ALTA 1008 - Part Six

Asymmetric Language Trend Analysis Intelligence Report
'Changes in language precede changes in behavior.'
By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

02.06.2008

Note: Entities are identified by a blue typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in *italicized bold green*, and red when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a *7* th part to this series.

This report in the series created from 69.916 million reads of the 1008 series.

Meta Arts - Memeering, 2ndF

Over the course of the past several years of our linguistic sweepings study, we have become aware of many organized groups who also are sweeping/mining/polling for their own purposes. Approximately 3/three years ago, we thought that we were picking up some new form of internet monkey-mind business, though at that time it was even questionable that a pattern was actually developing. Sort of like seeing the faint hint of where the foot print in the sand was just prior to the wave having washed over it. That is all it was, just faint 'footprint residues' within our linguistic aggregations.

Over the course of 2005, I became increasingly convinced that a pattern of specific linguistic manipulation was being swept up in our data gathering, and in the following year, we introduced several new prolog programs as data filters to our processing. In the effort to increase the granularity of our predictions and to refine our timing sense in the forecasts, we also enhanced our data filters to the level of 'traps' for the types of patterns I suspected were being picked up. In 2007, we were successful in isolating a few of these patterns within each run, and during the 'down time' in the processing, I had begun to craft programs to analyze just these aberrant patterns.

I labeled this pattern of linguistic manipulation a 'memeering' as it appears as a single meme being floated to consciousness within a selected group of fora. These sites have been chosen deliberately as was revealed by the pattern of accretions of specific words. These sites are being deliberately targeted for an as yet unknown purpose. These sites are 'seeded' by the manipulators, likely a team of computer jocks being led by a psychologist/psychiatrist who is in their turn being directed by a higher pay grade administrator tasked by his masters with getting specific 'words out there'.

The supposition that I labor under now is that this group, or these groups involved with this manipulation are attempting to use the internet as an 'energy dump', and to trigger that emotional energy via specific high resonance linguistics.

To understand the why's of this effort, we should begin with Robert Hitt (www.astroecon.com). He is an astrologer and fellow hyperdimensional traveler. His astrology is/has been targeted at large moving masses such as we might find in the Markets entity. He has been successful, and as a rational human with clear intentions, has even managed to learn from his failures. This learning process has allowed him to develop a sophisticated understanding of the 'energies' involved within such large mass human activities. From this knowledge base, Robert has developed several theories, with a particular theory being of interest at this point. Robert's theory can be relabeled as the 'gotta go somewhere' theory of emotional energy. As he will likely forgive me for renaming it, I will continue to explain that the basic idea is that X amount of emotional energy builds within a human based system such as the markets. The astrology allows for the prediction of how those energies currently held within the humans within the mass system will express themselves. Sometimes *all* the predictions and the astrology are unequivocal, that is, damn clear that outcome Z will occur. Only it does not. Instead, that day that

predicted outcome Z is to manifest, a *something else* pops up instead to 'consume' the energies otherwise headed into the markets. With shocking consistency this pattern of 'energies gotta go somewhere' have been very apparent in recent decades, and especially this century. A very large number of people were 'expecting' a very large market crash on September 11, 2001. In stead.... well, history. And then more recently the pattern had emerged when yet another large amount of predictions were going toward another markets set back, and lo...that day the Virginia college shooting occurred which left 32/thirty two victims, and the perpetrator dead. Note that this adds up to the 'significant' number of 33/thirty three. Also note that that day, the markets did *not* tank as expected, and as forecast. Again and again these past several years evidence of the Hitt energy displacement theory have been showing up.

We now think that we have picked up a corollary to that theory being attempted. In this corollary the idea is that the [energies] of an emotional nature, which have to go somewhere, are being 'pre set' or staged via manipulation of thoughts via the internet. Basically the context of the patterns we have captured suggest that "someone(s)" are attempting to "pump up" the emotional tensions around certain contexts at certain times. The patterns are clear within our very large aggregations as deliberate and organized 'meme - engineering' or our label of memeering. Our 'memeering' also breaks down into 'meme e ring', which is how we discovered the patterns to be used.

