ALTA Report

Asymmetric Language Trend Analysis Report
'Changes in language precede changes in behavior.'

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

This report created from 37.918 million reads of the ALTA 1308 series.

03.21.2008

Meta Arts - Appreciating Reality

The currently unfolding 'silver shortage' across the Americas, with more acute shortages in North America, is occurring as forecast in previous ALTA reports as appearing 'around the 2008 equinox'. This manifestation is the visible appearance of the language which was forecast as [not being able to obtain gold/silver for USofA dollars]. It now appears that the [silver shortage] is global and increasing with reports coming from Asia, and India about disappearing stocks of small sized silver.

There are further indications that the [death of the dollar] meme will continue at least through 2008, {ed note: this is *good* news in that it takes a while to totally disappear...so some preparations can still be made} with the potential for huge social disruptions later in Summer and certainly within the [chaos] forecast for Fall.

The extreme weather across the planet includes not only very high heat in the southern hemisphere (35 degrees for days in Australia), but also the manifestation of the [flooding] and [diaspora] memes within the northern hemisphere. The [flood] meme is also shown to continue

through 2008. This will be evident across the northern hemisphere even in the normally dry periods of [summer]. Then the return to the Fall weather (early by about a month), and with the [extreme storms/dramatic_rains/traumatic_winds] natural disasters still ongoing here in the USofA, the [flooding] meme takes yet another large jump up in emotional intensity values. The [diaspora] meme also continues to gain values across both the Populace/USofA and GlobalPop entities. The accretion of linguistic sets around the [flooding] are still gaining values for [permanent], and [massive displacement] of the [populace].

As the forecast for 2008 are beginning to manifest, we note that conditions around both the dollar death meme, and the natural disaster meme for the USofA will continue to merge as Spring progresses. The precious metals shortage, and the inability to obtain any with USofA dollars will pressure the [paper debt] systems, adding more weight to the forces compelling the existing [government infrastructure]. As the [government], including both the [bushies] and the [civil service] begins to react [badly] to the manifesting events, their mistakes will magnify the already bad situations into something worse. This [visible] aspect of [confusion], and [defeat/bad_outcome] will in its turn add more emotional force to the [loss of confidence] which is at the core of the current [unraveling] of the [millions of small particles (paper debt of all kinds)]. This continues, providing even more emotional input to an already heady mix, and then we approach a period, most likely in late Spring or early Summer in which the [emotional pressures] will [boil over/spew out] of the [populace]. The [blow up] will take the [press/media] by surprise as they are being deliberately controlled to support the currently collapsing world view, and so they will not notice the replacement world appearing through the cracks in their carefully planned and presented perceptions.

Markets - 2/Two trains each leave their stations....

As a definitive sign of the times, there is nothing on anyone's mind other than how the markets are doing. This also, and naturally extends into the housing market. There are some indications within the data that a period of relative [change] will come to the [dollar dying process] over the months of [summer]. This is to say that the data is indicating that a the [spring] plateau of building emotional tensions get a large boost as of the June [solstice]. Thereafter the emotional run continues in a steeply building trend until it breaks in very early October.

However, the totality of the Markets entity, AND the Populace/USofA entity, AND the GlobalPop entity are presenting a very confusing picture for all forms of [markets] over the next 5/five and one-half months. The data *must* be examined from 2/two separate perspectives as [duality] is rising as the dominating meta data layer within the meta data groups affecting these entities. Each of our 2/two main perspectives appear with significant sub sets with modifying aspect/attribute sets.

The first of the perspectives is that of the [federal reserve cabal]. This linguistic descriptor set contains the [federal reserve bank organization], as well as all of the other player in [global governance], and the [in-the-know power elite] who are required to keep the [federal reserve] in power.

Our immediacy values are pointing to a very [aggressive emotional attitude] by the [federal reserve cabal] which includes the PPT (Plunge Protection Team) over this next week (up to and through March 26th). The [aggressive emotional attitude] sub set is supported by aspect/attributes which include [defensive battle (for) control], and [deteriorating circumstances (force/compel) desperate measures], as well as [fierce] and [dangerous] and other descriptor sets for [extreme risk]. The data sets are very clear that the [spring] at the [federal reserve cabal] will be [consumed] with [hyper vigilance]. The [rhythm] of the [war to save the dollar] will flow and fluctuate throughout these next 6/six months, and seemingly is [terminated/lost] in early October as a

result of the [cycles completing], and some very [extraordinary circumstances]. However, after a very [nail biting spring], the [federal reserve cabal] will [bespoke believe] that they have [won] the [war to save the dollar].

