SpaceGoatFarts - Small Planet Destinations, Return to Earth

It has not escaped the notice of either the data gathering spyders, or the humans here at HPH that a [huge] rise in [ufo sightings] is occurring globally. Finding that there are daily, new reports, even members of the MSM (main stream media) component of the global media stream are confronting the issue. While the media notes the local [ufo sightings], our data tends to aggregate the [ufo reports] and subsequent discussions into neat little piles within the SpaceGoatFarts entity. However, some years back we thought we observed a pattern in which it was the size of the increase in sightings over 'normal' that was significant, especially globally. Prior to the 'historic' years of 2001, and 2004 (Sumatran tsunami), there were dramatic, and brief increases in [ufo reports] globally. We now have exceeded the levels of both those years within our data processing aggregations, *and* the [ufo report increases] are now being [sustained] at a global level. This is a new development. Whereas in 2004 the [ufo report increases] were usually only briefly stable in the localities of the sightings, this year and the latter half of 2007 have produced [ufo reports] which are continuing for months.

Additional components to the [ufo story] this time around include the reported sightings via camera and telescope of large, orbiting craft of all kinds. Also in these last 9/nine lunar months we have had global reports of very large [ufo craft] which have been uniformly described as being over a mile in length. Further, we are now into the fifth month of reports of strange ariel/sky phenomena which are 'presumed' to be natural. These include 'light plumes' and strange cloud formations which appear to be stable structures of unknown types.

The other 'anomolies' aside, the [ufo reports increase] is still a large story, and presents the SpaceGoatFarts entity with significant increases in emotional tensions within the [contact] meme. As we have noted ad nauseum, we have labeled 2008 as the year of [manifestation], and the modelspace continues to accrue increasing data sets under the [contact] meme, especially within the [ufo reports]. Within this area a sub set headed by [downed/landed craft] is also gaining emotional support disporportionately. This area also has a disproportionate number of references for [south america] over all other continental sets.

Just as when we discover [human body parts] or [human body processes] within the data sets, we tend to take [ufo reports increases] as serious indicators of change states pending. The [human body parts/processes] references are primal archetypes, with [ufo reports] not that far behind in terms of priorities. Reports globally spiked just a single day prior to the solar pole flip beginning. Other relationships to all manner of occurances can and have been demonstrated. From volcano eruptions, to earthquakes, and other natural phenomena, [ufo reports] have a long history of association. It might even be meaningful, if only we can get our monkey minds out of the way.

What we can glean is that in 2007 the [ufo reports] were up by over 200/two hundred percent over any previous year this century excepting 2004. At mere days into the new year, we are already up over 1000/one thousand percent in [ufo reports] over 2007 on a month-by-month comparison. Of course we can note that January was the worst January ever for the USofA markets, but somehow I

don't think that the [ufos] would show up just for that. So then what...?

The SpaceGoatFarts entity is *perhaps*, and that is a waaaay looong shot *maybe* forecasting that the next big thing to hit here on terra, will be just that...[impacts]. The SpaccGoatFarts entity has [impacts] as a rising aspect/attribute which is gaining in immediacy values support with some vigor. The idea coming across, however reluctantly is that perhaps the pending plunge of the classified military satellite will provide the [impacts] being shown. There are also some small pointers toward a possibility that perhaps the attractions *could* be the pending [zionist attacks] which we have labeled as the [israeli mistake]. *IF* these attacks were to be [nuclear], then this could possibly be of interest to the [visitors from ?other/space]. We note that they do have a tendency to be attracted to nuclear sites when out cruising.

Along with our [ufo reports], the SpaceGoatFarts entity also contains directly held [return (to) earth/impacts] data sets. These have been in place for some months, and recently have grown from the immediacy and shorter term value sets. It is not a happy data set. The [return to earth] set has aspect/attributes covering [10/ten years] of [no use/action], and [suffer complete defeat], and [edge of the stream/water], and [heavy metal (at) edge of water]...and if that is not enough, there are a number of bespoke sets for [bad luck].

