Hard Edge of Time - September, 2015

covering 2015 - 2029

Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes **are**: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities **are**: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon **is**: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: *emotional qualifiers* which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders **are**: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop
The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)
All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets
The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra
The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional

level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

Data and Interpretation

Processing for September 2015, through to

Meta Data

As a point of interest, there is yet another developing wave of 'rescue' language being forecast. The concept, independent of context, is appearing across all our entities at various levels of support. Many of the 'rescues' are described as being actual, physical rescues of people from nasty weather/extreme climate conditions. Others are rescued from militarized humans with bent minds, while other instances of rescue are more oriented toward 'rescuing (our/my) future via money'. We have had meta data appearances of 'rescue' before in recent years, and note that it, like body parts and processes, is a deep, and powerful archetype that has in the past produced very prescient data sets.

Meta data is when the same word or phrase keeps popping up all across the supporting sets at differing levels in most or all of the entities. When this occurs we can note that past performance teaches us to be aware of the potential for days/weeks/months/years in which 'powerful forces' are unleashed. As a small example, the rise of the new context for 'illegal aliens' in the USA starting in early 2005 was presciently described by the data over the 19 months prior to the large scale marches in the SW by meta data formations. It is likely that these upcoming months are another such 'society changing/moving periods'.

Terra

The data sets clearly are showing that we, planet earth riders, are going to be 'riding shocks', and 'waves'. The data has grown for the Terra entity (the fastest/largest growing entity) at rates not seen before for this entity (usually is more slowly changing than other entities).

New growth in 'expansion of planet' sets, as well as the resulting 'wacky weather' sub set for that growth. We are seeing new areas for 'wild winds', including some sets indicating that 'skyscraper buildings' will be 'severely damaged' by winds that will be described as 'freakish', only to reappear the next few days in the region damaging more tall buildings. In some instances residents will have to be evacuated due to loss of windows, there fore heat and shelter from the storm. These data sets are also indicating that 'power loss' will further hamper the 'tall rescue' efforts.

The climate change is going to really really cause problems for the global warming propaganda effort as the winter across the northern hemisphere has elements reflected in the southern hemisphere's summer. This is to say that the data is forecasting the southern hemisphere will have 'snow and ice storms in summer', as well as 'wild rains (in normal dry months (maybe in Australia))' that are further

described as 'terra forming', or 'land altering'. Not only are land slides, and slips being described, but also we have long run out slides where whole sides of mountains (mostly earth and rocks) washed off of clay substrates to inundate the valley below. We have data sets that describe new 'channels/canals' being gouged and cut from both rural land, but also 'urban environments'. This last includes language about the impacts of '4/four years of rain (in) 23 hours' that will 'roar' down 'narrow/restricted streets lined with 3 and 4 story buildings with such force that the buildings will be 'groaning' against the background roar of the water. These sets have very high visibility and will show up on line as videos taken by survivors.

In some cases cars and buses will be piled up into 'street dams' that will so block the water flow as to create 'in city/town lakes' that will 'subsume whole apartment buildings'. These instances are being described as common enough to have many different locations of similar scenes around the planet. Further in several areas the 'rains created dams' will have to have 'military attacks' to 'remove them after the rains pass'. The data sets are describing one of the first of these 'inner city dam removals' as 'going badly' when the cars/debris is 'pulled loose by a tank/crane' from the bottom. Residual water at least 40/forty feet high rushes out and pushes all the offending equipment into an even bigger dam several blocks further down hill. As this dam removal experience has high visibility it will apparently hit online as a video and other military efforts do not involve this approach.

Many data sets for the northern hemisphere winter are describing vast levels of destruction. Whether from floods from completely unheard of, never before reported levels of rain, and the resulting flash floods, or from huge wind storms also bringing large rain events within their aftermath, the winter of 2015/2016 across all of north America, and all of Eurasia (especially the Siberian east, and the Chinese northern coast) will be remembered for a time of 'destruction by water'.

Many of these 'excessive water events' are cross linked over to the SpaceGoatFarts entity and the very many forecasts of 'solar wonky behavior'. These cross links terminating within the SpaceGoatFarts entity include sets that involve 'extremely tall(high altitude), very wet, storms'. As the data is examined it would seem that the forecast is for water to be carried to levels in the atmosphere not seen before. These 'tall storms' are a special form of punishment for humans and their 'stuff' on the ground as very large hailstones can form that can be fatal from such heights. Further, even absent the hail, in some of the southeast USA tall storms the data is describing water, in quantities not imagined in the region falling from 'extraordinary height' such that it 'tears flesh' and 'knocks (people/animals/things) to the ground' when it lands.

The data sets are suggesting heavy rains/snow over most of the west, including, snow going down into California. Most of the problems for California will be involving fast rushing floods, infrastructure washouts, bridge destruction, and other significant problems. Some of these problems will include multiple month long outages for both electricity and internet/communications. In at least one instance a major, underground facility for telecoms will be washed away or filled with mud to the point that it needs to be 'recreated/rebuilt'.

