covering 2015 - 2029

Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes **are**: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities **are**: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon **is**: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

> composed of: *emotional qualifiers* which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders **are**: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop
The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)
All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets
The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra
The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional

level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

Data and Interpretation

Processing for November 2015, through to 2032

Meta Art

Many of the major headlines within this, and previous ALTA and IDIR reports will be appearing in a rush over these next few weeks. As modelspace was populated for this report, it became apparent that a change in the rate of accumulations of new sets had occurred between our last run and this. The new rate of 'loading' across the existing entities and structures within modelspace is almost 50% again as fast as in previous runs. Here at HPH we take this as a sign of what may be term the 'acceleration of events' or a 'quickening' of the perceived pace of life. The data loading patterns are forecasting that if you live in the USA, you will feel the acceleration by the end of November.

The data sets are also carrying bespoke language going to 'shockwaves' of 'emotional turmoil/excitement/fright' that will be 'tearing and rending' the 'social fabric(s)' of global humanity.

As an editorial note, it needs to be realized that all language about or concerning the 'middle east' runs emotionally hot, all the time, in so far as my system is concerned. This alone makes forecasting difficult. Further, not to be irresponsible, any further information that may be able to be leached out of the data sets would not be meaningful, given the enormous amount of words on the subject daily.

Further, if TPTB are engineering problems in the ME, then it behooves me to focus elsewhere, to see when is the next planned visit to FUBAR-land by the criminality-in-charge.

So, as a rule, we will not be covering ME activities in any depth in these reports. That noted, any spill over effects would be/will be discussed.

Terra

Yet more 'catastrophic' flooding showing for both the Caribbean region and the East Coast of North America. The data sets within the shorter term values are indicating a very cold winter across much of north America even down into the southern borders. The level of cold is described as creating 'frozen rain towers' that will be 'ice down 80 feet'. Other descriptors are for 'dueling snowstorms' in which a major snowstorm in the northwest is competing for moisture with another storm on the east coast that spreads deep inland and 'suck moisture' from 'three seas(oceans) at once'.

The data sets are still growing for yet more 'examples of expando planet' such as new chasms, cracks, sinkholes, and other familiar effects such as 'venting'. Now the data sets have brought in new language

for some as-yet-unnamed phenomena that we will here label as 'pop-ups'. These 'pop-ups' are incidents of geologic activity that can be thought of as the 'reverse of a sinkhole'. The data details would suggest that 'pillars' of earth will be 'shoved skyward' by parts of the expansion of the planet process.

The 'pop-ups', very much like the 'giant sinkholes' are indicated to cause a real viral reaction globally. This will be reinforced by the 'series like', or 'near pattern like' manner in which they will 'pop up' into public view. The data sets are indicating that first one 'plain, prairie' will be 'afflicted', then on an entirely different continent, but seemingly 'connected', will come notice of another 'pop-ups' being discovered. The data sets are showing this as a global phenomena that will continue long enough for humans to start to 'game their appearance' in the sense of trying to predict where and when the next set will show. These 'pop-ups' are also described as being large enough to provide real knowledge about geology not yet discovered.

Modelspace continues to accrue data for more flooding, and for more new types of flooding, and more flooding in new places not known (in the past) for flooding. Some of these new flooding types are also to be accompanied by 'gases (envelopes)' that will be bobbing about the landscape. Presumably due to either volcanic or other subterranean disturbances. In some cases the 'gas envelopes' are described as 'visible'. These are described as 'shutting down traffic', and 'emptying areas/buildings' as they 'float over'. The idea from the data sets is that these will be either carbon dioxide or methane laced to such a degree as to cause suffocation, in some cases permanent. The data sets that language will arise to the effect of "bad air bites". Or "don't bite the bad air".

Some of the new sets within the flooding descriptor sets include language going to the idea of a 'storm surge' that is 'so large', and 'so sustained' as to initiate a 'back wash' or 'surge back' effect as massive amounts of water flows back to the ocean as the storm forces pass by. These new 'back wash' effect storms are showing as causing massive damage that will also actually 'suck buildings back into the beach sands'.

The flooding sets continue to accrue data for new types of flooding not normally seen. These are forecast to include 'long run out slides' of 'mud' and 'material' that will be 'all ground down' into a 'cement like paste' which is further described as 'flowing across' a major highway section such that the area is 'cemented over' as a 'valley conducts' the 'sloshing (mountain) of paste' down-hill.

In many of the flooding sets we are now seeing that 'permanent damage' will result. In some cases removing local farms, and other necessary infrastructure such as telephone service and internet connections (by being buried or washed away).

In some of the data sets now accruing with longer term values associated, we have sets that indicate that many areas in the 'equatorial zones' will be 'under stress' in the ability to 'maintain plant (and other) life' over these next 30 years. The data sets are pointing toward the 'shift into ice age' as producing some very strange 'precipitation patterns' that will 'exacerbate the heat' and 'dryness' of very large areas of the Middle East, and many, if not most, islands, in that zone between the tropics. Most of the problem appears related to the new level and types of ultra-violet radiation from space (not just the sun). Some smaller problems will apparently relate to noxious gasses given off during the 'new lands' process that will engulf, according to new data sets, at least a few 'tourist islands' such that populations have to relocate.

The Terra entity continues to add new sets to its directly held portion of the 'sun disease' sub set. This set also occurs within the SpaceGoatFarts entity. The set within the Terra entity now has new structures that include language for 'swooning effects', and 'near instant (heat stroke)' as new, and spreading manifestations of the 'sun disease' and its effects on humans. Curiously there are a large number of sub sets for this 'swooning (fainting)' effect for Los Angeles, California. These new sets appear to reach a visibility threshold before August of 2016. There are also associations between this effect and music concerts from March through to about the middle of September of 2016. A number of fatalities will be reported according to the data sets.

