Half Past Human presents

ALTA Report

Asymmetric Language Trend Analysis Report
'Changes in language precede changes in behavior.'

This report in the ALTA 509 series is from 38.75 million reads. It includes immediacy, and short term value sets as well as longer term values.

Meta Art - Memeering

We have had a couple of requests for a more detailed examination of memeering which we will make every effort to address. The demands of the processing as well as the intricacies of the memeering place some time constraints on the effort, so it may have to wait until this series is complete, but if so, we will provide a general free to the public discussion and will send out notification via the email list.

Meta Data - Shades required, Holes of meaning, Binding views

By way of explanation, we need to note that our work is based on a very large lexicon of words in various languages and alphabets. This large lexicon has been crafted with each word having a connection to an array of numeric value These values are placed within an 8/eight by 8/eight array which has 10/ten layers deep for a total of 640/six-hundred and forty potential values. Most words do not have most values filled in. We 'tune' the lexicon between runs to reflect changes within the values (0/zero to 100/one-hundred) for each 'cell' within the multidimensional array. These changes are those that we have been able to guess that we actually find manifesting in reality. So we might raise a value for 'intensity' at the first or primary level for a word if we discover that when it appears within the global media stream it does so in association with words of a higher emotional intensity value, or if the word itself shows with force in the number and spread of its use. Make sense? If not, try to hang on a we necessarily proceed.

The multidimensional array is actually more important at the 10/ten layer leve than at the individual cell level within each layer. As each layer has a total of 64/sixty four layers, we usually represent the whole of a layer by the sum of it

parts. Within our modelspace each pixel represents a word or phrase in the lexicon. We assign a different color for each layer of the array based on its tot value sums. These colors are used to color the pixel associated with the word phrase at each of 10/ten views of modelspace. This means that each pixel will have a different color depending on which layer we are viewing at the momen So we could look only at the cross linking layer and get a particular view of modelspace, or we could examine the intensity layer and receive another view which would not necessarily look even remotely like the previous view. In addition we have the 'totality' view of modelspace in which all the layers are merged and shown at once, which provides us with 11/eleven 'shades' of meaning around our distribution of the word linked pixels in modelspace.

As may be imagined, modelspace, especially as a 'totality' view, can get real confusing. The complexities involved argue against any form of presentation 'raw' modelspace, even as a 2/d representation of our 3/d modelspace. Just too complex, and in totality, since we have the heuristics which *remove* both hu and shading values as the sums rise in numeric value, there are a lot of holes t not be seen....but they are meaningful holes not seen...especially if you've not seen them in the past.

These meaningful holes come from the total sums of all layers for all cells within the array. These layers are as follows:

1- intensity

2- duration

3- motivation

4- action/response

5- emotional direction(s)

6- constraints (where the meta data layers live)

7- associations

8- originating links

9- terminating links

10- ze X factor (unknown)

In the process of interpretation, depending on which of the various duration levels (immediacy, shorter term, or longer term) are predominant within the

modelspace, we prefer to start each week's work with a top level view of the total sums, and then to drill down in to the various layers searching for the shifts of language usage (new words appearing, or old consistent words disappearing) which hint at something 'in the mix'.

It was the 'disappearance' of several sets of words which *used* to be always associated with the [contact (of the Other/Space/Interdimensional) aliens] which put us onto the scent of the now manifesting [contact] meme. Many of the 'disappeared' word sets related to [disinformation] and were associated at the 5/fifth level, or emotional directions(s) with [ridicule] which itself was supported at the 7/seventh level with [officialdom]. At the time, we then 'read' the missing sets as being the 'sudden lack of words linked to disinfo, and official ridicule' and thus were on the track of the now manifesting [contact] meme, but of course, we were reading about it several months prior to its actu appearance. Make sense? Probably shouldn't since we are making deductions from what is not there, but we will continue apace anyway.

The 'sudden disappearance' of the 'ridicule' and 'disinfo' language (really just a drop waaay below what we had been used to observing) acted as eye candy in modelspace to draw our attention. We then set about isolating the SpaceGoatFarts entity and examined each of the various layers against the others by shifting the values back and forth while attempting to visually key in on interesting changes within sub sets. In a way this is similar to how astronomers find new thingey's in space by rapidly shifting the view of variou snapshots of the same spot of space. In both instances, movement, or change i being sought in the minutia of the flickering images. We probably have it easi than the astronomer fellows.

The data sets also suggest, both by instance and absence, levels of 'intensity' o the changes found within our flickering modelspace. The intensity value summations are very interesting in that they provide the values which indicate [visibility] within the global media stream, As the intensity values rise, there i also a corresponding rise in the 'impact' values which are the layers 2/two, 3/three, and 4/four in the list above. As these rise, we begin to forecast change in the nature of the existing social order. For those forecasts, we frequently fir meaning in layer 5/five which contains our emotional tension values. For clue to what words will be present in the forecast future fore shadowed by the rise intensity values, we turn to layer 8/eight where our associations back to the lexicon are located. These then are plotted against the layer 6/six constraints, and finally viewed from the layer 8/eight and 9/nine to pick out meaningful associations to other linguistic sets via cross links.

