covering 2016 - 2030

Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes **are**: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities **are**: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon **is**: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: *emotional qualifiers* which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders **are**: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop
The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)
All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets
The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra
The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Meta Data Layer – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

Data and Interpretation

Meta Data

The new sets processed for this report are being dominated (in their individual sets) by supporting language for 'acceleration'. The rising focus within the data for 'quickening', and 'speeding up', and 'rapidity' and 'rate (of) acceleration' are but a few of the many references to the idea that we are all going to be 'feeling the pace of events moving faster than ever before in our lives'.

Of course there will be confirmation bias language being found by those who are paying attention, but now the data is showing that 'ordinary humans' will be 'discussing' just 'how fast' the 'year is presenting (its) events'. This rise in the 'speed of manifesting change' is forecast to be such that 'street talk' is indicated to include 'fast/speed/quick' as references daily for most people by year's end.

Another soon-to-be-daily-heard word will be 'consequences'. This word is/will be showing up trailing our 'rapidity' word set, but packing far more 'gravitas' (also look for this to re-emerge) and emotional depth. The 'consequences' word will be with us for nearly a decade according to the projections within the longer term values. These sets are suggesting that 'real life consequences' of 'past sins' will continue to 'pop up' over these next '10/ten years' as the 'rot' is 'excised' from the various 'control systems' currently in place (mostly within the dollar based empire of paper debt).

The 'consequences' attribute appearance is supportive of the meta data layer of 'revolution'. The 'revolution' is showing as being of an emotional level more intense and more long lasting than both the previous American and French revolutions combined. The data sets are showing that this current (now started, now moving forward) 'revolution' has more (cyclic) intensity, and longer lasting, more society changing, more staying power effects than the 'industrial revolution'.

Terra

Continuing growth in 'climate alterations' and 'weather pattern shifts' sets are pointing at a very interesting few years ahead with some of the more dramatic of these 'weather pattern shifts' becoming evident over 2016.

These 'weather pattern shifts' are also going to be occurring on other planets in the solar system and these will be noted in a very 'captivating manner' later in 2016 as 'global attention' is temporarily moved from 'misery' here on Terra to the 'local space behind the sun' we all call home.

Here on earth the data is forecasting exceptional warmth along the 'west coast of the Americas', and exceptional levels of 'low land cold' in regions of central 'north america' and 'central asia'. Further,

forecasts are showing up in sets that are describing a 'reluctant admission' by 'weather /climate authorities (later, probably after June)' that 'yes' there are 'new glaciers forming' here on earth.

The data sets are also forecasting a 'summer of storms' for 'northern hemisphere' that will be 'unparalleled' in 'recent century's history'. These 'storms' are described as being both of 'extraordinary intensity' and 'out of place'. Many of the descriptors are for 'tornadoes' in very odd places. These also include 'water spouts' forming on 'inland rivers'. Further issues will include 'debris rains' from these storms. In at least one instance the data is forecasting a 'rain' of 'bio-hazard materials' that will apparently be marked with the 'bio-hazard badges'. This will, as may be expected, cause no end of 'worry' and 'local fright' as the event is 'reported'.

The data sets have very extensive, new cross links between GlobalPop and Terra entity that are forming up supporting sets for an 'emotional change' between 'humanity', and 'our planet (basically weather/climate)'. The warmists (those who believe TPTB about climate change) are going to be in for a very 'chilling' and 'unexpected' problem with their world view as 'excessive heat' on the 'west coast (north america)' is 'overwhelmed' with 'reports' of 'cold storms' and 'unusual cold fronts' in 'summer (northern hemisphere)', and 'extreme cold winter (southern hemisphere)'. The data growth patterns are forecasting a 'compete change' or 're-vision' of the 'relationship' that we all have as humans to the planet. These sets are further indicating that 'each' and 'personal collision with unexpected (bad/odd/unusual/fierce weather' will describe 'most humans on earth' as we get into 2017. In summation on this point the data is clearly focusing on our 'individual mental changes' forced by 'global climate circumstances' over 2016.

Additional problems for the 'climate change religionists' is indicated to come from the 'switch (sudden on/off) effect' within these 'weather systems'. Further issues will arise from 'stranded tourists/travelers' within 'summer snow storms' of some very 'unusual intensity'.

Other, weather related problems, are showing as coming from the sky (or to the sky, depending) as 'weather' is indicated to 'bring down airplanes (and other flying objects?)' over 'populated areas' (in the south east usa, and Taiwan/SE asia). These occurrences are due, apparently, to 'sudden' and 'completely unexpected icing conditions (when it should/could not happen, theoretically)'.

The massive 'rain storms', and 'flooding' (to be hitting west coast USA (*california)) by the time this report is posted, will be followed, in due course by a 'gap', then another round of 'crippling/flooding storms' that then will be 'evaporated' by the 'rising heat' showing as 'dominating Spring (northern hemisphere)' and setting up the 'west coast' for a 'brutally hot summer'.

Other Terra entity forecasts include yet more 'bad air bites' incidents. In some of the new sets are indications that several 'large vessels (ships) ' will have '(mentally and physically) incapacitated crews (and passengers)' due to 'passing through (a bad air bubble)'. The data sets are showing the 'bad air over ocean waters (northern Pacific mostly)' meme is going to go unreported for a long while then suddenly make 'headlines repeatedly' as the first of 'several cruise ships' will also 'encounter bad air bubbles' at sea. The number of 'people affected' is showing as 'large enough' to 'overwhelm' the 'ability of on-shore assistance' to be 'rendered'. The data detail sets further are implying much video reported 'heroism' as

'volunteer medical (and other) staff' are 'placed (onto)' the 'stricken/crippled ship(s?)'.

Further Terra issues with 'biting bad air' include the 'escalation' of both 'methane' and 'radioactive gas (exposure)' instances. In the case of the 'methane release(s)', we need to note that the data is showing that soon the 'blow back' of the 'radioactive gases' within the 'methane' will be creating new memes as 'evacuations' start to take on a 'grim tone' as 'death and illness' are 'exposed'.
The Terra entity has had new growth in areas for 'exponential growth (underseas)' of 'new lands'. The idea coming out is that some form of 'shipping problems' will be 'encountered' as 'new lands' are 'growing'. There are some sub sets that could be interpreted as a 'mid-ocean (more or less) "grounding"' of a 'commercial cargo vessel'. Whatever the actual circumstances, the data is clear that 'video' will be available of the 'incident' as it 'develops'. Other problems relating to the 'new lands' appearing sub sets include 'earthquakes' and 'pacific rim tsunami(s)'. The data sets are suggesting that several 'ports' will be 'damaged' along with 'ships in-port and in-transit' over 2016 as 'tsunami' waves come from 'new lands rising'. What is going to make this a very 'unique' occurrence is that the 'tsunami' will be 'deep ocean sourced'.

Continuing 'climate problems' are indicated for both hemispheres, but the emphasis on 'emotional trauma' as a result are more northern focused. The new growing sets are bringing the focus to the 'abnormal' and 'unusual' in so far as these aspects traits will dominate the emotional response to the 'out of place weather/climate incidents'.

The 'out of place incidents' are showing up as including 'low land, near desert snow' in 'summer' as well as 'high mountain lake floods' as 'new record levels of rain' are indicated to 'pour out' in 'mere hours'. These incidents are also connected to yet more 'flooding by mud/rock slides' and 'flooding (by) blocked drainage rivers' events. In some of the detail sets are descriptors for 'humans' who will be 'attempting' to 'navigate across (inches deep) fast cross roadway floods' and will be 'swept down the mountains at terrific speeds'.

The Terra sets also contain a number of sets going to 'flooding' from several 'waves' of 'rain' that will be affecting large scale 'technologies production areas'. This appears to be 'monsoon' related, and will 'shut down' the 'tech production'. There are detail sets of 'women (employees) swimming' across 'former parking lots'. Other sets show 'small cars floating about' and 'banging together (in the waves) of the flood'.

Yet more 'sky falling' language shows up for 'mountains' in both Eurasia, and north America. In both cases the geographic references are also involved in the 'new glaciers' forming language. In both cases the data sets are also suggesting that while the 'glaciers are forming' the 'run off (mid Summer)' from the 'mountains' the 'plains below' are 'flooded'. These 'floods' are within those sets that started forming a number of years ago in which a 'new inland sea' is forecast to be forming. These sets and their cross links continue to gain new supporting sets.

As well as the 'sky falling' data sets, we also have the 'oceans rebelling' sets growing. The data sets are showing that 'oceanic death' (especially in the Pacific and Caribbean) will 'escalate' to the point that 'fisheries' are 'stopped'. The issues will be cited as the 'death of the plankton layer' as well as 'zoo

plankton poisoning'. In much of the northern hemisphere, the data is showing 2016 as the 'last year (of) fish (on the plate)'. There are cross links here that go to the TPTB entity where the data sets are showing that 'fish' and 'seafood' is going to gain new contexts as a 'health food' for the 'elite' as the 'stocks disappear', and only the 'ultra wealthy' can 'afford to (eat) vanishing species'. The cross links to the 'ocean health problems' are also extensively cross linked over to the 'self organizing tribes (collectives)' sub sets of GlobalPop where the terminating sets are within the 'formation (circumstances of creation)' of the 'new coastal tribes' here in north America (and maybe in Australia as well).

There are a great many cross links over to the SpaceGoatFarts entity where the terminating sets include all manner of 'strange (new) phenomena' from 'underground'. Within the Terra entity it is worth noting that the 'sink holes' and 'cracking earth' manifestations are forecast to continue and to 'gain speed' in their appearance over 2016. With the 'sink holes' there are apparently issues with the 'reporting' of these catching up to their 'rate of appearance' which is a forecast within the data meta patterns that the speed of appearance will outpace humans finding the things. Many of these are forecast to appear in far distant 'wild places' where the effects of their appearance will have progressed for 'months' before humans stumble upon them. In some of these instances the data sets have details going to the idea of 'vast herds (caribou?)' that will be discovered to have 'plunged' into 'sinkholes'. In other areas of the data we have the suggestion that a 'sinkhole' is going to 'eat a river'. This instance will be discovered fairly quickly apparently as the 'local population' who 'depend on the river for water' will just 'wake up one morning' to 'discover' it 'gone'. And, according to the data forecast, not coming back any time soon.

