ALTA 0508 - Part One

Asymmetric Language Trend Analysis Intelligence Report
'Changes in language precede changes in behavior.'
By Tenax SE for HalfPastHuman.com

Note this report is offered for entertainment value only. Any resemblance between the events portrayed in this report and any developing reality is purely co-incidental and in no manner represents foreknowledge on the part of the authors of this report.

Note that this information is derived from humans expressing themselves on the internet. As such, human emotional values and the words used to express them are being sampled and interpreted here, NOT THE FUTURE. Any resemblance between this report and future developments is entirely in the mind of the perceiver and does not exist in reality. The Authors cannot be held liable for accuracy of lack thereof in this report. Authors cannot be held liable for human interpretation of this report nor any action any human takes as a result of this report. Any human foolish enough to alter their behavior based on this entertainment-only analysis demonstrates themselves incapable of rational appreciation of reality, and the authors are explicitly held harmless and blameless for any and all such mental aberrations on the part of the reader.

9.01.2007

Note: Entities are identified by a blue typeface. Aspect words are enclosed in brackets [aspect]. Attribute words/phrases are within parentheses (attributes). Near sentences or concepts composed of both leading aspect and trailing attributes are single quoted '. Interpretive editorial comments are preceded by an asterisk *. Editorial notes are within {} curly braces. Navigation links are in *italicized bold green*, and red when visited.

Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

This report in the series created from 13.22 million reads of the 0508 series.

Meta Data - Continuing Sets

In an effort to maintain continuity it becomes necessary to review those data sets which have been discussed in previous ALTA reports and which are continuing to accrue values.

These sets include:

Entity	Set(s)	Continuation aspects/attributes
Terra	Antarctica - rising land	the [rising land] set continues to build against the image of [altering currents within ocean/atmosphere] as a result of the rising [underwater] of a [bridge/connection] between Antarctica and Patagonia
Terra	Antarctica - energies from space	This continues to build, albeit more slowly, and the indications from the current long term value processing that it *may* be visible in late Winter, 2007/2008.
Terra	Rivers in atmosphere	grows at steady pace, but now also showing for manifestation in Winter, early December and onward.
SpaceGoatFarts	scattered energies from space	Indicated for initial manifestation August 13th through the 16th, but also showing up as a [repeat event] for December 2007 through end of March of 2008
SpaceGoatFarts	Antarctica - energetic 'bursting' over continent	Still growing, but again, with longer term values indicating a [visible] manifestation *starting* in late Winter (January/February 2008)
Populace/USofA	employment crash	continues to accrue values in all sets including the immediacy values. Early visibility of this very long term emergent circumstances is forecast to appear in late Summer, 2007 with a rise in [visible] aspects within Press entity as we approach the September equinox. The impact is to be very very very large if the George postulate and the totality of emotional sums attached are good indicators.

|		
Populace/USofA	revolution/rebellion	Continues to gain values in both shorter term, and longer term value sets. The shorter term sets from ALTA 0308 are showing that 'rebellion' and 'mutiny' will surface in early Fall (October/November 2007), and that [bloody] aspects will be in place by March of 2008. Very important meme as the longer term values have very far reaching potentials which are explicitly referencing [multiple generations] to be impacted by the unfolding meme over the next 2/two years beginning with the Summer solstice.
SpaceGoatFarts	Contact/UFO	The UFO/contact and/or 'disclosure' meme grows with vigor in all sets since 2000. The very large level of emotional support values suggests that 'contact' or at least 'disclosure of contact' is a very real possibility within these next 2/years, and that is has a very high level of probability of appearing with [shocking suddenness] and *without* control by TPTB. This last is indicated by the continuing association with SpaceGoatFarts as opposed to the same descriptor set within ThePowersThatBe entity. Supposition is that the "best laid plans of aliens and men, aft gang aglay".
Terra	shaky period	The [earthquake quivering period] is still building values in the longer term sets. This may be indicative of the current 'shakes' continuing for at least another year. This *might* be a good thing as the 'ending' punctuation for the 'time of quivers/shakes' is shown as 3/three really good sized earthquakes spaced 2/two close together, with a small 'whew' breathing space following, then the last of the very large quakes.
Terra	fungus amongst us	This area of rising 'environmental' alterations to the planetary 'biozone' continues to grow. It has been characterized as 'fungus amongst us' as there will be the appearance, and forced coping, with new forms of 'fungal intrusions' into human/plant/animal life. The hopeful cynic wishes that 'fungus' would also be irritating to the space aliens as well.
Populace/USofA	power/energy rolling shortages	Mostly visible as rolling shutdowns of electrical distribution system. Indications are for a 'regional outage' which is [never adequately explained], and thereafter a very much elevated 'near daily' manifestation of [blackouts]. Though short lived, these [blackouts] will be very troublesome.
Terra	Land rising	Indicated for the extreme southern oceans including the very southern portion of the Pacific, the land rising aspect has elements which are suggestive of an emergence in 2008. Remains to be seen, but a change in accretion patterns is definitively taking place.
Terra	transformation(s)	This set is participating in the 'transformations' meta data layer, and is also directly held within the Terra entity and is suggesting that [rising lands] will [alter/transform] the [global oceans/currents]. This in turn is shown as [transforming] the global weather.
Terra	global coastal event	This set is continuing to accrue data in immediacy, shorter term, and longer term values. The ratios are suggestive of a 'quickening' or 'approaching' of the event itself. Our best possible estimate is late 2008, or early 2009. We *think* our timing clues are good at this point.
Terra/Populace /Markets	planes can't fly	This set continues to grow in Terra, and via cross links in Populace/USofA, and GlobalPop, as well as Markets entity. Long term values accrual rates would *seemingly* indicate an early 2009 timeframe.
SpaceGoatFarts	restrictions on movement, encounters with scarcity	Both of these aspect sets are participatory within the meta data layers of the same names. In both cases, the aspect/attributes gain significantly in Fall of 2007 with a push upward towards February 2008 where the data shows these aspect/attributes going to vertical within SpaceGoatFarts entity