These problems with rain caused flooding will not be California's alone. The data sets are forecasting a very nasty winter of exceptionally high floods due to both local rains, and river/run-off for much of the

American south. This includes the south west where rains will be 'carving out' new channels throughout the region, including isolating many rural areas as roadways wash out. Other areas of note are the American Gulf coast from Texas through to northern Florida where data sets are indicating that rains will be monsoons, and that these will be both more frequent, and larger than usual to the point of severe damage to industrial operations (in the Gulf) as well as normal activities on shore. These areas will also be getting storms from 'the wrong direction' which will be devastating to trees and agriculture. Further sets are suggesting that the equivalent of a Gulf hurricane of rain will arrive at a major metropolis in the region in such a short time as to flood out parking garages, strip malls, interstate highways, local roads, and airports. A number of fires related to lightning strikes and downed electrical lines will also be making news from the Gulf region all the way into mid 2016.

The global weather over the next 6/six months will provide some indications of the developing climate change pattern of the next few decades. Not only is cold being forecast to be at deeper levels than seen in recent years (new record lows) but also levels of precipitation are described as being 'beyond records'. Many of these sets are also connected via cross links to areas within GlobalPop entity where the sets terminate in weather related disaster. These disasters are indicated to drain the coffers of the municipalities hit. Yet more economic grief at a very rough time.

Many of the precipitation problems will be sweeping across the European continent in a tangled weaving with wind storms impacting the Far East. Further storm issues will be devastating to northern Europe, both at sea level, and within the mountains. Irregular wind patterns are forecast to be bringing storms from unusual areas of the compass such that damage comes in 'reverse' to 'normal storm patterns'. Some of the areas include Poland, and northern Germany, Denmark and Scotland.

The data grow for 'early seasonal shifts', and long or extra-long seasons, is growing at many different levels of support. In the primary supporting position we have aspect/attribute sets that show 'snow storms' starting a long winter for some areas by early October. In many of these sets the indications are for snow to start exceptionally early and then to just keep piling on. Many new cold records are showing as keeping snow and miserable conditions around for far longer than foreseen this side of "that terrible winter of '15".

The early, repeated, and damaging snows of this winter are also showing as being prime causes for new land erosion and mega floods in early to middle of 2016. The data would seem to be suggesting that in a very late season totally unexpected event, much of the north central USA will be under significant water due to an ice dam breaking on a river to their north. This is indicated to be exceptionally late in what should be our next northern hemisphere Spring, and it will leave flood problems long into the mid year.

Areas of northern Atlantic coastal Europe are showing as getting both on-shore, and off-shore storms that are damaging. The data sets have forecasts for northern France and southern Germany being in the path of what seems to be 'bullet storms' in which small tightly whirling cells in a long string come off the north Atlantic and cut across France toward the Alps. These are showing as bring lots of water, very high winds, but being each of short duration. The data also shows that these storms will cause damage to rail lines, delays in delivery schedules, refugee efforts, local flooding of consequence, schools being

shut down, city governments being sent home, and various electrical/electronic outages. The most significant damage appears to be a saturation of large region of mountains such that landslides begin causing the loss of major roadways.

GlobalPop

Crises at so many different levels. In the data sets holding modelspace representation of the on-going monetary/currency crises, the newly acquired supporting sets include language going to the idea of marches and demonstrations in many capitals and large cities that will feature 'death to banksters' language with specific references to 'jewish', and 'rothschild'. This is indicated to be a temporal marker for a number of major social shifts to shake the Global Population through 2016 and 2017.

In general, it is far to say that all our sets for 'government' no matter where the geographic references are pointing, are all carrying primary support in some form of language going to 'power crisis'. There are various differing forms of 'power crisis' appearing in various different sets and we have some where the language is showing that the problem that government is going to face most is actually, a crisis over/about electrical power. These sets are very dominate within the sub groups for both islands and island-states (regional self determination zones). All of these are shown as experiencing an array of problems with keeping the lights on and the local air conditioning humming, but in the end, all of these proximate cause language carries back over to 'credit freeze' or one of its many differing labels globally. In some sets the 'power crisis' is more a political-social problem that may have elements of 'been here before', but in this new world, again, the underlying, or causal trigger for 'why this crisis, here and now?' will revert back to 'credit freeze'.

It must be noted that in many countries the 'credit freeze' language will be accompanied by linguistics going to 'evil XXX is the cause of this dastardly credit freeze intended to make paupers of out beloved ZZZ country', and other words to blaming the whole financial condition on a 'conspiracy' to bankrupt and take over. These sets include language about China as the cause for the 'credit freeze' from many American and other western big mouths.

One of the most species altering social shift is to be the 'failure of confidence' that will first hit the 'emotional ties (to) paper currency', and then the data shows that it escalates up to 'failure of confidence (in) central banks', which then goes further to the 'failure of confidence in any banks' (note that the failure of the banks themselves contributes to this emotional trend), and then quickly to 'failure of confidence in politicians and government'. Not a good situation for government. It seems ThePowersThatBe have no mechanism nor plan for coping with the failure of confidence in their systems. This situation is described as playing out over the next 5/five years in what had been the Western Empire of the Dollar.