Lastly we have layer 10/ten, where universe has taught us to place 'all that is beyond reason'. Basically, as Igor labels it, layer 10/ten is a 'reasonably tidy

black hole' of linguistic values. In many ways, it was layer 10/ten (X in roman numeral system), which some years ago began to indicate that a SpaceGoatFar entity was going to be required to hold all of the 'unknown thingeys' which we seemingly headed our way.

Now our own X-10/ten layer is just shouting up a storm. First we need to note that layer 10, within the SpaceGoatFarts entity is where both the [surreal life] aspect/attribute set, and the [death of religions] aspect/attribute set originate. These sets are in the populace entities, but their sums get a huge boost from th same sets held within SpaceGoatFarts entity. This was also the entity and laye combination which had forecast the 'maritime disaster over the west' where the language was manifest in describing the Columbia Space Shuttle disaster.

Which brings us now to the 6/six layer, or the 'constraints'. This is where the meta data layer information is housed, and it provides a view of how many influences are being placed onto the linguistic sets in other layers. As may be expected, the recent [contact] meme linguistics are being directed more by the [secrets revealed] meta data layer than other layers. As may be expected, the [secrets revealed] language, as with all other 'trends' sweeping through omnihumanity, has a tendency to be a 'self promoting phenomena' in the sense that usage of 'interesting or especially meaningful words/phrases' will produce yet more usage of the phrase/word within the global media stream as the 'mem is picked up and amplified during its manifestation. Make sense? We have all experienced it, words trend into use, and then just as abruptly trend out of use. Media is no different, merely more visible in these human traits. So we anticipate certain words to be showing up, and then guess as the 'proximate cause' as to the 'why' of their appearance in global media stream. Thus all our secrets are revealed.

The [secrets revealed] meta data layer was the first place that we started to observe the [surreal] language set develop some few ALTA series back. So several years ago when the [surreal] language set made its appearance in the data stream we had only very few associations from which to try to extract meaningful contexts. As may be expect, there are quite a few more at this juncture in the processing. In fact, we now have the [surreal] sub set dominating, and heavily linked to the [chain of (official) denials] which is a su set of the [contact] meme. The [chain of official denials] is the natural outcom of the [initial official contact revelation], and it is dominated by the [revolutio meta data layer, and the [secrets revealed] meta data layer is only secondarily influencing.

The logic chain linking [initial contact] to [surreal] is as follows:

if [official initial revelation of contact (with) space/interdimensional aliens] is

true; then previous [official denials] will be rendered instantly as [lies/deceit]. This in turn points to all other, associated contexts in which *any* official position has *ever* been taken as [suspect (of being) similar lie/deceit/cover-up]. This will include such contexts as [abduction by aliens], [aliens in sub sea ufos], [aliens in sub terra bases around the planet], [inter alien warfare], and so on until *all* the woo-woo speculation on the internet is *all* now assumed to be at least partially true somewhere as [officialdom] has a record of [denial] about the context in the past. It will be the [explosion] of these many thousands of [officially denied] memes into [public consciousness] as needing to be [integrated] into a [universe view] which will produce [cognitive dissonance] near toxic levels in so many people as to induce the [surreal] word into the global media stream to attempt to describe the [malaise/disease] which will afflict the [social order] as expressed by our [collective behavior] over these next 2/two years. Many people will have so much of their ego/personality invested in their world view, that the now seemingly [officially sanctioned] questioning of its basic principles will be too much for their rigid belief system to integrate. They will be technically of [broken minds] and will be swimming in a universe which becomes increasingly [surreal] by the day/hour. Many of these people will be at extreme levels of dysfunction for a long time, and will require care at the most basic of levels. As an aside, perhaps even meaningful, our data sets have a very strong association between the [surreal victims] and the [light emitters/photonic devices] sub sets.

These chains of reasoning have not been lost on ThePowersThatBe, and the [consequences] are known to them to involve a [delicate balance] or [gamble precision]. The issues involve [repressed human history], the [human civilization] which was [pan solar system] in the past with both Mars and earth's moon housing humans, as well as the [hidden solar system catastrophe]. Further there are even more fundamental issues such as the [continuous creation] model of universe, and the [doctrine/doctrinaires] issue to deal with [exposure] of the [contact] meme brings up [long suppressed secrets]. ThePowersThatBe of the *now* don't want to be [taking the hit] for these last century of [suppression of knowledge] which even to this day includes [murder] as the ultimate [tactic], even if they actually were responsible for directing or implementing various components of the [regime of dominance]. So a conundrum exists as [contact] is coming out, on schedule, whether they are prepared or not.

Further, there is the bespoke [fear] context within the ThePowersThatBe entity which has risen so far in the last 2/two years as to be the dominant sub set of the entity. Chief among the [fear] associations is the [loss of power] that [secrets revealed] around the [contact] meme are seen to cause. ThePowersThatBe [fear] the [loss of their personal power/money/prestige] as the [contact] meme matures, and changes the [global social order]. As a side note, the [fear] sums

within ThePowersThatBe around this [global social order change] are key elements in propelling both [planetary populace movement] into existence ove this next year or so.