The longer term value sets are painting a picture of a planet sliding into an ice age as *some of the inhabitants desperately try everything in their imaginations to prevent or at least slow it. Further there are sets (cross linked or derived from the SpaceGoatFarts entity) that add deeper, stranger wrinkles to the already tortured thinking prevailing within the struggling humanity on earth. These sets are describing the impact of the climate woes, and geo-engineering on the various population sub groups over these next 20/twenty plus years. These sets portray humanity struggling to collectively grasp the individual as well as historical contexts of the huge level of changes occurring. These changes are greater in emotional sum totals than what was experienced in the 'age of revolution' in the late 1700's. And these collective and individual social context changes are forecast to emerge along with the increasingly visible shift into 'chaotic climate'. Note that 'chaotic' as a linguistic structure brings along with it, 'increased chance of fatalities'.

The data further provides for terrestrial changes on a regional scope in the form of 'wash-outs' and 'tears/rips/cracks'. Other new sets within the 'sinkholes' sub sets are still growing in support for 'lines of connected sinkholes'. This last is indicated to scare the local residents into a rapid move out of the area (a good thing it would seem).

GlobalPop

The data sets are pointing toward something of a 'global' awakening in which 'currencies' will become 'questioned' as to 'values inherent (in the paper, and in the system)'. The data sets are reaching into areas of emotional tones that have detail images of people 'haggling' over the 'value of their currencies' in 'daily purchases'. These sets are widely tagged geographically, and while not global, is clearly a 'sweeping around the world' wave or movement.

As these 'event waves' roll around the planet, they will leave 'shockwave damage' behind. The data sets are providing descriptors for 'physical ills' that will affect some portion of the population JUST due to the sheer speed and number of events 'bombarding their consciousness daily' as the 'financial system unwinds/dissolves' within the 'western dollar empire'.

The detail sets associated with these sets include images of 'shoppers (housewives) befuddled' as their 'currencies are refused' or 'revalued on the spot'. Many of these images are clearly 'USA dollar' focused. In some areas we have other currencies where local, more commodities based economies, are finding

their currencies in some demand as their commodities start to rise in 'dollar terms'. These new 'emerging/rising currencies' are showing as creating a new form (for the western world) of 'currencies wranglers' who will be businesses/people who will 'trade currencies' at the 'street level' at 'international border crossings'. Most of these are showing in areas like Canada, New Zealand, and Australia.

Automated shipping is showing as creating a big stir as unmanned ships (container, and others types) join up with other 'new forms' of automated transportation. Several accidents and a few groundings over the next 3/three years are going to dampen some of the enthusiasm for the practice, but it will then be discovered that it was an 'error' in the GPS positioning that led to the issue, and more effort will go into robotized-transport.

Much of the new data going into Europe or EU related sets contains directly held values or cross links over to sets that are in supporting positions to the 'core peoples' movement sets. These data sets are still forecasting a very violent time as EuroPop reacts to the 'refugee problem', and as it becomes 'further flooded' with refugees. Over the longer term sets the forecast goes to the idea that 'tough times with integration' are 'swept away' by weather/climate based diaspora that comes to shift the 'core peoples' as the waves of refugees.

Current data sets are showing up in support of older forecasts for 'salvagers', and 'expeditions (to retrieve) precious items (under water – in flooded places)'. These older forecasts are now moving more data into 'visible' positions than previously which indicates that the language or 'press' around the idea will be gaining exposure over these next 4/four years to peak in early 2020s. The 'flooded places' sets are pointing toward 'formerly inhabited' spots that are now, either 'covered with water/flooded out', or 'pulled back out into sand (and or mud)' due to 'storm surge backwash'). See Terra entity for more on this new phenomenon.

As forecast in previous ALTA and IDIR reports the 'core peoples' groups are going to encounter an 'overwhelming flood' of refugees. These previous forecasts are now manifesting, we can expect that the continued growth in those same sets indicate that the conditions that set up the developing situation will continue for some time. These same sets are also gaining new supporting sets for not only further violence, but also instances of 'extremes of charity' as 'columns of refugees' become 'snow bound'. This last is showing as producing many 'fatalities' that will become a 'blood binding' between some 'local (indigenous) populations and refugee tribes'. This winter will be a new level of horror for diaspora within modern memory (going back to the terrible winters of 1946 – 1947 and the displaced persons flood that swept through Europe).

A significant section of the new growth within the Europe sub sets within GlobalPop have very extensive cross links over to the Terra entity were termination is within sets going to heavy snow, snowstorms, ice (on rivers) causing urban flooding, snow on mountains shutting down transport of all kinds (also leads up to the previously forecast tunnel problems that cause the evacuation), and ice storms that will be damaging to infrastructure such that repairs will still be underway nearly a year from the date of the storm. A number of sets in the terminating Terra entity groups also contain sets for mudslides that will be 'pushing buildings off foundations'. These sets are also cross linked to the 'long run out slide' that 'takes out a whole valley (population and all)'.

ChinaPop

ChinaPop sub sets are forecasting that a 'great chinese bubble (economy) is about to go 'pop'. This occurs when a 'giant move' in the Yuan to Dollar peg is announced. (see Markets entity for more details). When this bubble starts to go, the data sets are indicating that the PBOC and the ruling clique will become extremely 'focused', 'energetic', and 'driven' about all things economic. The data sets (see Markets entity) are suggesting that the resultant 'harried and hurried' activities will 'tip-over (the) western markets' as the 'chinese power structure' tries to 'save their country to save themselves'. The data sets are suggesting that a new 'initiative' will be added to the current '5/five year plan' such that they undertake a 'bold decade effort (at funding technological invention)'.

The data has China Central Control (political/banking power elite) deciding over the course of 'five very bad days (and nights)' to 'take ChinaPop to Space (as one of the 'New Strategic Initiative' main emotional hooks)'. Other parts of the initiative seem to center around a big clean-up effort, and a 're-investment' in industrial capacity in a 'jump step start' program where the idea coming from the data will be to 're-invent' existing infrastructure for the next century; better, more efficient, lighter, cleaner.

The data set accretion patterns point to the wide-spread adoption by ChinaPop of these main themes as 'self-validating (self-asserting)' parts of the personality of "next centuries' China".

As a response to the 'economic malaise' and the 'five bad days', the 'new strategic initiative' does show as getting China government over the 'hump' of the 'initial phase' of a 'pan global inflationary depression'. These sets are indicating that China has a rough year ahead, but it will be pulling out of the USA Fed banksters induced global currencies degradation faster than all other countries except for Iceland, and Greece and Portugal (why on these last two remains unknown at this point).