The [aggressive actions/reactions] which the [federal reserve cabal] take over the last full week in March are due to have impacts on the [precious metals] including [silver]. The data sets first accrue the supporting aspect/attributes of [decreasing (at) first]. These are processed from the latest immediacy values and indicate that the [aggressive actions] will [decrease] the [commodities] at [first], but the supporting sets continue with explicit references for [increasing (later/throughout latter part of spring)]. Also within the supporting sets for [silver/gold] are patterns which accrue through the shorter term value sets and come into the Markets entity in late April, continuing through to mid June, and which contain the [double] language. These sets now have *explicit* references to [piles of coins] and other [wealth] descriptor language. We also have indications that [paper silver/gold] will also do well, as will other [paper commodities]. These are the only explicitly *good* references for [paper trading proxies for commodities] which show up within the processing. The data sets are also supporting the idea that these will be very [troubling] areas for the TPTB/[federal reserve cabal] over [spring].

Will the emotional building trend of [spring] act as a period of [volatile but ultimately sideways] market movement? We have some evidence for this. While there are, and continue to be distinct reference sets for [silver] having its [demand double] over [spring], there are also indications for a less volatile[summer] in the [markets] as the relative [frenzies/pressures] of [spring] moderate with the [summer heat]. The data sets continue to point toward a [double] word being applied to [silver demand] over [spring] and it shows up repeatedly. We also note that recent rumors, some confirmed, are going to the idea of 'silver being sold out' at many local dealers thus validating the [demand] side of the equation. {Ed note: this is the manifestation of language we first

reported in ALTA 0308 in which the 'metals could not be had for US dollars', or [encounters with scarcity (in metals/coins) which money/currency could not remedy]}. Will this translate to price? Obviously it must at some point in time, and to some degree. The appearance of the anecdotal evidence of a physical silver shortage is the second, and so far largest step along the process of the [breakdown] of the recent [ratio/balance] between [gold] and [silver], and [silver] and [oil]. The Markets entity has had a growing data set which goes to the idea of [silver] being [decoupled] from [gold] and later [oil]. We have seen only very small hints of this development during the 4/four years that the [decoupling] data set has been growing. The [decoupling] data set contains references to a point of [near parity] being established between [silver] and [gold], albeit briefly. This [parity point] is still building in the data sets and so is likely off in the future still, however the build to [parity] must be recognized as occurring within the more general [chaotic shifts] as the TPTB/[federal reserve cabal] fight it out with universe for control of developing circumstances. Hmmm. Wonder who will win that war?

The data accretion rates show that the [battles] of [spring] *do* quiet down a little for the [federal reserve cabal] once the [summer solstice] is reached, but this is nothing more than a brief period of barely 100/one hundred days before the denouement for the [dollar] arrives in early October. From the first of October of 2008, through all the long term values out until at least July of 2010, the [federal reserve cabal] sub set continues to gain cross links over to the Populace/USofA where the termination points are in [anxiety], and [profound transformation], and [extreme discomfort] and others of similar emotional intensity. The idea is coming across that over the next 3/three years the [federal reserve cabal] will [suffer], though not even near to the levels shown within the Populace/USofA entity. However, please note that if correct, the [quiescence] will be a [reprieve] for the [federal reserve cabal], and may well represent a period in which many speculators feel it is best to take any 'profits' in Federal Reserve Notes out of the paper trading system. This is not 'investment nor trading' advice, merely a mention

