Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **IDIR (Immediacy Data Intelligence Report)** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing millions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

The Immediacy Data Intelligence Report is structured around data sets that are effective from 3 days out (of report issuance) through the end of the third week (more or less a month in duration). This report focuses on the immediacy data sets and places the data from these sets into the larger context created within the ALTA Reports. While not necessary to understand the IDIR reports, it is advisable to read the ALTA reports for the larger description of modelspace.

Definitions:

Aspects/Attributes **are**: collections of data that are within our broader linguistic

structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities **are**: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon **is**: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: *emotional qualifiers* which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders **are**: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop
The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)
All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets
The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra
The Terra entity is the master set for all structures that relate to the planet, and the physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts
This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types
IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third

Immediacy Data Report (IDIR)
September 2015

week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Meta Data – this term is used to describe discussion about the data sets as a whole, that is to say, about the processing, extractions, or collections of data and any impacts that such may have on the interpretation.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which

provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

Immediacy Data Report (IDIR)
September 2015

Immediacy Data and Interpretation

Introduction:
Note that Immediacy Data is not structured in the same manner as the ALTA reports on Shorter and Longer term data sets.

IM (for Immediacy) data is our base level of processed input data. These are the detail data sets from which we extract the supporting aspect/attribute sets for the Shorter and Longer term sets.

The loading stream to modelspace is of a serial nature due to a LISP program from some years back that is way too complicated to make into parallel processing at this late date. This serial nature affected the delivery of the audio IDIR reports, but this written form allows for full cross links to be developed by the triggers within the SQL database (post load processing).

Meta Data
The immediacy data sets are shifting. The developing patterns are now accruing with significant growth in the longer term and shorter term data sets that are attached. This new growth is altering the meta data ratios. This new growth pattern of associated longer and shorter term data may be indicative of a new level of prescience from these data sets.

Interpretation

Terra

The Terra entity continues to accrue data at a very rapid, even exceptional pace. Further the number of cross linked sets is a rising proportion of the new data sets. Further, the number of cross links terminating in SpaceGoatFarts entity sets is also a rising proportion of the total number of cross links within the Terra entity.

There are a large number of new sets going to 'unknown energies from space', which is both one of the founding sets for the SpaceGoatFarts entity, as well as the longest continuously growing set. These new growth areas include supporting sets for 'space lightning' which will 'threaten (the) ISS (international space station)'. Also the IM data continues to grow in the 'laser satellites' sub set which may be indicating either an attack on satellites by a laser, or the laser being satellite based. In either case there appears to be a period of 'unknown circumstances' in which one (or more?) major communications satellites will 'go off-line' for a very considerable period (hours? Nearly a day?)'. The 'unknown circumstances' aspect set is suggesting that the mainstream media will be fear-porn'ing the story with all the energy that they can muster.

Immediacy Data Report (IDIR)
September 2015

There are new IM sets going to the idea of the terra expansion causing a 'separation between two halves' of a bridge that carries major road traffic into a central, water ringed, metropolis. This will likely not be properly explained, however, the visibility of these sets point toward mainstream media (and alternative media) coverage of the 'sagging separation between two halves (of a) city)'.

Other instances of 'sagging' include an 'air-bridge' between two buildings, and a 'cable car (excursions)'. Rescues will be needed in these instances and we will have both the visibility factors forecast, as well as the other instances of the 'rescue' language resulting.

The Terra entity is building a large set of new supporting sub sets under the 'earthquake' descriptor that includes a very high proportion of cross links over to the SpaceGoatFarts entity where the terminating sets are within the 'unknown', and more importantly, the 'LHC' (Large Hadron Collider) set. These sets are in their turn cross linked back over to the GlobalPop entity. We have a disproportionate number of these sets geographically centered on China. These sets contain aspect/attributes that suggest that China will 'protest the LHC' and the 'earthquake link'. There are new sets going to the idea that a very major earthquake will strike China (central to NW china?) at a 'simultaneous point in time' as the LHC reaching a particular milestone in 'magnetic wave energy levels'. The data suggests that the Chinese government is responding to a 'wave of fear (about the LHC) that will ripple throughout ChinaPop following the devastating earthquake). From these sets we find that the 'fear of the LHC' becomes a global meme growing over the rest of 2015 and beyond. Also within these sets are indications that at least 2/two of our 'generation jumping personalities' will rise to prominence as a result of these events.

Other areas of the Terra entity are forecasting that humanity's problems with the changing earth under our feet continue. In the most recent data we have sets describing 'long straight line winds' as a new phenomenon that will hit several places on planet over next few years. These are going to be primarily associated with the northern hemisphere, but will occasionally also be south of the equator. Strictly a land based phenomenon, these 'long straight line winds' are described as destructive, dangerous, deadly, and devastating, but not like tornadoes or other vortex as wind displays. Rather these are departures from the jet streams, as in a 'burst of jet stream winds' is sent down to ground level, and due to conditions, remains intact and energetic for a considerable distance, and traveling at over 100mph, able to do quite a bit of damage.

