Meta Arts - Corks/Bouchons

The coming Fall (here in northern hemisphere) is shown by the accretion patterns within modelspace as being a rare time in which all sorts of currently static situations progress through profound, and visible change. As in throwing a boulder into a small pond creates a wave which disturbs all life in the pond, and perhaps even the shape of the containment of the waters, the period from mid September through to the end of January 2009 is indicated as being a time of [conflicting/contending waves] which will bounce humanity around like billions of small corks on very agitated waters.

The causes of the agitation of the waves bobbing humanity up and down are indicated as being split among several larger themes which include [wars/reversals], [revolutions], [economic collapse/endings], [flooding/earthquakes], and [political corruption at a very evil level].

The changes of Fall require the preparations of Summer. . Our modelspace movements suggest that the Summer Olympics will held against a very troubled and chaotic background. As will the rest of the disturbing events of Summer which help us all stumble into a very change driven Fall.

Please note that the report below, as with all our work, has an in built bias toward extremes driven by our numeric encoding in an attempt to capture emotional trends. Basically we are so crude at this work that we can only capture extremes of expression, and frequently miss the nuances which develop in manifesting circumstances such that they are mitigated away from the extremes forecast. Basically, it is not going to be as bad as it is portrayed below. Whew... that is a real relief, as I am sure you will come to understand.

Markets - Dark Spring

The data sets accruing to the Markets entity as the modelspace is progressed through Spring are not encouraging. The primary rising aspect/attribute set is headed by [darkening/loss_of_light]. This set is supported at its primary level by [hopeless situation], and [trapped], and [entrapped], and [stuck/restrained] by [manifesting circumstances]. The whole of the Markets entity also 'walks its talk' by becoming very dark due to the large number of cross links which begin to accrue along with the [darkening] aspect. The majority of these cross links, without regard to which entity is also involved {ed note: Bushista, Populace/USofA, GlobalPop, et cetera}, are terminating in sub sets headed by, or obtaining support from the context of [military, usofa]. The implication at the archetypical level is that the 'fortunes of those in the markets are now tied/bound to the fortunes of the USofA military'. This is being shown as an [emotional] binding, which emphasis on the [intensity] values, and the [duration] value sets within the lexicon. Yet another way of saying this is that the actions of the USofA military over the rest of Spring will contribute the greater majority of 'emotional impetus' to how the markets behave.

Other supporting sub sets for the [binding] of the [markets emotional energies] to the [emotional energies around the USofA military] include aspect/attribute sets for bespoke [bad luck], and [down (on their) luck]. We further have aspect/attribute sets suggesting that [harassment/badgering/bullying] of the [usofa military] will be providing a large amount of emotional push to [market behavior] over the rest of Spring and just into Summer.

The data sets explicitly are labeling this as [bad times] for the Markets entity, and suggest that [summer] will be [worse], and further that [heat sickness] will present [gasping behavior] in mid through late Summer. This [gasping behavior] is also defined as [ill winds], or [sour breath], or [bile breath]. Not a good sign probably. The long range data values brought in via association with immediacy sets are pointing to a [bad summer] turning [rotten in fall].

Those aspect/attribute sets which describe the current state of the Markets entity, as well as those which are gained over the remainder of Spring are headed by the set of [dangerous condition]. This set is supported at the primary level by [requires great care], and [delicate care/touch needed]. Further sets in the same vein are found to continue down the supporting chain for over 100/one-hundred levels of aspect/attribute set connections. This likely is not a good sign as there is no evidence that the powers that be who own the [markets] have anything like a [gentle touch].

The supporting sets accruing as the Markets entity moves forward across Spring and toward Summer include [bad fate], and [suffer hardships], and [crazy/insane actions/behavior]. Further supporting sets come in clumps near the end of Spring and are generally under the aspect/attribute set of [bad/wrong elements]. This in its turn is supported by [exploitive] and [second-rate] and [lack of sight/vision]. Further references to body functions {ed note: very deep archetypes, so likely important} include [lack of voice/mute], and [wounds (in) large muscles]. These sub sets gain considerable support as the Markets entity nears the end of Spring where the data indicates that a [sudden storm] will [overturn] the [whole boat]. There are many levels in support of the [overturning] which include references to [risking dangers], and [friends at risk of loss], and [demonstrations of a bad time/period]. Note that this area is heavily participatory in the [revolution] meta data layer.