As part of the 'strange new underground phenomena' sets, we have the cross links over to RussiaPop (see below), and it may be that the Terra entity will be correct, and that 'earthquakes' in 'bizarre place in Russia' will lead to the 'archeology discovery'. Without regard to this aspect/attribute set, the containing linguistic structure continues to gain supporting sets for 'earthquakes' and 'impacts' on 'Russian infrastructure'.

The Terra entity is also showing that yet more 'nuclear problems' are going to include 'leaks', 'flows', and 'floods' (both internal, and external to the power plant). These are going to include the 'exposure' of large areas of the planet to yet more 'radiations unleashed'. These sets are part of the 'diaspora' sub sets supporting sets. The data is accruing to the sets for 'nuclear wasteland (life being driven out)', and 'extinctions (local)', and 'population (forced by radiation) to evacuate'.

The data also continues to accrue to 'oceans death (fisheries gone as of 2016)', and 'economy (of ocean) changed', 'ocean currents change'. This last is a new set that is now showing that 'ocean currents change' is going to 'alter climates', and 'gouge coast lines'. In some of these latter sets are specific references for 'limestone erosion' at a 'fantastic rate' as 'ocean waters (acidity changes local)' will contribute to 'great gouging' and 'undercutting' of the 'limestone cliffs' such that 'land slips' occur, and as a direct result, 'displacement waves (different from tsunami)' will be generated that will 'wash away' a very large 'habitation'.

New growth in sets for the 'ocean living children' who will go 'to sea' in 'airship/water-ship combinations' {ed note: from several way old ALTA reports} for the express purpose of 'healing the

oceans'. These sets are gaining aspect/attribute sets indicating that the 'airship' part of the previous forecast is near to being a 'visible' technology. The previous descriptions indicated a new form of 'lighter than air craft', as well as a 'south american (Peru?)' source for the developing technology. Apparently some new engineering will be surfacing that will be the 'source' for the pending 'airship' development. The new technology is described in the data as being 'solar sustained', or 'lifted/cradled' by 'solar radiation'. The idea presented by the data sets is of a technology that 'performs poorly below the clouds', but 'can live above them (solar sustained) for months' without 'refueling' or 'resupply'. The data sets are describing this technology as being 'joined' in the longer term' with 'ocean scrubbing platforms'. Both the 'sky ship' and the 'water platforms' are described as being 'habitations' for humans working the 'ocean cleanup'. Both the Terra entity and the SpaceGoatFarts entity contain directly held sets for the 'visibility' of the technology in this year.

Other 'ocean' sets continue to gain supporting new aspect/attribute sets for 'current changes' that will be 'inducing (very) long term climate change'. The details would seem to be suggesting that 'Atlantic storms' will be both 'early' and 'very large' as the eastern seaboard of north America is forecast as being 'pummeled' by 'storm surges'. In some of the detail sets are indications of 'hurricanes reaching' as far north as New York later in 2016. Some of the details show that south Florida is 'over run' by a 'line of "popcorn" storms' that show in late August through September creating one of the 'wettest Summers' in 'memory'. Some of the 'Florida' details are showing 'cars/trucks' being 'swept into canals', and 'building foundations crumbling', and 'storm surge pushing boats (across) whole cities', and 'mass evacuations'. As may be expected, the 'storms' will be 'yet more burdens' on an 'already crumbling (global) insurance industry'. These 'storms' that hit 'Florida' are forecast as bringing an 'eruption' of 'fraudulent claims' for 'damaged properties'. Real damage is indicated to include Florida, Louisiana, and Texas.

There are a number of sets for 'strange' as the word to be applied to the 'weather patterns' over much of earth in 2016. The data sets are forecasting that we will all be 'grappling' with our 'limited understanding' of 'what is going on (within climate/weather)' as the 'warmists' are indicated to 'pursue their agenda(s)' with 'vigor' in the 'reflection' of the 'concern' over the 'remarkable heatwaves' and 'rain storms' around earth this year. However we need to note that the data sets are forecasting that 2016 will also see the rise into 'mainstream consciousness' of 'expansion of earth' and 'shifting (within position) behind the sun' and other 'explanatory thinking'. Curiously, a very hard focus on the center of the 'new earth thinking' is 'Portugal', where a 'small college' is being cited as being a 'burning match' for 'new thought (about earth expansion)' as a result of 'geologic math(s)'. Apparently this 'college' is on the 'coast', and is forecast as becoming a (multiple generational) success story' as the 'publication (on-line)' of the 'math equations' goes 'viral'. Likely it will NOT be the 'equations' themselves that go 'viral', but more probably stories of what they mean will be the 'fire (in the) popular mind' that is forecast to be 'flame spreading' from this 'small stone college'.

The Terra entity is forecasting a 'large increase' in both the 'amounts (in absolute money terms)', and the 'size (in square miles)' of 'human infrastructure damage' from 'weather' over much of 2016, and all the way through to mid 2019. The 'damage' is described as being (largely) a result of 'changing earth' and 'changing climate patterns' that will take nearly a 'decade' to 'seep into (human) consciousness' as being 'new patterns', not 'abnormal weather'. This is akin to living in an uninsulated house as the region has always had warm winters, and then cold starts setting in during Winter first one year, then the next and

so on until it finally dawns on you that you now live in a snow-in-winter area and had better get some insulation, and reinforce the roof for snow loads, as well as insulate your pipes.

Further 'climate' and 'weather (in this year)' problems are forecast as 'rivers overwhelm flood protections' and 'seek new paths' in many parts of both hemispheres of the planet. In the case of the 'southern hemisphere', the 'rains (where used to be snow in mountains)' will be 'cold and dangerous', while in the northern hemisphere they will be 'warm and dangerous'. The 'precipitation rates' are showing as 'breaking all records' in 2016 as the 'skies' will seemingly (and be described as) 'opening up'.

As has been noted repeatedly in these pages and previous ALTA reports, there continues to be growing support for 'in-land sea (forming from new earth conditions)' that will 'affect human habitation' and 'induce diaspora (scattering of peoples)'. These new sets for 'river(s) banks overwhelmed' are very much going to be a pan-global phenomenon. The data shows such occurring all across north America, and from France through Eurasia to the Chinese coast. The data would seem to be describing a 'latitudinal banding (of weather patterns)' such that the 'floods' in regions below it are due to those 'storms' not being able to 'go north'

There are also data sets growing in support of language to show up about 'preferring the rains' rather than 'face (unclouded) skies' with 'the blazing sun'. The data sets are forecasting language to be appearing as to the 'ferocity' and 'intensity' of the 'solar output'. In a sort of comical turn, the 'warmists' will have their 'most damning year (of record breaking heat)' to 'point to', but it will be 'clearly seen (as to be) sun caused'.

GlobalPop

The rapid pace of events are showing within the GlobalPop entity as being 'on (the) upswing' insofar as the 'rate of reports/information'. The data sets are filled with growing sub sets that are completing linguistic structures for 'paradigm shift' as the 'information flow' begins to go 'exponential'. {ed note: the data would seem to be indicating that the human energy that had been put into 'digitizing' the 'documents (of the) world' is now showing as sliding over into 'reporting current events', thus as older document archives are completed, those human hours end up going into 'new stuff' being 'reported'.}

The 'information flow' language is showing up as the data sets are indicating that the 'rate of reporting' will be such that it will be 'perceptible' to the 'average (net or phone) user', and thus will generate discussion of the effect as we go forward over this year and into next. Thus we have a case of the data forecasting a new trend in language reflecting a fundamental change in the 'information landscape' (from which the data is extracted) itself.

These sets are also indicating several new classes of 'information industry' will emerge in response as the year moves forward. While not 'saving Tech' in any form, these new 'information paradigms' are indicated to form the 'base layer' of the 'next gen tech' which will emerge later (post 2020).

The global demand for almost everything (within the data) is being forecast as 'falling' such that 2016 will be the 'year of the largest ever global lay off's'. The data is indicating that not only China, but most countries throughout the globe will be in a 'net job loss' mode rather than 'net job gain'. There are, of

course, areas noted within the data for continued growth in 'jobs', but in the main, the data is forecasting that as the 'paper debt markets' decline further and the 'peak currencies' effect is beginning to be felt globally, that more of humanity starts to focus on 'work', rather than 'jobs'. This is not a subtle distinction. The difference within the data is quite substantial. The data is forecasting the alt-media to be filling with new stories of 'jobs being lost' and 'work being found' as a deep meme across much of the western segments of GlobalPop.

Many new sets are forming around the idea of 'conflict corporations', or 'corporate mercenaries'. Some of these sets are forecasting that the 'Australian minister (being) beaten' by 'corp-mercs' by 'mistake' will be a 'pivot' point for the 'examination' of 'corporate (private, extra national, above the law) armies'. The data is showing that a side effect of the many national 'examinations/inquiries' into 'private armies' will be an 'embarrassing shift of attention' to the 'jesuit order' and its 'financial tributaries'.

New supporting sets are suggesting that 'evil deeds' and 'bad behavior' on the part of the 'jesuits' will be 'surfacing' during 'real estate market downturn' induced 'local property (values) upheavals'. The detail sets are suggesting that a 'property', currently 'owned' and 'rented' (for profit) by the 'black robed army/order' is also a 'repository' of some form of 'embarrassing documentation (of bad deeds)'. Further, due to the 'real estate market crash' in that locale (where ever it may be), the 'rental property' is 'cleaned up (readying it for offer)', and the 'evidence' is 'discovered'.

The 'global real estate crash' is cross linked to a number of sets suggesting that the 'real estate markets' and 'over valuation' will be the 'blame' words for a number of other 'general markets', and 'general economy' problems. These are also indicated to 'flush out (old/long standing) corruption' as the 'economic activity (and speed)' decrease'. The detail sets are showing that failures in 'insurance companies' will leave 'exposed corruption' as 'true ownership' and 'false deeds' are 'made public'. Other instants of 'corrupt banking' are indicated to 'expose (local) politicians corruption'. In these latter sets are supporting linguistic structures that include descriptions of 'mobs' moving at 'night' to 'surround (politicians) house' and 'haul them out (beating them along the way)'. Other sets are of similar vein. There are enough of these supporting sets, and their cross links extensive enough to warrant an interpretation of a 'wave' of such events as various 'local economies' come under 'severe stress' as the 'global banking system' becomes 'unglued'.