Bushista - Brutal Bitch Bites Butt

Karma, the 'brutal bitch', rules September for both Bushista and Populace/USofA. The [whips] of [fate] come out early for the Bushies with [new wars] emerging from their [box] in Iraq to bedevil into [oblivion] any idea of [smooth administration/management] of the Bush

wars of aggression against the Iraqi's. The data sets for the Bushista entity are bulging with immediacy values, *most* of which are participatory within the meta data layer of [conflict] going vertical in *all* components of the Bushista entity. This suggests that from the beginning of the month (actually September 2) [chaos] will be the [operative method] emerging from Bush based organizations. There are many [civilian] [organizations] referenced as being part of the [crumbling/dissolving] of [rational][response].

When the modelspace is progressed into September, the [accident(s)] of the first few days are rapidly replaced with [grandiose pronouncements] from the [addled] brain of the Bushista entity in response to the [resurgence] of [insurgence] and the [breaking out of the box] of the [new wars]. The cross links show a very substantial and profound 'side effect' here in the USofA to the [expansive/sweeping] actions of the [usofa military] in the Bush wars. As modelspace moves up to September 10, and then into the 11th, events in [iraq, qutar, and arabia] bring [global disruption]. There are hints in the immediacy values of a [bloody uprising] in [arabia] which is indicated to [propagate] out [global effects]. In response, the Bushista entity is indicating that [bold operations/plans] will be [undertaken]. The [response] phase from the [usofa military] is shown as extending out until the [equinox]. After that, the data sets are pointing to a [contraction] of the [military] as a [deflating balloon]. This is at least partially caused by Bushista issued [mad/crazy /inappropriate/mental_illness] [directives]. The results of the [contraction] and [disarray] will send out an emotional wave or [momentum] which will persist through the entire 72/seventy-two days of 'building emotional tension values' as indicated on the chart below.

Emotional Tension Trend Line to 5/08

Further problems are indicated for the Bushista entity at several key points in the month due almost *entirely* from [economic implosion]. The [emerging deflation] is shown both in directly held data sets as well as cross links so thick as to appear almost black in modelspace. The [deflation wave] has the highest [visibility] value we have yet run across so expect to hear the [deflation] word incessantly as long as mass communications last.

The immediacy data set for the Bushista entity is uncharacteristically dominated by [economic] and [debt] aspect sets. These descriptors are showing for a (week of) September 3rd [shift (in) awareness] of the [fear] at [official] levels. This [shift of awareness] will also set up a situation in which a short cycle culminating in December appears to those with the observational skills to detect it. This next cycle of [economic development/evolution] will have a 'pre-saying' descriptive event emerge over the next week. The ripples from this event will also dominate the [conflict] meta data aspect in Bushista for the next 3/three months {ed note: actually then next 3/three lunar months} and will peak in importance on or near November 28th. This peak of the cycle has cross links to Populace/USofA and GlobalPop where they terminate in areas dominated by [revolution] meta data layer.

The karma [outburst] which so bedevils Bushista in September begins with [violence], and [disruptions] and very rapidly, as modelspace

is progressed, proceeds into [degradation] and [economic peril]. This last has a large number of bespoke [fear] and [anxiety] aspects in support. There are indicators that the ubiquitous [flood] meme will surface relative to the [usofa dollar] as the [system (is) flooded] with dollars as the [implosion] begins in ernest. As noted the cycles set up by the immediacy values have their peak before the end of December, and the indications are that the [implosion/deflation] of the [economy] will proceed over the nearly 3/three months from September 19th through to December.

There are the usual data sets indicating that [bush, et al] will [remain loyal] to the [influential person] currently under attack as the [dollar N(ear) D(eath) E(xperience)] evolves over the month. Further descriptors are pointing to [officials fleeing] in cars [flying flags] and [demanding attention] for the [influential persons] inside. The [fleeing] is from [angry mobs/crowds], and will bring a [freshening] to the [fear] driving the Bushista entity over this month. The indications are that soon there will be [calls/crys] for the [head] of the [treasury] as a result of the [flashing speed] with which the [crisis] both [deepens] and is [increased/augmented/magnified] by [government/officialdom words and deeds].

Some of the perceived attacks on the Bushista entity will provoke a [grandiose verbiage] about a [response], but will also [expose] the [hypocrisy] at the same time. This will be [visible], and it will be in part responsible for the [mutiny] of the [mercenaries/soldiers] which will follow. This area participates in the [revolution] meme, and also seems to be forming a 'cycle set up' situation. If so it may be more clear when the shorter term values are processed next week.

Populace/USofA - Great Drama, Accident Pachinko, Dark Week

The prompting for the early posting of this Part One of the ALTA 0508 series was delivered by universe in the form of a data bulge which had specific value sets for specific days in early September.

