Shock the monkey – August, 2016

covering 2016 - 2048

Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes **are**: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities **are**: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon **is**: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: *emotional qualifiers* which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders **are**: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop
The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)
All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets
The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra
The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Meta Data Layer – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

Data and Interpretation

Meta Data

There are several major trends that are either peaking, merging, or crossing in the data sets. These trends are reflections of the motivation mass emotions affecting humanity.

While there are repressed emotional needs for home rule, and core peoples language present, there are also other memes for escape from near feudal repression and expansive potential that are going to drive headlong into the self releasing, long repressed, 'homing' language.

Other major trends that are crossing include the pressing of the illusion of paper versus the reality of decaying paper based debt economics. Basically, once someone has won all the script (money) in the game of Monopoly, it is no longer fun to play. Oh, and the board is about to be kicked...

Terra

Planetary changes are still showing as being the 'primary' mover of humanity over the rest of 2016 and beyond. The data sets continue to grow in support of 'diaspora', and it is clear that there are to be 'many causes' showing up 'beneath our feet', or 'from the sky over our heads' for a number of years. The Terra entity has new longer term sets that are forecasting the 'major changes' in the planet to be impacting through 2045 and then 'waning' with 'intermittent bursts (of) activity' for the next 84/eighty-four years (four generations more or less).

The 'mane of the horse' is a reference that has been gaining new supporting sub sets over the last two processing periods. In this instance there are no less than 4/four large geographic regions that are referenced as being part of the 'horse' which is a 'land feature'. These include the Middle East, a section of the Caucus Mountains, a section of the western ridge of mountains in Mexico, and an extensive area in the 'bad lands (western USA (also including parts of Utah, and Nevada))'. Without regard to which of these four regions is being described, the data sets are accruing for a 'break-down' of the 'sub base material' that in turn leads to 'sudden channeling' in the 'surface' of the 'region'. The 'channeling' is described as sort of a 'river bed' look to it, but water is not involved, at least not on the 'surface effect'. The data shows that in a similar fashion to the 'disappearing rivers' which are 'here this evening' and 'gone the next morning', this 'channeling of the (surface) of the earth' is supported by 'rapid', 'over-night', 'within vision', 'watching (it) occur' and many other such sets including support for 'video' to be released of the 'event/phenomenon' as it 'rolls (across the) landscape'. The details have sets for 'housing developments' being 'sunken into shallow ravines' as the 'channeling occurs' in their 'area'. The 'dipping', and 'running dimples' of the 'landscape are described as 'taking out roads', 'toppling water towers' and 'caving in (long) streets)' where further details show that 'rooftops (of houses) on opposite sides of the street' will be 'touching' as the 'street' sinks away below the houses'.

Not only will 'airline pilots' and 'air traffic controllers' be 'upset' by the 'new wind patterns' forecast to be developing over the next few years, but they will also be 'put to (new) work' trying to 'cope' with the 'reversal (of) long running (global) wind patterns'. Other areas of human activity including 'power generation (from wind farms)', and 'crop planning and forecasting', and 'ocean transport' are indicated to also be affected by the 'increasing winds activity' and the 'reversal of flow (patterns)'. The 'increasing winds activity' has very large areas indicating that both 'upper atmosphere winds' and 'surface (of the planet) winds' will be 'drastically changed (over next 4/four years)' as well as 'substantially increased (in forces transmitted). As far as this latter set, the data is showing that 'ocean transport' including 'cruise ships' will be significantly impacted as the 'ships' are described as being 'delayed', 'slowed', 'misdirected', 'pushed about' by the 'increased wind force (at the surface of the planet'. This is indicated as a cause in a number of 'boat race accidents' to be seen across the northern hemisphere this Summer and Fall.

Whereas in past ALTA reports we have had 'flooding' be a dominant factor in many entities, in this report we have 'winds' taking over that role. The number of new sets in supporting position across all of modelspace that have 'winds' as a directly held value has escalated to overtake the 'flooding' language by about 10%. This is an exceptional shift in our data processing history as the 'flooding' set has been the 'dominant' set for at least 4/four years.

Even 'pollution patterns' are indicated to be 'altered' by the 'reversal of the winds' and the 'increasing wind activity'. The 'winds change' is shown as 'moving masses of (probably chinese) pollution' that will then be 'affecting new areas' and causing 'new protests', and 'disturbing health changes'. These sets are also filling with data showing that some 'rich enclaves' will be the 'new bitching centers' as suddenly their 'clean(er) environment' becomes 'smothered' as the 'new winds' will 'blow pollutants' the 'wrong way'. These sets have many cross links over to the SpaceGoatFarts entity where we have terminating sets indicating that 'bizarre schemes' will be 'put forward' by the 'rich (now suffocating under new pollution)'.

Other problems to be caused by the 'new winds', especially the 'reversal' of 'old patterns', are indicated to include 'power plant problems (including shutdowns, and shut-offs)', and (curiously) 'urban flooding' where there are pattern dependent urban planning features. There are also pointers for 'birds flying into' many different kinds of human habitation and technology as their systems are sent into 'dysfunction'. The data further shows that 'forests', individual 'trees', and 'small stands (of timber)' all being 'pushed (from the) wrong way' will be 'falling over' in a 'global (on-going) winds disaster'. The data further suggests that the 'shifting winds' will take some time to 'percolate' into the 'general awareness' and then it will take even longer for the 'shifting winds patterns across the face of the planet' coming to 'general awareness' as most humans will think, for a long time, that the 'winds' are a 'local phenomenon'.

Notwithstanding the 'winds' and their impacts on 'ocean activities' of humanity, the Terra sets are quite clear that the 'ocean deeps' will be a subject occupying more of our time in the near term future as 'water levels' are suggested to 'lower' against the "port's standards". These sets are suggesting that the 'ocean levels' relative to 'port facilities' will be 'dropping' to the point that 'humans will notice'. Mostly the reason we are going to 'notice the dropping ocean levels' is that 'stuff wont fit/work' at various

'ports' around our planet which will get our 'attention' and lead to all kinds of '**w**ild **a**ss **t**heories' {ed note...cannot resist.... "say WAT"}.

There are a number of new sets accruing to the 'channeling' that are forecasting it to 'appear (or be noticed)' at the 'bottom of the ocean'. These new 'sub sea channels' are in the supporting sets for an 'expansion episode' in which the 'mantle stretches' and the subsequent 'increase (in total planetary surface area)' is indicated to 'draw down (the) ocean levels'. This is NOT described as being an instant kind of thing around the planet. In the data the new sets are actually describing a number of years in which there is a 'raging debate' as to 'what the hell is going on with ocean levels'. This is described as being due to the 'slow' or 'creeping nature' of the 'ocean draw down'. The data is quite clear that it will take a number of years for the 'ocean draw down' to become 'noticed' at a global level.

Some other 'earth expansion effects' will not have to wait so long to be noticed. These are going to include even some very very very damn 'rural areas' where the 'spreading' of the 'mantle' is described as 'stretching out', 'flattening', 'making oblate', 'shortening', 'crumbling', collapsing', and 'destroying' the 'walls (of) mine tunnels'. Other effects such as 'road separations', and 'rock (walls) crumbling', and 'flooding', and 'tilting (slanting, going off-kilter such that trucks slide off the formerly level roads)' are attached in support of 'open mines' being 'destroyed' by the 'upwelling (of) mantle separation effects'. The data sets are forecasting that 'global mine production', already facing problems via the upcoming 'credit freeze' situation is also going to be reduced by the impact on mines of 'stretching earth', and 'relaxing earth'. These sets are showing that what we once thought to be 'solid' is anything but.

Yet more instances of 'earth expansion' effects 'messing' with human infrastructure are showing up in detail sets indicated 'breaks' in 'sub sea cabling', as well as 'shifts (in relative position of surface features)' causing such problems as 'navigation aids (for both boats and aircraft) being obscured/hidden', and 'satellite systems' that will 'report inaccurately' as their 'points of reference' are now 'closer (or further apart)' than before.

Along with the 'reversed winds' phenomenon developing globally, there are also continuation sets for 'jet streams (dropping down (and bringing some airplanes along))', as well as 'wind tsunamis' that will actually 'roar (across) the landscape'. Other 'atmosphere' issues include 'sudden (decompression)' of 'ordinary (although high up) places'. The effects are described in the data as 'people (passing out) while skiing or at ski resorts'. This is showing up as something of a 'sensation' albeit brief as 'several ski resorts (at about the same altitude)' experience the 'sudden decompression (of the atmosphere)' phenomenon.

There are a number of 'rescue' language sets going to 'winds at sea' being 'too fierce' for 'cruise ships' and again a continuing growth in sets for a 'very large rescue effort' in which the early 'hours (days)' are too 'windy' to 'extract passengers' from the 'listing vessel'. The data sets are indicating that it will all work out in a positive manner (more or less), but that the 'early days' are going to be both 'nail biters', and 'traumatic' for all concerned including those who only watch the 'rescue drama'.

The data sets for a 'large', and 'damaging earthquake' in 'western china' is still building new supporting sets, albeit slowly. There are larger builds for a 'very damaging earthquake' within the longer term data sets primarily, which are known to be unreliable as to timing, for 'north america'. There are also sets for the 'sink hole stitchery' to 'crack' Japan, and to induce both a 'minor tsunami (affecting Hawaii hardly at all)', and an 'echo earthquake' along the 'california coast'. Again, most of these new sets are longer term

and are focusing more on mid 2017 and beyond.

The 'earthquakes' in China are not limited to the 'far western regions', we have a number of sets for the 'intrusion' of a 'substantial earthquake' that will 'disable industrial shipments', and 'disturb port facilities' on the northern Chinese coast. What makes this earthquake notable is the presence of a number of 'foreign ships' and 'dignitaries' both of which are showing as being 'damaged' at least to the extent of eliciting 'international press coverage'.

Other ChinaPop future news is going to consist of 'rumors' that will be circulating in the 'technology circles (hardware and replications)' about a 'space payoff' for Chinese manufacturing. While there are a large number of references to 'unknown' and thus many links over to the SpaceGoatFarts entity, the majority of the external cross link sets are to the Markets entity where the terminating sets are for the 'new electrics' and 'energy (and it would appear...the welding/cutting)' at 'molecular level'. These sets are also filled with bespoke 'secrecy', and 'central authorities' so it is likely that the 'rumors' are all that will materialize until those same authorities so permit. However it is noteworthy that the 'rumors' appearing about 'space pay-offs' for China are coincident with the 're-engineering (of) copper (at an atomic level)' and the first of the 'new electrics' to appear as a result of that are not far behind.