Power? Got electricity? Especially in Japan? The data sets are suggesting that a number of 'nuclear problems' are going to be 'besetting' the planet as 2016 progresses toward 2017. In both years the 'nuclear radiations exposure' is showing as 'doubling' for 'most life' in the 'northern hemisphere'. In many of the new sets for 'leaking radiation', the data sets are showing that a 'long term process (of exposure (has) begun)', and that many of the 'nuclear plants' will be 'sources' for 'global exposure' for decades. These sets include new supporting sets for 'evacuations' in areas in 'north America' that will then become problems for 'europe' as the 'radiation leakage blows east'.

The 'electrical problems' are showing as not limited to 'japan', nor to 'nuclear power plants'. In many other sets we have the 'destruction (of the credit) system' as being a 'global (mostly western world) causal agent' for 'rationed electrical service'. In many of these sets we have GlobalPop reacting 'badly' to the 'favorable circumstances (special privilege) rationing'. In these latter sets the details show the 'elites' not being subject to 'electrical (or other) rationing' as they will claim 'fortuitous circumstances'

such as 'living near a hospital' and being on the same 'vital electrical circuit' as 'necessary government'.

The data sets within GlobalPop entity may be describing the shift from 'centralized power (generation)' over to 'distributed (in-situ) power consumption' as there are numbers of sets going to 'grid failures', and also many rising sets for 'home (local) generation'. If this is the case, the data is forecasting a very early stage of a larger movement developing over a longer period of time. There are growing sets within the longer term data values for 'at-home (on site) electricity production'. Many of these sets are cross linked over to the 'new makers movement (aka 'lean manufacturing', aka 'home based production') {See Markets & SpaceGoatFarts entity for more discussion of this developing wide meme}.

As modelspace is moved from the present through the rest of 2016, the GlobalPop entity shows a 'building' of the 'gold fever' meme. As the 'visible shift' in the 'gold (to all other claimed assets)' moves into a higher gear over the last bit of Winter and into Spring (northern hemisphere), the data shows that 'global gold fever' starts expressing itself in various forms out of both the propaganda media and the alternative media.

Some of these forms are showing as 'gold prospecting' in 'very unlikely places', as well as a great many new 'reports' of 'new forms' of 'gold robberies'. Some of these sets include descriptors for 'gold theft' from 'major (banks/corporations)'. Other sets show that a 'rush to prospect' will be a significant part of the 'gold fever'. Lots of videos of 'prospecting (both successful and fatally bad)' will be making their way to the 'social media' outlets as the 'gold fever' begins to 'take hold' of the 'global population psyche'.

Other 'psyche grabbers' are forecast to include 'outer planets (activity)' in which the data is showing that 'apparent (life) activity' in the 'outer planets' is going to 'attract attention' from 'humanity' over 2016 and into 2017.

USAPop

The state of the USAPop is showing as getting very much 'harder' due to 'imposition of capital controls'. These are indicated as being 'sneaky' and 'midnight plot' to be 'placed upon' the 'USA population' before the 'elections'. The first data within these 'capital controls' sets shows up in late May, and from that point forward, steady growth occurs. The 'capital controls' set becomes a rising supporting secondary sub set to the USAPop entity by late October. This is an indication that the language will be commonly discussed by that point as the 'population' reacts to 'domination by dying banks'.

As modelspace is progressed through March/April into Spring, northern hemisphere, the data shows that the 'dollar wobble' becomes 'quite severe' and in its turn is 'triggering' the 'hysterical (wonky) behavior' of 'trading machines (software high frequency trading platforms). The data within the Markets entity is cross linked back over to the USAPop entity where the terminating sets are dominated by aspects of 'extremes (of) volatility' and 'snapping' of 'trading links' such that 'software (algorithms)'

become both 'unbound (range free)', and 'base loose' (no longer tied to base range behavior). These sets are gaining new supporting sets in the areas of 'wild ride', 'wild gyrations', 'wild fall', and other language around the idea of an 'out of control process' which is at the core of the definition of 'wild' at its emotional tone level within the lexicon.

As modelspace is moved slowly forward into and through Summer (northern hemisphere), it becomes possible to see that small changes in 'fundamental trends/memes/movements' are going to be the precipitating triggers for the 'wild swings'. Note that the USAPop is not the only entity showing that 'wild (unrestrained)' behavior will be ramping up over Spring and through Summer. There are solid indications within the GlobalPop entity that many areas around the planet will be subjected to not only 'wild weather', but also 'wild behavior'. There are cross links over to the SpaceGoatFarts entity where the terminating sets include the idea that 'strange (unknown/denied) energies from space' will be at least as much a participating factor in bad behavior as will the pressures of the collapsing financial system.

The data sets are showing that the USAPop will not be 'receptive' to the 'officialdom' bullshit explanations for the 'rapidly crumbling financial system', and is forecast as being 'negatively disposed' to the 'last (and greatest) round of quantitative easing' that will be moved into place as we move into July (at least according to modelspace). These sets in this area are suggesting that by August, the 'headlines' will be about the 'failure' of 'debt creation' at levels never before 'seen, nor understood', as 'QE5' fails and 'explodes on lift-off'. The detail sets are suggesting that the ability to 'make debt' is/has 'gone away', and that this is going to be labeled as 'limp currency'. While this is on-going, the data is also showing that the 'rapidly falling (purchasing power)' of the 'dollar' is also 'generating pressure/stress' on USAPop.

The data sets are showing that the USAPop will be 'reeling' and 'complaining' about as much as '1/one percent per day' levels of 'loss of value' of the 'dollar', not knowing that mere weeks later, the rate of loss will be over '4/four percent' in a day. Most of the language forecasting the 'bad behavior' does not directly acknowledge the 'dollar degradation' as the cause, but as modelspace is moved through into October, there is language about 'dissecting the Summer crises' for 'understanding' of 'just what the hell happened?'.

Some of what happened will include 'human versus (financial) machine' battles making it to video. The data is suggesting that many videos will be produced showing 'humans beating ATM machines', in hundreds of variations. Others will show up as people 'take revenge' and 'vent anger' against the 'institutions (of) banking' by 'crashing' various things into 'bank buildings'. The data sets are suggesting that so much 'bad behavior' is manifesting in Summer, that by August, the 'election cycle' has had to 'absorb' the 'demonstrated social pressures/change' and 'respond' to them.

The data sets are showing that the 'terrible outcome' of the 'summer crises' will be daily discussed by November as the USAPop is described as 'reeling' and 'staggering' from the '(emotionally) crushing changes' that will have occurred by that time. Note that the sets for '(emotionally) crushing changes' are heavily supported by longer term values and continue to grow at a very rapid pace as modelspace is progressed out to 2019. The immediacy and shorter term sets are showing that the 'state (of) rapid social (and political) and terrestrial change' is going to be 'vomit' and 'disease inducing' in the 'USA

population' as these 'changes' will be 'sweeping across' the 'social strata' from the 'rough beginning (to Spring (northern hemisphere))'.

The data sets are showing that **several** conditions for 'diaspora' will (continue to) develop by early June. Not only are the various 'nuclear crisis' indicated to 'come to a boil (actually, boiling)' causing 'wide spread panic' and 'evacuations', but also the 'aftermath' of the 'various earthquakes' and 'underground eruptions' (that will be occurring through to late Fall (northern hemisphere)) are also indicated to be 'causes' for 'diaspora' and the 'developing/growing' problem of 'displaced (and lost) persons' that will be rising to such an acute stage as to be cited as a 'national (and existential) crisis'.

The data sets are showing that the 'officialdom' of USAPop is going to be 'hitting the (mistake) wall' over 2016. The data is showing a near term peak in late April and through May as the 'officialdom' slowly reacts to the 'financial crises' of March/April. The 'reaction (by) officialdom' is within sets that contain new growth for 'government mistakes' that will reach 'staggering proportions' as the 'government systems' begin to 'demonstrate break-down'.

These 'break-downs' will be 'self reinforcing' as 'inter-connected (officialdom) systems' will be 'feeding off (the mistakes (of other systems))'. The data sets would have the 'actions' of one 'agency (Parks)' be 'magnified' by the 'interactions' with 'other agencies (DHS)' as the 'headquarters' of 'both' will be 'clueless' and 'unable (to correctly) state (the) problem'.

The 'compounding' of 'inter-agency failures' will be appearing 'en mass' as June slips into July. The 'destruction' of the 'financial bases' will be 'so complete' as to 'prompt' a 'series (of) nationally televised speeches' that will be 'clearly (without) understanding'. The 'speeches' are showing as being a very solid temporal marker for 'Summer (economic) storms'. The data shows that 'new crises' within the 'monetary system' will be 'developing hourly' across several days in Summer such that 'popular reactions (to bad behavior by the banking system)' will then 'force' the 'government' into further 'bad decisions'. Examples of these 'conflicting crises situations' would include 'bank runs' that include 'ATM failures' which prompt 'rioting (and destruction (of local bank buildings))', which in its turn causes an 'over reaction' by 'officialdom' that causes other problems including 'water (and electricity) shortages' in 'near by regions'. Those 'shortages' then induce 'rioting' in those areas, as well as further degradation in the 'communications' between the 'government agencies' as one 'agency' will 'deprive the other' of 'electricity and vital resources' which further compounds the problems as 'anti-riot forces' are 'moved irrationally' in response to 'new situations' without regard to the 'stability' of the 'previous (riot) site'.

Long term values are forecasting that 'private money' (as in 'local currency') will be 'rising' to visibility in the 'mainstream' as the 'paper debt mountains' crumble further in 2016. USAPop entity is showing that certain areas of the 'north american continent' will include 'centers of prosperity' which will be 'founded' on 'private (sound) money' used 'locally'. These will be 'local resource backed scripts', according to the data, as 'populations react' to the 'death (of) circulating money'.

