the 15th and so if new data appears within the processing that has an immediate nature or impact, we will issue email updates as required.

A Note On Processing - A cautionary note to subscribers

It becomes increasingly evident that a very large scale shift in language use is occurring which has impacted the processing for this report series. It was one of our goals in striving for the largest ever data set size to try to extend the reach of the modelspace. It was our hope to be able to gather enough data to process for a finer level of granularity of 'emotional carry' values and 'duration of impact' values such that we would be able, theoretically, to extend our modelspace out further.

Instead what we have discovered is that the short term, high immediacy, and high impact values have really dominated our processing, especially within these last two sessions. While it is usual to 'chase time' during the last of the processing in the sense of running up against the short term indicators which were gathered weeks back during the initial processing and now are being interpreted close to their 'period of focus', we have been rather swamped with a figurative cresting wave of short term values which totally subsume any of our long term indicators.

We sort of ran into this with the data gathering which took place in early December, 2004, prior to the tsunami. During that period it was very difficult to get any long term indications of emotive trend shifts as so much of the lexicon was near-term focused. We are seeing a similar situation now, with several additions.

While it would sort of be expected to find the short term impact values rise disproportionately along with the rise of so many tipping points, we nonetheless have an impression that the scale involved is more extreme than would be expected. An impression only. Statistical analysis does show a preponderance of immediacy values over long term that is extreme in our experience, but we have to also state that never before have we encountered this situation of so many entities engaging in tipping point behavior. That so many are involved, exiting or rising into tipping point *must* have an

impact on processing, however, we are not able to quantify that impact now. Is our processing during such an active tipping point period magnifying effects? We can't say.

What we can say is that a very loose association seems to be developing between events and previous ALTA reports. We are citing the 'sky fire' and recent GRB's {ed note: Gamma Ray Bursts}. In that same vein we now have scientists globally acknowledging that far too much energy is being absorbed by the earth from the sun and other sources, and not being released. Also, yesterday's solar flaring, and CME release could be the beginning of the sequence as reported in previous ALTA reports. Then, we are now entering the 'summer shakes' as we get the earth response to the increase in energy. We expect that this will continue and increase as we move forward into June and July.

On the more mundane fronts we find that the events within the global financial infrastructure is seemingly very accommodative in matching its internal breakdown to the previous ALTA reported sequences. Again, the hedge funds/derivatives issues of last week, as well as the behind the scenes activities currently on going have been suggested as likely by the ALTA report of this series and the two previous.

Usually we do not necessarily have the inclination to attempt to fit the details of evolving circumstance here on earth to the fictions created within the ALTA report modelspace. As a rule we are content to get things correct 'in the main' such that the astute readers of the reports may take such actions as they deem fit based on prognostications which seem to be better than random chance in laying out the potential development paths of events. In this report series, and very likely prompted by our unusual processing this time, we thought to take a minute to point out that a couple of conclusions may be, in our opinion, safely drawn from the ALTA reports and developing circumstance.

1) it does appear that summer shakes will escalate if the trends shown in 2005 continue unabated.

2) as the San Juan de Fuca plate at the extreme north western edge of the continental USofA is the only Pacific plate to NOT have had a major quake in the last 50 years (and indeed is now approaching 204 years without), our ALTA forecast for that plate to buckle, would still seem to have potential as the summer shakes escalate. Note our base of operations is within 150 miles of the plate, and the main internet hubs are in downtown Seattle (48 miles away from the plate edge) and environs, so it may be expected that if this does occur, communications with HPH are likely to cease for some period. Should that happen, we have made a half-assed plan to relay through Geo. Ure at <http://www.urbansurvival.com>.

3) it does appear, that in spite of officialdom protesting otherwise, that the sun, and extra-solar influences are also escalating their effects here on earth. This is not good for humans and other life in a number of very significant, and very immediate ways. While the long term impacts maybe mostly discussed in MSM, it is the potential for catastrophic

activity that, in our opinion, should most concern the species. The issue is easily seen when presented in the context of a '4 per cent increase in solar radiation being absorbed over the release rate from the planet'. This indicates two things. First that more energy is coming in than is being released, and second, that the rate of absorption of extra energy is steadily increasing. Further, we now know that not only is earth gathering and holding more of the solar energies, but also that the sun is now releasing more energy than was expected. We have maintained from direct observation here, that solar levels are increasing at 1 per cent or more per year since 1998. This may be one key puzzle in the whole chemtrail issue, as TPTB may have decided that 'screw it, kill the air, it will buy us a few years'. If so, the bill is now due. From our equipment here, even on heavily sprayed days, more energy is still making it to the ground. In the last 2 years, the effects on local plant species provides very plain evidence to those who know the horticultural world. Further, there is now 'official' corroboration of this effect from 'accredited scientists'. And within the press releases about the situation, in spite of the usual blame it all on humans as a 'global warming' issue, we now are seeing 'cracks' in some of the logic as various factual elements spill out. This includes the admission of a very large increase in high energy particles in the electrical area of the energy spectrum which are being absorbed by earth at an increasing rate, just as their incoming rate is also increasing. The electricity has to go some where. It is our supposition, in support of, and supported by our ALTA reports that the electricity will release this year as our 'summer shakes'.

In support of the energetic nature of earth, we can look to a bit of Bucky Fuller's maths:

- the total sum of human activity produces an average of 350 quadrillion BTU's;
 - prior to 1999, the sun delivered energy to earth in amounts measurable as 600 million quadrillion BTU's;
 - we cannot measure plasma impacts on earth's energy absorption rates;
 - as a rule, we do not actively measure the electrical inputs to the earth from the sun within the BTU calculations, though we know in recent years that electrical output from the sun has increased measurably;
 - an increase in solar activity of just 1% over ten years was thought to have triggered several of the larger mass extinctions in earth's history;
 - the 4 percent increase in solar radiation getting to earth translates to 24 million quadrillion BTU's, or just over 68 thousand times the human activity production of heat in toto.
- 4) we note that the correlation between the economic breakdowns globally, such as the recent 'hedge fund trouble rumours' and even the slide of manipulated markets of the DOW, et al appear to be confirming the worst of the imaginings with recent actions.

There are indications within many of our entities that this is not a trend, but rather the beginning of a wave cresting into absolute chaos. As you will note below, we are having very large scale lexical changes occur in many key entities suggestive of very large scale, broadly impacting change. As might be expected, this is not change in a good way. Our caution here is that readers need to be aware that a very concerted effort at control of both media and markets is now breaking down. However, our processing of this past week indicates that a serious effort toward 'spin' is likely coming. Do not be deceived. The number of reports we are able to gather discussing 'abnormal trading patterns' globally is shockingly large. It is still our opinion that the economic reality differs considerably from the officially described version, and now, neither are healthy. As per discussion in the Markets section below, we expect that things will continue to worsen. We still look for a May 20th 'something' to rear up with some vengeance. We still expect, from our Populace entity cross links, that the worse has not yet happened, and that by the early part of June, a whole lot of current concerns about economics will be internalized within the change taking place in the populace as a whole. The ALTA data describing this change does not indicate happy times and much barbeque.

It was our hope to have a Part 6 of this series in which we could focus on longer term themes. That seems unlikely given the processing of this week. We have a conference call pending for Monday with our principle clients about the next report series. At this point we are planning to put Igor back to work next week with the set up and initiation of the next run while I produce what I can of a Part 6 for next weekend. It may be that we will also be coming out with a Part 1 of the next series within days of the part 6 being posted. We will announce a subscription opening and other details after the conference call. Look for a Part 6 to appear, with email announcement, though at this point we are uncertain of its focus.

NOTE OF CAUTION

In spite of the woo-woo nature of our reports, we believe that we could successfully argue a 'better than chance' accuracy. Grant us, for the moment, that this is indeed the case. Then, without suspending disbelief, and actually with our skeptics hats on, let us consider the broader themes expressed in the reports this year.

