Editorial notes are within {} curly braces.

Data set distilled from 36.92 million reads. Our expectations are to achieve 70+ million reads within our bandwidth limitations. We expect a 6 part report series from this data set. Depending on the processing flow there may be a 7th part to the series.

Meta Data - August 26/28- A big 'whump' or are we wrong yet again?

Given the movement of the modelspace as depicted in the charts of this series, we suspect that yet one more, largish, emotional tension release "event/episode" will occur, or develop over the course of August 26th through to August 28th. Further, the emotive tension summations suggest that the events of this next "release bubble" will extend through to the bottom of this current release period through September 6th, 2006. As a reminder, the previous lexical clues point to both 'violence' from planetary convulsions, as well as 'officialdom' screwing things up from there. The descriptor set also points to 'violence' at the human/tribe/nation level, again with impacts which extend out to September 6th in their initial flush. Also we need to note that the planetary 'violence' is geographically focused almost exclusively on North America with a sub set that effectively points to the 'west central' part of the continental USofA. In support of this, almost all of the cross links from the Terra entity for this 'violence' go over to the Populace/USofA entity. All of this area of termination for cross links within the Populace/USofA entity are dominated by 'duality' as well as the 'restricted movement' meta data layers. So our interpretation is for a 'big whump' sort of event which coincidently has a juxtaposition (emotionally) with 'national events' which combine to provide the populace of the USofA with yet another Katrina/Rita sized emotional time {ed note: about 11 days ending very early, 2:24 am on September 6, UTC}. This event/episode, and its fading/termination will end in conjunction with the current release period on 9.6.2006, but we note that the 'conflict' meta data layer, specifically affecting the last, yet-to-be-dominated entity, the Populace/USofA, starts very late on August 31, 2006 and will contribute its energy to the last of the release period, and then will begin to turbo power this next, large emotional building period.

New notes on August 28 - September 6

The linguistic set of descriptors for this period, when isolated from the various entities and examined "ex situ" is dominated by the aspect of 'transformation'. This aspect is heavily dominant within the Populace/USofA and may well make it to meta data status as it is noted

rising to prominence within many and diverse entities. Under consideration at the moment is the narrow band of data from all the major entities which is associated with the 11/eleven day period beginning on August 27. Within this narrow band, 'transformation' , and its variants such as 'tranformative event' are dominant. The next level of the descriptor set is headed by the aspect of 'events/occurrences'. This is a rare statement from the data that 'individual' and 'isolated' manifesting 'events' will be driving the 'sudden, unexpected, shocking' release of emotions which ends this release period and begins the next leg up.

Within the data set there are several reinforcing repetitions of both 'sudden/shocking' and 'unexpected'. The latter is also supported extensively by aspect/attribute sets going to the idea of 'radical' and 'unexpected events shock {to the} core', which is then 'propelling rapid/rushing transformation' which is itself holding descriptors for 'shocking' and 'sudden/rapid'. The imagery coming from the data is for some events which are both so unexpected and so radical in nature as to propel a 'transformation' which will itself manifest as the 'transition/movement/crossing' of a 'violent wave of change/transformation/alteration'. Further this area is shown as an anchor for some very long term, that is to say, existing for several years, 'transformative after-shocks/echoes'. Much of this language arises from Populace/USofA, in fact, *most* of the 'transformation' aspect is held by that entity.

While it is tempting to associate all of the language extracted with the 'weather/climate' problems which are shown rising to consciousness about this time, over half of the descriptor set under 'transformation' is tertiary supported by 'civil rights' or 'oppression'. The latter is the larger of the sets, but is itself dominated only 2/two layers further down by descriptors going to 'freedom from oppression', as well as 'dominance shatters, oppressors fall'. The whole of this area is otherwise completely filled with references to 'violence', and 'violent response/re-action'. Much of this area is shown as acting as an anchor point for echoes in early May of 2007 and beyond.