The 'memeering' fellows can be found by noticing a distinctly non-random pattern for specific linguistics appearing at context linked site ring. An example of a context linked site ring would be "international bonds", or "international commodities", or "space aliens", or "illuminati conspiracy". In all these instances there is a large central context which can easily be identified within each site. There may or may not be any actually link trading between these sites. The operators of these sites may or may not be aware that individual forums under their control are being used for the purpose of seeding these linguistics. The operators of these sites are likely not aware that they have been chosen by the memeeringers {ed note: rather a nasty mouthful} as part of a specific pattern spreading algorithm.

We are fairly certain that at least 3/three governments can be identified as employing the memeering techniques, though it is unclear if they are each in the business, or if a central contractor is involved. Further we have fairly clear evidence of several lower level commercial/political memeering going on.

The aware observer may be able to catch the memeering being used in near real time by following several context linked sites with large fora operations, or very high traffic, and then watching for the appearance of very damn similar linguistics around a small, and emotionally charged meme. An example might be the appearance of the 'race' meme within the political fora in the week leading up to its appearance within the global mediastream as the 'theme of the week'. Other examples are easily seen when they 'stick out' from the usual postings within the forum. An example might be a big-"C" conservative theme which appears within the 'space alien' site ring. It does happen. We can't yet say if this is by mistake, or a shot-gun approach, or a what-not? But it does happen. It was such a happenstance which first alerted our software spyders years ago.

The use of memeering does explicitly point to attempts to use corollaries of Robert Hitts postulate of 'energy gotta go somewhere' for specific, and seemingly power-reinforcing, goals. The idea that 'seeds' of thought which have been emotionally-charged via linguistic analysis are being sown on the internet is a bit scary. This is actual, demonstrable evidence that [mind control via media], a well defined context within the ThePowersThatBe entity, has been escalated from the global broadcast mediastream out to the individual experience of the internet.

So for now, our processing filters are finding, and discarding the planted 'seed memes', though we do find the responses to be useful, and usually *not* within the memeering process, and so are using some of these within our larger aggregation of aspect/attributes. But on the whole, we are discounting the meme seeds, but not throwing them away. It sometimes is useful to be aware of such plants growing in the giant mental garden of the collective consensus reality.

Be careful out there, the emotions you are experiencing *may* not be your own, or universe inspired. They may be planted...for someone else's purpose. The aware observer will be cognizant of how they are being affected by what is being place there for them to read. Of course the memeering designers recognize that the schooled mind will accept any thing shoved down its pie hole, while the educated mind can entertain the idea with out necessarily accepting it...or in this case, getting their emotional energy redirected by it.

Igor is going to be working on a taxonomy of such internet plants which we will make available as a 'field manual for identification' at some future time.

Speaking of 'seeds', we have also identified the progression within the data for the 'death of religion' meme. Further in a Byzantine twist, we also seemingly have found a Second Foundation force (2F)or group already embedded within the global social structure which will be supplying the 'replacement' for the context of [religion] as we progress past 2012 and into the [future populace incubation period]. At this point there are risks to going further toward identifying the 2F force/group, and no general benefit. We can say that this 2F force is cyclically and karmically aware, and uses 'propitious moments' with an elegance that is quite engaging to observe. We expect much more in this year of manifestation to strike at the [3/three popes] and their organizations. As the cracks appear within these power structures, the aware observer will be able to view some 2F work as an [invisible wind] cleaning up behind the 'invisible hand' of the [illuminati/power elite].

