Future forecasting can seem overwhelming...

Even to me, and even after all these years examining data and creating reports. So if it gets to you, or you have questions about the reports, my best contact email for such will be clif@halfpasthuman.com. For background on how these reports are created, there is a primer in the last 5/five pages of this report. If your questions about preparation are not answered after reading these, then send an email and I will get back to you when I am able to get through the daily work (there is a lot of it).

If you have a need for yet more words on the subjects discussed herein, albeit 'live', please visit the webbotforum.com. Please note I have to isolate the forum due to the language causing a circuitous reference issue for our work. For the sake of not affecting my interpretation I do not visit the forum.

Note to new readers, our work tends to concentrate on a negative view (see primer at the end of this report).
Refunds available on request, no questions asked, so do not feel you need continue into information you would prefer not, simply over purchase price.

Meta data

Please note that we are showing a schism within the data that is being reflected in the take over of the Deep State by the winning faction. This take over includes the 'above ground' expression of that victory which is the Trump administration. This is a redefinition of the 'officialdom' phrase long used in these reports. There are still elements of 'officialdom' as it had been previously defined by 'globalists agenda' in place within 'governments' in the western republics. There is also a new and rising 'officialdom' definition as the Trump administration, and the winning faction of the Deep State move consolidate their power. The convention adopted to reflect this condition in these reports will be to preface 'officialdom' with the word 'new' in parentheses to differentiate from the '(globalist) officialdom'.

The processing here at halfpasthuman was able to catch a major shift in language in early 2016. The change captured allowed for the tuning of the lexicon that has increased the near term success rates. The capturing of the language change allowed for the increased accuracy within bitcoin projections. The capturing of the change in language has produced the forecast for Trump victory.

The shift in language of last year was a leading edge of a manifestation of change that our data sets are forecasting to be on-going for at least the next 50/fifty years. The larger patterns within the language have linguistic structures suggesting that the level, and intensity of change over these next 5/five decades will be beyond anything we may be able to imagine now.

The central problem during this time will be one of attitude. Obviously, the more one has an attachment to the status quo, the more one will suffer mental anguish as the change proceeds. Those people with the awareness to harmonize with the changes have some potential to take considerable control of how the manifestation expresses in their life. Those who fight change become its victim.

Though it will feel as these changes have emerged suddenly, their origins are deep within the past. The forces propelling them have been at work for decades. Preventing these changes is practically impossible, and certainly not desirable.

In all ages of great change such as we now enter, it helps one to learn to flow with the currents of time. Those aware people who wish assert their vision within the manifesting reality will rise up as the active agents of this great change. They will harmonize with universe and surf the cresting wave of change.

Your planet changes faster....

Yet more signs of 'rampaging climate change' are forecast as coming along to 'upend' the last of the 'warmist' claims. These sets are suggesting that 'shocking incidents' with 'ice and snow' in Spring in the northern hemisphere are to be part of a large 'reconsideration' of the 'global warming claims' by some very powerful 'social influencers'. These 'social influencers' are being described as 'blockages' that will be 'removed' in the 'logic' of the 'climate change into Ice Age'. These sets have 'global warmists' coming 'under attack' at several levels. Perhaps the most shocking is forecast to include 'physical attacks' on 'famous (warmists) faces' in 'public' and caught on media. These sets are showing that 'young people' will be 'outraged' at the 'lies' sold to them as 'accurate climate projections', and will 'react badly' over this year as they 'encounter famous (lying) faces' out and about in public. The data has 'physical assaults' taking place at 'restaurants' and 'speeches'. We also have indications that 'flying food' will be involved.

These 'out of season' conditions are also forecast as 'exciting commentary' and 'debate' that are forecast to be continuing for at least the next year at a fairly steady pace. The 'debate' sets have the 'warmists' becoming 'violent' in several 'public meetings' that will then go 'viral' as videos. These are forecast for the 'mid summer (northern hemisphere)' period during which several 'out of season weather events' will also be coincident with the 'public fights' over 'warming'. The data sets are forecasting that 'media' will have a 'good day' with the juxtaposition of the 'fist fights defending warming paradigm' during 'summer freezes'. The data sets have the 'warmist paradigm' being swept into the 'dustbin of history' by mid 2018. These sets also bring in continuing growth for 'revealing (of the) Ice Age'. The 'revealing' language is specifically centered on the 'projections', and the 'mathematics' including 'formula'. Note that we get language about the 'formula', not the actual equations themselves. These sets have some 'projections' to be discussed that will be focusing around the decade of the 2050's as being 'pivotal', but also that the 'smallest Ice Age effect' is to be 'tossed out' as about '250/two-hundred-and-fifty years' in duration.

Noting the continuing rain in California, and indeed along all of the west coast of North America, it is not surprising to see so many references to 'inland seas' showing up. We must note that the data sets have a 'big earthquake' series ahead for North America over 2017 and through into 2020, that is indicated to cause a 'bowl' into which will 'pour rivers' that then becomes an 'inland sea'. These sets would seem to be suggesting, by the number of geographic references to an area that is more or less

'central USA' that shades over to the SE USA, that the 'bowl' will be created in USA. However, geographic references can be misleading in our work as there are European place names as well, and we also need to note, that many of the names involved, show up in hundreds of counties across the USA. Our longer term data sets have the 'uptick' in 'seismic activities' being at a 'peak' in 2029, and then 'fading slowly' through 2047. The majority of the 'big damage' sets from the 'earthquakes' of 2017 appear to be in 'north west China', and north America.

Further sets that DO seem to more specifically California focused are being supported by 'flooding over roads', 'buildings awash on lower floors', and 'urban centers with boats floating over roadways'. Many of these sets are describing 'urban' and 'suburban' areas along the 'central valley' being 'flooded' with 'many homes' and 'buildings' suffering 'devastation'. The data sets have imagery of large numbers of 'small boats' that are 'active across the waters'. The depressing part of this set is magnified as the 'boats' are going to be 'necessary' for 'months'.

We have new sets for 'diving on city center streets' in order to 'recover valuables' from under the 'flood waters'. We have 'divers' being required by 'government' to 'work emergency problems'. These sets are describing 'several hundreds of miles' of 'flood' and 'damage'. The data has 'rivers washing away' large sections of 'supporting banks' and 'levees' such that the 'landscape' is 'totally changed' with 'new river beds', and 'new lakes'.

Without regard to the geographic aspects, the data sets have new values for our 'rivers in the sky', that will include 'rapids', which are described as 'pulsing waterfalls' of rain that will be 'stationary' over an area, but at the same time, be 'pulsing out rain' in 'waterfalls' amounts. These 'pulsing waterfalls' of rain are indicated to be photographed, and video recorded.

The data sets have far more action in the 'climate' and 'weather' sets over 2017 than we have seen even over these last five, very active years. The data continues to grow in support of the 'extra seasonal sudden plasma freezing' events that have occurred sporadically over these last few years. The data now has repeated aspects for several such 'instantaneous freezing events' to occur this year. One of these aspects are showing as including a 'sea level freeze' that will include several 'large boats' that will 'freeze' to the point that 'metals become brittle'. Another set that stands out has 'aircraft freezing suddenly ' in mid flight.

Solar spectrum shift is being forecast as driving a number of changes to our 'food crops' as well as 'plant life' in general, and also affecting many of the invertebrates at a species wide level. The 'solar spectrum shift' is forecasting a 'slide into red light' over these next 12/twelve years or so such that 'red reflections' and 'red sunsets' will be reappearing as 'dominant themes' in discussion decades from now. Also, coincident to this language, we have sets forecasting the 'return of the wine dark seas' as the 'color(s) of the oceans' change along with the 'solar spectrum shift'.

Other, more immediate changes in the planet are forecast as including new levels of 'lightning strikes'. These sets are showing as being without regard to season, that is to say that even the out of season lightning strikes are indicated to be 'excessive'. These sets are forecasting videos of 'thousands of lightning strikes' that will be 'rippling across wide plains' to such an extent as to be 'visible from space', and to 'light up the sky' for the 'duration of the night' due to constant 'lightning strikes'. Apparently there will also be 'thunder storms' in which mainly it is no storm, just hours and hours of 'deafening thunder'. The data is not clear whether these two will coincide. Another aspect of the 'lightning storms' will be

'massive prairie fires' that will be seen in the smoke columns drifting for a thousand miles.

The data sets have many more 'storms' that are going to become described as 'patterned'. These sets have 'robust', and 'growing', and 'continuous' as supporting sets for these 'new storm patterns'. These patterns will become 'rhythmic' and 'extra-seasonal'. These sets have these 'new weather patterns' as being 'regional identifiers' over these next few years. As examples, the 'west coasts' of both the Americas, and Europe are forecast as becoming 'battered' by 'storms'. These sets also have supporting sets for 'pulses', and 'rhythmic flow' of 'extra historic' levels of 'rain', and 'snow'.

The 'new (west coast) weather patterns' are forecasting that the 'storms' will be 'so regular' as to be 'scrubbing off hillsides', 'moving houses', and of course, causing 'flooding'. The 'flooding' words are also containing supporting sets for 'inland seas', and 'lakes' being 'filled'. Many new sets for 'displaced persons', and 'diaspora' as well as 'evacuations', and 'planned relocation (of) communities'. These latter are within the longer term value types.

The data sets have the new 'west coast weather patterns' being so 'storm filled' as to cause shifts in the 'population' and 'habitation' of Europe. Some of these sets are referencing 'ice storms' described as 'coating the coast' with 'walls of ice'. These 'ice bluffs', and 'ice walls' are described as remaining in place for weeks. Many will be 'reinforced' by 'storms after storm'. In some sets we have details suggesting that 'houses will be crushed' by the 'accumulating ice masses'. Note that this latter is also indicated to affect the 'coastal regions' around large 'lakes' where instead of 'lake effect snow' the new language forecast will be focused on 'lake effect ice walls'.

Harmonizing with the calving of the ice berg off of Antarctica, the data sets have new growth in some very old sets for 'ocean currents changing', and 'new lands emerge' from the 'southern ocean'. There are yet more sets for 'bizarre weather' that will be 'reported' from Antarctica. These sets are another dose of universal irony as the data would have a 'msm film crew' being 'rescued' due to their 'bad choices of locations'. These sets have new 'ice ridges' starting to 'form along coastline' as 'Antarctica climate change' seems bent on 'escalating faster than it can be recorded'. Many new sets accrue in modelspace as we move through late Summer, northern hemisphere, that have 'winter' in Antarctica breaking all manner of records, for both 'heat and cold'. The data sets have very large 'melt areas' continuing to 'thaw' over the upcoming southern hemisphere 'winter 2017'. These sets have very large 'ice reductions' taking place in 'winter', but along one 'coastline' only. The 'cold' sets have 'new floating ice masses' growing along other Antarctica coasts over this coming 'winter 2017' to the extent that 'sea lanes' are altered, not so much in deference to the 'ice mass' as much as due to the 'current changes' that are involved in the 'new floating polar ice'. Other sets have the 'warming coasts' of Antarctica 'exposing' the 'topology', as well as the 'hidden ruins'.

The 'new patterns' for 'persistent pulsed storms' across the 'oceans' that then are 'rivers in the sky' which impact the 'west coasts' of the continents in the northern hemisphere are also showing as being 'drought' causing as there will be areas that will, temporarily, be 'without rains'. These sets would have this be but a 'brief' interval in what will become a very 'wet and wild weather year'. In those areas that will be 'rain starved', albeit briefly, there are sets for 'cracked earth', and 'broken roads', and 'breaking pipes (as the dirt sloughs away)'. These sets are showing impacts for late Summer, northern hemisphere, 2017. These sets then receive supporting values for 'relief (of) dryness' by way of 'mega flooding'.

New growth in data sets around the idea of 'filling of old seas' with so much rain that 'deserts' become

'mud' then 'fluid'. The data has 'west coast rains' from Ireland to India, and Alaska to Peru, and Denmark to Algeria being so massive in the amounts of water being dumped as to 'break records' with each and every new storm. The data sets have 'scars' being 'cut into hillsides' all around the earth by the 'rain deluge' over 2017 through 2019. These 'rain patterns' and 'amounts' are described as 'eroding mountains', and 'shifting agriculture' around the planet.