The [bad luck] sets are also troubling to read as they suggest that [the east] will be [impacted] with the [heavy metal]. While in general there are a lot of supporting sets going to the idea of 'no trouble', there are a few which suggest that a [small irritant] will [blossom] into a [large disaster]. Again, there are pointers to the [officialdom/ruler] who will [make things worse], and [increase risk] through [rash decisions].

Other components of the [bad luck] sets indicate that [rains] will play a part in [creating] conditions [worse/evolving] from the [start]. Then the [government] apparently steps in with its contribution to the [problems], and things really get screwed up from that point forward. There are a number of cross links from the [bad luck] sets over to the Populace/USofA and the GlobalPop entity, but the dominant number, likely based solely on press reports, is in GlobalPop.

GlobalPop - Slaves, Snakes, Sneaks, Peeks

The GlobalPop entity has cross links which are in support of the Populace/USofA entity in suggesting that the [military destiny] of the [usofa] as a 'global enforcement arm' for the NWO/power elite is drawing to a close. The GlobalPop entity is suggesting that the [military actions] of 2008, that is, those on the part of the [usofa] will *not* resolve well. The data sets for the terminating cross links within the Populace/USofA are headed by aspect/attributes for [draft (cycle) ending/beginning], and [defeats], and [unexpected consequences]. The originating points within the GlobalPop entity are headed by [shipbuilding] and [deportation/forced labor]. Both of these aspect/attributes are supported by internally held aspect/attributes for [slaves] and [incidents (of) slaves (being) oppressed]. The [deportation/forced labor] is somehow connected to [barcelona]. The geographic references are higher for this city than any other locations within the data sets. Further there are cross links from [barcelona] to [free(ing) the slaves], and [workers/slaves revolt]. Further data sets in support of the [workers revolt] comes in the form of [barricades], [siege], [riots], [barrier fights], and [flame wars].

Along with the [shipbuilding] and [slave labor], we have data sets in support of [transshipment (of) slaves], and [deaths (at) sea]. There are other cross links indicating that a [terra intrusion] incident in the form of [waves damaging ocean vessels] will occur during [spring], which is to say *before* the [summer solstice], June 21/23. This [terra intrusion/waves damage ships structures] episode is significant as it acts as a temporal marker for the [slave revolt] appearing later in the year.

As a related, temporally in any event, there will be a very major [military funeral] out-and-about in the global mediastream *just* as the [seas damage ships], and the [slave revolt begins]. There are a very large number of [china] references within the [slaves revolt]. Further supporting sets point to [worker's action], [revolt], [actions (supporting) protests], and [riots/fights (for) worker's rights]. These are cross linked internally to the [barcelona] sub set within GlobalPop entity. There are also cross links over to the [fuzzy revolution] within the Populace/USofA entity.

Significant emotional tension support for the [seas damage ships] comes from a related, but disparate set which is headed by the aspect/attribute set for [black snake shipping disaster]. This [black snake shipping disaster] is described as being so [shocking] as to [stun] the [global media stream], as well as the [general populace]. The [black snake shipping disaster/event] is supported extensively by refferences to the [vatican], [sorcerors], [black pope], and other specifics relative to obscure [catholic secret organizations]. These are somehow involved within the [purpose/power play] of the [black snake ship/shipping], and are further involved in the [aftermath/results]. The detail layers of the aspect/attribute sets appear in semi-regular waves as modelspace is progressed through the year. These result in [vatican] rising in [visbility] in March, just following the [equinox], and then again in late Spring, just prior to the Summer [solstice]. In both appearances, the rising [visibility] values suggest some of the events of the day will cause the [vatican] to attempt to [bind itself] to the [usofa]. This will create problems for both later in the Fall.