As the Markets entity crosses the solstice into Summer, the data sets gain values around [misguided] and [greedy] which are themselves in support via cross links of [secrets revealed] within the populace entities, and further are also directly holding [revealing of secret plans]. This last is explicitly referencing [hidden knowledge] which causes [flight (from the) markets] when it comes to light. The data suggest that at some point in late Spring, some [participants] will discover this [hidden knowledge (of the) intent (of the) powers-that-be], and will [exit] before the [dangerous situation] manifests.

There are other data sets in support which tie the [observation/viewing] of the [hidden knowledge] to a pending [arrest]. The data suggests that a public [visibility] opportunity associated with the [arrest] will give those who have [suspicions] an opportunity to [confirm greater than the worst]. This area is replete with references to [evil plan], as well as descriptors pointing to the [plan (of the relatives)] being [evil] beyond our [ability to grasp]. This descriptor set apparently is providing a view of those [speculators] who will [discover] to their [horror] just how [deep] they have been [involved], and [manipulated/played]. It does not bode well for the Markets as Summer matures.

GlobalPop - Pak'a Bone, Juggling Oranges

As the modelspace is progressed through the June [solstice], the data sets within GlobalPop begin to accrue a new set of supporting structures under [pakistan] headed by the aspect/attributes of [boiling/foaming]. The aspect/attributes under [boiling/foaming] begin to appear in the [pakistan] sub set as the entity is the area of mid May, and the accretion pattern continues

with a slight rise until about mid June, however it is not until the [solstice] is past that [boiling] rises to the top of the aspect/attribute set to take the descriptive lead. The indications are for a [rocky] and [tumultuous] late Spring. However the patterns suggest that this is merely a staging of the necessary components for the defining period of this language which comes in mid August in a span of days from the 13th through the 20th. During this latter point, the [boiling/foaming] political pot that is Pakistan is showing as [erupting] or [boiling over]. The dominant aspects for this very tense 7/seven days are [violence] and [extreme (religious) emotions]. Both of these aspect/attribute sets are provided some of their support from [painful] and [crushing (to the) spirit] sub sets which position in the GlobalPop entity with an abrupt appearance in that fateful week in mid August. These sets continue to grow support at a steady level until the modelspace is progressed through the last of the ALTA 1308 longer term value sets which extend from mid September through December of 2008. This sub set of GlobalPop entity, which is to say the [pakistan] group of lexical structures is heavily cross linked to the Bushista, and the Populace/USofA entities. In the case of both the [pakistan] area of GlobalPop provides support for aspects such as [upheaval], [reversal (of) past accomplishments], and [retreat (under) crushing fire].

From mid-September out through December of 2008, the combination of entity sub sets around Pakistan suggest that a [violent struggle] with many [battles] will be very [visible] within the global mediastream. These [battles] are showing as actual, and not merely [political], though the cross links into the Populace/USofA indicate that the [conflagration (of/in) pakistan] will be a huge boost to the already existent [chaos] in the political process here in the USofA. Note that this will *not* be good for any of the [establishment] or [power elites] as the [pakistan fires] are indicated to [burn out/expose by violent flames] many of the [longest hidden secrets].

It is interesting to note that the [pakistan eruption] will occur within the already identified crux/crucial time around October 7th. The GlobalPop entity also gains a number of new sets, all cross linked over to the Populace/USofA, during this time of mid-September out through early November which are within descriptors indicating [attack(s)]. These [attack(s)] aspect/attribute sets continue to grow over the period from late September through to late January 2009.

The data sets have a new context which we have labeled the [cern collider]. This context is shared between the GlobalPop entity, and the SpaceGoatFarts entity. This last is due to the large number of [unknown] elements involved with the CERN Hadron Collider. The GlobalPop entity contains the majority of the [known] components, as best we can express them, and the SpaceGoatFarts entity holds the totality of the context, including all the [unknown], and [officially denied] sub contexts.