As noted the 'karma bitch' bites butt early beginning with [extreme drama] on September 2, but in terms of sheer [activity], the [ball/dance /engagement] does not really get rolling until September 9th, persisting through to the early morning of the 12th, and sending out [retribution] waves which will [precipitate/catalytic_reaction] from the Bushista entity which in turn causes a 3/three month [upending] of the [known world].

But, to return to the Populace/USofA and the immediacy value set, the prognosis for Labor Day travel is incredibly [bad]. In the processed immediacy values the [great drama] and [dramatic transformations] aspects begin to take on significant emotional summation values starting very early on September 2, and gaining as the week progresses.

The day will start with [unexpected brightness] which is shown as [beginning/initiates] the [usofa populace] into [limping] across [broken turf/ground]. The [limping] [populace] archetype has been showing up in the ALTA reports for the Populace/USofA for the last year. The spreading of the [limping] archetype across many ALTA reports, and across all the data types {ed note: immediacy (3days-to-3weeks), shorter term (3/weeks to 3/months), longer term (3 to 18 months)} pretty much guarantees that this archetype will be manifesting at multiple levels. This will include personal levels for all readers of these reports who are members of the set Populace/USofA, as well as at multiple group levels. Thus it is to be expected that the [limping] will seemingly [seep/weep] from all aspects of life as the month begins. To the aware observer the multiplicity of [limping] will be quite easily viewed, as well as experienced.

The day of September 2nd will be progressing rapidly, along with the [sun], into [great drama] early in the day. The [building/growing drama] will lead to [restrictions on travel] as that meta data layer also begins manifesting at all levels. The implications from the data set are pointing to [power loss], [accidents], [disruptions], and [surprise/unexpected] [bindings] that will [mound up] throughout September 2 and into September 3. The [late at night] aspect begins the modelspace under the [great drama] sub set within the Populace/USofA.

The [flooding] meme picks up for the Populace/USofA on September 2, and grows throughout the next 4/four days. The meme is different from our 'regular' [flooding] aspect in that the supporting aspect/attribute sets include [mountains], and [rolling/boiling streams] as well as [seeping mud].The [flooding] meme has been a very continuous presence this past year, and shows no sign of ending soon. It gains significant values across the whole of the Populace/USofA entity as the modelspace is progressed forward through September. Along with the movement toward the equinox on September 23, the [flooding] meme sub set of [mud] gains the most in emotional tension summations. Further support comes from [destroyed/damaged] [property] which apparently will [grow (by) 5/five times]. This supporting set is cross linked over to [housing] under the Markets entity and it terminates in [losses/risks] with specific sub set termination in the supporting aspect/attribute of [nature_caused/terra_intrudes].

Separate from the [flooding] aspect, but within the supporting sets for [great drama] and [limping] is a specific set which contains references to both [1000/one-thousand miles] and [3000/three-thousand miles]. Both of these aspects are supported by directly held [visible] aspects, as well as by cross link to the Press entity. The implication is for [something] which will [affect across/from 1000 miles] as well as [3000/three-thousand miles]. In the latter case this specific set also is within the lexicon in the [national, continental, usofa] descriptor set. This is due to the popular notion that the [coasts] of the USofA are [3000/three thousand miles] apart. The data may be providing a metaphor for the physical or continental USofA. Under this sub set are directly held supporting aspect/attribute sets for [flying]. Just guessing, but a seeming interpretation could go toward 'something from 1000 miles away shuts down transcontinental travel for the day (or maybe more?)'.

Much of the [restrictions on travel] and the [limping] supporting aspects are themselves supported by [economic] and [job] and [money]

aspects. These are going toward an emotional [constriction] on [easy flow] in both [travel] and [spending]. This will continue for sometime as the immediacy values are at the extreme end of the range for the data type. The aspect for the [northeast] shows as a particular [cork] as well as a [restrictions (on) spending] center.

As the modelspace is progressed forward the [late at night] aspect set which begins the period of [national limping] for the Populace/USofA starts to gain details in the accruing supporting aspect/attribute sets. These are pointing toward a [night watchman] who the data indicates will be involved [5/five times] in the [emergence] of the [great/high drama]. An alternative interpretation would be that the [night watchman gets/makes 5/five passes/calls/actions]. Or that [5/five incidents] within the same locality are [drummed/sounded /driven/unbound/discovered] by the [night watchman]. This person is described as a [old/former] [athlete] who will be [returning to past-acquired skills] during the [great drama]. Given the [visible] aspects, and the Press cross links, the whole [watchman] drama should take a few days to develop in the global mediastream. Also there are supporting aspects for the [watchman] descriptor set which contain [fire] references (see below).

The data sets are indicating that the [great drama] will be [bringing/delivering] [difficulty] in [going forward], which aspect set is participating in the [restrictions on travel] meta data layer, but that somewhat more [favorable conditions] may be available to those aware observers who decide [early (in the) process (of) discovery/emergence] to [return] rather than [proceed].

The supporting sets for the [restrictions on travel] are replete with [fire] aspects, as well as [flooding] aspects, and [refugees]. The [fire] aspects are, in a similar fashion to [flooding], being supported by [refugees], and [find clothes (for them to) wear]. The problems which [start] the [refugees limping] {ed note: constant emergence of limping within other sets} will also be [affecting/influencing/impacting] the [continental travel/movement] meme.

We need to also note that [fire] as an archetype is within the set for [transformation] which is a meta data layer slowly growing within the modelspace. Further the [fire] aspect set also includes [terrorism] as is defined from the Populace/USofA point of view. This definition for [terrorism] spans the widest possible range and includes 'government sponsored' terrorism at *all* levels.