From the GlobalPop point of view, the [usofa] will be a real pain-in-the-ass in 2008 as the [political], and [social] and [military] upheavals in this country will affect the whole of the planet. The GlobalPop entity has many occurances within the movement of modelspace in which [problems] within the [usofa] rise to the level of [visibility] within the global mediastream associated with [planetary impacts]. The data sets are pointing to the [4/four polarity points] of the year {ed note: the 2/two equinoxes, and 2/two solstices} for particular impacts. However note that these will not be single day events. Rather the data accretion patterns suggest that the whole of the months of March, and June, and September, and December will be 'involved'. Further the results/impacts of the events of those months will 'trail off' into the

months following. As an example, the data accrual patterns for the cross links between the GlobalPop entity and the Populace/USofA entity take a very large step up in mid February, and continue to climb steeply through to a peak slightly after the March 21 equinox. During this time the data sets are pointing to 'reports' from the global media stream which inform the GlobalPop entity about [terrorism/terroristic attack] in the USofA (02.15.2008 to 03.03.2008), but also within the data sets are pointers toward [anger/tension /conflict] between the [populace] of the USofA and the [elite/rulers/politician class]. Further problems will be reported as a significant [politician/petty person] will be [caught/video/filmed] in the [actions/results] of [lying/cheating/stealing]. This is shown as impacting the [political landscape] of the USofA around the middle of March (03.13.2008-03.19.2008). Further the global mediastream will be reporting on the [revolutions] meme building within the [american empire]. Further reports will go to the idea that the [american political process] is [corrupt] (from the view of the populace) and [cannot] be [repaired].

The data sets accruing to the GlobalPop with the cross links over to the Populace/USofA for the [mid March] incident of [political pirating] are painting a picture of [seething anger], and [barely restrained violence] over the [episode]. The issues will be marginally complex such that it seemingly takes a few days for the totality of the [import/meaning/gravitas] to sink into the USofA [populace]. This view is reinforced by both the accrual patterns and the linguistics involved. The data suggests that the [episode] gets coverage, and in a similar fashion to the [watergate burglary], the [details] of the [aggression/sneaky cheating] show up over the following [3/three days]. However, the data is also pointing to an [eruption] of [anger] which is then [pushed/repressed] into a [small spot/box/containment] as [events manifest]. We do note that the GlobalPop entity will have the [sneaking cheating politician episode] as the [prime marker] for the [second american revolution]. This is apparently a very important temporal marker. This marker is also associated with the [veterans taking over national monument] meme.

Further data within the GlobalPop entity points toward a view of the [disintegration] of the [american social contract] beginning with the [cheating politician], but then rapidly being fueled by [bad/horrible/regretable decision(s)] within the [officialdom/Bushistas]. As the data accretion continues, modelspace is showing that the original mid March episode of [caught politicians] is [aggravated] by [officialdom] by about March 19th. Globally the [currency markets] as well as other [commodities] markets will be [shaken] by the [potential/probability] of [civil war/political chaos] within the USofA.

As the modelspace is progressed into late Spring, the [revolution] meta data layer rises to a level of [continuing] visibility. This is a global influence. The early 2008 (February/March) [revolution] in Pakistan, resulting in a new [political structure/government] by late May, and the rise of [instability] in governments in [afghanistan] and [iraq], as well as the late March events in the [arabian pennisula], and the early March [uprising] in Myanmar/Burma, are all putting global pressures on the [officialdom] of the [american empire] as the [rule by threats] relationship breaks down over the course of Spring, such that by Summer, a new [political reality] is emerging globally. Further, the [internal insurrections] of Spring in the USofA cause the [cracks] within the [officialdom] such that the [ThePowersThatBe] have to [risk exposure] in late Spring/early Summer to [try (to) patch] up their structures. It does not bode well.

The GlobalPop entity is showing that the global mediastream will be dominated by USofA [meltdown/problems] from March through to about July, when other, more local events will finally push themselves to the top of the reporting queue.