More data sets for 'seismic activity' over these next few years. Noting that the longer term data has bigger 'earthquakes' showing up in 2022 and 2025, it is nonetheless striking the number of 'earthquakes' and 'volcanoes' that are showing up in the new data sets. We have 'earthquake' sets that are contained in many of the other sets. These 'seismic activities increase' sets are building up from June onward. There are several sets for a large earthquake within north America for late in July or early August of 2017.

As modelspace is progressed through August and into July, the 'earthquake' sets continue to grow over the rest of 2017 and through the next year. These sets are showing what is described as a 'swarm', but may be more accurately thought of as a 'aftershock quivering'. These sets are cross linked to the 'quivers', and 'quavers', and 'jelly-like movement' of the 'ground'.

The data has many of the 'earth changes', and 'weather alterations' being a part of both the 'secrets revealed' meta data layer, and the meta data layer for 'compartmental knowledge'. These sets combined have supporting sets that are indicating a major, visible-on-video-media, 'freak out' by 'many power elites' as the 'information' that 'breaks their composure' hits the internet. These sets have 'crashing' of (at least) that layer of 'secrecy' as 'loose lips sink conspiracies' over 2017. The data sets have 'video' of 'prominent personalities' who will be 'distracted', and (on video) 'speak factually' to 'the wrong person'. Following this 'words slip out', the 'celebrity' is shown, first frantically trying to 'take it back', then 'running away'. The details have the 'flight of the celebrity' being on video with the 'crowds of security chasing after the fleeing celebrity'.

Other areas of 'planetary changes' are indicated to be also 'forcing political changes' as the 'breakdown' of the 'legacy corporation media narrative' begins to 'shred' over the middle of 2017. At this point the data sets are suggesting that the 'political narratives' are going to 'crumble' over late Summer northern hemisphere. These sets are pointing to 'layers' of 'complex lies' that will be 'burnt off', and/or 'shredded' in 'minutes' with the 'presentation of evidence'. The 'evidence' is described within the data sets as 'compelling', and 'visual', and 'accepted'.

Other new sets for 'earth changes' are filling with references to 'oceans', and our repeatedly discussed 'new lands' sub sets. These sets are supported by 'heat source', and 'continental', and 'minerals', and other sets indicating that 'new volcanic vents on the ocean floor' are going to be 'spewing' so much material as to be 'creating islands' and 'land masses' faster than 'navies can catalog'. There are repeated references here that are tied over to the GlobalPop area where we have 'damage', and 'impacts', and 'running aground' and other language about 'boats crashing into land' that 'previously was not there'.

Yet more sets for 'Antarctica' within the Terra entity area are suggesting that 'strange weather', and 'new ice forms' will be 'impacting' the continent over 2017 and through 2018. These are indicated to be 'participants' within the 'ice flows' process such that 'ice bergs' are calving while on the other side of the continent, 'new ice masses' will be forming. Most of the 'new ice masses' are showing as 'floating'. The many new sets of supporting values include descriptor sets for 'new ice', and 'extension of continent'.

Your Global Populace changes....

GlobalPop

All humanity is showing in the longer term data sets for impacts of 'food prices' and 'food availability'. These sets are hinting that 'seismic activity' as well as 'ice age' (developing) conditions will be the primary driving factors. The data sets have the combination of our previously discussed 'credit freeze' being combined with 'bad rain', 'bad earthquakes', 'bad solar radiation (reduced levels)', and other factors into a 'crushing of the food supplies' insofar as the 'prices' are concerned.

Other 'weather' is also indicated to 'impact prices' over 2017 and 2018 as the 'financial systems' become stressed by both 'internal problems', as well as 'external (weather) problems'. These external weather problems are forecast as producing 'migrations' and 'population relocation' across Europe. These are indicated to occur over the next few years as the 'cold weather' becomes much more intense.

The 'cold weather' is also indicated to 'participate' in the PopWar over these next two years at several different levels. First by 'shuffling' the populations around. Second by providing 'strategic barriers' to any 'further invasion'. These are within the longer term data sets and appear to be showing for the 'winter of 2017/2018'.

Yet more 'disruptions' are indicated to be affecting the 'population' of the 'northern hemisphere' as 'nuclear worries' begin to 'escalate'. These 'worries' are going to be 'increasing' over 2017 with a number of 'strange incidents' involving 'radioactive materials'. Some of these 'episodes' will incite 'major governmental responses', themselves indicated to cause 'public alarm', and 'mass panic', and 'chaotic evacuations' that will all be 'mysteriously canceled'. The data has 'helicopters' filled with 'men in radiation suits', as well as 'fleets of trucks filled with soldiers and police' who will be 'rushing into' a 'small town' and basically scaring the hell out of everyone for hundreds of miles around as they insist on 'rapid evacuations'. This will spread across the internet like a grass fire in a drought. Mass panic ensues. Much discussion, only to lead to ??? what? No real answers to anything. Lots of mess, some small damage, and people let back in a few days later with no radioactive traces even showing. Other episodes are also showing as 'leaving scars' on the landscape, and 'causing national panic'. The data suggests that some of the 'explanations' will lead to 'UFO' as the 'cause' for the 'sensors reacting'.

Other very strange 'sightings', as well as 'described encounters' with 'alien craft' will be 'hitting the net' this Spring as the northern hemisphere 'heats up' in UFO visits if not in weather. In many of these sets we have 'incidental visual indicators' for 'cloaked ships' that will include 'clouds', 'rain/snow', 'ice sheets' and even 'lightning'. The data sets have the 'ice sheets' and 'lightning' being in one instance together. In this instance, there is going to be 'evidence' left for the 'local inhabitants' to gather up. These sets are focused on eastern and northern European countries. The data sets have the 'local inhabitants' being smart enough to pick up the pieces, and then 'deny everything to officialdom'. These sets have a some hints that 'relics' of the 'UFO' encounter will be 'offered' for sale on-line which is going to 'alert' the authorities yet again. Too late though as the 'items' will have been sold and 'delivered'.

The data sets for 'eastern europe' also are showing for a major 'rescue' involving 'USA soldiers'. Longer term values, no details other than appears that the 'soldiers' are the ones doing the 'rescue' and that need

for the rescue is 'environmental/climate/weather'.

Global Gold Rush

Within the many areas of the GlobalPop entity there are numerous sets for 'gold rush'. At first the temptation is to report on these within the individual sub sets based on geographic locations, but the sheer number of the instance sets makes this too time consuming.

The data has 'gold rush' from the 'cracked', and 'tilted sub divisions' of California, to the 'beaches of Mexico, and to the 'hills of central europe', and to the 'caves of Africa',and to the 'rivers of South America'.

This area is highlighted as the data sets are so voluminously filled with references to 'gold' and the many ways that humans will be attempting to obtain it. These sets are new to this processing, but are continuations of the meme first seen in 2015. The growth patterns suggest that we are not yet close to the full manifestation of the 'gold rush' language, though it looks as though 2017 is where we get our 'good start'.

PopWar: Shattered

The 'border countries' within EUPop are indicated to be in the 'big squeeze' over most of the rest of 2017 as 'USA Deep State officialdom' continues to attempt to put Russia into a 'box' of their creation. The other part of the 'squeeze' will come from the 'mass migration (invasion)' over Spring and Summer. The data sets have 2017 as the 'year of the invasion of Europe'. These sets would suggest that 'more men' are going to try to 'move into (settle, conquer)' Europe this year than in all the 'last ten years' combined.

These new growth areas are showing that the 'invasion wave' will be more 'accurately described' this year, as the PopWar meme grows to 'respond to (the new) wave of invasion'. These PopWar memes are escalating in number, but with lower emotional impact numbers for each new addition than had been seen in past months. Stated another way, something of an emotional plateau is being reached relative to the language around 'migrants', and 'refugees'. These sets have the actual outbreak of 'war between populations' begin in such a way as to 'take government' of several 'countries' by 'surprise'.

The 'surprise' factor is indicated to cause the most problems across the actual 'battlefield'. These sets are filled with supporting sets for 'walk-in' problems as the 'government forces' are so clueless that they 'walk across battle lines' in 'neighborhoods' and 'start up conflicts'. These sets are describing 'battles' that will persist for 'days', and then 'lulls', and 'restarts' as the 'combatants rest and rearm'. These sets also have government forces being 'fools', and 'failing to grasp' the real 'situation' until 'too late'. These sets also contain hints of 'chaos' within 'government control of their forces' such that 'no one is sure who is in command'. Further sets show 'pitched battles', that will involve many 'wounded and dead'. These sets have these battles being 'interrupted' by 'extra seasonal weather' that will 'catch the combatants' by surprise.

We have continued growth in longer term value types for the PopWar to 'fade away' as the 'Ice Age impacts' are indicated to 'reduce the prize (to) nothing'. These sets have the 'invaders' being 'turned back by cold' over these next few years as 'increasingly fierce winters', and 'increasing weather hardships' are

described as 'breaking (the) attention on the goal'.

Other impacts on PopWar include the 'action' against the 'funding sources' such that 'personalities' are 'sent hiding', and 'conduits dry up'. This phase of PopWar is indicated to begin over June with announcements that will be coincident with very large 'economic shifts' within many of the 'countries affected'. These 'economic shifts' are likely 'laws' and 'policies' that will be 'interdicting money' used in PopWar. The data has the 'interdicting of money' sets supported by 'nation wide raids (by) law enforcement', and 'arrests', and 'incarcerations'.

Some of the supporting sets for the 'incarcerations' sets are cross linked back over to USAPop where there will apparently be some 'simultaneous cooperative raids'. These are all indicated to be 'fueling' the 'national debates' over the rest of 2017.

A striking amount of the new data sets for PopWar also have either directly held supporting sets for 'gold buying', or have cross links over to the 'gold' sets in either GlobalPop or Markets entities. These sets are all referencing an 'emotion driven buying wave' that will seemingly 'burst into flames' in several EU countries, then move rapidly to first the UKPop, then over to USAPop. Note that there are many strongly supported sets for 'gold' and 'women's uprising' in IrelandPop. These sets are now also in supporting positions for the 'gold prices rise' sets within Markets entity.

The 'gold buying wave' sets are primarily centered on Europe, however the second largest geographic reference is for 'London'. These sets have detail sets that are forecasting a 'bank robbery' that will be 'attempted' by 'invading migrants'. The 'robbery' is indicated to 'fail' in a spectacular fashion. The detail sets have the 'attempted robbery' being a 'spot light' on 'gold'. The data forecasts that a 'run to the bank' to 'buy gold' will commence the very next day. Coincidental, but linked somehow within the data sets.

The 'rush to buy gold' in the northern European states shows as the 'catalyst' for UKPop to get 'emotionally involved with gold'. This is forecast as leading to a number of very interesting days of 'on the street interviews' with people queuing up to 'buy gold'.

GlobalPop 'encounters with gold', and 'stumbling over gold', and 'locating gold by accident (of nature)' and 'locating gold by accident (of man)', and many other such sets are gaining broad support for instances of 'found gold' that will be 'popping up' over the rest of 2017 with something of a crescendo across late September through October. The 'encounters with gold' sets are quite intriguing as they are suggesting that 'divers' will 'encounter gold', and apparently 'more than can be lifted by two men', and 'all in a single spot', which is to say, in some 'cave' underwater. This 'cave' is not described as though it is associated with the ocean, rather we have language for more of an 'industrial dive'. In this set we have a 'twist' occurring as the 'divers will take photos', and 'video', and cause a sensation when they put it online, BUT when they 'return with assistance', all the 'gold is gone'! And then this causes yet more 'internet furor'. Much of it into seriously deep woo-woo.

Break-awayPop

The data sets have 'missions', and 'logistics' that will become 'visible'. The curious part of our Break-awayPop set is that we have new growth for 'infiltration', and 'releases', and 'video', and many other sets

indicating that 'whistle-blowers' (plural in the data sets) will be 'pouring out' a large amount of 'captured video'. This set is within the longer term data only, as of this processing. This suggests we are looking at a possible manifestation in mid to late 2018. HOWEVER, there are a number of cross links to other sets that suggest that perhaps, this may be a case of what we have termed "future masking" as we first encountered in 2003 with the Band Ache earthquake and tsunami merging with the data for the Scott Peterson trial which was also emptied by an earthquake. These sets may actually be showing that an 'early release' of some small level of video, or other information, much like the 'celebrity trail courtroom emptied by earthquake' in the early part of the year, was part of the total earthquake language for that year that included the horrific occurrence at Band Ache in which 300,000 died, as forecast, and a 'nation was knocked back to a previous age (stone age)'.