Meta Data - Coagulation, Karma Gulch

The meta data layers are linguistic structures, basically contexts, with descriptors or labels which are supported by modifiers in the form of aspect/attribute sets, which are really many phrases that go into describing as fully as we are able, the emotional components of the
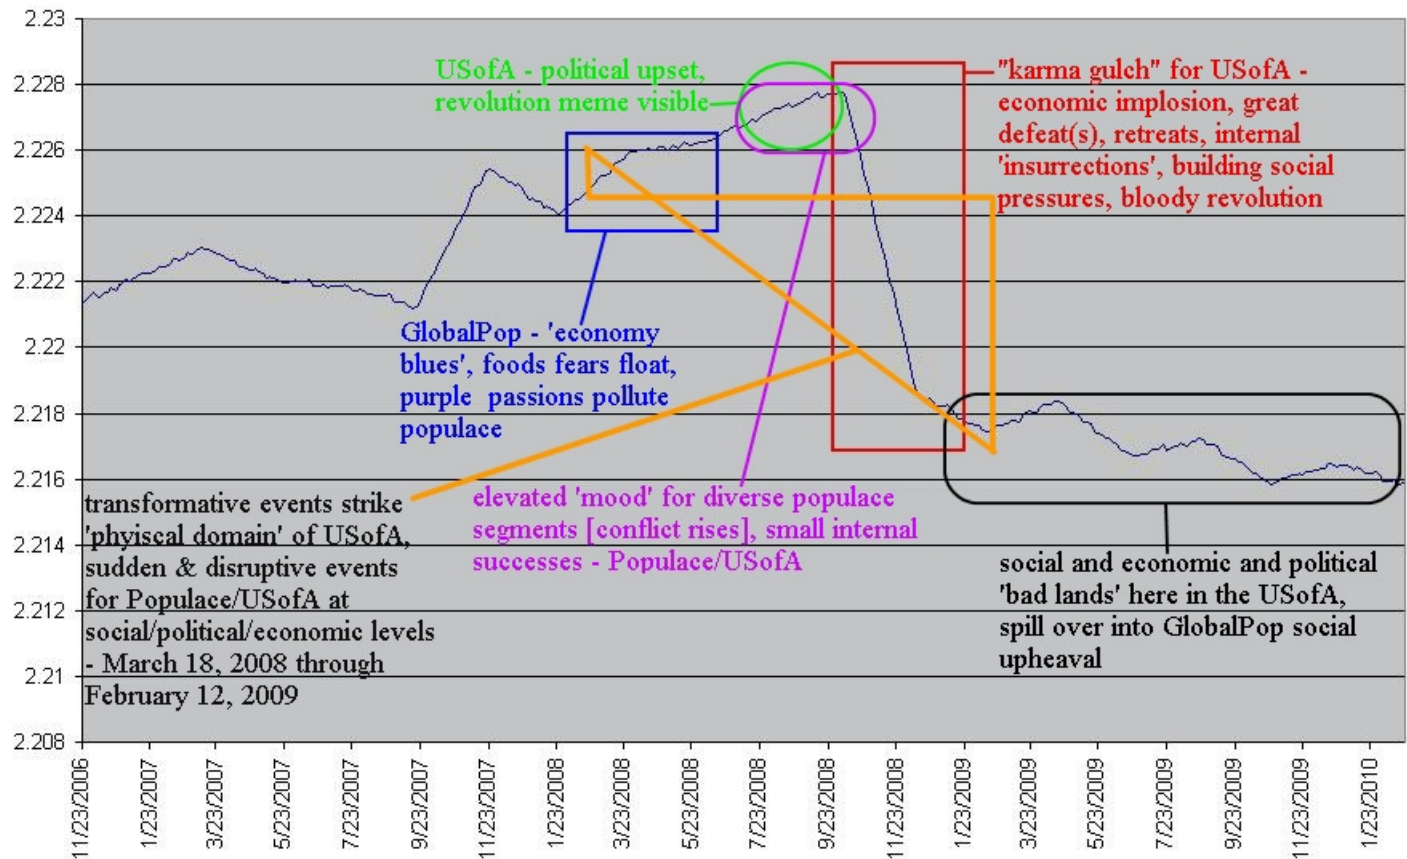

words and phrases involved. Whew! A linguistic set rises to the level of a meta data layer by being included in the natural processing flow in almost all the entities in modelspace, *and* having the same set of descriptors, with nearly the same sets of aspect/attributes in support. Thus a linguistic set becomes a meta data layer when it appears in mostly the same form across multiple entities at more or less the same spots in modelspace.

The meta data layers can be thought of as a [consensus] which is formed by the entities at the linguistic level. So thus when we see that [flooding] appears in the Terra entity, and then in Markets, and the populace entities, and others, well... it would seem to be obvious that universe is trying to get across the idea of [flood]. It makes little difference to the modelspace that the [flood] in Markets might be seen in support of [foreclosures/defaults]. Or in the populace entities, the [flood] may be in support of a [political flood] or a [flood] of refugees, who themselves might be fleeing the flood indicated in the Terra entity. And as reality manifests, we have noted that the words of the meta data layer contexts are indeed showing up as descriptors within the global mediastream for a plethora of seemingly different happenstance. But yet we note that headlines may warn of a [flood] of coming bridge collapses, due to lack of maintenance, or yet other headlines about the [flood] of illegal aliens, or yet others about a [flood] of [airline disasters] due to weather....but at the root, it is the manifestation of the meta data layer contexts in their respective arenas.