Other sets within the Terra entity are discussing 'local conditions' that will favor 'nitrogen rich air' such that 'oxygen levels are reduced'. At first much of this form of 'new winds/new airs' phenomenon will be put down to 'pollution' by the political class, but within a short period, many competing theories will be presenting themselves as it starts to be 'felt globally', though intermittently. Some of the symptoms will include reports of 'group heart attacks', and 'group fainting episodes' that will also include animals. Many of these episodes will be manifesting along coast lines and other sea level areas so the connections to the planetary atmosphere will not be made initially, and thus the rampant confusion around the subject which will also include quasi-credible reports that the phenomenon is being caused by space aliens.

Many new sets are forming in support of the 'climate change', which is NOT being caused by humans, but is entirely happening due to the relationship between earth and sun, especially earth's position

relative to the sun, and earth's growing size. The data sets are accruing in support for a multiple decades long process of the 'changing planet' to reconfigure large parts of both north America and Asia (specifically central and northwestern China). The transformation process is described as involving drought, floods, earthquakes, fires, monsoons, and land upheavals (somehow different from earth quakes). According to modelspace, the planet is barely a fifth of the way into the process now, and likely will last another 40/forty plus years.

GlobalPop

The data sets accruing to the EUPop seem to be showing that the 'refugee crises' in several countries will be used as a 'cause' to bring out 'soldiers on the street'. Other new sets cross linked over from the Markets entity also go to the idea of 'soldiers on the streets', but in this instance the idea is that 'market crashes/carnage' will cause 'social unrest' and that 'NATO' forces will be required to 'maintain the social order', at least according to TPTB in EU-zone. These new sets are providing details indicating armor and tanks, and helicopters, and other 'interesting' new forms of 'civil oppression power'.

The IM data is bringing along Shorter term data sets centering around the idea of 'chains' that will either be in sets going to 'populace control by keeping people out', or by 'chaining people down/to objects'. Further instances of 'chains' in sets also contain associations for 'chained together boats (a water fence?)', and 'chained together properties (hastily, for a border?)', as well as 'chaining up hectares of lands by modular fencing'.

The 'oppression of the populace' meme is a newly growing and newly stabilizing meme that is showing up in a number of entities and major sub sets. According to modelspace movement, the 'oppression' meme will be initially most evident in SE Asia, and will ultimately include India (some sections). In other areas, there are sub sets indicating that Brazil and other South American countries will also have to install an 'oppression' regime. These are all connected to the 'death of the dollar' meme via extensive cross links.

In sub sets there are new areas of growth that point to the Russian and Chinese 'New Silk Road' is going to get several good boosts of new activity and solidity developing around a 'common currency structure'.

Other sets are showing that 'Africa' remains reasonably stable given the global currency crises sweeping around the planet. Yes there are refugees exiting through northern Africa, and employment problems will beset South Africa, but the whole of the Southern half of Africa seems to not be as involved within the global economic crash. This may be due to the recent mineral discoveries as well as the local populace NOT being tied extensively to the US dollar.

Again the data processing is presenting the 'rescue' meme for our consideration. In these new instances we have sets going to a 'rescue' by the 'Russian military (and others?)'. The appearance of the 'rescue' is showing such that a 'confrontation (skirmish/battle)' will cause 'european' people to 'require a rescue' under 'harrowing conditions'. This 'rescue' is also appearing within modelspace in a nearly concurrent

Immediacy Data Report (IDIR)
September 2015

fashion with the previously discussed 'Indian military rescue (at sea)'. These two are apparently but the leading edge of a large meme wave around this word.

The data brings in language about 'floods' causing the need for 'military rescues' along almost all eastern coasts. This includes the eastern seaboard of north America, and south America. We also have flooding as a major military rescue opportunities along the coast of China. The USAPop sub set includes some of the data details about the flooding situation that develops in Winter (northern hemisphere) and seems to continue into Spring. Japan is also hit hard by further storms of 'historic proportions', but in the main the largest level of damage suggested by the data appears in China.

There are a number of new IM sets pointing to a new, wide meme of 'train wrecks' and 'train derailments' and 'train accidents (in the staging area/yards)'. Many of these are seemingly within China, though at least one is also weighted towards Europe. In this latter case, the issue of 'refugee involvement (tampering?)' will be a very visible side stream of language from the incident.

Several sets accruing to GlobalPop entity are suggesting that something of a 'crime wave' will be walking around the planet as several instances of 'large scale metals theft' are reported. These are indicated to be impacting the 'new silver channels' (see Markets entity), and at least 1/one 'gold vault'. These thefts are further reinforcing the idea that 'precious metals' become 'too precious (for) language/words'. The supposition coming out from the data sets is the that the theft will be blamed on a 'sovereign state acting badly'. There are sets within the supporting sets here that suggest that perhaps this is more of a 'repo op' (reclaiming sovereign metals) rather than a 'private' theft.