These 'release of video' and 'documents' about the Break-awayPop have little details. Those that do show up at this point are reminiscent of the Band Ache earthquake forecast. We have minimal details that have elements for 'collapse of bonding agents', and 'release of video', and 'short haul space hops', and 'profitable mining (in space)', and 'watching China', and 'who are they?'. These sets are all 'space' and 'space travel' supported sets. The 'watching China' set has aspect/attribute sets for a 'sneaky watching' of the 'fresh launch' of a 'Chinese rocket'. Other details that emerge include 'mining', but not, apparently, as we earthers think of it as this is 'mining in space'. There are no mention of asteroids, or other places in which to mine, so the reference is obscure at this time. Some supporting sets have 'who are they?' as a 'question' that is naturally going to arise from the release of the videos and other documentation from the Break-awayPop, however there is a discrete aspect/attribute set with that wording as its label. Within that set, the idea coming across is that a video is going to show some very greatly puzzling 'beings', and that the people doing the recording will be 'heard saying quietly "who are they?" '. This set is further indicated to be so 'compelling' to watch that, once on the net, it will be in continuous play across the planet for decades. First, because of the 'who are they?' 'shock' that is described as 'stopping traffic' in any city where the video is seen on a 'wall screen'. Second the data has the 'novelty' factor driving continuous views. Third, there are sets that have longer term value suggesting that the video will also be played for years for its 'pivotal historical' impact.

Other sets within the Break-awayPop entity have descriptors for 'interdiction', and 'border crossing', and 'phone in orders'. All of these sets are within a group that is suggesting that 'communications' between 'space ships (secret earth space program)' will be 'decoded' and made available later in 2017. These sets have a 'communications glitch', caused by a 'solar incident', will be responsible for some 'smart earthers' being able to 'crack the communications channels'. These 'youths' are showing as becoming 'mega internet fabulous' overnight, and then later having 'issues' as the 'authorities' try to 'track down the source' of the 'decoded communications'. There are numerous sets indicating that these 'accidental decoders' will become very much 'global sensations' with their 'faces recognized for decades'. This level of 'global fame' is indicated to arise from their 'handling (schooling) of the government(s) involved' more than their actual 'technical skills', although those are considerable.

Another 'mega internet fabulous' personality to arise later in 2017 is described in the new data sets as a 'police officer' (maybe female?) who is in a 'jurisdiction' that uses 'dash cams' and 'body recorders'. These sets have the 'officer' actually being involve in an 'accidental encounter (crash?)' with the Break-awayPop. The data has the 'dash cam' as being the 'saving' of the 'officer' as everyone who hears of the 'incident' will 'disbelieve it'. Then the 'organization' to which the 'officer' belongs is indicated to 'stand

up', and 'back up' the 'officer' by releasing the 'cam film'. These sets again point to giant reactions across the internet that will lead to the 'officer' being a 'very sought after personality'. This set, as with the 'decoded communications' sets, also has lots of references to a 'solar incident'.

AustraliaPop

What is up with AustraliaPop? Yet more data sets for yet more 'political bribery scandals' are showing up as 'frying careers', and 'opening jails'. This last seems to be a hint that there were 'amnesty irregularities' that are going to surface in AustraliaPop media before the end of July. These 'corruption scandal' sets are gaining new supporting descriptors that include 'hidden property purchases', and 'bribes (from) government officialdom'. This last is referencing AustraliaPop 'government workers' being 'bribed' by 'officialdom' both from Australia, and elsewhere. The data sets are suggesting that the 'scandal' part of the language soon to come out will also be 'prying civil servants' from their 'positions of power'. Many more sets for very large scale 'political upsets', and 'politics in disarray'.

These sets have the 'disarray in politics' to be 'tightly bound' to Britain. It appears that a 'document', which will be 'mysteriously located' in Britain, will be 'pivotal' in 'turning (out?) the government' over latter half of 2017.

Data sets now accruing are suggesting that in spite of the 'crumbling confidence' in 'government', the AustraliaPop 'dollar' will be 'rising' against both the USA dollar, and the RMB. These sets are suggesting that this is part of a larger trend to be impacting USA dollar over last half of the year. The ramifications for AustraliaPop are suggested to be good, though the rising value of the Australia dollar is indicated to 'bring grief' to both the 'local housing market', and 'importers (of) commonwealth goods'.

DeutschePop

With all the other 'social chaos' rampaging through Europe, the DeutschePop sets are now shifting emotional weights away from the 'active street battles' to the 'political realm', and the 'economic crashing' within the EUZone. The data sets have DeutschePop reacting 'badly' to 'political maneuvering', and providing a 'big boot' to 'globalists in general', and 'politicians in the south'.

Further DeutschePop has new growth in 'political rebellion' which are focusing on the 'government', and even more importantly, the 'industrialists'. This 'rebellion' is described as 'bringing out' the 'collisions' into 'public media'. Some sets for 'bruised young people' in a 'political arena' as a result of 'fist fights'. The data would have the 'fist fights' be due to 'force being required' to 'open (the) door'. These sets are also going to cause the media within the globalists control to start referring to the 'potential for a Hitler's return to Germany'. They probably don't mean that Trump is going to relocate.

The largest areas of new growth for DeutschePop are focusing on 'economic chaos'. This 'economic chaos' includes all levels of the 'German financial system' as well as the 'industrial base'. It is the 'industrial base' being 'threatened' that is indicated to 'bring out the industrialists' to 'oppose officialdom'. These 'opposition forces' are showing as 'participating within the political process' until an 'unknown' incident occurs, likely before the end of May, the result of which is showing as 'breaking' the 'industrial base' away from the 'political machinery'. This 'separation' will be described by those leaving

as 'being thrown out'. Big political problems will follow, many a direct result of the 'abandonment' of the 'entrenched powers' by the 'industrialists'. The data shows the 'population' to have a 'shift' away from 'cooperation with government' to a burgeoning state of 'antagonism' toward their 'officialdom'. This is indicated to NOT be a 'youth effect', but rather to be 'within the middle class'. The data shows 'officialdom' ignoring the 'signs of change' within DeutschePop to their regret.

Longer term sets are accruing to the DeutschePop sets for a flurry of 'time machine', and 'strange things in time' language to manifest over late 2017. The few details show that some form of 'time machine' controversy erupting over 'strange happenings' in the 'rural' and 'forest' areas. These sets are suggesting that some 'manifestations' will 'excite public interest' including 'bus tours' at some later date. These sets are suggesting that a 'time machine' will be the 'proffered' and (more or less) 'accepted cause'. This 'understanding' is showing as being tied into the 'increasing UFO sightings' over Europe, especially, central and eastern Europe. The data has 'bus tours' being organized to the sites in Germany where 'time machine' supposedly left 'evidence'. This is showing as something other than an 'aberration' as there are many longer term sets in supporting positions.

As many be expected, there are many new sets for the 'local version' of PopWar within DeutschePop. The new data has PopWar in DeutschePop moving 'from south to north' even in the 'erratic winter weather'. Other sets have the 'southern region' becoming a 'battlefield' over these next months, with an increasing 'frequency of night battles' (Der Nachtkreig) escalating to the point that 'national politics' are affected by 'early Spring'. Der Nachtkreig is described within the data sets as occupying much of the 'national attention' over 2017. These sets have a 'fascination' with Der Nachtkreig that borders on the same emotional tones as 'soccer fanaticism', but with higher values for 'fear', and 'dreading'. The data seems to be implying that an element of 'entertainment' is going to be involved with 'ratings and views' a component of the 'escalating night fights'. This is forecast as leading to not good scenarios for a while, then some very smart 'citizens' will decide to 'escalate the entertainment value', and the 'night battles' are thereafter indicated to be a 'global sensation'. Many of the 'record viewings' will be 'drawn from China'. The data sets are indicating something of a 'Deutsche cult mindset' will developing within ChinaPop youth over these next few years that will begin with the 'videos' of Der Nachtkreig.

FrancoPop

The tendency of the Gauls to be 'war like' and 'threatening' is about to 'resurface' in a rather interesting way as the PopWar: France is indicated to 'heat up' with 'drone surveillance' that will become a 'spark' among the 'invading muslim population'. These sets have the 'invaders' being in 'camps', and 'camping in parks' and 'on streets' when 'drones' will be observed 'watching them'. This is indicated to elicit a reaction totally unexpected by any of the 'participants'. The data suggests that the 'migrant invaders' go on a 'rampage' trying to 'bring down the drone'. The data is somewhat confusing as it talks of 'hundreds' of 'windows' being 'broken' by 'flung debris' aimed at the 'offending drone'. This incident is showing up as going viral, and producing all sorts of follow on 'bad behavior'. This will include 'phones being snatched and smashed' by 'migrant/invaders' as they are convinced that all devices are 'monitoring them'. Further, the 'migrant/invaders' will also take to 'smashing windows' in 'sprees' whenever there are 'drones around'. While producing good business for the 'window replacement companies', the 'glass smashing episodes' are going to 'trash' so many streets that it becomes 'unsafe to drive' just because of the 'debris' and 'broken glass'. These new sets also have FrancoPop participating in these episodes as

there will be 'deliberate attempts' by 'drone operators' to 'irritate' the 'migrant invaders'. Other sets have the 'media' also finding that much of the area of France now 'occupied' by the 'invading migrants' will be a 'no drone fly zone'. In some of the sets are aspects suggesting that the 'french police' will make an appeal to NOT fly drones and 'provoke broken windows'.

Other areas of France that are not urban have differing forecasts. These sets have a few small towns and villages that are 'invaded' and then 'war breaks out' which will lead to many 'wounded invading migrants'. These 'wounded migrant' sets are indicated to 'cause a deep rift' with 'American media/progressives' as the cross links from these sets terminate in USAPop within 'outcry (for shooting) invading migrants during pitched battles'. These sets are also continuing to provide supporting values for our longer term sets of the 'Rothschilds property' being involved as the 'escape route' of the 'losing migrant mob'.

FrancoPop is going to be 'experimenting' with all manner of 'reactions' to the 'upheaval' within France, and the 'french political system'. These 'experiments' are further described as being 'cast off rapidly' as the 'political chaos' moves faster than 'solutions' can be tried. These sets are filled with supporting sets that go to the idea that FrancoPop is going to be 'hard pressed' by the 'rapidly unfolding violence'. These 'violence' sets include 'occupations' and 'government take-over'. These are not necessarily at the same place. The data would seem to be forecasting that some villages and towns that become 'occupied by invading migrants' will react by 'citizens overthrowing local government' in rapid coup's that will be felt as 'shocking' to the EU ruling elites. Further, the successful 'repulsion' of the 'invaders' is also going to elicit much 'verbiage', and 'global publicity'. This is seen as a 'key episode' by the 'indigenous peoples' as they declare themselves to be part of the 'woke population' of the globe.

Some of the new sets are also suggesting that FrancoPop is going to have a combined problem involving 'invading migrants', and 'nuclear power plants'. These sets are arguing that 'military force' is going to be brought in to 'protect the region' due to the 'nuclear power plant'.

IrelandPop

Yet more water problems, including 'protests', that are some how associated with the 'women of gold'. The local to IrelandPop issues are showing lots of protests against 'government actions' including 'property charge protests', 'evictions', and 'corruption charges' that are indicated to arise from, or being propelled by a 'suicide'.

Some of the new growth appears to be suggesting that 'people moving' will start a 'government free zone' or 'new city'. These sets are cross linked to the 'women and gold' meme, though not in a cause and effect fashion.

There are yet many more sets for 'banks' and 'battles' against the 'women of gold'. These sets have references to 'alternative money', and 'dangerous moves', and 'pushing on people' and many other sets going to the idea of some form of a 'new money collective' that will be causing the 'banksters' to make 'very bad decisions'. These 'very bad decisions' are indicated to have a 'national follow on' that provides 'impetus' to the 'anti-banks movement'. The data sets have the 'women of gold' or 'women with (alternative) money' being 'beaten down', but not 'defeated'. The emotional 'response' of the 'population' is forecast as being a cause for the 'break-down' of the 'justice system'. The data sets have the 'women with/of gold' as being 'freed' (rescued/released) when the 'population' decides that 'enough is enough'.