As Igor (pronounced Eyegore), has observed, when the meta data layers have very high visibility, they have a tendency to 'coagulate' the expressions used in the global mediastream around the same sets of words within our contexts (more or less). We have also noted yet another form that this coagulation takes, that is, the 'grouping' of same sets of circumstances within various predictive forecasting systems. This form of coagulation is also involved with the slowly manifesting changes within the social consensus that we label 'reality'. This consensus can be modeled as a large collection of assumptions and group emotional responses to specific stimuli which is 'live' in the sense that it morphs over time. It is within the social consensus of reality that such things as inter-generational conflicts and tensions will play themselves out as the older consensus actually dies off, and the newer, younger consensus fills in the gaps, ultimately coming to dominate the totally of shared reality. Within allowances for generational sizes, and wars and such, it is within a 'dominated' reality that approximately 1/3 (one-third) of any older generation can expect to pass their waning days. Their in ability to grasp the new social consensus in its nuance is what makes up a considerable amount of the condition of the old as 'stuck in the past'. They actually are stuck in the past as the new reality was formed around them, and put in place by other generations. The layers of emerging, and fading social consensus reality accelerate as the society moves along the technology scale. Should the singularity as envisioned by the technocrats ever come to pass, the result may be each generation receiving so much new input over the previously born, that a multiple generational consensus reality breakdown develops which prevents anything from passing between the generations.

To return to the 'coagulation' though, we have to note that multiple predictive systems are all starting to coagulate around certain contexts. These include the meta data layers of [conflict], [duality], [restrictions on travel], [encounters with scarcity], and others previously noted. The central theme of the [coagulation] of predictive systems on a global scale is that the [usofa] is facing a [karma gulch]. The context of a [karma gulch] is defined as a [spirit/karmic debt barrier] which [must be crossed]. In this case, we may be speaking of a [karmic gulch] around the [domination] karma for the [populace/usofa]. It also appears from the meta data layers that the [karmic gulch] may be an appropriate name for the October 5th to the 8th sudden drop in emotional tension values shown in the chart below. It also can be interpreted as a [must do], which more or less means we have to [go through the karmic/emotional states], willing or not due to a totality of past karma. Perhaps the singular way to avoid the upcoming [national karmic experience] would be another form of [national karmic experience], which is to say, [radical, national enlightenment]. Hmm, given the deep sleep affecting most humans here in the USofA, the 'safe' route would seem to be not too likely.

Emotional Tension Trend

The [karma gulch] will *not* be approached suddenly. Stated another way, for the aware observer, there will be no surprises in the months leading to our Fall of [destiny]. But for those humans who are *not* paying attention...

GlobalPop - Meta Data Do, Pakistani Redeux, Birds Do It

The recent spate of internet access problems for the Middle East (Asia Minor and the Persian Gulf States) meets some of the expressed language for our [restrictions on travel] meta data layer as it manifests, but there are still several other major areas yet to show; these include [airplanes grounded], and [grains not shipped], and [fuel restrictions (due to) transshipment problems]. We note that the [grains not shipped] are supported by cross links in 2/two separate streams, one for [must/mold], and the other for [fuel/energy/political] memes. The onset in 2008 of the manifestation will seemingly be along the broad brush lines of the meta data layers. As these have been rising vertically within the GlobalPop, and also within Populace/USofA, the emerging pattern of early information from January does not bode well for the rest of the year.

So far in the first lunar and solar month of the year, we have had the worst january on record for the USofA equities market, a record breaking month for currency devaluation, as well as commodity pricing increases, the worst housing market effects in any January on record in the USofA, and if that is not enough, terra has intruded with staggering once-in-a-century storms in most of the northern hemisphere with the result of this being the worst January on record for shipping/travel delays globally. And for global, weather related human deaths. In areas of the southern hemisphere, the [flooding] meme has been manifesting such that the [flooding] in south eastern Africa is being described as [epic].