Assuming that we are interpreting the context within the GlobalPop sub set correct, the [cern collider] will be having a [good] Spring, followed by a [troublesome] Summer, and a [disastrous] Fall. The data, as it is moved along with the entity through modelspace over [spring], indicates that the [cern collider] will [come under the protection] of a [very rich prince] who has [large numbers of resources] to place [in protection] of the [effort]. This [prince] is described as being [of horsepower] or [having lots of horsepower/power /energy] and the [desire/lust] for an [audience/knowing] of the [infinite]. The [prince] will/has directed the [controllers] of the [cern collider] to [race (the developing/manifesting) circumstances] and to [progress (in the) juggling of the Oranges]. This last reference is taken as a place holder for a label which we do not yet have within the context, and thus the data set has supplied the closest lexical link in emotional summations, that is, [oranges]. The aspect/attributes sets gained as the GlobalPop entity is progressed through Spring show that [finally 3/three oranges (are) juggled] after [great difficulty] in [learning the technique]. Then as Spring wanes, and we progress into Summer, the [cern collider] sub set is shown as [learning] to [juggle] first [4/four oranges], then [5/five], and finally [6/six oranges]. At this point the TPTB and the [extremely

wealthy prince] arrive and [pass around praise] and [rewards] before [settling down] to [plan future business]. It is at this point that we begin to see a new aspect/attribute set of small size but large emotional summation values appear in support of the [cern collider] sub set. This aspect/attribute set is headed by [spiritual/ki/chi/prana/unity], and contains support at the primary level for a [debt] which is described as being [incurred]. The [spiritual debt] is further supported by [deep], and [great/large]. This [spiritual debt] is shown as [arising/leaping from obedience] and having [generational impacts]. The progression of the modelspace brings further support for [advancement/success] in [summer] which is also supported by [damned/cursed]. Further the [cursed success] is indicated to bring [communications] from a [female ancestor]. Hmmm. So the thing is a giant electro-mechanical medium? As with most [gargantuan] enterprises pursued by humans, things aft gang aglay. In this case the [fall] is indicated to bring [illness], and [strangeness], as we watch much of the emotional energies of the [cern collider] shift over from the GlobalPop entity into the SpaceGoatFarts entity. As this emotional energy slides over, the GlobalPop entity has the primary rising support for the [cern collider] sub set coming from [illness] which is in its turn supported by [surreal/imagined/dreamlike]. Hmmmm. Probably not a good sign.

Populace/USofA - Petty Problems, Spitting, Pak Disorder, Desperate Despots, Fall Attacks

Poor McCain, the Republican party de facto nominee is showing within the Populace/USofA entity as running into [severe issues/problems] in [May/June] relative to a number of areas, but [chief] among them is the [greed/lust] for [money]. This [money lust] sub set suggests that the [insatiable desire] will go [unmet/unrequited] over the last of Spring and into the Summer [solstice]. The data is being interpreted under the [twin/doubled aspect] sub set which suggests that not only the [lack of money] will be [publicized], but so will the [greed/lust] attribute language as well. The data suggests via the very high [visibility] summations that the [teevee faces/mouthpieces/propagandists] will be discussing several of the [greed/lust] attributes around the [mccain/republican] campaign over these last weeks of Spring and the first weeks of Summer. Further the data points to several [visuals] which will be [viewed] which bring out the [faces of lust] such that the [candidacy] will be [tainted]. This data set grows parallel to the [illness/disease] problems which also will become [visible] in late May, and which are interconnected to the [lust for money] problem. Further issues will arise for both the [candidate] and the [backing corporations] in the rising [visibility] of how [other people's money] is being used. There are also some [sexual scandal] hints which point to [increased teevee coverage] due to the [salacious] nature of the [core problem].

Along with the [lust for money faces] which the Populace/USofA entity shows as [creating active revulsion/disgust] among the [populace], the [candidate] himself will be [personally involved/center_of] several large and very/highly [visible] [gaffs/bad sayings]. The indications are from the [visibility] summations that these [gaffs] will place the [face of lust] into the [public attention] so repeatedly as to create its own [caricature] .

Then, as May and June fade into Summer, the data suggests that the [gaffs/bad speaking] will be joined by [attacks] on the [personality] of the [candidate] as well as the [core values] of the [republican party] by some [insiders/secret enemies]. These [insider leaks] are showing as being [illness inducing/vomit producing/sickening] and further are indicated to [consume] vast quantities of the [energy/resources/money] of the [party] to [counter/rebut].