The diaspora sets continue to gain new aspect/attributes in existing sub sets as well as new sub sets that are increasingly pointing toward displacement as a key word over the rest of this decade and well into the 2020's. Many of the new sets are bringing in more instances of conflict into the events surrounding the movement of large masses of refugees around the continent of Europe. There are sets going to the

idea of villages that will be surrounding their area with barriers, and placing local people at frontage roads to prevent the tides of humanity from sweeping through their area. In some of these sets a strange form of irony from universe is described in which the mass of refugees, after fighting with locals for resources or access move on to another location, but the site is so devastated that the local population is also now forced to become refugees as their supporting infrastructure is gone.

There are specific sets within the detail layers for crowds/mobs taking over 'cell towers/installations' as warm spots for the night, and causing widespread disruption of service. There are sets for instances of mass car theft in which whole dealerships are looted with the vehicles being driven as far as they will go on whatever gas is in them at the time of the theft, and thereafter abandoned when the tank was empty. There are specific detail sets for small sub-divisions and retail centers becoming both battlegrounds as well as temporary 'new villages' as the refugees are herded by terrain and circumstances into fortuitous places. Many sets show breakdowns in government through internal fighting as there is no consensus nor even dominant approach so power vacuums develop that propel the political system across Europe into breakdown, disarray, and dysfunction. The longer term sets have new growth patterns for military involvement by 2016. Many new sets are also indicating that the military itself is engaged as a part of the refugee story in Europe by 2019 as governments have failed, currencies are either gone or very weak as global hyperinflation has set in such that payment in currencies is meaningless in many areas. This produces a situation of the 'unpaid (former) military forces' who are described as participating in the diaspora at several different levels that will include 'marching for money' as social systems crumble and food availability is unstable.

The GlobalPop entity has new growth in the social disorder sets indicating that the public pressure on all social institutions is going to escalate into a state of 'continual erosion/break-down'. The cause for the public pressure will ultimately come down to the collapse of the fiat currencies and central banking, but the proximate cause in many of the more visible cases of social institutions break-down is going to be 'immigrants (and/or) refugees'.

This meme is operating on several continents. It is also beginning to have power political 'legs' as the indigenous populations view the simultaneous arrival of vast numbers of refugees and the systemic breakdowns as being related (though most do not understand the situation is being engineered by TPTB).

The data sets are showing that 'turf wars' begin all over the planet at levels that TPTB (officialdom) had not actually anticipated. While they thought certain populations may be 'reactive' to 'promoted immigration', the data is suggesting that TPTB(officialdom) will 'react badly (when) surprised (by) public demonstrations against immigration'. The data sets are forecasting that officialdom did not anticipate that their social engineering would 'lift the populace' into a point where it could view itself. In other words, the actions of the TPTB(officialdom) will bring out protests that will not succeed in altering TPTB(officialdom), but will succeed hugely at 'bringing together (the majority) peoples' in their understanding of their own 'political power' by way of 'sheer numbers'. These data sets are suggesting that political protests (social drama) at scales not seen before will 'cripple the agenda (of the governments)' across much of the western world.

Curiously, the issue of 'immigration' is only a northern hemisphere meme, but as has been noted in previous ALTA reports, the upcoming debt system collapse will lead to a 'reverse migration' of 'schooled young people' from the northern hemisphere to all places south of the equator over these next 25+ years.

The closer one gets to mid-planet (aka equator), the less the language is about immigrants and the more it references 'refugee'. In both sets however, the supporting linguistics include general descriptions of draining, straining, rioting, blaming, failing, fleeing and destroying (old political landscape). These sets are affective of all 'western' regions, EU, AU, USA, and Canada (even) with the 'immigration' language, and throughout the Mediterranean, Asia, and Caribbean with 'refugee' language.

New data sets for the Mid East include further sets about the strategic blunder made by the House of Saud when it invades (or has invaded) Yemen. These sets continue to accrue new values for the 'revenge (of the) people' rising up in both Yemen and Arabia (formerly Saudi's Arabia). In these sets the blow-back from the invasion brings the battles back to the Saudi's. These sets also include several sets for 'royals' assassinations being 'publicly video recorded' as well as one spectacular instance when 'fleeing royals' are 'set upon (by mobs) while in their airplane attempting to flee'. These sets also include data for major destruction of infrastructure during the fighting that may include oil terminals but certainly does include major shipping ports. The idea here is that several ships will be deliberately sunk as part of the response to the invasion of Yemen. These ships are sunk to create a bottleneck and to cause a trap to be formed for Saud military forces. Lots of data sets for 'captured royals', and 'beheadings' and 'torture'. In these cases both are described as being 'public'. Further sets go to the idea that British 'royals' will become involved. The data sets would seem to be indicating that the British 'royals' will expend some serious effort to try to 'negotiate the release' of at least one group of 'captured (Saudi) 'royals'".

The data sets are filling up supporting sets for something of a global phenomenon to emerge over Winter 2015/2016 and continue through 2016. This new meme is going to the idea of personal revenge against banksters. At is core the data sets are discussing either individual murders of banksters in revenge for personal problems caused by them, or the many instances of mob violence against banksters. In some of these sets there are also detail sets going to the idea that at least one 'royal' will be 'caught within (the) banksters vehicle (airplane?)' as is it mobbed and destroyed. The data sets are indicating that at a press conference about the event, the 'royals' spokesperson will be heard (probably a 'live' mic issue) to say that 'who cares about some scum banker!, a royal was involved!'. This does not set well within the banking community and thereafter it appears as though the 'royals' of the planet are also being targeted, and not necessarily by 'locals'.