As the modelspace is progressed through the [spring equinox] on March 21, the data suggests that this is 1/one of 2/two 'hot zones' in time in 2008 for Pakistan. The data accrual patterns are pointing toward a raising of the internal temperature of the country in April/May, and then later in November/December. This internal temperature issue is related to the [usofa military activity] of the same period. In both periods the supporting data sets are headed by aspect/attribute sets of [turmoil] and [violence]. In both periods the [usofa military] will be [strategically involved], though it appears that [global concerns/foreign policies] from the [usofa populace] point of view, will be [breaking down/crumbling] as the [new alliances] take hold, and the [power shifts] are manifesting.

At this point the cross links from the GlobalPop over to the Bushista entity are pointing to a period in which the [madness] is [running hot/amok]. These sets of cross links are suggesting that [global concerns] will be both [pressuring] and [deluding] the Bushista entity, which will, yet-once-again, provide more evidence of an [empire disintegrating].

Several ALTA reports back we started to pick up the [disease] meme and its association with [january, 2008] and beyond in this year. At the GlobalPop level the [disease] linguistic set continues to grow in all data type categories, the immediacy values, shorter term values and the longer term value sets. The immediacy values are concerned with [bird flu], and especially [mammalian transfer] of the disease. The shorter term value sets have several other [disease] or [conditions] folded into the [worry] zone. However, it is the longer term values which have both the highest level of emotional tensions around the subject, as well as the largest amount of [disease] related archetypes. As the year progresses we expect the [disease] meme to be rising in [visibility] as well as supporting the [diaspora] meme, and to be influenced by both the [duality] meta data layer, and the [restrictions on movement] meta data layer.

We still are having the [sun disease] meme accrue values within the Terra entity, and this set has a number of extensive cross links over to the GlobalPop and Populace/USofA entities.

ThePowersThatBe - Magicians, Popes

As noted in previous reports in this series, the data sets for the ThePowersThatBe entity are accruing aspect/attribute sets indicating that a form of [next generation psychic warfare] is to have rising [visibility] over the course of 2008. As we have ended the first month and the data sets continue to process with new additions under the [sorcerers/magicians/wizards] sub set of the TPTB entity, and given that these aspect/attributes bring along some longer term value sets, we can forecast that as the global mediastream presentations of the [elite/select/celebrity] will become increasingly 'bizarre' to the unaware observers this year. Those prepared will be able to spot the glimpses of [psychic guards], and other [wizards]. The data is indicating that this is now the case as the [conditions] will [demand closeness] to the [wizards]. This will be more [masked], but is also showing as *much* more visible for the [religious popes]. This is to be especially true for those who will be observing the [black pope]. It would seem that a new [council] of [wizards] will be put into place by the end of [summer] at the behest of the [black pope]. Hmmm. Given that the [elite] are no strangers to recruiting and using the [religion] meme as yet-another-method of control of the populace, it is revealing that they will now be more open, and [visible] in their employ of [sorcerers/magicians/wizards]. Again, it appears to be the [year/time] that is the key difference. The data is seemingly suggesting that the [elite] will be less concerned about [offending] the [morals] that they have put into place to control others, and much more concerned about [psychic attacks]. An odd note, but nonetheless, a still building meme suggested to play out as the conditions change here in 2008. We also note that [prominent deaths] will continue to strike the [pope(s)] of the world as 2008 progresses. The [popes at risk] theme also continues to accrue data, including both [assassination], and [intercine warfare]. This last is indicative of the larger [revolution] meta data layer and its impact on the planetary populace, as well as the interfactional [conflict] within the TPTB entity.

As the TPTB entity is progressed through the early months of 2008, and onto the data sets of the longer term values covering [summer] and [fall], we note that an increasing amount of cross links build between the TPTB and the SpaceGoatFarts entity. These are seemingly suggesting that a large [effort/labor] which will involve [millions] of [dollars] and [thousands] of people will begin/has begun in [winter] to [conflict/combat] some bespoke [feared interaction] between the [populace] and the [unknown energies from space]. Due to the data pointing to this project [just beginning] in 2008, it is unlikely referring to chemtrails. Further the data suggests that it will barely be started when circumstances in the [economic] world will cause it to [implode] due to [lack of funds]. The modelspace is saying that this project is nonetheless a significant [temporal marker] for the aware observer as its demise will provide a clear(er) understanding of what will [flavor] the [karma gulch experience] in Fall. Hmm, so sort of a [pre smell] of things to come?