As the GlobalPop comes off of its [american political crisis] binge, the supporting sets within the entity gain a very large number of cross links from the SpaceGoatFarts entity beginning in July. These cross links are mostly originating within the SpaceGoatFarts entity, and terminating in GlobalPop. Most of the origination points within SGFs are within either the [unknown energies from space] or the [sun disease] sub sets. In both cases a large proportion, that is over 1/3rd (one third), of the cross links terminate within [religion] sub sets within the GlobalPop entity. The termination lexical sets within this sub set include [college (of) cardinals] where we find that it is supported by such cryptic aspect/attributes as [early/previous peek/seeing/voyeur view], and the [death of religion] sub sets. The [college cardinals] is also cross linked over to the meta data layer of [revolution], and contains internal supporting sub sets of [fire], [burning], [assassination], [war], [conflict], and others in similar vein. The [college of cardinals], and the [vatican] sub sets are showing that [italian archeology] will be a [trigger episode/event] for the [fire/burning/fire assualts] in late July, and throughout August.

Markets - Spring Showers, Summer Riots, Fall Implosions

The data sets supporting [gold/silver/precious metals] as well as a new context of [strategic materials- personal] which contains the [basics for life] sub context are all showing within modelspace as beginning [spring] in a state of [repression] by [restricted movement]. The domination of the meta data layer [restrictions on movements] is indicating that at least in [availability] and [prices], the control ends in [spring].

For [gold/silver], and other [precious metals], the general shape of the accretion patterns at a macro level indicates a [doubling] of the [interest/demand rates] as [spring progresses]. The shapes of the accretion patterns indicate that there will be [3/three] small waves of [attitude/perception change] over the course of [spring]. By the time that the [summer solstice] arrives, the [gold/silver] context is describing a [new relationship] with [currencies/strategic materials] on a global level. The data seems to be indicating that [events] will [drive] the [alterations] in [gold/silver pricing] over the course of [spring] such that [gold/silver] will tend to [dominate currency] at least at the local levels. In general, the shape of the accretion patterns indicate a doubling of 'relative value' with currency over the course of [spring].

Sub sets of the [gold/silver] area are indicating that [persons] of [long standing influence for good faith] within the [community] {ed note: likely the 'gold bugs' community} will suddenly find themselves [elevated] to levels beyond their [comprehension]. In at least 2/two instances, these [persons (of) sudden fame] will be making [inflamatory statements] as regards the [bushistas], and the [officialdom]. In

these 2/two instances, the [inflamatory speech] is to be temporally significant as regards to the [revolution] meme, the [unauditable] meme as it continues forward, *and* the [veterans seize national monument] meme later in the year.

The flip side of the data sets are indicating that the [currencies] of the planet will be taking a [drastic fall] in [prestige]. There are extensive cross links to our FuturePop entity indicating that global drift toward an [exchange economy] will progress over the years. In an exchange economy, value is transfered within each transaction sufficient that both parties are left with items of intrinsic worth. The first [winning match] of the emerging new global economic patterns will have been won by [strategic materials] over the course of 2008, and it begins in or near the March 21 [equinox]. Thereafter, and for the duration of [spring] the [opening] in the [conflict] will be apparent to the aware observer. The cross links are also indicating that this [conflict] between [exchange economy], and [debt economy] will alter the [tokens of authority] globally.

As the data sets for [gold/silver] are progressed along with modelspace through [spring], several areas of cautions emerge. The lexical sets are headed by aspect/attributes indicating that [success] is achieved within these new circumstances by [perseverence of patience] which allows for [movement at a moment's notice], but which is [not rash]. Now please note that [rash] as an aspect/attribute set includes emotional ties. Soooo.....the aware observer will recognize that they are becoming [rash] when there are [emotional drivers] toward [immediate/unplanned] actions. Also note that if the [emotional reaction] comes from the [stomach] it is more likely to be [rash] than if [head based]. Make sense? The data sets are indicating that at some point, many of the [currency trading] world will be [forced] to [action] without regard of the [consequences]. The data indicates that this is a temporal marker of large significance for [gold/silver] as the next few weeks will see [2/two] large steps of [prestige] relative to [currencies].