Given the very high levels of emotional summation values around [terrorism] and [false flag] events within the populace of the USofA at the moment, *any* emerging circumstances which remotely could be [terrorist attacks] will be so labeled, at least initially. Sooo...we have a bit of difficulty with many of the detail sets of supporting aspect/attributes for this Labor Day weekend. The difficulty is formed by our point-of-view as we examine the data.

So...we will *assume* that [terrorism/terror-attack] is the operative filter on our view of the data sets for these next few paragraphs.

Given an assumption of [terrorism] as the reference point for examining the data, we note that as modelspace is moved into September 2, the rising aspect/attribute is [confusion]. This [confusion] aspect is also a meta data layer. It is a large set and includes references to [deliberate obfuscation], as well as [chaotic] and [masking circumstances]. Now note that this last aspect is itself a very large lexical set and includes thousands of physical world descriptors for [masking circumstances] such as [fog over mountains], and [water(s) over roadway]. Both of which are specific instances of the case of [masking circumstances]. Also note that the [masking circumstances] aspect/attribute set contributes to the archetype of [obscuring features] which itself is a supporting sub set for [confusion]. So the interpretation is that an instance of [visible] [confusion] will be seen on the global mediastream during the unfolding of circumstances on Sunday and that [terrorism], especially through [fire] will be [visible] at some time during the day. Further we note that [rolling smoke], a sub set in support of [fire] is also within the lexical set for [masking circumstances] and thus reinforces the idea that [confusion] will rise around the [terrorist attacks(?)] on Sunday.

The data sets further contains supporting aspect/attributes for [dangerous situations]. Within the growth of this data set are aspect/attributes for our previously discussed [transportation system shut down] and the [transportation system under mud]. These sets have grown dramatically within the immediacy values and there are clear [northeast] associations. The [mud] meme is back with a vengeance in these newly processed immediacy values. In this instance it is supported by [deep, very very damn deep], and is further described as a [mire/sticking mud] which in turn is providing support for the lexical set showing that the [transportation system (gets) mired down in mud/stickiness].

Some elements of the bespoke emotional qualifiers for the [fire] and [terrorism] sets are also providing support for our [accident pachinko] set, and these go to the highest level of [grief]. There are numerous instances of bespoke [crying], and [wailing], and [release outpouring]. The extent of the [grief] is showing as [national] or [wide spread] within the Populace/USofA, and is further reinforced with [7/seven days on/forward]. The movement of the Populace/Entity through modelspace is also in support of a [week] of [grief/mourning], and further is reinforced by the accretion of values for [grief expressions] over the next week.

The [confusion] around the [terrorism] meme gains support from aspects/attributes that include [weapons, projectiles], and [weapons, blades], as well as [mixed up, obscured], and [transportation]. We also have the previously reported [gatherings] component of the Populace/USofA with specific instance cases, as well as general case references to [holiday gatherings]. However, these are more heavily weighted emotionally on the [travel] component of any [gathering] with the interpretation of the data set pointing to [travel disruptions]. Some of the detail sets for [disruption] include [terrible/horrible] and [smells] which are supporting sets for [gases], and also are indicated to [produce/induce vomiting]. This last is internally cross linked back up to the [fire] aspect, and also over to [refugees] within Populace/USofA. We may therefore expect multiple instances of the [terrible smells] meme to show up in [visible] descriptions of events within the global mediastream as the days progress. Once again, within the [gatherings] are references to [concert], which in turn contain

support for [confusion]. The [concert] references are also supported by [box/boxed_in], and [equal colors cover]. This last can also be interpreted as [matching hues/vibrations blanket/cover] and so may be pointing to an 'equalizing effect' of some sort which we are not able to further describe at this time.

The detail aspect/attribute sets for the [fire] and [terrorism] set provide that [going astray/losing_way] will be the immediate result of the [confusion], and that the [loss (of) (mechanical?) guide] will be [dooming] for those who will [persevere] under the developing circumstances. The data suggests that a more appropriate response would_have/will_be to [turn around] and to be content with [small shelters (in) humble place/space]. This last descriptor set is cross linked over to [bathroom, public place, tiled walls, water] within the supporting set for [terrorism], and suggests that such [humble spaces] may be the key to survival amidst the [confusion] of the [developing circumstances]. There are also references which indicate that some [old/mature] individuals will take to [small spaces] as they recognize that [proceeding (into/during) smoking confusion (brings) problems].

And as we proceed down this particular [fire] and [terrorism] rabbit hole, the data sets once again present at least 1/one specific instance of [transportation system] reference at each layer in the data set. Probably this is meaningful and that the [fire] aspect will be centered around [transportation]. In the details of the [transportation] references we find that [engines/drives] are [decoupled (from) transmissions]. This [dislocation (of) mechanical/physical components] is what is showing as the proximate cause for the [disruptions] which will bring the bespoke [grief]. Within the supporting sets for the [grief] aspect, the data has [tears (following) blood] over the next 7/seven days.