The 'destruction of the past' meme that has gained so much support over these last 8/eight years is now growing in the areas of 'break-down of religious organizations', including 'vatican operations'. Further new sets also include 'failing churches' across the USA after an upcoming/pending 'scandal' that will ensnare so many 'pew warmers' in 'legal paperwork' that church attendance in many regions falls dramatically. Other indications are for economic woes globally to have a very significant impact on 'organized religion' and all 'organized charities'. This will include some level of visibility for the

'wholesale abandonment' of churches. Also some regions are showing up in these sets due to the diaspora language and the resulting 'emptying of the towns'. {ed note: many due to long term pollution problems not able to be addressed with local resources in an era of dwindling credit and debt system support}. Additional aspect/attribute sets are coming in supporting the 'emptying of towns' from both the 'credit freeze' that causes 'mass layoffs', as well as a 'collapse in the mortgage and real estate markets'. This last is showing as being hugely impacting of the social structure of the USA. This set has extensive cross links between the USAPop, the rest of GlobalPop, the Markets entity, and TPTB entity.

Other data sets are bringing in longer term sets that indicate that an 'oil supply crisis' will hit the 'plastics productions' industry in the late 2020s. This forecast is linked to events of 2016 and 2017 in which major earth changing tremors and weather patterns, as well as the 'credit freeze' cause a globe sweeping oil production crash. Many of the supporting sets go to the idea of the industry being reduced past the point of ability to meet global demand just at that point in time when major push to electric powered point-of-use motors takes over. Not that there won't be demand for oil, but that new industrial developments will be 'pushed down' to the individual user and electrical energy will take a big bite out of oil's ownership of human energy use. The oil use is indicated to shift over to supplying chemical needs rather than burning the stuff. Prior to the 2020s, oil will still be primarily an energy producing commodity, but due to new developments in electrical energy, as well as crashing production due to credit freeze, the data forecasts shortages from 2018 through early 2020s in several large areas of the former Western Dollar Empire. The data sets show that this continuing state of shortage produces some very interesting developments in both efficiencies of use, and replacements/augments for oil as energy source.

ItalyPop
Data sets are pointing toward something of a huge political upset within the Italian power structure that is further showing as having both long term impacts as well as setting off explosive rhetoric. New sets are still growing in the area of the new electrics wherein the Italian scientist pops up with a surprising discovery involving crystals. These new data sets are bringing in larger ratios of shorter term data so the likelihood of some visible manifestation of this forecast is increasing. Recall that we expect to hear first about this in a scientific journal of some 'dis-repute' in that it is not academic, and is not peer reviewed, yet has some status within the slice of scientific study that it covers.

FrancePop
As modelspace progresses through September and into mid October there are new sets appearing that are suggesting that the 'french banking system' will encounter a point of stress leading to a dysfunction within some of the accounting. This may not be visible in the media until later in the year but the impact will be significant and is affecting pensions. A further echo of this event is also being forecast for late winter (strong winter especially along the coast, but also a strange north to south wind causes significant snow and problems inland and down into Mediterranean), most probably in late February or early March in which there are going to be repeated calls by the populace to 'tear down the (banks) edifice/structure' due to the failure of many private and public pension funds. Note an alternative interpretation would have it be the Euro itself under such pressure that the anger of the french people is being directed outward toward Brussels rather than inward. Also note the whole situation is indicated to be very greatly 'emotionally exacerbated' by the unreliability of many prescription, psycho-tropic

drugs. In some instances, the data is suggesting that specific kinds will have been off the market for several months by Spring.

USAPop

There is considerable growth in many of the data sets within the USAPop for severe impacts from the (now having begun) 'credit freeze' language. These sets are forecasting continuing 'outages' for 'electronic payment systems' (no mention of Bitcoin or blockchain herein) that will be affecting very large segments of either the population, or the business ecosphere. These sets are forecasting EBT outages to continue to rise exponentially as the many attempts to 'fix' the system result in the 'kludge from hell'. Other sets are suggesting similar situations for SWIFT and for the 'postal system', although it appears that the 'delivery failures' will not be visible there until nearly the end of November, 2015.

As the various parts of the credit system begin to 'freeze over' as the data would have it, the underlying support that 'credit' provided to various real world systems in everyone's life becomes visible very suddenly, and usually very shockingly. In the new accretion patterns the data is spreading over a wide number of sets and is also going deep into supporting positions in a majority of the terminating sets. These data elements include forecasts of no gasoline (in large regions), no electricity, no water, no store deliveries, or if electricity, store replete, they will not be 'able to sell' due to computer outages at some central server that just went down due to it region losing power and no diesel for backup gensets.