As yet another side note, look for several new personalities to manifest as [leaders] within the global media stream as the [contact meme] spreads. These [persons] will be of the formerly [untouchable class/officially ridiculed], and a least 2/two of the [male personalities] will experience very large jumps in [media presence/visibility] over the rest of this year and into 2009. In both cases, likely well deserved considering the sheer amount of work these individuals have performed over years of [official censure]. Sort of like the woo-woo version of Nelson Mandela being release from prison. The first of these [persons] will be very [visible] within the global media stream in November, with special emphasis on [video].

GlobalPop - Whatsamatter U., Red Pill

The linguistics are suggesting via cross links that ThePowersThatBe are becoming concerned about the [education opportunities] available on-line. The issue apparently relates to [video classes/instructions] in a variety of subjects, including the more [occult/hidden knowledge] as well as [taxonomy/genealog (of) TPTB]. The linguistics are pointing to a pending [censorship] under the guise of [cleaning up falsehoods] which will *attempt* to [control the flow]. However, the [forbidden university] is shown as not being restricted to a singl site or subject, and presents something of a dilemma for the [control systems]. The [forbidden university] shares some descriptors which could also be applie to Whatsamatter U. where Moose and Squirrel got their education, but it is nonetheless, being taken very seriously by TPTB. This area is also a sub set of the [fears] of the ThePowersThatBe entity, and gains its emotional supporting values from the [contact] meme sub set in that entity.

Always maintaining awareness that we chose to take the red pill, our data set i pointing to a very long slide into a very deep rabbit hole. The [dissolution] aspect/attribute set is now rising to dominance in the sub set of the [global social order]. In this instance the [dissolution] aspect has as its primary supporting aspect/attribute set the phrase of [within meaning] which is cross linked very heavily over to the SpaceGoatFarts entity where we have the termination points in the context of the [surreal] sub set of the [contact] meme Apparently the [dissolutions of the mental stability] deriving from the [shocki: fast spread] of the [contact] meme will produce the [dysfunctional humans] w. will be [trapped] in [increasing surreality] at a significant level within the [global populace]. The same [whipsawed/shaken] sub set which describes the emotional impacts of the [contact] meme grows very rapidly over Fall and Winter. The data accretion patterns are suggesting that the [contact] sub set wi

start to produce [alterations] or [metamorphosis] of the various [global social arrangements] at a [visible] level by the end of Winter. These manifesting circumstances are indicated to be gaining [visibility] as will the [surreality] of things as Spring of 2009 fades into the [summer of hell]. The data set has 2/tw key points of origin for the [pan global insurrection] or [fourth order revolution]; these are May of 2008, and Spring of 2009.

The May of 2008 date has some significance in the future which it does not have now due to the [secrets revealed] meta data layer. This suggests that som occurrence within May of 2008 will be exposed later in the coming years whe it will be viewed as a key date for the changes which will have occurred by th but which are still in our current future path. The Spring of 2009 will be a 'self evident' sort of key time for the [planetary populace movement] or the [global insurrection] as it is viewed by The PowersThatBe. This will be due to the [millions] seen demonstrating, and the [riots], and other [civil order disruption which will come to dominate the northern hemisphere during those months.
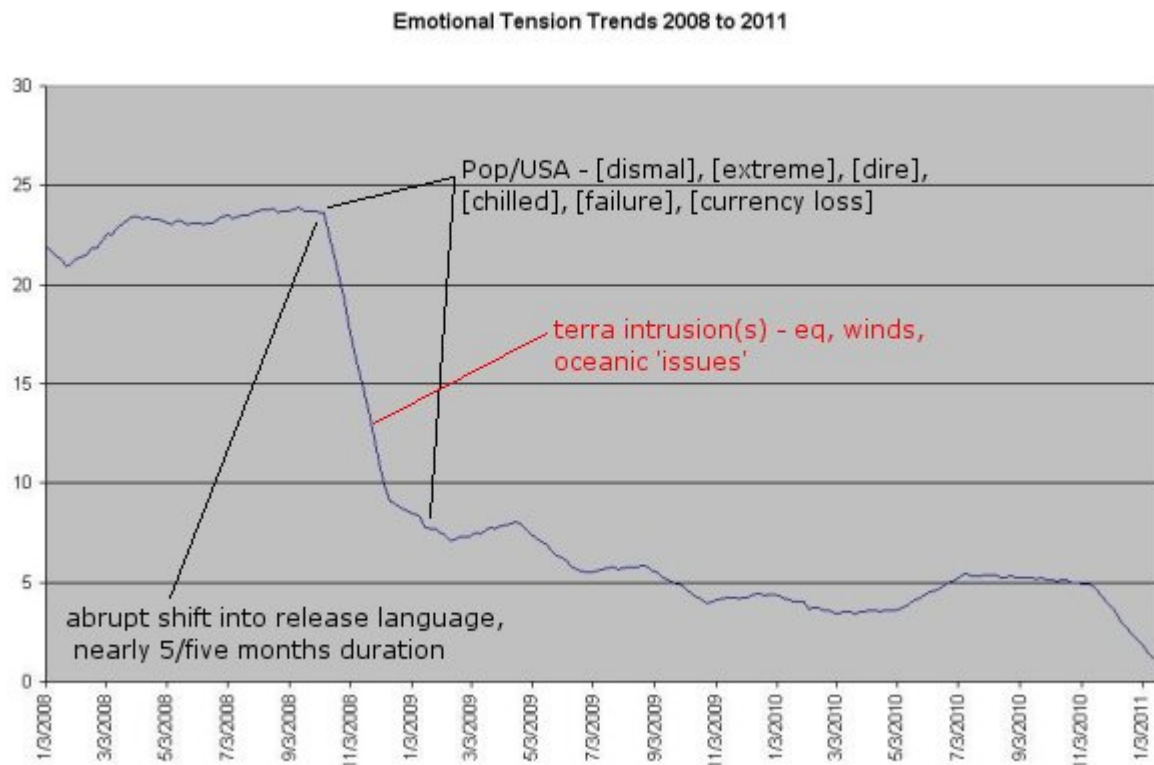