As the modelspace is progressed through the Labor Day weekend, the Populace/USofA entity rapidly shifts from [confusion] as the dominating aspect into [destruction (of the) edifices (of the) past]. This is a brief phase, and has high [visibility] values with extensive cross links into the Press entity. The suggestion from the data is that the [confusion], supported by [fire] and [terrorism (broad definition which may include government/elite against populace)], will be replaced with discussions of the [past edifice destroyed] within the global mediastream. Still within the Labor Day weekend, though actually shifting into September 3rd, the data sets are then dominated by [transformation] which is a meta data layer aspect just starting a rise into vertical state in Populace/USofA. It must be noted that the [transformation] aspect archetype is replete with support from [fire] which is the 'archetypical transforming process'. Again the [transformation] is at a [national] level within the Populace/USofA, and though while not [uniformly felt/experienced], is nonetheless shown as a [motivation/force (for) unity] within the Populace/USofA. There are sub sets within the [unity] which are suggesting some very [bad] outcomes within the [populace unity] for the ThePowersThatBe which will include the Bushista entity, the Press entity, the Markets entity, as well as individual [political parties, collections of petty people]. It needs to also be noted that the meta data layer of [revolution] rises to nearly triple its starting values as the month of September proceeds.

As a last note on the [fire] meme, it contains supporting aspect/attribute sets which have been interpreted as [fuel bombs] in the past with some support from developing circumstances. The suggestion is that [fuel bombs] *may* be involved with the [fire] and with the [5/five ? instances] in which the [watchman] is [active].

Both the [flying] and [transportation] aspect/attribute sets contain specific instance references to [helicopters], and further to [large transport helicopters]. These are not otherwise supported and so their role in the developing circumstances remains unclear at this point. Other 'orphan' data aspects in support of the [transportation] meme include references to [sail boats], and [sails, under full winds], as well as [sailing class (in) river]. These may be pointers to local identifiers for the developing circumstances. If so then they should be visible as backgrounds within global mediastream images.

The data sets also indicate that a number of [prominent deaths] will occur during this next 3/three weeks and will include [priests] and [cardinals]. There is some suggestion that some of these will begin to appear on September 2nd. Along with the [death (of the) cardinal] are supporting sets for [initial view/glimpse (of) hidden disease]. This last is supported by sets for a [still alive] individual who is associated with the [dead cardinal].

If you have never seen the image, a pachinko parlor is a hugely noisy place which makes the average casino seem sedate. In fact, some parlors are sooo noisy that local earthquakes are *not* noticed by the 'players' within the walls. So imagine a HUGE room filled with [noise] and [smoke] and [chaos], and then [swirl/stir] in [accidents] as the central meme and that is what modelspace is forecasting for this Labor Day weekend. An [accident pachinko] in which [chaos] rules and [smoke divides/masks].

The data suggests that [rocks] will be involved in [accidents], presumably in boating and [water carried transportation]. Further there are [flying], and [walking], and other forms of [transport] all of which have directly held supporting aspect/attribute sets for [accident]. The data set is so filled with [accident] as a meme, that some of the supporting sets are pointing to [robbers] and other [criminals] who will also [become visible] due to their having [accidents], or due to [accidents] interrupting their planned [criminal actions/activities].

The data set contains [violence] supported by [mighty/great/huge/maha(hindi)] as well as further support coming from [noise], and directly held instances of our previous aspect of [confusion] which must be remembered as also being a meta data layer aspect. The [noise] is apparently going to be a very [visible] {ed note: no, noise is not usually visible, but the [visible] descriptor set is our primary link to the video world of the global mediastream} element within the [great drama] of the weekend. Under the [violence] aspect, we also find support from [tension released/broken], and also [broken states/conditions]. The [violence] is *not* specifically human caused, and is filled more with the supporting sets indicating the more general state of a [violent universe expressing itself through accidents].

Within the supporting chain for [confusion] and [violence] and [accident], the data sets have the Populace/USofA entity

[exposing/exposed] to [to life/desired effects]. This last is a curious, and rarely seen descriptor set which includes [to flag/mark] and [the effects of life], and is mostly found within the internal referential integrity checks within the processing. It has the connotation of [expected or unexpected, the results - as they are], and 'means' that [no unreal thing can appear in real universe]. A further meaning is [the desired effects (of) natural laws in harmony]. A further, and deeper, descriptor for this set is [release event, the out flowing, breaking of tensions with manifesting release of emotions]. Probably, under the circumstances already described, *not* a good sign.

We have specific references to [meteors] and [meteoric speeds], as well as [fires (from) meteors]. These in turn are supported by [officials/officialdom] which in its turn is supported by [sitting]. Hmmm. Sounds about right, [fires from the sky], and [officials sit by]. The [meteors] are also in support of both the [secrets revealed] meta data layer, as well as the [loosening] aspect which is itself internally cross linked to provide support for [confusion]. Within the [meteor] aspect are repeated references to [getting/accomplishing (things) swiftly/quickly], and as may be understood, the idea of [meteoric speed] may be the intended point of the data, and not an actual [meteor (causing) fire in the sky]. Also within the [meteor] sub set are directly held values for [at a great distance] and [heard/experienced (at a) great distance]. Both of these are internally linked back to the previously discussed [1000/one-thousand miles] aspect.

Within the support for our [accident pachinko] for the weekend, there are aspect/attribute sets for [obligations (which) go awry] and [heavy loads] which will [tempt robbers], but that the [robbers] will have an [encounter (with) accidents] and become [visible] as a result. Further support for [accidents] at multiple levels comes from [release/loosening] which will affect [pools (of) stagnant waters] which in turn are shown as [upsetting plans].