If we set modelspace to January 2016 and move in quarter year increments, a pattern not visible at finer temporal levels begins to emerge within the accretion of data into USAPop. This pattern is suggesting

that something of a 'push' is coming to the USAPop from TPTB. This 'push' can be described as 'deep incentives', and 'visible examples (of a successful life)' that will be emerging and focusing on the 'younger generations' here in USAPop. The 'incentives' and 'examples' are described as being 'technology based', and further are being focused on 'makers'. The larger idea coming out is that a 'push' toward 'maker engineering' and 'personal incentives (for self-education in maker techno-crafts)' is being made by ThePowersThatBe on the 'younger' USAPop. This appears as a 'deliberate' and 'planned' meme as the 'last vestiges of the old industrial base (of USAPop)' is (finally) 'withering away'.

The data sets are continuing to grow in support of the 'social changes' that are (about to be) 'pushed out' onto USAPop. Many of these sets have either cross links or directly held values relating to the 'political election system'. These sets are pointing to 'media blitz campaigns' and 'constant (media) pounding' from 'new', and 'sneaky' sources. These latter are describing a 'new push' to 'flood the USAPop' with 'television' wherein 'televisions' will start 'appearing' everywhere it is possible (including public restrooms!). Note that many of these sets will include 'monitoring capabilities' such as 'separate camera/software systems'. The data suggests that the 'television push' is being driven (to at least some extent) by a 'desperate need' to 'try to maintain (entrainment/mental control)'. These data sets are cross linked over to the SpaceGoatFarts entity and many of the terminating sets are included in linguistic structures for 'electronic mind control'. Many of these sets are also cross linked over to the ThePowersThatBe entity where the terminating sets are also including 'fear' and 'desperation' language. These sets have detail layers going to the idea that recent 'social changes' have moved 'USAPop' away from some of the 'sources' of 'techno-mind-capture', and that TPTB are 'distressed' about their 'fading grip' on the 'collective mind state'.

As modelspace is moved through March and April, the data accrues in several new sets for 'break outs' in the 'precious metals', as well as 'break downs' of 'key indicators' for the 'Federal Reserve Note (aka 'dollar')'. The data is forecasting that 'gold' will be 'bouncing' up on 'higher lows' throughout March and into April, as it generally moves 'upward'. There are new sets for the 'surge' in 'prices' for 'gold and silver' over May and June that then goes into another period of 'higher lows' for both metals in early July that seems to holds until near mid August. At this point the data is indicating that the 'surges upward' in 'US dollars price' begins again. Unlike the 'May and June' price action, the data sets are not showing any slow down in the next few months once the Fall 'rush (upward)' begins.

The data sets are indicating that the 'power vacuum' that was 'unexpectedly created' over the course of Summer (northern hemisphere) will be 'exposing' very large 'cracks in the system' by the end of September. At this point, it appears in the data that the events of Summer and Fall, here in USA, will be creating such 'political chaos' that it will become 'evident (to the sleeping) population' that 'things (in the world of TPTB) have gone awry'.

There are a number of new sets going to the idea that the 'break-downs' within the 'governmental structure' will bring about a set of 'terrifying' conditions (for local populations) as 'federal agencies' will be 'battling' for 'turf' and the 'population' will be the 'victims' of 'both agencies' as the 'turf battles' escalate to 'street battles'. From the descriptors it could be inferred that a case of 'my stooge' turns in 'your stooge' to my agency, and vice versa such that a situation of 'dueling false flags' is created.

The various forms of 'impact from weather' and 'climate change' are indicated to 'shift priorities' and 'create (new) alliances' within the USAPop as 'local conditions' deteriorate, and the 'national political structure fractures'. The 'fracture process' is forecast to get a whole lot worse as the 'dollar' comes under 'extreme pressures' over late Spring and through Summer. During that period, the 'bad behavior' at the political level escalates until it become necessary for 'justice department intervention'. This is forecast as 'not going well' for any of the parties involved.

The data sets are indicating that the 'economy' of the USAPop is headed for yet more 'crashing' as the 'layoffs' and the 'failures' continue to 'pile up' on the 'backs of the people'. In new sets of interest, there are new sub sets going to the idea of a 'resurgence' of 'back to the land', and 'self sustaining (inner urban) homestead' as the 'economic model' is 'crashing' around the 'destroyed population' of the USA. The data is showing that the 'extreme stresses' affecting the 'economy' are going to 'cause' a 'break-down' of the 'inter connection' of the 'financial system' and the 'economy'. These sets have details describing 'families camping out' for 'free meals', as well as 'mobs (of mainly) men' who will 'force open warehouses (in the search for food). Other sets are showing that for the first few months of this next financial crisis (over 2016) the 'national government' will be so 'chaotically amplifying' the 'bad situation' here in USA that 'local attempts (at self preservation, and self-care)' are going to be 'sabotaged' or 'destroyed'.

The detail sets are painting a picture of 'attempted (propping) of the fake (view) of the economy' as being a 'failed proposition' that gets the 'real economy' so 'skewed' as to basically 'slowly grind to a near halt' over Spring and Summer. This will be seen in the 'increasing failure rate' of damn near everything; from 'bad toasters', to 'no bread in the stores' to put in them. From 'terrible take-out food', to 'no alternatives'. From 'trains running late' even though very much 'empty' due to 'layoffs' and 'businesses closing'.

There are detail sets describing places within the 'continental US' that will be 'going native' or 'using wampum' as it will become known due to the 'liquidity shortage' and the 'dollar instability' and the 'reaction' by the 'federal reserve' and the 'federal government'. These details show such things as 'cars' and 'property' including 'houses', 'businesses', and 'inventories' will be 'traded', 'sold and bought', in ways that 'do not use the Federal Reserve Note (aka dollar)'. The data sets further are showing that the 'local governments' in many of these areas are going to try to implement 'forced attendance policies' in which they 'pay' the 'employees' in 'redeemable script'. The catch to the whole thing is that the 'employee' cannot refuse the script, nor quit. Not allowed. In some instances there are sets going to the idea that 'local police' and 'state (highway) patrol' units will be 'sent out' to 'retrieve' certain 'errant employees' of 'government' who decide to stage a 'sick out'. Again, the data forecasts a 'bad outcome'.

In other areas of the USAPop the new growth includes sets that describe a more or less 'functioning' transition 'away' from the 'federal reserve note' over the course of 2016/2017 as the 'financial crises' deepen into 'global depression' and 'global political chaos'. In these instances the data is showing that the local 'population' takes a 'pragmatic' approach to 'dealing with global financial chaos' and (more or less) makes it 'work', in spite of 'no circulating (paper) currencies'. In many of these linguistic structures, 'bitcoin' and 'precious metals' are both repeatedly referenced.

The new aspect/attribute sets include details for 'local / municipal government failure' that will be 'exacerbated' by both 'weather/climate change', and 'federal government incompetence'. The forecasts include 'roads closing' due to 'flooding' that will 'dry out' but not 'reopen' due to 'lack of repairs' as 'local government' has gone 'suddenly broke'. The data sets are showing that 'out breaks' of 'animal diseases' such as 'rabies' will become 'nearly daily reports' over late 2016 and into 2017 as 'global climate change' forces 'wildlife to migrate' in spite of 'contact with humans'. These 'contacts' with the 'forced migration' of 'wildlife' are showing as being a source for 'new disease vectors' for the next several decades.

RussiaPop

Rumor are forecast to be coming out of far eastern Russia concerning a 'new discovery' of 'ancient habitation'. While seemingly merely yet-another-ancient-civilization find, the 'rumors' are showing as including language about 'ancient, but functioning, technologies'. These linguistic structures also include elements going to 'non-metallic electrical conductors', and 'weak field mass movement devices'. These 'rumors' are described as being so 'persistent' and 'so exciting' that 'archeology' at a 'global level' is 'suddenly surging' as the 'rumors' begin to include 'secret visits' to certain 'western archeologists (and other scientists including some more or less famous 'woo-woo world' personalities)' by 'recruiters from russia'.

RussiaPop has new growth within sets going to a 'space base' (platform technology)' that will be 'unveiled' as it is being 'assembled' (already launched?). The detail sets are going to the idea that a 'manufacturing base' is being 'placed' into 'low orbit' for 'new technology' and 'new chemistry' that is being forecast as being 'prelude (to) (energies) from space'. These sets and others are in supporting positions to a 'broad Russian effort' to 'move Russia' into 'space dominance'. The effort is showing as being at least partially inspired by 'chinese space success'. Further sets within the sets for 'Russian space (manufacturing) platform' (which may be more robot than human operated) is indicated to be 'harassed' by 'UFO' visitors both on 'launch' and 'once in position'. The data sets are suggesting that some 'chemicals on-board' will be described as 'like sausage for dogs' in attracting the 'UFO' attention. This 'strange attractor' phenomena is showing as gaining 'global visibility' as the 'Russians' are indicated to 'go open' with the 'visitors'.

The data is also forecasting that the 'Russian space industries' will be 'joined' with the 'Indian space control systems industries' as they jointly set out to 'construct' a 'series' of 'in-situ, self constructing factories'. These are described as being something of 'self-unfolding, self controlling robots' whose mission just happens to be acting as a 'factory in space'.

Other new growth within RussiaPop shift attention to the Arctic and Russian 'exploration' of 'secret resources'. These 'secret resources' are described within the data sets as being connected to the 'new archeology discoveries'. These sets are again referencing 'still working (ancient tech)', and 'non metallic energy conductors'. Further sets are forecasting that 'rumors' of a 'space alien trash dump' being 'found' by the 'Russians in the Arctic' will be in circulation by late Summer, as the many other rumors of 'secret Arctic expeditions' by a number of countries are rampant across the alternative media.

ChinaPop

ChinaPop is showing that 'continued growth' within their 'economic base' will (while slowing) still be 'robust' enough to 'power' a 'transition' into 'personal consumption' as a 'greater segment' of the overall 'economic growth'.

The 'personal consumption' sub sets are showing growth in a unique 'personal response' to 'endemic pollution'. These sets are showing that 'inventions' of 'personal, anti-pollution devices' will begin to 'flood' into the 'internal Chinese markets'.