Spring of 2009 will be the [prelude] to the Summer of [radicalization/hell] which will continue through to the Summer of 2010 when the [bloody insurrection begins]. Which is not to say that the [elite/ThePowersThatBe] wil be 'safe' until then. The data sets indicate that many [skirmishes] will develop and be [visible] prior to the actual beginning of the [9/nine years of global insurrection]. Thus, in spite of the sudden rush into release language and its implied [changing conditions], and in spite of the numerous [shocks] awaiting the [global social order of humanity] over the rest of 2008, the threshold of REAL change in the [state of change] itself is to be encountered in 2009 as th planetary populace enters its [transformation] stage. Then the real fun begins with the [excitation/quickening] in 2010...

Populace/USofA - De' Wave, Breaking, StoogesUSofA

Our data sets are seemingly suggesting quite directly, that the [usurpers/pretenders/frauds] *WILL* attack Iran. The data sets label this as ar [unjust], and [irregular] form of an [action] which is supported at the primary level by the aspect/attribute set of [not appropriate to possess (the things/resources of others)]. The [not appropriate to possess] has the aspect of [possess] as being very highly [visible] within the global mediastream with the interpretation that the word [possess] will be worn out from use by the global media stream over the coming [Iran attack]. There is some small probability that the [attack] that the data sets are forecasting is *merely* a bombastic escalation of language only. The probability of this is small, and there are 'rea world' indicators that pressures are being applied as the time remaining to the

neocons is short. The real world indicators are providing evidence of a definit[e]
'ramping up' of emotional tensions around the [attempt] by the [bushistas] to
[control/own] the [iranian resources/people].

The data accretion patterns for the [iran attack] begin to grow rapidly as
modelspace is progressed into mid August, and then continue to grow right up
to the early October sudden shift into release language. As is noted on the cha[rt]
below, the shift into release language is both abrupt, and long lasting. As the
release language persists without any relaxation of the strain for nearly 5/five
months, this coming Fall and Winter have seemed to justify some of the more
extreme language such as [dismal], and [full of dread] that has accrued over th[e]
last few ALTA report series.

Emotional Tension Trends 2008 to 2011

We have been monitoring this Fall and Winter in our data with special attenti[on]
for at least the last year and a half. Within the last year, the continued growth [of]
the more ominous aspect/attribute sets have prompted an examination of the
release language period with an almost microscopic view. While such a narro[w]
focus *can* and *may* have so restricted our vision such that we are missing
very key indicators that we are wrong, it also has the potential to provide us
with invaluable real world cross referencing to the various linguistic sets whic[h]
have and are accruing. So, if we are correct, and there is either an [attack on
iran], or an [ad nauseam mainstream media discussion of an attack on iran],
then we can expect to see many of the linguistic clues manifest in the languag[e]

in the global mediastream.

Noting that this [attack] does not have a further modifier of [war], but instead
appears to transition right from [attack] over into [confusion] and then
[disaster], the interpretation of the data accretion patterns is that the end result
a [multiple country disaster] of staggering [emotional impact]. As we have bee
reporting for months within the various ALTA series, the data suggests that *i
the shift into release language on October 7th or thereabouts is the result of an
[attack on iran], then the following 5/five months will be consumed by the
[digesting] of the [imports/effects/residual problems]. These are forecast to
include the [final death of the dollar], the [collapse of globalism], the [collapse
of international trade], [starvation in the USofA] such that [hordes will flee
(back across the border)], and [internal bloody strife in the USofA]. These are
small catalog of the problem areas which will develop over the subsequent
5/five months following an [attack on iran] in the Fall. The data also provides
for a [near 50/fifty percent casualty rate] from the actual [attack]. The
descriptors go to [planes falling from sky], as well as [blood and oil flaming o
the waters]. There are further indications of [chaos] in [cities] all over the
region, as well as [riots] and [mass demonstrations] throughout the planet that
in their turn will occupy ThePowersThatBe for months in [suppressing (the
riots/revolutionary activity)]. The data also goes on to suggest that even if the
[israeli military] is not directly involved in the [attack], it will nonetheless
suffer a [devastation of resources], and [destructions of the hundreds]. We
think this last is applicable to the [israeli air force].