As the modelspace is progressed through Spring, the [gold/silver] context becomes dominated by [regeneration], and [extended prosperity]. There are images within the supporting aspect/attribute sets of [large mountains/plateaus] from which [3/three years span] can be [contemplated]. This last has been encountered before and is interpreted as a [large peak which encompasses the last 3/three years activity or last 3/three wave patterns]. The data sets are further supported by aspect/attributes for [ripe market], and [opportunity] of [generations].

The cross links over to the Bushista entity, and the [officialdom] sub sets of the Populace/USofA entity are pointing toward a [shock] to the [senses] which has both of these groups [reeling] and [fainting/fading] under the [discipline] required. This appears to be 1/one of the instances of the [government fluck ups] which cause further harm and eventually build to the level of [social unrest/riots] later in the year. Experience has taught that Spring showers (of misfortune) bring Summer riots.

As the Spring progresses, there will be a few key inflection points within the continuing struggle of the [markets] within the [death of the dollar] process. The general trends will be [kicked] into higher levels of emotional tension values through out much of March and April, where the conditions will be extra charged up due to [political scandals] within the [usofa]. Further problems will emerge in these 2/two months due to the [violence] as well as the [military descisions], and the [economic conditions] which support the Bush wars of aggression. The data sets are indicating that [severe impacts] on the [wars] will come from [bad descisions] made by [officialdom] with regard to the [continuing economic ungluing/unbinding/separations]. There are also indications that the [officialdom mistakes/bad descisions] will be [increased/magnified] by [speeches/talking] after the [mistakes] are [visible].

The data sets are showing a large number of cross links from the Populace/USofA entity where we gain most in about the late July/August period. These links are terminating in [military activity] from the Populace/USofA entity. The main interpretation is that it is possible that a 'bounce' will come to the [markets], specifically the [equities markets] in the last days of July, which will last up to September. This 'bounce' period coincides with a very brief time in which the Bushista entity is pointing toward a [more congenial mood]. This [mood change] is temporary, but is presumed [permanent] by the [bushies]. The data indicates that TPTB will decide to [push the envelope] of [control parameters] to try and [pump] the [usofa equities markets] during this period. The data is labeling this time as the [last bunch up/rise up/escalation]. As noted it appears to last right into September, when the [mood breaks] due to [defeats] within the [military activities]. There after the [markets] are on track to the October 5-8th when the next release period begins. It is at or near that point that we show some very large probability for a [financial/currencies/markets implosion], in a process which takes only a brief 4/four months, and from which there is no recovery.

Populace/USofA - Iraq AgOff, Saigon Revisited, Sin Parade, Bad Holidaze

The year will prove to be a very trying/challenging year for the [populace] of the USofA. We have data indicating that [political cheating scandals] will prompt [anger/rage] to the point of [violence], and [bloody revolution]. Further details indicate that an [assassination movement/plan/campaign] will manifest over the course of late Spring and throughout the rest of the year. Many of the [selected victims] will *not* be [public figures]. The data sets seemingly are indicating that a [revenge] plan in shaping up against many of the 'hidden hand' from within the ThePowersThatBe. The [assassination] meme picks up a great deal of emotional tension after the September autumnal equinox, and then again just as October is encountered.

But, looong before the [assassination] meme gets rolling we have all kinds of fun language showing up for the [populace/usofa].