As the [solstice] is passed, the [angst] and [dithering] about the [mccain woes] will fade slightly, and the early part of the month of July is indicated to bring a very slight [resurgence] in the [positive visibility] of the [republican candidate], however as July becomes [hotter] both [politically] and [socially], the data points toward [serious/real obstacles] will emerge from the [background] of the

[money nature] of the [candidate/party] which will so further [stress] the [candidate] that his [health] will be affected. This [health crisis] is showing as a [point/period] of [irrevocable change] or a [turning point] of the [campaign].

With the coming of August, the emotional tone of things changes dramatically. The data set indicates that [mccain] will become his [own worst] enemy. Further the sub sets are headed by aspects pointing toward a [rage] and a [tirade] which will become so [visible] as to [excite imitations] {ed note: likely tons of YouTube samples being taken to the far edge of things}.

As far as the [democratic party], the last of Spring and most of Summer will be dominated by [viscous attack language]. This [attack language] is showing as [hate filled], and is extensively supported by [desperation]. The [desperation] is a bespoke emotional tone of serious summation, that is to say, that the [desperation] emotion within the [democratic party] will extend down several levels in the social memes, as well as being broadly applied. The [desperation] sub set suggests that [hillary] will be [desperate] and will [increase attacks] including [sub tabula/hidden enemies] attacks on [obama], and also that [obama] will be [desperate] in his response in that the [attacks] will force to the [visible] forefront an aspect of [ruthlessness] which he would seemingly like to avoid displaying. Further [desperation] will come at several levels within the [party organization] as the [elimination] of the [party's cohesion] becomes more apparent [in their eyes] as Summer progresses. Other supporting sets within the [desperation] aspect/attribute include [brutal[and [shocking] and [sudden] attacks as well as [violence]. Deeper in the supporting layers we find that an instance of a [ruthless], [pointed] and [centered/focused] response will gain such [visibility] as to be a [defining] moment for the next [2/two years]. The timing clues suggest that the 'wave' of these impacts on [obama] will extend from about May 4th through to July 26th, with the 'peak' of the emotional tone coming in the week of July 26. For [hillary], the same period has language going to [intense] with support from [pressure] and [chaotic] and [high speed/fast occurrences/shortened time]. Further the primary aspect/attribute sets are headed by [impatient], [brutal/brutish/cruel], and [reactive]. The whole of the period from May 1 to about June 30th will be very [wearing/tiring /exhausting] for the [hillary] campaign, as well as the [candidate] herself. The data further suggests via supporting aspect/attributes that [surprises (will be/are) bad], and that the [hillary] campaign has several [surprises] coming in June which will [hollow] her [efforts]. In early May, say from about the 6th through to the 12th or so, [hillary] will be dealing with [unexpected obstacles] which will arise from [family] and which will [conjunct/combine] with [legal problems] such that [june] will be [felt] by supporters as being [hellacious], and [rushing/exhausting/draining].

The data shows that the whole of the [election process], as differentiated from the [campaigning] will be under extreme [stress] between May 31 and June 17th, and then again in August from the 3rd out to the 19th. These periods relate to a broader level of societal stress which has very large inputs from [economy] and from [wars]. This last is extensively cross linked over to the Bushista entity where many of the terminating points are held in [coup de tat] and [revolution] as well as [foreign adventures/invasions]. Other areas of termination within Bushista goes to [defeats] and [retreats] within the [war] sub set, and a set of corresponding [retreat/defeat] within both [economy] and [environment/climate] sub sets in that entity.

Cross links over to the GlobalPop entity from both the Populace/USofA entity and the Bushista entity show that the [social order] within the USofA will be [rocked/shaken] by global events, especially in [pakistan, iraq, israel] over early through mid August. These events seem to be related by modelspace with the [calamity] sub set which is both rising, and dominant within the Populace/USofA entity from mid September on through the end of January 2009. The aspect/attribute set headed by [calamity] is so thickly cross linked to the Bushista entity that the links have to be removed in order to view the underlying entity structures. A tedious process which interferes with the interpretation, and which *certainly* does not bode well for the USofA

[populace] nor [ruling/political elite] during that time. The [calamity] sub set gains its initial flush of [visibility] values beginning on October 7th and continues to have [visibility] above the minimum threshold levels through at least the end of January 2009.