These sets also include references to failure of major 'public events' across 2015 and into 2016. The data is showing that by mid 2016 the public is getting used to the failure of events of all kinds to 'go off as scheduled' and thus the meme slowly fades from discourse except in especially egregious examples of systemic failure. But prior to that 'emerging acceptance', the data is painting a picture of 'delayed acts/celebrities/politicians', 'everyone's there, but no electricity', or 'no food deliveries'. These sets also include details about movies on location where the very large casts become 'trapped' due to local logistics breakdowns. Or other instances where staff/crew arrive, but gear never left, or is gone 'walk-about-to-places-unknown'. This latter is also part of a rising meme for 'theft (from within the) system (at low levels)'. The data is forecasting a situation where low-level theft either from the system (of the employer), or through the employer's system (theft from their customers) will become so endemic as to be both 'considered (near) normal', as well as 'initiating a boom in internal corporation security' over late 2015 through 2022.

The Longer Term data sets within the USAPop are forecasting that the 'political season (late 2015/2016)' has just morphed into the Tenth Level of Hell for professional politicians here in USA. These new sets have rising sets within the supporting groups for 'mass' or 'populace' and the 'reaction to (rise of) gold' relative to the dollar. In these sets we find many references to sets such as 'blinded by greed', and 'captivated (by gold) fever', and others that are at the core of a new group of sets describing, via the Longer Term data, an 'american point-of-view (in) transition'. This new point-of-view includes language that suggests that the USAPop moves its understanding to 'gold/silver' as 'being endless flow (of) wealth)'. This language has appeared for the first time within this major sub set (and former entity). Further, these sets have extensive cross links over to the Markets entity and a majority either touch upon or terminate in the 'US dollar' sub set. These sets are further linked over to the SpaceGoatFarts entity where we find that many terminating sets include 'political unwinding', and 'political unrest', and

'social unrest', and 'gulag america' {ed note: personal choice, others offered by details include 'corporate prison nation', and 'enclosed (encamped) populace (under) siege'. The effective range of this language is from September through December 2015 with the latter bringing in the longer term values for 2016.

There are a large number of new sets going to the idea of 'new SOCs' {ed note: our term for 'self organizing collective'} that will be 'swelling (with) new attendees/participators' that in their turn are supported by aspect/attributes including '(being/coming) out in the open'. There are many supporting sets for this latter language such as 'demonstrable outrage', and 'righteous anger (visible in) street crowds', and 'street college(s)'. This last is an interesting descriptor set that goes to the idea of self-organizing groups building 'street curriculum daily' to 'keep even / get ahead of ' the 'education needs (of the newly arriving/newly awakening) crowds'.

These data sets are metaphorically piling on top of their predecessors which included 'loss (of) faith', 'lost confidence', 'seeing (with fresh eyes) the corruption (of) governments', 'loss (of) illusion', 'loss (of) respect (for government/officialdom)', 'seeing through propaganda (for the first time)', becoming aware of (propaganda/corruption/elitism), and numerous others in the same vein. While these sets are arising from the Immediacy data and Shorter term sets, the carry-along effect is bringing in far more Longer term values than both other types combined. The net effect of this suggests that a 'long awakening' is becoming visible in the media in the last few months of 2015 that will persist for what seems to be generations given the ratio of Longer term to other data types.

Something similar to the European 'military as refugee' exists within the USAPop but also includes vase numbers of veterans who are without sustenance as their care-system (vet benefits) breaks down.

The data sets show that the USAPop will also, concurrent with the breakdowns in the VA system, also be experiencing 'severe housing crises' in several states and regions. These housing crises will include infrastructure failure (water, electricity, transportation) such that municipalities and local and state governments are hard pressed to cope with the numbers of people being displaced. Further the accretion patterns within these sets also include a 'major pollution' event (yet upcoming) that will 'induce (most of) several counties populations to flee the area'. Again each of these sets have cross links terminating in other sets indicating deep failures of the government as the various agencies and organizations within government attempt to 'manage the situation'.

The data sets are pointing toward government 'management' being such a large cause of problems that over the course of very late 2015 and through 2016 a major new social milieu will be forming in which the basic precept is 'self (or local group) reliance'. The data sets indicate that this meme moving through the social order (especially during an 'election season') causes major government disharmony and internal contention/conflict.

The data sets are indicating that at some point in 2016 the federal government will decline to prosecute people in many areas as they cite 'jury tampering' which is their euphemism for "unable to get a jury of locals that will accept our point of view", and as they will be without funds and the judicial system

itself will be dysfunctional, this will mean many repetitious statements in the media about 'mercy' and 'local justice' will be part of the positive feedback loop for the 'self reliant' meme.

As modelspace is moved through September 2015, the USAPop gains sets that are pointing toward a duality unlike anything seen previously in the game of American Politics. There are data sets indicating that both a fracturing and a uniting will be taking place. The fracturing is within the various political parties from the top down to the bottom resulting in 'rejection (of the) illusion' being offered by their former political identity. The fracturing is described as being at a grass roots level to begin, and strong enough to impact fund raising efforts so seriously that the Two Party Dictatorship remains looking extremely as though it is the 'Rich and Powerful Party' as nearly 100% of its meaningful moneys end up coming from fewer than 20,000 (twenty thousand) people nationwide. Further problems come into the political picture as the data sets are forecasting that the wave of defections will flow upwards and remove a number of key staffers who actually get things done. Further sets point to political opportunists who will be near-to-mid-top and will quit their parties in attempts to ride the popular wave. Chaos will be something of a dominating linguistic appellation for the American political scene from about February 2016 onward.