Our emerging view of a planet wracked with earthquakes, sky quakes, solar quakes, fiscal quakes, war quakes, and political stupid quakes holds up a very harsh promise for the future. If even correct in the main, the view is grim. If correct in particulars, so much more so. And now we are seeing both 'officialdom' and their science lackey-dogs out with supporting evidence lending credence to such a view.

While severe, with much hardship indicated, we always need to note that as Bucky Fuller discovered, 'universe, seemingly, supports the continuation of humanity'. Now, without questioning the wisdom of universe in that goal, let us consider that there are waves or energy flows within universe, and perhaps one of these indeed seems to support the over

all advancement of humans. Previous, recent periods of catastrophic activity within universe and our local solar neighborhood, have resulted with humans still running around out-and-about. It is our developing opinion that we are indeed in such a period of universe expressing catastrophic activity in our local neighborhood.

It is our opinion that the universe will guide individuals as it sees fit. This will include the guiding toward places of safety or destiny, as it chooses. Again, in our opinion, this is a really damn good time to learn to listen to universe. From our many years on the aikido mats, we emerge knowing the essential rule is to learn to harmonize with the flows of energy, only then does freedom enter into your ability to act. This may well be a period in which one needs to learn to swim *with* developing currents.

From our traditional greetings on the mats as we face our partners in aikido practice;
"with respect, let us begin".

Populace - Threats

Our Populace entity, still split into the USofA segment, and the GlobalPop segment, are now both referencing a new common lexical structure, even though their divergence increases. Within this new structure is the indications that the populace at large, globally, will be influenced by 'threats' to 'remove the lid of the earth'. Further we see that the structure contains a progression of 'dangers' as one drills deeper into the lexical sets. This may imply that there will be '3 sinkings in mud' supported by 'the framework is pulled apart by destructive forces'. This latter is referenced 3 times through internal cross links implying either a three-fold threat, or perhaps the same threat escalating 3 times.

We note that the lexicon of cross linked emotive sums for the structure, common to both of our Populace entities, is built on a base of 'evil all around'. Also that the 'evil all around' is what is seen as being responsible for the 'shredding/destruction' of the 'frame/framework/structure' of the 'plaza/common meeting ground'. This 'destruction' is indicated as being 'witnessed' by the Populace as a whole, and further the attribute speaks to that with the image of 'painful memories' with 'deep roots in the past' will 'tear all eyes' and 'clench/squeeze all hearts'. The supporting aspects are cross linked in the main, with many of the cross links terminating internally to the structure with the image from the attributes of 'destruction of the past belongs with the destructive ones'. And supporting this is another image further down in the lexical chain of 'destroy painful memories of the past'. This in turn is cross linked back to BushCo where it terminates in 'extract roots deep in the past'.

This lexical structure within the two Populace entities has a static emotive summation which goes to the idea of the 'threats' to remove the lid of the earth. However, within the

Populace/USofA entity we note that the structure is joined to a primacy state change in which we see a 4 fold shift in primacy state from 'cohesive' toward 'dissipation'. This refers to the tendency, positive or negative, of humans to coalesce emotionally around an issue. So this primacy state change is suggesting that the impact on the Populace/USofA will be on in which a moment of cohesion around the 'destruction of the past' will result in a multiplicity of responses which will tend to diverge and fracture even more than the initial response state.

A curious note is the intermingling of cross links through both Populace entities back to the Terra entity where they terminate in a cluster of internally cross linked references to the 'sun'. Further we also find the word 'sun' as a bespoke value within all of these attribute sets. Within these we get images such as 'seeing the change in the south' as well as 'sun at its zenith, illumination of the destruction of the past'. And such as 'maturing situation precedes transformation'.

In the bespoke image within the lexical reference we find that the 'sun evaporates the marshland/estuary, compelling the people of the waters/boats to walk'. And hanging off the bespoke sun reference is a complete aspect set which goes to the idea of 'dried mud becomes a safe road amidst chaos'. This is further reinforced with language to the effect that 'mud roads lead feet north and west', this in turn augmented with 'danger seen south and east'.

Markets - Surreptitious Venom

The modelspace having had our base levels reloaded, we can now compare our clumps of immediacy values along with the other data recently processed. With the background in place we can now see that while things are clearly bad now within the Markets entity, they have no where to go but down.

If things were not so imbalanced internally within the Markets entity, it may be possible to see a 'save' coming, however our entity is clearly lopsided and sliding downward as a whole below the emotively neutral line. Within the dominating aspect set we see that 'everything disperses in fluttering chaos', or less poetically, 'entropy develops from dispersion'. Further it would appear that the cause of the 'fluttering chaos' is specifically the 'contract not fulfilled', or as also within the data, the 'thought not completed'.

These in turn are cross linked internally to self-supporting structures which all hang under the aspect of 'surreptitious venom'. This aspect in turn has its own supporting attribute sets which include 'discontent with bald lies', as well as 'frustrations create neurosis'. These in turn link over to 'decay stopped short, but not well balanced, decay begun second'. Also supported by, 'freeing from slavery to the father', as well as 'inherited traits impose penalties'. These are then supported by 'repetition of the father's mistake, small cycles/circles/spiral downward'. And, 'tighter spirals lead to choking'.

We also see that 'personification of the father's ideas dominates the decay'. This reference is cross linked back to Populace and the 'destruction of the past'. We also find that 'no glimmer of hope' as 'compulsions dominate' when 'derived from/created by' the 'father's vision'. This is reinforced with internal attributes going to 'taking compulsions from father'.

There is also a warning note sounded by this structure within Markets as it offers that 'only the well-balanced prosper' while the 'off-balance/weighted' are seen as 'disappearing/sinking in the mud at the bottom of the lake'. This last is reinforced by 'clouds of silt' will 'rise from settling in the mud'.

As we proceed into the week(s) ahead, our Markets entity is suggesting that a 'confluence of courses' which are described internally as 'rivers' and 'flowing waters', will develop and will 'drag down the feet' of the 'unwary'. We also note that primary aspects are undergoing a very significant change both as primacy state values, and as total emotive summations. In this case the transformation is from 'fertility/productivity' to 'withdrawal/wilting'. As primacy state values, these are the pegs against which the model is analyzed within the on-going process. Another way of stating this is that the basic context of the entity within the model is undergoing a change.

In this particular instance, there is a four-fifths or 80 per cent change in dominant aspects within the entity as it moves out of its tipping point. We have a newly described entity as a result in which 'cohesion' has totally dropped below the level of all primary, and secondary aspects. Further we find that 'perpetual motion/churning' brings us to 'heated circumstances/hot water'. Within our change of descriptors we have a rising group of aspects moving from secondary positions up to the primary level and within this set we find 'lame', 'halt/dragging', 'hobbled', 'crippled' and other in similar vein. These are supported by the tertiary layer of aspects in which we find 'subservience fails', and 'subservient wife rebels'. This is amplified by 'serious matters' will 'overwhelm the pleasure seekers'. This area is cross linked over to the BushCo entity discussed below, and terminates in the initial spreading ring of an odd structure that is developing there.

Looking at the various rising aspects of the Markets entity in conjunction with their attribute sets, the entity appears to have developed a problem with direction. We actually can find such questioning constructs as 'motion stopped/halted, what to do now?' within the attribute set and all we have to do for interpretation is to merely place a question mark at the end. There are others attribute sets which may go to the response such as 'mind frozen, throat seized, belly/bowels release'. Not a good sign.

Further within the changed context descriptors for the entity there are aspect/attribute sets for 'place of darkness waits', and 'darkened moon dominates', and 'return to subservience, dark holes', as well as 'no proper place, no proper people, dire'. These in turn are supported by such as 'too gloomy with restricted pleasure', which in turn is supported by 'burning currency, little warmth'. This whole area of the entity continues with further

cautions that the 'ruler has no blood', apparently to be taken in conjunction with 'sacrifice is seen wanting/lame' while 'eyes behold excrement stains'. Both of these are held within a lexical structure whose leading aspect is 'evil' which is modified by attributes of 'in the beginning, stains the end'.