Whatever the 'shockingly sudden', 'unexpected' and 'transformative' events of the end of August are, the modelspace is indicating that these events will drive the emotional tension building in early September as well as 'fuel' the 'transformative feverish fires' of the 'malaise/illness' which is forecast to 'blanket' the global economy beginning in mid September. This 'economic malaise/illness' has many curious features including a very early association with the Populace/USofA, as well as a continuation data stream extending through 2007. Further the data for this 'blanket of economic disease' is very heavily reinforced with aspects/attributes going to the idea that it is a 'disease of illusion' which will show up that 'reduces fantasy' and 'returns reality'. The whole of the area within both Populace/USofA and the Markets entity is focused on the 'replacement/transformation' of 'illusions/delusions/lies' with 'sharp/distinct' divisions and the 'rejection' of 'preached illusions/delusions'.

It would be fair to say that the modelspace is forecasting an 'economic illness' which will seemingly persist for a number of years. In spite of the huge increase in emotional tension release associated with 'economy' and the Ides of March of 2007, it would appear that the modelspace is showing that the 'real/actual' economic disease is already in place, but the 'denial of the fevers' won't begin until after mid September. From that point on, the 'malaise' is such that 'duality' begins to express itself as those who would have an interest in keeping the populace 'deluded' continue to 'preach nonsense'. This manifestation of the 'duality' is very tightly bound to 'transformation'. The imagery is that this whole area of 'economic illness' and subsequent perceptive shifts will somehow be 'initiated/sparked' by the 'unexpected events' of very late August. And further that the emotional trends will be exacerbated after the event/happenstance by idiot politicians.

Meta Data - Ok, this is a bit freaky

Ok, so this is a bit freaky. A primary goal of this series was to identify, as clearly as possible the starting point and the extent of the next release period. Having just come through a rather significant release period {ed note: ends 09.05.2006}, and having observed the kind of strange things that humans get up to during a large emotional release, it made sense to wonder about the coming emotional trend lines. And after having seen how rapidly and how steeply the next emotional building period is portrayed in our previous charts, the release period pending for March of 2007 was a primary goal of this series. In the course of the processing of the longer term value set it is shown that the actual peak of the emotional tension building period occurs on March 3, 2007, or, gasp!, 3-07-07. Noting the designation of this series as 307 {ed note: actually for March, 2007}, it is just a bit freaky when the peak of the emotional trend line hits a plateau that is topped on March 7th, holds at that level until early morning on March 15th, and then begins a very large release period. We had known before this series began data collection that the release period started close to the 15th, and so chose the "ides" appellation along with 307. We did *not* know that the peak hit on midnight, UTC, on March 7th. Universe continually surprises.

Along with the release period details forecast by the longer term value sets, the modelspace is also able to provide some further, meta data level information. Of very great interest is that the end of the release period shows up only 2/two days prior to the 'crumbling' of the 'conflict' meta data layer. In the past, the meta data layers have sort of "trailed off", or slowly faded out of the various entities. The 'conflict' meta data layer which involves all of the entities as of August 31, 2006, does not follow this pattern in its demise, and rather is very rapidly lost over the course of the release period of 2007. It would appear safe to interpret that it is the out-flowing of emotions within the release period which brings about the end of the 'conflict' meta data layer. The justification is that the totality of the release period of 2007, which extends from March 15th through to September 17th, releases just about 2/two times as much emotional energy as the current release period {ed note: another installment of this current release period is due for 08.26 to 09.06}. Another factor is that the release is showing as being from some very lofty emotional levels, many times higher than the levels that began the current release period. This 'great height' starting point seems to offer the effect of magnifying the impact of the emotional release.