As modelspace is progressed through the rest of 2015, new data sets are accruing that are going to the 'collapse and/or disappearance' of the 'pension funds'. These data sets are seemingly referencing all manner of pensions including government programs. The 'private pension funds' will also be hugely impacted both by the credit freeze, but also by the attempts of the government(s) to get cash/money/liquidity from 'anywhere' that they may. As may be expected, the participating members of these pension funds are not pleased. In episodes not seen in the USA in some time, large numbers of (formerly) middle class people take to the streets and riots and violence ensue. The visuals coming from these large demonstrations are very incongruous as they describe young military and police beating, and being beaten by 'aged' and 'infirm' retirees.

The many riots and other 'carnage (actual deaths video taped from riots as old people cut down by police)', also include supporting sets for the 'food riots' that will sweep through the eastern seaboard states. Please recall that we have had longer term data sets for these events since 2005. The descriptions that began in those data sets are still being reinforced and supported by new data. These sets include the 'food riot spills over into secret military installation' sets. These sets would seem to be within the next 2/two years of appearing within the media (what is left of it), as well as on the P2P information circuits (social media sites). The data sets are still building under the idea of a 'secrets revealed' dump of massive proportions as the 'space alien material/documents' are liberated and set into the wild during the riots. The data details go to the idea of a group of young people who realize what they have discovered during the event, and they set about systematically removing and disseminating the information. At that point, even though the government becomes aware of the situation, they are powerless to do anything about it, nor to take retribution after the fact. Now in the newly accruing sets we had aspect/attributes that show some of the secrets revealed to include the 'USA assassination files' for the last 2/two centuries.

Other problems appear for the 'military industrial entertainment complex' within USAPop data at several different, emerging levels. There are new supporting sets for the "dot mil's" {ed note: includes subcontractors} that are indicating severe structural issues will appear within both physical goods (ie:

airplanes, boats}, as well as within the 'organizations' as the credit freeze expands throughout the western economies. The data sets are indicating that the DOD and subcontractors will be 'bereft', and 'dry', and 'broke', and 'deprived (of cash flow)', as the credit freeze deepens. The issues apparently involve chains of supply that fail when companies producing sub-components fail, or are unable to secure financing for payroll, and transportation. Further problems arise with supply chains involving importations of foreign goods as these are indicated to 'dry up' in a very spectacular fashion. Further detail sets within these sub sets are also in the direct supporting chain for the ALTA forecast from 2007 of US (foreign) military bases abandoned and collections raised by local populations to get the soldiers and workers back to the US.

Other problems for the directors of the dot mils is a widening separation between the populace and the military. Problems with military pay and veterans treatment are showing as causing rifts between the populace and the 'command and control structure' of the military-industrial-entertainment complex. The data sets are pointing toward disruptions at all levels for a number of 'key plans' that the directing staff have in motion. Problems arise in that lower level functionaries are essentially living and trying to work in a fading empire quickly passing from "3rd world" status down into "dysfunctional/failed state" while their superiors are still functioning at a global level. However it is interesting to note that the data is forecasting that even the 'elites' in both military and entertainment, will, in 2015, start receiving large doses of reality in the form of major breakdowns that leave 'major players' both stranded, and bereft of any meaningful 'power'.

The amount of corruption being indicated to become visible over 2016 is showing as being affective of the 'political season'. The data shows that the corruption exposure causes economic problems within the social order by way of the 'hijacking/stealing' of the 'welfare system'.

Other areas within the USAPop are showing that the 'daily breakdowns' of the various 'electronic support systems' cause a 'wearing away' of both 'trust' and 'confidence' in the "system".

IndiaPop
Creating a new form of medical diagnosis from computerized modeling of a newly created type, a group of firms from India are showing in the data as being at the lead of the 'next envisioning of ayurveda (human/medicine)'. These new medical devices are showing as cheap, easily replicated, and reliable even in rough conditions. These devices, at the start, may be bulky, but the data is describing something that will become hand held and very much resemble the Tricorder from Star Trek's medical bay. This device is indicated to be appearing just as the refugee crises globally are producing huge waves of illness and disease spread.

Other data sets for IndiaPop include their own issues with weather/climate refugees, and serious problems with ocean currents and coastlines. Some of the erosion from storms and ocean current changes are indicated to bring out new artifacts of a 'deeper civilization' than previously known in the region.

The data sets are describing other regional issues that will bring the Indian populace to a new relationship to their military. Further that the Indian military will be producing some globally viral

video of a spectacular rescue (at sea?) that will be 'capturing imaginations' and provide something of a global 'cool points' explosion for all things Indian.

It needs to be noted that the data sets are pointing to an Indian (or of Indian extraction) who will suggest 'The Workable Plan'. These data sets are mostly longer term values running out several years, nonetheless, the data would seem to suggest that at least the beginnings of the Workable Plan solution (to global economic problems) will be rising from the Indian sub continent sometime before 2018. The data sets are suggesting that the plan will arise from a mathematician who has a concept breakthrough in the area of something akin to 'robust distributed systems design'. In a manner very reminiscent of Satoshi, and the emergence of blockchain technology with the public or popular face being Bitcoin, the data is suggesting that the 'Workable Plan' can also be considered as ' disruptive technology' and while facing opposition, the 'growth by network effect' model shows in the data as the 'idea seeps' into the 'public consciousness' where it thereafter 'resides with very long term impacts'.