that if the data sets are anything close to correct, this [summer] will be followed by a wildly chaotic Fall which may include an actual [fall/crash] in paper assets of all kinds including currencies. While the supporting aspect/attribute sets in support of [gold/silver] continue to accrue over [summer], the data also suggests that at some point the [markets] will go into [lock down] in which it is not possible to [realize/manifest liquidity] on [paper assets]. The evidence for the [pressures] capable of creating such a probable future exist now, and are observable now in grocery stores and gasoline/fuel stations across the USofA. As these pressures mount toward the sudden, and precipitous release language shift in early October, it would seem probable that the [public mood] of [suffering] and [discontent] *would* be very likely to manifest by breaking through the bogus view presented by the mainstream media. Once this [press breakthrough] event or events manifest, then the [markets] *will* react globally to this new level of [disruption] with added pressures on the [dollar] and the [ruling elite] here in the [usofa]. At the point that the [confidence trick] which supports the [paper markets] fails, the ability to transfer [wealth] out of paper and into actual [coins/metals] will be gone. So it would seem that a reasonable course of action would be to continually [take off] portions of [at risk paper assets] as the opportunities present themselves from mid June onward. we note that the [summer solstice] brings with it a new set of supporting values for [silver] which include [great savings], or alternatively [life savings for great masses].

The second of these perspectives is the 2/two populace entities. These are examined in detail in their own sections, but must be considered as part of the feedback loop that exists within the [markets] globally.

From the Populace/USofA, and the GlobalPop perspective, each and every [battle] between the [federal reserve cabal] and the [cycles producing the symptoms of dollar death] is heralded by the [federal reserve cabal] as the [end of the war]. As the [spring] moves into

[summer] there will be some level of the [populace] which does 'see evidence' for this claim. However, this group is small, is mostly predisposed to want to believe the pronouncements from government, and while vocal, has lost any [swaying/coercing] ability within the larger population. The feed back loop of their [self serving polls] presents just enough of this [supportive/delusional population] back to the [federal reserve cabal] to [calm] some of their [anxiety]. For the rest of the [populace], long [denied] and deliberately [ignored] by the [media/corporate press], the [summer] will present a very different picture indeed.

Having come through a [spring] in which [dishoarding] will be a minor blip in the [global medistream] as [prices] for all kinds of [commodities] at all levels are showing as having [extreme fluctuations], the [populace] inter connects within the Markets entity are all heavily favoring [suffering], and other [revolution] supporting language. Further the [duality] meta data layer is clearly showing as dominant as very large [collapses] within the [social order/infrastructure] will be [actively denied] almost in a routine fashion by TPTB, yet [experienced] by the [populace]. This [disconnect] is also a [duality] and [revolution] supporting component of the events of [summer] and into what looks to be a really nasty Fall.

Much of the language of the [populace/usofa] sub set is itself affected by [duality] as it presents the perspective of the [aware observer] in opposition to the [general populace]. In the case of the former, and within internal ties over to the [silver/gold/commodities] sub sets, we find repeated language going to the idea of [ready] and [timing (the) opportunity]. These are supported by explicit references to [opportunity opening up], and [realization (of being) unprepared], and [waiting (after preparation) for the correct timing/moment]. Against this image of the [aware observer] waiting for the [correct moment for action], the data sets also contain imagery within the sub sets supporting [cry of alarm], and [carrying arms (for the) revolution], as well as [traveling (in groups) at night]. These and other cross links to the Populace/USofA

entity are pointing to a change in conditions within the [social order] which will emerge over [spring] and against which background decisions will be made.

There are bespoke references to [corruption], and the emergence of a [sting] and the [lulling into a false sense of complacency] of the [perpetrators]. This [sting] is indicated to be part of the general [press/mediastream] background of the [cry of alarm/revolution] period this Summer. Also showing as affecting the [mood] of the [markets] in Spring are 2/two pointers toward a [dam] which is [carried away], thus causing considerable [loss].

Further aggravations for the [markets] comes from the [political realm] of things as the data indicates an [aggressive stance/resistance] emerges in [congress] over April which significantly affects the Bushista entity to its core. As this section of the data is forming links to events later in the Summer which involve heavy [casualties] by both [british] and [american] forces, the likelihood is that the April problems will be stemming from the [brutal bush wars of aggression]. The [contention] between the [bush administration] and the [congress] will take place in the midst of a [national mood] of [barely restrained anger], and [expressed hatred], with the [government] the seeming target for the [acts of rage/frustration].