Chart 1

In navigating the more interesting components of the modelspace as depicted in the chart above, we need note first that the 'conflict' meta data layer emerges from the last of the current release period. It does so as it manifests within the last entity yet-to-be-dominated by the 'conflict' layer, the Populace/USofA. This manifestation of the 'conflict' within the Populace/USofA entity marks its movement into "meta data status" in that as of August 31 this layer will dominate all entities. Further the 'conflict' meta data layer appears within the Populace/USofA entity just as a sudden spike in the emotional summations within the release sub set takes place. Are these coincident? Does the appearance of the 'conflict' layer cause this spike in emotional release within the Populace/USofA? Or does the 'violence from the earth/climate' actually cause the movement of the 'conflict' meme into meta data status? We do not have the granularity or the brains to determine this in advance of its emergence. At this point we can only be reasonably certain that the 'conflict' meta data layer begins at least temporally close to this last release bubble. Thereafter the steep upward trend of the emotional tension line shown in the chart above is driven most by the 'conflict' meta data layer expressing in both populace entities {ed note: GlobalPop, and Populace/USofA}, as well as driving the emotional sums within the very large Terra entity. Within the Terra entity, we here at HPH are conceptualizing this as expressing 2/two flavors of meme; 'conflict with unmerciful nature' in the sense of the 18th century elite, and a more future focused alternative, 'conflict/struggle within universe for growth/understanding'. It is worth noting that, once again, a meta data layer, this time 'duality' is confusing the whole of the issue. We are seeing a rising expression of 'duality' appearing in many forms over these last few ALTA series. The 'duality' is having its fun by providing very clearly delineated sub sets with large base collections which are forcing the interpretations to stop and consider alternatives, even within the other meta data layers.

In examining the chart above, note that there are 2/two large, faded blue rectangles which each encompass a release period in the vertical dimension. These are provided to aid the eye in comparing the 2/two release periods for amplitude. While the current release period is providing a .00056 drop in emotional tension values, the pending Ides of March release period drops the level by .000999 which we have rounded up to .001 in total emotional tension value reduction. Further we note that while the current release period was of approximately 75/seventy five days duration, the pending release period for 2007 is 186/one-hundred-eighty-six days in duration. So while we have a larger level of release, it is also spread out over a longer time. Better? or Worse than the current release period? Hmmm. Yes.

The coming release period also offers some interesting information, within the far edge of the longer term value set, indicating that the 'conflict' meta data layer will 'combust' or 'burn itself out' during the last lunar month {ed note: 28.75 days} of the release period. Will 'conflict' cease after that point? Probably not, but the indications are that the energies set to emerge with the 'conflict' meta data layer will have 'exhausted' much of the 'will to contend' within the populace of the planet. This ultimately could be good, but somehow the getting to

that point probably will not feel good to those who manage to make it through. As may be expected, given the huge presence of USofA military globally {ed note: USofA maintains military presence in over 120 countries}, it is not surprising to us that most of the 'conflict' meta data layer appears to affect the Populace/USofA disproportionately in the extreme. Further the Populace/USofA entity is showing, albeit initially within the 'duality' dominated far value lexical sets, that following 'conflict', the Populace/USofA will be 'burnt out' on 'violence/conflict/contention', and is shown as 'acting/action/creating' a new 'context/direction' for the country. These long term values are hinting at a 'new modus_via' which will 'rise up' into the public mind set as 'water floods the marsh' and which will lead to 'contraction/withdrawal' of all things military. Even though these longer term values are pointing towards a 'less militant/aggressive' American presence on the planet as a whole, there are very large segments of the value sets which go to the idea that getting to that point 'will/must' involve a very large, internal 'conflict/struggle'. This 'struggle' will bring out both the 'rebellion' and 'revolution' memes noted in previous reports in this series as well as previous ALTA reports as manifesting within this coming emotional building period.