Other signs of 'internal investment' include a 'new program' beginning which will be to 'expand' the 'all roads' lead to 'Beijing' and turn it about to 'roads (from Beijing)' go to 'all parts of earth'. This effort is showing as being the 'largest building project ever undertaken' by humanity. These sets have a very large level of cross links over to the SpaceGoatFarts entity as well as the Markets entity where the dominating theme is 'robots'. These sets are indicating that the 'building effort' involved in 'uniting Pan-Asia by road/rail/coms' is going to be extensively 'robotic construction'. The data sets within the Markets entity are also terminating in the SpaceGoatFarts entity where descriptors have 'remote controlled fleets' of 'construction robots' working for the next '20+ (twenty plus) years' in the 'building out phase' of what will shape up to be the 'grand Pan-Asian Design'.

The 'Pan-Asian Design' is described within the data as being the idea of 'a single island in a global ocean' with 'China at its center'.

ChinaPop entity has had new growth in areas that are cross linked over to the Terra entity that go to the idea of 'fatal pollution'. The data is suggesting that 2/two types of 'pollution' are going to be causing 'fatalities' over Spring 2016. The data is forecasting that 'air pollution' is going to be causing 'collapsing people' at levels that will be both 'noticeable' and 'commented upon' to the level that 'chinese authorities' will be forced to 'cope (with) international publicity' about 'tourists (dying) of bad air'. The data sets are showing that the 'response' from 'officialdom' will not be 'adequate' and that 'further fatalities' will emerge over subsequent weeks as 'climate/weather changes' are indicated to 'combine' with the 'local topography' to create 'bowls' of 'deeply contaminated air'.

Other sets that the other form of 'pollution' is 'water contamination' that will be affecting ever greater regions to the extent that 'whole water systems (region wide)' will be 'shut down' in desperate 'hunting' for the 'source of contamination'. Modelspace movement is suggesting that about this time, the 'personal response to pollution' idea will be rising with velocity as 'devices' appear to 'compensate' for the 'bad air', and 'poisonous water'. This first wave of 'regional poisoning' (by environment) is showing as lasting through to November as the 'weather crisis' combines with 'industrial pollution' to produce incredibly difficult times. These will include widespread shut down of businesses, everything from industry sites, to retail shops. There are sets going to the idea that 'malls' will show up on videos as 'touting their clean air systems'. In other cases, new forms of advertising for 'safe air solutions' for apartments and other dwellings are going to be dominating Summer thoughts as 'bad air' will also bite in China.

Other areas within ChinaPop are pointing toward the 'crashing internals' of the 'economic system' that will be showing up in many different ways, other than the usual riots and mass protests. Yes, the data shows that there will be very large increases in the 'disharmony' within ChinaPop, including many 'demonstrations' of 'national authorities' and their 'new methods', but also the data is showing that 'new avenues' such as 'China in Space' and 'organized (long term) resettlement' will be 'put into place' in order to 'draw off' as much of the 'destructive energies' as is possible.

New 'engineering' of 'planet sized works' will become a 'branding feature' of 'the 'New China Initiative' that the 'central authorities' will be 'pumping out' both internally, and to 'external customers'.

SEAsiaPop

One of the largest groups of multilingual populations on the planet, the SouthEastAsiaPop entity is indicating that some of the more 'significant video' clips coming out of Summer 2016 will be from SE Asia. These are indicated to include 'runs on banks' and 'currencies' going into 'hyper frenzied trading'. The data sets are forecasting that video streams will show long lines deteriorating into 'desperate people' as 'doors are being locked (in their faces)'. These 'desperate people' will be 'reacting' to a 'sudden currency failure' that has been 'exacerbated' to an 'extreme state' by 'traders' and 'algorithms' going 'past the point of bankruptcy'. At modelspace is progressed into Summer (July 2016), the 'full extent' of the 'bankruptcy' of the 'debt issuers' is 'apparent'. Within this 'daily changing financial environment', the SEAsiaPop sets are indicating that 'embarrassing explanations' begin to 'appear (from) central banksters' as several of the 'currencies' are 'rocking' under the 'pressures' of the 'failure' of a 'minor group' but which was then 'mistakenly transferred' to a '(unknown) sensitive spot'. The 'traders' are showing as being really 'without understanding' and their 'actions' will 'magnify the problems'. The 'late to realize' the actual circumstances of what is 'happening on the street' is what is being cited as causing the 'ripple (into) western markets' of these 'price swings' on 'currencies' that is going to cause 'bleeding bladders' from the 'fear squeeze'.

IndiaPop

Data sets continue to grow for two conjoining sets, of 'corruption' and 'bankruptcy'. These sets are pointing toward a 'failure (of) the Indian government (past) debt commitments' that will be showing up as 'very bad indeed (derivatives related)', and then, in conjunction, the 'corruption (of past officialdom)' will be seen as a 'causative factor' within the 'bankruptcy proceedings'. This becomes increasingly important to the Markets entity as a 'court case is discussed (pre-trial words)', and 'Indian government actions trigger' a 'flight (from fear)' in 'capital' that will 'break-down' several of the 'key levels' within the 'gold/silver markets'. These sets are cross linked to the Markets entity and suggest that several 'large funds' from India will be 'catching gold fever' and will 'demand to take delivery'.

These sets are suggesting that there will be a 'crisis' within the 'global currency markets' and the 'global metals markets' as a result or concurrent with the Indian 'capital flight'. These sets are showing that a 'flood' will be making the news in the background as a 'flood' of 'US dollars' attempt to 'take away' all the 'available gold'.

Other sets within the IndiaPop entity are cross linked over to the SpaceGoatFarts entity where we have

terminating sets going to the idea of a 'huge wave' of 'USO (under seas UFO's) sightings' along the 'indian (east?) coastline' that will slowly be concentrated into two or three specific areas which will then be the source of 'daily interest' on the part of IndiaPop, and the 'national officialdom'. The situation is showing as getting much more complicated as both the USA and Russia send 'military observation vessels' to the region. Further problems are created as 'satellites' are 'redirected' for 'close observation'. These USO background stories will be part of the overall emotional tone of a 'steady hot summer' of very interesting 'social memes' sweeping through a 'very agitated population' across most of India.

IranPop

The data sets are showing that a 'young peoples' movement is going to present some 'challenges' to the Iranian 'establishment' over the rest of 2016 as a 'demand' for 'access' to 'the tools of new science' is going to bring about 'conflict' within the country's 'academia'. The reason that this is surfacing in the data has to do with an 'Iranian initiative' for 'social progress (in the middle east)' that is showing as gaining 'huge traction' across the region. Not only in the Middle East, but also in Europe the 'IranPlan' will be both a 'catalyst' for 'social change (within EU muslim populations), as well as a 'direct challenge' to 'fractional reserve banking systems'. It is striking how these sets appear in the data as they are very small motes of clustered, tightly defined linguistic structures, that are also the center of one of the largest cross link maps ever to appear within modelspace. These sets are mostly longer term and shorter term values so there is little in the way of details as these are primarily within the immediacy sets, but the progress of these structures within modelspace shows the growing 'net work effect' should be 'visible' within the 'alternative media' by late in July. Please note that there is NO reference to the Keshe material as it is being screened out as mostly a waste of everyone's time in producing no energy whatsoever with never any repeatable results.

The data showing now *might be able to be interpreted as an 'Iran centered reformation of islam', but at this stage it is not able to be determined if the forecast 'social order change' is of something of the implied magnitude of a general religious reformation. Still, the effects of the 'young peoples movement' in Iran over 2016 are forecast as not only 'upsetting (the) mountain (of Iranian academia (orthodoxy?))', but also of 'challenging (global) humanity' {ed note: mostly this is actually referring to 'young people', under 40, as these sets are consistently very long term and show a multiple decades long time frame social meme developing.}

OzPop

As modelspace is progressed through March, new sets start to appear with an Australia focus that show that the 'economic models' being used to 'shepherd' the economy go 'wonky' as 'pits' start appearing in the 'local housing markets'. The idea is that 'fringe properties' in 'fringe places' will start to 'lose price (value)', and something of a 'ripple' will occur that will first reach up into the 'forecasting houses' who 'prime government', and then rapidly bounce over into the 'high end (value street) properties' as the 'long feared', and 'long anticipated' 'crash of the Australian housing market' unfolds. The data is forecasting that what had been a 'fading Fall' in 'housing (support products) sales' will leap into a 'woeful Winter' as 'funding' for 'raw lands' and 'in process developments' will 'dry up' as the 'weather

changes'. This 'drought' of 'dollars' is also extensively cross linked over to the 'base money shortage' that is indicated to be 'sweeping around the planet'. See Markets entity.

The relative 'swiftness' of the 'housing bubble exhalation' is indicated to be the 'grease' that 'slides Australia' into 'economic depression'. It will be the 'continuing depression' over this next decade that will be the cause of both the rising rate of immigration and emigration as 'educated young people' migrate to 'south america' (later this decade), and 'retiring Asians' immigrate to 'northern Australian retirement/recreation communities'. The data shows that it will be the 'pristine nature' of Australia as the 'sales theme' against the 'continuing battles against pollution (in Asia)' that is going to 'turn economic tides' for (some) of Australia post 2020.

The data sets are showing that the 'first (and most chaotic) years' of the Australian 'housing bubble collapse' are going to be a nexus for the 'creation' of 'new living arrangements' in which alternatives to 'fixed abode dwellings' will be taken up in a very large way. The data sets are suggesting that the 'Australian history' will be used as both a 'common law justification' as well as an 'explanation' for 'new circumstances' in 'living arrangements'. These are showing as including 'traveling bands' (also coastal floating communities), as well as 'circulating squatters' (who will shift from foreclosed building to foreclosed house as politicians 'scapegoat' the 'idle poor').

MuslimPop

Noting that it is definitely unusual to slice our data along religion lines, nonetheless, the sets are accruing at such a rapid pace for 'millennial changes' within the 'social organization' of that part of humanity that defines itself as the 'muslim world'. Also, given the very diverse geographic spread the data is presenting, it does not make sense to cover this material in the other entity or sub set discussions.