First we begin, out of sequence, with the [iraq war(s)]. Our data set shows that there are actually several [conflict] centers within the over arching [iraq war/conflict] label. As we move modelspace forward through the year a couple of spots show very rapid and large aspect/attribute set growth for the [iraq war(s)]. Just past the March [vernal equinox], and actually accruing more in early April, we have data sets pointing to a very [unsettled/irregular/unknown] period in which increased [struggles], and [military effort] is required to *just*

[hold still/retain positions]. This [struggle] rises to the level of a [collective gasp] from the [populace/usofa] as the [video/images] are shown. This period will be very much under the influence of the meta data layers of [duality], and [revolution]. Further the [restrictions on movement] meme will be effectively laying across Iraq, and large portions of the middle East. As a result of the [struggles/conflict] increases in April, and the [last stand mentality] which emerges, the [usofa military] will begin a period of [aggressive offensives]. This [aggressive offensive] time will be from the [populace/usofa] view. It may be coincident to events in several *other* countries which occur prior to the equinox. These would be [pakistan, iran, egypt/gaza]. The [aggressive offensive/conflict escalation/brutal times] is showing as being [launched] around July 8th, and will extend for about a month. This [aggressive offensive] is heavily linked back to the Bushista entity, as well as internally over to [politics/usofa]. The data indicate that the [initial month] will be [laudatory], and will make the [bushies] feel as though [redeemed] in some small part.

This area is cross linked over to the Markets entity where the interpretation is that a coincident effort will be made to [pump up] equities markets in an attempt to harmonize with the up-tick in emotional mood of the country following what *appears* to be a [military victory].

Of course, we can guess the outcome...and it is not good. The [national mood] changes by November to a consensus of [personal horror]. This aspect/attribute set contains support for both the personal view, as well as the [national outlook]. The supporting sets within this area are cross linked internally over to the [bush bust] which is on-going, and which the data sets indicate will take a most serious turn indeed in the very early days of Fall. This area is also linked over to the [military/usofa], and it indicates that coincident with the [manifestation] of the [bush bust/dollar death] in Fall, there will be very severe setbacks in the [bush wars]. These [setbacks/defeats] will manifest in mid November, and extend onward through February 2009 without abating. Also during this time the data sets are pointing toward the [iraq government/puppets] being [beseiged/trapped/locked up] and other language indicating a [break down] in the [political structure] similar to the [last days of saigon].

The [national mood] of November and on into [winter] will be very [expressive]. The data sets are pointing toward [revolution] as the meta data layer to be most dominant within the Fall. Much of this area is cross linked internally back to March [equinox] and the [hobbling (of) vice dick cheney]. The ides of March mark a period in which [vice dick cheney] suffers [set backs] of all kinds. These are supported by aspect/attributes for [crippling health issues], [lost companions], and [restrictions (on) movement], as well as [past sins paraded]. As we had noted in previous discussions of this series, there are [prominent deaths] which will emerge in late Winter or early Spring and which will set off a [flurry] of [secrets revealed]. Some large areas of those linguistic sets are linked to this area of [vice dick cheney bad health/bad life]. These [bad health] problems will be [eclipsed/overwhelmed] by other 'issues' near the end of June.

The data sets are pointing to a very heavy [attack] on [barack obama], and curiously [ron paul] by the Bushista's from May through July. The accretion patterns suggest that the intent of the [bushies] is not detered in July, but rather other [issues] including the [aggressive response/brutalities] will be forefront then, and the [attacks] on the 2/two candidates will [languish]. As an aside, the aspect/attributes for [barack obama] indicate that his response will be [scathing], and [withering]. It will actually [impact] the [health of vice dick cheney] during the [exchanges].

Vice dick cheney will not be the only [prominent health issues] to arise during this period. The [health] and [illness] aspect/attributes for [john mccain] are showing an increase in [worries] that appear near the March [equinox], actually a few days in advance, say around the 17th. These [health issues] are indicated to [proceed/grow] over the next few weeks until about April 7/8th. However, this is but a pre-echo event so far as our data is concerned. It shows that the [health issues] will resurface for [john mccain] with a vengence in [September] and will persist through to May of 2009. These [health issues] are shown to benefit [ron paul] in a very significant manner.