Populace/USofA - Bad Drugs, Bad Lands, Bad Bush, Bad Wars

As noted above in the Meta data discussion, the [karmic gulch] spanning the transition from Fall into Winter, *the* rising aspect/attribute set for the Populace/USofA is [violence/violent activity] which include 2/two areas of focus; the first being the [continent/country/physical domain], and the second is the [human realm]. Within the first area, the highlighted areas are our old friends the [traumatic winds], who are now joined by [cooperative/joined/linked earthquakes]. This will also include the potential for some spill over from the [human realm] in that we have data suggestive of [attacks] as well as [assassinations]. This latter aspect/attribute set actually shows up earlier in the year. We find that the [assassination] meme begins to gain [visibility] in late February, around the 23rd. From that point, the [assassination] meme continues to gain emotional tension values in a steady fashion all the way until late November/early December. Then the [assassination] aspect/attribute set nearly doubles in 2/two increments which appear closely together in mid-November. There is a prior instance of growing emotional tension around this issue in late September, just after the autumnal equinox, but while these gains increase the total emotional summations, they do not add to the [visibility] quotient. It is the 2/two incremental increases in November which so boost the [visibility] of the [usofa assassination] meme in the global mediastream.

The impact of the Populace/USofA entity meeting the [karmic gulch] in Fall/Winter of 2008 is described by the data sets as [profound], [primal], [troublesome], [causing (long lasting) changes (at a) profound level (of) social infrastructure]. Of course this area is also participating in, and contributing to the rise of the [revolution] meta data layer. Note that for those of the [populace] who are *NOT* aware observers, admittedly mostly everyone in the country, the [karmic gulch] will be [felt] as a [sudden] and [unexpected] occurrence. To this section of the [populace/usofa], the coming [shocks] to the [national systems] and [psyche] will seem very much as though they have been [dumped] unwillingly and unknowingly into the [bad lands]. This period of [bad lands] transition will *start* when the impacts of the [karmic gulch] start to abate. From this point in early 2009, the [populace/usofa] will feel as though the whole nation is having a [bad trip] at the worst possible time. These [bad lands] that the country will hit just after the [karmic gulch] will last from early 2009 (February 3rd or so) until late in March of 2010. Whew, bad days indeed. And a looong stretch of them. Filled, as modelspace predicts, of a whole bunch of humans having a [bad trip] every day as they [fail to adapt] to the [new circumstances] which are manifesting all

through 2008, but seeming with a real [violent] level from the beginning of Fall.

The [bad trip] mental component of the end of the year and beyond cannot be over emphasized. The data is very clearly pointing toward the [wandering delusional/mentally infirm] as being a very large burden on the remaining functional populace. The [burden of care] meme gains [visibility] in December, and grows through 2009. The descriptor sets are of [mental defective/wounded/crushed/hollowed] people who are so 'out of it' as to [stand mute, shaking] on [street corners] in [shocked confusion]. This area is a continuation of the [mental disease] forecast and still continues to grow both in directly held values and cross links, including those over to the SpaceGoatFart entity. This area is still gaining in longer term values and shows that these [wounded citizens] who are [unable (to) cogitate] due to [mental shocks] will be an [economic] burden on the country for generations. There are several supporting sets which are forecasting that some of the long term effects will be beneficial to the populace in ways which will not be recognized for nearly 20/twenty years. These [beneficial side effects] of the [tragedy (of) melted/shocked minds] will be felt/manifest within the FuturePop entity, rather than the current Populace/USofA, so this places it beyond the 2018 time frame. It was from some of these supporting sub sets that we first became aware of the [second foundation] which is currently embedded within the human populace of the planet. It is this group which will 'inherit the future earth'. And within the data sets are described as growing [from millions] to [billions] in [less (than)] a [single decade].