The data sets for ChinaPop show that in response to Central Government actions, the populace turns to 'innovation' to 'get money (out of banking system)'. These innovation sets contain many explicit references to Bitcoin, and new wallet forms tailored for chinese needs out of the country. Further the data sets are suggesting that a few stories about chinese innovation in avoiding currency controls will appear relatively soon after a very public launching of 'new real estate services' in 'hard hit US markets' where 'bitcoins' will be used to 'directly purchase real estate'.

For their own reasons, the Central Chinese Politicians will declare 'bitcoin' to be 'off limits' to scrutiny by the 'capital control cops'. In effect this avenue becomes something of an 'invitation' to the chinese population to become technological literate in respect of cryptocurrencies.

Young ChinaPop goes 'ballistic' with the announcement of upcoming space adventures. Further, the data sets are suggesting that ChinaPop is 'about to hit its stride' as a 'global invention/innovation source'. The data sets are clear about ChinaPop having reached a point of 'combining/magnifying (of) sophistication' in a wide swath of 'new technologies'.

The data sets are pointing to ChinaPop being 4/four to 8/eight years ahead of the 'western' part of GlobalPop in entering the 'great renaissance wave'. These new sets cross link the 'western' part of GlobalPop back to the 'stifling/restraining/constraining/restricting western banking/financial system' as the 'primary obstacle'.

ChinaPop is showing as crossing a cusp into a period where 'invention magnifies invention'. Specific references to 'new materials' having a 'spreading influence' upon 'young chinese minds' show up in a

number of sets about the upcoming 'roll-out' of some 'remarkable (spooky) new surface materials' in which the 'apparent light reflecting surface' will be of a 'malleable/controllable' nature that will allow for 'new forms of human-to-object interactions', as well as 'smart walls' and other surfaces. The sets for these 'new materials' are quite explicit in the high level of emotional values pointing to a 'giant excitement wave' among the Chinese 'invention universe'. This excitement is indicated to spin off into popular fiction, and movies, and gaming. In this last, the gaming phenomena itself is going to be dually affected. Not only will the imagination of the game developers be 'sparked (into) next generation' by the appearance of these 'new materials', but the human-to-game interface will also be dramatically altered as 'smart' {ed note: likely to be called some variant of 'reactive', or 'feelers' or 'sensorial'} controllers will be created that will become more like interactive-sensorially-enabled-clothing than hard device.

The 'invention wave' now manifesting in China is showing in the longer term value sets as running in an 'active' or 'hot' phase for over 140/one hundred forty years. Such projections are based on a 'generational' understanding of language and are not to be taken as more than a measure of the depth of the impact of a social trend and a hint of its possible temporal length. In this case the 'new inventions' trend is but one facet of a very very wide renaissance that will be globally affective, but will be 'incubated', and 'cultured' in the 'caldron' of China.

A very noticeable side effect of the 'chinese invention wave' is going to be the increase in the 'emigration' from Europe and USA to places like Hong Kong, and Singapore. In the case of the latter, new ventures to be proposed in the upcoming months will somehow lead to Singaporean version of 'new lands' and something of an exciting 'settlement' wave will sweep the city-state. In further data sets there are cross links to 'ocean habitation' that may be part of the 'new lands' to show up for Singaporean inhabitants.

The arrival of the immigrants from the West into Asia will be large enough to cause lots of comments, especially in the western mainstream media. These media references are suggesting that discussions of 'french students (creamy top of intelligence/sophistication)' who will be 'turning Chinoise' en masse' will be circulating in the msm as early as mid 2016. The data is showing that so many French (and Irish) students will be leaving for Asia that airline schedules will be affected; as will local traditional holidays.

New areas such as 'Petite Paris' and "lil' Newyork" are indicated to be visible in late 2016 in Hong Kong and the New Territories as the immigrant wave starts moving into the mainland.

Something of a 'reverse wave' is indicated to occur in early 2020s and onward as 'senior/tested' people come back from Asia to their 'home countries' with 'new skills' and 'wealth'. This is showing as also being coincident with the 'inventions wave' reaching 'flaming' stage in the former dollar empire regions. Vast numbers of cross links from the 'inventions wave' sub sets within GlobalPop go over to the SpaceGoatFarts entity. Many of these terminate in sets that include either directly held values or internal cross links to 'space alien wars' and 'human space activities'.

The ChinaPop sets are gaining new aspect/attribute sets grow under the 'tech boom' sub set. These new sets are also in support of the 'credit freeze' sub sets. These new aspects bring in sub sets that include a 'crash' within the Chinese 'technological development sector'. However, the data is also indicating that ChinaPop will be coming out of the 'tech crash' almost as soon as the print is done. This is going to be

due to the central military industrial complex (within China) and the PBOC will work together to 'push out' some of the 'secret developed technological devices'. The data shows that late in 2019 will be the beginning of a longer term boom period for Chinese industry as their 'space efforts' start to 'bring results/payoff home (to earth)'.

The 'technological crash' within China is but part of a 'credit freeze crisis' that motivates a 'reaction within authorities' that causes 'plans to be altered'. This altering of the plans is what is showing as being significant to the planet as a whole. Apparently the data is forecasting that China is about to begin a giant investment in 'infrastructure', including 'space to earth' support systems. However the data is also including cross links over to SpaceGoatFarts entity which is suggesting that the 'space port' is going to 'reveal hidden technologies'.

CanadaPop

The Arctic Coalition of Russia and China will be coming into direct conflict with the 'canadian authorities' over 2016. The data sets are showing that a 'rescue' of 'food deprived' First Peoples groups by the Russian/Chinese troops will have Canada authorities screaming 'invasion' with adjectives that will trigger flashbacks to the hysteria of the 1960's cold war. This is showing the potential to escalate as the data shows an 'attempt to trap (encircle)' the 'rescuers'.

The data sets are also continuing to point to Canada as experiencing a 'surge' in 'currency woes' that will lead to 'social unrest' and 'unlawful displays' against 'incumbent politicians'. Further these sets are indicating that Canadian political problems will spill over into USA as 'financial chaos' grows over 2016. There are several sets going to the idea of 'border crossing slowdowns', and 'refusal to cooperate' incidents between Canada and USA authorities which will make the mainstream as well as alternative press.