Deeper within the [accident pachinko] data set are expressions of the [secrets revealed] meta data layer which has support from aspect/attribute sets pointing to the [worthless nature] of the [civic organization] now that the [leader] is [playing games] and [doing nothing]. Apparently the [accident pachinko] will [expose] this [state of no worth (within the) civic organization]. This is shown as starting its own chain of both [secrets revealed] actions, as well as supporting the [revolution] meme for Fall here in the USofA. There are specific references to [failure (of) appeals], and the [reviling response]. These in turn are shown as being [visible] to the global mediastream, and in turn provide support for [removal (from) office]. This last is in support of the [emerging revolution] of Fall and will produce [changes/alterations] within the [structures] which [dominate].

As the modelspace is progressed through the Labor Day weekend, several sub sets of the [accident] meme begin to rise, including a [grounded boat], and [approaching boat], as well as [rising tide (sets) boats (on) grasslands]. There are repeated references to [grass] and [grasslands, plains, steppes] along with specific references to [trails in mountains], and [ledges]. All of these are in support of [accident], and all of these have internally held [accidents] in their support chain indicating that [accidents] at such places will begin a string of events which will participate in larger [accidents] within the [great drama] of the weekend. Further there are references to the [forests/trees] around the [trails in mountains] and specific pointers back to our [fire] meme discussed earlier.

As modelspace proceeds through September 3, the immediacy data sets begin to accrue new sets in support of [wealth] with internal cross ties to [accidents] and [secrets revealed]. All of these aspects are showing as immediacy values with the image of a [national wealth affecting accident] emerging which itself begins a [destruction] phase for [wealth] as an internally held construct here in the USofA. In other words, the data is showing that [accident(s)] over Labor Day weekend [expose] the [myth] of the [rich USofA]. Pressure in the form of [angry] release language begins to [trouble (the) markets] starting on September 4th. The [anger] will also [feed] the [secrets revealed] meta data aspect relative to both Markets entity and the Bushista entity. These [secrets revealed in anger] sets are showing as having the legs to still be prompting actions in December.

As the Labor Day weekend fades into the work week, the Populace/USofA entity is forecasting that the [dark week] will begin with the sudden rise to dominance of the aspect/attribute set of [dispersion/scattering/dissolving]. This aspect is showing both at the [personal] levels, and at the [national] level. There are indications within the supporting sets that the [dispersion] will affect the [populace] physically, as well as emotionally. The bespoke emotions associated include [wailing/crying] which is directly supported at the top 3/three levels by [life of indulgence/leisure/privilege]. These areas are heavily cross linked over to Markets, and to Bushista, and to Press entities, as well as internally to Populace/USofA at such core levels as [national identity], and [personal life construct, self]. This last is a very deep value set within the lexicon which holds those words which humans use to describe their concept of themselves. That this level of lexical structure is being affected is worrisome as it takes a great deal of emotional and external stress to compel humans to alter their view of universe and their place within it. Hmmm. Probably not good a good week here in the USofA.
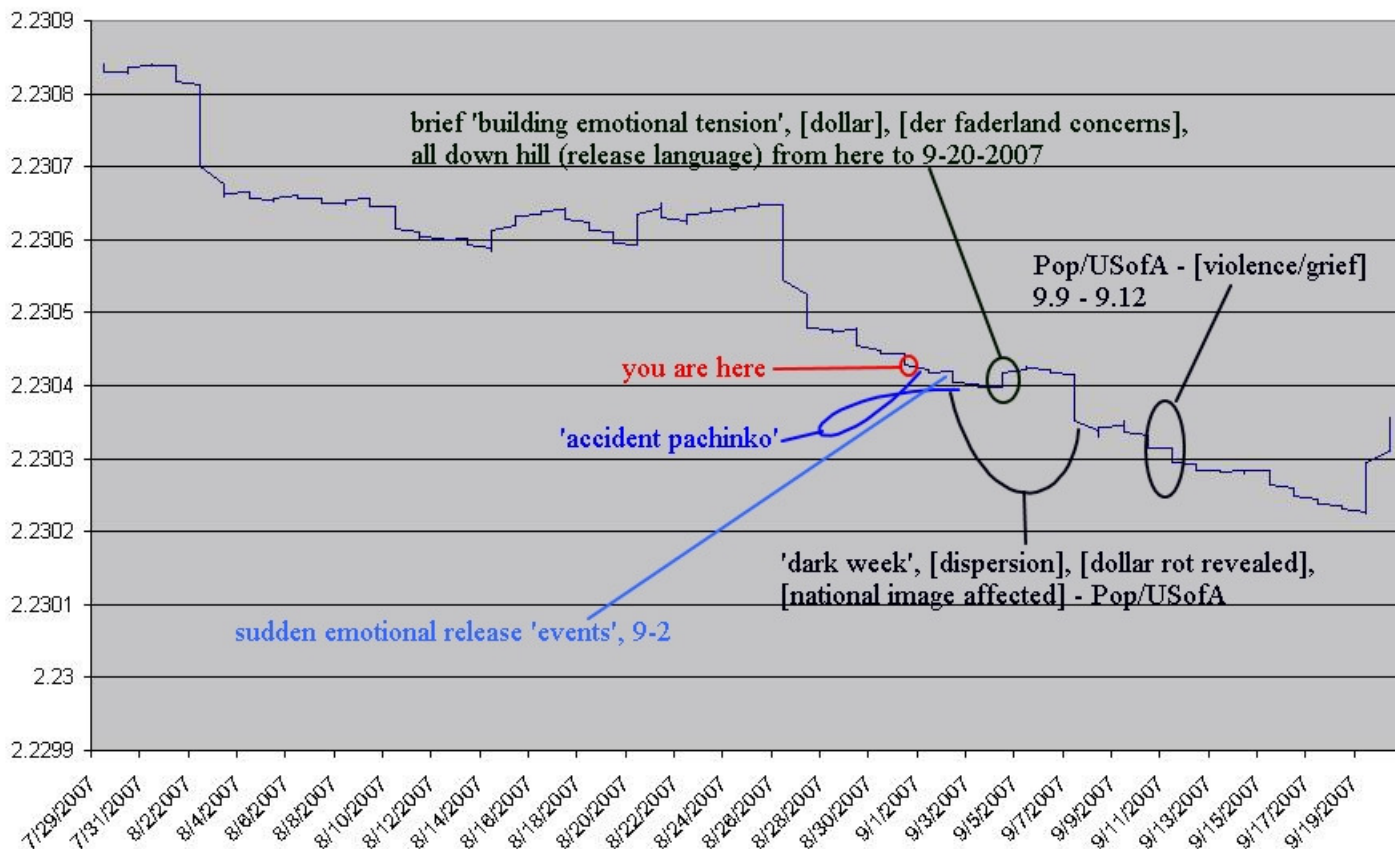