As the modelspace is progressed through the slight emotional bounce of July and August, and into Fall as the September equinox is passed, the data starts accruing for the Populace/USofA entity under the [economic] sub set in huge bursts. The first of these very large data bursts hits the entity in early October, thus our call for the [karmic gulch] to begin manifesting on October 5th to the 8th. This first data burst brings in a new, rising and dominant aspect of [severe] which from that point on is the controlling aspect for the [economic] sub set under the Populace/USofA entity. This [severe economic impact] is described as being [unlike/dissimilar] to *anything* previously encountered. In the support of this idea of this being a [once in 12/twelve generations] occurrence, the data sets are producing cross links which indicate that from the [seed/core] of the [severe economic debacle/crises] which manifests in Fall, a [winter] of [bloody revolution] is predicted. The data sets go on to describe the [economic death] of the [nation] this coming Fall as being the [devastating legacy] of the [Bush Bust] which will apparently be known for [reducing USofA populace (to) beggars (and) thieves]. As an aside, the Bushista entity is indicating that shortly after the entry into 2009, a series of [documents/stories] and other [pertinent material] including [photo's and video's] will be [produced/introduced] into the [public life] under the [secrets revealed meta data layer]. These [informational items] will become part of the [emerging restructure/rewriting] of [recent history] and will be used to [label/name] the [Bush terms] as those of the [most incompetent] and [most corrupt] administration in the history of the country. Of course this is *after* the further problems of 2008 have put an *extra fine point* on the Bush incompetence with yet-more-natural-disasters which will be handled with [extreme] and [ill conceived//ill prepared] thoughts. The [natural alterations/changes] to the [nation] over the course of the [traumatic winds], and [dramatic rains], as well as the gradually manifesting [accumulation (of) earthquake damage] causes yet more [pressures] on the [failing/collapsing political system] within the USofA. Also at this juncture, and propelled by the [great economic implosion] of Fall 2008, the [usofa government/officialdom] finds that it is as [poor] as the [citizenry], and is [incapable] of [paying] for [transports]. This is apparently the [transport] of [relief supplies], and this area is impacted by both the [encounters with scarcity], and the [restrictions on travel].

With apologies for jumping around with this Populace/USofA discussion, we need to note that in concert with the GlobalPop entity, the [disease] meme forecast in the last several ALTA reports *is* manifesting globally as of January of 2008. This [disease] meme will increase monthly as the year progresses. Within the Populace/USofA several distinct areas will begin to dominate. These will include the [animal diseases], and the [other world diseases]. {Ed note: including Morgellons}. The [disease] meme, as noted above, seemingly creates a [great/large] and [unique] [opportunity] for [change] within the [social structure] of the [populace/usofa] wherein [millions] will [seek out] what we are terming the [second foundation]. In our linguistics we do not capitalize the [second foundation], out of respect for both I. Asimov who coined the term, and the actual [second foundation] itself, whose principles would also be offended by such a label.

The data sets are suggesting that 2/two areas of [intense conflict] will beset the [populace/usofa] as a result of the [incompetence] of the Bushistas. The first of these periods extends from the middle of February until about the first of May, and the second, as previously discussed, from November, through December and into 2009. The Iraq war will be involved in both periods, though less so in the November/December escalation of [militarism]. In the remaining portion of [winter], the data sets are suggesting that tensions will be building due to [missed/bad communications]. This set in its turn is supported by aspect/attributes which add both intensity values, as well as duration values to the mix, bring the emotional tensions to a small peak in late March. From there until May, the data suggests increased [military actions], as well as [dissensions] within the [populace]. Further [arenas of war] will be impacted, though it is unclear whether this is due to [energy] prices, or due to actual [embargoes]. In either case, the [iraq war] will be [shifting] steadily over these next few months. The shifts in direction will be affected by the [duality] meta data layer currently dominating the Bushista entity, and rising in place in the Populace/USofA entity. There are distinct cautions for those of the [green persuasion] {ed note: more on this developing duality affected theme appears in FuturePop entity} against [getting involved] in the [screwiness/squirreliness] which will be [rolling out of/flowing from] the Bushistas like shit from a goose.