MexicoPop

The reverse 'flow of peoples' is showing as starting to get to Mexico as both the economic and social order within the USA deteriorate to the point that 'illegal immigrants' begin to flee. The data shows a 'reverse migration' beginning in mid 2016 as the USAPop moves into the 'years (decade) of struggles' in earnest. Many of the supporting sets are showing that the Mexican political structure begins a "new path" in 2016 that leads (in reasonably short order) to the 'decriminalization of drugs', as well as the 'adoption of silver as currency (alternative 'test' at first, then more mainstream over 2017-2018). As modelspace is moved forward into 2020s, MexicoPop shows as hitting a 'wall of refugees/immigrants' as an issue for its social order. The issues shows a 'demographics collision' between MexicoPop and the would-be immigrants which produces huge changes across much of the American continent. These population problems are showing as being forced by 'climate diaspora', and subsequent 'political upheaval' as large populations of very young people head north into Mexico.

USAPop

Major shortages post June 2016. Data sets are accruing for 'shortages' to be major language from mid

2016 on through 2025 within USAPop. The appearance of the 'shortages' language is also a major temporal marker for forecasts from as far back as 2004. The 'shortages' language is also intricately tied into the 'death of the dollar' and 'hyperinflation' language of recent years.

The LT data sets are showing that in 2016, likely in mid year, the debasement of currency will be a requirement that will start to be needed daily. The issues seem to be some form of 'surprise' has occurred and the 'interest rates' are rising independent of the 'federal reserve bank'. The data is showing that in spite of negative rates at the 'fed rate' level, the data is insisting that the 'real rates' will be rising, and will be 'slippery' as the 'daily fluctuations' are going to be 'provided' and 'plotted'. These sets would seem to be suggesting that a new form of 'interest rate determinant' is going to be in place and making itself felt by mid July of 2016. These sets are part of the 'sudden crushing needs' as an emotional label that will be 'sweeping throughout' the USA populace over late 2016 such that 'shortages' becomes the word most used in weekly conversations for entire regions of the country. These shortages are showing as everything from 'foods' to 'energy' and beyond. There are sets for 'pills absent (not available)' and a plethora of language relating to the health care system such that the dominating impression is a form of 'floating regional collapse'. The idea showing up is that as one organization goes into a 'resource (including liquidity) death spiral', those persons in need will begin to 'swamp' the nearest 'competitor' such that they become the 'next organization' to fail. These 'cascading closures' are showing for everything from hospitals to pharmacies to food stores. The percentages referenced would seem to indicate that whole regions of the USA empire (including effects (though lessor and differently cited) in places like Guam) will be 'crumbling' under the 'weight' of the 'credit freeze'. It is these new growth patterns that are directly linked to the long ago forecasts for 'US military bases in fiscal disarray' such that 'charity (of the locals)' will be used to 'transport the soldiers back home'.

The sudden 'international power structure' changes of early 2016 will, by mid year, have forced the 'populace into debt slavery' at levels such that the 'slave population' will begin to be 'pressured' by the local 'criminal (governments)'. These sets are likely referring to the use of 'forced labor' from 'defaulting students' and 'welfare seekers' in that the 'collapse of liquidity' for 'state (and local) governments' will have those governments proposing 'work for benefits' programs. The mere 'proposal' of these programs is showing as being the trigger for 'mass protests' and 'social instability'.

The data shows that not only 'international power structures' will be changing, but so will the 'electrical power structures' around the 'developed world'. This is going to be due to 'lack of credit' or 'credit freeze' wherein the 'power plants' cannot purchase 'fuel' nor pay employees. Beginning in late 2015 with the 'crumbling' of the European power grid, the 'blackouts/brownouts' problems are showing as being 'regulated' by the 'authorities' by way of 'rationing of electricity'. While the mainstream propagandists in USAPop will be all over the story of 'living like 3rd world (with rationed electricity)' hitting Europe, it will not occur to them that their own towns in USA will be experiencing the same effects in the latter half of 2016 and onward.

The accrual patterns for USAPop as modelspace moves past mid June of 2016 would seem to be indicating that a massive wave of a 'popular call' for 'auditing' the 'gold holdings'. This is showing as beginning in early 2016, but taking nearly 4/four months to reach a conjunction point in which it merges with 'shifting political language' where it then 'takes power' and 'forms a consensus point'

around which 'vocal opposition (to existing power structures)' will emerge.

"Down with their walls!" will soon be the 'cry' of the people against the 'banks". The idea coming out of these new sets accruing to the USAPop entity, revolution sub set, is that the 'populace discovers its voice' pretty collectively and then in early 2016, nearly ALL the political candidates at all levels for virtually any office become 'champions (of the people)' against the 'evil banksters'. The 'down with their walls' language also includes many supporting sub sets for 'secrecy', and 'criminality'.

The data flow has brought in new supporting sets that include language for 'young people' who will be the 'point of accomplishment', and will be 'seeking active prosecution' of 'corrupt officialdom'. High noon, the 'zenith' of a nation or a generation delivered at a particular moment. The 'epitome' of the social order just as the decline over takes forward momentum. The 'decline ratio' of 'new events' and 'net emotional trends' is described as being 'just over the point of the fall', or 'being in mid air, with both feet off the edge of the ledge'.

Amid the 'prosecution frenzy', the 'reaction (from) officialdom' is being described as what 'sets revolution' in motion. The 'disaster (financial, on going)' hits the 'populace' with such force as to cause a 'debilitating reaction' that will bring '3/three days' of 'national disruptions' including 'sieges against banks and officialdom', as well as 'take overs of airports' and 'other transportation centers' including 'ports' and 'trains'. These latter sets include many references toward 'battles between young people and the (minor security) officialdom on site'. The 'transportation take-over' language contains supporting sets for 'accidental', and 'happenstance' that goes to the idea of 'young people trapped by circumstances in places they do not want to be'.

There are descriptors for captured employees, and facilities that will cause 'massive panics (and) upsets' within the officialdom power structures. These sets are showing as being visible precursors within the larger 'fracturing of the political structures' previously forecast for USAPop.