A section within the Markets entity is used to hold those values which pertain to the emotive view of speculative nature of markets. Within this section we find those references to 'hedge funds' which led to our emails of this past week. Now placed within the framework of the compete Markets entity we can note that 'hedge funds' are not quite off the hook. In fact, it would appear that this coming week will bring up entirely new dimensions of the whole story. Our data suggests that 'hedge funds' will encounter 'weak hands' which will try a 'carry to the mountain/surcease' only to 'fail on take-off/initiation'. Further there are suggestions, through the cross links, that a barrage of 'seductive messages' will hit the Populace this coming week. This is seen as being part of a 'duality' which will come into notice in which 'marriage is offered', even as the 'groom mounts the horse, preparing to leave'. We note that 'seductive glances' will be used to 'entice the unwary' to their apparent 'demise/doom'. This, internally cross linked within the Markets entity, is seen merely as the 'language of usual day', and a lower descriptor goes to the idea that 'if gullible, so deserved outcome'.

This apparently is all necessary as there currently exists a description around hedge funds a 'dancing on balance' and 'hemmed in' through lack of 'alternatives'. These in turn are connected to the 'attempt' at 'self directed movement' which will 'encounter barriers on all 3 sides'. This is seen as forcing the 'blandishments/flattering offers' of 'marriage' which will end in 'feuding' and 'death'. Further this whole area is flavored by the rising aspects both internally cross linked and externally linked which go to the idea of 'leaving productivity' and 'beginning transformation'.

A curious cross link over to BushCo seems to echo the interpretation of the reaction to the 'coming shock'. We find that within the terminating aspects/attributes on the Markets side of the links, that 'shock comes' is the dominating aspect, with attributes for 'realize the seriousness', and 'situation dire, danger in middle'. This is further augmented through near-repetitions such as 'realize the seriousness, shocked to senselessness awareness'. There are lower references which go to describing a situation developing in which 'external laws' applied to 'internal circumstances' will yield a 'disclosure of what has past' that will participate within the building emotive shock on BushCo. This is not to say that this area is the cause of the BushCo problems, merely that it participates in the whole developing stew, perhaps as primary ingredient, rather than merely a flavoring, though we do not have enough data to postulate which at this time.

BushCo - Energy Restrained

As we progress with our processing of the data sets, we naturally find ourselves slower than developing events. Usually at the point of the last segments in a report series we are working on data that has immediacy indicators of a very high level suggesting that the emotive values are near to manifestation. We arrived at this point during this past week's processing. So we are now examining values for the BushCo entity which are directed against a timeline that spans the week of May 15.

In this case, the BushCo entity is going to face two instances of 'constraint'. In one, the rising aspect is 'energy restrained by force', in the other the aspect is 'restricted movement forced upon'. In this last, the entity is the focus of the 'restricted movement', which is to say, that our interpretation is that BushCo will find its movements restricted by developing circumstance, rather than a situation where BushCo tries to impose 'restricted movement'.

That we have two rising aspect with a common emotive thread, [restricted movement], but in which each has divergent supporting aspects/attribute data sets seems to clearly indicate that there will be two fronts or areas in which this will play out.

We find that the separation of the 'constraints' falls broadly across the subject line. In one case the 'restricted movement' is being directly applied to BushCo's 'energy' and further that this is seen as being 'restrained for 3 months'. Further that the 'restraint of bonds' will 'hamper movement, frustrate will, and darken brow'.

The other area of 'constraint' being imposed on BushCo is a bit more graphic. We note for instance that this is a case of the 'ignorant proceed', in spite of 'having no control over their bowels', which, besides likely being very messy, is seen as a real detriment to 'proceeding with the young'. In the data set we find that the BushCo entity is going to 'proceed, without regard to lack of control of self', and that this will create a very ugly situation in which the 'urge in the underbelly rises in light'. Within this attribute set we note that the 'rises in light' pulls along a very hefty lexical structure in which the 'great step forward' by the entity will produce a 'sinking into wells of excretions'. A rather ominous bespoke query is also present within the entity as though it is asking itself the question 'will you/i succeed?'. Never seen entity-self referential questioning prior to this instance.

When we delve a bit deeper into the structure we find that the 'constraints on power/movement/exertion' are replete within the data set and provide a very high emotive sum which derives from a very large supporting data set. Please note that the same emotive sum might be reached by much fewer words which had individually higher emotive values. As an example, our current emotive sum of FFDE {hex digits} could be reached by summing thousands of words, each with a value of 0001, or it could be reached by summing only a few words each with values such as 1A1A. In the case of the entity at the moment, we have a very broad base of lower value words. This becomes pertinent in that our interpretation tends to find that fewer, but high value words tend to

produce brittle or fragile interpretations which, in the past, we have taken as indicators of sharp change events. In the case of the many small value words, we tend to assume that these represent a longer term developing trend with a larger emotive-mass, and thus we see it as a harder-to-alter momentum toward a particular emotive outcome. Clear as mud?

Well, the point is basically, that the BushCo constraint data is seen as having a very large emotive-mass suggestive of a not-to-be-easily-turned kind of momentum. This area is also heavily cross linked back to Press and the developing 'rebellion' line of movement, along with other cross links back to Populace.

While noted in the Part 4 posting that BushCo develops black threads as a result of the tipping points pressures arising from the other entities within the modelspace, we may now be observing that a tipping point condition might be developing within BushCo. At this point we have a spreading base from one black thread area which may, over time, develop into a tipping point. If it does not, then our interpretation is that the spread of the influence of this area will come to dominate the aspects as a persistent sort of flavor-of-things. In other words, while the emotive values are suggestive of a tipping point developing, they are just hovering slightly under the thresholds we use as tipping point indicators. In our model, once the values within the multi-dimensional array reach a certain saturation level of all of the individual sums crossing boundary numbers, we consider that a tipping point crescendo has taken place, as usually, the array will evolve into a new numeric matrix very rapidly. In this case we do not yet have BushCo actually reaching the crescendo point as we are just below the critical mass level. But it would appear that something would have to release or change as these very high levels of emotive values have never been sustained within any entity within our experience of this form of analysis.

The spreading from the affected area returns to a dark core of clustered values which suggest that BushCo will be presented with a 'face seeing' the 'unexpected which has come true/manifest' in spite of 'devotion/prayer' to the contrary. We find that the area shows that 'weak eyes tear quickly' as 'prayers against evil bring about disaster'. Further the 'face' of the BushCo entity is seen as evidencing 'shock' and 'horrified disbelief' that the 'unexpected view' has revealed the 'hidden'. We must note that in this case, while there are elements within the data set which describe the 'hidden' as being 'secrets', it would appear that BushCo is about to be rocked by secrets from outside the entity. This would appear, just from a weighted index of values, to be focusing not on any secrets internal to BushCo, but rather, more shaded toward BushCo 'piercing a veil of illusion' and having some 'fear manifest as circumstance'. It would seem from our data to be describing a situation in which BushCo has a generalized 'not to be spoken fear' which will actually manifest. This is seen as producing a 'contorted face, drools, mucous and tears' as the 'acknowledgement of understanding' of what has beset them. Further the BushCo entity is show as 'convulsing', and 'writhing' as it runs into its own 'denial of responsibility/participation'.