In addition, the modelspace is indicating that [fraud] from [offshore] and against [american insurance corporation(s)] will be [visible] in early Summer, likely about mid July. This [fraud] is described as being [uncovered] in the [remains] of a [maritime accident/disaster]. The resultant [evidence] will escalate over Summer to an [international incident], though news worthy, and visible, it seems to be more of a background meme ticking over during Summer. This area does go toward the continued [tensions/conflict] with [former allies] within the Bushista entity, however the linguistics appear more meaningful for the [very wealthy] and [power elite] who had [ownership] of the [insurance companies] affected. This area will resurface with higher levels of

visibility in very late Summer, just as the Fall problems begin. Parts of the data set have extensive links over to the Terra entity where they are related to our previous forecast of [dramatic rains] and [traumatic winds]. The interpretation is that the [maritime disaster] will be due to [extreme, and unseasonable weather] which will damage [shipping] that had been en route to the [usofa].

There are increasing data sets which have nearly the same level of participation in both the Terra and the Markets entities. In these sets the summation values are impacting both entities in sufficiently large percentage to make it difficult to assign the set to either of the entities as its primary set. This has arisen only once previously and that was within the data sets indicating the (at the time) pending Sumatran tsunami. Now we have a spread of linguistic sets which cover both Terra related incidents, such as [hellacious winds/damaging winds], [tornadic waterspouts], and [hurricanes] which also have very nearly the same summation of the impact, intensity, and duration values in both entities. The implication is that this is probably *not* a good sign for either humans or corporations involved. Further data goes toward the persistence values affecting the Markets entity having less impact over time, that is to say the actual [damages] forecast will be larger than the ability of [insurance] to affect by some significant and noticeable difference. Incidentally to the Terra sub sets are timing clues pointing toward several [natural disasters] which will impact the [northern hemisphere] over this year. These will provide ample evidence of the [fragility of infrastructure] and will also participate in the growing global [encounters with scarcity] and [restrictions on movement] meta data layers.

Populace/USofA - YACC, Up the Revolution, Lost Summer

No, not 'yet another c compiler', but rather [yet another context change-YACC]. Our [YACC] is appearing this [summer] within the [populace/usofa] in the same manner as did the previous [context change] which

was the manifestation of the [illegal 'immigrant'] movement. This previous [context change] occurred as forecast by the ALTA reports and caught the [american public] by 'surprise' as the movement seemingly emerged from nowhere. The new [YACC] is developing now, is showing up within the immediacy value sets and the shorter term values, *and* brings along with it the longer term value associations. The [YACC] is well under way by the July 19th in modelspace, and seems to have enough summations to be [visible] within the global mediastream by perhaps as early as July 8th. The origins of this [YACC] are not as clear as the preceding context change within the [social order]. The pending [YACC] also has much more persistent longer term values suggesting a [multiple decade] long impact. There are even indications that the [YACC] which emerges in the [populace/usofa] will be a feeding flow towards several of the larger sub sets within the FuturePop entity.

The coming [YACC] is some how related to the [reductions/diminishments] of [sinful pleasures]. It contains supporting aspect/attribute sets including [temperance], and [modesty], and [middle/mean/median]. These sets are part of the core of the developing context that the data sets are forecasting to emerge within the [populace/usofa] over the course of [summer]. This context change likely will not be as dramatic, nor as instantly visible as the [immigration/illegal alien] marches of the recent past, but will be [visible] by the time of the October language shift from building tensions over to release language. The data sets are pointing toward the [new context] to emerge as a [developing/growing/evolving (change)] within the [social order] of the [americas]. There are cross links internally within the data sets to the previously discussed [female personality] who was noted as [emerging from amazonia/brasilia] and who has recent ties with [highlands] with geographic references to [central america]. This [triple america] link set is still being reinforced and therefore is probably important, if not to us, then to universe.

The [new context] will be manifesting as a background to the continued

growth of [revolution] and [revolutionary pressures] within the Populace/USofA. The [new context] does contribute to the [revolution], but is not showing within the data as being a direct supporting sub set, rather it seems that the [new context] is itself part of the manifestation of [revolutionary pressures] within the [social order] which act as a self-reinforcing background for the [revolution] meme.