The [calamity] sub set is supported at the primary level by an aspect/attribute set headed by [attacks]. The data indicates that the [usofa military] will be under [extreme duress] over Fall as [restrictions on movements] and [encounters with scarcity] meta data layers are dominating both the [usofa economy], and subsequently shown as [limiting/curtailing/restricting] the ability to [project power]. These meta data layers are indicated to [severely impact/limit] the [potentials] during a very trying time globally. The data indicates that this includes actual [attacks] on the USofA {ed note: some indications for Continental US, but certainly those foreign bases where commercial power is 'protected' by the Army}. This sub set is heavily cross linked over to the Bushista entity where the termination points include aspect/attributes of [dithering] and [drunken melee] and [bad thinking]. There are Bushista entity sub sets in support showing a [drunken binge] which is responsible for [wearing down/deteriorating] the [body] to the point that [bad decisions] are [compounded] by [ill health].

Within the Populace/USofA entity this Fall is shown as being [tripled/thrice_multiplied] in the [calamity] sub set. Not only are [attacks] against [usofa power elite interests] such as [oil companies], [banks], and other corporate organizations indicated, but these will be occurring during a [flood] of other 'bad news'. This [flood] meme is itself supported by dual [flood] descriptors indicating actual [flooding] of the land, as well as expressing the archetype of [floods of bad news]. In the latter sub set are cross links to the Bushista entity which are headed by [failure (to meet) additional difficulties].

It is necessary to consider, for a moment, just how our technique works, and how it can be interpreted in the reverse of actual events. So we will note that for a number of months in the past we had a [wounding] which was associated with [cheney], and which we interpreted as [cheney being wounded/ill]. This, of course was the opposite of what occurred in that it was Cheney who [wounded] his attorney. In that case the aspect of [wounding] and its association with Vice Dick Cheney was interpreted in the 'wrong direction'. This being said, we must therefore acknowledge that we could also be applying the wrong subject-to-object interpretation on the aspect of [attacks], and therefore it may be that the Bushista's entity focus on [aggression], and [brutality] is pointing toward yet another instance of the Bushies using the USofA military to [attack] some other country. *HOWEVER*, even if this is correct, and the [attacks] are by the USofA military against others, the end result is still clear for the [populace/USofA] and that result is described by the aspect of [calamity].

If we take the very extensive layers of cross links from the Bushista entity into consideration, and sum both the directly held value sets as well as the cross linked sub sets, then the highest level of aspect/attribute set associated by the summations of the emotional values produces the aspect of [return (of) energies]. This [return] sub set can also be interpreted as [coming back] or [return (of) energies offered/extended]. Soooo....since the [bushies] are putting out [negative] energies, we can expect that a [returning flood] of [negative consequences] is indeed being forecast by the very sudden and steep shift into release language.

Does the data indicate an [attack] on the [continental USofA]? Well, yes, however this is part of the [return] phase of the [cycle of violence] most recently reinforced by the [bush regime]. And given the extensive [holdings/paper_ownership] of the [usofa power elite] in [foreign countries], the [attacks] are just as likely to be [foreign/off_shore] as within the [continental USofA]. The modelspace actually has data sets going to the [flood] of [attacks/confrontations] which will fill up the [visibility] values for Fall and Winter.

Terra - Floating Heads, Stinky Muds, Sky Tortoises, Yin Crisis, San Juan de Fuck'ya

There are a number of heavily cross linked areas within the Terra entity which go over to the Populace/USofA entity, but not to the GlobalPop entity. The interpretation is that a group of [terra intrusions] will be affecting the [continental usofa] or [north american continent] over Summer, which, while they will also affect the larger global populace, will *not* be directly impacting people outside of [continental north america]. The data suggests that the [summer] will include several [natural disasters] which will combine in their impacts to cause a [dangerous situation] at a [national] level.