The 'gold vault emptied (by thieves)' is also showing up as an 'excuse' that will be 'tried out' via the mainstream media propaganda outlets. The idea coming across is that a 'bullion bank' is going to 'stage a robbery' of its own facilities. The data indicates that management at the facility will 'think' that they have 'gotten away with it' after several jittery days. Then the data is showing that one of their minions in the robbery will be 'self-exposed' which will lead to the 'unraveling' of the crime. Further data shows that 'CFR (council for foreign relations)' connections will cause the CFR to become embroiled in both the investigation and the publicity. Neither will sit well with the CFR, and their response to this leads (in late 2016) to a 'purge' and a 'draining' as it becomes 'politically unhealthy' to be a member.

In some of the new IM sets within the GlobalPop entity are aspect/attribute sets for a 'revival' of 'revenge killings (and kidnappings?)' in which some banksters will discover that they had stolen from the wrong people. As part of the 'banksters suicide', and 'banksters murdered', and 'banksters (snatched) grabbed' sets, the data is growing around the idea of 'sovereign pension funds' being 'stolen' that will 'initiate' a series of 'hit requests' on-line that are described as 'shattering' the confidence of the banksters. The data sets are filled with supporting sets for 'banksters hung', and 'banksters ground (up in big equipment)'. These data sets are themselves supported by sets that indicate a new wave of media visibility of the inter-banker war, as well as the new wrinkle of 'revenge killings' by 'banking victims'.

New sets are suggesting that a global 'resistance movement' (different from the Anonymous movement), will begin to be 'felt but not seen' as 'cover events' are constructed in such a way that 'blame cannot be placed'. What is appearing is the idea that something of a formula develops that is

used as a tactic in the 'war against the banksters'. The first hints of what is coming will be felt rather than seen in the previously discussed electronics system degradation that will beset both trading and government. What is being described is a new view of tactics developing for the digital environment. These sets include the idea that in the information age is vulnerable to information. This resistance movement is described as being 'without borders'. Sub sets indicate that the success of the movement over the next few years will prompt TPTB to label it as 'subversive' and 'terrorist'.

Some late processed sets are showing that the 'royals (queen of england and her spawn)' will be 'inconvenienced' in the extreme by new issues with mobs of refugees. In some sets there are discussions of the 'loss of property (to the mobs of refugees)' as these groups decide that the 'queen has some nice lands not being used for anything' and decide to settle in and fight eviction efforts. Other forms of irritations caused by 'common humans' will contribute to form a new era of 'inconvenience' for the 'self-claimed royals' as they become 'beset' on all sides from calls for 'punitive taxation' and 'elimination of privilege' and 'refusal (to pay for) pomp and ceremony' rise up from the populace due to the crushing problems with the death of currencies and the totally debased global financial system. Other issues will involve direct assaults on 'self-claiming royals' over late 2015 and throughout all of 2016.

CanadaPop

IM data is indicating that a political crisis will bring about a failure of an 'insurance company' as several hundreds of corporations 'unexpected;y default'. These defaults are showing as depriving the insurance company of a huge level (40+ %) of its 'stated assets' (bonds?). Further, a 'storage company (bullion bank?)' in Canada will also be part of the 'default' wave that is tied into this 'developing political crisis'. The IM data is bringing in longer term data indicating that this 'government failure' will bring 'shame' to some 'political elites' and further be a continuing problem for Canada for the next several years. The data sets are showing that (in 2016) the 'press (propagandaists)' will be 'flayed' by the 'criminal actions' that they have been 'supporting (as paid agents)'.

Several new personalities will be seen arriving on the international scene over the next 19 months. Enough of a bulge in the demographics is being suggested that makes this period worth noting. The idea coming across is that some 30 something age people are going to be propelled by events into global visibility. More than just a 'random' association, the data sets are forecasting that a 'pulling effect' will be occurring due to the pressure of global events and that people will be 'jumping a generation' into positions of power. The data sets are indicating that a large number of these new global personalities will emerge from China. This is partially associated with the capital control policing efforts.

USAPop

The data sets are accruing new language about 'corruption' being a tag line applied to the 'government' both 'elected' and 'appointed'. The new language is showing as being in the mainstream media at some point in the next few months as 'corruption' becomes a major theme for a 'collective feeling' of a 'rejection' of 'politics as usual' by very vocal 'populace at large'. This new language is growing at a very much faster rate, and is bringing along sets going to the idea of 'little chance (for 'normal' politics)', and 'bribery / baksheesh (ritualized/socialized bribery)'. The data sets are clustering around an 'incident' in

Immediacy Data Report (IDIR)
September 2015

which some very highly placed people in USA officialdom will be caught on video during a bribery investigation. This event brings along high emotional sums indicating a very rapid, and visceral response by the populace. The data sets indicate that this incident is also then attempted to be used by the two-party dictatorship (republicans/democrats) as a 'distraction' within their media blitz. It will be a new form of very intense 'blame game (shift it)' on all media outlets still functioning.