Further problems for the Populace/USofA will arise from a new form of scandal about the [warrantees] on [lands]. The [scandalous behavior] of the [government] will be at the core of the [problems with land deeds/warrantees]. This will be such a problem as to impact not only the [populace/usofa], but also [foreign buyers]. The idea coming across is that by mid July, the [visibility] of the [land warrantees] disaster will begin to contribute to the further pressures on the [populace/usofa] such that the [government] of the USofA is described as [teetering/shaky/without foundation/on_one_leg]. The Populace/USofA entity is forecasting that this issue of [lands without warrantees] will be so affecting of the [national mental state] as to cause this period in time, here in the USofA to be labeled by future historians as [prelude to revolution]. This area not only supports the [housing] sub set within the Populace/USofA entity, but also is participating in [duality], and [revolution] meta data layers. These layers are growing in general, with the [duality] meta data layer gaining the most visibility. The aware observer will note in the coming months as the [press/corporate media] within the [usofa dollar empire] struggle to [cope/express] the [duality] manifesting around them. The [hidden populations] of the [displaced] and [soon to be homeless], as well as the [uncounted] and [unwanted] workers will be very [visible] parts of society, yet almost totally, and actively ignored in the media. All the reports will be pressured toward the [happy days are here again] meme promulgated by the Bushies and TPTB groups. This will not be well received, and [riots] will be a growing problem for the [social order], the [press], and the [officialdom]. Made even more difficult by the [denial] actively flowing from all sides of the [power elite]. The beginnings of this phase of the [housing markets implosion] will be in place, and [visible], according to

modelspace, by July 19, 2008.

The modelspace continues to gain values for the [lost summer] which is an aspect/attribute set going to the vast quantities of [loss] which the [populace] will [suffer] through this year. The supporting sets are numerous and include [lost vacations], [lost houses], [lost schooling], [lost lives], [lost relationships], [lost family], [lost communities], and more to virtually any 'thing' that can be identified. The impression coming out of the detail level of the aspect/attributes supporting the Populace/USofA entity is that the whole of the [lost summer] will be very [miserable] at some level for almost everyone within the [populace/usofa]. The [lost land] and [lost housing] sub sets are gaining values disproportionately to the other areas, and are the leaders of the total emotional summations for this set. The [loss of housing/home/roots/community] will be the single largest impact over [summer], but it may well be lost itself in the plethora of presenting problems plaguing the population.

We are still building values for a [loss of power/electricity] which will be covering a [very large region], and which *still* is gaining values for a [multiple months] duration. This [power loss] is also shown as [rippling across/through] the [power grid] where it causes problems repeatedly at a [national] level intermittently for [months]. The [power loss] is still tied to the Terra entity, and is either a direct outgrowth of the [natural disasters], or coincident to them, yet independent of the cause. The [power loss] further pressures the [government], and is also seemingly responsible for [igniting] several of the [riots/bloody revolution/rebellion] incidents of the [summer] and throughout [fall].

Bushista - Aggression, Thrashing, Diving

The waning days of the Bush administration would seem to *not* warrant much in the way of language contributions, after all the [populace] is generally content to be rid of the Bushies, and is merely waiting for the time to catch up to the desire. However, the data sets for

the Bushista entity suggest that this administration will not go quietly into the good night. Rather the data specifically is focused on 2/two periods over the next 6/six months in which the Bushista entity gains linguistic support very rapidly. The first of these is in April, and continues through May, and the second is in July, continuing on through to mid September, though with a 'peak' in late August.

The immediacy values are pointing to an April [conflict/confrontation] between the administration of the Bushies, and the [congressional powers]. This [confrontation] is part of a very extensive mood of [national anger], and [populist assertiveness] which is shown to emerge with some rapidity over the last few days of March and into April. The [national anger] is supported by extensive sets for [military], and [expansion]. These aspect/attribute sets go directly to the support for the background against which the [high drama] between the [bushistas] and the [congressional powers] will play out.

Much of the April through May problems within the [thrashing officialdom] will be [visible] through Summer, but the most [profound] impacts and [language] are showing for April/May, and then to resurface with [violence] in early November. These areas of the Bushista entity are heavily cross linked to the TPTB entity, and the Populace/USofA entity, and are under the support chain for the [duality] and [revolution] meta data layers.