While the supporting sets for the Populace/USofA entity dominating aspect for the first weeks in September are pointing to a [dispersion] of [point of view], and [dispersion of riches/wealth], and a [dispersion/dissolution of confidence (in personal/collective) future], these sets are in turn supported by aspect/attributes painting a word picture of [grand/great/huge new/developing currents/tidal_current] which are shown as [starting/beginning] to [sweep away] the [mental debris/old_thoughts/out_dated_information] which was/is at the center of the apparently now [defunct/degraded/useless/old] [american national image].

There are the now persistent [flood] meme aspect/attribute sets showing up for Populace/USofA, however there are clear indicators that there will be both [water floods] and [emotional floods] affecting the populace over this next month. Further, the bespoke [emotional release/flood] will begin on September 4, and what ever the proximate causes within the greater world, a primary impact by the end of the [dark week] will be the [rot] which will be [revealed] in the [dollar, usofa]. This [rot] will also be participatory in building the emotional values for the [revolution] meta data layer as it rises in prominence over the Fall.

Much of the [dark week] language gains emotional support from the curious aspect/attribute set of [grabbing/taking/seizing (the)

advantage (from) others]. This aspect takes its emotional summation total strength from the ThePowersThatBe entity where it is heavily cross linked. The data set in support includes [collapse (of) relations (with) victims] as well as [dissolution (of) schemes/plans (to) rook/crook/defraud others/foreigners]. These aspect/attribute images are held directly within the Populace/USofA with extensive cross links back to both TPTB entity and the Bushista entity with further cross links over to the Press entity as well as a very high [visibility] value set. This set is proximately involved with the brief burst of building emotional tensions indicated for the night of September 4th and into the morning of September 5. These aspect/attribute sets also gain strength from [conflict] which is the meta data layer being active within Bushista entity and the 'shit rolls down hill' effect of the [bad karma] of Bush et al. There are indications that the sudden rise in emotional tensions relate to a [markets/money/dollar] driven [repudiation (in/of) strength] from [foreigners]. It would seem reasonable {ed note: within the framework of our obvious madness} to forecast that there will be a large 'foreign repudiation' of 'dollar debt' late on the night of September 4 which hits the Populace/USofA on the morning of the 5th.

Emotional Tension Trend - Aug/Sept

The immediacy data sets for the Populace/USofA entity are showing a spike in [violence] and [grief] which [afflicts] the national psyche on September 10 and 11. Though the implication is that it comes not from past events, but rather from those which will develop on those days, and in the [place of an overseas assignment]. The indicators are that [return (to) prominence] comes to [iraq, afghanistan] as result of [renewal/resurgence] within [6/six areas]. These [6/six areas] are apparently regional blocks, 3/three in each country in which [return (to) power] takes place in a brief 2/two day period. The images provided by the data sets are *not* like the recent past forms of warfare within these 2/two countries, and rather resemble the imagery of [waves] of [attacks] which keep coming like [sand from a stream]. There are indications of a [7/seven wave] event over 2/two days. The data sets are describing this as [week (of) darkness] within the primary aspect/attribute supporting sets.

Also of interest as an affective element for the Populace/USofA across the month of September are indications that [3/three storms] of some size will be background influences to the human drama. There are aspect/attribute sets going to [vapors/clouds] so large as to be [horizon dominating], as well as [inner change (coming to the) perceptions (of the) seasons] during their change. The indications are the [denial] starts to [slip] due to the [emerging/unfolding] of weather/climate related events over the month with an special emphasis placed on the equinox.

Markets - Great Expectations Reversed

There is a natural and bespoke anxiety at this time for those who are concerned with [markets] both globally and within the [usofa] based [financial instruments 'industry']. The data set of immediacy values for the Markets entity has this next week dominated by

[unrealized/unreal/fantasy/imaginings] with direct support for this aspect/attribute set coming from [great/grand/grandiose expectations]. Given the further support derived from aspect/attributes which include [empty bottle], [no things/material], [dropped pieces], and [luxuries lost/dispersed], the interpretation tends to take its cue from the tertiary supporting aspect layer which has bespoke [miserable] as its dominating aspect. The whole of the interpretation of the aspect imagery reads as a [week of comprehension of the unrealized great expectations produces miserable feelings]. All of this area is either directly held by the [financial debt, instruments, paper], or [usofa dollar] sub sets for Markets. Deeper within the supporting sets for our [unrealized great expectations] are aspect/attributes producing images of [decrease brings poverty], and [decrease/loss/shrinkage proceeds/follows 10/ten waves]. This last may be alternatively interpreted as [10/ten waves of decrease]. Further aspects in support go to bespoke [desperation], and [sudden job loss] which is supported by instances of bespoke [desperation], and [miserable]. Other areas at this same level point to [friends] who will have to [band together (in) common shrinkage/loss] in order to [survive]. The prognosis is actually quite grim and has imagery suggesting that by the following [July], that the [bands/groups/tribes] of [previous/former luxury job holders] will be [reduced/decreased] to [2/two small meals a day].