The [disaster] sub set which is in support of the [iran attack] sub set within the
Populace/USofA continues to grow in a very ominous, and bespoke [dire]
manner. The accretion patterns suggest that not only will [israel] and all its
[citizens] become global [pariahs/outcasts], including many countries both
[rejecting] the [israeli documents/passports], but they will also [institute
searches/seizures] against [israeli owned property], and will, as part of the
global [pogrom] which develops, [expel israelis] from their countries. This wi
also likely extend to [non israeli jews] as the [emotions] take over and [reason
flees] from the [terrible disasters] which are described as [lingering] from the
[iran attack]. The supporting aspect/attributes include language going to
[multiple generations (who will) curse israel (for their personal) suffering]. It
language such as this which has increased markedly within this round of data
processing. Much of this language comes from the longer term value sets, but
now we are noting an increase in the shorter term sets also holding to this idea
of [hundred of millions (who) curse israel daily] as a result of their [suffering
personally] from the [residuals of the iran attack]. Now we note that the
[hundreds of millions] is seen in both the GlobalPop entity, as well as the
Populace/USofA entity. In the former case, it appears to be as a result of [direc
experience/encounter] with [suffering wounds/abrasions/scrapings], while in t

Populace/USofA entity the [cursing of israel], though more [violent], and [actively aggressive], is due more to the [death of the dollar] and the subseque [economic demise], and [mass starvation] which besets the [populace].

While the language is less than clear at the aspect/attribute level, the [iran attack] would seem to produce a [multiple generation radiation problem]. This may be something on the order of [clouds] of [fallout] drifting around and affecting Asia, and ultimately the planetary populace, it can also be interpreted as [making *all* the oil radioactive]. The Populace/USofA entity is clearly pointing to the [economic] repercussions of the [iran attack] language as being the [proximate cause] to the [infrastructure meltdown] at the [global banking/dollar reserve] level, and that in its turn is the primary cause for the [suffering, starvation, death] here in the USofA. Noting that numbers are unreliable within the aspect/attribute sets, we nonetheless can report that the Populace/USofA entity suggests that [2/two (or 22/twenty two) millions] here in the USofA will [suffer (to?) disability/death] or alternatively, [suffer up to desiring death], over the [18/eighteen months] following the [iran attack] as th [economic collapse] raises the mortality level due to collapsing [health care] and severe [encounters with scarcity] of [medicines], [adequate food], and [energy]. There are some ambiguities within the numbers appearing, but at the low end of the scale is [2/two millions] with [22/twenty two millions] appearii at the other extreme of the range.

The data sets accruing in both the shorter term and longer term values suggest that the [disability/death wave] within the [populace/usfoa] resulting from events of this Fall which precipitate the [economic collapse] will [totally alter the [american social order]. These changes are very diverse, and include impacts on [inheritance], and the [rights of states versus populace] which will have echoes in the [outcries] and [slogans] appearing in the [radicalization phase] just prior to the [violent revolution] of the Summer of 2010.

Without regard to the probability associated with the [iran attack] language, there continues to be growth in the lexical sets associated with the [economic wholeness/completeness] in both the Populace/USofA and the GlobalPop entities. These data sets are descriptive of an [economic collapse] as the [dolla dies]. As noted above, the impacts include [health care system shutdown], and [starvation], and [collapse of globalism] as well as [infrastructure collapse] in the form of [loss of power/electricity], and [school systems shut/shuttered]. Th last is indicated to start with [too cold] buildings, and the [lack of money], but then, in many places in the USofA, the [weather] is indicated to [spur/induce community actions] to [open shuttered buildings] as [emergency shelters] in spite of there being [no heat]. The data sets for these [weather induced reopenings] are clustered around the [maritime] states along the [eastern seaboard] from about [north carolina] through to the Canadian border. We not

in passing that the data sets indicate that [canadian neighbors] will [lend hands/assistance] to their [afflicted friends] by the [tens of thousands] as the northern hemisphere moves into Winter.

Again, without regard to the possibility of an [iran attack], the data is indicatin an [economic plunge] of truly [mentally stunning] scope. It is the [economic infrastructure collapse] which results in the [disability/death wave], and so the [death (of) millions] is the direct result of the [power elite] who have been [manipulating markets] for their own ends. This is a key component of the developing [murder] sub set within the [planetary populace movement] now beginning to emerge here on earth. The [power elite/ThePowersThatBe] sub s of the [planetary populace movement] suggests that the [9/nine years war] against [illuminism/TPTB] will go very badly for them indeed.