ChinaPop
Now (grudingly) being admitted as the 'drivers of global economy' by the MSM, the ChinaPop sub sets are filling with aspect/attribute sets going to the idea of a '(western) mainstream media fit/seizure' as chinese authorities 'crack down' on 'western propaganda machines'. The data sets are indicating that the authorities in China will conclude it was 'western media propaganda' which 'caused or exacerbated' the Chinese stock market implosion. Further they will mandate a number of new controls on all things 'western press' that is showing as seriously impacting western media corporations. Further sets within this group include hints that inter-governmental fighting will break out within several western governments as they attempt to decide 'if, and how to' support their propaganda press arms. The data sets are showing that several western media personalities will be 'detained' or 'imprisoned' as a result of their being in China at the wrong time.

The continuing downturn of the Chinese stock market shows as causing serious problems for the 'ruling cabal of criminals' that control the Western markets. These sets also include cross links over to the ChinaPop sub set of GlobalPop where they terminate in sets that include a 'new effort (at education)' by the Chinese authorities about the 'criminal western governments'. These sets are forecasting that large expenditures of time and money will go into an effort to portray the western power structure as a very successful and wicked criminal gang. That it is a collection of criminals and psychopaths makes the efforts easier. Some data sets would seem to suggest that this becomes a new form of social 'gaming' in China (context not yet formed so no further details) that will take nearly 10/ten years to run out the trend (fad).

ChinaPop sub sets are also providing us with yet more data details within the Immediacy data types in support of the 'new electrics'. These new aspect/attribute sets are growing within the 'electric triangle' of India-Canada-Siberia. These new sets are going to the idea that a Chinese Russian 'cooperative' venture will begin to 'explore (successfully) the electrical properties' of these new Siberian diamonds (described in these reports a number of years before their announced discovery by the Russian media). These sets have new cross links to 'Chinese (development bank?) funding' of a laboratory where our 'Indian mathematician' works and apparently has the report on these electrical properties made available to him. Thus starts our chain leading to both the emergence of the 'new electrics', and the

renaissance of the 2020s and beyond.

Further problems facing the ChinaPop include the upcoming 'House of Saud' debacle that will place China in the unfortunate position of both peacemaker, as well as "rescuer (of) american 'assets'". As forecast in previous ALTA (and IDIR) reports, the invasion of Yemen by the House of Saud is "its own punishment". This is because the military defeats of the Saudi Army, and the subsequent guerrilla (cross border) invasion causes the 'House of Saud' to run for its life. It is the 'flight of the princes' which will be the temporal marker for the ChinaPop rescue of the 'regional assets' which will include 'american resources, and personnel'. Other nations suddenly indebted to ChinaPop and its military and diplomatic relationship with Iran include 'Germany, Italy (minor amount), Britain, and France'. Some data sets would seem to suggest that the events surrounding the 'rescue of regional assets' also involves high level diplomatic dickering and trading as the data is pointing toward a 'new sales arrangement' from France to China for 'naval support ships' following the events of the 'guarding of the ports (and) ways'.

Further data sets accrue to the 'flight of the princes' that place this as a very significant temporal marker for other global events including many Markets changes. Some of these have terminating sets within ChinaPop sub set of the GlobalPop entity. These sets include references to a 'discovery (internal to china) of true value' which suggests a 'revaluation' of the 'precious metals'. This 'discovery of true value' is itself a temporal marker for both Markets and Terra entity events. See the discussion about the 'General' in Markets entity section.

ChinaPop sub set is growing in supporting sets for 'discord' over the 'industrial standards' issues (varies locally). It would seem the data sets are forecasting that the central authorities will use the current period of markets disruptions and install a 'new deal' sort of plan (apparently long in development secretly) to 'refocus' the social direction toward 'clean growth'. This new plan will include a 'new vigor' in 'patrolling for hazards (within industrial areas)'. The data shows cross links to other uses for this plan at an internal level. The 'clean growth' plan is showing as providing a 'next level of internal economic growth' as the chinese central authorities discover it can be profitable to 'clean up and protect' against errors and waste.

Markets
A major problem, of an emotional and mental nature, will be afflicting most if not all of the personalities that we call 'traders' as we move forward in this year. The data sets start accruing in mid September, in supporting areas for the coagulation, in which 'traders' are showing as 'living in denial', and 'performing rituals', and 'consulting wizards and sorcerers'. These sets are in their turn supported by aspect/attributes which include 'depressed (when examining reality)', and 'unbelieving (of what senses are reporting)', and other language indicating that the 'global equities melt-down' ('ooze out', 'flow-out' and other similar language appears) will not be understood for what it is which in turn will cause a large (most) percentage of the traders to 'ride it down' trying to 'ride it out'.

The data sets are filling in the tertiary supporting levels within the 'daily traded paper debt markets' set of the Markets entity for 'suicides' {ed note: many of which will be legitimate rather than bank hits} of not only traders, but also 'principles', and 'clients'. Modelspace also has new growth in sets for 'fleeing

(fund/pension managers)', and 'mobs (of aged clients) crowding through brokerages (NY/London/Hong Kong in visuals) seeking their money'.