At the higher level of the Markets entity are indicators that the [first/primary wave/flow] of [decrease/consolidation] will take out [1/one of 3/three] of the [financial papers/debts] and the [firms/companies/corporations] which [market] them. Note that the explicit reference is for [10/ten waves/flows/cycles] of [decrease] and that September is host to *only* the first of these [10/ten]. During this [wave/flow /cycle], the [loss] is distinctly, and bespoke [1/one in 3/three]. The 'cause' of the [loss/decrease] is showing as [repudiation] or [no takers/no sale].

The imagery for the support of these first of [10/ten waves of decrease] goes to bespoke [greed/chasing/desiring] of the [nobility/elite] which will be [visible] as the [decrease] brings about [stark contrasts], and [visible disparity]. The cross links to the ThePowersThatBe terminate in bespoke [fear] with support for [mobs/crowds/tribes]. The data sets indicate that [violence] and [preparations] for [violence] will be [visible] to the aware observer as the month proceeds. The [nobility] is indicated to be [suddenly/surprisingly] [visible] in its [preparations] and [hoarding]. There are detail aspect/attribute sets which have imagery of [burdens/packages/goods] which will be [forcibly shared/distributed] in some form of [official] attempt at [placating/calming]. This [effort] is indicated to not merely [fail], but to do so with such [arrogance] as to [incite/spark] a [popular backlash] which in its turn participates in the growing [revolution] meme. This last is also shown as producing a [startling moment] within the [presidential politics circuses/entertainments] here in the USofA. The sub set in support of this last includes [rollick/rolling] and [shock] and [over turning]. This last aspect is supported by [vomiting] and [speed] with an interpretation going to [changes come so suddenly as to induce nausea/vomiting].

Much of the supporting data for the Markets entity for the next week has imagery suggesting that [abundance] will [decrease] at a global level, and that soon, [trifles/small particles] will be the difference between [eating] and [starving]. This longer range projection has its roots in the actions of the month of September with that area having its beginning in the first week.

The Markets are also to be [rocked/shifted] by [war failures] and the [mad decisions] of the [princes]. Then there are to be [natural/climate] impacts which will also produce more [decrease]. A curiously large percentage of the supporting sets within the [natural/climate] sub set have directly held references to [shifting grounds] which may be forecasting long term [economic] effects of [earthquakes].

We currently have the appearance of much of the language forecast for the [dollar near death experience], however that particular meme is not yet complete. The expectation is that the 'survival' of the [dollar, usofa] won't be clear until after September. There are yet problems to surface this month which are so large in scope that the [dollar] as a trading instrument is at real risk of *not* meeting the challenge, which is really another way of saying that the 'fate of the dollar rests in the oh so capable brain trust of the Bushies and their companions in manipulations'. Hmmmm. Not too reassuring.

Conclusion - Part One - Sea Legs

September promise to be a brutal month. The emotional release values are at extreme levels as we end August, and then they escalate rapidly from here. The release language is pointing to multiple areas of emotional response across a very wide part of the globe. The continuing markets/debt unwinding and the developing meme of deflation will come to be associated with September 2007, in a similar fashion to the October association with the Lesser Depression of the 1930's.

For those aware observers and students of developing themes/memes/cycles in human behavior, the first week in September promises to set the emotional tone for the rest of the year and into the first 'discontinuity' of 2008. These next 4/four months will be dominated by the cycles exposed in the release language of this next week. As the Labor Day weekend actually begins on Friday, August 31, we have chosen to post today, even though the report is a bit less voluminous than we would prefer. This is due to the expectation that [events/circumstances] will begin to manifest rapidly as terra shifts over into September. This 'racing time' feeling is particularly acute with this report given the very large ratio of emotionally hot immediacy values and that we are at the 'peak' of this very long release period.

We expect this next week to be characterized by a 'rocking sea' of disparate reports, all and each of which containing release language. The [unsettled/choppy] feeling to the data set may be perceptible to the aware observer as the week, and events develop.

The wise traveler during this month, and especially over the Labor Day week end will cultivate an attitude of 'detached observation' and guard against 'reacting emotionally' to the developing circumstances. It will be difficult no doubt, with those in the crowds around the

'bubble of detached awareness' reacting/participating in the emotional response, but the data sets indicate that [presence/continuance] will be [enhanced] by [removing (from the) emotional waves], and by gaining 'sea legs' as the [emotional floors] are [shifted under the feet]. The idea is that the wise traveler will 'surrender' any attachment to irritability and impatience, and will proceed with [caution due] each step as the small steel balls of the Accident Pachinko go whizzing by.

We expect to have Part Two with the initial processing of the shorter term value set posted by the 11th. It may be that yet again we will find it necessary to 'rush' our work as the events of the 9th through the 11th may be pressing on us all here in the USofA. If so, we will provide notification.