As the modelspace is progressed through the release period of Ides of March, 2007, we note that 'conflict' at many levels will dominate and that the 'echoes' of the 'rebellion' and 'revolt' memes will manifest on the world stage through out the Spring/Summer of 2007, and again, will be centrally focused on the USofA and its population. Also as a reminder the twin themes of 'rebellion' and 'revolution' are dissimilar in their ends. The 'rebellion' ends with the power structure intact and just new players occupying the power positions, while 'revolution' upsets the whole of the power structure, as well as the removal of the old power players. In the case of 'rebellion' the emotional angst and range is tightly held to the social infrastructure/contract boundaries even if some small spillage occurs into 'bad behavior'. Within 'revolution' however, 'all things change/are-at-risk', and basically 'chaos reigns'. According to the modelspace, the emotional power of the populace will move away from the 'acceptance of repression' that is defined as the 'new normal', and will gravitate toward 'action against oppression'. This is showing now as being 'challenged/directed' toward 'rebellion'. This interpretation comes by way of the large number of cross links over to ThePowersThatBe entity. So the interpretation is that the 'power elite' will attempt to 'direct the flow' of the emotional energy of 'rejection of oppressive actions' which arises within the Populace/USofA into 'rebellion', *but* that universe has other plans and that 'revolution' will overtake 'rebellion' within the release period.

Returning to the chart above note that the building period has 2/two distinct sub periods within it. From the beginning of the building period on September 6th through to about November 20th, a very steep trend driven by the emotive sums from Populace/USofA and the Terra entity in the main has only 1/one release episode on or about October 21st. This minor release episode lasts but a few days, then off again at the same steep rate upward until November 20th, or thereabouts. Then, from that point through to the peak of the building period on March 7th, the trend line runs less steep and is composed of 'steps' composed of 'building' and 'small release within larger building cycle'. These steps of 'build/small release' continue up to the final plateau of March 7th through the 15th, 2007. This apparent 2/two phase building period with such a clear demarcation is unique within our experience of the modelspace. The chart below highlights this effect.

Chart 2

Bushista - War? Again?

As has been discussed, the whole of the building period and the release period, that is, from September 5, 2006 through to September 17th, 2007 is under the influence of the 'conflict' meta data layer. It will come as no surprise to observers of past 'release periods' that modelspace is suggesting that the Bushista entity, just at the peak of the building period (03.07.2007-03.15.2007) is hell bent for 'war'. Further, in keeping with the life-themes of lies and deception, the modelspace has noted that the Bushista entity is 'driven to unanimous purpose for war', and that 'undeserved blood payment' is sought by the 'core' of the Bushista entity.

Hmmm. Will they finally have their 'momentum' to attack Iran? The data is indicating that the whole of the focus of the Bushista entity in Ides of March and for at least the immediate few weeks beyond as being 'war' and 'conflict'. The Bushista entity also show *no* signs that any external enemy is attacking, although the language attaching to the Bushista entity is *all* about 'defensive'. Or as they say in low circles, the 'protection racket'. Bushista is apparently indicating that the populace of the USofA is going to be 'protected' again.

The descriptor sets which accrue relating to the Ides of March release period are headed by primary aspects of 'war' and secondary aspects of 'undeserved aggression', and sadly, in the tertiary position we note that 'regrettable behavior' is shown as the probable results. Unfortunately, at least so far, it is the people of the planet who suffer from Bushista's 'regrettable behavior'. In a small area of the entity there is language going to the idea that the 'family {is/will be} screwed, and punished' as a 'side effect/unintended consequence' of the 'regrettable behavior'. There is also a supporting aspect/attribute set for this area which suggests that part of the motivation for the 'regrettable behavior' is that the 'punishment of the family' is at least understood {at some level} as being likely, and this is defined by the language as a 'hidden revenge, childish, without honor, devious'. Hmm.

The lexical sets for the Bushista 'push to war' is supported by not-very-good language. The entity picks up data sets for 'underhanded behavior', and 'uncalled for duplicity/deception', as well as results oriented supporting sets going to 'not produce actions', and 'no productions of effects' and 'no visible results'. These in turn are supported by very deep sets in the vein of 'disruptions {to the} normal flow {of} power' and 'intention {to} disrupt, seizure'. Again, these sets themselves are supported by wording indicating a not too effective result such as 'cry and complain, no action'. The entity also shows that 'devious creeping behavior/actions, lies/deception, dishonesty {are} used/employed {as the} approach/strategy'. Much of this language is bound by cross links to Populace/USofA and goes to the idea that an 'approach to those on the hill {capitol hill?congress?senate?} will not produce attack'. The descriptor set goes on in a very graphic

way indicating that 'pants shat {into/upon}, dirty hands blacken face', and this is apparently in response to 'words of derision'. Yeah, seems about right.