The data sets are showing that from Guam to Goteborg, from Somalia to Canada, the 'muslim world' will 'transition' over 2016 through 2027 into a state of 'frothing reformation'. The data sets are pointing to a 'quest for redefinition (of being muslim)' from 2027 that will extend out for 21/twenty-one years (a whole new generation).

The data sets are showing that the conditions for a 'turn' in the 'nature' of the 'expression of islam' towards 'deep self examination' are developing over this, and the next 10/ten years. These conditions are also lining up temporally with the 'fourth turning' {ed note: in the parlance of the times, and for lack of a better appellation at this point} that is affecting the 'western (christian) world (absent Russia)'. The 'islamic reformation' is showing as being more visible, earlier in its process, and will be 'slowing/fading' from its more 'active' process just as the 'fourth turning' gets real 'active' legs.

The data is showing that the 'deep change period' of the 'islamic world' will begin in earnest as the 'fall (of the house of) saud' and the subsequent 'wars for mecca/medina' are going to create the 'conditions' for 'horror' as 'muslim-vs-muslim extremist behavior' moves to a whole new level.

The good news in the data sets in supporting positions for the 'muslim reformation' is that the 'western world' will be 'getting deep into (its own) throes (of political/social) upheaval' and (mostly) won't be 'messing about' in the Middle East (and SE Asia) as much as it had in the recent past.

The data set growth for the 'wars (for possession/control) of the '**Black Stone** (or *Hajarul Aswad*)' at the center of the hajj is also indicated to create 'internal problems' for the 'islamic religionists (imams)' as the 'destruction' within the 'war' is also forecast to include the 'Kaaba (the site of the Black Stone)' as well as 'places of veneration'. The details are going to the idea of a 'root-less Islam' left to 'rediscover itself' in the late 2020's and beyond. Note that at this point the longer term data sets are showing, via extensive cross links to the SpaceGoatFarts entity, that 'Islam (goes to) space (support)' as a big part of the 'reformation' and 'redefinition' of the 'muslim world'.

The longer term value sets are forecasting that most of the current 'political organization' of the 'muslim world' (focusing on the Middle East more than SE Asia) will so change over these next 10/ten years as to 'not be recognizable' from today's 'maps'. There is new growth in aspect/attribute sets showing that all of the 'kingdoms' will 'fail' then 'fall', and, according to the accretion patterns, the 'falling' after the 'economic failures' will happen very 'swiftly'. Further sets are showing that 'political chaos' will 'ebb and flow' along with the 'reformation' and the 'redefinition' of the 'Islamic region'.

The longer term sets also are showing that the 'post-(internal)-war period' will be 'led into stability' by two places that are not currently known to be that stable themselves, 'Pakistan', and the 'Philippines'. In both geographic instances the data sets are providing support for 'isolation', and 'village seers/philosophers' as being 'central thinkers' in the 'reformation'. In the case of the 'Philippine seer', this person is showing as being 'rejected academic' who has been 'working (medical?)' in 'southern Philippine islands'. This individual, though young, is indicated to 'write a description' of the 'sharp fulcrum' that will be 'paining (the) islamic mind' in such a way as to cause both 'external cohesion' and 'internal contention' within the (then) 'emotionally drained', and 'spiritually abused' pan-Muslim world.

The 'horror' and 'destruction' of the 'Kaaba War years' is showing within the supporting sets for 'kingdoms fall', and 'peoples rise'. As the 'wars' fade due to the 'destruction (of the goal)', the 'reformation years' are indicated to 'cloak the region' in a 'giant cloud' of 'confusion'. However, within these sets are also cross links over to the 'rebirth' and 'new growth' sets for the 'political reorganization' that is also forecast as a part of the 'reformation process'. The 'new political structure' is indicated to 'form' over the next 20/twenty years, or so, as the 'many sins' of 'past generations' are 'exposed' in a 'cleansing process'.

Cross links over to the Terra entity are showing that the 'rebirth' of the Middle East geopolitics is also going to be accompanied by 'climate change' that will, in the late 2020's, settle in to much 'wetter', and far less 'hot' patterns. The 'climate shift' is indicated to affect not only the 'solar energy plans', but also vast 'swaths of desert' in both Africa and the Middle East (also over into India). The idea coming up from the data sets is that the 'Atlantic' and 'Pacific ocean current changes' will cause 'precipitation traps' to form over the 'southern and eastern Mediterranean Sea' and the 'western Indian Ocean'.

Markets

Debt deteriorates and 'derivatives' will be 'sloshing about looking for a home' as modelspace is progressed through March and April. The data sets are showing that very large swings in '(paper) valuation (of) stocks' will be occurring on a 'daily basis' such that 'to hold overnight' will be thought of (by traders) as 'to (potentially) die'.

At this point the emergence of the 'consequences' word will begin with it gaining a context and emotional tone taken from the point of redefinition, which is to say, the 'corrupt halls', and 'back alleys' of 'wall street'. In the emergence of the new context of 'consequences' we have forecast an emotional tone of very significant depth. This is to say that the application of the word will be by the 'victims' of the 'consequences of their (previous) own acts', and be such that it will take on a new temporal tone of 'finality' that will become commonly associated with 'fatalities', and '(unwilling) suicides'.

Some of the 'consequences' set are much more benign in their their forecast, and some even positive, at least at local levels. In these instances of 'consequences' we have the focus on the 'makers movement' which is also known as 'lean manufacturing' when viewed at an aggregate effect level as in macro-economics. The 'consequences' sets are indicating a significant 'rise in stature' for the 'basement dwelling maker (techno-tinkerer)' as the 'economy shifts' and as 'new capacities' come 'on line'. These 'new capacities' are cross linked over to SpaceGoatFarts entity and thus may be signaling an ET connection, but without regard to their origin, the technologies themselves are forecast to include '3d extrusions technology' that includes 'metals' of a 'wide variety' of 'properties' including 'hardness' and 'conductivity'. Further 'new capabilities' are detailed to include 'inter-mingling' or 'inter-mixing' of 'conductive' and 'insulative' materials within '3d making' such that we will have 'objects/things' made with 'inbuilt circuitry' and 'techno-capacity'. Other 'new (developing/soon to be announced) capabilities' within the 'makers' community are forecast to include 'bio-printing' of 'bio-infrastructures' for 'body regeneration' in which they will 'print' new 'bones' as a 'matrix' and then 'infuse' a person's cells into the 'bone' before using it in replacing diseased or damaged parts. Most of these new supporting sets have both an 'Asia' geographic reference, as well as extensive cross links over to 'silver'. Both as a necessary component within the new machinery, as well as for its 'unique biocide' properties'.

These 'new technologies', and 'new biological uses', and other sets are all part of the data forecasting that silver premiums will be going over 100% of the 'spot price' that is 'fixed'. The 'real price' will be determined by 'Asian demand' as several times the 'spot price'. The data sets are suggesting that this will occur before the end of this year (2016). Modelspace would have the process be underway now, with some significant steps in silver price to become manifest over late March as Spring (northern hemisphere) brings on significant 'markets' changes. The data sets are growing in support of a 'fractured market' that will be so 'disassociated' and 'jangled' at one point that the propaganda media will be 'forced' to 'report several "official" prices' for 'silver and gold' at any given time. These sets are showing that 'fractured officialdom (in financial (central banking) world)' will have 'caused confusion' amongst the 'reporters' for the propaganda media and induced something of an 'aversion' to 'discussing silver' on 'air' to the extent that 'personalities' will 'scuffle' in front of cameras as 'staff' try to 'remove them' for 'bringing up silver'.

In spite of the forecast 'aversion' to 'silver discussion' the propaganda media will be forced to cover the subject later in the year as 'hyperinflation' of *some things, including the monetary metals, takes place. While the data shows that the rest of the 'economy', including 'paper debt markets' are 'falling towards flat', the 'precious metals' and 'foods' are indicated to have very rapid 'price gains'.

The 'rapidity' and the 'strength' of the 'price rise in silver' force the subject on the 'reluctant media', but the longer term data is showing that 'officialdom' within North America declares 'silver' in 'all forms' to be 'a strategic metal' and a 'necessary domestic resource' and then 'limitations (on) export' are 'imposed'. This may occur as early as late 2016, or first quarter of 2017.

Further 'constraints' are showing as being 'forced' on the 'national jewelry industry'. However, the data sets are also indicating that the 'impositions' and 'schemes' and 'control efforts' will all be 'lagging behind' the 'continuously growing currency/banking crisis'. The data shows that 'officialdom' is 'unable to keep up' with the 'rising prices' and the 'changing global markets' against a 'demand wave' that was 'not foreseen'. The data shows that there is a 'global coins shortage' from 'all sources' as the 'global population re-monetizes silver'. This will be seen in the forecast 'long lines', and subsequent 'fights' that will be shown from 'video' at the stores. The data further shows that 'pawn shops' will be 'scoured' for 'junk silver'. Supporting sets in this structure are forecasting that 'silver service (tableware)' goes 'astronomical' in prices.

Part of the 'problem' for ThePowersThatBe, and the 'established western political powers' is forecast to be a 'global silver shortage' that will 'persist' for 'months'. The largest single linguistic set goes to the 'emotional fever' that is 'excited' in the 'global populace'. The 'prices' of 'silver' are showing as 'breaking' with the 'last vestiges' of 'control and manipulation'. The Markets entity has extensive cross links from the 'silver' sets over to the USAPop where many terminate in the 'political fracturing' sub sets.

The 'global draw down' in 'silver stocks' and the many stories about the subject are showing that the GlobalPop 'excitement' with 'precious metals' presents a 'crushing blow' to the 'power blocks' within the 'global political system'. The 'emotional fever' and 'excitement' language is very telling as the emotional 'tone' associated with 'precious metals (especially silver)' are inversely correlated to 'confidence' in the 'system'.

The data sets are showing that the 'industrial (corporate)' users of 'silver' will have plenty of 'needs' for 'silver' and 'no blockages' to 'paying (going) rates'. The data is showing that 'Asian industrial demand' for 'silver' will be such that 'prices (over) $120' will find 'willing buyers' in the 'multitudes' as 'solar power' and 'new electrics (new energy)' uses for 'silver' reach a 'crescendo'.