Data sets are showing that some 'news' outlets will be defunct/bankrupt within a short period of time as their 'advertising revenues' meet up with the 'death (degrading/collapsing) dollar' meme. The data sets are showing that the 'networks' will be 'seeking a subsidy/bailout' in order to be able to 'carry on in business'. This seems to be before the end of the first half of 2016 given the accretion patterns now observed. The request/demand for 'network media support' has cross links over to a set within the TPTB and other officialdom sets showing that the media will be declared as 'necessary infrastructure' and placed under the control of the government in a more or less open fashion thereafter.

In the midst of the media system failure, the continent bears the brunt of several 'super' storms. The flooding and the temperatures are showing as being horrifically cold, and 'armpit deep (in the streets)' for the flooding which is both from storm surge and from massive, truly massive, unseen-before, levels of rain arriving ahead of the 'rolling surge waves'.

The data sets are describing streets that are so flooded that boats are needed to navigate, and that they will be floating at second story or higher levels. Bearing in mind this is describing several storms and several cities along the east coast. Some indications seem to suggest that New York, and parts of New Jersey (mainly shore front communities) will be 'slammed' by freezing rain (not quite snow)' and the 'storm surge' that 'destroys (the below ground) infrastructure', apparently not only transportation (subways), but also telecoms, and other electric services to very large regions both of major metropolitan areas and the surrounding environs.

The IM data has been accruing for variations on 'flood' as a linguistic. This is to say that the data has variants of 'flood' in many different areas. So there are 'flooded (by refugees)', and 'rising waters (pressures of potential floods)', and other language of 'flooded streets', and 'disrupted (schools) due to floods'.

Other areas with 'floods' as a base language includes the Markets entity especially the retail side of the gold and silver language. This also includes Bitcoin, though in this case the language is about a 'restricted flood (of demand)' that is forcing prices (especially in Renminbi) upward globally. The data sets are, in the instances of the Markets entity, focusing on the real impact of supply versus demand. In these instances most of the supporting sets include 'contention' and 'conflict' and 'stress'.

Other floods areas include 'flooded infrastructure' as the 'systemic crisis unfolds' and further 'pressures of (system) demand' are felt by the welfare state. There are also references to 'floods (of) demands (for) services' within 'healthcare', and 'social services' including 'food support' that are showing as 'encountering (brick) walls of no response (silence)'. Further language includes '(flood) gates shut', which includes specific and frequent references to 'overhead steel mesh gates' and other 'security gates/structures' being employed to 'curtail service demands'. The Shorter term data newly accruing is

also forecasting periods where 'government agencies' will use 'barricades' including some constructed of vehicles chained together. Again we note that the 'chain' language is appearing in multiple areas of modelspace and may be developing into a meta data layer.

Politically, USAPop is going through some big changes. The data around the dollar debacle brings 'reality' to the 'political infrastructure' in 2016.

New language around the word 'conquest' is accruing to the USAPop under the 'break-away civilization'. The details in the IM data suggest that the 'populace (now conquered/after conquest)' reacts to the 'fracturing' both of the political system and the financial system by 'joining tribes'. These new references to the 'tribe' include the idea of 'displaced workers' who will be 'nomadic' searching for work and stable living situation. This last is a new wrinkle in that it is from a set going to the idea of weather/climate that gets 'out of bounds (of normal)'. This set is cross linked over to the Terra entity and supports the idea that large portions of North America are going to be 'under (on-going) threat/reality' of 'destructive weather patterns' that will propel diaspora. Within these sets are new elements going to the idea of nomadic wandering 'tribes' that will form over these next few years. Part of the impetus will be to foster a sense of place and self in a world where one is 'pushed onward (down the road) by local authorities'. Large scale encampments are described as being 'segmented by (former) place', and 'given (former) place names to local features'.

Other 'flood' language sets also go to USAPop being hit by 'shocks'. These are within sets that go to 'housing', among other sets including 'political structures' across borders. These sets would seem to be forecasting that the international political structure will be stressed and pressured into a new form as a result of economic shifts globally. These will include an evolving new relationships to oil, and its byproducts. Other sets include the USAPop encountering fracturing at the level of local political relationships due to the economic impacts of the currencies being 'destroyed' at a planet wide level.

In something of a surprise the Council on Foreign Relations is showing up in the IM data sets as being directly impacted by the 'curtailment/reduction/coagulation' of the 'precious metals supplies'. These new sets are suggesting that the CFR is going to be 'taking a hit' relating to 'gold price suppression', and will be 'losing credibility' almost as fast as 'members desert' the organization following what the data is describing as a 'spectacular suicide' which will bring into question the 'long term health' of those who attend the CFR meetings. Some language suggests that 'rumors of sacrifice' and a 'dead pool' among CFR members will be 'chilling' to their 'recruiting plans'.