There are new sets hinting that the 'hemispheres' will start to 'blend'. This is apparently a reference to 'cross equatorial ocean currents' that are going to be 'new', and act as 'new heat carriers'. These 'new heat carriers' are showing up as 'creating (new) weather patterns', some of which are going to contain the 'pop-corn storms' indicated to make their first appearance this year. What makes this set of interest is not the 'storms' potential, but rather the continuous references to how 'scientists' and 'science publications' will be using the 'new' word to describe the changing 'heat distribution mechanisms' of the planet. The data would have the 'joining of the currents' be both 'ocean and atmosphere', and the point of the process is part of the 'self regulating' nature of 'earth heat distribution system'. These sets have the 'new heat patterns' being a supporting component of the 'reversal of the winds' and the 'creation of (new) strange weather patterns (and types – look for the 'new' label to be used by weather services globally)'.

The 'joining' of the 'currents' has sub sets that bring in the idea of 'giant (revolving) storms' that will be created by the 'tangential collision' of 'jet stream winds'. These 'giant rotating storms' are not showing as 'hurricanes', but rather as 'stationary conditions' that can be 'bypassed' and 'maneuvered around'. While not really 'stationary', these are described as so slow moving as to be mostly 'bound in place' insofar as humans are concerned. The secondary supporting structures are going to the idea of impact from the 'rotating (giant) low pressures' as 'requiring new sea lanes' and 'obscuring satellite observations' of the regions under the 'clouds'. Note that so far as can be determined now, none of these 'heat transfer regions' are over land. There are some hints in the longer term data values in the supporting chain for these sets that the 'heat transfer rotating low pressure cells' may, at some more distant time, join up into 'bands' or 'collections' of such 'storm cells' for short periods.

The 'blending hemispheres' language is part of the 'expansion of the earth' sets. These new additions are forecasting some really strange stuff coming to 'oceans', and other 'bodies of water (including the atmosphere)' near you. Some of these new 'strange stuff (climate/weather episodes)' are forecast to include 'dancing water spouts' that will 'chase ' and 'damage' several 'speed boats' at a 'party'. The images are showing 'scattered cans/bottles floating' and 'over turned (expensive) speed boats' and

'crying women (in the water)' and 'dazed (and bleeding) young men' and 'debris (over a) wide (multiple mile area)'. Other 'strange stuff (weather)' that will be 'attacking' the 'population' shows up in detail sets for 'summer music festivals' that are 'wind swept (suddenly)' and 'destroyed (tents ripped, stages broken, people bleeding and on stretchers)' as 'freezing squalls' come from 'very high atmosphere' to 'rain down (ice balls (the size of drink cups)' furiously for 'many intense minutes'. Part of the forecast language is going to be about how 'shockingly brief' the 'storm' was given the 'huge amount' of 'human and property damage'. There are also other areas describing 'mountain cable cars' that will 'require rescue' when 'ice storms' come in and 'coat everything' causing the 'machinery to seize up/fail'.

Yet more 'earth expansion' symptoms are described as 'altering canals (in several areas in the northern hemisphere)'. In some of these instances, the 'canals' are described as being 'closed due to blockages' caused by the 'recent, local expansion effect'. Some of these 'canals' carry 'commercial traffic'.

Other 'expansion effects on oceans' sets include the previously mentioned 'ports no longer useful as the facilities' are too far away from the water. These sets are now gaining support from new aspect/attribute sets for the 'unusual' and 'excessive precipitation' as also being a factor in a few of the 'ports problems' sets as we have forecast 'devastating rain storms' that are going to 'wash (away) the hillsides' and 'bring them (rushing down upon the) (local) port'. The data is suggesting that several videos will be available this year showing 'buildings' and 'debris' including 'cars, buses, trucks, and cranes' being 'washed down hillsides' to come 'crashing into port facilities' as the local 'population stares on, horrified'. Further, in at least one of these 'ports covered in land debris' instances, the data is arguing that the 'regional transportation system (via ferry)' will be 'disrupted for years'.

GlobalPop

The GlobalPop sets are bringing in new sub sets for 'disruptions' and 'upsets/over-turnings' and 'replacement' and many other descriptors going to the idea of a 'major social changes'. The nature of the changes are diverse and show up across many different sets and entities, but are all participating in forming a picture of '(western) humanity' in 'transition'.

The high levels of the emotional values behind the 'disruptions' and the 'over-turning (of the) existing systems' are derived from the very large increase in 'hyperinflation' language showing up. The data sets are predicting 'hyperinflation' to be a very 'active' word over these next 2/two + years as more and more countries fall into the 'deflation trap'. Note that the data sets are showing that ALL of the hyperinflation victim countries are 'petrodollar linked'. These new 'hyperinflation' sets are forecasting that 'Africa', and both 'north' and 'south' America will be 'whipsawed' by both 'deflation' and 'hyperinflation' over these next 'two years' to such an extent that the 'dollar empire crumbles' and 'nation-states (recreate themselves)' as well as 'spawn new nations'. Some of these 'new nation-states' are indicated to be 'geographically bound (surrounded)' by 'older (dying) nations'.

A few of the 'new nation states' to emerge from within 'existing borders' have, as their seeds, actions that will begin in 2016. Some of the supporting sets include 'alliances' between 'traditional foes' within the GlobalPop such as 'labor unions' and 'students'. The data sets are forecasting that the old tactic of 'divide to conquer' is going to 'fail miserably' as the 'dollar empire dies (taking with it many of the staples of the safety-nets in society)'. Across much of the globe, the majority within the northern hemisphere, the 'financial resources' that had 'fed' the 'political diversity' of the past few decades is

posited to 'dry up' in such a fashion that all of society that is 'social system dependent' find themselves 'coming together (bonding)' against a 'common enemy'. The data sets are forecasting that the 'bonding' of the 'distressed students' and the 'depleted pensioners' and the 'failing labor unions' is going to create a 'situation' within the 'ruling elite' and the 'financial system' in which those 'statists' and their 'backers' will be making several very large 'mistakes' that will involve both 'bad decisions', and 'bad behavior (run amok)'. In these instances the 'statists' will find that there is 'no help' for the 'cutting situation'.

A few other instances of the word 'cutting' include its appearance in lexical structures that are going to the idea of the GlobalPop 'cutting through (the knots (placed on the system by the powers that be (TPTB)))'. These sets are related to 'life goods', or 'making a living from a pile of rubble'. The idea coming across is that as the 'global financial system' goes into 'visible failure', there will be instances of the 'leading edge' of GlobalPop. This 'leading edge' is composed of 'people (makers/doers)' who will be 'decided (mostly by universe prompting them)' to 'just do it'. These 'leading edge people' are forecasts to be 'creating new food systems', many in 'desolate urban environments'. These sets are showing that the 'new leading (food growers (technology driven)) edge people' are showing as 'being/becoming successful' in both 'ways' and 'degrees' totally 'unimagined'. The idea coming across is that the 'financial circumstances' are such that 'followers' and 'students' appear in 'giant/huge/overwhelming numbers' and the next thing that mainstream propaganda media knows, there is a 'grass roots (pun intended) college system' that will be 'evolving globally (before their eyes)'. The data sets are at one level suggesting that a certain 'critical mass' has been (or very soon will be) achieved such that 'social evolution/change' will be 'visibly activated'. This last is an interesting note of linguistic and likely prescience interest as we have modelspace in essence commenting on its 'source' aka humanity, as being moved or altered by external forces. Kind of like your phone saying 'hey, it tickles ergo you must be updating some app'!

In this broader instance the 'app' being updated is 'humanity' and its perception of itself in its current history. Another way to think about this is that the data sets are forecasting that the tendency of (at least western) humanity to 'live in the future' via 'entertainment distractions' is already shifting (humanity ass it big and it takes a long time to move it) and we, the aware, shall be able to perceive this shift occurring in real time over these next few years. One of the first instances of this 'humanity level shift' is forecast to be in the 'sudden (according to msm-propaganda-media)' appearance of the 'urban centered alternative foods technology'. Many of these sets and their supporting sub sets are also in the chain under our previously reported (in USAPop) 'empty (retail) malls' and 'empty retail buildings' being 'co-opted' and 're-purposed'.

The GlobalPop entity is forecasting that the 'global depression' brought about by the 'central banksters' and the 'political authorities' is but 'being born'. The 'depression' lexical sets are now including language around 'deflation'. The 'global depression' and the 'global deflation' supporting sets are pointing toward a situation in which 'deflation' is 'eating (house prices, commercial real estate prices, and most other 'debt collateral')', as there are no 'credit takers' to 'continue debt based asset growth'. These sets are very confusing and bring in a number of seemingly conflicting sub sets, however the data has a pointed focus on the 'crumbling' of the 'fiat currencies' that are 'failing' and 'falling' so fast as to 'create (greater) political instability'. These sets are directly tied to the 'rising (popular actions)' and the 'new leadership from the core peoples movements'.

The 'dynamic deflation' that is the 'feared death disease' by the 'central banksters authorities' is showing

as being the 'dominant factor' in the rest of 2016 and through to at least mid 2017. The data sets are forecasting that the 'deflation' is 'like an (aggressive) cancer' as the 'credit freeze' hits various parts of the 'economy' like an 'ice pick'. This 'deflation' is described as being 'cancerous' in that it is not 'general' or 'blanketing', but rather is described as 'eroding', and 'tunneling', and other language that goes to the idea of a 'twisted, interconnected tunnels' that are 'lacing' through the 'financial systems'. The individual detail sets are bringing up 'assets' such as 'debt on real estate', 'debt on energy', 'debt on art', 'debt on students', 'debt on debts' as being the origins of the 'tunnels'. These 'tunnels' are describing the former 'assets' that had been '(nominally) backing the debt' as being 'destroyed', and 'at zero', or 'near zero' for most of these 'debt (based) assets'. There are extensive cross links over to the Markets entity where the terminating sets include very large representation of 'gold', 'silver', and 'bitcoin'.

The data is showing that it is the 'dynamic deflation' that starts in the 'italian banking system' which in turn is described as 'spreading (like mold through over-ripe fruit)' into the 'global banking/derivatives system'. It is the 'derivatives' sub set that contains most of the language for 'violence' and 'disruption'. Other sub sets include 'repudiation', and 'explosive (detonation – in which a 'counter-party' is 'blown-up' for 'failure to pay')' all of which leads to 'cascading crash-cade defaults' and 'bad words' between 'former partners'.