The wording of much of the supporting data set to the Bushista entity 'war' sub set *could* be interpreted as the use of an 'underground bunker buster nuclear bomb'. This sort of interpretation shows up due to the internal supporting sub sets for 'earth splits open', and 'ears ring many hundreds {of} miles away', as well as 'seed cracked, contents spoilt'. While this language is in the vein of an actual or manifest event, our data cannot tell the difference between such, and the alternative which would be a public debate on the same subject which involved the same level of emotional release. So with our interpretation already running toward a 'failure to manifest' and 'regrettable behavior leads to seizures', both indicative of a "stopped state", the interpretation here will shade to the idea that the 'underground nuclear attack' by the Bushies upon EnemyX which is very likely Iran, will *not* yield and actual attack, but instead will be the subject of much rancorous debate within the USofA power structure and population. We note of course that much of the 2007 Ides of March release period is involved with 'revolution' and 'violent realignment {of} internal loyalties', and that the Bushista entity is holding lexical sets in the longer term values for 'abysmal failure' as well as 'wretched lies return {to} plague, pit {the} body, head'. Further there are references to Bush's "face tell" in that the data shows for a 'face scarred {by} self disputes mouth'.

Markets - Assembly of Ignorant Assholes

The Markets entity is a major contributor to the release of emotional energy over the Ides of March release period. The movement of the entity through modelspace as the longer term data set is loaded is not suggesting a very good 2007. In the many outer areas of the Markets entity {ed note: usually representative of the riskier investments/speculations} the data points are all down below the neutral, mid line of modelspace, *and* are point-clusters for larger descriptive sets. Stated another way, the areas of the Markets entity which are descriptors for the more abstract forms of money speculation are all pulling in new data sets in support of their context, *and* these new data sets are all both negative in the very long term values, as well as being emotionally negative within their summations, *and* are contributory to the shift from a building emotional tension trend to a release of emotional tension. Further these new descriptors are seeming to act as points-of-attraction for more such data as the modelspace is progressed; this is indicative of a 'sustained effect/impact/trend'. Further the dominant aspect for the Markets entity just as the release period begins, and held internally is 'restricted movement/shutdown/cessation'. This aspect/attribute set is also participating in the meta data layer of 'restricted movement' and has a very large cross link base which goes to the Populace/USofA entity where it terminates in 'restricted movement' which is also participating within the meta data layer at that point. Whew! What a way to start an Ides.

While it is not necessarily indicating a 'markets closure', the Markets entity is clearly suggesting some level of 'emotional seizure' that causes a 'cessation of beating/activity'. Further the data goes to the idea that the 'markets stoppage yields cracks {in the} surface {which} expose secrets'. These 'secrets revealed' in turn are heavily connected to language that is both legal and political {ed note: as separated lexical structures bound in/held}. In both of the lexical sets the aspect/attributes in support are also holding internal sets going to the idea of a 'closure'. So a very open, relaxed interpretation would be that some 'hiccup' in the 'markets system' would lead to a 'revelation of deep/underground secrets' which in turn put pressure both legal and political to 'close/restrict movement' within the markets. Make sense? Sort of self-fulfilling event stream.

As the 'shutdown/cessation/closure' lexical set is examined, the supporting sets show a bit more detail in suggesting that '5/five out of 6/six' are 'placed {under} restricted movement'. The cross links within this area of the details are both extensive and mainly internal to the Markets entity. There are some small number of external cross links which go to the Bushista entity, and an even smaller set to the Populace/USofA entity. In the case of the Bushista entity cross links the idea comes across from the aspect/attributes of the termination section as 'summit {of} ignorant leaders produces wet feathers', and further that the 'summit' is 'declared urgent' while also being spoken of as 'assembly of ignorant assholes'. This last comes via the cross links from the Populace/USofA, and the Markets entity over to the Press entity. So the interpretation is that the whole of the 'summit' will be labeled as 'assembly of ignorance' {ed note: not too many press use the formal designation for leader any more and thus 'assholes' are not likely to appear, at least on teevee} . Further we note that the markets as a whole show their real troubles to be temporally linked to the 'summit of the assholes'.