There are many sub sets with language for 'overnight vigils', and 'proclamations' that is forecast as bringing 'victory' in 2018. There are a number of sets suggesting that this movement will have a label applied that will be the 'tag' for this period as these days mature into history.

These sets for 'women' and 'gold' are extensively cross tied over to the 'gold buying wave' sets within GlobalPop, though where they differ is both in emotional tones (anger versus fear), and within the duration of impact values in that this 'women and gold' and 'women struggle (involving gold)' sets have values extending out 3/three generations.

There is continuing new growth for 'western Ireland' and the 'underwater project' that we have labeled the 'Slope'. The data sets have new supporting sets for a 'Chinese central authorities investment program' that is indicated to be 'coming to Ireland' over 2017 through 2018. These sets appear first as we move modelspace through Spring and into Summer. The data has a temporal marker of 'scandal' and 'discord' that will be putting a 'hidden layer of pressure' on 'Ireland officialdom' as they will be 'secretly meeting' with 'Chinese representation' about 'solicitation of investment'. This juxtaposition is showing as being ultimately 'good' for IrelandPop in several ways.

ItalyPop

Yet more seismic activity is popping up within the data sets with many of these having Italy specific geographic references. Please note that many of these same names are also to be found in North America and a few other locations, so the data below should be taken within this context and not necessarily all focused on Italy proper.

Our new data for 'seismic activity' includes 'quivers', and 'quavers' which are described as 'pre-release activity'. These are describing a period in which 'villages' are going to be 'quivering' in an 'odd fashion' as part of the 'earthquake activity' increase over this year and next. The data sets have 2017 becoming very active through 'arcs' of a diagonal 'great circle'. The 'arc' described has many of the Italian names appearing. Again, there are many references for north American seismic activity, and these also include geographic references that also include Italian names.

In general, the data has ItalyPop starting to 'become Californian' in their 'earthquake awareness'. The data has new 'populist initiatives' sprouting up like weeds over 2017 as a group of 'young leaders' begin to 'make preparations' that 'the government will (can) not'. This meme is also associated with much 'haggling' and 'arguing' as the 'young people' are 'confronted by officialdom' and 'declared (as) menaces'. The data has the 'declaration of public menace' to be made not over the 'preparation work' itself, but rather for 'speaking' about the reason for the need of it....earthquakes. So the data has a group of young leaders getting in the 'face of officialdom' about their 'earthquake changes denial', and the 'potential risk' of 'major earthquake' and the 'deaths of millions'. These sets have the 'Italian young leaders' being 'labeled', in a pejorative manner, as 'California hippies'. This is going to be due to the use of analogies between Italy and California, insofar as the 'potential seismic risks'.

As had been forecast for so long, the 'Italian banking "system"' is still being presented as the 'lynch pin' that causes the 'derivatives' to fall into the 'crevasse'. The data has 'northern Italy bank', once headed by a 'climber who made famous a local climbing area (maybe even named the same)' as being the 'breaking point'. These sets have the 'Italian banking system' being so 'distressed' in such a 'rapid fashion' that they 'race to government' for 'relief'. Problem showing in the data is that 'government' will

'have no funds', and 'be incapable' of 'inducing loans (from) Germany'. This last is indicated to be due to the 'tight connections' between the 'Italian bank' and DeutscheBank. While a seeming inducement to loan money to 'failing Italian bank', the picture becomes muddied as the 'scale' of the 'derivatives monster' is 'discovered'.

The 'Italian banking system hidden liability' sub sets are also supporting sets for 'lira' and 'return of sovereignty'. Both of these sets are cross linked to the 'seismic activities' sets with the implication being that each will be boosted along by the 'earthquakes', and also that a 'social earthquake' will be involved. The 'return of the lira' sets are arguing for a 'restatement of Italian ethos (heart?)' as 'separate and distant' from the 'Brussels experience'. These sets are forecasting the rise of some new 'political talent' from the 'disheartened youth' in the form of someone who is identified as being a 'practicing linguist'. This may be a singer or other word talent. The data would have this person be rising in 'political stature' over 2017 as a result of the 'words let loose'. The data has the 'mere rumors' of 'lira return' being both 'emotionally boosting' to ItalyPop, and 'fighting words' to the 'bureaucratic elites (in Brussels)'.

ScandanaviaPop

The continuing expression of PopWar in Sweden is but one of many points of 'outbreaks' of 'open violence' as modelspace is moved through the last of Winter and into early Spring, 2017. The PopWar sets have the 'violence' being 'instigated' by the 'invaders'. This is going to prove to be a 'mistake' as the 'invaders' in several areas in Sweden are forecast to be 'surrounded' and 'set upon' by 'mobs of indigenous population'. These sets have the PopWar becoming so 'violent', and 'strife filled' as to 'disrupt' areas of the country for 'weeks'. It is at this point that the 'officialdom', in spite of their 'attempts' to 'calm the warring factions', will have to 'order out military forces'. These sets are also indicating that a 'military base' itself will become 'attacked', and 'embroiled' in the PopWar confrontations over Spring (northern hemisphere).

The data sets have PopWar beginning to 'push back' the 'invading migrants' as the 'extra-seasonal winter weather' in early Spring is forecast as providing 'disincentive' to 'warm loving peoples'. The data also has 'psyops war' being waged against the 'invading migrants' by a number of differing groups in ScandanaviaPop. The data sets have interesting details such as 'phone home centers' in which 'free phones' are provided to 'invading migrants'. The 'free phones' are apparently to be used in the 'psyop battlefield' by 'disinformation spread', and 'tracking', and 'propagandizing'. Other sets have some 'apps installed' to 'capture intelligence' which is then to be used to 'spread dissension', and 'mistrust' among the 'installed invading migrants' while also using their 'call lists' to 'disrupt operations' back at the 'point of origination'. These sets have very extensive cross links internally, and many terminate in 'old soldiers', and 'young-bloods' who will be 'sitting together' at 'DIY command centers' as they 'sip hot soup (reference obscure)' and 'conduct mind wars'. These sets are also providing details about the 'later stages' when the 'invading migrants' are showing as 'having learned of the free phone psyop war'. In these sets the data has the 'twist' from the 'psyops war' causing the 'invading migrants' to 'freak out' and 'run away' from many forms of 'technology'.

Other tactics employed by the ScandanaviaPop will be less kind, more 'violent', and in the end, less 'effective' than the 'old men' and 'techie kids' with their 'mind wars'.

SouthAmericaPop

Data sets have the seismic activity ramping up across South America just as the population becomes embroiled in 'political upheaval', and 'UFO (UAP) swarms'. These may be related as they manifest, and are certainly temporally linked in modelspace which has 'swarms' of UFO's that will be involved with the 'population' in ways we have previously discussed as being as 'debris falling down on spectators', but now are suggesting that 'deliberate releases (of unknown matter)' may be at least part of the point of the 'aerial display'.

There are many sets for 'UFO' and 'engagement' with the 'military fighters'. These sets have at least one country in SouthAmericaPop deciding that they needed to 'do something' in reaction to the 'ejection' of 'material' from the 'UFO'. These sets suggest that the 'military fighter jets' will not be able to do more than 'chase' the 'UFO'. However, the 'population' is indicated to be 'concerned about the material being ejected', and is showing as being 'supportive' of the 'government actions' against the 'UFO releases of material'. This 'material' is also indicated to 'bring foreigners' of many types to the area to 'investigate'. These sets have the 'material' being 'scooped up' by 'airplanes' and 'drones' in 'subsequent releases'. The data also is describing 'international investigative teams' being formed to 'pursue' the 'unknown' within this 'new UFO behavior'.

The data sets have the SouthAmericaPop being 'motivated' by 'strange weather', and 'intense freezing' into new forms of 'agriculture' as 'traditional crops' begin to be 'hard pressed' by 'changing weather conditions'. These sets are forecasting a very 'difficult Fall', and very 'damaging Winter' for the southern hemisphere including Africa. The new growth areas include language for 'crop losses', as well as 'crop asset losses'. The 'crop asset losses' include 'trees', that include both 'fruits' and 'coffee', and 'vine fruits', and 'production facilities'. This last is referencing the 'damaged facilities' from 'extreme weather conditions'. These 'extreme weather conditions' are indicated for the 'coasts', and especially the 'south eastern coastline of South America'.

USAPop

As may be expected, the data sets for USAPop are growing both widely, and wildly. The rising memes within USAPop are much more numerous, and much more voluminous than seen in all of last year. In terms of the emotional sums, we are already beyond the collective emotive sum for both release and building tension language peaks seen in 2011 with the peaks of the silver market. We have exceeded the sums within the fear tension, and fear release levels seen over 2008, and 2009. The data sets have widened in the sense of adding more descriptors that are new to the entity area, and further, in the sense of having more descriptors of a discrete nature, which is to say, not already enfolded by cross links into previous ALTA reports. Stated another way for clarity, the data has seen an explosion of new objects that will be the subjects of our discussions within USAPop over this year. Should this rate of growth continue, we would have USAPop nearly double its 2016 size by mid 2017.

Yet more sets for 'narrative wars' are showing that the 'battlefield' of the 'dueling over narratives' will become 'littered' with the remnants of 'former history'. The 'litter', and 'debris' is described as being 'cohesive' but 'wrong understanding' of 'history' and 'reality' that will be 'tearing at academia'. The data shows the 'reality' goes into 'tailspin' as a result of 'releasing of information'. These 'tailspin' episodes are described as 'press conferences' in which 'reality' is 'shaken' by the 'information discussed'. Note

that this is not so much providing the emotional impacts of the things being said about the subject, but rather the mere fact that the subject itself is discussed that causes the 'tailspin'. These sets also include the idea that 'personal integrity' of the people involved, as well as the 'serious approach' to the subject are indicated to cause the 'shock' through the media. The data sets have the 'media' being 'shocked' to the point of having to 'report' on 'alternative conspiracy ideas', and even more shocking, 'being taken seriously'.

This 'taboo subject taken seriously' set has high levels of emotional tension values and is acting as a temporal marker for many other sets within what we can call a ripple outward occurrence. These 'public face' ripples continue to intersect and magnify each other over the course of the rest of this year and into next. Note again that this episode is showing first in the data as modelspace is moved into late May.

The 'taboo subject taken seriously' sets are also in a linguistic structure with yet another instance of 'backlash'. These sets are seeming to suggest that a 'backlash' against 'bad speech' will come about that will be 'felt' by lots of USAPop as 'very scary'. Note that this has nothing to do with gender or such, and within the data sets the focus is entirely 'professional'. These sets are suggesting that a 'separation' or 'rift' is going to take place over 2017 in which the 'AMA' (American Medical Association) and its 'affiliate forces' will be 'eviscerated' and 'disenfranchised'. These sets would have the 'doctors' being "sent running (to) lawyers' in 'great numbers' as they are 'frightened' by 'government actions' against their 'guild'. Again, please note the language will shift from the use of "AMA", over to 'guild', and 'lobby' to reference the "doctors' lobby" as a 'pejorative term'. These sets are suggesting that the 'government actions' against the 'doctors' lobby' will be not only 'shocking' for those 'inside', but also for those 'outside' and 'dependent' on the 'corruption system'. These sets do not argue for an 'easy acceptance' of the 'new information'. There are some hints in the shorter term data values of 'assaults' on 'doctors' that will lead to 'arrests', followed rapidly by 'nullification' of the 'charges'. These sets are suggesting that the 'revolutionary language' used about the 'lobbying organization' will be part of the 'corporation backlash' that is forecast to be felt within USAPop from 2017 through to 2023.

There are new sets for the 'sun disease' that are indicating that all manner of 'odd behavior' will be 'seen' in, on, and around our 'sun'. These sets have many new instances of the 'disturbances' being captured by 'space satellites' in real time as they are happening, and in these up coming episodes, NOT being 'interdicted by NASA'. So the data sets are forecasting a big truth bomb to be 'motivating officialdom' to start 'babbling' from 'many different corners of their vast collective mouths'. These sets have the USAPop being particularly involved in this meme as it is NASA and the 'conscripted academia', and 'toady media' that has been 'supporting the narratives' which are now indicated to be 'under attack' by 'manifestations in nature'. These 'manifestations' are including the many aspects of 'sun disease' and these specifically are going to 'twist NASA' into 'loops' of 'bad logic' as they try to 'reconcile' the 'solar behavior' to their 'carefully constructed, media enforced, fantasy' of a cosmology.