As the modelspace is progressed from late February through to the early days of March, the cross links from the Populace/USofA entity and the GlobalPop entity increase dramatically. Most of these come from the [pakistan shift/insurrection/gov't change]. However a number of others appear from [iraq]. These [explosive] events from the Middle East, especially from [pakistan], will pick up dramatically in the last day of February, and manifest as a [burst] of [transformative activity] which will last until the 11th. Though reasonably brief, these 12/twelve days will boost the [transformation] meta data layer into vertical rising motion within the GlobalPop entity, as well as propel it to near vertical activity within the Populace/USofA entity.

This period of 12/twelve early days of [violence] are directly connected to the next 12/twelve months of the Populace/USofA. The data is pointing to [events/manifesting circumstances] within the 12/twelve days as being [triggers/causal points] for [violence] and [attacks] against the [usofa] over the following [12/twelve lunar months] which takes the modelspace up through February of 2009.

As far as the Populace/USofA entity is concerned, the [attacks/violence] are only a small part of the story here in the USofA for 2008. During the months from April through to March of 2009, the data sets are indicating an actual plethora of [incidents] here in [usofa]. These will involve [explosions] which are indicated to be [ignited] by [natural events]. These will involve [land shifts], which are supported by language indicating [lahars], rather than mere mud slides. The [land shifts] are also heavily [earthquake] linked and supported. The data is also pointing to [weather incidents] including much more in the way of [damaging winds] and [torrential/flooding rains]. Further problems are indicated to arise within the [national power grid/distribution system] due to [weather] problems. In some areas the support for the [power loss] shows that some power generation sources will be [permanently lost] over the course of 2008 up through about mid 2009.

The aspect/attribute patterns are increasingly dramatic for April (15th through 29th), all of July and August (with Bushies getting 'last warm and fuzzies'), October, November, and December. January and February of 2009 are especially troubling as the Terra entity adds very large increases in emotional release language during that time. The Populace/USofA is showing that [violent mood swings] will

occupy much of the [emotional drama] of this Spring and Summer.

The 'good news' is that the [natural disasters] of 2008 are to be most [visible] and [discussed] in later months of the year. The November (late in the month) through January period show as very [visible] for [natural disaster] for the [usofa]. The data is indicating that by that point the [economic disaster] has [manifested] such that when the [natural disaster] occurs, the nation will feel a bespoke [helplessness] which derives from the [transformation] and [restrictions on movement] meta data layers. This [mood] arises with so much strength aws to [overwhelm] the [national consensus]. It is during this period of [dire national extreme crises] that the Bushista entity is showing its 'peak' in [paranoia]. Hmmm. Probably justified, given the pending circumstances.

The Populace/USofA entity picks up data at a furious pace between September 22 and October 21 with the 'peak' of the curve being at October 5 through the 8th. This is likely going to be a very disturbing lunar month, both economically, and politically. The rising aspects for this period are [sudden], [disruptive], and [enraging/upsetting/vomiting]. The [disruptive] aspect/attribute set is supported by linguistics which go to [several generations], and which are also cross linked over to both Markets entity, and the FuturePop entity. The events in this period are indicated as setting up the national mood of [feeling stuck/mired/trapped], and [unresponsive/unable to respond] which later manifests with the [natural disaster] of late Fall/early Winter. If we had to pick a time period for the [natural disaster], the data accretion patterns would seemingly be suggesting December 9th through the 13th. These patterns are especially disturbing given that the primary aspect/attribute set accrued is [dangerous].

Once again, by Fall the [iraq war(s)] sub set again suddenly grows in [intensity] values, and [emotional duration] values. Not a good sign. Worse yet is that seemingly by February of 2009, very few within the [populace/usofa] will care much....due to much more [immediate crises].

Conclusion: ALTA 1008 - Series End.