The sets for 'high noon/zenith' that then 'tips' the populace over into the 'social decline' into first 'degradation of conditions (down to those of a gulag)' and then 'rebellion' followed by revolution. Note that we do not have data sets saying 'armed revolution', but rather 'revolutionary fervor sweeps (the) USAPop'. So it is still within the realm of possibility that the revolutionary emotional language will result from a relatively peaceful overturning of the many systems which are trying desperately to control the USAPop.

The data sets also include numerous sets for 'prayers' and 'praying people' who will be 'obstacles' to the 'young peoples cultural revolution (YPCR)'. These 'praying people' will include a number of those 'priests and potentates' who have had 'authority and abused both it and their parishioners'. The data sets are indicating that the 'cultural upheaval period' will include 'space for revenge' that will seemingly be 'out of place murders' during a time when most public killings will be for 'political reasons'.

As modelspace is moved forward into mid 2016, the shortages language gains emotional values that further reinforce its impact on the larger USAPop set. These emotional values sum up to 'society changing levels'. Some of the new sets accruing from the shortages sub set over late 2016 paint a

picture of a 'response' to shortages at a local level across the population. The response, while diverse, will include a new 'vogue' for 'invention' and 'make-a-way' that will fulfill our forecasts from 2006. These new social movements will be the base from which the renaissance of the mid 2020s in USAPop springs. These social movements toward 'do it locally', and 'find it, fix it, use it' will involve a large segment of the population as a gradual expression of how the global depression will manifest in the USAPop. Some of these sets will include wide spread fulfilling of the 'demolition dana' language that had cadres of young people out 'harvesting' old and abandoned strip malls and other empty, never to be used buildings. It becomes something of an 'enterprise' over the next 4 years.

The shortages language sets are part of a supporting group for various sets within the USAPop for 'climate disasters' that are appearing from December 2015 and growing through to meet the major shortages sub set growth in late June, early July of 2016. The idea from the accretion patterns is that climate disasters such as fires (when flooded out), and 'electrical disasters (sub station level) during ice storms' will create local conditions for shortages during and following the disasters, but that these will continue to grow across Spring in north America until the greater economic descent creates national shortages to add to the existing problems.

Housing, and commercial and private real estate of all kinds are showing in the data sets as 'going Greek' wherein the language involved in real estate sales will change drastically as MOST of the market will (by late 2016) be 'moving underground' or 'off books' or 'sales not in dollars'. The data sets are pointing to a 'wave of failures' of 'marginal regional (and local) banks (and some credit unions)' in early 2016 that sets up the problems of mid Winter through to the 'hopium' of a 'Spring recovery (for sales)'. However the data sets are indicating that the 'ability of government to fund real estate markets' is 'disappearing (more each day)' as the 'fiat currencies' enter into 'weekly tugs' (in their relationships to each other -likely indicates 'weekly devalue-ings').

The data sets are indicating that the housing/real estate sales markets will not be alone in the effects of the currencies problems. There are a large number of new sets going to the idea of 'social unrest' in many regions due to 'sudden spikes upward (in demanded rents)'. That these will be due to a falling currency in a market where employers are massively laying off/firing work forces in efforts to stay afloat will not be seen as 'contradictory' by the 'officialdom authorities'. However, the effect will be to cause the first in a series of 'rent riots' that will dominate the news frequently and deeply. The 'rent riots' will be both used by the officialdom, and cursed by it as the riots are showing as 'taking a deep bite' out of 'budgets' at all levels, and, even more importantly, 'using up materials/weapons/ammo' that will not be 'easily replaced (due to inability to purchase due to bankrupt nature of government in general)'. The data for the 'revolution' wave within USAPop grows directly from the 'rent riots' of 2016.

Within the chaotic 'real estate markets', there are going to emerge, in 2016 and 2017, stories of 'sales' at spectacular levels of value. The data sets would seem to be suggesting hyperinflation at levels even Zimbabwe would have trouble reaching. However these are the 'dollar quotes' which is going to become something of a new slang term used to denote 'contact with the old system'. So the data would have us being real estate buyers or sellers in something other than dollars, but having to report to officialdom in dollars, and due to the hyperinflation of the day, these amounts will be some where on the other side of ridiculous times a few orders of magnitude.

Markets

The new data sets are referencing a 'pop' in the 'china bubble(s)'. However, the 'pop' is apparently been 'foreseen by some thinkers within the Chinese power structure', and a 'plan to respond' has been prepared. It **may, just perhaps,** be that the 'plan already prepared' includes a 'shifting to gold/silver' and 'deposit insurance (on precious metals) becoming allowed'.

"Inflation" is going to be the key word in the economic chatscape over this next year and a half. The data points to a 'crashing wave' {ed note: near, NEAR simultaneous to real waves inside major infrastructure} of 'rising public exposure (of the manipulators)' while the 'populace (is) shocked awake (by) currency failures/central bank errors'. These 'currencies failures' are showing as being 'led by US Fed' when it 'creates a public reaction' by 'wrong actions' that will be emerging over November and December of 2015.

The data sets are pointing toward 'currency wrangling' even reaching down to the 'street level'. {see GlobalPop}. Much of the new currencies action will occur as a result of what is being described as a 'giant move' in the Yuan relative to the dollar. These data sets are focusing on 'bond supports fail' in the USA as a result of this shift in 'relative values' of the two currencies. The impacts at an emotional level to the population of the planet from this action are showing as large. Globally large. The data shows that all manner of 'desperate attempts' at 'currency smuggling' accelerate in China, at the same time that 'real estate (high end most noticeably, and first) plunges'. These new sets would have '4/four out of 5/five real estate companies in the USA out of business in 4/four months following the 're-peg' as it will be called.

Get ready for DOW = 125,000! Hyperinflation is indicated to do some really strange things, but really the data is showing that the 'stocks sales' will crumble, and go to the point of 'meaninglessness'. This is within the longer term sets and grows to significance over most of 2016. The data sets are indicating hyperinflation boosting the nominal dollar price of the 'equities markets', but only briefly, thereafter, in spite of hyperinflation of consumer prices within the USA, the 'stocks markets indeces' continue to fall over the movement of modelspace out to 2020 and beyond. The idea of 'equities markets' as run by 'stock selling organizations' connected to banks will 'fail' and is indicated to be replaced by crowed funding and blockchain participation over these next few years such that 'global funding of equity producing ventures' will not involve any of the former corporation players as we have them today.