The USAPop set has a growing number of longer term sets for 'earthquake' and 'earthquake damage' that is indicated to 'begin', yes, just 'begin' in 2017. These 'damage' sets are filling with yet more 'flooding' and 'river changes course' language. Again, we have more language for 'down river nuclear power plants' that will be having problems with 'cooling flows'. These sets for the 'earthquake damage' are also within sets for for 'railroads' that will be 'derailed', and 'bridges being blocked'. In one instance the data would have a 'train derailment' on a 'bridge' that will cause a 'line blockage' that will 'back up

national railroad traffic' for 'weeks'.

New sets for yet more USAPop emotional response to 'damage' from 'rain rivers in the sky'. These sets have 'damage' occurring to 'standing fruit (orchards, vineyards)', as well as 'low lying lands (in) vegetable crops'. These sets have the 'flooding' being a supporting factor for 'large crop losses' over 2017 and 2018. These are going to the idea of 'crop lands' being 'covered (flooded) several feet deep' both from 'rain rivers in the sky' as well as 'rivers', 'creeks', and 'lakes' all 'overflowing' their banks. These sets are arguing for 'weeks', and 'months' of 'flooded lands', and 'soggy low lands'. These sets are suggesting that 'boats' will be used to 'rescue farmers'. There are many sets with details for 'boats floating' over 'submerged crops', and 'rotting crops deep underwater'. Other sets have some areas so 'flooded' that 'man-made barriers' are going to 'breakdown' and allow 'brackish', and 'delta waters' into previously 'fresh-water basins'. Thus we have details with 'sharks', and 'sea-turtles' that will be 'video captured' as they are 'swimming miles inland'.

Many sets within these groups are in the supporting chain for 'boat tribes' to be developing along the 'southern coasts'. These sets are internally cross linked over to both the 'rain soaked croplands' and the 'earthquake damage' sets. These sets are in supporting positions to the previously discussed 'bowl being created in the ground by subsidence following an earthquake'. These sets are suggesting that a 'backward flowing river', the 'rain river in the sky', and the 'in-flowing tide' to create 'new inland seas'.

There are new sets for more 'gold panning', and 'gold finding', and 'gold prospecting', and 'gold theft' for 2017 all across the sub sets for USAPop. Many of these are still showing up as tied to 'disasters' that will 'expose' the 'potential'. There are sets for 'panning pools' that will be both specific 'gold panning places', but also 'cooperative panning efforts'. These latter sets are continuation of the longer term sets discussed in previous ALTA reports about 'sub divisions' that will become 'gold panning centers'. Many of these sets are dominated by 'California', and 'Nevada' geographic references.

Other 'government actions' are forecast to be causing problems for things as diverse as 'sea lane management' and 'chicken feather processing'. These 'government actions' sets are collectively within a larger linguistic structure that is describing the 'consolidation of power' that will be 'sweeping through' the 'old system'. Note that the supporting sets for the 'old system' have many that are bringing up the idea of 'geriatric', and 'infirm', and 'lame', and 'shuddering'.

The 'chaos' language that grows over March, and April, then dampens down over May, is indicated to begin within a 'markets problem'. These sets are showing that the 'initial problem' within the 'electronic markets' in March will precipitate 'political dueling'. It is the 'dueling' that is showing up as being the 'chaos fuel' over the rest of these months, though we need to note that the originating problem will also be continuing as the 'markets' based in USAPop are forecast as going 'pustule', and 'showing signs of infection'. These sets are further focusing on the 'impacts' of the 'banksters tactics' that will be 'showing up within the population'. These sets are indicating that 'underhanded tactics' will be used within the 'political battles' over March that are forecast to be within a 'secrets revealed' burst over April. Yet again, these sets are presenting further that the USAPop will be entering a period of 'chaos'.

Many of the new sets within USAPop are bringing out language around the 'secrets revealed' meta data layer in place for so many years. These sets are suggesting that much of 2017 will become 'occupied' with and in 'secrets being released'. In these new sets the data would have 'officialdom' as being the 'source' of the 'releases', and not 'whistle blowers', but rather, the organization itself.

Many of the sets for the 'chaos' previously forecasts to be appearing from March through May are supported by the new sets for 'government breakdown'. Many of these sets include 'citizen actions' such as has been previously discussed in ALTA reports with such as the 'old age pensioners riot/mob action' in 'government offices'. Other sets include 'sit-in demonstrations' and 'occupations' of 'government offices' by 'geriatric patients', and 'families'.

Other 'government' and 'officialdom' sets are showing that, as forecast over a year past, the language will include 'pogrom', and 'purge'. These sets have new growth for the 'purge' sets that are cross linked over to the 'presstitute media' within GlobalPop. It would appear that the 'purge' language is to be 'very upsetting' to the 'legacy captive media'.

The primary supporting sets for USAPop are growing new supporting sub sets for both a 'battlefield' or 'warring' emotional 'frame of mind' within the population in general, as well as the 'ebullient enthusiasm' of the 'flush of winning'. This is from top level supporting sets that are showing that a 'long period of repression', once 'finally lifted' brings about a time of 'incredulity' in which 'belief in future potential' is 'thrown wide open'. These sets are suggesting that our previously forecast 'Americana revival' is going to be 'writ large' across the 'national consciousness' in ways 'never before witnessed'. These sets are cross linked internally to 'enthusiasm' within the 'younger generations' which is going to 'propel' an 'emotional renaissance' that will be leading to many new physical expressions over these next few years. These sets are not contradictory to the previous forecasts for a 'rough period' economically for these next 5/five years. The data has the 'five rough years' or 'years of struggle' as being 'undertaken (with) positive' emotional attitude over an increasingly larger segment of the population as modelspace is moved forward. Stated another way, the data shows a 'small wave' of 'economic enthusiasm' within the younger generations in USAPop as 'spreading deeper into the population', at the same time as it 'continues to grow' within those already 'affected'.

When modelspace is moved from March of 2017 through to March of 2018, the data has many many emotional memes working through the population. These include both the 'death of the old financial system', as well as the 'rise of 21st century capitalism'. These include the 'domination of space' meme as well as the 'break-out of new technologies', while opposing memes of 'loyalty to culture royals', and 'diminishing power base (of the ruling elites)'. These sets have the 'dwindling power of elite globalist empire' that will be 'fighting continuously' to 'regain financial control' over the 'population'. These 'fighting to regain control' sets are showing that the 'ruling elites' within the USAPop, including 'major celebrities (of the promoted arts)' are going to be 'cast out', and 'suffer humiliating responses' including 'abandonment', and 'boycotts', and 'trashing (socially)' as their 'slavery (to) global elites' becomes 'evident' to the 'woke peoples' within USAPop.

We have new sets within this period for the 'battlefield' to be shifting within the 'financial wars' as the 'speed' of 'currencies in crisis' goes into 'acceleration' over the period of 'political upheaval' previously forecast from March through to June. These 'political upheaval' sets are also supported by 'economic dirty tricks' that are forecast to be 'launched' by several of the 'corporations' against the 'population'. These 'economic dirty tricks' are showing as including 'slow downs' and 'deliberate disruptions' in 'financial services'. These 'tactics' are indicated to participate within the 'financial chaos' of these months and further, these sets are showing as 'initiating' a 'blow back' into the financial system that is forecast to 'favor' the triumvirate of 'bitcoin', silver, and gold'. The data sets have a 'dirty trick' being 'exposed' in a really 'appealing manner' by 'new voices' that is going to 'go viral'. It will be the 'reaction

to the viral video' by the 'originating corporation perpetrators' that shows as being the 'kick off' of the 'global investigation' and 'backlash' against many of these 'multinational corporations'.

The data sets are showing that the 'woke phenomena' is going to be 'spread by children' as they will be 'insisting upon (waking up) their parents' to the 'bad things the globalists' are doing. These sets are focusing on the 'blow-back' and 'backlash' period that is forecast to be visible in its rise by mid July 2017. These 'woke population' sets have supporting sets of 'too late to stop', and 'in the works', and 'abandoned' all referencing 'globalists' and their 'plans'. These sets have 'plans exposed' by 'evidence' that are suggesting that 'plans (to) roll out (public pedophilia)' will be 'exposed' as the 'losing faction' in the Deep State is 'revealed' by 'production lines' and 'long (in the works) artifacts (movies, books, music)' continue to 'emerge' over 2017. It is as though the data is describing a 'production line' at an 'industrial level' that had been 'paid for', and 'put into motion' years ago predicated upon 'certain outcomes', or 'inevitable victory' that 'did not occur'. Then, following the 'failure to win key battles', the 'production lines' continue to 'roll out' the 'evidence of plotting' even as the 'plotters' are in 'disarray' and 'retreat'. These sets are also supported by sub sets indicating that 'woke population' will be 'pointing to (the) evidence rolling off production lines' as 'proof of guilt'. These sets are suggesting that 'social (cultural) war' in USAPop will be 'erupting' over Summer 2017 with 'many brutal battles' and a 'quick' and 'decisive' resolution by the time of the last of the globalists 'economic attacks' in Fall.

This is where the 'chaos' language begins to 'wrap up' the USAPop 'political infrastructure' as the 'corporations' which had 'supported pedophilia', and 'sexualization of children' are indicated to 'clamor' for '(new) officialdom' to 'protect them' from the impacts of 'backlash' and 'attacks (by) victims'. These data sets are showing as 'bringing up crying families' as their 'employees plead for help (for their employing corporation)'. The real problem for everyone concerned is going to be the 'inexcusable nature' of their 'crimes'. Much 'confusion' within these sets as the data shows the whole of USAPop struggling to come to grips with themselves as 'victims' of 'evil mind control efforts' by 'corporations' on behalf of a 'global pedophilia network'.

 New data sets with 'california' as a central geographic reference are showing that the 'flooding' forecast to cause problems over March of 2017 will also include 'high tech firms'. There are data sets going to the idea that 'flooding' will 'breach' the 'protective sleeves' and cause 'global internet problems'. These sets are forecasting that 'flooding' will be 'filling up' the 'work areas' for 'large scale routing equipment' for some of the 'telephone companies' that will in turn cause 'wide spread internet failures'. The new sets have added support for 'flooding' being 'impacting' to the point of 'emergency operations' having to be 'activated'. Other sets have 'unprepared companies', many described as 'global head quarters' being 'evacuated' not because of 'flooding' at their buildings, but rather due to the 'loss of services' including 'electrical', 'potable water', 'sewage', and 'internet'. This is described as being an 'on-going problem' that will extend out into Spring. This is indicated to bring very large economic and 'dollar' impacts.

Other 'financial problems' from the 'flooding' in California are forecast to include 'banking assets collapse' as 'thousands' of 'properties' including 'houses', and 'commercial buildings', and 'production facilities', and 'growing lands' are hit by 'disaster'. These sets have a very large economic impacts with long duration values. If these sets are accurate, the forecast is that the 'environment changes', both 'physical', and 'financial' for 'California' will persist for decades. The 'financial impacts' are also showing as affecting 'national food supply' for years from the 'damage' that has already been sustained. The forecast within the new data is for at least 7/seven years of 'financial problems' that will be directly

related to the 'unfolding flooding situation' this year.

Many other 'adverse effects' from 'weather' are forecast to affect USAPop even as the social order reacts to its own internal political strife over Spring and Summer. These 'weather gone bad' sets have 'very very very late planting seasons', especially for 'corn/maize'. Note that these are for 'eastern', and 'eastern through central' USA, but we also have 'maize crop damage' in the 'south west', and even 'deep into Mexico'. Further, the 'very late planting start' is going to be only one of several problems from weather this year. These are forecast to include 'exceptional tornado "season"' that will be 'extra (outside of) seasonal'.