EuropeanPop

We are looking for the 'new leaders' of the 'core peoples' movement to be 'stepping forward' over these next 12/twelve months. The data sets have growth around our previously mentioned 'street violence hero' sub set, and now we have new sets suggesting that the 'hero' who will find him/her-self at the "center of (the core) people's movement" will 'backed-up/supported' by a very 'astute political genius' from the 'far north'. We are getting hints that the 'astute political adviser' forecast to 'create the center (around the young hero)' has a sublimated letter in his name. We do get such language hints occasionally and in the past they have proven valuable as temporal markers. The 'center (to be formed)' within the 'core peoples' is showing as 'overturning' the 'local politics' over much of 'northern and eastern europe' in what will be described as 'exceptionally fast time'. In the data sets there are repeated references to the 'speed' of the 'political transformation' of EuropeanPop, as it will be 'utterly recreated in (mere) months'.

As may be expected, the 'tumult' within the political structure of the EU is going to 'roll (out) and downhill'. Unfortunately for the 'officialdom', the data sets are showing that the 'population' does not 'follow' the 'dictates', and by August the data is forecasting that the new meme-du-jour is to be the 'active break-up' of 'NATO'. This 'NATO breaks down/apart' meme is also providing support for the 'USA military unable to get soldiers back home due to economic problems' sub sets.

A shift has occurred in the focus of much of the new growth coming into the EuropeanPop entity into a 'german' and 'austrian' sub sets. These sets are suggesting that there will be an 'attempt' to 'en fortress' the 'EU core' by 'groups' in these countries. However the data is also quite clear that their efforts have 'not chance' to succeed as 'failure (is) assured' due to the 'rapidly unfolding global conditions' which include the 'assault on (debt based) asset prices' by 'deflation', and 'debt repudiation', and 'debt destruction'. These and many other sets are indicating that there will be 'turmoil (in the old) town tonight (metaphorically)' as the 'germanic peoples wrestle' with the 'failing Euro currency' and the

'collapsing social cohesion' that is being described much as the 'peace' of the former eastern european communist republics in which it was 'dictates (from above)' that kept their systems together, not an 'organic union'.

The data sets are forecasting that the combination of the 'global credit freeze (mainly western countries to start)' and the 'deflation (of the italian banks)' is going to 'disturb' the 'vatican' as it will 'suddenly' find that it is 'wrestling' with 'debts' that were 'hidden' by 'paper trails'. Much of this language is supported by the 'failing counter-party' sub sets within the 'dynamic deflation' linguistic structures.

There are a number of new sets for an incident of 'lost documents' which will turn out to be a very large embarrassment for 'officialdom' both before the 'documents' (likely a computer) are found and then for 'months afterward'. The data gives the inference that the 'carelessness' may well be 'deliberate' in an attempt to 'leak' certain information and it goes 'spectacularly well', if that was the intent. These sets are part of a group of three temporal marker linguistic structures for the longer term value sets of the 'core peoples movement' and the 'pan-europe [unknown] alliance' that is indicated to be 'dominating' the 'politics' of both Europe, and the Middle East by the early 2020's.

While there are some data sets hinting that it will be 'NATO' documents that are 'lost', the more interesting sub sets are those providing some details as to the 'finders' of the 'documents' as they are described as being an 'alternative community' from a 'self-governing zone'. This conjunction of characteristics is what propels the 'contents of the documents' to such prominence in such a shockingly short period. There are further sets that indicate the 'success of the release campaign' will also be due to the 'diligence' that the 'community takes' in providing 'audio versions' in multiple languages as well as the 'original documents (including videos?)' on 'social media video'.

AfricaPop

Large changes are suggested for both Africa the continent, and AfricaPop. These changes are going to include many forms of the 'earth expansion' effects seen around the planet, including a 'new (line of) sink holes' that will be 'stitching their way across (northern aftica, likely eastern coastal area)'. These 'stitch lines' will, from space, be able to be used to 'discern (the next zanzibar)'.

Other, and different 'earth expansion' effects, including 'in-land blow-holes' that will be 'spewing tidal effluents' are forecast to be something of a 'global sensation' and an 'instant local tourist attraction'. As an 'attraction' the data suggests that the 'blow-holes' will become 'too dangerous (to be around)' as they will be 'demonstrating' both 'force', and 'heat' in 'intermittent bursts'. These sets are filled with longer term language for 'disaster', and 'continent changing', and 'topography altering', and 'map changing', and other words going to the idea that these 'effects' are going to be very 'disruptive' to the 'local populations'. In some of these sets there are sub sets going to the idea that the 'blow-holes', and 'sink holes' are going to be creating 'side effects' that will 'alter (the) Suez Canal'.

New sets for AfricaPop show that 'mining interests' and 'energy (both solar and oil)' are going to 'move their interests (ahead)' by several 'years'. The 'shift ahead' of the 'plans for Africa' by these multinationals are part of the 'on-going crash' of the 'financial structure'. The 'credit freeze language'

does not appear to hit AfricaPop as hard as others, likely due to the 'movement' of 'capital' to 'African resource exploitation'.

AustraliaPop

The 'crushing' of the 'high end real estate' throughout Australia is described as setting up a 'scene' {ed note: may actually be used in media at some point thus the detail levels we are getting now.} in which a 'Fosters drinker' sits on his 'small cement patio' and 'points' to the 'rich houses' up the hill, and 'derides' their 'owners' for their 'crying over loosing a few dollars (of imaginary) value'. The punch line to the detail sets is that our central character is focusing in on the linguistics of "why didn't he sell when he had the chance?". Then the data would have it be between '6/six weeks' and "6/six months' before he is also saying the same thing about his own house..."why didn't I sell when I had the chance?".

The 'end of cycle' words showing up for the 'Australian housing (and later, maybe 2/two months trailing, 'property (commercial)') market' include both intensity, and duration-of-impact values that suggest at least, **repeat, at least** a 5/five generations impact on the 'housing prices' upon reaching the 'bottoming' part of this process in about 4/four years time.

Note that there are sets indicating that the 'north west coast', specifically those 'hills' and 'dry, colored crags' that are 'facing India' and are described as the 'receivers' of the 'long up-welling winds' are going to 'lag behind' and then 'sprint ahead' of the rest of 'australian housing price discovery'. This 'weight on spring' effect is directly held, and also internally cross linked to the 'earth expansion process' and it's impact on the 'australian coast' in that region in a few years. The 'expansion' is indicated to 'crush mining', but at the same time, 'reveal' by way of 'earth shifts' new 'veins' of 'silver' and 'other precious metals (including rare earths)' that will 'revitalize' the area later as 'new mines' are created from the 'recently (in the future) exposed veins'. Note that the appearance of the word 'recent' in the data set is a temporal pointer that indicates that in a not-too-distant future, the time between the 'first exposure' of the 'new veins (of metal ores)', and the 'beginning of the effort to exploit them' would allow for the use of the word 'recent' at that time. Let me restate this just to muddy the idea even further.

Then, say a year from now, the 'australians' involved will be saying things like "let's go dig in that recent land slide area and get that silver (commercially)'. So then, that is, at the time that they voice these words, it will be only a very short period since the slide and earth expansion. This has many levels of implications but one of them allows us to peg our modelspace to these sets when they appear as a major temporal marker on the way to a 'sound money' system globally. See Markets entity for more on these sets.

It is the 'sound money region' that is described as being 'isolated' from the rest of the 'Australian social order', as well as being 'physically separated' (in some manner) that will be leading the 'land/property prices' back to 'stability' over the end of this decade. This is apparently due in no small part to the 'ore' in the ground as there are many sets indicating that 'destitute home owners (formerly)' or 'long time squatters (foreclosed former owners mostly)' will 'resort' to 'digging up their back gardens' and 'shifting their houses (to get a better digging site)'.

Significant 'social order' changes are described for 'northern' and 'north eastern australia' as the 'rescue' of 'large populations' of 'distressed boat borne people' will become a 'global sensation'. The data sets in these sets are primarily longer term, and are seemingly describing the aftermath of a 'disaster of significant size' to a population to the 'north' of Australia, that then has to 'flee' the 'once supportive environment' in many 'hundreds (thousands?) of boats'. These then become the source of the very large increase in the 'rescue' language and also 'population explosion' language for AussiePop.

There are a number of longer term sets going to the idea of a 'political shift' for Australia as the 'USA dollar (FRN)' falls so low as to be 'unable' to 'support (in purchasing power)' the 'American military outposts (inside Australia)'. These sets are within the supporting chain for our very long held sets for 'too broke (to get soldiers back home)'. These sets are now gaining new supporting sets that are filling with both shorter term and immediacy data types indicating that these events are now much closer. Also we need to note that these sets are part of a larger, long held, temporal marker that is just at the beginning of the 'alteration (of humanity) as USA dollar empire implodes' and the 'world of markets drastic changes'.

CanadaPop

CanadaPop is showing as having similar issues to AustraliaPop as regards the 'USA dollar'. The data sets are describing a situation in which the 'legs' of the 'chair' supporting the 'USA dollar (Federal Reserve Note and the banking structure)' are going to 'go wobbly' and cause 'downward pressures'. Note that the data would seem to be suggesting directly that the 'Canadian dollar' is among the 'legs' that will be 'wobbling (downward, ahead of the USA FRN))' over these next few months and into 2017. These sets are seemingly implying that the 'wobble' described is a 'rubber banding effect' within the 'global currencies markets', as well as within each currency as regards its 'purchasing power'. So basically the data is forecasting that the 'Canadian dollar' (along with Aussie dollar) will be 'dropping ahead of (the rate of fall (of the USA dollar))' at least for the next 2/two months or so.

Increasing 'desperation' for the 'falling local government tax revenues' appears in sets that support the idea of 'cooperation' in an active manner with 'chinese officialdom' such that 'chinese (capital control) police' will be 'seen' on the streets of a few 'select canadian cities' as they work with 'local authorities' to 'detain wanted individuals'. It turns out it is a very small world after all.

CanadaPop has new growth for 'crushing debt' (at a public service level) such that 'odd (taxes and) bonds behavior' gets to the point that it becomes 'visible' in the 'world markets'. This appears to be a 'digital money creation' situation that is 'slowly losing (the) ability' to 'maintain parity' with the 'deflationary drain' that is '(behind the scenes) sucking out productivity'. These sets contain sub sets for 'currency woes' and 'currency (liquidity) failures' that are pointing toward 'failing construction companies' as their 'projects', even 'not completed' become 'worth more every day', but 'daily costs' become 'too crushing to meet'.