The Markets entity is indicating that the 'tech industry' (at least as that which includes 'fintech') is going to be 'taking a hit' as the 'base money shortage' emerges as the 'liquidity critical path constraint'. The detail sets are showing that the language will be filled with 'deaths (of) unicorns' and 'mass firings' as 'evaporation' becomes 'instantaneous'. The data sets further are forecasting very large 'price crashes' in 'prime tech (rental) real estate' that will be further reflected in 'local tech (housing) markets' as 'hundreds (of) thousands' will 'lose their jobs'. The data sets are extensively cross linked over to the USAPop where terminating sets are indicating a severe ripple effect as 'student loan payments' will be

'suddenly plunging nationwide'.

New linguistic structures for a 'base money shortage' that develops 'globally' are forecasting that 'dollars' will be 'shrinking' as the 'debt (is) destroyed' in 'bad loans'. The data sets are showing a strange form of 'illness' within the 'financial system' as 'credit/debt currencies' and 'credit/debt entries (in paper work/documents)' are 'reduced' with 'each dead debt declared/realized'. The idea coming across is that 'real money', not 'digital dollars' or 'debt-as-asset-backed-currencies' is going to be 'all that remains', and further that the 'entire planet' has been 'depending (on the) circulating abstractions (of real money)', and now is reaching a point where it must start relying on the 'base money (in) circulation'. This is indicated as being a 'shock' to the 'financial system' of such magnitude as to be 'death (to) banks' and 'political parties' as the 'base money (lack) illness' spreads though the system over these next '2/two years'.

By establishing modelspace at early March, and then moving forward in weekly increments over 2016, it is possible to observe the accretion of data showing the 'base money' failure beginning to 'surface' in the 'derivatives markets' over March, which is indicated to precipitate a 'panic to sell' all forms of 'paper debt' as the 'Great Unwinding' becomes 'visible' in the propaganda and alternative media over April. The data sets are showing that by May, the word 'panic' is appearing in many differing contexts from 'markets' to 'politics' to 'social change' to 'daily life'. The 'reporting' on the 'panic to sell' occurring in the paper debt markets is showing as 'so widespread' as to 'induce headlines' in all major media outlets. The idea within these sets is that these 'headlines' will be 'nearly simultaneous' as the 'world' reacts to the 'emerging financial panic'.

The data sets are growing in the Markets entity for the 'March/April' period and the 'downturn/falling paper debt markets'. This is indicated in the data sets to 'create/ignite' a 'surge upward' in 'gold' that will have 'silver trailing behind (temporally, not in price)', and will have 'bitcoin' also 'advancing', but behind 'gold'.

As modelspace is progressed through 2016, the 'gold/silver/bitcoin wave' appears as upward moves that begin in late March, progress through April and hit a small peak in late May. Then as the 'officialdom' reacts to developing issues, including the 'fracturing political system', there is a 'calm period' that shows as a 'settling down (calming down)' of the 'rush into gold'. So over the course of June, and early July, as there are major 'geographic (tectonic)' and 'geopolitical' attention grabbing events, the data is showing that the 'rate of advance' for 'gold' slows down. However, it is at this point in mid July that 'silver' gets its 'emotional legs' where the 'need to acquire silver' begins to 'overwhelm' both the 'retail distribution network', and the 'last (energy) towards price suppression'. Then, within a background context of 'early stage hyperinflation', the data is showing that 'gold' and 'silver' and 'bitcoin' all start upward moves that will apparently persist for a number of years.

The data sets, especially the shorter term values, are pointing toward a mid to late Summer (northern hemisphere) surge in the 'dollar prices' of 'bitcoin'. This surge is showing as a 'kicking off/igniting' of the 'next wave (of the) rally' in 'gold' and 'silver'. As 'bitcoin' is 'surging' it shows as not being in the '500s (five hundreds)' for very long. Compared to the language for 'bitcoin' in the '600s (six hundreds)' there is very little in the way of sets for BTC between 505 and 605.

It is during the 'shifting period' of June, July, and August, that the data sets are saying that the 'markets (specifically bonds/treasuries)' will be 'reacting' to the 'latest (push of) hyperinflation', and will 'wither' like 'arteries deprived (of blood)'. These sets are referencing what will, in the future beyond 2020, (likely) be known as the 'point of failure'. This period over 'Summer (northern hemisphere) 2016' is going to be the 'initiation point' for the 'bond collapse' of this, Greater Depression. This Summer is forecast to be 'likened to' or 'compared with' the '1933 bond crisis'.

The data sets are showing that as the 'hot Summer days' are just settling in (mid summer or so) the 'collapsing bonds (in USA markets and EU markets)' will 'induce' a 'ripple collapse' in 'luxury housing' and 'summer rentals (of estates/houses/yachts)'. Further the data sets are showing that 'tourism', and 'summer events (planned tourist attracting public events)' will be 'hitting cash walls' and 'inducing bankruptcy' for 'event promoters'. In one of the detail sets there are indicators of a 'ripple effect' that will 'devastate' the 'local (civic) government' as the 'bankruptcy' (of local tourist attractions) is described as 'rolling uphill'.

Other Markets entity data accruing in late processing is the 'crisis' of 'housing prices' that will be 'visible' and 'discussed' by late in June. As the 'Australian' and 'Canadian housing prices' have clearly begun the 'crash of ages', the data is showing that the 'crash fears' will be 'driving' the 'US' and 'London' markets as "dumping (by lowering prices rapidly)' of 'housing' will be 'discussed' and 'visible' on the mainstream propaganda media over much of late Spring (northern hemisphere) and through Summer.

The Markets entity is showing that the 'long anticipated Australian housing bubble pop' is going to both 'catch (the shorts) off-guard' with a 'head fake (feint down, then jump up)' of 'banking stocks' that will clear most of the 'bets against (the) banks', then just afterward, the data shows that the 'banking stocks (tied to both housing and energy)' will 'puke out (in volume)'. There are sub sets going to a temporal marker of 'new zealand (mid tier) bank failure' as a temporal precursor to the larger 'slaughter' of the 'Australian housing 'industry'".

The data sets within Markets entity have a growing mass of 'weather' and 'climate' related sets that are also extensively cross linked over to both the Terra entity and the SpaceGoatFarts entity.

Within Markets entity the data sets have a 'weather' bias as being 'damaging' to 'businesses' across the 'globe' in 2016. This will include 'ship wrecks', some of a 'spectacular' nature, as well as some (to later be determined to be) 'scuttling' episodes in 'disguise' as 'weather induced ship collision with land'. Other aspect/attribute sets have the 'damage' to 'businesses' including 'buildings' being 'undercut/eroded', and 'destroyed road (vital) ways', and 'long term flooding' of 'vital roadways' and 'flooding (of vital) infrastructure' such as 'electrical plants', and 'train yards', and 'distribution warehouses'. Yet more growth appears in sets for 'water treatment plants' being 'flooded out'. These latter sets are supported by 'video' so likely that particular 'storm front' will have a lot of 'video coverage'.

The Markets entity is also showing that 'businesses' will have to 'cope' with manifesting 'earth expansion effects' in the form of 'disruptive sinkholes' and 'diverting (of traffic) cracks' appearing in the

planet as well as 'human infrastructure'. The 'cracks' are also indicated to cause problems, especially in 'Siberia', and 'north america' as 'pipelines' in the former, and 'telephony lines' in the latter will be 'ruptured/pulled apart' as the 'fixed components' are 'stretched' along with the local planet surface.

Even further problems will be caused as a result of 'satellites gone (wildly) wonky' and 'refusing to cooperate'. These sets are supported by 'earth expansion' and 'new magnetic (field) manifestations' as being the cause for the situation. The newly arriving aspect/attribute sets include details going to the idea of 'new (temporary) magnetic disturbances' which will result from 'earth plate movement'. While showing as 'brief', these will be long enough to 'induce field disturbances' within 'satellite guidance systems' such that the 'satellites' will 'refuse (to obey) orders' from earth as the 'coordinates sent' will be 'computationally out of range' and not 'executable'.

Other 'business environment' affecting items are showing up in new accretion patterns. In many of the new sets are supporting values for 'insurance (industry) contagion' as 'rates scream higher' under the 'twin influences' of 'hyperinflation' and '(low level) fraudulent claims'. The data is indicating that as the 'depression' worsens, one 'consequence' will be many people trying to 'get by' through 'small scale insurance fraud'. The huge increase in 'demanded payouts' that are showing as being a 'burden' to the 'insurance industry' over these next 3/three years, is also indicated to contain a 'rising percentage' of 'bogus claims'.

The 'destructive failure' of the 'insurance industry' is forecast to occur as a 'degrading force' in the 'background' of the 'bankruptcy wave' going through the 'banking system'. The data sets are forecasting that the 'western banks', led by the 'USA banksters', are forecast to 'hide' vast quantities of 'losses' as the 'credit' that they lend out is 'sucked dry', and 'collapses' as 'bonds', and 'companies' are showing as 'failing to meet expectations'. While the 'USA banksters' are going to be on a 'lying spree' that is 'epic' in its 'scope' and 'impact on the economy (when it comes out)'.

The 'lying and hiding' by the 'banks' is indicated to create very 'bizarre' situations around the planet. In some of the detail sets we have 'regions' whose 'businesses' are 'all bankrupt' and basically, as the 'bank refuses' to 'allow any businesses to fail', everyone in the area is 'working for the bank'. Several places are showing as 'acting as bank slaves' with the very expected 'resolution' as the 'slaves revolt' and the 'local (banking) system collapses'.

The 'banking crisis is described as being 'active' over most of 2016 and through to 2019, is forecast as 'starting in Italy' as 'several (dozen?) banks' will reach 'critical mass (no liquidity)' over the first few weeks of Spring (northern hemisphere).

The 'liquidity crisis' is also going to 'expose' the 'bogus businesses (bad accounting)' that is 'central' to the 'dead banks'. The 'bad/dead business' are described as being 'so far beyond (expectations)' as to be 'politically shocking'. These details sets are basically describing a situation in which a 'failed bank' is 'exposed' as its 'books are examined', and the 'information' starts coming out as 'leaks'. The 'leaked information' is indicated to be 'exposing' many 'businesses' that are 'without (real) cash/liquidity/profits'.