The USAPop supporting sets have the 'political chaos' of the 'globalists in retreat' being a 'fighting retreat' that is forecast to be 'strangely violent' around 'vaccines', yet 'polite' around 'gutting the AMA (American Medical Association)' and its buddy, the APA, (american psychiatric association)'. These two organizations are forecast as 'hitting political support walls' as they 'come under counter attack' from 'conservatives', as well as 'find their politician supporting base gone' at the 'state and local level'. These sets have the 'bloody fight' with the 'pharmaceutical companies' drawing in the AMA which induces a 'schism' within the organization's supporting base. This 'schism' brings out 'whistle-blowers', and 'evidence of malfeasance'. Both of these are showing as contributory to 'attacks on the AMA' and its 'hidden agenda'. There are other sets that are showing an odd 'alliance' between 'black america' and the 'trump administration' against the 'AMA' over an incident not yet able to be identified. These are longer term data sets. Some of these sets have the 'APA' and the 'AMA' both being 'spotlighted' as being 'lobbying organizations' with a 'long history' of 'discrimination' and 'self interest promotion at the expense of the paying public' being 'internet fodder' to the point of 'conventions of members' being 'moved or canceled' due to 'general public disgust' or 'threats of recriminations' against the 'venues'. These sets are deeply, deeply filled with interlocking conspiracies that are indicated to take 'decades' to 'unravel' and to be the 'grist' for 'countless articles and books and videos and movies'. Many of these are indicated to initially be of the 'confessional' format from 'shamed former employees'.

Yet more sets are continuing to accrue to the 'housing market' within the USAPop that include 'banks dumping', and 'inter-bank credit problems'. These 'bank credit problems' are going to be the proximate cause for 'housing' being 'dumped on the market', and 'discounted' as 'credit freeze' sweeps throughout the 'regional banks'.

There are large increases in the data sets for 'housing market problems' sets. These increases are now bringing in more immediacy data, than shorter term data. And more shorter term data than longer term. The ratios are suggesting that we are closer to the 'manifestation' of the 'housing price crash' and the causal 'credit freeze (between banks)' period. These sets appear in larger numbers as modelspace is moved through July and into August. There are initial areas of growth in mid May, but the main fill pattern becomes established later, in mid Summer.

As a sub set of the 'housing problems' for the 'banks', there are a number of new sets supporting the long forecast 'chinese capital control police' coming for 'deeds'. This is an interesting sub set accretion pattern now as the data has 'bank failures' being the 'prompt' for the 'claims' of ownership. This apparently will unfold as a situation where 'chinese investors' in 'American regional banks' which 'fail' will come to 'make claims' on the 'assets' of the 'banks'.

A significant number of sets are cross linking the 'investors claims' on 'assets' and the 'restructuring' of

the 'real estate market'. This 'restructure' language focuses on the 'banks' and their 'inter-bank credit problems'. The 'credit markets' for 'mortgages' are indicated to be 'under pressure' as 'rates rise' language increases. The emotional impact of the 'rising rates' language shows up more in April, and is indicated to be 'impacting purchasing decisions' at all levels within the USAPop economy. There are a number of sets providing support for our forecast of 'regional banks in trouble start dumping foreclosures' from previous ALTA reports.

In spite of the many sets that are forecasting really serious financial woes for USAPop, the 'economy' sets are actually turning slightly positive within the emotional sums for 'impact', 'spread', and 'duration' of the 'emotive tone'. Within modelspace these "people's economy" sets within USAPop, there are many sets that are replicating the 'renaissance' sets from GlobalPop in both emotional sum tones, and directions. Further we have aspect/attribute detail sets that are suggesting that a 'dichotomy' is now developing that will be 'visible' within media starting in about mid Summer as the 'renaissance' and 'new technologies' sets begin to converge. Modelspace is clearly showing the 'death of the US dollar empire', and the 'rise of America'. These sets are also further reinforcing the sets for a 'return to Americana'. Other sets in supporting positions have 'yankee', and 'notre americano' (with a drawl) being taken as 'personal labels' or 'identifiers' by the 'new generations' within the 'Americana' meme. Interesting that the latter descriptor of 'norte americano' is also showing for CanadaPop and MexicoPop later in 2018 as the 'renaissance' and 'building economic activities' are showing as 'exciting young people' across the continent. This last is in spite of the many sets for 'growing problems' that will be affecting the whole of the population on the continent.

Some of the forecast 'problems' for North America over 2017 through to 2020 are going to be quite severe. Many of the new sets are either directly holding or are cross linked over to 'radiation' as terminating sets. Other sets include the 'dying dinosaurs' of the 'mega global corporations' which are showing up within the new data as being 'broken', and 'busted up'. Other sets have 'discord' and 'unrest' over 'foreign claims' on USAPop 'assets' as the 'banking system' comes 'unglued'. Yet more sets have 'currencies crisis' developing to a 'threshold' over late Summer that will come 'perilously close' (in some people's minds, including msm presstitutes) to 'war'. Note that there is no data showing that there are actual 'war activities', rather the data sets have the 'dying politician cabal' as the 'source', and 'promotion' of the 'war' meme. These sets are pointing to a very 'tense' period as the 'dying cabal' becomes 'more desperate' over the months of July through October, with the data sets suggesting that the 'cabal tries to take advantage' during the 'seismic damage period'.

The data sets have the 'USA college system' begin to 'implode'. Many of these sets have the 'professors' being 'under pressures' by the 'administrations staff' at almost all the 'colleges and universities' due to the 'crashing student class base'. These sets are arguing that 'students' are going to be in 'short supply' over 2017 as many major memes within the society conjunct this year. These sets include 'increasing difficulties to obtain student loans', 'increasing detachment from student ideals/goals', 'increasing costs', and other sets going to the 'economic impact' of being a 'student' as 'inflation rises' in USAPop. These sets and others around 'derivatives', and 'markets' are combining to forecast 'significant drops' in 'enrollment requests' to the point that 'colleges' begin to 'fail', and to 'plea for government bail outs'. It is as this point that the real 'numbers' involved in the 'student loan banking industry' will look very much like the 'sub prime mortgage loans' just as that crash was about to unfold. These new data sets have the 'universities', including most of the 'state universities', being in major 'funding crisis mode' by

September of this year. These sets are forecasting the 'break out' of 'fights', including actual 'fist fights' between 'professors (teaching staff)', and 'administration staff'. These sets and others are forecasting a '5/five year period' of 'reorganization of education' that will dramatically alter the 'schooling experience' here in USAPop. Many many 'bankruptcies' are forecast to lead to 'sales of university properties' all across the continent starting later in 2018, and continuing for the next 7/seven years.

The data sets have the 'break down of the universities' as 'releasing professional speakers' to 'speak their minds'. This is forecast as being 'not a good thing' for 'hidden secrets', and 'university structures'. These sets have 'professors' being 'whistle-blowers' that will be a large contributing voices in the 'developing chaos' sweeping across the USAPop financial system.

Markets

The 'dollar woes' are showing as growing over the 'chaotic crisis period' that is indicated to form up 'storm-like' over March, and then 'rain down' the 'crises' over April and May. These sets are indicating that the set up for 'hyperinflation' forecast for Summer (northern hemisphere) and later in this year emerges from the 'derivatives burn' in the background of the 'currencies crisis'.

Noting that the 'dollar woes' are going to escalate over 2017, the data is also showing lots of 'incredulity' as the 'dollar rises' relative to the 'other currencies' which are also all showing as being 'in crisis'. The 'incredulity' sets are also supporting both the 'bitcoin price' and 'precious metals prices' over 2017. These sets for 'incredulity' appear first during the 'escalating political' and 'currencies crisis' of March, and grow steadily throughout April, and then burst out in May.

The many sets for 'currencies crisis' are seemingly coalescing from mid June onward. There are new growth spurts for late July through October followed by a slight respite, then a new burst of sets in late November through into 2018. It is in the later parts of the 'currencies crisis' of this year that we have 'foreign dollars' (Australia & Canada) beginning to show an increase against the USA dollar.

\The silver reaction to the 'currencies crisis' shows up as the manipulation is described as 'slips' from their grasp, they get another 'grip' on it, but their base is now much higher, and 'slippery' which requires lots more energy to maintain such that they keep losing control thereafter in little bursts.

The continued growth of the 'currencies crisis' set has the price of Bitcoin setting 'new all time highs' frequently throughout 2017. The data sets have the 'reductions' in price as part of bitcoin's 'consolidation pattern' being 'reduced' as we go forward. This may well mean that our expected $500 USD drop will be far less. The data has the 'pattern' of 'bitcoin prices' being 'less deep' and 'less wide' on each new iteration through at least to September of this year. Prices will still be escalating rapidly in all 'paper currencies'.

Other aspect sets that are accruing in supporting positions for the bitcoin set include descriptors for 'boom', and 'hiring', and 'build-out (infrastructure)', and 'escalating involvement'. These sets are all active over this and next year. These sets have 'bitcoin' becoming something of an 'industry' in the sense of the number of people becoming involved in some part of the 'use structures'.

Pending construction boom? The data sets have the 'first realistic appraisal' of the 'coming ice age'

leading to discussions of a 'massive build out' of many areas on the planet such that 'northern hemisphere humanity' can 'relocate'. Many of the supporting sets have 'china' being at the 'center' of the 'climate change discussions' that will be 'ice age focused'. Over half of the new sets are focusing on 'food growing technology' and ChinaPop.

Many of the PopWar sets are also extensively tied to 'gold' via cross links. These cross links bring up supporting sets that are forecasting that a 'swelling' of the 'demand' and 'usage' of 'gold' and 'silver' as money will be occurring across Europe due to the PopWars, and the disruptions of the larger European economy. The data sets have the 'rebellion' by the EUPop over 'paying invaders' is indicated to have near 'instant' ramifications for the 'ruling elite' in Europe as the 'population' decides to go on 'tax holidays'. These sets are indicated to have a very large impact on the demand, and thus the 'prices' of 'silver' and 'gold' even within the controlled 'markets' for such within the European financial system. These sets are forecasting that the 'silver' and 'gold' demand will be a 'leading indicator' of a very large shift at the 'generational level'. These sets are forecasting that the 'younger generations' within the 'EURO zone' are going to 'see corruption', and 'break down' of 'social contract'. Thus the data is forecasting that the 'younger generations' are going to 'seek safety' within 'physical gold and silver'. These sets are also replicated within the Bitcoin sets. Here though there are much higher emotional support for 'speculation', and 'desire for gain'. While in the 'gold and silver' sets the data has the 'younger generations' are to be 'seeking safety over (long) time'.

The data has the 'interests rates rise' being a singular point of fixation for 'global markets' as the 'trade destruction continues'. However, the geographic point of fixation still shows as Italy as the Euro is indicated to be 'pressured'. These sets are describing 'pressured' with language about 'new currencies', and 'resumption of old currencies'. There are sets for 'breaking off (from the) Euro', and 'refunding banks' with 'new currencies'. A very interesting item within these sets has to do with the actual 'printing of notes'. These sets are suggesting that a counter-wave of sorts to the 'cashless society' meme shows up as 'countries print currencies' as they 'abandon the Euro' they are 'forced' by the 'need to establish confidence' to 'avoid digital' and 'flood the system' with 'cash'.

Other sub sets of the 'interest rate rise' have new descriptors including 'commercial real estate' and 'valuations', and 'renege', and 'default'. The new aspect sets supporting these sets are all tied via cross links over to the set for 'deflation'. The 'deflation' set is dominated by 'commercial real estate', but also has many supporting sets for 'residential real estate ' where it is also defined as a 'money cache', and not a 'home'. These sets have intersections that are forecasting a curious joining of a 'down trend' in 'commercial real estate' across the 'western nations' to 'personal wealth protection (in) real estate'. The new data is suggesting that one is going to 'contaminate' the other such that 'valuations reductions' are going to 'spread' as though a 'virulent disease'.

New supporting sets are showing 'contamination' between 'foreign owned real estate', and the 'commercial real estate' market holdings of a number of firms. The data has the 'break-down' of the 'markets' reaching a point where there are 'pockets' of 'attempted panic selling' of 'plush real estate holdings'. Note that these are showing as 'non occupied' and are 'money holders'. The data sets have the 'attempted panic selling' reaching a 'frenzy' in some countries as their 'populations' try 'desperately' to 'sell properties' in other countries.

Data has a number of 'insurance claims' showing up from 'exploding pipelines'. The pipelines

themselves are not the real focus of the 'exploding' sets, rather it is the 'grounding strapping', and 'above ground stands'. The idea coming out of the data is that some previously unknown or rare electrical sources in the ground are going to 'feedback' into the 'pipeline infrastructure' to cause the 'exploding pipeline sections'. These sets may be referring to the 'increase in lightning strikes' across large areas of the northern hemisphere previously discussed in this report.