HKPop (Hong Kong Populace)

The data sets for the HKPop are cross linked extensively to the Markets entity where we have terminating sets that are headed by 'bankruptcy'. This set appears to be applying to a governmental entity, rather than strictly a private business, however the impact does ripple outward to include private business. The IM data is suggesting that the HKPop will be impacted by the bankruptcy (may be related to power production?), at a social level.

In the shorter term data are sets that suggest that the HKPop will be benefiting from a new economic boom as 'China sells dollars', and as 'China creates conduits (for money flow, oil, et al)'. In spite of the wide spread social impact of the bankruptcy, the HKPop obtains a benefit from the resulting restructure that will, while apparently, providing an oppression of freedom relative to the flow of business, nonetheless has compensation in new business focus (from China). The language actually speaks to a loss of old freedoms. The idea coming across from the data details is that China will have (at some level within the political hierarchy) the view that HKPop is a 'risk' relative to the 'infiltration of subversive elements (aka mercenaries and western agents)'. The fear associated with the 'risk' is not of espionage per se, but rather 'sabotage' and 'covert acts of war'. This mental approach is showing as being applied to the 'management of the HKPop' and its 'business conduits'. The benefits from the developing situation to HKPop are showing as two fold: HK acts as the gateway out for 'sold dollars', and as the 'port of entry' for dozens of new forms of business including 'oil trading' at levels not seen previously within the Chinese markets.

ChinaPop

The 'capital controls' initiative is showing as really taking off after an October meeting (amongst government?) that is described as 'publicly visible (reported upon)'. These sets are within the supporting chain for the emergence of the General who receives the promotion discussed in a previous ALTA report.

The data sets are gaining new support for 'discord and disharmony' within the real estate market(s) within China. Commercial real estate is not as deeply affected by the new aspect/attribute sets, but will also suffer, depending on location. Part of the problems within the real estate sector are suggested to be affected by 'rumors (of) war (between China and USA)' at a secret level. Further influences will be felt as a result (unknown exactly how this will work) of the 'China sells dollars' meme. Other major influences starting to show in modelspace include devastation due to earthquake (again our 'wedding(s) interrupted data sets are showing so perhaps the first of these will be within the next 'wedding season'), and untenable weather changes (mainly sudden, devastating dry-cold). This last is cross linked to the Terra entity and the 'space polar vortex going walk-about' language reported in last several ALTA issues. Also as part of these Terra linked sets we have ChinaPop associations with the 'long straight line winds' phenomenon discussed in the Terra entity.

New sets are going to 'experimentation (in collateral exchange)' that will be engineered by the Chinese financial authorities as a response to the 'collapsing commodities collateral spiral' that shows as appearing in China over late October. As modelspace is progressed from there, the data would have the authorities in China become 'dazzled' by the 'brilliance of the scheme (the commodities as collateral swap?)'. This is part of the sub sets going to China 'tuning out (the western influences) in their economy'. As modelspace is moved into 2016 a series of problems with both earthquakes and other 'natural disasters' is going to move China to have a grievance and to state a case (against western banking interests). The results of this coming confrontation are part of the calculations being made by China now, and being forecast these last few years in the ALTA and IDIR reports. The data sets would have China still in preparatory stage, but ready to act due to the position of relative strength. These

same new aspect/attribute sets provide for China to 'export (infrastructure) components' at a level not seen prior. These sets make one think of 'exporting dams, power plants, and ports, and airports' and such in 'kit-form' that is then assembled on site by crews of Chinese engineers.

Several differing sets are going to the idea of tens of millions of people that have to be evacuated or supported as a result of the earthquake(s) that are forecast for later (in 2016?). This diaspora is showing as being mandated by Chinese military as well as circumstances. These sets are also discussing some impact on regional rail lines that will prove to be very frustrating to all concerned for a number of weeks as repairs and removal of a mountain of debris are required.

FrancePop

The accretion patterns for FrancePop are showing that the populace, already hard pressed by north African refugees, is going to have a 'collective epiphany' over the Fall (northern hemisphere) 2015 that will produce very striking and significant social order changes starting in early 2016. The data sets are forecasting that 'factories' of very specific types will be 'seized' by 'activists/populists' and their records used in an 'anti-propaganda' campaign. This would appear to be part of a 'prohibition movement' in which 'activists' seek to 'restrict access to psychotropic drugs'. The data suggests that some records from seized medical offices will be used to 'taint politicians' as 'drug dependent tools of big pharma'. The campaign will also combine the refugee crisis with their agenda and suggest that 'FrancePop has been deliberately drugged to hide what is being done to their country'. The effort shows in modelspace as gaining very large public support including 'public drug dumping events' where people come and 'take the pledge'. Sub currents in this movement will be labeled as racist by TPTB. Lots of violence showing in the data sets. Instances of 'corporate thugs' being 'trapped by activists' and 'paraded on television' will be making the news in France early this next year.