Some of the [dangerous situation] language includes references to [cattle body parts], including [heads] and [bones] which will be [discovered/encountered] in [shallow waters]. The [shallow waters] are a significant contributor to the emotional summations around the [disaster] word set, and these are also in support of [flooding]. We note that the [flooding] meme continues to grow within the Populace/USofA entity, and is now gaining support from [splits/tears /breaks/ruptures] in the [lands]. Further these [tears] are supported by language about the [release] of [contaminants] which are themselves summed to [dire impacts/results] with a [multiple generations] level of duration. Since 'body part' references are deep archetypes, we have a tendency to take the appearance of such language very seriously. Now we note that [cows skulls] and [corpse(s) of cattle] are very frequent within the support language for [flood] for the Terra entity and most of these are cross linked over to the Populace/USofA entity. Further there are a large number of USofA centric geographic references also within the supporting sets. Further we find that [transportation] sub set within Terra entity has a rising aspect/attribute set of [blocked/bouchon/corked] with support from [floating cattle corpses], and [foul/offal] and [disease bearing flesh]. Probably this is not good for the Summer driving season.

The [flooding] meme is now growing to include other supporting language besides the [release of (vast quantities) of contaminants] and these include [cars (sunk/deep into) mud], and [foul mud covers wheels] which in its turn is supported by [restrictions on movements]. These also are within the general support for the [flooding] meme in both Terra entities as well as the Populace/USofA entity. The data sets around [muds] continue to grow and are appearing within the Terra entity as modelspace is progressed into the last part of June. Several of the cross links from the [muds gripping wheels] within the Terra entity are cross linked over to the Populace/USofA entity where the termination points include the aspect/attribute set for [crying/wailing /bemoaning].

The Terra entity continues to build data for [spring] around the [thunder within (the) planet/ground]. This [thunder] aspect/attribute set has [pulsating] as its primary supporting aspect/attribute set, and that in its turn has [broken crust] as its primary support. As the set is examined we note that the [pulsations within the ground] are also supported by [cracks (open) (as in/like a) seed]. Other supporting aspect/attribute sets include [open (like a/an in a) mouth], and [deep chasm (fills with) pulsations]. These sets are indicated by the [visibility] level to reach the point of wide spread discussion within the global mediastream. The data indicates via the summation of the emotional tone totals, as well as the individual sums for [duration], and [intensity], that the language becoming [visible] over this issues will have a *huge* level of [anxiety], and [bespoke fear]. The [pulsations within the ground] sub set gains the most in its visibility as the modelspace is progressed beyond May 13th, and it continues to scale thereafter. The idea coming across is of a [general fear of unknown earth shaking]. This area is cross linked to the SpaceGoatFarts entity were the termination point is within the now familiar sub set of [unknown energies from space]. The data sets around this [pulsations] issue continue to grow as we progress modelspace forward into Summer where the general tone of the

supporting sets contains [spreading/growing] as its primary support. The indications from the duration fields summations are pointing to an 'effect' or 'condition' which will be growing over time, and subsequently including [anxiety] and [fearful stress] as a general populace background emotion. Without regard to [earthquakes] which will also be manifesting, the [ground pulsations] are showing as a growing presence in daily life globally over the rest of the year. It appears from the data that [spring] is the beginning point of the general [anxiety creep] which also grows over the rest of the year.

The [pulsations in ground] sub set derives significant emotional support from the SpaceGoatFarts cross links, and these cross links seemingly grow faster than the general set within Terra. The idea suggested is that perhaps some point in late Spring will bring an awareness that a [causal/direct link/connection] exists between the [pulsation phenomena] and the [unknown energies from space]. The SpaceGoatFarts entity cross links originate in several areas of the Terra entity which are suggesting that [occurrences/episodes] of the [pulsations] in [spring] will be bringing [disruptions] to [mealtimes]. These [disruptions] are described as being such that [observers] will be [looking upward] with their [mouths agape/open]. Further there are SpaceGoatFarts termination points suggesting that [sky tortoises] will be among the imagery coming out of the [episodes]. Further, there are descriptors in the supporting aspect/attribute sets within Terra entity for [tiger stripes] which will be [sky viewed/seen] during the [sky tortoise] episode. The data set does model [chemtrails], so this [tiger stripes in the sky] reference is *not* going to [chemtrails] as that area is not involved within the major sub set of the [pulsations]. This indicates that a new phenomena which the data can only reference obliquely is likely being forecast. These [tiger stripes] may indicate some extra solar system activity, though if so, there will have to be a very high level of [visibility] within the global mediastream to reach the levels of emotional impacts noted in the data.