CaribbePop

Yet more data growing in our sets for a 'ship (wreck) find' that is going to have 'ancient (mummies)'

that are described as having a 'gut gripping effect' on the 'power elite'. The data sets are filling with language for 'dangerous (addiction to the) knowledge', and 'curiosity (is painful)', and 'desperate (bad behavior) to know'. These set are part of a larger lexical structure that has 'large yachts' and 'new power centers' arriving in the Caribbean following the 'discovery' of the 'mummy wreck'. This is indicated to be a large enough level of activity that it will show up in 'incidental video coverage' on the net. The data suggests that the story of a '(trying to be) quiet invasion' of the affected region of the Caribbean will 'get out' by the 'displacement' of the 'cruise ships' and 'closing' of 'tourist spots'. While there are a large number of cross links over to the SpaceGoatFarts entity, the terminating sets are within 'unknown' aspects, so no help there.

These sets are continuing to build both shorter term and longer term values. The longer term sets are post 'discovery' and are suggesting that the impacts will have a very long duration, whatever may be the actual discovery. These sets are also cross linked over to the Terra and SpaceGoatFarts entity were we have terminating sets supporting the 'mysteries (of the) oceans' linguistic structures.

Some of the shorter term sets include descriptors for 'climate change (re-alignment)', and 'global cooling', and 'ice age', and 'ancient people', and '[unknown] mummies'. Unlike the presentations of films, these 'mummies' themselves are the focus and apparent interest of the 'elites'. The idea coming across from the data sets is that these 'mummies' are either not human, or are mummies from some very very very far distant past, as in before the previous ice age.

The data sets are pointing to the 'contradictions' inherent in the 'elite PR statements' of 'old ship wreck (move along nothing to be seen here)', and the 'incredible', and 'frightening (to the locals) amount (of) money (and) resources'. The 'resources' are going to include at least one, more or less permanent, 'power ship' that will just sit, and 'generate electricity' for 'months'. These sets include details of 'locals' who will 'complain' about the 'constant noise' and 'air pollution' from the 'power ship' and will be 'displaced' and 'forcibly relocated' for their trouble.

Other sets within the 'trouble' sets supporting the 'mummy wreck' include details describing an incident in which 'hundreds' of 'people in floatation rings (life preservers)' will 'drift in (on the currents)' to 'sensitive waters' and 'claim distressed mariner privileges'. This 'episode' is indicated to come near the end of the 'recovery tenure' and to be very 'fortunate' for the 'local population' as the timing induces the elites to 'offer up' a number of 'concessions' including 'major power production facilities'. These are all in an effort to be 'allowed' to 'quietly extract the many tons of material' from their 'mystery mummy wreck'.

ChinaPop

The 'Chinese taste' for Bitcoin is showing up across both the ChinaPop entity and the Markets entity as modelspace is progressed through July and the rest of Summer. The data sets are forecasting that ChinaPop is going to 'subsume' the 'global demand' for Bitcoin in a 'rushing frenzy' that will labeled (in China) as 'climbing the waterfall'. This period is the first of 'three (very) large waves' of 'Chinese purchasing' of Bitcoin for the next 18/eighteen months.

Part of the 'drive to purchase' Bitcoin within ChinaPop comes from the 'currency changes' discussed in the previous ALTA report. These sets continue to grow for the 'on-going devaluation (process)' to 'accelerate', which, as may be expected, is indicated to cause yet more 'bitcoin purchases'.

The ChinaPop entity has the 'chinese authorities' starting up a 'new cadre' of 'trained investigators' who will be 'schooled (for) international duties' as the 'first step' in their 'capital control cops over-seas' initiative. Some of the problems showing up for this 'effort to return money to China' is that it is going to run straight into the 'unrestrained activities (of) chinese (criminal) tongs (associations)'. These sets are hinting that some 'news flashes' will be 'erupting' as 'chinese-criminals' versus 'chinese-police' fights breakout on 'foreign shores'.

The ChinaPop entity is forecasting that the 'growth (of) chinese commercial (trading) activities' is about to 'overwhelm' the 'western world' in much the same way that 'bitcoin' is now a 'chinese dominated crypto currency'. These sets are pointing to a 'critical mass' effect in which there will be 'so many' of Chinese 'day traders' that 'professionals' in all the western countries will be 'outnumbered 10 to 1'. These sets are arguing for ChinaPop to 'take over' the 'trading action' around the planet by 'sheer weight of numbers'.

The data sets are forecasting that the Chinese 'authorities' will be 'concentrating' on 'converting' to a 'consumer goods economic base' for their 'internal consumption'. A curious part of the 'internal consumption consumer goods' includes ' anti-pollution measures' both at 'personal' and 'collective' levels. These sets are indicating that the Chinese will 'consume anti-pollution remedies' and 'devices' in 'giant numbers' and will even undertake 'giant (privately financed) air mining operations' in an attempt to 'sell clean air' at the same time as 'recovering (valuable) hydrocarbons'. Other aspects of the 'conversion program' include a 'push for employment' by the 'central authorities' including language that hints at 'employee subsidies' and other 'innovative thinking' for 'achieving maximum employment'. These sets are gaining so much in the way of emotional tone due to the rising presence of data sets containing 'social unrest', and 'falling wages', and 'economic downturn' that all are also contributing to 'riots', and 'regional (level) disturbances'. These are also indicated to cause at least one episode of 'transportation disruption' when a 'regional labor issue' will 'erupt' into 'national attention' as 'commodities' and their 'distribution' are impacted negatively for perhaps as long as '2/two weeks'. The 'disruptions' have a greater preponderance of south-east China references than others.

The new data sets about the 'rising lands' and the 'rare earths' are also now containing geographic references to the 'disputed (new) islands' in the South China Sea. These sets have internal cross links over to new linguistic structures indicating that it may all 'happen again', as China sets about 'building another island chain'. These and many other sets are in an area that we can call, 'China sets about terra forming earth'. These sets have details going to the idea that GlobalPop will be viewing the first of 'mega Chinese engineering (outside of China) projects' appearing in a start late this Summer, northern hemisphere. Other sets are pointing to both 'moving mountains', and 'carving (out) sea mines'. Sets in the 'sea mines' supporting chain are indicating that a 'mineral discovery' off the 'west coast' of 'Ireland' is going to receive both Chinese 'money' and 'expertise (in sub sea engineering)'.

While there are very large sets of new growth for China, given the extensively cross linked sets around 'money', 'currencies', 'bitcoin', and 'precious metals', the data would seem to be saying that "everything else takes a back seat' this Summer. The ChinaPop sets are showing an increasing 'focus', indeed, even 'determination (to focus)' on 'money' and 'economic movements' over these next few months, especially

the month of 'August'.

From the ChinaPop perspective, the 'goings-on (in USAPop)' over 'August' will be an 'entertainment boom' as well as a 'big kick in butt' to get 'moving (for) self-preservation' as the data sets are showing a 'portrayal' in the 'chinese news machine' of the 'western powers' being 'clueless'. It is the 'clueless behavior' of the 'western powers' that will actually be explaining many of the pending 'policies' and 'actions' of the chinese authorities'. In some of these, as we have recently witnessed with the Chinese central authorities moving to 'embrace bitcoin' {ed note: as forecast months ago in these reports}, the data sets are suggesting that it is 'self-preservation' as a 'power structure' that has the 'chinese authorities' so 'worried' about 'western bad behavior with money' and thus their 'inexplicable ' policies relative to 'gold' and 'silver' and soon, 'bitcoin'. The data sets are suggesting that the 'embrace' of 'Bitcoin' goes to the level of 'encouraging adoption' of the 'currency'. This 'encouragement (by the) central authorities' is indicated to 'propel bitcoin' to 'chinese mainstream'. These sets are suggesting that this will begin in late 2016 and progress over the next several years. It is this 'chinese central authorities' move into 'bitcoin' that is seemingly responsible for the shift from the emotive values of 'silver' being associated with 'bitcoin' over to the emotional values more associated with 'gold'. In essence, the data sets are describing 'bitcoin going mainstream globally' as we have entered the age when the emotional tone of ChinaPop will dominate the planet.

Other aspects of ChinaPop showing as 'dominating' these next few decades include 'engineering' insofar as the 'construction' of 'large projects'. The data sets are continuing to grow in supporting positions under the 'chinese authorities' setting out to 'curb (internal unrest)' by 'exporting chinese (young males) abroad'. The will do so, according to the new set growth of aspect/attributes, by creating an 'army of (the) gray ants' which will be their 'external (to china) infrastructure engineering and build-out forces'. Seemingly organized as an 'army' the 'infrastructure core' is indicated to include all forms of 'economic (required) infrastructure' such as 'trains, planes, water, and housing'. These sets are suggesting that over the next 30/thirty years, the 'gray ants presence' in places such as 'Africa' are going to be so 'constant, consistent' that they will have 'seemed to always have been there'.

USAPop

Watch for the impact of the 'infrastructure crises' of Summer 2016 to begin in earnest in July. Along with a labeled crisis periods (see Markets entity), the data sets are forecasting that there will be a noticeable increase in 'natural disasters' of the 'summer kind'. These 'natural disasters' impacting the USAPop are forecast to include many which will be natural, but not recognized as such as the underlying causal factor is showing as the 'earth expansion' effects. Examples of these will include 'grand stand collapses', indicated to happen both 'empty' and 'with people' in them. Other disasters include 'rides', and 'attractions' where 'hidden earth expansion problems' are described as 'surfacing' with 'spectacular imagery' within the resulting videos. Other examples include 'near instant draining (of water park facilities' as the 'topography changes' due to 'earthquakes'. As an interesting note, within the 'earthquakes' section are three individual sets for 'female hero'. These 'females hero' sets are seemingly describing 'three (separate) heroines' who will be 'brought (forced into) prominence' by their 'unselfish (life risking) actions' over the 'early summer'. These instances are temporal markers for larger memes to

emerge over this very pivotal time. We have some small descriptors for attributes of the women involved, and yes, it would seem that in spite of 'youth' being one attribute, all of the women are 'adults'. Further we find that at least one will be an 'army girl' with 'tats'. Other attributes are forecast to be 'bringing (thousands of) marriage proposals' to one of the women.

The USAPop entity is forecasting that the 'heroines' will not be the only 'show in town' as the 'political fracturing' is gaining new supporting sets at a very rapid rate {ed note: the increasing rate of growth was coincident with the shift forward of the bitcoin data sets recently}. This 'fracturing' will manifest, according to the data as a 'violent schism' that is described as 'people with torches' leading the 'disenfranchised majority' out of the 'emptying hall' and 'down the road' towards a 'meeting in (a) public park'.