GermanPop

Distressing emotional sums are growing under the GermanPop sub sets, especially around 'refugees (immigrants), rubles (lost russian deals), regionalism (failing EU?)' as the events of September and October press down on the German economy, as well as produce a feeling of 'being encircled' or 'trapped within conflicting emotional boundaries'. The GermanPop sub sets are also indicating that 'weather and water (rivers flooding)' will be putting additional pressures on the populace as the roughest winter in over a century settles in over Europe. Logistical nightmares are forecast due to the weather this winter in Germany, and the shipping problems from these winter storms will become 'legendary' in many of the institutions that attempt to cope over Winter 2015/2016.

Markets

The data sets flowing into the Markets entity over August and now into September, contain hints that a real 'exogenous event (aka Black Swan)' is just ahead in our future. This event is described as affecting 'interest rates', as well as 'destabilizing (formerly solid) banking relationships' that in their turn will cause a 'ripple of defaults' that will affect the insurance industry (though likely the 'insurance of money'

Immediacy Data Report (IDIR)
September 2015

and not things).

One set has aspect/attributes going to the idea of 'counterfeit shares accounting'. This set would have the appearance of someone who 'has done the math', and then presents information showing that more than 50% of all stock shares are counterfeit. The data shows that a presentation will be made in which an example is shown that has Company X having issued 10/ten millions of shares, then repurchased 2.7 millions, which leaves a balance in the hands of the 'public' at 34 millions (huh?) shares outstanding. The disconnect and delta between actually issued, and 'now available' is showing as being demonstrated on ALL stocks trading in most western Markets including USA/London/Germany.

The IM data accretion is bring along very heavy loads of Longer and Shorter term data sets that are painting a picture that would seem to go out about 10/ten years (or so). These new sets are supporting sets for 'cooperation', or alternatively as this set has two primary descriptor trees, 'cooperative alliance'. In this set, the aspect/attributes are filled with repetitious references to 'Russia' and 'European countries' all of whom are 'doing deals', and 'trading', and 'increasing capital investment'. There are a number of supporting sets for 'mutual technology development', and even more telling, the 'mutual (Russia/Germany) research development (air transport?)'. Further sets of a similar nature have 'China' and European countries engaged in very heavy trade, and infrastructure development. The data sets and temporal markers are suggesting that the effects of this trade in terms of 'wealth creation' will barely even be 'ramping up' over these next ten years, yet the sets are also suggesting a 'five fold' increase in cross country trade between China, and the EuZone.

The IM data has brought along considerable new Shorter term data (which brought its own Longer term data along) accruing to the sub set for Silver. These new sets are filled with sets going to 'new forms/types (of) channels (for retail and wholesale)' movement in the metal. The data sets are pointing to a 'nationwide' effort that will employ tens of thousands (of mostly young men) standing on street corners waving signs 'WE BUY SILVER'. These sets are mainly effective for Spring (northern hemisphere) in north America, though there are indications that we will see some of the early build-out of the 'new channels' by December 2015. There are also sets suggesting that this 'incentive to dis hoard' language is also applied to Europe, where, there are more sets going to the idea of 'heirloom silver' being 'solicited' to 'fill global demand'.

The data set growing fastest within the silver supporting sets is labeled as '(no) difference'. This set is filled with references to the idea of 'silver equals money'. The sets also contain references to silver 'having to be sold' in something of a 'big lot' in order to 'raise liquidity' at a 'government' level. These 'no difference' supporting sets include sets that show that 'silver' will be 'used as debt settlement', as well as 'silver (as) money (for the global) populace'. These sets are growing in significant amounts as modelspace is progressed through the rest of 2015 and through the first half of 2016 to the point that it would seem that the 'USA elections' are affected by 'monetary systemic degradation' that in turn leads to the 'fracturing (of the) political party structure'.

Other sets are showing that 'volatility' throughout all parts of 'the (financial) system' has triggered (during these 3/three weeks of coagulation in September) a 'cascading shift' into 'precious metals' at a 'gathering pace' by 'the masses'. This is TPTB and the banksters worst nightmare! The data sets are

going to the idea that 'demands' for 'gold and silver' are going to reach 'screaming high levels'. The data would seem to be suggesting that by the end of 2015, the 'rate of seeking (to acquire) gold/silver' will have '(slightly)more than doubled'. This is not referencing the price of the metals in any currency but rather is explicitly stating that the 'total market (at a retail level)' will have more than doubled. This is a very key temporal marker for both the Markets entity and the GlobalPop entity as it is coincident with the rising renaissance language (preceded by revolution) for the 2020s and beyond.

There are new IM sets for 'gold displacement (being discovered)' over the course of Fall (northern hemisphere) where an 'accounting error' is going to be blamed for some 'extremely distressing circumstances' wherein some 'accounts' thought to be backed by gold are found to be not covered. This is showing as triggering a mini-riot within a 'secure facility' in which the 'police' are 'forced to wait outside' as they are unable to breach the entrance. The data has some preponderance of European geographic references.

Data sets are showing that some new media coverage of 'silver as currency' will be on the net by the end of 2015. These sets are showed as 'following' the 'crash (of the holding) system'. The data is further supported by new sets for a 'crash-cade' in which 'connections' between 'buried gold (not there)' will be the 'lynch pin (trigger)' to riots at a national level as well as the introduction of 'soldiers on the streets'. These are to be 'social calm enforcers' and 'populace controlling soldiers'.