The affect of the above does not look good. As we progress the modelspace out at this point in our processing we do not gain much detail nor extension on the timeline due to the immediacy values of the data set. This has the effect of producing a dark, and spreading sort of bruise appearance on BushCo entity with no sign at this point that it will cross over into tipping point. One likely interpretation is for a very nasty period of very intense stress on BushCo. As to how the entity suggests that BushCo will handle this, we only have to look to the dominant, rising aspect in the region which goes to 'convulsions' and is further amplified by the many references to very unsavory bodily fluids, as well as the underlying bespoke emotions of 'shock' and 'horror'. We also note that the entity appears as though it will be 'shedding' a bit as the smarter elements 'wake from shock, flee'.

When we apply our timeline indicators to rising aspects, we can note that BushCo through most of July will be on the receiving end of some pretty powerful influences from the developing tipping point conditions in the Populace/USofA. Also there are further cross links from Populace during this period over to the Press entity which indicate that 'rebellion' will be planted as a seed within the Press. Further our timeline shows that around August 10/11, the Press entity will begin to engage in open manifestations of the new trends. This will also coincide with developing pressures from the Populace entity which will be taking something of a rest during August after the very stressful 2 months of June and July. However, just as the Populace is winding down as a pressure point on BushCo, we note that the Press begins to rise to dominate the period of August 10/11 to about September 14th with its pressure on BushCo. During this period we see that the already low opinion being expressed by Populace will actually turn ugly. This is suggested by the several instances of bespoke emotions within the Populace entity of 'disgust' and 'revulsion' which are rising aspects within Populace/USofA which terminate at BushCo. At this termination point, we also note that rising from the Terra entity we get the term of 'bloody tears flow all night' supported by a very complete set of attributes going to the image of 'earth broken, everything wrong, no movement, failing, much longer'.

As if this is not going to be enough of a burden on things, and still noting that looming large 'death' thing due to hit the USofA in December by way of the BushCo entity, we also note that during late September and into October a rising aspect of 'disease' will beset BushCo. It does not appear to be life-threatening, though does seem serious in nature, and its impact will be to add yet more to the BushCo entity at a time that it is already beyond safe pressure levels. Given the indications of the data held in the supporting aspects, it would be safe to assume that far less than quality decisions will arise from BushCo during this time, and that the very visible mistakes will provide yet more pressure as BushCo starts stumbling all over itself.

Terra - Ten Years of Confusion

The Terra entity is still progressing in the major trends noted within this series. We find

that 'spewing, quaking, and baking' will be the major themes that the earth will express to its inhabitants this summer and into fall. The lexical pointers within the Populace entity, primarily the USofA contingent, have cross links back to Terra indicating that the Populace/USofA segment is to get a 'solid ten years of confusion' as a result of terranean activity this year. The indications are for earth activity, seen to involve both earthquakes and volcanoes, to 'cost more than the nation's day' a 'multiple of mass times'. We are taking this last to indicate that the costs in dollar terms on the USofA populace will be several times the entire daily output of the nation. Within the allegorical language we have rise through our processing we frequently get numbers without having a way to assign meaning, and conversely, sometimes we get no numbers but some indications of a mathematic relationship. In this case, we note that 'multiple of mass times' has appeared in the past where we successfully considered it to represent several orders of magnitude. So the interpretation is for terranean activity to cost the USofA populace some significant portion of their years' labors.

Again, the trends for 'explosive rain delivery' and 'upheavals of land' as well as 'plate shift' are all still showing. Further indications are for some very large, mass evacuations as 'fleeing in darkness, vagueness' during which 'millions retreat, many die'. This is seen as occurring as a result of the 'responsiveness of the earth' or alternatively, the 'rebounding of the wave through the ground/earth'. These aspect/attribute sets are fully populated and terminate in a series of cross links back to Populace, both sub-objects, and contain imagery to the extent of 'long trails, discarded pleasures, bad feet, newly dead'. Further, the 'dark smoke drives the women, children'. This latter has a curious sub aspect which goes to 'missing the men'. Odd, as it stands.

Also the continuing trends for the 'unexpected' are seen tied from that primary aspect of Terra over to both Populace and BushCo, where we find that there are dozens of terminators, many located within the 'black threads' previously noted. It is as though a whole series of not-so-minor earth upheavals are going to be putting the BushCo components into a not-so-good mood. Noting that our whole process is emotive analysis, it is not surprising to pick up on developing emotive trends. However it is unusual to have so many bespoke emotions rise as primary aspects. This is seen when we progress the Terra entity through the modelspace in conjunction with the Markets and BushCo and Populace. In all three cases, the model seems to indicate that terranean activity will induce problems to BushCo both directly and indirectly. This pressure is seen as resulting in a very 'belligerent', as well as 'confused', 'misguided', and 'angry', 'aggressive', 'agitated' BushCo administration. Our data indicates that as the Populace entity moves into its tipping point conditions in early June and through July 28th, we find a rising amount of cross links from there as well as directly from Terra which go to BushCo and the bespoke emotions covered by 'mindless rage' or 'helpless frustration'.

Gaining within our Terra entity are emotive sums which are pushing a primacy state change. It would appear that the crush of sources of worry for the Populace will include the Terra entity at the top of the list by August. We find that the May to June timeline

shows for 'explosive release' leading to 'summer shakes' all of which bring 'anxiety' to the Populace entity. Within the Terra entity we still note the continuous accretion of values for 'extreme rain events'. And as previously noted, 'volcanoes'.

The newer material within the entity has added a note of some concern for 'moon' caused disruptions in June. We see that the 'moon' will 'turn from the earth' and that 'storms pile the sky with rainwater' which again is seen as developing such ferocity as to 'restrict movement', including both food shipments, and rescue attempts. Our indications are that this will happen during a 'full moon' and that the 'rescue attempts' will follow as described as 'uniting' in 'moonlight' to 'secure the damaged' and 'provide for the innocent'. There are cautions that the rescues will be 'costly' both in life and resources.

Press - Underhanded Activity

As we moved our modelspace through the period of these last weeks in May, we can see that this coming week, perhaps even starting on May 15th, the Press entity will begin to develop a theme that seemingly will play out the whole week. This theme is best described by the rising aspect of 'underhanded activity'. Within this curious reference that we have never seen arise as a dominant aspect before, we also note some rather ominous lexical clues to the details to emerge. We can see that one of the prime points of the theme breaking in the MSM will come from a situation in which 'weapons are hidden under dense shrubbery'. This will apparently be visible when some of the Press are 'invited to climb the hill' where the 'angle of sight reveals' the weaponry.

What will not be instantly clear is that the data suggests that the whole of the story, press participation and all, is part of a very large set-up, or 'underhanded activity', in which 'much uproar' will be directed toward 'developing a common purpose', or as also seen within the aspect/attribute sets, 'develop unanimous purpose'. The supporting data sets clearly are showing that this whole thing is 'rife with questions of validity', and is 'roundly rejected' as being 'filled with duplicity'. We further find that when the Press is 'forced to confront honestly', that they will see that 'uncalled for behavior stains the heart'. As a further curious reference, we will apparently see 'hand covered smiles' on the part of reporters and others involved as the 'officialdom faces' are 'red with shame' when 'carts of lies' are 'found, burned, their ashes' to be 'flung in the face' of the 'servant on the steps'.

An obvious interpretation for this would be that the Bush administration, in an attempt to take the focus off of the developing global economic meltdown, and their failures in Iraq, as well as the duplicity at the heart of BushCo itself becoming exposed, may try to drum up a consensus for 'action' against Iran or North Korea. This will fail. It is seen as failing so miserably that 'open tears' of 'frustration' will be seen on the faces of 'servants' who will be 'pressed by masters' on one side, but will run into a 'cacophony of chaos' when facing the citizenry. In point of fact, there appears to be the real potential developing for some form of mob action, or crowd response of a very negative fashion indeed.

In a small lexical aspect/attribute set within the Press entity we find that one of the stories developing from the very action packed week ahead will be an instance where the 'guards' will 'fight the soldiers' to 'secure exit' from the 'rally of success, stated' for one of the main participants. What we see here has USofA dominant geographic aspects, and just enough in the way of descriptors to suggest that Cheney, or someone with the same sort of physique or standing {ed note: a little vague we know} will be forced off stage by the 'voices of the walls'.