Look out for the resurgence of an 'old time (economic) religion' within the 'ruling elite' of USAPop as the idea of 'price controls' will come to be 'floated' about in front of the public as the 'hyperinflation' starts. The idea *used to be 'wage and price controls', but now, with no one working, the 'wage' part of that equation will be absent from the discussion. Thus, the data is indicating that this will induce the 'producer class' to 'shouting' and 'wailing' about the 'unfair burden' that they will 'feel' is 'theirs alone'. These new sets are part of the long trailing 'response' from 'officialdom' period as the 'ruling elite' get 'bashed' over Summer (manifesting now), and have to 'respond'. Again, many new sets contain supporting sets for 'wonky', 'ill advised', 'upside down', and bespoke 'stupid' as being applied generally to these 'officialdom responses' as the 'Summer of Crisis' will be 'heating up' through July and August.

It is during these 'credit crises' days that a much larger group of USAPop is forecast to get 'bitcoin fever'. While there are some 'gambling on price appreciation' aspect/attribute sets, it apparently will be the 'utility' of bitcoin that will be the drawing factor in the USAPop. This is showing up not within the mass of USAPop but within sub sets that are 'international' and 'business' focused. The data sets are suggesting this increased use are within the supporting chain for the 'bitcoin as international settlement vehicle cause it's too expensive to pass around gold' set.

The 'real estate whispering' is showing as taking up more emotional energy from USAPop as the various local 'real estate bubbles' give 'clear indications' that they are 'deflating'. Not only are the new data sets forecasting a 'traumatic drop' in 'home sales' (more or less across the nation), but we now also have new sets for 'drastic price reductions', and '(seller) incentive battles' wherein some local markets are showing as 'hitting extreme levels' of 'competition' as the 'real estate sellers' will find themselves in a position of 'paying (for potential buyers)' in ways not previously seen in US markets. There are large areas of growth in these sub sets detailing all manner of 'advertising' and 'promotions' that are forecast as being 'far less than effective', but which are also characterized as both 'perceived (as) necessary', and 'acts of desperation in desperate times'.

The 'real estate markets' sets also include quite a bit of new supporting sub sets about the 'lack of foreign buyers'. Not only will the 'chinese' be 'disappearing' from the 'buyers side' of the 'equation', they are forecast as becoming 'net sellers' of 'USA real estate' over the next 'four years'. Further, there are other sets for the 'drying up' of the 'south american buyers' as the 'economies' in that part of the world that are 'dollar dependent' become 'deflationary'. Again, many of the 'sudden' and 'must sell' offerings in the 'southern USA real estate markets (including Miami/and other FL locations)' will be due to 'dollar deflation pressures' on 'home country economies'. This juxtaposition of the 'ballooning (of) foreign

sellers' into the 'market' just as the 'foreign buyers' also 'disappear' is indicated to participate in causing very large levels of depressed prices for 'high end real estate'. By this is meant that the 'initial (price) drops' in some local markets are going to 'exceed 45%' off of "last year's price".

Given the rising emotional tone values, and the negative forecast, the data would seem to be arguing for a break-out into the 'open press/media' that the 'economy (at least real estate)' is 'tanking' or 'submerging'. The data sets are showing that a 'media discussion' about the 'high end real estate markets' going into a 'stall before the fall' these last few months is indicated to now move to the 'falling and bleeding (prices)' stage of the 'market collapse'. Much of the language here is reflective of the tones seen in the AustralianPop entity where their local 'Joe Sixpack' is 'feeling pretty satisfied' and 'protected' in the 'warm haze of the lazy summer and beer' while 'contemplating contemptuously' the 'misfortunes of the (local) rich'. Again the data sets are showing that the 'crashing sound' that 'Joe Sixpack' is hearing will soon be in his own neighborhood as the general 'real estate market' meets 'headlong' the 'onrushing avalanche of credit freeze'. The data sets are providing a picture that is difficult to describe. Within this linguistic image are sets that include 'rolling', and 'crushing' to describe the 'motion' of the 'travel' of the 'credit freeze' through the 'system'. A good analogy would be having one's 'veins freezing (along their) length' at a 'rapid, but observable speed'. The 'credit freeze' is showing as being 'centric', which is to say, 'beginning' in several 'regional centers', and 'spreading (from each center/loci)' in all directions (locally). There are also detail sets pointing toward 'national lenders' going 'dark', and 'silent' over the course of 'only a few days'. These descriptor sets have details showing the 'lights out' effect at 'real estate offices', and 'auto dealerships', and 'retail stores' including 'complete malls' as 'daily operating credit' is forecast to 'dry up' like a 'shallow pond in the summer sun'. In some of the detail sets the 'economic activity' is described as being 'reduced 77%' over just a few weeks.

The 'rapid', and 'visible implosion' of nearly everyone's 'local economic activity' is going to be rising to 'media attention' over these next couple of months as the 'cessation (of construction projects, even recently started ones)' and the 'curtailing (of business expansions)' and the 'cancellation rates (of damn near all business categories from hotels to boats to appliances to cars to houses to hospital beds to vacations to weddings to anything short of funerals)' are showing as 'escalating' to the point that even the 'mainstream propaganda media' will be 'directly' and 'embarrassed' by the impacts on their 'public face' and 'operations (work/business)'.

A significant impact is indicated to 'hit' USAPop in the 'face' as 'devaluation schemes' are being 'discussed' by media when talking about 'the dollar'. These 'discussions' on corporation controlled broadcast media are going to be 'misdirecting' the 'focus', but the data is forecasting that the 'emotional impact' will nonetheless get through to the point that there is going to be a 'cluster' of 'media reports' about 'long lines (for gold/silver at retail level)' in a number of places in the USA. Some of these sets are also focusing on Texas where the 'getcher gold' meme will be spreading like 'wildfire' and some of the 'gold (and silver) sales outlets' are indicated to use the 'wildfire' metaphor within their advertising. These sets are suggesting that part of the propulsion for the 'texas gold rush' is going to be the emotional energy within the area coalescing around the idea of 'Republic of Texas Independence'.

The data sets are also showing that a considerable amount, say close to 28% of the emotional impact and duration values for the 'independence Texas' meme is forecast to be coming from 'other states' and even 'other nations peoples' who would like to 'emigrate' to an 'independent Republic of Texas'.

Other sets within the supporting linguistic structure for 'submerging' also are including 'economy', and now, newly arrived, a plethora of additions to the 'failure of the social contract' sub sets. These sets are suggesting that a 'redress (revisiting/re-examination)' of 'old economic policies' is going to be 'forced (upon the) mainstream propaganda media' as the USAPop is going to be 'gripped' by 'intriguing details' of 'near recent past (mistakes of the) federal government'. Some of these new sets are forecasting that 'Oklahoma City Bombing' and other 'past deeds' of the 'government' will be 'examined' in such a manner that these 'old stories' of 'misdeeds' will be 'new again'.

The larger 'failure of the social contract' sets are arguing for a 'conjunction' of 'unexpected (not imaginable/ not able to be planned for/ not on the radar....) circumstances' that are showing up as producing 'discord' at precisely the 'wrong moment' in a 'plot' against USAPop. The 'circumstances' are described as 'special' to the 'environment' of the 'intended victim(s)' as well as being 'bizarre' and (when reported) 'widely disbelieved'. While the new aspect/attribute sets are showing that the 'circumstances' are 'beyond belief', and 'wildly incredible', the data nonetheless shows that the 'bizarre reports' will be 'factual', and further, that they will actually be 'accepted' by USAPop in spite of the 'continuously stated' descriptor of 'unbelievable'. As the data flows through modelspace, the image suggested by the growth patterns of the data is of an on-going 'situation' that may 'drag on' for days. Within the section of USAPop the movement within modelspace occupies slightly less than eighteen/18 days. Within the data accretion patterns there appears to be a forecast for 'fouled up plot/agenda' to be reaching into the 'minds' of the 'mainstream USAPop' via 'live coverage' being 'net funneled' via 'social media'. Much of the other new sets are showing up in support of a new phenomenon being 'unveiled' as it is being 'created'. The detail sets for these descriptors are confusing, dense, and extensively cross linked over to the SpaceGoatFarts entity where the terminating sets can be inferred to be point to something 'not yet named'. So the idea coming across is that we have yet again an 'unknown' dominated set trying to describe a 'social phenomenon' that has not yet appeared, and is both 'novel/new' and (as of this writing) 'unnamed'. What is known about our 'unnamed social phenomenon' pending in the near term future is that its effects will be very intensely felt, and cause 'long lasting/multiple generation' changes in the 'general social contract'. Other hinted impacts include a 'recasting' of how USAPop 'perceives itself now' based on 'new history' being provided.

A new area of growth within the USAPop is centered around the 'southwest' in a broad geographic sense. While the cause is not quite clear at this point, the resulting emotional tone spike is pointing towards an event or circumstance that will produce very large response in the national population. The data sets are showing that 'earth changes' are involved, and that further, the 'condtions created' will be 'drawing in' the 'federal government response teams'. These 'teams' are indicated to 'run into (physical) walls', and 'other obstacles' to 'their agenda' while the 'circumstances (of the) disruption' continues. There are some hints that 'technology disruptions' will be involved in the 'incident/events/manifestation'.

Further examples within the data of 'regional (former) power centers' that are to 'suffer degradation' as a result of the 'credit freeze', include 'hollywood'. The data is indicating that the 'southern california movie (and other media) industry' is indicated to take a 'major hit' (pun not intended, but it was in the data) as the 'credit freeze sweeps the banking system'. The idea within the IM and ST sets shows that a 'sour stomach feeling' is going to be 'forcing' many of the 'speculators' in that 'industry' into 'hospitals'

as the 'cancellation wave' is described as 'rolling over the (hollywood hills)' and 'drying up' the 'income (for the) valley'. At some of the 'processing levels' for the 'hollywood distribution system', the data is showing that the 'break-away inflation' has 'spiked' the 'costs' involved in 'making movies' here in USA.

Other 'hollywood' issues are forecast to include 'chinese (super) competition' for 'foreign markets' as the 'chinese movie industry' will 'turn into (become)' what the data sets are describing as a 'truth machine' that begins to 'detail (the) crimes (of the) western hegemony'. These sets are suggesting that within a 'shockingly short time', the 'chinese movie industry' will be 'out producing (for foreign consumption) hollywood' at ratios of '10,000 to 1'. The detail sets show that very soon a 'single month' of 'movie releases' from China will be more than all films ever released from 'hollywood'. And the 'majority' will be 'anti-western dollar/criminal empire propaganda films'. Expect to see many of the upcoming Chinese films explore the 'great financial panic' of 21ˢᵗ century America.