Amidst the many references to 'violence' and 'contention/conflict' within the new supporting sets for the 'crash-cade' of the 'currencies', there are new sets for the 'iraqi dinar (among others)' pointing towards a huge revaluation....downward. The data sets are suggesting that perhaps as much as a 20/twenty fold reduction in 'perceived value', or put another way, a ratio of something like 30,000 Iraqi Dinars to the USA dollar.

Other currencies showing major reductions against the USA dollar include the Canadian Looney, the Ruble, and the Thai Bhat. There are many other currencies listed, though no clear level of percentage shifts either way. Suffice it to say that the world of currencies trading is going to be very very active over the rest of 2015 and throughout 2016.

Twenty year + financial crisis (serial crises) from country to country, AFTER the 'collective collapse/implosion'. The data sets are describing a period of 2/two decades in which humanity will be involved in 'cleaning out' the infections in the global economy created by the central banksters. This is coming after the 'grand global collective debt implosion'.

Separate from the 'silver as money' meme, and but also separate from the 'silver for solar (regular industrial use)', we have new sets that are going to supporting positions within the SpaceGoatFarts entity that are 'silver' based, but really are related to the sovereign social interactions (international relations). In these sets the new aspect/attribute support includes 'silver (from) trash', and 'export controls (on trash, especially phones/electronics)'. The data sets are also indicating that support for this new 'industry' of 'precious metals recovery'. In a similar pattern to the recovery of silver from film processing in times past, a new industry engaged in recovery of precious metals from electronics will 'gain government support' including the creation of a 'new monopoly' on the purchase of the results of

Immediacy Data Report (IDIR)
September 2015

this activity. These sets are also showing that a giant gray market will develop in supporting chemicals, and gear for 'illegal recovery experts'. Temporal markers for these sets include one about the 'price of gold being calculated (globally?) in grams'. Other signs of support for this new policy includes the issuing of 'edits against exporting trash (without sifting for electronics)'. Curiously this will elicit howls from major supporters for some politicians as trash exports are big business. These new trash trade restrictions are showing as a part of a global move to putting 'borders back into globalism'.

As modelspace is moved through October and November, the data sets for the markets are forecasting that as the 'collapsing (of the global) finance scheme' continues apace throughout the period of 'coagulation' and into the hyper-stag-flation period that will follow, the banksters will go into a 'frothing of collateral seeking behavior'. This is due to some 'economic signal' that comes from China, and in its turn is indicated to 'spark a fire' on 'dry tinder'. The 'dry tinder' sets relate to 'empty vaults', and 'failures to deliver (cross border)' that will 'initiate word battles' about 'defaults being allowed'. These data sets are showing that 'collateral promised, must be delivered' will be a persistent statement though it may not be globally known as to the 'actual cause' of the 'new belligerency' that arrives on the global scene.

Further problems are showing in the shorter terms sets in the new aspect/attribute sets around 'silver' in that some 'yield seeking funds' will be 'charged/blamed' for 'new price volatility' when the markets react to 'claims of collateral transfer'. Two of the 'financial insurance companies' that are 'behind the funds' will be brought out into public exposure due to sudden loss of collateral (if the rumors are even partially true).

Some of the spill over effect on the previous metals markets include problems in the USA bonds market. It would appear from the data sets that 'fraudulent or counterfeit' bonds will surface in a public market. An alternative interpretation is that a group, or perhaps the whole of a 'market' will have a problem with their technology that results in 'double counting' of all transactions for a major portion of a day, thus 'counterfeiting the trading of that day'. This in turn does not inspire confidence once the problem has been noticed, and markets closed for the 'fix'. Please note that these sets are in the supporting chain for the 'continuing, rolling, technology problems' indicated to afflict the 'trading platforms' over 2015 with increasing frequency and intensity.

A new sexual scandal is showing as having a disturbing, if distracting, effect on the markets over the course of a week in which the Fed et al central bankster really need a distracting miracle. It does not save them, though at one point they may actually believe that they are able to 'propaganda-ize' their way out of their then current troubles. However, what is more revealing from the predictive perspective is that a 'minor character' in a background image will be instrumental in the 'fracturing' of both a major 'investment house' as well as the 'political aspirations' of a number of its associates. The data sets would seem to be suggesting that yet more suicides result.

Geopolitical conflicts are showing as being escalated within the context of an economic war between the western dollar empire and everyone else. These new sets are indicating that new tactics such as 'security examinations' of container shipments will begin appearing within a few weeks of the rapid escalation of the currency wars later in 2015 (or early 2016). There may be a manufactured 'reason' for the 'imposition of delaying security procedures'.