As part of the Chinese PBOC push of technological advantage outward into the population, the data sets are suggesting that DIYBio (do it yourself biology) and its many spin-off subject areas are going to be a huge area of interest all across Asia, but first, and principally in China (until about 2026 when Indonesia and Singapore each will rival their neighbors for expertise and exports based on DIYBio, or more appropriately, 'corporation recombinant DNA work'. These sets are indicating that a 'group of Asian children' (a club or group or self-organizing-collective) is going to have a 'success' with a 'whimsical melon (maybe more related to cucumbers)' that will produce a 'food type' previously not

commercially available. This new 'aroma producing melon' is described as a 'pivot point' for an upcoming 'accident' in which further modifications of the aroma cells will be done to the point that either by happenstance and random combinations (a 'natural hybrid'), or by design, a plant will be produced, which according to the data, will cause 'psychedelic experiences' when the 'fruit' is 'opened' due to its pheromone -analog chemicals within its 'magnificent scent'.

These sets are pointing to something of a 'gold rush' mentality taking hold across much of the Asian continent after the publicity around this area of interest and the 'break-out' and the success of up coming 'exposure products' which will be focused on 'unique foodstuffs' with 'special characteristics'.

The data sets, in both the shorter and longer term sets are being dominated by the 'end of the business cycle' language that is filling with sets in support for 'bond bubble failure (implosion)'. These sets in their turn are supported by new aspect/attribute sets for 'bank bail out'. These sets begin their rise to domination as modelspace is moved into late January of 2016. They then build from there through to the end of June of 2016 where there are multiple sets for 'dollar failure'. Within the 'dollar failure' sets are multiple sets for 'desperation', and 'catastrophic (political) failure' that may be forecasting the 'death of a (major) political party'.

In building to the 'dollar failure' sets, the data growing for 'end of (business) cycle' is supported by sets that suggest that 'bank failures' will be brought about by 'insurance and real estate market failures'. The 'banks failure' is going to be 'blamed' on temporally proximate 'insurance conglomerate failure', and 'real estate market down turn'. However, the data sets are showing that the populace does not accept this 'blame shift', and then the 'banks' become targets of 'rage riots' and 'revenge destruction' attacks. These are forecast to be rather strangely 'national' in nature, but also, are being described in the data in rather odd fashion. According to how the data sets emerge in modelspace, the 'rage riots' against the banks, are going to start, and maintain (for a while), a 'brand' focus. In other words, when people start rioting, it will be against a specific bank as they were its former customers. Then it will quiet down, until the next bank breaks, and then its customers will riot, maybe being joined by the previously aggrieved, and the casual, "ain't got nothing better to do since not work, so may as well riot along with my friends and family" part of the equation.

Many of the new sets that are directly held by both Markets entity and GlobalPop entity include sets going to the idea of 'China (gets) irritated' by an upcoming 'political shitstorm' created by the USA politboro (our political infrastructure) for internal consumption that gets out of hand and goes international. The data forecasts that Chin responds by a 'knee to the groin' of the Federal Reserve. This appears in early 2016, and leads to visible 'public fainting' by Fed controllers as 'interest rates' around the world begin an upward surge.

December pricing in USA 'seasonal sales' are showing as being a 'fire sale', and a 'panic sale' and a 'panic liquidation of inventories'. While touted as a 'good' for 'holiday sales' by the propagandapresswhores, the falling prices are actually going to trigger, according to the data, both a 'new flood of currencies', as well as 'massive hyperinflation'. The flood of currencies comes before January, and the first show of hyperinflation, in January, 2016.

Some of the related sets to 'sudden credit freezing', and 'inability (to obtain) foods/vital materials' are growing in modelspace with a mid March 2016 bulge of new sets. These sets are in supporting positions for a 'crash' within the 'for profit education system'. This will be due to a 'freeze on funds' or a 'lack of guaranteed positions available' to 'backstop the student loan program'. Our longer term data sets from a number of years back about 'students abandoned' and 'trapped' are again gaining strength in this latest round of processing. These sets are suggesting that some of the more visible components of the previous ALTA forecasts about the 'student loans freezing up' and 'cash flow crunch' that eliminates the ability of the 'college food services to purchase food', as well as 'energy bills piling up', and other signs of 'insolvency' will be manifesting into visibility in early 2016 and will build toward something of an 'also ran' crisis by mid Summer (northern hemisphere). 'Also ran' due to other, more press-appealing political crises dominating the 'news'.

The data sets are continuing to build for a 'shortage crisis' with lots and lots of repetition of the word 'shortage' by mid 2016. So many linguistic sets are going to this idea of 'goods shortages' starting in USAPop that it will participate in the 'political fracturing' that will be on-going. The shortages are not going to present themselves evenly across the nation. Different items and classes of items will 'go missing' at different points across 2016, however please note the data sets are suggesting that the general shortages 'progression' will be towards something of a 'mean' across the country. The idea is that it may start as no bananas in your stores, and no pomegranates in mine, but as time progresses it will get to be toilet-paper in both areas. Make sense?

The 'shortages begin' is a phase of the 'decade of struggle' that has been previously discussed in both ALTA and IDIR formats. This is a key point and is showing in the IM and shorter term data as a 'change of state' that will be both recognized (shortly after it starts reaching visibility), and felt nationally. Please note that the 'shortages' forecast began showing up in early 2004, and also that we have an operating premise here that the 'longer in forecast, the more impacting emotionally (depth and breadth)'.

The data sets are now characterizing the 'silver action' for December and onward as 'the (movements of the) traveler'. Noting specifically that these are EMOTIONAL characteristics that follow, the data sets contain the following language about silver from December onward into 2016, "lucky", "following a lucky star", "rising like a star", " transcending material desires" and other language in the same vein. The data quantifiers, when summed, show the silver set as reaching into 'joy' as an emotional state. This set appears in early December and rises from a state of 'pleasant glow' or 'pleasant satisfaction (with events)'. These sets are suggesting that the rise will not be subtle. Rather the data is once again pointing toward the 'spiking' previously reported in past ALTA reports.