Other aspects of 'chinese (over taken) activities' are going to include 'travel (for leisure)' as the 'Chinese (capital) juggernaut' rolls over the 'cruise business' at a 'global level'. This 'roll over' is also showing as including 'dominating' both the 'itinerary', as well as the 'guest manifesto'. In the case of the latter, this 'dominating of the passenger list' has sets in support of 'national (patriotism) pride' language popping up in various markets as the 'chinese passengers' will be 'pricing out' the 'locals'. This situation is forecast to create 'incidents' in which 'patriotism' and 'bad behavior go wild'. The detail sets include 'fights', and 'international incidents' and 'trade repercussions'.

As may be recalled, our previous ALTA reports have long been forecasting that 'regional power outages' would be a defining characteristic of the 'Summer of 2016' at least for USAPop. Within the 'power outages' sub sets we have new growth for 'conflicts' that will erupt at a number of levels, including 'on the street', and 'within the board rooms' as the 'power outages' are described as 'eating' the 'spare (national) capacity'. The data sets show this to be a long term problem that gets worse by the 'month' after the first 'initial flurry (of) summer incidents'. These sets are also in support of the 'heat wave' and the resulting 'infrastructure damage'.

The whole of the 'infrastructure damage' sub sets within the USAPop are going to other 'climate change damage' that is indicated to 'come back/blow back ' with 'exaggerated damage' as the 'previous fix' (which may involve a 'dam') has a pending 'blow-out'. There are many sub sets that are suggesting the 'explosion' to be inside a 'major electrical power plant'. The new growth in these sets have details about 'excessive heat' that will not only 'spark fires' but also 'sag (major) high tension lines' at a 'critical time' with a result that the 'lines (conduits to another state)' will 'break' and the 'shock (to the power plant' will 'initiate (machine core) failure'. This does not show as a nuclear power plant, rather as hydroelectric or gas plant.

The 'shortages' issue is indicated to be greater than just the 'electrical (energy)' system in that we have sub sets for 'shortages' in 'foods (as in specific food types/items)', and 'precious metals'. Other sets show that 'rotating (consumer) item shortages' are going to 'lay-over (the western world)' as the 'credit freeze hits producers', and the 'shipping/distribution system'.

Part of the new growth in the 'credit freeze' sets includes 'retirement grab' in which the data are showing several 'announcements' by 'officialdom' that to 'secure' and 'safe guard' the 'retirement accounts' of the USAPop, these 'must be converted' to something that the 'government can protect'. These sets as well as the subsequent sets for 'near riots' and 'officialdom offices overturned/trashed' and 'federal (retirement)

agencies offices destroyed (trucks driven through walls, that sort of thing)' are all interconnected both directly held, and via cross links over to the Markets entity for a 'break-out' of the 'precious metals' as 'off grid money'. These sets are part of USAPop and Markets entity sets that go to the idea of first 'lines' and 'daily queuing for silver/gold' across the USA that then turn 'vicious' as the 'supplies (become) exhausted (in mere days)'. At this point in the movement of modelspace the data sets are showing that a number of 'breakdowns' and 'government failures' start to 'pile up' on the 'lousy economy' that then once again 'push the population' into 'precious metals'.

It is at this point that the 'government', especially the 'banksters' find themselves in a 'deep bind' as they are 'unable to (try) helicopter money' due to their fear that the 'population' would 'simply run up the prices of gold even higher' with the 'delivered fiat currencies'.

What is indicated to 'shock the monkey (freak out officialdom)' during the 'middle of summer' is the 'dollar (following the euro) falling down stairs'. These 'downward falls' are indicated to 'prompt significant changes across (the) social order'. Some signs of these 'changes' are not only the lines for silver/gold', but also the '$20 days (upward in price)' for 'silver', and '$500 days (in gold)'. These movements in 'price' are indicated to be 'altering the political background (of the) USAPop' and causing 'severe strain' among the 'ruling elite (criminals)'. The 'strain indicators' for this period will be seen in the 'bad behavior' and 'dying (parts of) major banks'.

The 'falling down' behavior of the 'dollar' over Summer is forecast to create a situation where the 'population' begins to develop its own 'precious metals exchange system' as the 'banks' and 'officialdom' are left to 'rule over' the 'seized (engine) of the paper debt economy'. Within this 'developing system' the 'real price discovery' of 'gold' and 'silver' is being described as being 'several (times the) price' being 'officially quoted'.

Markets

The language accruing to the Bitcoin sub sets now includes 'spreading wings', 'on fire', 'fire below', 'fire above', 'fire (in the) belly', 'fire (filling) arteries', 'favorable winds', 'fresh winds', 'fair seas', 'flying high', 'basking (in the) sun', 'successful husbandry(growth)', and many others of similar emotional tones all going to the idea that over the course of July, and the Halving, that Bitcoin as the "global people's currency" is going to 'do very well indeed'. As modelspace is progressed through the year from late June through July, first we encounter linguistic renderings suggesting that 'bitcoin' will be "in the 1000's" (as in 'worth over 1000 USA dollars but less than 1999 USA dollars') for such a 'short time' as to have the 'time period' itself become the object of the conversations. So the implications to be taken from this is that very soon, as in perhaps by end of July, Bitcoin prices will be over 1000 USA dollars, and that the transit through to over 2000 USA dollars will be 'remarkably brief' to the point of 'eliciting conversations' about the 'speed of price rise'. Now, note that the 'speed of passage' of Bitcoin through the '1000s' of dollars could easily be 6/six months and still be very brief according to how the words are defined within our lexicon.

The new sets include language for 'insane valuations', and 'hyper-hyper gambling (in BTC)', and many other sets going to the idea of the 'global population' being 'in competition to buy bitcoins'. Now it must be noted that this is NOT referencing, in the majority of sets, a real intention to either 'gamble' or 'invest' or 'speculate' on Bitcoin as a potentially 'rising value asset', but rather these sets are directly

held descriptors going to the idea of 'selling (local fiat) currencies' for bitcoin as a way of 'transferring (the) value and the risks' out of their 'local paper' or 'local digits'. Further interesting alterations in how Bitcoin is being 'perceived' and 'valued' and its emotional qualifiers are coming out of recent processing as Bitcoin has become more 'global' as the center of its sales activity has shifted to China. The accompanying shift in perception and value is forecast to include the idea of a 'nascent GlobalPop ideal' now starting to form in the actual GlobalPop. This is perhaps best expressed as the concept of Bitcoin gaining 'emotional cache globally' JUST because it is a 'global people's issued currency'. That it may be also considered as 'ersatz' or even 'illegal' depending on geographic location and local authorities does not seem to alter its rising perceptual value as a 'global (outside the (now dying) system) people's currency'. The subtleties of the emotional shift are masking its forecast importance.

Further, there are new aspect/attribute sets for 'yellow light (being reflected from gold)', and 'golden aura', and 'gold like', and 'glimmering', and many other 'gold' attributes that are accrue to the Bitcoin sets as modelspace progresses through July and August. Within these new growth patterns are 'gold' like attributes far too numerous to note here. The tone of the Bitcoin sets have now firmly shifted from those of silver over to those of gold. Also note that this is occurring while many of those attributes within the 'silver' sub sets are also changing rapidly.

Within the 'silver' sub sets there are many new aspect/attribute sets going to the idea that 'silver ' will be viewed by the 'population (globally)' as a 'precaution against calamity'. This new status is indicated to rise from 'chinese television' and the 'chinese central authorities advertising (to their own people)'. There are many new sets showing that a 'push to own silver' will be 'main theme' of the 'campaign' as the idea of 'silver as (daily) money' will be 're-introduced (by chinese central authorities)'. A significant portion of the language is building around the set for 'central sincerity' within which there are indicators that the 'Chinese officialdom' is 'scared shitless' about the 'chinese population' being 'caught by surprise (when global currencies collapse)'.

Ethereum does show up in the data, however the sets that are accruing to its linguistic structure are all emotionally 'hot' up until very recently. This state of 'heat' within the emotional tone values (such as duration, energy, intensity, impact, length (temporally) of impact, et al) is such that no useful forecast could be made, however, now that the 'ether' is launched, and there are now appearing negative articles, and discussions, with a 'victim' involved such as those who own 'ether coins', there are now emotional divergences, and nuances which are what allow for the forecast language to emerge. That said, this is a very significant turn in the data sets as it implies that 'ether' has legs into the future. Most alt-coins have yet to even get close to this stage within modelspace, the other notable exception is 'ripple' which has taken on an identifier/label [the word 'ripple'] that has so many connotations as to be more readily found in the data sets albeit only infrequently associated with the 'ripple alt-currency'.

You, the reader concerned with 'financial markets', and 'economics', and 'politics', are living through the reason that last month's ALTA report was named 'wild ride'. The naming of these reports is a part of the processing of the data sets, and given the level of emotional intensity, and the incredible duration of impact of these days, this current report could have been named "The 16/sixteen days in July". It was not so labeled for a variety of reasons, but that will not stop the 'fiat currencies' and and 'global markets' from living and thus naming this month as 'those 16 days (give or take 3) in July' and the 'wild ride in markets'.

Modelspace is a 3/three dimensional scatter graph. It does not ever indicate a starting day or a precise time as such. What we get is a general span of time in which the emotional forecast language will appear in the media. As such we have a very broad possible range for the location of our '16 days in July'. The first could be as early as the intended publication date of this report, which is to say, July 5, 2016. The second, and more probable, is July 11, which is the day following the 'halving' of the mining return on Bitcoin. The first of these dates represents the largest initial bulge of this data set while the July 11 day represents the peak of the emotional tone sums across the entire range of July relative to the sub sets in the linguistic sets referenced. In other words, July 11 has a forecast emotional tone that is close to the emotional tone of the '16 days in July' sub set.

This '16 days in July' sub set is being described as a very significant temporal marker for '5/five generations (100+ years)' as well as being a 'point of shattering (of the existing system?)'. These '16 days in July' are so labeled as the data suggests that some future 'histories' and 'historians' will name our 'pivot point' as 'those sixteen days in July of 2016'.

Breaking away from 'price controls' and towards 'free markets' and the resulting chaos and 'dollar degradation' are all within the labels for the new descriptor sets accruing over this last period of processing. These involve new definitions for words commonly employed and now, according to the data sets, are going to be 'demonstrated'. These 'to be demonstrated' words are including 'collapse', and 'shattered (confidence)'.