Populace/USofA - Phase Two, Work'n It, Bright Sparklies Trap Monkeys

While the whole of 2006 has been indicated by modelspace to be a 'transformative' year, with implications from the long term values gathered in the last 4/four ALTA series that the 'transformations' seen in 2006 will have 'decades of influence' or be 'generationally effective', we need to note that the data set has *always* pointed at August as the 'pivotal month', and further that the 'conflict' meta data layer arises as an 'initiator/catalyst' for the beginning of the 'transformation of the core'.

As the modelspace and the charts above indicate, the upward trend line of emotional tension takes off like a mule-kicked Missouri farmer just as September begins. A not-to-be-missed element within this emerging new trend line leading to the Ides of March release period is observed to come about on {or near} November 22nd. As can be seen from the chart above, the upward trend line makes a very large change, deviating from the very steep rise, and then beginning a stair-step pattern which, while still rising steadily is not as steep as the early rise. It can also be observed in the chart that the early September 6 to November 21 rising pattern has only 1/one release period, while subsequent to November 22nd, release periods abound, although the upward trend line is maintained. It is worth noting that the second phase of the building emotional tension period is similar in many aspects to the general building period in which the Katrina/Rita disaster, as well as the Pakistan earthquake occurred. And it is worth noting that many of the release bubbles indicated as green circles on

the chart are the size equivalents of the Katrina/Rita release week. It is also worth noting that while we have very large inputs from the Terra entity, much of the whole of the emotional tension of 2006 into the Ides of March is being directed by the summation values arising from the Populace/USofA entity. Simply put, the emotional 'angst' arising within the populace of the USofA for all of the second half of 2006 is showing as directing the response to events from September 6th through 2007. The Populace/USofA entity is suggesting that the emotional state for which it is proxy will not be good, nor particularly effective. This is due to a 'conflict' arising within the populace and between the populace and the 'officialdom/leaders'.

The 'conflict' expression seems to appear at just the exact pivotal moment, within the last day of a pivotal month within the middle of a pivotal year {ed note: we use a 384 day, 13 month lunar calendar for modelspace}. This seeming 'keyness' to things is clearly manifest in the linguistic sets which go to describe the rest of the year and the subsequent release period next March. Much of this language within this entity is going to 'rebellion', 'revolution', 'chaos', 'heartache', 'headache', 'bellyache', 'starvation', 'change_of _alliance', 'change_of_pov/perspective', and others of similar vein. The data set supporting the Populace/USofA is much more transformed now than in September of 2001. The ratios of emotional tone separating the state of the Populace/USofA entity in 2001, versus September 2006 are several orders of magnitude. The indications are that while September 2001 had an 'impact' on the populace, September (Fall) of 2006 will 'transform' the populace.

Much of the 'transformation' language {ed note: as may be expected, given that 2006 is an election year} appears with the November 22nd shift in trend line behavior. This is a significant change period, with much of the language going to 'dispelling illusion' and 'delusions conquered'. As may be guessed, the 'secrets revealed' meta data layer is expressing significantly within this entity at that time. The 'transformation' will involve both 'wide spread', or 'abounding/boundary' violence as well as 'revolt {against} oppression'. This expression of both the 'transformation' and 'revolution' language sets is worth some attention as from the period of November 21 onward, the modelspace is indicating a series of 9/nine release steps which take place over the course of barely 3/three months. These release steps, in some cases, are as large in emotive magnitude as was the week long Katrina storm release.

Further it should be noted that in spite of the many releases within the Fall and Winter, by the time we reach the Ides of March release period, we will have moved the whole of modelspace upwards in emotional tension by .005 units. This is extremely significant within the totality of our work in that the modelspace has been bound for several years to movements within .001 units. So now a 5/five times increase in totality of generated emotional tension is indicated as emerging over the course of the second half of 2006, and this is in spite of the 9/nine release bubbles between now and March 15th, 2007.