The Press entity also is indicating that the movement will be from 'forced unity of opinion, attempted' towards an attempt at 'fire, in many forms' and 'brilliant lightning', with 'resounding reverberations of thunder'. The nuclear touch here comes through. We also see that the story will be involving the 'one who strives for unity' in a public display of 'cries' and 'complaining', in which 'mocking laughter' will be the response. This 'laughter' at their expense is seen to 'force uprightedness' and will end in 'vein calls for reliance on divine force'. Again, laughter is seen as the response, that is, both from the audience for these calls, as well as from the Press. In fact, it would appear that 'words of derision' will 'hurry the servant' from the 'halls'.

A sub set of data has to be presented here as it could present a possible alternative interpretation. This data is focused on our May 20th period specifically. We have already voiced the idea that some form of 'natural movement' which is seen as happening on or around that day, could be the 'rallying cry for unity' that will 'issue from officialdom'. It could be that some form of natural disaster is what is being picked up here. The sub set could be interpreted as suggesting a situation in which a natural disaster occurs, and the BushCo admin sends someone out to 'plead unity' to the masses. Again, though, and it is a hard interpretation to make, it would appear that even under these circumstances, the 'plea for unity' will be met by 'derision' and 'abuse of the servant'. Further down within this sub section we have descriptor set which goes to the idea that the 'servant, on rising' will 'drop lies' from his 'pants'. These lies are 'picked up' by the people within the crowd, and the 'guards' who attempt to retrieve them are 'beaten, cursed'. Then the whole thing degenerates into the mob action suggested above. At that point, the 'lies' dropped from the pants are apparently to be given to the Press as the indication is that these lies will form the 'case for retribution for death'.

TPTB - Selected Sacrifices, Mystery Woman, Dread Companion, Mind Snakes

We have to note that a new entity is emerging when the modelspace is progressed such that the Populace entities pass the June 11th/12th period. We see that a rising emotive tide within the Populace begins on June 2, with some form of a spike on June 6th and is fully in place by June 12th and there after becomes *the* dominant force. As we are able to see the Populace start this tipping point, which still is ongoing in next February, we also see a new entity split off from the two populace subsets. This is clearly noted by lexical separations. We have chosen to call this entity the TPTB for 'the powers that be'. While we note that they refer to themselves differently, and would have the common

populace accept their own delusion as to their 'elite' status, we chose not to play into that mind-set, and instead, merely note that these are the 'dogs' currently controlling the pack. Just because they are currently in-charge, does not make them less the cur.

This is a curious language separation, and we have had a very sleepless night as we had to build some new functions into our base lexicon to effectively screen for this new entity. This is due to the very large common lexical set shared with the populace entities, and the small set that is leading the division with said Populace entity. We were, funnily, able to derive a very nice lexical addition, on Igor's suggestion, from the verbiage to be found at the site for the Council of Foreign Relations. Thanks to this front organizations kindly placing much of their common emotive base in plain sight we now are able to 'see' TPTB speak about themselves within their own emotive lexicon.

When applied to our data set, it would appear that social dynamics are revealing this self-selecting reorganization of things within our data set. The self-styled 'uberclass' is apparently at that point where it is moving toward separation from the masses. We have formed this entity to track these lexical changes as events progress.

Within our TPTB entity we find that the newly separated data set instantly starts into a tipping point on its own. The whole of the small entity is completely involved within the emotive chaos of the tipping point as we progress towards late July and up to about August 10th or so. Thereafter, the level of emotive convulsions dampen off a bit for a period lasting perhaps a third of a month or so, then the entity goes right back into a tipping point condition without much in the way of either divergence of emotive values, or release of emotive stressors. In both cases of tipping point behavior, we note that there is a primacy state change occurring continuously in the background of the entity. This state change will take the entity from a cohesion to chaos over the course of several months. We find that the primacy state change is moving from a 1/one {ed note: never seen a prime state number this low} to a 158. This is a huge move. It suggests that forces will be actually shredding any unity of expression within the entity by years end. Our data actually is replete with suggestions for intercene violence being played out at many levels as TPTB will 'select sacrifices' to appease the 'howling of the mob'. Not a good sign for anyone it would seem.

The problems about to beset TPTB entity will appear over the course of a very intense 24 hours. While developed internally, there will be external manifestations of this 'day from hell' for TPTB. They will find that the universe is about to instruct them in the 'natural order' being one of a 'collective of men/humans' rather than the 'pact of the tradesmen'. This will be brought to their attention by a 'king of the east' who is seen as 'slapping their face, twice, hard-calloused hands'. However, the real problem for TPTB is seen as coming from the 'south' where a 'woman, lame in both legs, blind in both eyes, and bereft of feeling hands' is seen as nonetheless, 'inducing chills in the skin' with her 'penetrating words' and 'clear insight' into the 'soul of the seed, deep in the well'. Apparently this female influence is quite actually, if our data is correct, about to take center stage as a

prime vehicle through which universe will change not only TPTB, but also the Populace entities. We note repeated, ropey-thick, cross links between this small area of TPTB entity and the Populace. We need to note that the cross links split into two, one going to the Populace/USofA, and one going to GlobalPop.

Due to the larger number of cross links, and more complete descriptor set, it would appear that our mystery woman will arise from outside the borders of the USofA, but will nonetheless still come to dominate TPTB thinking. There are a few more descriptors for this woman, and include such items as a 'companion, short, dark, covered in dreads' who has a 'bond of blood, outside skin, violence' suggestive of perhaps a body guard, or one bonded through violence and the taking of blood, rather than blood of birth. All about this woman will be 'aspects of evil', 'faces of demons', and 'lies, deceits, and deceptions', yet these apparently arise as a 'veil of protection' which only the 'close will penetrate'.

According to the data, once our mystery woman starts speaking 'chaos begins' for TPTB. The data indicates that 'factionalization/splitting apart' will begin almost at once with the 'favored few servants' seen 'sneaking off' to 'refuge in the cold south'. A curious reference that when we look into it has a caution expressed to those of TPTB who would take this route to 'flee the chaos' of the 'woman's censoring words'. The caution extends that 'natives' of the 'refuge sought' will be ever so 'hospitable, even toned', but that first evening the 'rest of the weary' ends in 'blood filling the cracks of the cobblestones' as the 'revenge of the oppressed' begins. This area is heavily cross linked back over to both the Populace, both segments, and the Press entity so perhaps the data is indicating that the 'slitting of the underbelly' will make the evening news.

We also need to add that the movement of TPTB entity. The chaos is seen as 'erupting' from within the entity as an 'excess of energy' strikes their emotional 'core'. The data specially references 'damage, destruction,chaos' internal to TPTB as a result of 'collisions of excess energies'. These energies are seen here as purely emotive, but note that the point at which they appear is simultaneous with the beginning of the 'spread' within BushCo.

One final note to add regarding TPTB is that those who will be watching for signs of this developing distress will apparently have to wait only a short time. And the data is kind enough to suggest that 'odd deaths' {ed note: may refer to an odd number of deaths, such as 3, or 5} will 'induce blame hunts' within TPTB, as some will 'suspect their own' and 'imagine the worst of their brethren'. These 'odd deaths' will be the first sign of the developing multi-faction ed civil war within TPTB. Shortly after this time the data indicates the 'castigation' by the 'king of the east', and subsequent to that the first of the 'mind snakes' {ed note: perhaps better transliterated as 'penetrating insight'} coming from the 'woman on canes' will break over TPTB. However, first note that the 'face presented' for this woman will be her 'blood bonded' companion, who apparently has his own role to play in events. Now this ought to be some really good reality teevee!