Further issues will relate the [pulsations] within the Terra entity to the [search for food] within the GlobalPop entity. Again, as with the SpaceGoatFarts entity, the cross links arise within the Terra entity in all levels of the support for [pulsations in ground]. There are linguistic structures in support which go to the idea of [searching for food] within the [earth] is now being [discussed/visible] and is [connected] directly to the [search for meanings/understandings] within the [unknown energies from space]. The idea coming across is that the global mediastream will be engaged in a continuing discussion about the connection of [food problems] here on terra to [space energies]. The data suggests that the [problems] under discussion will include the [absence] of [growth/germination]. The data points to several levels of discussion ranging from [weather/climate] out to the much more significant [energetic volumes/types]. It is this more extreme end of the range of discussion which has the highest levels of emotional summations attached, and these are pointing toward a [yin energy crisis]. There are further sub sets in support, both in the GlobalPop, and in the Terra entities which suggest that some [humble/common/regular persons] will be [globally visible] as they are offered up as examples of [yin pullers/aggregators]. The [visibility] of this [yin crisis] will vary greatly, as will the wording applied to the [energy problems] at its heart. The linguistics range from the mundane, through the religious, into the scientific and out the other side. We have chosen to label the issue the [yin energy crisis] as it best reflects the mean descriptor set. This area is in direct support of the [revolution] meta data layer, especially as it affects the [global scientific culture], and is also participating in support for [duality], and [transformation] meta data layers.

Further supporting sub sets for the [pulsations] focus on the [deep ground] with many supporting layers for [peering into/examining/investigating] as the [pulsations] are forecast to both [persist] and to [spread/grow]. In the [spread] sub set are descriptors for [tiny islands] separated from [mainland] by [small passages]. These [tiny islands] will be the next area in which the [pulsations] phenomena manifests. The [islands] are described further as having [tall promontories] from which it is possible to [look down upon] the [fixed state] of the [passages]. This area also contains references to [nourishment/food] and

[crises] and [illegal actions]. These are somehow associated with the [tiny islands]. Further data support comes from internal cross links over to the [tiger stripes in sky], and the [essence of foods/life]. Then more oblique support comes from [visible discussions] with a [famous prophet] {ed note: via cross link to the Populace/USofA entity}, who would be very well advised to use [extreme caution] in what he/she will say about the [pulsations]. Hmmm...yet another Larry King exclusive?

The [pulsations] sub set indicates that there will be all manner of [calls/cries for action], but that this would indeed be very stupid as the [phenomena] will only be at the [germination stage] at that point, and the [calls/cries for action] will be based on a very [incomplete understanding] of the [nature/essence of yin-and-yang]. This area also contains support from more prosaic language such as [high energy particles], and [streams (of) data]. This area also participates within the [millions of small particles] meme which is growing across a number of entity sub sets.

The [pulsation phenomena] is described as itself [undergoing transformation] later in the year. At that point in the modelspace we have a strong reappearance of the [female personality] who has been showing up in the reports for over a year now. This [female person], with associations to [amazonia] and the [central highlands] of America (central America), is also described as being the/a [uniter], and being [visible] within the [background] or [incidental to] a [wedding] this Summer. We now get a little more details from the [pulsations] data set in that directly held values under [female personality] include [comments (on) restrained energy], and [exhibits (strange/unknown) personal energies]. This apparently happens at or slightly after the [transformational] point for the [ground pulsations].

As a really strange note, there are directly held supporting sets of [pulsations] which are headed by [silver] and [gold]. In both cases the aspect/attributes are referring to first the actual [metals], and secondly to their various archetypical natures. Both are somehow positively related to the [pulsations phenomena].