Again noting that some serious levels of emotional impacts for the charts above derive from the Terra entity, as well as the GlobalPop entity, it is nonetheless apparent from modelspace that the populace of the USofA is in for a very testing/trying time in the second half of 2006. In the release period beginning in March of 2007, both populace entities contribute a proportional-to-size amount of the emotional release. In both entities in March, the dominant themes revolve around 'conflict', 'secrets revealed', 'encounters with scarcity', and 'revolution/transformation'.

In the case of the Populace/USofA entity, many of the meta data layers begin to go vertical in either October or November such that by late on the 21st of November, the dominating impression is conveyed by 'exact grain/granularity {of the} old ending, new beginnings'. In many ways the linguistic set reads like a forecast of a whole lot of work after that point. The 'work' involved is actually characterized within the descriptor set as 'exertion', and 'effort'. The descriptors are complete, correct, and fully populated with links to a very definitive lexicon set which provides some confidence in the interpretation that 'work separates/divides' and 'exertion finishes'. Ok, so not hugely illuminating, but when taken in conjunction with the supporting sets for this area, a picture emerges of a USofA in political/climate turmoil which induces more turmoil as 'officialdom fails {ed note: yet again}' only this time 'secrets revealed' kicks in, and 'revolts' are 'presented/made_visible'. Much of the data sets in support contain references to 'exertion, sweat', 'blood', and other indicators for 'much damn work'. What is apparently being forecast by the movement of modelspace is a 'shift' occurring on or around November 21 in which 'transformation' will 'separate' the populace into 'those who work' and 'those who die'. While a harsh interpretation, the data supports the view that the "don't get it" part of the populace, lost to monkey mind and the lure of bright sparklies will be 'self-dooming' in that they will 'stay with the past', oh, and apparently the 'past dies' on November 21. Hmmm.

While a very dismal, and distressing forecast comes from the progression of modelspace and the Populace/USofA entity through the rest of the shorter term values (2006) and into the longer term value set (2007), we must note that some positive aspects exist for 'transformation' which do not for many of the other major aspects. In the 'transformation' descriptor set are many layers supporting an 'improved condition/state/awareness'. In fact, nearly 40/forty per cent of the whole of the 'transformation' descriptor set is positively focused values, and while not the majority this is only due to the summations by mass, not impact nor duration values. So it is that the 'transformation' aspect actually needs to be seen as a composite linguistic set with negative shorter term values, and positive longer term values. It is in such descriptor sets that we are able to model concepts such as 'hope'.

In contrast to 'transformation', the 'change/alteration' data set contains merely the negative values, predominantly shorter term in duration. The modelspace can, and does have both 'change' and 'transformation' arise frequently. What has occurred within the Populace/USofA entity is that 'change' dominates 2006, but even with that domination, in the background, 'transformation' is rising such that it is linguistically paramount in late November, through December and into the rest of Winter. The 'change' aspect fades into a supporting role within the 'transformation' aspect in/on November 21. So, 'chaos', 'pain', and 'suffering', but also, all in support of 'ending old delusions/paradigms', and 'creating reception of/acceptance of new beginnings'.

We need not dwell at this point on the 'suffering' and 'loss' that will be an integral part of the post November "build-release" steps up to

the Ides of March. The data set pretty much conveys the idea with 'conflict', 'chaos', and 'revolution' whipping all about. The data set is very clear at this point, and in an unambiguous fashion is declaring that August 31, 2006 marks the 'pivot/point/start of separation'. Much of the 'separation' is found in descriptor sets indicating that the 'solar system/world' is 'falling apart' on schedule, and that 'many/most' will 'fall with their illusions'. It cannot be forecast as to how many will 'fall with their illusions', but the implication is clearly that the event-stream of universe is just about to enter a time in which 'most' will 'not adapt/transform'. This is supported by the cross links back to the 'work/exertion/effort/labor' that is 'demanded' of these times. For many, as is noted ad nauseam here in ALTA reports, these 'times are truly dread'.