Conclusion

This represents the last of the accretion of new values within our processing. As noted above we will likely have a small part 6 to be posted with clean-up issues, small entities and such. Look for this next weekend.

We will also notify everyone via email of the outcome of our conference call tomorrow.

A very curious flavor of universe on this report is that geo-storming knocked out power to our processing repeatedly last night as the storms resulting from the CME and other solar energy lashed the area with rain and thunder. Such reinforcement from universe of truly abnormal weather goes to stiffen the spine when interpreting some of the more outlandish possibilities from our data. Then, this morning, power and communications restored, we find a slew of emails from a few California residents noting that previous predictions of people being 'displaced/driven' by bad smells may well be manifesting all up and down the California coast in the near future as there are many reports of very heavy sulfur smells in both water and air.

We take heart in our earlier observation that 'universe supports humans', and that we are frequently quite wrong in this, and hopefully will yet be proven wrong in both the scope and nature of the problems heading our way these next few weeks. However, we would also urge an extra bit of awareness during these weeks as clearly things just ain't quite right here on earth. We also note for all readers that universe repeatedly demonstrates that it favors the prepared mind. By reading such screwy-ass reports as these one at least expands their thinking, develops alternative scenario possibilities, and helps prepare their thinking for flexibility in extreme circumstance. Good luck to all passengers on Spaceship Earth.

Data set distilled from 84.667 million reads .

Note that due to the 905 run being into significant data capture, and the clean-up nature of this report, this part is necessarily brief.

Time Windows

A few subscribers have asked for 'time windows' relative to potential events as maybe picked up within our data. We have to decline as our approach simply does not work that way. We will note those potential events which morph over time due to accretions, but we are reading emotive values which hold true at the time of the data acquisition. These values hold out potentials for a few hints as to human behavior in the main. If we were to

measure, as an *example* the emotive potential for the 3000 (more/less) deaths from the Sept 11th attacks on the WTC and determine that its value was X, then the 25,000 (more/less) deaths the following summer from heat in Europe could reasonably expected to have an X times 8 (more/less) increase in emotive value. This may or may not translate to more time awareness 'prior to the event'. But ASSUMING it did, that is that the *"magnitude of the emotive impact is directly correlative to the time in advance of the event"*, then the Sumatran tsunami should have produced X times 100 as it had 300,000 (more) deaths. So if we get a pre-happening window of 64 days for Sept. 11th event, and 4 months for EU heat zone, and one year for Sumatran tsunami, then perhaps something on the order of a very large quake resulting in emotional impact on 13 million people might get what, say 2 years? 3 years? advance warning. See the problem. We have no clear date range for any event such that a 'all clear' day could be sounded. Our approach does not work that way. It assumes that emotive content presages behavior change, nothing more. NO ALL CLEAR date. As far as we can tell at this point, no real morphing of either short term or long term predictions. We are assuming, that to some great extent, that we get a lot of the little specifics ahead of time, but never see them manifest in the great spew of events that is current time. So as in all of 2004, there were reports of 'bad water'. Had not a clue until the October timeframe that we were dealing with the potential for what we termed 'electrified water' and then interpreted as a 'storm'. If we had looked to the data set, it could easily have been interpreted as 'force driven water' which then would have been more correctly interpreted. Currently, in 2005, one of our developing themes which is slowly being augmented as we go forward, is 'plate shift'. No time window. Little specifics other than those already reported. Presumably any plate shift that may affect 13 million humans would more or less affect the whole planet, thus the likelihood that we have the location within our data set, but the problem is which of the over 23 thousand geographic references associated here is 'the' place?

Footprints in the Snowdonia

While it is not meaningful in the sense that we cannot validate the individual references and therefore have no real way to validate the total, we thought to note that our processing is picking up odd discussions out-and-about wherein the behavior of persons or institutions is a bit puzzling as regards their 'things'. We see these reports referencing the closing of 'craft' centers around the planet, and the relocation of their ritual items elsewhere, usually shipped in large, very damn sturdy wooden crates.

These reports in turn are augmented by the relocation of various agencies of various governments. Again, we find a few more references where newspapers, or insurance firms, or archival firms {especially those concerned with the maintenance of 'hot spots'}, have been noted to be relocating. Of course, it is purely coincidental that large data gathering groups such as the CIA in USofA chose to relocate a portion of their operations to deep bunkers near Denver at the same time that reports and details from bills of lading are available about the relocation of 'craft' items from Italia, and other low lying points near the watery parts of the planet. Apparently there are times when it no longer matters

that footprints are being left in the Snowdonia...

Terra - Local Neighborhood Heating Up

Within the Terra entity we find a couple of heavily doubled cross links, both internal and external. The external links go back to the Populace entities suggesting a large scale impact. What is clearly shown in the data, whether it is correct or not, is that the [sun] is going to 'throw the wind' toward earth such that the 'people will huddle' and that 'clouds of rainwater are heaped together' to be 'blown around the planet' the way a 'boat is blown around the pond'. Further, 'not all the force' will be 'eaten by the clouds' and therefore the attribute sets suggest that 'winds pummel the earth, digging holes'. This is further reinforced by the cross links over to Populace where it is seen that 'people huddle' and are 'stuck in sucking mud'.

This increase in 'solar wind' also will contribute to the spreading of the dark edge around two of the black dots developing within BushCo. It would appear that the environment will intrude within the next week such that BushCo has yet another 'fire to quench'. Further the data suggests that 'fear' is 'bespoke quelled' as though there will be some attempt on the part of BushCo to issue a don't worry message.

Within our Terra entity we note that not only will volcanic activity be involved, but that apparently some very large, and abnormal weather patterns will emerge simultaneously. The current weather patterns suggest that we will see a continuing and devastating heating over most of the Northern American hemisphere while extreme cold clamps down on the Southern American hemisphere. There are also suggestions that a 'striping' of the 'ground, like segments in an orange' will develop which will be visible within the weather.

We note that the 'rainwater' issues of earlier parts of this series are now starting to emerge within our modelspace at the current point. It would seem probable that large scale weather pattern disruption may begin within the next week. Of course our model is known to be inexact in timing, so caution is urged on that specific. However we do note that the patterns seen in earlier parts as 'potential' are now showing up as 'manifesting'.

We still get indications that 'shaking' will 'upset the day, barely begun' and that 'breakfast, food preparation' will be 'disturbed, broken'. These are seen developing over a wide area, and that the 'mind will rattle, freeze', while 'cereal boils'. Then the other implications are for continuing shaking events throughout that day such that 'handles, reached for, not found', and 'pots/pans not there', and 'doors ajar, windows cracked'. We also note a very unique appearance of 'ears affected, shrieks' which is associated with this particular shaking event. It would appear from the data that the 'noise' associated will be reported extensively after the fact due to so many hearing it. In this particular instance, it would

appear that this is to be a 'lifting' sort of shake in which the aftermath will reveal 'two mountains, impassive in chaos' where before only 'mud' was 'known'.

Also for the short term the Terra entity suggests that 'solid mountains' will 'shine' and 'shake', and that further the 'mind will get it' that 'feet can't hold still'. We also see that some form of 'pollution' disaster will bring 'fouling' so widespread as to 'induce fear/vomiting' and to 'move feet, wheels'. There is some small suggestion that the 'pollution' will be 'set loose' by 'rolling matter'. Perhaps indicating landslides? Maybe so as there are supporting aspects showing rain/flooding involved.

As this pollution problem manifests we find a cross thread back to BushCo indicating that 'shouting faces' will 'berate the victim'. This will not come across too well, as we find within augmenting attributes that 'fouling your nest, brings ridicule'. This in turn is supported by 'childish behavior, craps his pants'.

Again, as an odd twist, we note that the arrival of our 'dred companion' associate of the 'blind woman on canes' will seemingly rise from the pollution incident. This is seen as contributing factor to some level of consternation and 'dithering in circles' like 'ducks' that will be visible as TPTB react.