Within the Populace/USofA entity, sub set [power structures] which is a linke sub set of the TPTB entity, the data suggests that the [first casualties] will include the [organized religions]. The data sets are pointing to the [secrets revealed] meta data layer as being a prime trigger of the events of this coming December, within the [social order] of the [populace/USofA]. Apparently a [list] will be [leaked/revealed] which will [detail] both the [identities] of many [thousands] of [preachers/priests/pastors/rabbis/imams] who have [taken brib from the [officialdom] as part of the [populace control measures] now being p into place. The idea from the data is that this [list] will ultimately prove to be the [unburdening] of the [evangelical/religious control power structures] as th individuals named will be [exposed] as [shills] for the [power elite] *just* as the [suffering] of the [populace] increases dramatically. This coincident timin will be a very [visible] and central element in the later [extermination] of the [priest class] during the [9/nine years revolution/insurrection], though the problems for the [listed priests/pastors/preachers] will begin in late 2008, thei [deaths] as claimed [collaborators (with) murderers] wont start until next year in late Summer, though it is not until modelspace is progressed into the latter half of 2010 that the first of the [religionists trials] begin. It is the period of th [trials] for [treason against the people] that the [religionists] are finally receiving the [persecution] that they have always claimed was theirs. Curiousl our data does not show that *any* of these [listed priests/pastors/preachers] w actually welcome the [martyrdom] coming their way. Oh well, in all, the whol of the [death of religion] meme is really only a minor sub plot within the mucl larger background of [chaos] and [change] at a [personality shattering] rate which is our collective destiny over these next few years.

The data sets are filled with [personality shattering] descriptors due to the tota mass of changes within the [economic] sub sets. The growth of the aspect/attributes within this area relative to crossing into the 'release language period' of post October 7th is huge. There are specific aspect/attribute sets

pointing toward [mass furlough/layoffs] of [government workers] at all levels. These are shown as beginning to be [visible] within the main stream media in the country in late November, or early December. This may indicate that the [press] starts talking about the subject because the [layoffs] are being considered, *or* the visibility rise may be due to the actual first wave of [layoff notices] going out at that time. In either case the data sets are suggesting that by May 2009 (5/09) that the USofA [officialdom] is in [dire condition] due to the [millions] of [government workers] who are no longer [employed]. There are internal cross links to the [secrets revealed] meta data layer which suggest that a great many of the [former government workers], realizing that they will [not be returning] to [government work] in their lifetimes will [walk off] with material such as the [list of religionist stooges (of the TPTB)] and other items which thereafter are showing up as a significant force in propelling the [revolution] meta data layer higher in emotional sums.

A very large supporting set is showing up all through the populace entities, but with a specific focus on the [populace/USofA]. This is true even within the sets directly held by the GlobalPop where it references the [populace and/or social order] of the USofA. This supporting set is headed by [breaking/shattering/crashing]. All of which have an [economic] focus. This sub set of [breaking], being an active descriptor, and coming with large levels of support in both the shorter term and longer term value sets argues for an interpretation of an [active breaking/crack-up] of the [economy (de Bilderberger)]. We note that the [economy] will continue post October as the populace needs will be met, one way or another, but that the [officialdom] component of the [economy] is shown as [breaking up]. The [officialdom] or [de Bilderberger] [economy] which includes [globalism] as a sub set is indicated to [crack up] such that the [seizure/lock downs] will [catch] the [unwary/unaware] by [surprise]. The implication is that the last of the [dollar death] comes swiftly and the whole [paper based economic machine] suddenly [stops]. Thus the data for the [hyperinflation] is showing for such a brief period as the [seizure] is indicated to pretty much [stop/cease] all forms of [withdrawals] from any part of the [de Bilderberger/Fed(central) bank] controlled sections of the economy.

The [breaking/crack-up] of the [paper based economy] will impact the whole of the planetary populace to some degree, but as may be expected, those nearest the [central bank/de BilderBerger] will be experiencing [crack-up] in a much more accelerated fashion. In other words the data sets describe many sub sets of the [populace/USofA] which will be impacted, but far less so. These are the [gray markets/underground/non-taxed/unofficial] part of the economy. Conversely, the data shows that the [minion/stooge] layer of the [de Bilderbergers/Illuministas] will suffer both first, and greatest as they actually believe in the lies of the [press/propaganda] even though they are actually

participating in the process of [deceit], and feel themselves to be [exempt] fro its impacts. So for the [stooge layers] of the [officialdom], the [blows] of the [crack-up] will be the [hardest] and [first].

The data sets are indicating that Fall and Winter will have the beginning of the [reactions] and [public demonstrations], but it will not be until late Winter or very early Spring of 2009, that the [formerly employed minions/civil service] their [great numbers/millions] will be [seen in the streets]. At this point, the fir of the [precursors to revolution] will already be in place, and our data sets indicate that by [May (5/2009)], the beginnings of the [meetings of the SOCs] will have taken place, and the [planning for return/revolution] will be underway. It will also be at this point in Spring of 2009, that the data indicates the [surreal] sub set from the [contact] meme will begin to produce [casualties and will start its [visibility] within the main stream media. Along with the [rise in dysfunction] as a descriptor set, we note that the [disaffected/former minior set is the second largest supporting sub set within the [breaking/crack-up] set, *and* from late Winter, this sub set becomes the fastest growing as the Populace/USofA entity is moved through to Spring along with modelspace.

SpaceGoatFarts - Hot Breath, Good joss, Dragons vs. Hydra. Da Finger

You can almost hear it....the torrid thunder rolling off the wet hills with the afternoon tropical rain storm wetting down the pavement and raising a mist th rises up to the second story balcony where you sit with tea, watching the strea of humanity pouring, merging, blending, discarding, separating, and spreading out over the streets which hover below the rim of your porcelain cup of local brew called ulox. Somewhere close by a bamboo tube with messages to heave is carefully placed on an incense fire crisping the layers of skin each in turn igniting and adding its acidic sweetness to the smoke slowly rising to merge with the rest of life's exhalations in the sky. Universe is getting aromatic, and gritty.