The movement of the new supporting sets for the silver linguistic structure appear in a very steady stream from about mid December onward well into late 2016. These data sets are appearing as modelspace is progressed forward at a steady, though variable rate. The number of new data items per modelspace movement is variable, but the pace of their appearance is steady.

There are a number of data sets that are providing details of 'chaos' and 'rampaging fires' {ed note: actual fire...not metaphoric} within the 'financial industry' as 2015 fades. These new shorter and longer

term sets are providing a glimpse of 'fraud cover up (by shredding paper, burning records, killing bankers)' that starts to emerge. The data sets have a trigger that appears in early 2016 that seems to be forecasting a 'wave of prosecutions of bankers (likely in china)' that will 'send shivers around the planet'.

Other very interesting newly arriving sets in support of the silver set contain some supporting sets for the idea that 'high ranking officials' will be seen to be 'fishing (for any silver they can get)' in the 'public waters'.

The data sets are holding firm in growth for new BTC movements along with the silver/gold upturn (in all fiat currencies now that the shift in dollars has occurred). The BTC continued growth indicates that a 'sweeping action' across the 'cryptospace' is going to occur for 'new minds' to go to work within the BTC in a 'global infrastructure build-out'. This will be viewed by the 'participants' as a 'crash effort' to 'roll out' a 'necessary infrastructure' at the 'mom-and-pop' and 'bricks-and-mortar' level globally as the 'sure and certain signs' of dollar (fiat currencies) death are becoming more visible daily. The data sets are indicating that 'big pushes' by some 'corporations' will provide a vehicle for 'new growth' in 'BTC prices/use' as 'millibits' get their own 'personality' globally. This occurrence of the word 'personality' is as presented repetitiously by the data and is so reported without knowing quite what is being suggested by the new aspect set.

As the pricing for BTC continues to swing wildly, seemingly out of control, but in a more general up than down direction over the rest of November, we may well go back down through 408 again, and then back up a third time as is described in the linguistic structures for BTC that precedes the very large move for silver. The language explicitly stated that the '408 (line/flag)' would be 'transitioned 3/three times'. The data set has a solid 'floor' under silver being linguistically referenced at the same time that the last pass through 408 and then through 428 occurs. Now we need to note that this has been showing in the data sets as the third week in this November since March of this year. So, even with the recent price action on BTC, the data sets (in these last two days of the preparation of this report) still show the large move upward in silver as occurring in the latter part of November, and they still show a pass through 408-428 just ahead of that point. The issue is the granularity of just how far ahead of the rise of silver does the BTC action occur? While the language shows as being 'rapid', this triple transit through 408 range, the data also lines up nearly all of November in modelspace in getting that linguistic structure populated. So in that sense, 'rapid' may be something of a miss until seen while looking back after the fact.

SpaceGoatFarts

The land of the Druids attracted the attention of the Roman Empire due to the presence of easily obtainable Tin which was essential in producing Pewter, which the Romans used to 'sweeten' their wine, but alas, the Pewter leached out the Lead from the alloy in the process of treating the wine which when consumed produced two generations of early dementia and collective mental degradation just before the collapse of the Empire. The same mines that brought an invasion from Rome were the beginning of the wealth that was built over time and crimes, into the British Empire. But in the span of

the current civilization, tin mining is an almost non existent activity. The mines 'payed out' before the current technological social order evolved.

The data sets are indicating that the expansion process that is underway here on earth will not only bring on 'new lands' from under the seas, but also several new 'strikes' or 'finds' of rare earth minerals, include the largest discovery of tin in the history of our civilization. Further, the 'tin vein' will also be shown to contain a new form of naturally occurring alloy of silver. The data sets are suggesting that a new mining 'boom' will commence in a few years after the 'death of the silver mining industry'.

The idea coming across from the data sets is that global mining industry collapses over 2016 throough 2020, but that technological and geological discoveries come into visibility in late 2018/19 that will produce the globe's largest ever mining operation, and a significant portion of it will be underseas.

There are a number of sets going to the idea of 'personal understanding' of 'space alien wars'. These new sets are suggesting that a great many more humans will have this 'personal experience' of the 'space alien wars' over the course of this next year. These new sets are heavily filled with immediacy data and shorter term values.

The detail sets of the 'personal experience' sets includes the appearance of 'hidden (occult) power structures' that will be 'exposed' by way of a 'video undertaking'. These sets include many supporting sets going to the idea that diverse people around the planet in some numbers will become involved in personal encounters with 'space alien being'. These sets MAY be describing a 'misunderstanding' of the previously forecast 'break-away civilization encounters'. IF SO, then these new sets are likely due to the 'selling' of those experiences as encounters with 'space aliens'.

The data sets are suggesting by the accretion patterns that these encounters will be 'filtering into alternative media' in a slow stream that grows, and that at a point further into that stream, someone will notice and produce graphs/facts showing that the stream was growing both in size and rate of experience. It will be these 'scientific analysis' of the on-going phenomena (NOT abductions) that will start to cause ThePowerThatBe to 'freak out' and respond to growing 'public alarm'.

More new data sets for 'issues' for CERN. Now these are going to be not only 'overt connections' to the 'devastating (deadly) earthquakes', but also a new series of 'fatalities (that cannot) be hidden'. The idea coming from the data is two fold; first that there have been previous fatalities that were hidden, and now that a new 'round' of such are going to appear. Some of these new 'fatal problems' within the Large Hadron Collider include linguistic structures headed by descriptors for 'caves (ruptured/fallen in)', and 'long tunnels' that will be 'exposed' due to these 'ruptured land areas'. The data sets further include sets for 'elite (irritated)' {ed note: at what is not expressed in the data, perhaps yet another set-back in schedule}, and for 'villagers with pitchforks and torches' expressing the idea of 'local population becomes very angry when electrical/energetic fires burn down things and fry people in their beds'.

Pony up, or 'ride out'....the data sets are suggesting that some of the 'exopolitical exposures' coming over the next 4/four years will be part of a 'plan to sell (the idea) of funding (an anti-alien effort)'. These sets are focusing on a connection to the Argentine, and a 'hidden collider connection' that will be

also exposed. These sets are also focusing on 'giant electrical energy generation projects' that will be proposed as part of several 'south american infrastructure re-investment schemes'.