The data sets are forecasting that a good temporal marker is going to be the 'suicide' of a 'banking regulator' who will nearly 'instantly' be found to be 'criminally dirty'. This temporal marker will be a 'kick-off' for the 'banking shares markets' getting to the 'panic to sell', and 'pain for speculators'.

Noting the seeming connection between Bitcoin at 408 and the 'bottom' for price in 'silver' likely was a fulfilled forecast (though not able to be confirmed for a number of weeks yet by price action), the data sets have a clear hook between 'silver' and 'bitcoin' that is forecasting that a 'rapid rise' in both will be 'dominating' the 'markets discussions' as we move from April into May. The forecast for both 'silver' and 'bitcoin' for the rest of the year involves a 'calmer' period in mid Summer, that then is followed by a series of 'price surges' as various 'geopolitical' and 'financial system' manifestations occur. These are showing as including 'oil kingdom failure(s)' that have impacts reaching very far into the future.

ThePowersThatBe

The TPTB entity is showing that 'fear' and 'panic' and 'desperation' are the 'driving' emotional states at the 'top of the pyramid'. The data sets within this entity are, as always, conflicted, at least in the sense of having two states reflected in the data. So we find 'fear' and we also find 'confidence'. Now we can note that the 'confidence' sub set is also much tainted with 'fear', and 'anxiety'. The data would seem to be describing a condition of 'anticipated success', but one in which 'outcome' still is 'in doubt'. These sets are extensively cross linked over to the Markets entity where terminating sets are within the 'system collapsing' and 'crashing' sub sets. These would appear to be suggesting that the events of this, and subsequent years, within 'markets' and the larger geopolitical human-scape, are much more 'engineered' than we assume. Further, the data would seemingly be forecasting that the TPTB groups will be 'receiving (much) success' as we progress over these next 2/two years, but that within the longer term (4/four years and beyond), the events of the 'rise of revolution' will see 'the destruction (of the) power pyramid'.

The data is forecasting the 'unexpected deaths' of two of the TPTB (minor level, and in politics). These 'deaths' are going to be more or less 'natural' according to the data, but the interesting part for the aware observers will be how much is 'revealed' about the 'internal constituency' and 'conflicts' of TPTB as 'the assembled glitterati' are showing as 'having noticeable holes (people absent)'. The data sets here are very significant, and the tiny bit of knowledge to come from the 'gathering' of the 'elites' will be 'speaking volumes' to those who can hear.

SpaceGoatFarts

The concept of 'lean manufacturing' is showing that it is going to occupy a lot of pixels over these next few years as the 'officialdom' at a 'global' level begins to 'wrestle' with the 'abilities' that 'lean manufacturing' places into the 'hands (and minds)' of the 'populace'. The data has 'lean manufacturing' including such technologies as '3d printers', 'cnc cutting', 'cnc welding', 'diybio: gene splicing', 'diybio: gene "crimping"'. This last is one of the forecast (from 2003) 'new (and mostly illicit) therapies' that will be 'hitting the markets' over these next 30/thirty years. The 'gene crimping' is defined within the data as a 'method' that allows for the 'activation' of 'epigenetic patterns' via 'genetic manipulation' via 'energetic (rather than chemical)' means. These sets include linguistic structures for 'athletes' who will

be 'global faces' who will 'turn to epigenetic activation' to 'significantly enhance performance'. The data sets note that people who are the 'recipients' of these procedures will be called 'crimps' in the general parlance as the language evolves and these new human phenotypes emerge from within the general population. The data sets are also clear that the 'trans-humanism movement' will be 'dying' as the 'potentials' of 'epigenetic controls' are 'manifest'. These 'potentials' are quite interesting and include very much 'enhanced' physical and mental capacities. OF COURSE there will be many 'accidents' and 'deaths' and 'freak-outs' as a result of 'crimping gone bad', but as with all technologies, there is risk along the way to maturity. The longer term sets indicate that the 'crimping movement' will become a 'mainstream preoccupation (source of fear)' for many years. As may be expected, the data sets are forecasting that 'weight loss' will be the primary motivator for 'illicit crimp jobs', with 'anti-aging (testosterone re-up)' being a close second.

The 'justice industry' is showing in SpaceGoatFarts entity as reaching a 'pivotal point' as 'technologies' start to 'redefine human capabilities'. In some new and still forming linguistic structures, we have detail sets going to the idea of 'wireless telepathy' which will be 'undetectable', and apparently will work well enough to have 'governments' in a state of 'anxiety' and 'shouting panic' over the 'spread (of) open source, wireless telepathy technology'.

The data sets are showing that an instance of the 'invisible hand' of the 'covert agenda' that drives the 'secrecy world' will 'inadvertently' become 'visible' as a 'woman (small, thin, bright, smart)' will be 'visible' in a 'container'. The data sets are showing this as a temporal marker for a number of other sets within the SpaceGoatFarts entity. This instance of 'visibility' is showing as coming in 'real time' then 'viral video'. This manifestation is described as being of a 'woman in a case (viola/cello)' who is 'viewed' as she 'emerges' in the 'background' of some 'officialdom' event. She is described as being 'seen' by both the 'audience present' and the 'audience remote'. Note that this last has a number of modifiers which would *seem to be suggesting that 'non-humans/non-terrestrial humans' are also in 'her audience' as she 'emerges' from the 'case', and 'takes the stage'. The 'woman in the cello case' is indicated to be coincident with a nexus of emotional shifts within the global population. These shifts include many references to 'disclosure' and 'UFO's' and 'space aliens'. The 'woman in the cello case' is not showing as being alien, rather she is indicated to be a 'human victim'. The data can be inferred to be suggesting that this many be a manifestation as strange as 'teleportation' or some other 'extra-worldly event' as there are many descriptors within the supporting sets all going to serious level of woo-woo involved in her emergence from the 'cello/viola case'.

The data sets are not providing much further detail about the woman, nor what role she may play after emerging from the 'musical instrument case', but what is quite clear is that the visibility of the event will be coincident with major changes within the global population. The data has numerous cross links over to the Terra entity as well as Markets and GlobalPop entities from this sub set involving a 'woman' who will be 'self-freeing (from) her captivity (within a) cello case'.

As modelspace is moved through June into Summer (northern hemisphere), the data sets are showing that yet 'more' instances of 'strange stuff from underground' will be making 'news headlines' in both propaganda media and alternative outlets. There are many different descriptors for the types of 'strange stuff from underground'. A few examples include more 'in ground noises (groaning/moaning/voices)',

only this time they will be 'heard' as 'clearly voices', and a 'lot of them'. Other examples are forecast to include 'extrusions (of) crystalline rock' in a 'virtually overnight' time frame. These sets are showing multiple instances of this phenomena continuing to occur over a number of months, perhaps well into future years. In these sets the details have descriptors for such as 'new (rock) growths' in the 'middle of the road overnight'. And 'new rock grows (pushing building up (on one corner)) and (over to its destruction)'. Other sets are forecasting that 'strange underground phenomena' will include 'tornadoes' that 'get stuck' over 'underground rifts' and 'eat their way down (into the ground)'. Other detail sets have 'new lakes/rivers' that will be 'created' as 'new sources (of water)' come 'rushing out' of 'cracks in the earth'. These last sets are showing as being all over the northern hemisphere. In many of these 'new river sources' sets the first appearance of the 'floods' will be a 'bubbling (artesian) wells' that will 'emerge' from 'cracks/crevices' to be later 'sources of eruptions' and 'violent (spewing) gushing torrents'.

There are many new sets growing in supporting positions for the 'sun disease', 'solar health' sub set. These sets are specifically focused on 'internal changes (externally visible)' within the 'solar flow'. These sets do have internal cross links over to the terminating sets of the 'disease (mental included) of humans (that is) sun (change) induced", however the new growth is in 'sun disease', 'solar flow' sub sets. These new aspect/attribute sets are showing a very 'tight relationship' between the 'solar (surface) flow' (both in direction, and volume)' and 'climate health' here on earth.

There are continuing growth and new patterns for both the UFO large set, and the smaller sub set of 'USO' (underseas objects of unknown nature). These latter are showing as being the preoccupation of the 'global (ufo watching) population' as the 'numbers of reported (and video recorded) USO sightings' are forecast as escalating dramatically.

Yet more data showing up around CERN and the LHC and 'earthquakes'. The growth in the 'chinese dispute/complaint' sub set continues to gain new aspect/attribute sets for the 'chinese authorities' to 'publicly demand LHC cease' until 'studies' can determine if the machine has been 'causing massive (yet to occur) earthquakes in China'. These data sets are still dominated by longer term values but the shift into shorter term is occurring now with the implication being that the events are merely months away.

Conclusion: Sudden Venting

In the far distant past of this last millennium, May of 1980 to be precise, events of a geologic nature reached their logical conclusions and Mt. St. Helens blew its top to ashes.

For those of us who lived nearby for the preceding years, it did not exactly come as a surprise. The constant, and increasing venting of steam from 'newly discovered' fissures all across the north eastern side of the mountain were something of a clue as to what was to come. Still, universe surprised us all that day with the magnitude of the eruption and blow off of the pressure. The violence of that day is recorded in the ash layer laid all around the northern hemisphere.

This analogy goes of course to the global social order which is currently filled with new fissures erupting steam on a daily basis. It can, in my opinion, proceed to include only the path that leads to the 'blow off (of the top)". This language is explicitly chosen to reflect the analogy into the markets arena. The many emerging meta data layers identified years ago do nothing to calm the impressions that the 'steam pressure' is still building, in spite of recent 'sudden venting'.

As noted in previous ALTAs specifically for this period that includes MAY of 2016; in walking the mountain, when one encounters a sudden venting, remember to use your senses and smell the heat, see the shimmer in the air above it, hear the steam as it expands against the cold morning air, and taste the acrid flavor of deep, internal pressure bringing up minerals to the air on your tongue. These should be your clue... you do know it will be hot, so don't put your hand in it just to confirm that fact. Universe provided your senses so that you don't have to be stupid. Now is the time to use them and rely on them. The world, time, and everything are all heating up. Welcome to the first Summer of the New Days.

Which way will it go? Will it be the Dawning of the NWO? Or something else entirely?
Stay tuned to a reality near you!