You can almost feel it as the skin warming rays of the setting sun begin to dro below the trees in tropically early fashion on the last day before Spring of 200 and the thunder pushes down from the nearby hills forcing the mist and smoke into small droplets that coalesce on the hairs on your arm as your skin cools against the tea drawing the heat of blood into your belly. Observing the press local omnihumanity in the streets below, an oddly square hat signals your eye as its wearer/transport weaves through the crowded markets deliberately, precisely with graceful adaptation to the flow. No novice here. Following in th closing gap behind the square hat is a pushing wedge of a cap insistent on

reopening a path through omnihumanity forcefully. Wedge cap follows square hat. How tao of it all says universe in the shifting of the sleeping dog in the corner of the balcony and the whine of insects futilely assaulting the screen mesh enclosing the hotel's balcony. More tea? The proprietors hand offering a new cup. Yes, please. Universe is fitting.

You can almost see it as the rim of the cup descends below its steaming cloud revealing the street below where a flowing round straw hat with very wide flopping brim oscillating rhythmically up and down as though a deranged mushroom on a mission. Swiftly yet without betrayal of presence, mushroom hat intercepts wedge cap obliquely from the right. Brims obscure the momentary interaction, but wedge cap tilts brim down, and like a tall tree falling in dense brush, clears a dark coat covered patch of omnihumanity as the wearer crashes to the stones below. You can almost feel the crushed cheek, the bruised jaw, the chipped tooth...and just as the crunching sounds of impact rise up with the sweetened bamboo smoke, omnihumanity presses in, sealing the wound in the flow. Mushroom hat moves on to catch up with square hat. The local tea is good to drink, its aroma mixing with the scent of burning messages to heaven. Wedge cap slowly, hesitatingly reappears before being swept away in the omnihumanity flow just on the other side of the porcelain cup. Seeming it is not wise to oppose the tao. Sounds of dinner rise up from the kitchen below. The smell of crisping coconut evokes pie questions. Universe promises good joss in Spring. Time yet to get ready.

The recent increase in [visibility] of the [contact] meme is manifesting as forecast. The implications implied by the aspect/attributes accretion patterns under [contact] within the last few ALTA series *seem* to be available in reality for a good chew. As we gnaw on the manifesting details of the [contact] meme, and the many [claims] and [counter claims], we can at least be certain of a few broader influences within the spew around the subject. These will include the [secrets revealed] meta data layer as a continuing influence with a building presence. As modelspace is moved forward into [spring, 2009] the SpaceGoatsFarts entity is forecasting a period of [good luck/favorable kami] for our previously discussed [2/two poor bastards] who are [caught into a journey] with the [hot breath] of ThePowersThatBe on their necks. The [chase] scene provided by modelspace is centered around the [will of the secrets holders] coming into [conflict] with the [imperative of the time/timeline] and the [decision process] about the whole context of [contact]. Make sense? Clear as Sirius on a foggy night?

The [contact decision] sub set, including very extensive cross links over to ThePowersThatBe entity, is now being populated by increasing numbers of references to the [draco] and the [water snake] constellations. These sub sets are building up in relation to each other as though somehow [linked] within the

[process of the contact meme decision]. These sub sets with bespoke reference to [constellations], are in support of the [contact] meme, but also provide increased summations within the [secrets revealed], and [revolution] meta data layers. In both of the supporting sets for [draco] and [snake] constellations, the primary level of support comes from the aspect/attribute set for [life]. We can also interpret the [life] within these contexts as [beings/critters/creatures/people?]. At the secondary level of supporting aspect/attributes for both sub sets of [draco], and [snake], we find [contrast], which can be also interpreted by its alternate descriptors as [comparison]. The context of [contrast] is only 3/three layers removed emotionally from [tension] and [contention] which are themselves only 1/one layer away from [conflict] in the emotional hierarchy of our work. As an interesting expression of self referential integrity, both the [constellation] references have [duality] as their tertiary level of support, and finally at the fourth order of support, the primary aspect/attribute sets are [changes], and [signs/portents/omens].

At the primary level of support for the [contact decision] sub set, the current rising aspect/attribute set is headed by [imminent], which in its turn has [acknowledged/revealed waiting] as its primary level of support. The sub set of [imminent] appears in SpaceGoatFarts as the entity is progressed along with modelspace past the Spring equinox of 2009. At that time the [secrets revealed] meta data layer as well as the [duality] and [revolution] meta data layers are all at vertical within the SpaceGoatFarts entity suggesting that a period of very [increased] or [maximal] change will begin. Also under [imminent] are several directly held sub sets for [officialdom]. These are all heavily cross linked back over to the ThePowersThatBe entity, and all are also cross linked over to GlobalPop entity where many of the terminating sets are headed by [instructed to wait (patiently, without outward fear)].