Detail layers are providing very large sets of 'Unknown' elements for a late September surprise that may involve 'energy' sector such as an 'electrical system shut down' that has a large number of cross links over to the the 'east coast (usa) markets)'. This is heavily cross linked, shows before or on the September equinox, and is a totally new set with a few detail sets presenting the images of a very disjointed picture puzzle of a long lasting 'black-out' that will also 'shut-down' both the 'transport' and the 'data transport' including 'lasers' which will have the impact of 'stalling', and 'misdirecting' the 'algos' as well as causing some of the 'high frequency trading systems' to 'freak out'.

Of course, the whole level of the 'September freak out' has to be understood in relation to how the data shows Summer in the Markets entity. As both July and August progress, the 'markets' aka, 'paper debt trading vehicles' are gaining sets for 'old', 'tired', 'geriatric', 'breaking (down) internally', 'bad smell', 'rotting skin(s)', 'tired blood', 'sore bowels (from too many 'harsh evacuations')', and many other, much more disgusting body references all in the same emotional tone of 'weakened state complaints' and 'general body break-down'.

New sets growing across modelspace are now using the 'depression' word. The data sets are showing that not only the 'alternative (woo-woo) media', but now the 'msm', the 'pundits', and even the 'person on the street' are going to be using the 'd-word' to describe the 'global economy'. Other sets are showing that there will be modifiers to this word frequently very rude, or crude, but accurate. Some of the more accurate aspects showing as creeping into daily conversations over the next few years will include the 'central banksters' as in "the central banksters depression". In the case of the 'central banksters' as a set, there are increasing amounts of possessive language emerging relative to the attributes within the sets. This, and the changes in the emotional quantifiers, allow us to forecast the upcoming shift of 'mental imagery', and 'emotional attachment' within the greater GlobalPop about the 'central banksters'. Whereas it was merely a decade ago that the 'Fed Chair' was treated as 'close to the (king) of the world',

the data is now forecasting that 'banksters' will be 'soon shocked (to be) recognized', and 'publicly berated' and 'beaten'.

Much of the new aspect/attribute sets accruing to the 'depression' word are indicating that there are going to be huge numbers of 'solutions' proffered over the next two years, all of which are 'useless', and 'meaningless' in the 'scope' of the 'depression (being) experienced'. The data shows that the 'political class' especially the 'new generation (of want-to-be's)' are going to be especially egregious in 'spewing nonsense' related to 'ongoing, crushing economic woes (in former dollar empire)'.

The data sets are showing that the 'trade wars' language and 'economic flow (of capital)' are forecast to 'go into crisis' as the 'economic activity' (mainly in the USA) is 'grinding (to a) complete halt'. Further, the 'depression' language is accompanied by the 'hyperinflation' language growth that 'jumps' into the 'public consciousness' as the 'federal reserve banksters' go into 'public panic mode'. The data sets are clearly indicating that the discussion of 'hyperinflation' in previous ALTA reports have now shifted into its manifestation period. The data had, over the course of this last year, held that the Summer of 2016 would have first the 'response period (by the officialdom)', followed by 'the panic period (by the officialdom)'. The 'response period' is an underlying and background meme running across the last half of June and all of the rest of Summer. Then the 'panic' period begins with the '16 days in July'. These sets are showing that the '16 days' is going to include the 'first burst (of hyperinflation)' coming from the Federal Reserve Banksters.

The 'hyperinflation' language is specifically focusing on the 'federal reserve banksters', however the ramifications are indicated to be almost instantly 'global'. In the 'side effects' sets are some indicating that the 'italian banking system' starts a 'dramatic crumbling' that is described as so 'severe' as to 'impoverish (the) vatican' as the 'hidden debts' become 'revealed', and the 'pledges' are 'sought (to be) honored'.

While not directly part of the 'hyperinflation' sub sets, the 'scramble (desperate to get out of fiat) currencies' sets are pointing toward the very near term future when new 'ersatz currencies' including 'digital offerings (blockchain clones)', and 'mock-metals', and 'regional tokens', and many others are going to be manifesting in a reality near you. While all of these are linked to the 'dying dollar' which is doing so from 'hyperinflation', it is the 'failure of confidence' in the 'fiat masters (Federal Reserve Banksters)' that is our proximate cause for action appearing in the data. The 'increasing intensity' of the 'economic crisis' is a growth factor for these 'new currencies' appearing globally, however it is the 'bizarre behavior' of the 'fiat masters (as people)' that is showing as propelling the 'spread (of fiat abandonment)'. Of course, in the midst of the 'ersatz currencies boom', there is the 'dominating (hyper-drive (pun intended)) rocket-ship' that is Bitcoin.

Over these last few ALTA reports the data sets have been bringing up 'automobile industries' and the 'car dealerships' as a global system as being the 'next vein (to) coagulate'. These sets are also in supporting positions for the 'car dealerships (in USAPop)' being 'converted (to other uses)'. New growth continues to point to 'shut doors' and 'squatting families (and gangs)' who will 'take over the (former) dealerships'. In some of the longer term sets we have 'food production', and 'warehousing space' as uses for these 'car sales sites'. Within the USAPop the 'pivot point' for the 'implosion' of the 'dealerships system' is shown as being the 'millennials' and their 'distaste' for both 'driving' and 'car ownership' (also, probably a lot of that is fueled by 'student debt loads')'. Globally, the data shows the

'depression' that settles over 'consumer goods' (excepting China) is due in no small part to the 'chaos' that is going to 'rule/dominate' the 'global financial system' and 'all currencies' for these next 20/twenty years.

The data sets for the 'price rise' in 'silver', specifically, have supporting sets that include language around 'air gaps'. These 'air gaps' are the best our descriptors can do to describe the 'jumps up' in 'relative price' (in dollars)' over very short periods of time. Whereas the data sets do have descriptors for 'stair steps', these 'air gaps' are apparently their own form of 'price action' (likely not called that by the professional traders). These 'air gaps' have very distinct sets of emotional sums indicating that the 'jump up (in dollar prices)' will be so large and the 'gap in the air under the price' so huge as to cause 'traders' to 'faint' and to 'vomit'. The former from sheer disbelief and the latter because the actually do believe it. The data sets are also describing the 'air gaps' as being so large as to 'create (generational) fortunes' in mere 'hours'.

The data descriptors for 'silver' have '38/thirty-eight' as being the only number between '18.88' which is also described as a 'barrier' and the 'new all time highs'. So, noting that these sets are linguistic and not numeric based, and that the numerals come in via linguistic structures much as though being reported after the fact using these numbers and our psychics bring in the headlines and thus the numbers, the '38/thirty-eight' number for 'silver' is especially interesting as it has a correlation via cross links over to the 'bitcoin' sets. This correlation would have 'bitcoin' be in the '1000s (one-thousands)' at or near the time that 'silver' goes to '38/thirty-eight'.

The Markets entity continues to grow data, now almost all in the immediacy data types, that the 'insurance "industry"' is going to be 'destroyed' by the 'stagflation' that will be 'settling in over global economic activity'. Or already has been (so 'destroyed'), as the data sets are suggesting that a 'wave' of 'bankruptcy' and 'defaults' is going through this 'industry' beginning this Summer, and continuing through the rest of this year and most of next as the various 'majors' will be 'tottering', 'teetering', and 'reeling' from the 'crashing economic burdens' of 'negative rates', 'falling currencies', and 'escalating claims'.

The data sets are showing that the 'major banks' including the top '20 banks' globally are going to be 'rocked' by 'failures' across the rest of 2016. These 'failures' are showing as being 'losses' to the 'credit system' and a major contributing component to the 'developing credit freeze'.

The data sets are showing that the 'crypto-currencies' are the 'default payment method' that takes a 'big jump forward' as the 'various' forms of 'central bankster tricks' all 'fail to work'. The idea coming across from the data sets is of a universe homage to Bucky Fuller in that just when the 'system collapses', we already have 'invented that which replaces it'. The data sets are showing that as the 'fiats die', a 'path of least resistance (at that point)' leads to 'bitcoin' and other 'crypto currencies'. The predominant is Bitcoin, but others are showing up within the data sets as having useful life both regionally and in 'vertical markets'. There are also indicators of 'smart crypto-currencies' coming which will be 'smart objects' able to 'identify their owners', and to 'act on instructions and timing'. These 'smart crypto-currencies' are also, like Bitcoin, described as being a 'western invention' that ends up being 'dominated by ChinaPop', and also 'captivating ChinaPop'. These are described in longer term data sets and are several years out, but are also described as 'natural outgrowths' of the 'time, energy, money' that will be going into 'bitcoin' and 'crypto -world' as the 'ancient paper scripts die off'.

The data sets have geographic references for 'south america' and some parts of Africa such as 'south africa', as being 'crypto-centers'. These sets would have 'fiat currencies failures' being the prompting motivation in the former, and the rising 'southern ocean trade routes' for the latter. In the case of the 'southern ocean trade routes' there are Terra entity links suggesting that the 'heat sinks' and 'heat distribution system' of the planet enters a period, to humans, of 'irregularity' such that 'new routes' are needed, and 'south africa' becomes a 'major trade way station' due to location. The 'speed at which the failing fiat currencies plummet' is indicated to 'force' the 'shipping business (into) bitcoin', and as a result, 'south africa' becomes a 'crypto hub' for the region.

Yet more data sets are going to the 'adoption' of bitcoin as the 'fiats fail' across the 'dollar empire world'. Again, it is the primal archetypes for 'food', 'shelter', 'health', and 'well-being' that are firmly linked into the 'mass adoption' of 'bitcoin'. These are indicating that the 'collapsing (purchasing power)' of the 'fiats' are going to 'grab (the unaware humans)' by their 'intestines' and 'wrench them' into 'fear' in ways 'not before seen'. The 'not before seen' is actually a bespoke term that is going to the idea of 'peer pressure' and the 'piling in effect' as the 'fear' starts compounding itself. In past fiscal crises globally, there are physical limits to 'release (safety)' that would include the amount of gold or silver available to be bought, which while true also in this (pending) crisis, is now augmented by the 'bitcoin rescue effect' about to be witnessed globally. This will consist of the idea of 'whew, I was able to get my money/wealth out of paper and into bitcoin' usually followed by 'just before XXX'. This is akin, in a loose way, to the 'wealth effect' so touted by the 'central banksters'. This 'psychological state of 'safety'' is going to be unique to this particular global financial crisis as, unlike former crisis where the limits are the availability of gold and silver locally, now, bitcoin will be 'perpetually local and available'. It will be merely a matter of 'how much fiat' is paid for how 'little bitcoin'.

The data sets are quite clear that what propels 'bitcoin' into the 'safety-net' of the upcoming 'financial/fiscal crisis' will also be the same characteristics that will makes its use as a 'settlement vehicle' so attractive later for 'larger capital payments', the 'ease of transport'. Bitcoin will, as has been forecast in these reports for the last year, move emotionally into the same level as 'gold'.