Within the Terra entity, the [wedding] sub set continues to grow its association with the [female personality]. The [wedding] of the [sister/female relative] is now associated with the [east coast] of the USofA, and further is indicated to be [interrupted] by [earthquakes]. We note that the [earthquakes] are *not* at the location of the [wedding], but are such that the [guests] will be [involved] with the [earthquake recovery], and are described as [spilling out] of the [wedding location] like [ants] out of a [fiery nest]. It will apparently be this image which will bring our first global mediastream images of the [female personality] as she will be in the background as a [wedding guest]. The data sets are pointing toward this [earthquake] as being the [first of parts] of the [natural disaster] which will be in place here in the USofA by the end of the year. The data is suggesting that a [combination/union/joining] of manifesting circumstances which are shown as being spread over the year will combine to form the basis of the [calamitous circumstances] for the [populace/usofa] by/through Fall. We have some preponderance of data sets pointing toward the [offshore] of the [northern west coast] of the USofA as being a [triangulated point] for the location of the [earthquake]. The [earthquake] is described as being a [lifting event], and [inducing (rolling) waves] which further are described as [altering hills] and [breaking dams] as the [waves] course [toward/to the east]. Further data suggests that the [earthquake] will cause [flooding] both immediately, and later in the Fall as the [aquifers] and [drainage patterns] of the lands have been altered. In addition, the [flooding] aspect/attribute set applies to the [earthquake] in that it appears as a [flood of earthquakes] rather than merely a single event. The data suggests so many [tremors] that it will be [academic] as to which to pick for the [earthquake] and which to pick as [aftershocks].

Conclusion - Part Zero: Lumpy Shadows, Void Process

The idea of a [yin energy crisis] is going to be a tough bit of universe in the gnawing. To understand the concept as it is being discovered within our data

we begin by pointing out that apparently the [details] of situations, or rather the [explanations] which will be offered for the details of planetary biospheric breakdown are not necessarily pertinent. That is to say, that many theories for bee hive collapse may be offered, and some may even have substance, but that these details are now becoming far less important as time progresses, and greater patterns begin to emerge from the shadows forming the background of daily life here on terra.

Continuing with the example of the bee hive collapse, we make a lateral move through emerging reality to discover that [disappearances] are not related to only bees, but are showing up in many different species around the planet. Evidence comes from [fisheries], and [aqua farming], and [land farming] and [commercial culturing] which all are showing instances or parts of a larger pattern which could be labeled as [disappearances/lack of]. This [lack of] descriptor set could then be further described by the supporting language of [energy to continue], or [generative energy]. This in turn can be further refined in description to [continuation], or [extension (into the) future. So as the linguistics are followed from real world examples we can move our minds along until there may be the potential of glimpsing the larger pattern, which *could* be labeled as [disappearance of the will/ability to continue in time]. It is our conclusion that this trend accounts for the many points of prophecy predicting a 'die off' here on earth, and that the trend line further is directly responsible for the language expressed within the [die off] context. However, please note the pattern is much, much larger than the small encapsulation found in [die off].

Once glimpsed, the presenting pattern can be re-viewed, and re-labeled, and the [yin energy crisis] label results. The label is fine, but seeing the pattern is only valid if projections of future expressions of the pattern can be forecast with some reasonable accuracy. We think that we have been able to reach at least the broader levels of understanding about this particular pattern, and could project that the growth of the pattern of [yin energy crisis] will next make the [visible] discussions in global mediastream under the label of [lack of germination] or [void process]. This [void process] is very broad in scope and points toward a [lack of generative energy] such that [fertile eggs] will not hatch, embryos will not develop, seeds will not germinate, pollination will not 'take', and other examples of the [life force/prana/chi/ki] being [interrupted]. Of course, the aware observer, seeking the broader patterns, will not be too distracted by the 'details' offered as to the individual examples of the generative process gone awry, and will instead note that yet another part of the larger pattern emerges.

There are some supporting layers within the [yin energy crisis] which support the idea of [temporary], but we need to note that this language is vague and could be referring to a multiple year period.

The data for the [yin energy crisis] does not bode well for life here on earth. Any grace in the situation appears as we note that 2008 is the year of 'manifestation' and that here in this universe, manifestations are not static (at least so far), and change follows all emergence. As humans frequently do not like change, and take all change as being a personal blessing or curse, the tendency at times is to wish for a state of [no change]. When even marginally wakened to the nature of reality, all observers desperately hope that such a wish is never granted.

****

The speculator slices will be posted by late on Sunday, May 4.

We expect to have Part One posted by late on Sunday, May 11.