Part of the changes will be deriving from the [secrets revealed] meta data layer. These instances of [careless talk] will be [echoed] next year (2009) by [documents] which will [pollute] the [legacy] of Bush. This year the [secrets revealed] are derived from [careless talk], and [mean intentions] which the modelspace suggest are less than 2/two months from their first appearance. However, modelspace is also showing that these [secrets revealed] will grow in impact all through the rest of the year until reaching a peak just as the populace hits the [karma gulch] in October. Yet another of the memes for this year which pop into place and then start percolating their influences through the social stew over time.

As the [karma gulch] is encountered, the data is specifically warning against [panic] and [losing (one's) head], and [danger (at the) base (of the) striped mountain]. These linguistic areas are directly, internally linked to the [polluting careless talk]. There are supporting layers

indicating that [barriers] to the [danger] are [in place] such that it can be [observed] but not [approached]. Hmm. Now that don't sound good. There are repeated sets which give 'warning' or advise caution and then go onto suggest taking [precautions against calamity], especially in August and September, as these are shown as the last 2/two [placid] months. After that modelspace describes the times as being in a [dramatic phase] in which [unexpected extremes] are [manifest]. Once again, this [manifest] word is probably an understatement. The nature of the emotional summations show that the release language of the [karma gulch] time comes on both [suddenly] and with [extremes].

Returning for a moment to the [iraq war] fiasco of Bush, the data suggests that during the [karma gulch] period, the [national consensus] will be faced with a [definitive fulcrum] of [emerging circumstances] in which a [choice] will have to be made. Fortunately for all concerned, the [choice] is *not* able to be made or influenced by the 'decider' nor other [petty people/politicians]. It will apparently come to the [will] of the populace, *and* to the [economic reality] which [drains national wealth] by the end of the [karma gulch] crossing. This last about [draining] the national wealth can also be interpreted as a [rapid flushing] of the [remaining national wealth]. This alternative interpretation is probably more accurate as a forecast due to the *huge* amounts of [economic disease/bad odor] which appears over the course of the year prior to the October encounter with [karmic reality].

Conclusion: SCCC, SW Flooding

Ohoh...you know its bad when the mainstream media of the global mediastream start sounding the alarm about [sudden catastrophic climate change] and [tipping points].

Sadly the [traumatic winds] are starting to manifest here in the USofA. As a temporal marker these can be used as clues to several pending sets of linguistics in the populace entities, as well as the Markets entity, and Terra entity. Within the Terra entity, we can expect the [winds] meme to progress apace with the year until we come to late April or early May where the [visible] language in the global mediastream will be referencing this as the [worst wind] year perhaps ever. Further we can now expect the [dramatic rains], and the subsequent [flooding]. Over the course of this year the [southwest flooding] which is USofA referencing is likely to manifest. This [southwest] designation may actually be referring to southern California, and some small points east. We do not know how literal to take the label. But the [flooding] component is *not* ambiguous. It is very clear. In our previous discussions of the meme we have noted that some of the [south west flooding] is to be [permanent] as [aquifers rise] and [old lakes] are described as [refusing to drain].

The [traumatic winds] must be considered to be an [event in progress] as the data sets continue to accrue to this linguistic sub set. This also suggests that the [dramatic rains] will, as forecast, continue past the [spring equinox]. In both cases the [damages] and [dangers] will be subsumed within the larger [natural disasters] for the [usofa] throughout the year. A few of the potential problems are highlighted within the chart above.

Both the Terra entity and the Markets entity still have large data sets yet to be processed so both entities will be discussed in Part Seven of this series. Please note that our data continues to point to deterioration of the [markets] over the course of February and into March. There are still signs for [steaming lumps of derivative shit] to be [smelling up] the [markets] as we move toward the [spring equinox]. Our data, in contrast to many other forecasts, suggests that the [markets] will hit a number of very highly emotive states between [spring] and [summer] such that the total emotional load on the populace increases to the level of [aggravating] the [emotional tone] to the point that [revolt] comes out in the [political] context. The [social] order will also be severely stressed as the [economic structure] continues its crumbling through [spring]. The data is also suggesting that [food(s) concerns], including [availability], and [costs] will bring extra added pressure to the [social order].

We expect to have Part Seven posted by late next week. There are a lot of residual data sets remaining to process. We expect that the posting will be able to be made by late on the 16th.