SpaceGoatFarts

In the longer term data sets accretion patterns are some consistent references that are binding the 'north west coast of Australia', that part that could be described as 'facing India', and the emergence of a 'sound money system' that further is described as having 'global penetration'. The 'sound money system' is specifically that, a 'system' in that it has a 'bitcoin based, international transfer component'. Note that this is going to be a natural evolution, so it is very doubtful that the 'sound money' to be adopted 'locally' in this region following a very large 'silver vein exposure' will start out with Bitcoin attached, but the view being presented by the longer term data sets is that at some time in the early 2020's, this 'sound money' will 'break out' of its 'local boundary' and start 'going global'. At that point it can be forecast that Bitcoin will be the 'international transfer mechanism'. It can also be inferred that the 'transfer' is going to be a 'ratio' of 'silver to bitcoin' with no intervening 'currencies'. This is revealed to us in the language rising in the supporting chain as it will be a real mind and mouth teaser, to whit, "Ozoz/BTCd' which, at that point in the future, will translate to 'Australian silver ounces to Bitcoin decibits' ratio.

Other 'sound money economy' sets include geographic references to 'ireland', and 'eastern europe'. In the sets with Ireland as a leading geographic reference we still are growing supporting sets for 'The Slope' as an 'underseas project' that is to be 'establishing (IrePop) future'. The data sets have many cross links back to older language referring to the 'Black Irish Sand Hogs' of USA and these sets are being updated to focus on a 'new (global affecting) project' involving the 'underseas Irish working man'. There are several deep core cross links over to the SpaceGoatFarts entity where the terminating sets are suggesting that future 'comedic entertainment' will have 'focus (on the typical) underseas Irish-extraction worker' and 'his/her travails'. The 'entertainment' value of 'The Slope' project aside, the data sets are showing that 'coastal Ireland' will be one of the 'regional sound money' loci over the next 10/ten years.

Oh, oh! Turns out that 'software (aka computer based automation)' will not only 'eat the world', but will also be consuming 'religion'. The long term data sets are suggesting that 'government(s) (though mostly USA deep state)' will be 'employing computer/technology based sensors' that will be an attempt to develop a 'computerized force sensor'. These 'force sensor arrays' are described as sort of 'reaching into (the) ether (to) extract knowledge' about the 'immediate local environment'. These new sets are painting a picture of 'deployment (of) portable force sensors' around the 'planet' to 'ascertain (if)' [unknown] is 'manifesting/appearing'. The data is not clear as to what the 'deep state' is 'seeking' with their 'new technology', but there are many internal cross links over to the 'wireless telepathy' and 'secret conversations' sets of past ALTA reports. The new growth areas within this 'computer "dimension" sniffer' include sub sets going to the idea that in spite of the 'developing global financial (and economic) chaos', there will be a 'consistent', and 'concentrated' effort on the part of these 'involved governments' to 'sniff out (the [unknown]) but sought after manifestations'. There are internal cross links over to CERN and its 'LHC'. Within all of the sets there is a focus on 'computerized "god-stuff" sensors' that are described as 'supplanting' the organized part of 'organized religion'. In some of the language the interpretation could easily be for a 'cell-phone to the other-life' imagery coming from the detail sets. These 'devices' are within sets painting a picture of 'religion supplanted'. Also there are sub sets indicating that, at least for a while following their introduction, there will be some humans who 'abuse' the '[unknown][process or device here]' such that we would say that they were 'addicts' to these devices or process. This is again one of those instances in which there are no currently meaningful labels and the data is filled with references to 'unknown'.

The SpaceGoatFarts entity has new sets for a 'disquiet' that will be 'evident' or 'manifest' or 'demonstrated' by 'animals' more or less all around the planet. This 'disquiet' is going to also be perceived by some humans, that is to say, both the 'unusual behavior by animals' will be observed by humans, as well as some humans 'directly perceiving' the 'big uneasy'. This 'big uneasy' is showing in the data as lasting but a short time, but that period is at least long enough that the humans around the animals pick up on it and then go discuss it such that it gets picked up by the alt media. The data would have this brief period of 'animal jittery behavior' also be 'observed' by 'scientists' and 'researchers' as their 'collection apparatus' goes 'wonky (delivers obviously 'conflicting' or 'out of range' results)'. The 'jittery (anxious) animal days (weeks?)' sets are forming up as though a temporal marker but if so the range would have to be 5 or more years out.

Previous ALTA reports, going back a long number of years, have had sets that described 'food riots' in the USA, specifically in the 'Maryland' area. These 'food riots' had the 'side effect' of having a 'break-in'

through a 'back fence' into a 'deep underground military base (secret)', that was within 'walking distance' of some major 'urban areas' in 'Maryland'. As part of the 'side effects' sets, the data described the 'rioters' not only 'finding and looting food', but also 'finding a huge cache' of 'secret government documents', and 'deep space (alien) stuff'. Now these sets have new growth in both the USAPop and SpaceGoatFarts entity wherein some of the details of the '(to be) liberated (in the future) documents' are describing a 'decade long' series of 'experiments' on 'military dependent children (in the 1960s)' in which 'epigenetic dynamics' were being 'studied'. Without regard to the 'studies' referenced, the data is indicating that the 'liberated documents' will 'reveal secrets' about the 'resulting epigenetic triggers' that were 'activated (across the) baby boom generation'. Hmmm....that may explain a lot!

In a definite 'back to the future' sort of moment, the data sets are forecasting that a 'researcher' will 'uncover (the) truth (about) lightning' this Summer, and this is showing as providing a huge boost to the 'new electrics' sets as the 'base science' will become available for the 'inspired guess' or 'intuitive insight' that will be 'sparking' off the 'new electrics' over this next year. Additionally, the 'discovery' is showing as leading to a very cheap, and very effective form of 'lightning protection' and 'anti-electrocution device'. This 'how lightning really works discovery' is also indicated to form the 'base science break-through' for the 'force-field technology break through' of the 2020's and beyond.

In the early days of this work, the data brought forward the 'unknown' sets, and the 'officially denied' sets to such an extent that the interpretation demanded the creation of the SpaceGoatFarts entity just as a part of trying to manage the complexity. There have been other instances of focused data arising continually throughout the years, but recently there have been very few such sets within the SpaceGoatFarts entity area. Now we have the emergence of the word 'force' as in 'force-field', and with specifically that meaning.

These new sets involving 'force-field' is showing across the SpaceGoatFarts entity and now is acting as an originating source for cross links that are going to terminating sets in both Markets and the GlobalPop entity. In the Markets entity the data is of the longer term type with a 7/seven to 10/ten year time period before we start seeing some of the forecast 'production pieces' from these new 'force-field technologies'. In some of the descriptors we have a lot of the word 'disrupting', and 'displacing', and 'disturbing' of 'market segments' by the 'introduction' of some of these 'technologies' based on the 'manipulation (by waved electricity)' of 'standing (dynamic wave) force-fields'. Examples provided by the data include 'giant lifts (and giant fork lifts)' being replaced by 'energy cushions (or pads...the new industry will wrestle with the labels for a while)'. Other examples include 'force-field "barges"' in which 'containers' are 'rafted together' by 'force-fields' such that they can be 'lifted' and 'shifted' en masse with 'no apparent connections (between them)'.

The longer term sets that go out as far as 2029 through 2039 are describing a world in which 'energy' and 'force' are not connotative cousins, and in fact, the linguistic nuance of the variants of types and 'flavors' of force-fields is showing as being core to the language of 'work' at that time. The subtle differences in 'force-field types' and 'flavors' (repetitiously appears....) and the 'electrical [unknown] interaction' is described as becoming its own 'collegiate path'. Hmmm...so Tampa Joe's girls may become 'force-field engineers'.

The very long term data sets that can be followed through the 'new electrics' appearance also include the areas of 'new materials handling' which, for all intents and purposes, we will call 'replicators' here

after, is indicated to make 'penetration into social mainstream' starting in mid 2024 and be 'firmly established' by early 2031. The data sets describe the appearance of the 'first replicator' and the 'billionth' as occurring on separated by only a few months in time. The issue apparently will be that there will be a 'non-replicatable force-field control component' in the early units, and that 'barrier' will be 'overcome', according to the very long term data, within only 'months'. There after, 'replicators' can 'replicate' themselves and we are off to the (technology) races as 'every home' becomes a 'technologies laboratory' for '(almost) no cost'.

Returning to closer to the ever present now, the data sets continue to build for the 'fly-by', or 'cruise-by' of 'the earth' by the '(space alien) tourist ship'. These sets continue to gain new aspect/attribute sets for the 'inhabitants' of the 'over flown region' to be 'wide-eyed', 'dumbstruck', 'slathering', 'drooling', 'fainting', 'shitting themselves' and sometimes all of these at once at the 'sight (of the) space alien cruise ship and its passengers staring back at them'. Probably *not the best way to present humanity to visitors.

Conclusion: Shock the monkey...monkey-mind that is!

Timing is really everything. Get your timing wrong on anything in life and it is as though you did not even show up. Which, as we all have heard for decades, is half of the recipe for success.

Success as we understand that term, that is to say, as it has been defined by the powers that be (TPTB) over these last dozen decades is about to undergo a transformation. The powers that be (TPTB) are ruled by their monkey-minds, their focus but hands stuck in the jars trying to grasp the world of 'numbers' and 'money'.

But now, the transformation is upon us. What once was up, will now be down. Those under-foot, will now be kicking-ass. The data sets are arguing for a pivotal point in future history to be unfolding before our eyes, or rather, around our skins as we, the aware, are neither sleeping through it, nor merely viewing it, but rather swimming in it, living it, glorifying in the pure shibui (perfection) of it all.

And it is happening now!

Those preparations that have been made, and are ready, are there; those not, well, they are not, so just let it go. You have the now to live in, and within this up coming now, there is opportunity in crisis, as the chinese translators would have it, or rather, as some prefer it, 'chance favors the prepared mind'.

Now is that point at which the unprepared mind will look with envy on the 'generational fortunes' being created over these next twenty years and 'wonder how it came to be', and many of them will attribute it all to 'luck'.

The difference in luck and timing is only in the mind, and the truth is that all of life, and everything, is timing, even luck.

To be aware of timing means one can seize the opportunities presented by universe that others will not see, and thus they will label it all as 'luck'.

Enjoy your 'luck', you've earned it, but remember...Universe provides what we need, not what we want, even when it appears that we are getting what we want....sneaky universe will have its surprises....it likes shocking the monkey too.