Further emotional [discharges/upsets] are shown to manifest within the Bush administration over July, August, and early September. These may be related to some perceived [victory] within their [delusional perceptions]. This is unclear. What is showing is that all the emotional values increase within the Bushista entity, but especially the [intensity] value sets associated with the [military], and [control]. The data sets have the directly held values within the Bushista entity overwhelmed with the cross links over to the Populace/USofA entity, and the Markets entity. The accretion patterns increase steeply as the modelspace and the entity are progressed through September. The largest part of the

growth accrues after the autumnal equinox, and into the first few days of October. Thereafter the very sharp turn into release language occurs and the Bushista entity is swept along with all the rest of the entities into a [shocking/reeling/mind_peeling] 4/four months of plunging into the [release language abyss]. Part of the [delusion] besetting the [emotional stance] of the Bushistas over Summer stems from a [total disconnect] and even [active denial] of the conditions affecting the [populace]. There are indications within the supporting data sets that near the September autumnal equinox, the Bushista cabal will have a [frightening episode] in which [disdain], and [disregard] for the [lives/livelihood] of the [citizens] will be [evident (in) words and deeds]. This *may* result from a [casual remark] about a recent death at that time. The [episode] of the [bad words] escalates beyond (their) understanding, and the subsequent [denials] and [attempts at spin/cover_up] also [blow up] in the Bushista [face].

As the Bushista entity is progressed into October, the growing set of data begins to pile up in support of a [mental breakdown], or [descent (into) brain hell] which will manifest due to [flawed absolutism] running head long into [developing reality]. The data sets are suggesting that the [officialdom] will be [unglued/separated/self-isolated/bunker_mentality] due to the [reality] of the [events] following the [autumnal equinox]. These [reality crashes into preconceptions] are of a very high emotional summation within the Bushista entity. The highest such values that have yet been encountered within this work. It *could* be that some monumental [event] or [incident] which is [unlike] anything yet encountered just [happens] and [everyone] is [caught off guard]. The level of emotional summation values within the Bushista entity in the release language turn *could* include [contact] with [space aliens], or even [proof of complicity (with) internal attacks] being released, or even [engineered attack on USofA]. Whatever the provocation, the results are evident within the summation values for the [jump (head long/without caring) into madness]. This is coincident with the Populace/USofA and the GlobalPop entities also plunging into [heated emotions] and [extensive pain (propelling/driving) extreme

emotional reactions] release language at that point in the modelspace. Much of the [end of calm] period for the Bushista entity has cross links internally back to the April [conflicts] where the links contain aspects pointing to an [echo] association. If accurate, the modelspace is suggesting that the April events will provide hints as to the nature of the October manifestations. However note that the October turn into release language is much larger than any of the sub sets within a single entity and therefore any of the Bushista echoes which may emerge are likely limited to the Bushista entity reaction to the events of October. Clear as Mississippi river water after a rainstorm?

Conclusion: Part Three - Zero State, Air Scenting, Da Snout

All of the new data sets, no matter which entity is being supported, continue to paint a picture of the [death] of the [usofa dollar]. This meme shows as continuing up to about Summer of 2009. That is to say that after the turn into the violent release language of the October 2008, through February of 2009 time, the data continues to contribute to the death of the dollar meme, albeit at *decreasing* levels such that by July of 2009, it appears that the [dollar] is finally completing the destiny of *all* paper currencies, that is the 'return to zero value'.

This idea of [zero value] will surface across the 2008 and 2009 years as a central meme for the [end of dollar days]. There will be a whole lot of the existing human infrastructure which will be tested, and judged against a real world worth standard, and our data suggests that most of it will be found wanting, and consigned to the [worthless/zero value] dust bin of history. The range of such things of [zero value state] will be hugely shocking to vast numbers of humans. This will contribute to a collective burden for those humans aware enough to [get on with things] having to provide care for large numbers of people who are [future shocked] as the world evolves around their denials and determined efforts to 'halt time' or [return to the past]. The [zero value testing] meme is similar in nature to the [green death] meme which was

so prevalent within the data and the press a few years ago. The new [creeping awareness] meme of [zero value testing] is showing up now as millions of people around the planet are choosing to *try* to acquire [silver/gold] in preference for *any* paper based currency. The winds of change are blowing, and just now can be air-scented strongly for those who care to try. It smells clean, and is refreshing to the soul, and the lungs fill with high-energy particles/negative ions as the scent is found. The smell of the decay of the current state of things is thick, heavy and covers the planet in a thick blanket of denial and deliberate avoidance. However the high-energy winds are blowing down the hills now, change is not only in the air, it *is* the air. Breathe deep, and fill the snout. The flavor of this smell is disruptive, discordant, disturbing, and delightful. Things change. Just watch....