The data sets have 'markets' moving into 'currencies problems' that rises to dominance in the language from the last part of April onward. These sets have April and May being the 'ramp up' in 'currencies crisis' language that then dominates 'markets problems' over the rest of the year.

The data for 'bitcoin' is closely tied in its growth patterns to the 'currencies problems' that are described as 'globally affecting populations'. These sets have 'bitcoin' being 'kicked upward in currency prices' as the 'sovereign currencies' are showing as 'falling' against 'each other', and 'against gold and silver'. The most dramatic 'raise' in 'price' for 'bitcoin' shows as developing over March and progressing through the 'chaos' of the following months. There are sets for a 'slow down (in) rate of growth' over Summer, up to the point of 'increasing earthquakes'. These 'earthquake' sets are indicated to be participants in 'social chaos' in which 'bitcoin' is described as 'coming to the rescue' as 'other systems' will have 'broken down'.

As these sets are growing, the data has the 'hyperinflation' being 'noticeable within the real economy'. These sets are showing that the 'economic impacts' of the 'currencies crisis' will be 'pressuring both corporations and banks' into 'moving into bitcoin'. Further sets have the 'governments' also becoming 'buyers'. These sets are all cross linked over to the 'bonds markets' and the 'substantial increases into interest rates'. These sets have the 'US Federal Reserve Bank' becoming 'disenfranchised' by the 'USAPop government'. Note that these growth patterns have a clear separation between the 'government', and 'officialdom'. The 'officialdom' sets are showing as 'wailing', 'crying', 'freaking out', 'bad behavior in public', and many other sets indicating a very 'negative emotional reaction'.

It is at this point that we have linguistic temporal markers for the pending 'release of Antarctica information' that will be ahead of the 'disclosure of frozen technologies' by mere months. These linguistic temporal markers are suggesting that the 'central bankers' will be both 'bragging' and 'begging'. They will be both 'blowing smoke (about their accomplishments)', and 'shouting about (the) danger (they face)'. The issue indicated within the Markets entity is that the 'people' will not be 'buying the argument' that 'central bank death will equal society death'. Many of these sets have the 'central bankers' becoming 'fools' and 'charlatans' in the 'eyes of the public'. There are many sets going to the idea that 'government' will not be supporting the '(former and dying) officialdom' in their 'hysterical screaming' of 'existential crisis'.

The 'currencies crisis' sets are where the 'economy', and 'finance' are showing as intersecting. These sets have the 'political structures' as being at 'war' in USAPop as well as most of the 'western republics' over 2017 through to 2019. These 'political structures having internal war' are showing as 'impacting economic health' globally by 'currencies crisis focus' over 2017, but less so over 2018, with a notable 'increase' in 'global economic activities' from mid 2018 onward. These sets have 'economic activities' being defined as actual 'population directed' focus for 'economic thought' as opposed to 'financial system directed thought'. The difference is forecast within the Markets entity area as beginning to be 'perceptible' over late 2017 as a very 'rare' level of 'real information' is shown as the 'spark' for 'pent-up

personal activities' in USAPop that are forecast as being 'noticeable' in 'economic numbers' by early 2018.

The 'economic rise' is not being described as a 'boom'. It is being described within the data sets as the 'unleashing' of 'driven down energies'. Further there are sets headed by labels for 'ideas' that will be 'cutting chains', 'breaking constraints', and other language for 'unleashing', and 'removing obstacles' for a 'repressed energy' within the actual 'economy'. These sets grow as modelspace is moved through 2017 and into 2018 with new supporting sets for 'technology disclosure', and 'technology infusion', and other sets to the idea of a 'global break-out' of 'economically enhancing technologies'.

The 'economic rise' language sets are clearly focused on a 'people effort', and 'new technologies', and 'small business'. These and many more descriptors are painting a picture of 'enthusiasm released', and 'powered (by release)', and 'new blood/new vigor', and many other sets that are specifically pointing to 'teenagers', and 'early twenties' as being the 'sharp point' of this new economic meme moving through society.

These 'new economy' sets are also showing that 'mega corporations' are going to be 'breaking down', and 'breaking up', as 'economy of scale' shifts down, and not up. The data would have the 'mega giants' being 'out worked' by 'small companies' to the level that 'corporations' go to 'government' to 'complain'. The data for the USAPop sub sets have 'no sympathy' being provided by 'government'. Further the forecasts are for a rather dramatic 'meeting' between 'mega corporations' and 'government' to be 'near to blows' as the 'corporation cabal' fights for their 'exclusive privileges'

It must be noted that the data sets have a very active emotional impact sum rise as modelspace is moved across 2017. This active emotional impact sum rise is affecting many areas of the Markets entity. As had been seen and discussed in previous ALTA reports, the Markets entity continues grow sets for 'rising dollar' even as 'bitcoin, gold, and silver' are also rising. This confluence continues for at least 2017, and into the first quarter of 2018. The 'dollar rise' sets are now showing that the 'unleashing of USAPop low level economic activities' will be 'increasing speed of circulating currency' in USAPop and that this will foster an 'emotional draw' or 'attraction' to the USA dollar for the rest of this year over other currencies.

The data has the 'notable exception' to the 'emotional attraction' of the USA dollar being 'Greek drachma', and 'Italian lira'. These sets would seem to be arguing that 'rival currencies' will be 'attracting global capital' over late 2017 and into 2018 as they will be the 'new kids on the block', and will have 'shining and bright futures' at least at the 'attracting capital level'.

The data has the 'bonds crisis', which seems to be more a crisis for USA Federal Reserve than others, escalating over March through May along with the rest of the 'fiscal chaos'. These 'chaos' sets are pointing to 'derivatives consumption (burning)', in the background of the 'currencies crisis' that will be itself 'escalating' across the rest of 2017 from early March onward. The 'derivatives melt down' sets are pointing toward the 'social chaos' within Europe as being the 'prompt' for 'financial freak out' by 'corporations' and 'banks'. These sets are cross linked to the 'bank robber attempt' sets as a temporal marker of note.

There are sets within the Markets entity that MAY, just may, be signaling a 'new triumvirate' that will be composed of 'China', 'Japan', and 'USA' governments. These small and slightly growing sets are indicating that a 'deal' will be 'unveiled' later in 2017 (if these sets are accurate), in which 'China, Japan,

and USA' will be 'inviting participation in new technologies' for 'funding' of the 'joint ventures'.

Other sets speaking to 'new alliances' are bringing in new aspect/attribute sets (our details layer) for 'joint purchases' of 'vast areas of farmland', and 'foreign groups' that will be 'shopping (buying) old industrial sites'. There are specific sets going to the idea that 'multinational corporations' will be 'seeking ways' to convert their 'paper currencies assets' into 'real stuff'. These sets have specific geographic focus on North America, including USA, and Mexico more than Canada, but there are some geographic sets for the 'west coast', and 'eastern' Canada. These sets are presenting the idea that the 'Just In Time supply system' concept that 'facilitates' and 'lubricates' the concept of 'globalization' is 'crumbling' to the point that 'new investments' will be made in 'large amounts' into building out 'local supply chains' and thus also, 'local manufacturing'. These sets are suggesting that 'tax credits', and 'real profits' will be 'viewed' as 'tied' to 'local supply chains'. These sets are also pointing to 'political pressure' on USAPop 'political class' to 'knuckle under' and 'spend on infrastructure'. This 'infrastructure' set is specifically focused on 'delivery supporting systems' including 'roadways', 'truck access', and 'electrical power (cheap)'. These sets are arguing for an interpretation of a USA as 'center' for 'de-globalization' in the sense of 'reconstruction of local supply chains' and 'machine' and 'manufacturing shops'. Many of these sets are cross linked over to SpaceGoatFarts, GlobalPop, and USAPop entities where the terminating sets include '3d printing', and 'new technologies' including lots of references for 'new materials'. Specific to the 'new materials' sets we find new supporting set for 'growing [unknown]'. While not particularly illustrative a descriptor set, its cross links and supporting sets provide the idea of 'growing materials from vats of oil'. And 'continuous process growing of ceramic items/objects'. This last is suggesting that we are about to experience something of a 'ceramics industrial renaissance' that will bring out 'extreme precision', and 'self lubricating', and 'wear resistant' language around 'ceramic materials productions'.

As modelspace is moved forward in 2017, and during the chaos period of March through May, the data accrues for 'bitcoin' to become more 'costly than gold'. As this transition takes place, the data sets have it being a temporal marker for many other sets including 'silver', and 'precious technologies (from Antarctica)'. These sets have a strange occurrence developing as 'nations', and 'central banks' begin to 'buy bitcoin'. These sets are providing the 'propellant' for the 'rush' through 1448 in US dollars on its way to $2300. These new data sets have the 'chaos' period of these next few months as being 'pivotal' for both 'bitcoin' and 'silver'. These sets are arguing for the 'secret hyperinflation' to be 'creeping out'. As a temporal marker, these sets are going to the idea that 'silver' will be the 'shining light' as the move into hyperinflation shows in the 'public consciousness'. These sets have 'silver' rising faster in 'US dollars' than either 'gold' or 'bitcoin'. This is merely speaking to the 'rate of increase', and not its price during that rise.

As the 'gold falls behind bitcoin' forecast manifests, it is also a temporal marker for 'new ideas (from) Antarctica'. The temporal marker of the 'cross over' has been within our data sets for over a year, and has had many 'secrets revealed' sets attached to its growth. These 'secrets revealed' sets are forecasting that 'media' will be focusing on the 'big names' who will be ' absent', and 'running' as these next months unfold. These sets are specifically referencing the 'impact' of the 'pedophile network roll-up' on Markets. It appears as though the 'timing' of 'revealing' will be 'exquisite' over these 3/three months of 'chaos'. These sets have deep ties to 'Antarctica' and 'The Discovery', although there is a separation of time between the temporal marker and the 'disclosure' of the 'technologies'.

As modelspace is moved through 2017 and into early 2018, the data sets have the 'new technologies (hyper technologies)' being 'moved into production' in a number of countries. These sets are also presenting forecasts for 'emerging (new?) nations', that will have 'clean currencies', and 'improved outlooks'. Some of these sets are very extensively cross linked over to 'Bitcoin', and 'gold'. There are sets for 'small nations', that will 'adopt bitcoin', and 'gold', as 'circulating money', and in so doing, create 'jump start conditions' for their 'economies', and more importantly, for their 'youngest generations' of 'workers'. These sets have very large increases in emotional sums for 'optimism', and 'future outlook', both of which are going to contribute to 'local economic booms'. These sets are suggesting that many news articles will be coming to the effect of 'lost generation struggling out of holes' is 'succeeding' due to 'hyper technologies'.

There are supporting sets for 'new nations', and 'new national currencies' that are including 'crypto currencies'. These sets accrue as modelspace is moved into June. There is a small flurry of growth in 'bitcoin as national money' sets, then a lull through for about a month, then another, larger amount of 'bitcoin', and 'crypto currencies' language that joins these sets from mid July through into November. The detail layers would seem to be suggesting that many 'smaller nations' are 'issuing their own national currencies' which are 'tied to bitcoin', while other 'national (and regional and 'new') states' will be 'using bitcoin' directly as a 'reserve'.

Other sets for 'bitcoin' are showing that our previously discussed 'bitcoin price patterns' are being supported by the pending 'banking crisis'. The 'bitcoin prices' and the discussed pattern will be 'pressured upward' by the 'debt defaults' that will be occurring in the 'inter-bank lending system'. There are sets that are suggesting that a 'lock up' among 'credit' and 'loan guarantees' that will 'spread to the banks'. These sets are in supporting positions within the 'regional bank crisis' sets that will be affecting GlobalPop over this year with a 'kick off' in March through May, depending on location.