Immediacy Data Report (IDIR)
September 2015

SpaceGoatFarts

A new group of aspect/attribute sets show that a 'shocking discovery' will be rumored in the 'mining industry' as a 'mining crew' will find the 'other end of the vein (hole)' that will be showing that "someone" has been mining the earth from the inside! While likely the break-away civilization, the data is not clear, and shows that some aspects will include lexicon links over to 'ancient', and 'fossil(ized)', and 'dropped (in accident) sophisticated (but non functioning) mining tools' that will be part of the 'find'.

The 'disappearance (from) plain sight' of a 'wagon/carriage' of 'historical value' is showing up as a temporal marker for further break-away civilization events. This marker would seem to be for later in 2015 or the first half of 2016 and relates to yet more signs that 'not all is well in UFO'land'. The data shows that this 'theft' from the point of view of the previous owners will be just ahead of a 'calorie crash (underground gardens devastated?)' within the break-away civilization. It is the 'break down of the logistics' that supports the break-away boys in their flying villas that is indicated to 'bring about a deliberate meeting (perhaps 2017 or 2018)'.

The SpaceGoatFarts entity is growing new supporting sets for the 'LHC (Large Hadron Collider)' fear sub set. This will apparently become something of a global phenomenon, though at first it will be seen as 'an alternative/conspiracy view'. The data sets are showing that a very close link between an earthquake and the firing off (or up?) of the LHC will 'fuel fears' that will then become 'explosively viral' with hundreds of millions of views/discussions on the subject showing up daily until it starts to both dominate the net, as well as 'skew' all the advertising and search engine results.

Sets within the SpaceGoatFarts entity are cross linked over to the Terra entity suggesting that some physical manifestations of weather will be blamed on 'space aliens', or 'space alien technology (run amok in human hands)'. Most of these sets are related to the 'atmosphere' and the new phenomenon of 'hard breathing air', but others are related to 'lights (in/from the sky)' that will be 'perceived as threats' when 'large groups (out of doors?)' are 'spot-lighted' by these beams.

New sets growing in support of the 'tourist eaten by locals' meme. The idea here is that 'tourists' from the western countries will go missing in a series of 'episodes'. These tourists will disappear so completely, so totally as to defy any ability to trace them. The data sets would seem to suggest that a number large enough to get visibility within the press and alternative media goes missing over a very short number of days. The data ties these to the break-away civilization and the increasing number of 'encounters' with ground based humanity.

Other new growth areas within SpaceGoatFarts entity include language around the 'new earth orbit', which really is more about the 'appearance of the shifting of the seasons of the planet'. These sets are indicating that former 'seasonality' taken for explicitly stable, will be 'discovered' to be quite variable. The data sets are noting that the 'seasonality in question' debate will slide through the on-line

alternative world like 'flat-earthers' on buttered toast.

Some of the secondary level of supporting sets for the 'shifting seasons' also contain sets that include forecasts of a new wave of discoveries about the planet. Many of these are described as actually new and previously unknown, while some will fall into categories well known by the alternative communities.

Many new sets are adding support to the 'flying Nazi economy' and its Antarctica association. These new sets suggest that global earthquake patterns are a 'worrying problem' for the "underground/under-ice dwelling space nazi's". The idea coming across is that the shifting planetary plates are now putting huge levels of 'crushing pressure' on sections of ice in Antarctica which the Terra entity suggests will soon 'expose the cracks' in the ice as well as 'deep underground/under-ice tunnels/habitations'. Note that TPTB will probably NOT be telling us regular humans about these new discoveries (also cross linked over to both Terra and GlobalPop entities). Yet, the visibility numbers with the data sets are climbing so the expectation is that some form of the information will become publicly available over these next few months into mid 2016.

Last minute sets under the Break-away Civilization sub set of SpaceGoatFarts entity are suggesting that due to surface weather problems, the break-away boys are going to have to start 'eating from their own gardens'. There are some further sets here that indicate that this will not go well for the Break-away Civilization, and will lead to a 'meeting' between 'planet bound humans' and the Break-away Civilization in late 2018 or early 2019 to discuss 'mutual problems and opportunities'. Primarily this meeting will be instigated by the Break-away Civilization due to the complexities of the failure of their food stores.

Conclusion: Universe prompts...

From flying space Nazi's to families in canoes, THE upcoming crisis for humanity is going to be the developing waves of diaspora. The scattering of the peoples will be from multiple causes which is showing as catching TPTB by surprise. Especially when TPTB were thinking that it was all going according to plan (their divide and conquer/control via cultural shattering from massive immigration), just then universe decides to intrude with some 'prompts' of its own in the form of earth changes.

The planetary reshuffling of humanity is more than just a key element in the plans of TPTB. The intelligence behind universe has its own reasons for humanity to be reordered. The plans of TPTB will be subsumed in the moving of humanity by the grand intelligence of universe.

As we move forward toward the renaissance of the 2020's, we note that the tornado (flood/earthquake/riot/fire) that ate mom's house is just universe saying you had been playing video games down in that basement way too long.

Time to get moving in harmony with universe. Wait too long and it will find some way to 'prompt' you.