One last note is that curiously both the Terra entity and the Populace entity, more so the USofA rather than GlobalPop, show a duplication of lexical sets. In the primary case, they both contain a rising aspect of [tension] within the [sun] associated area. Further within their separate augmenting attribute sets, they each carry an image of 'tension in the sun'. And within the Populace entity, we have a further, internal cross link going to 'crawls the skin of the back'. And within the Terra entity we note that the 'inner tension' of the 'ground' will be 'fed' by the 'tension' of the 'sun', and within that reference we find an attribute set going to 'rainwater pours from sky', and 'gravity pulls sky energy'. This in turn is augmented with further attribute sets of 'stand above', 'caution steps', 'careful step', 'do not contend', 'shield', 'armor against harsh', 'tension too great, water released'. Not too comforting, and just a bit confusing. It may be signaling some sort of continued solar storming which in turn drives abnormal storming here on earth.

We also need to note that the 'inner fire' and other references for Antarctica, as reported earlier, are now manifesting, coincident with B15A going walk-about. In the data now we have emerging aspects/attributes for 'release of waters' and 'new waters' which are apparently 'safe to drink'. However, the most aspect/attribute sets newly acquired go to the idea of 'many springs' and 'new rivers flowing'. We also see that the 'wind' is soon to be 'stopped by the new mountain'. This latter may be referring to a more or less permanent anchoring of the B15A berg. As to the rivers and springs, we also note that both lexical areas terminate in 'no cap' or 'no restraint', suggestive of a general melt? There are also suggestions that within the new 'rivers' we will find that 'living water, living creatures' will develop and rise to public awareness. This latter through cross links back to GlobalPop. This is suggestive of perhaps new bacteria? or other life being release

from icy entombment?

Markets - Fire Up The Still

Our Markets entity is just now emerging from its tipping point conditions. We note that the Markets entity has a 2/3rds change in aspects, with dominance shifting from 'restricted movement' over to 'take a breath', as the current, primary aspect. This however, is replaced within this week as we progress the modelspace forward. The new rising aspect is 'Distillation'. Further we note that wholesale change of attribute weighting is shifting the Markets entity lower in spite of the more positive, but weakly so, dominating aspects.

We find that the Markets entity states clearly that this coming week will see [nothing] (to be) [left unchanged]. That 'wind creates waves on all surface of the lake', and that 'summer comes, sun heats all'. We also note that in this case the Markets entity is suggesting through the many [sun] related references, that the 'summer comes not smoothly', and that 'wither, and pulp' will 'clog the fields'.

The Markets entity has had the middle of its mass drop below the median, or neutral line in our model. As we progress the modelspace forward, the visual image of the mass sliding downward continues. One of the driving emotive sets comes from a rising aspect within Markets with very negative values. This set goes to the image of 'dirty hands bring gifts'. Deeper into the structure we find that reinforcing images also come to the same conclusion that 'muddy gifts produce unwanted eyes'.

A cross linked area within Markets goes to the idea of reassuring words from 'outside' the 'field'. We see that the 'king looks to expectancy' while 'steadfastly holding out', and 'promises more promises'. At the same time, the supporting aspects/attribute sets within the Markets actually says, 'feet in mud', and 'sucking mud grates skin'.

Also within the recently acquired data from the last of the processing we can see that Markets entity is growing very much more 'tense' as 'divergences develop'. This lexical aspect of 'tense' has within it an attribute set going to 'was observed, acting childlike', this in turn is supported by 'professing lies, ignorant excused'. However, the cross links from the terminator of this set go to a larger area within Markets led by 'regrets' and 'soured' and 'foul'.

Within another very heavily cross linked Markets area we find a bit more poetic rendering of the emotive values in that the aspect/attribute set goes to 'contemplating visions'. Within this is 'seeing empire', which in turn has {would have been} [nice] to (live there). This last has a terminating aspect/attribute set going to the image of 'last of fantasy/lies/fictions'. Further we find that this whole area is cross linked back from rising

aspects over to Populace where it terminates in 'childlike' as an aspect, which is heavily supported by attributes for 'deception'. This last is cross linked back over to Markets where it terminates in 'revealed'. The interpretation should shade toward a complex, multi layered deception emerging relative to Markets over the next week as the whole 'face' of things financial will seem to 'shatter' and diverge.

This whole area of the Markets entity is seeming to split into a divergence, but one centered around 'distillation', or 'squeezing out with heat', or 'metal purified with heat'.

While the current indications are for a whole lot of 'dithering' and 'back and forth' sorts of motions within the financial markets over the next week, there are some specific references for larger moves. We find that a 'gathering to question wisdom' will be held and that this will be a marker for specific fracturing of 'interests/alliances'. When this occurs, it would appear that the insurance industry as a whole on a global scale will come under very extreme pressure. The pressure aspect would seem to take some time to manifest, that is, it shows up over the course of the summer months within the modelspace, however it will be felt within that segment as beginning later this coming week.

There are also indications within Markets, heavily cross linked to GlobalPop, of an incident involving 'food, cooked, boiled, food cooking container'. We note that 'bowels and blood' will be involved, and this incident will prove to be a very large motivator for segments of the population in the Northern hemisphere. Further the 'boiling container' is 'toppled' and the 'source is removed'. This is not seen as eliminating the problem however as the 'stain spreads'.

This whole segment of data is moving over towards a rising aspect of 'distillation' as previously noted. Within this segment is one or more of the 'causal' factors for our developing impact on the Populace/USofA. It would appear that some aspect of the Markets being 'distilled' will shock the Populace/USofA to its core. This area within the Populace continues in this state at least through February of 2006 which is the extent of our possible range at the moment. This area also is seen as growing over that time, as well as taking on new hits from other aspects within the Populace/USofA entity and Markets entity through cross links. One interpretation might be towards damage, even severe damage, to a USofA institution. The damage is seen as large enough in its impact on the Populace to have an immediate 'wave' pass over most the population. Then over the course of the rest of the year, the real impact emerges.

As a side note, the Markets entity is suggesting that the EU constitution vote will be 'frothy' and 'turbulent' within France. That some politician 'proffering' that the 'ignorant' should be 'excused' and 'asking for patience' with the 'ignorant children' will cause further aggravation for the passage of the Union. Our data would suggest it will not pass, though the EU continues.

Silver

In spite of price indicators to the contrary, our Silver entity continues to separate from Markets entity, traveling off on its own. We still are acquiring data suggesting that the emotive attraction of silver is rising rapidly and will escalate on this path even further and faster. Noting that emotive values do not translate to prices {at least we can't figure the math}, we still note that Silver is rising away and upward, and that some period this summer, nearing the end of June, larger emotive value steps are taken upward, by this as well as several other commodities.

Oil

As noted earlier in this series, Oil is still showing that a 'separation' will occur in which a significant portion of supply will be removed. This appears to be the result of shifting earth, rather than human intervention, however we do see a repeated reference to 'carelessness'. This also appears to trigger a very large reaction toward recovery of the lost supply, however, our data would suggest the prospects are dim, though we have to note this is near the end of the time period and thus our linguistic descriptors are less than robust. Nonetheless, the indications are for some large impact on availability though the level of immediacy is low. As to geographic indicators, it would appear that this is time-co-incident with some increase in volcanic activity, and maybe pointing toward off-shore, SE Asian oil assets.