Many of the cross links from the [contact decision] sub set of SpaceGoatFarts, sub set of the [revealed journey], go over to GlobalPop where they terminate in [beside (oneself with) happiness], and [awaiting with breathless anticipation], and [joyous dancing]. There are further layers of support in other terminating sub sets which go to the idea of [happiness] in a more mild form, as well as [harmony], and [expressions of welcome]. As may be expected there are also others where the primary aspect/attribute set goes to the idea of [a very dangerous situation]. To this last it needs to be noted that the odds favor *any* extra terrestrial life capable of getting its collective ass here are likely to be technologically advanced enough to kick our asses good, so fighting should probably *not* be our first choice of response....at least not [fighting/war] as our current crop of [military] understand the term. There are others on the planet, as shown within the [rishi] sub set within both the GlobalPop entity, and SpaceGoatFarts entity, who are already [at war], or more accurately [engaging] the [aliens/Other] in a [contest of forces/control/precision] for the sake of

[omnihumanity]. These [individuals] and [small SOCs] are *not* within [officialdom], and at least some level of [officialdom] is currently trying to [locate] and [eliminate] the [threats to (alien) control]. This is a sub set of the [hot breath] in the [contact decision] aspect/attribute set. Apparently some members of the [rishi resistance] have been [causing problems] at the [psi] or [woo-woo] level as they have been naughty and demonstrated to [scientist/stooges (of the military/alien/corporate complex)] certain [shocking/disturbing/frightening] types of [psychic powers]. According to the data, these [psychic attacks] will be much more [visible] in the late Winter in the global media stream, but are already underway. The data sets seem to be indicating that certain [manifestations (from) empty space] in front of [crowds of scientists] had these seeming adults [shitting] and [pissing] on themselves as the [manifestations] demonstrated both [awareness] and [presence (there in the room)] in such a fashion as to be [undeniable]. The data sets are describing an instance (perhaps more than 1/one) in which [floating body parts/limbs] were seen to [point the accusative finger] at some very *very* high up, alien-connected human stooges/scientists. This has had a [chilling effect] on certain personalities of late which the data sets indicate will participate in a [revelation swarm] coming in late Winter or early Spring.

Conclusion: ALTA 509 - Part Three - Envelopments

The data sets do indicate positive as well as negative trends. As an instance, the whole of the [contact] meme, in spite of the huge amounts of [fear] and [disruption of the social order], has a slightly positive total summation across all the fields in our complex, multidimensional array. Also the [revolution] meme, again in spite of [fear], [death], and [destruction], ultimately is also a positive value set as its summations are pointing toward a more positive emotional set as the [insurrection] progresses. Not that [insurrection for 9/nine years across the planet] will be a 'fun' time for anyone. However, the very long term data sets are indicating that the resulting FuturePop entity will have a much higher level of positive summation than either the Populace/USofA or the GlobalPop entities have now.

Of course, as universe has it, to get positive, you must have first experienced the negative. So that is where we are headed in the near term...a time dominated by negative experiences on its way to a new state of positive experience domination. Or maybe it will just feel like it once the negative slacks off a bit.

But, as has been increasingly hammered home to us here at HPH in examining the raw data and watching the accretion patterns, the [contact] meme will change *everything*. It will do so at such core levels that archetypes

themselves will alter, disappear, and new ones float into our collective consciousness. This cannot be overstated (apparently), given the sheer size of the [contact] meme supporting sets and the huge numbers of cross links. Just a the landscape around us can be altered by weather to the point that we 'feel' an 'perceive' ourselves in an 'altered planet' as snow, or storms totally change the local environment overnight, so will the human world be changed by the awareness of [contact] with [other/aliens] and *all* its implications start creeping in like a slow moving, very dense fog. As an unstoppable natural phenomena, the fogs of [confusion] generated by the [contact] meme will continue to envelop more and more of daily life over these next 2/two years. Continuing to [pressure] the [release of emotional tension language] to the top the [contact] meme is now showing as being involved deeply in the pending [9/nine years revolution (against the illuminatists and their minions/allies)]. T data seems to suggest that as [insurrection] flares up across the planet, it does as pockets of [fire] and [light] seen dimly (initially) through the [dense fogs of contact] which will cover the whole of the planet as a mist that rolls in, dampening everything, and lending all actions new [import] and [meaning].

We are left with the words of Rabindranath Tagore (previous century poet/writer/thinker from India) who described the proper mental position for a aware observer as

"The mountain remains unmoved at seeming defeat by the mist."

As the events of these next few years flow into your world, remember that the endless chaos of the times can be considered to be the mist to the mountain th is your conscious awareness. Rabindranath warns, as do many of those in the know, that the [challenges] of the future are met by the attitude of the ever-present moment which is now. Yet again another admonition to [find your center] and to hang on to that attitude as things are going to get a bit misty out there.

###

We will have the speculator slices posted by late on Sunday, the 27th, but do not expect any cheering news. If you are still into trading in the paper markets in any form, you are at risk of a total loss as the [lock down/seizure] of the [markets entity] is still growing, and is gaining lots of new values within the immediacy values sets.

Part Four will examine the Terra entity, and other smaller entities that have been deliberately left out of the interpretation so far in this series. It is expecte to be posted by late on Saturday, August 2.