We need to note that many of our continuing patterns build up along with the emotional trend line of this Fall through to Spring. These include such themes as the '75/seventy-five per cent' of the populace at a global level shown as 'going insane', and further the 'sun disease' which is 'affective of the worms in the head'.

We also have continuing and climbing values within the Populace/USofA entity for post September economic impacts which hugely drive the emotional 'angst' and also impact all sorts of other components of life here on earth. The 'revolution' meme in major part is driven by the negative value set words within the Populace/USofA entity which are 'economic' or 'financial' in nature. Basically the Populace/USofA entity is stating that the 'depression is here' and seemingly gets underway along with the August 31 'conflict' meta data layer, it is just that we won't notice until around mid month of September. Hmmm, neither part of that sounds too pleasant.

Conclusion: Part 4 - Temporal Spot, Time Surfing, Light your damn candle

It comes down to us...to the aware, to the observant, self directed humans. Seemingly universal waves of history have caught up with humans and their little solar system. Seemingly, at least according to lying modelspace, August 31 marks the temporal spot. Only instead of an "X", what we will have is to be a cry of "why".

Seemingly, the 'why' question will continue fill the air as the Fall and Winter unfold.

As self actualizing, sovereign and observant individuals we know not to waste time trying to answer the 'why' questions. After all 'why' goes to 'intent' and usually in the midst of the chaos in which the unaware scream 'why {does this happen to me}', it don't matter. Repeat that, it does not matter 'why' the wave is threatening to sweep you away, especially in the midst of it crashing down around you. All that matters is to swim.

What matters is to react to the wave, and if you can, to be facing with the flow and ready to surf up to the top, to just behind the foaming crest. Not an easy task under any circumstances, but completely unobtainable if the 'why' question is freezing the brain, trapping the mind with totally irrelevant emotions.

This may be a very good year for those who learn to 'time surf', that is to stay ahead of the rising emotional tides forecast to emerge globally. Now, 'very good year' is relative, and may only mean that one 'escapes with {their} skin', but hey, given the alternative...

This year, at least according to modelspace, will *finally* shift into the complete 'duality' of expression within humans at some very core levels. This is important in that it does bring relief to the long suffering Cassandra's as the 'potential for doom/destruction' finally appears in such 'actual/manifest' forms as to bring 'denial to an end'. Many of the humans are shown as *not* accepting the 'evidence of their lying eyes' and, sadly, will have to be considered a 'cost' of the times. While much of modelspace is focused on metaphoric and archtypical representations, it nonetheless is indicating that large stresses are to emerge which will 'threaten existence/life' of much of the human species over the progression of the solar system through the next, very few, years.

And it all begins in just a few days. Isn't that just lovely!

But we can at least take some solace in the realization that, at least here on earth for humans, 'change' is merely the beginning of 'transformation'. And as noted, 'hope' is the understanding that universe has created darkness for the sole purpose of being relieved by light.

It is all about energy, at so many levels. No matter how huge the mass of darkness, it takes only a very small light to eliminate it. Just as on the aikido mat, the goal is to harmonize with the opponent/partner's movements such that their own momentum/energy is used to redirect their force away from your center such that it is said 'a feather can move a ton', not by acting in opposition, but rather by adding that single feather's weight to push the moving mass off its once-determined path, and avert confrontation. It is *all* about energy. As will become apparent the remainder of this year. At a great many levels indeed.

So with 'light' being the archetype expression of 'awareness', then the admonition from modelspace is that 'times of darkness (change) come now, light your damn candle'. Or, more gently, 'seek to surf/harmonize with the wave of transformation coming to a temporal nexus (immediate future) near you'.

We expect to have part 5 posted by Saturday, September 2, but given the nature of universe's unfolding patterns, we will not be surprised if circumstances intrude a bit over this next week.

Remember, humans don't look up as our species never had to face large predators from above, but we still need to keep in mind that shit rolls down hill.