Derivatives - Abstractions

We note that a very heavily cross linked area from Markets over to the Populace/USofA, and GlobalPop, clearly shows that 'abstractions' will 'stink, not be eaten'. This is co-incident to a rising emotive movement within both Populace entities {first in GlobalPop, but later, and much stronger, in Populace/USofA} toward 'tending home' or 'counting grains'. Both of these somewhat obscure aspects have much more detail internally within the attribute sets which go to the images of 'paper burns, food eaten', and 'abstractions denied, earthly fruits'. We further have 'accounting of calories/energy', and 'failure of trust of one, trust of all'. Again these references are hanging off of the 'abstractions' descriptor within Markets, subsection, 'speculation'. We also see that 'turks refuse', and that 'italian delay' will cost the 'mover/creator' their 'day of respite'. It would appear that a movement within the financial infrastructure globally toward abstractions will run counter to a current within the populace of the planet toward more earthly focus. These two counter trends impacting will create conditions of extreme 'distrust' of 'paper' and 'lies' that will further exacerbate the already developing tipping point within Populace. We note that a 'crisis' is coming, which the Populace/USofA entity shows through cross links as being 'self-created' or 'self-manifesting'. This in turn has very large negative emotional connotations through emotive sums in both Markets and Populace entities. Further this develops into one of the threads of 'confrontation' within Populace leading to the Civil Strife.

Populace - Culture Clashes, Delusions Shattered, Civil Strife, Class War

While the Populace entity has recently split, the developing emotional descriptors from which the title of this section was derived, exist in both GlobalPop, and Populace/USofA, though in each, the specific triggers and instances differ. Within GlobalPop we note the problems with religiously motivated culture clashes will continue and escalate. In some cases to 'divided city' state which will be straining the regional 'control centers' in 'confrontation' between the 'central authority', and 'local citizen' action. Sort of a caught between a rock and hard place scenario. In this instance the religious wars are intra-religion, and actually are more cultural assimilation issues.

Within the Populace/USofA, similar indicators of a 'religiously' derived culture clashes exist, and these also will escalate. In this case, however, early in June incidents will develop which will bring about a wide-spread, 'negative', and 'snarling' mood within the citizenry. This will taint all activity for some time. It will infect the citizenry and its relation with the Press/MSM such that media is 'scrambling' and 'shocked'. Further, the model indicates that 'harsh' words are going to erupt from the Populace/USofA relative to the Bush Wars near the end of May which will be taken up again in mid June. The reason that this criticism is significant is that this particular area goes to a cross link within BushCo which later cross links back to our Class War section. It is as though the word wars are beginning in real seriousness within the USofA, and that currently the divisions within the Populace are being exploited.

We note that the 'delusions' will be 'shattered' in early June. These are separate from 'illusions' in that such are self-generated, while 'delusions' are something put upon from the outside. In this case the impact of the shattering will be severe. In one sense, it almost shatters the Populace/USofA entity itself. Clearly one segment of the population will be very vocally in denial, and is seen as 'shouting' the 'absurdities' at 'midnight'. Howling at the moon might be a good image as well. In this case, 'frustration' at the 'denial of truth' as it is perceived by this segment, will cause them some considerable pain. It is worth noting that this group will later contribute both to the Civil Strife when their 'alliances' to 'lies' is broken, and to the Class War.

The emotive hardening of the attitudes seen coming can not be over stated at this point. The summation values are high enough to suggest violence over such abstractions as religion. This emotive hardening of the attitudes, while specifically exploited by BushCo in the past, will come to plague BushCo over the summer and into fall. We note that the Populace/USofA cross links show that BushCo, as one who lived by/prospered by the sword, is about to suffer from the same. The indications are for a very bloody defeat of USofA forces and intentions {both spoken, and hidden} in the Middle East theatre. Not only will Iraq spiral out of BushCo control this summer, but the Populace/USofA cross links suggest that they are emotively expecting a very far reaching collapse of all aspects of BushCo 'foreign policy'.

BushCo - Press Squeeze, Isolation, Worms Wear Daily

Along with the rising pressures on BushCo in late May through July from the Populace, both USofA and GlobalPop, we also see that the 'hardening of the attitudes' will afflict BushCo in a very significant manner and they will 'squeeze' the Press. The cross links are indicative of a turning of the BushCo emotive 'unstable' world view toward the Press as an entity. We note that the attitudes now showing will develop rapidly into a "with me or a'gin me" stance taken by BushCo vis-a-vis the Press. The Press will have a fit. We see a very large set of divergence developing within the Press entity as well as the impact of this in cross links on the Populace/USofA entity where it sets up a thread that joins back in late July {some how with a Bavarian connection to the story} with one of the 'black worms' which will infest BushCo this summer and beyond.

Just at that time {late May} , BushCo will be encountering a push towards 'isolation' as an emotive wave from the Populace/USofA. This wave will have various faces that will all impact the BushCo entity as well as its relations to the Populace and the external, greater world. It is very much another 'caught between a rock and a hard place' situation developing. The primary generator of this is an emotive trend developing within Populace/USofA toward isolation. We see this trend expressing itself in relation to imports of Chinese goods, the importation {illegally} of undocumented slave labor across the borders, and the moves toward 'isolating' the USofA dollar fiscally from the realities of the world at large. These sorts of trends continue, and early in June begin an escalation such that BushCo develops a 'black spot' around the subject of 'isolation' in all of its various faces. Now, since BushCo is totally out of step with this wave, and indeed is still promulgating 'greater american empire abroad', they will run into some severe emotional turmoil, internally and externally as a result. Further, they will not appreciate that this is a basic emotive wave, and instead will attempt to 'control' or 'overwhelm' the various individual faces of the wave, thinking that each represents a specific problem or issue. This will fail, and is seen as generating other waves both back toward the Populace/USofA which will further aggravate the emotional turmoil within BushCo, but also externally to the USofA, the waves will also irritate large numbers of the BushCo participants/shareholders.

This developing problem between BushCo and Populace/USofA is one of the 'black spots' of intense emotions which develop into 'black worms' as we move the modelspace forward. In this case, a number of these develop within BushCo over period from last week in May through last week in July. Those that develop in early June cross link back to the tipping point state hitting the Populace/USofA entity about that time. All of these various 'black worms' are fully in place by end of July or early August, and we seem at that point to take a brief, perhaps 10-15 day hiatus, then they all begin being active again with much increase in data values throughout the months of September through to November. The clear indication is that much of BushCo energy will be consumed the rest of the year in just fighting the battles of the moment desperately trying to maintain control such that they totally have lost sight of the larger picture. In a way, sort of like

trying to patch each of thousands of leaks while your boat is sinking, and not realizing you are already underwater.

Press - Dithering, Fracturing, Revolt Internally

As a note, the Press entity will go through a few convulsions over the next months. Due to squeezing by BushCo, and the 'pressing downward' of the 'internal authority', it would appear that an 'employees' revolt will develop within the MainStreamMedia, or other wise known as corporate media. This revolt may manifest itself openly as employees are disciplined for going against corporate directives. The indications are for some very public, and very wide scale disruption within the MSM, and a movement from 'chaotic confusion' towards 'delicate balance' just prior to the Press entity going through a period of 'transformation'. Much of the transformation will result from Iraq related issues and not the current log on the fire of the Newsweek story. Rather it would appear that the Press will get its largest 'squeeze' from BushCo about impending news from the Bush Wars, and that contrary to expectations, the 'employees' will 'say live' as they 'see it'. This will create a big problem all the way round until it later resurfaces to infest BushCo with yet another 'black worm' to gnaw on them through the summer.

Conclusion of ALTA 605

This concludes the ALTA 605 report series.

While mostly really negatively focused, these reports nonetheless do provide at least some small awareness of developing potential such that hopefully, 'when everyone around you is losing their heads', you need not participate in the general emotive trend of the moment. This is the demonstrated value of flexibility in thinking, and the validation for the often repeated saying 'universe favors the prepared mind'.

Thanks for participating in ALTA 605. It looks to be a very interesting summer.

ALTA 905 data collection underway. Report Part 1 projected for May 30th.

The data is already piling up for the ALTA 905 series, and our early indications are for more details about the developing 'summer shakes' as well as the human centered 'shakes' which seem to emerge this fall and winter.

Good luck to the humans. Though universe clearly supports the species, a little luck never hurts.