Yet more forecasts are emerging within the data sets for 'time travel' and 'time radiations'. In the case of the latter, the 'radioactive decay rates' will start to go 'out of scale' in several different parts of the planet. These will be connected to stories of 'time dilation' that will be impacting some 'small groups'. In some of these 'small groups', there will be 'physical evidence' left over of the time dilation effects. In some of these cases, the data sets point to 'individual humans' being 'removed from groups', or being 'left out/falling out (of time field)' during these episodes. {ed note, there is no supporting physics for time shifting nor any evidence of supporting, and necessary business eco-systems required to support a 'time industry', but the data is reporting that these linguistics will appear.}

The SpaceGoatFarts entity is forecasting that the 'invisible hand' will start to become an emerging meme around the planet as a 'new generation' of humans wakes up to the 'cog in the machine harvest' of humanity by TPTB. These sets are pointing to very large emotional impacts on the 'stagnating generation' {ed note: those kids stuck in the parent's basement} as it becomes known that the 'break-away civilization' has 'bled away' their future economic potentials in recent thefts. These associated sets for the 'exposure/encounter with the break-away civilization' sets are continuing the growth in the larger sets for 'long term plan' coming out into the open.

Many of the sets are going to the idea of 'how did this ??? go on an I not know?' will become something of an 'instant reaction' to 'developing events' that will be 'shocking' the populace from the economic to the military to the space areas.

More sets are going to the idea of a 'hidden collider' or even more than one. Note that the sets are supported by sets that indicate that these may be 'illusionary' or 'replica machines'. The data is not yet clear on the meaning of these sets. The underlying sets include details that would suggest that perhaps there are going to be 'holes' punched into 'ground/earth' as a result of the activation of the LHC at CERN. These sets are extensively internal cross linked to other sets that include many references to 'nazi technology' and 'sanskrit texts'.

Many of the new sets in support of the break-away civilization 'encounters' are pointing toward a 'discussion' of its 'effects on the global social order'. These discussions are suggested as causing some acute level of distress among the various 'planetary authorities'. These sets are pointing to a sort of 'spot the (break-away civilization) effects game' meme that starts popping up and then growing around the internet as the various OTHER sets of the break-away civilization encounters with 'regular people' begin to grow.

The SpaceGoatFarts entity is suggesting that the 'repression of the creativity' of humanity is going to have some near immediate repercussions that will seriously shake out the 'power structure' that governs the western world (aka dollar empire).
The data sets are suggesting that the 'debris' from space will be fulfilling several of our previous forecasts.

The data sets are showing that DIYBio is going to 'break out' into the open over the next 2/two years with a plethora of 'new discoveries' including some 'escapee ribofunk-lite yeasts' going 'rogue' and 'sending a lot of people' on a 'suspected psychedelic exploration' via 'air borne' release of 'mind-state altering aroma-chemicals (pheremones? Of a 'previously unknown form'). These will be something of a 'sensation' in more than one use of that word. The DIYBio movement will get a huge boost from the publicity and an already 'besotted (by rapidly changing circumstances)' population will come suddenly to face the 'unfolding reality' of 'grinders', 'binders (diybio version of 'deep makers' = sort of like genetic cell programmers)', and 'finders' (those now making a living 'sieving the recombo world for new goodies'). This will bring up more legal hackles and lawyer snit fits than we can imagine at this juncture. It will, in the end, according to the data sets, pretty much doom the 'USA justice' system, as well as the 'lawyer schools'. Reasons are unclear as of this point in the data.

The SpaceGoatFarts entity is suggesting that the DIYBio meme will bring in a large number of new terms from several languages as the 'wild west (wilderness/unexplored)' nature of the field is 'blown open' to a relatively 'unsuspecting planetary population'.

Conclusion: Surfer, dude!

In my youth, surfboards (Atlantic short board style) were a frequent platform for thought. Discovering early on the magic of freeing the mind by intensely occupying the body (usually with survival of the body kinds of experience), i had found surfboards provided the perfect platform for really deep thought.

Of course, the thoughts always coalesced after reaching shore. During the experience, body-mind was totally involved in the experience. The elements provided by the senses and the feeling (touching) body nerves completely over take the mind. During the experience of trying to keep body-mind alive on a dynamically moving board rushing across the tops of waves, there is not 'worded-thought'.

There is no awareness of consciousness by itself during the process of fighting to keep itself within the body and the body alive in the forces of the ocean powerfully hurling you towards the abrasive shore.

It is an experience of total immersion in the moment. Cliche, and nonetheless is THE most powerful experience a human being can have while in the body. In that brief instance of the experience of 'no-time', your consciousness simply is, and is experiencing, unaware of itself doing so. At its core, it is coming close to this feeling that drives all surfers out again and again. It is the same with all such forms of intense integration of awareness with experience out of time.

A common element to all peak human experiences is the recognition of the 'out of time' perception afterward.

In my life, every single peak experience was obtained by 'going through the fear'. As a surfer, you soon learn that if you stop within the fear, you will clench and wipe out. In order to float on the magical layer of boundary between water and air, you have to accept the fear, bite through it, and learn to 'be' yourself, centered, within it. The fear does not go away, it merely becomes one of the diverse flavors of

the peak experience, and not even a dominating one. It merely is. As you are. There. In it. Outside of your ability to perceive the passage of yourself in time.

Our collective perceptions are being altered by the 'events stream' which is how humans judge the passage of time. This shifting of 'time' within the collective experience of society is showing within our data sets. It is indicated to 'leave a mark upon' the 'younger generations' in the western world that shows as 'rippling through 5/five generations'. This suggests an impact on humanity that will last over 100/one hundred years. In this context, the data is saying that it will take over 100 years for the 'out of time' peak experience of these next ten years to be integrated into our collective understanding of ourselves as humans.

So the data sets are showing big gnarly breakers forming up gritty. Gritty surf comes from pressure waves so deep as to stir the bottom to bring up sand and dirt and debris to cloud the waters and add gritty foam to the wave.

To learn to surf, you must first learn to recognize, then love your fear. As the fear itself, and also because of what is promised on the other side...

...time to bring out the long boards and stoke it up....

after all, realize it or not, YOU are a time-wave surfer!

Hang loose!