The 'war on cash' language is dropping off in its emotional sums, and the data growth patterns are favoring an interpretation of a 'fading idea' as the 'backlash into cash' starts to appear in 'small countries', and across 'regions' of the globe. The data has the 'backlash' putting more 'emotional value' into 'cash', 'precious metals', and 'bitcoin', being a 'reaction to avoid' within the 'populations'. The data has the 'central banksters' discussing this 'backlash', and 'how to control (the) increasing emotional attachment to all forms of physical money'. The data has the 'central banksters' being in a general 'freak out mode' that will be 'leaking out' its 'concerns' via 'whistle-blowers' and 'leaks'. These 'leaks of criminal words' are forecast to build from mid March through well into late September. The data even has a 'minor furor' as a 'security is clamped down' within the 'Federal Reserve system', and ironically, produces yet more 'leaks of sensitive information' from 'new sources' who will state that they were 'injured' by the 'security clamp down'.

While it may be more appropriate to put the 'pedophile scandal' in either GlobalPop or USAPop, the data has more new supporting sets in this run directly held by Markets entity, so the discussion is placed here. These new sets are suggesting that 'financial impacts' of the '#pizzagate (pedophile network global) scandal' will become 'visible' in the 'financial chaos' that is forecast to 'erupt' in March. The 'financial chaos' sets are providing hints that the 'arrests' of 'major media figures' for 'participation in pedophile crimes' is going to be 'forcing' the 'legacy msm media' to 'confront' their 'demons publicly'. The data sets are suggesting that several of the 'media organizations' will 'not do well' in this process, which will result in 'big losses' at the 'stock markets' for the 'parent organizations'. These sets have

'significant impact' on the 'media organization' as being '1/one out of 3/three' of the 'famous faces' to be 'suddenly gone' from 'public view'. Much of this 'media action', or 'media involvement in the story' shows up as the northern hemisphere moves into Summer.

SpaceGoatFarts

Part of the 'new hyper technology' meme set, there are new data aspects for a 'sound (vibration) crumbling' that will become a 'machine' that will be able to be used to convert nearly anything into 'rubble', or 'dust', or 'atoms'. This 'sound crumbling' aspect is part of the temporal marker chain that leads to 'in ground harvesting of minerals by vibrations'.

The data continues to gain sets for 'earthquake swarms' and 'tension' in the earth's mantle that are in turn connected to the 'emergence of UFO/UAP' at levels not before witnessed. The data shows that 'UFO/UAP' activity increases over 2017 such that it becomes 'daily encounters' for so many humans that 'videos' are 'discouraged' just because they are 'filling up storage' and 'getting so few views'. Why go watch it online when it is happening outside your window?

Modelspace continues to gain new sets for 'space activities' at a larger level than any other descriptors within both SpaceGoatFarts, and GlobalPop entities. These 'space activities' sets include 'UFO/UAP', but are actually dominated by what we earthers would describe as the 'secret space program', or Break-awayPop. These sets have 'new sightings' of 'space craft' also including 'human production vehicles'. These 'sightings' are forecasts for several areas of the planet, and are suggested to include large numbers of people in the 'viewing', but are perhaps more interesting in that they include sets that are cross linked over to 'Antarctica The Discovery'. These sets are suggesting that the Antarctica 'disclosure' meme is to be emotionally pressured by 'repeated sightings', and 'media speculation' about 'UFO (UAP)' not as 'extra-terrestrial', but rather as 'secret space program'. These new sets have 'press conferences' being 'disrupted' and 'global distractions' being created as 'questions' about 'recent mass sightings' of what will be described as 'earth human manufactured space ships' will be presented.

Other 'space' focused language provides new supporting sets for the 'space alien cruise ship float-by'. These new sets are still dominated by longer term values, but now have rising amounts of shorter term sets. These new sets continue to describe a 'global sighting' of something that is 'clearly not-human' as it 'floats in the sky' without even 'disturbing clouds'.

New sets are also showing up for 'space activities' that are of an 'unknown' type. These do not appear to be 'vehicles', but are described more as a 'something not quite distinct', nor 'easily mentally grasped'. Some of these supporting sets may be hinting of 'direct sense organ participation' in whatever are the 'unknown space activities'. These are more longer term values than other types, suggesting a mid 2018 manifestation.

Yet more Antarctica sets are now including language for the 'wrestling', both 'mental', and 'emotional', within the 'groups who know (about The Discovery)' over some of the 'technology' that has been discovered. The idea in these sets is that 'those who know' are in a situation that is 'frustrating' to them due to some form of 'conceptual block'. It is as though they 'think' that they know what they are 'examining', but at the same time, the 'technology' is 'refusing to yield' to their 'understanding'. What is interesting about these sets beyond the discussion of the 'conundrum', and 'perplexity', and 'frustration', is the 'technology or device' that is the subject of these sets has descriptors including 'solar cell', and

'flux bi-partitioned', and other language about a 'giant induction device'. There are some small number of sets that indicate that this 'device' is still 'operating', and likely has been for thousands, if not tens of thousands of years. The data sets are indicating that the 'crew' involved is getting some 'physical' and 'radiation burns' as a result of their 'slightly inaccurate paradigm'. The data forecasts that the 'break-through' in the 'mental grasp' will be in mid 2017.

Yet more 'Antarctica' to 'Mars' ties within the new data sets. This is true of each subject independent of the other, though there are more originating sets within the Antarctica groups. A significant minority of the terminating sets within the 'Mars' descriptor has 'small house', and 'electric light', and 'covered garden', and other language that is quite bizarrely 'pastoral'. There are sets for 'Mars veldt' and 'Mars radishes', and 'Mars early seasons', and 'Mars light rains', and 'Mars (walking) trails'. Many of these terminating sets are also themselves originating cross link sets back to Antarctica. The thick ropy mass of cross links itself is extraordinary in its depth of sets cross connected. These sets are all together within the larger 'secrets revealed' meta data layer that is so active over these last few months and seems poised to grow over the next few.

There are new sets for a 'renegade country', being led by a 'renegade corporation' that will 'defy' the 'globalist ruling elite' and begin the 'build out' of 'Tesla technology' for 'in-ground electrical distribution'. The data shows huge mountains of 'abuse' being heaped on the people of this country. The geographic references are, at this moment, dominated by Paraguay/Uruguay references, but these sets do not have enough data details to state that this will be the site, or point of origination of the 'scheme'. There are many sets suggesting that the 'economic elites' begin 'freaking out' in 'public media space' followed by 'continuing attempts' to 'defame the project', its 'participants', and 'goals'. These sets are further filled with 'assassination attempts', and 'bombings', and many other, more minor examples of 'bad behavior' over this form of 'free energy'. These sets are also extensively cross connected to ChinaPop and the Markets entity where the terminating sets include 'markets upsets', and 'markets overturned', but also 'shares markets boom', and 'magnificent expansion'.

New sets for Antarctica are bringing in descriptors for such things, mostly not explainable, as 'portable cold (hand held)', and 'portable light, adjustable, cold', and 'portable heater, cloth'. In some of these sets we get a hint from word arrangements that such things as 'portable heater' are actually composed of 'cloth'. Other sets have the descriptors providing a list that appears very much as though an inventory is being created.

The data sets have other 'secrets revealed' sets that are forecast as becoming 'active' over 2017, very likely as a result of the 'Antarctica' secrets revealed, and the inevitable cross connection to 'space aliens'. These other sets have descriptors for 'other dimensional', and 'cross universe intelligence' {ed note: unknown and unexplained fill this set repeatedly}. The 'cross universe intelligence' sets are describing some discussion to come about the idea of an 'invasion' by 'micro-life' that is 'flowing into our solar system'. Further the data sets have the idea of the 'micro-life' being 'thought predators', and other forms of 'anti-human micro-beings'. These sets read like a scientologists' worse nightmare. These sets are describing the discussion, and not any form of event or occurrence. Additional hints within supporting sets connect this 'micro-life invasion hypothesis' to the Antarctica discovery. This may well be a prescient hint of some ideas that will come out of 'officialdom' about 'Antarctica' over these next months.

The data sets for the 'Antarctica' sets have new supporting sets for 'genetics' and 'epigenetic activities' that are going to come out in 2017. Much of the data for the 'new genetics library', and 'epigenetic switches' is within the longer term value types, and is showing as modelspace is progressed into early 2018. The 'switches' sets are found in a number of 'Antarctica' sets beyond the 'genetics' group, and can be found as a prominent supporting set within 'anti-gravity', and 'no-time (instantaneous?) communications'. These and other descriptors are suggesting that a common 'quantum switch mechanism' will be found and be useful within many disciplines.

Yet more data around 'Antarctica' is coming in to modelspace across all of 2017 going to the idea of 'time judgment'. These sets have the 'time judgment' being what we would call a 're-do' of humanity's understanding of its 'own history', and 'time on earth'. These sets have humanity being able to 'put a ruler' to the 'time of its history' but only after 'decades of study'.

Modelspace is filling up a new set that we are going to label as the 'day the rockets died'. This set is all about 'new propulsion', and 'lifting technologies', and 'anti-gravity', and other sets with similar descriptors for that 'glorious day', when 'humans shut off the rockets'. These sets have longer term data, however the really exciting part is that there is shorter term data in the initial sets at a ratio nearly 40% by volume. This is suggesting that this set will begin manifestation this year.

Conclusion: Inertia snaps...

The general state of the population within USA that has brought on all the recent changes within the body politic is due to the deterioration of the economy over the last forty years of globalization. These last four decades have had the USAPop falling behind the rest of the global population in skill sets, and opportunities. That we fell behind is not due to the character of USAPop so much as it is due to the lack of character of the ruling political elites.

The political elites have created a system that robs USAPop of its resources in order to support the 'Deep State' and its 'addiction' to 'space alien technologies'. The robbery of USAPop has gradually escalated until it reached the point of taking more than 70% of the growth within our economic activity. This very large and damaging parasite grew so big as to force the host into radical change as it realized that was the only alternative to death.

It may be helpful to think of the degrading infrastructure within USA, not as the result of bankers run amok, nor short sighted aversion to maintenance, but rather to the lack of capital due to robbery. The banksters were merely necessary stooges to support the robbery. The loss of the trillions of dollars from all of the various secret government programs has taken its toll on the population. Further exasperating the situation are the globalization initiative which shifted production jobs away from USA, as well as the 'brain drain' of the best of the engineers and thinkers being recruited by underground (Deep State) operations. These hidden 'special access programs' do not return value to the economy. And we need to note that since the 1970s, the Deep State and its underground laboratories have not been contributing to new technologies as they had across the two decades previous. It is as though they allowed just enough of the digital technology through our social order to provide the technical manufacturing base to support their next phase of the reverse engineering effort. And no more since.

The problem, from the point of view of a 'secrecy state', is that there is no end strategy. The idea of taking ever more secret over each and every year is never considered when one starts down this path. The decision is just made in the moment without thinking about the giant mass of secrets that will build up in even a relatively short 70/seventy years. Another missed component is that the world changes, in far less than seven decades the whole of the planetary ethos changes as generations come and pass.

Thus the secrecy state becomes isolated almost instantly merely trying to maintain its first, core, secrets. Quickly it becomes a creature captured by its own point of view. Within the secrecy state, everyone operates with the assumption that 'this is normal', or at least, 'this is the way things are'. The nature of the secrecy becomes ingrained in the culture until it is the primary focus of much of the operation of the culture itself.

Then, one day, universe has things change. Well, the change had already continuously been manifesting, it's just that one day, some people lift up their heads from their captured view, and then, recognizing that things have changed, they allow their minds to accommodate to their new perception, and for them, things change as well.

That is the way it is here, on the surface of the planet as we too have been constrained by the culture of the secrecy state for these 70/seventy years. A whole generation has been born, raised, and lived under the rigid point of view of the secrecy state all the while being mostly ignorant of its existence. The tentacles of control of the secrecy state, and the constant drain of providing its lifeblood have held down the development of the above ground civilization to the point that the ruling elites, in league with the secrecy state, became infected with its vision, and as a consequence, imagined themselves all powerful....and so it goes, only at the height of the zenith does the direction of the motion change.

Once the mind becomes aware, inertia snaps....and creative revolution manifests.

About Predictive Linguistics and our methods

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM (immediacy data) primarily, and then within ST (shorter term) data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as

millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes **are**: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities **are**: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon **is**: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

> composed of: *emotional qualifiers* which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders **are**: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop
The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)
All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets
The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra
The Terra entity is the master set for all structures that relate to the planet, and the physical environment of planet earth. This master set frequently and increasingly has

extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Meta Data Layer – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.