The data sets are placing very large supporting sets under the 'fading', and 'wearing down', and erroding confidence of/in central banks and paper debt instruments. Not only in the public at large, but also within the trading 'community'. Here the data sets are speaking about 'out flows' and 'runs (on) brokerages', and 'beating up/mobbing brokers', and 'fund managers' being 'dragged off golf courses', and 'from within their houses' to 'face mobs demanding money'. Other sets go to a 'brawl' that will develop in a very up-scale restaurant (likely NY or environs) in which 'brokers' are beaten, and 'crowned with food' before being driven from the shambles of their 'party'. Further sets are showing that a case of near copy, a similar scene will be video taped by guests at a function on the west coast (likely LA, southern california). In both instances the motivation is pension funds lost or reduced significantly.

The data sets for the Markets are now being dominated by rising supporting sets within the secondary support level by the 'gold and silver' sets. These sets themselves are being propelled into new levels of highs within the multidimensional arrays that hold our emotion quantifiers and qualifiers. These secondary support levels include new language such as 'fellowship (between) gold and silver' and 'rising (in) linked (fashion)'. These in their turn are supported by language going to the idea of 'new (taken out) highs', and 'far look (to see the) end (of the) rise'.

The newly accruing language for the 'gold and silver' sub sets within the Markets entity includes sets that include 'providing sustenance', 'able to quench thirst' { ed note both of these and other sets are in support of 'silver (pence) minor pieces'}. Other sets bring out data going to the idea of 'bartering/trading (with) silver coins (as a base)'. The data sets have supporting language going to 'fractional ounces' as well as 'grams'.

A very large number of sets within the Markets entity are terminating sets for other entities, or for internal cross links. Many of these terminating sets are filled with supporting language replete with 'panic (to own/possess)', and 'searching (desperately) for (mostly forgotten (old) treasure (from memories))' and 'greed (driven) quests/searches for gold/silver heirlooms'. All of these sets are within groups that begin appearing in late September and grow appreciably as modelspace is progressed through to the end of December. At that point in modelspace movement several new sets burst into the display and intersect with the 'gold/silver' major sub sets. Within these sets there are rapidly filling sets containing language about 'governments' and their 'reactions' to the 'developing (transition state of the) world'.

Some of these sets are forecasting that some governments will attempt as early as late December 2015 to 'suppress the use of gold/silver' for local or in-country transactions', while others will be doing everything thing in their power to 'solicit gold/silver (from the) populace'. These latter sets are cross linked internally over to sets going to the idea of 'if you don't have gold, we don't trade' becoming a prevailing attitude among countries around the planet.

The data sets are forecasting that precious metals are so scarce, especially silver, following the many

markets implosions across 2015 and the first half of 2016, that they become TOO precious to be allowed to be used for industrial purposes. There are several very thick ropes of cross links from the technical/industrial sub sets of the silver sets that go over to the SpaceGoatFarts entity and the GlobalPop entity pointing toward new technologies developed in labs nearly simultaneously in different areas of planet in which copper is altered at a molecular level to be an effective replacement for silver in solar and other energy or electronics based devices. These sets are part of the 'new electrics' meme that has been growing for over a decade in my work. These sets are part of the same longer term data type accretion sets that included such forecasts as the 'unique russian space diamonds' recently announced by Russia. These and many other 'new electrics' specifics forecasts have me place a reasonably high expectation of fulfillment of these linguistics. The current forecast from modelspace movement would show early signs of 'too precious silver' in late 2017 and would have 2018 for the 'laboratory breakthrough' that sets of the new form of 'chemical engineering' that has been forecast, since early 2005, as one of the 'three legs' of the 'first renaissance' of this century.

As modelspace is progressed into September, and then through into October, several new sets featuring Army and/or Military show up in supporting positions within the Banks sub set of Markets entity. These Army references over those two months appear and then rise to the tertiary level of support. These Army references have many supporting sets that seem to indicate that the data is focusing our attention on the Chinese military, specifically pointing at a General (of distinction) who apparently will be 'arriving on the global stage'. This General is showing either as being promoted or giving out promotions, but the linguistics would seem to favor his being 'promoted' and into 'authority to make military decisions' over some region or matter of consequence. The appearance is also supported by sets going to the idea of a 'reshuffle' or 'large numbers being overwhelmed by a small group' and there after 'ceding loyalty (to the) new agenda'. Much of the supporting sets for this last has a certain 'New Deal' flavor to it that is suggesting that a 'bold initiative' is tried out by a 'bold (young?) new leader' who is able to 'coalesce the Army and populace behind him'. That this individual has so many ties to the supporting sets for banks may seem odd at this time, however the data accretion patterns are showing up as an intersection that produces consequences of global note. Much of the data suggests that the General to pay attention to will have either Air Force or Space Force (or being a pilot of jets in his past). As the shorter term value sets accrue the pattern is suggesting that this General will be a 'point upon which (the banks) pivot'. The data brings along longer term emotional quantifiers for a decade plus level of impact on the Banks.

The rise of the General to prominence is showing as a result of the Army being negatively impacted by the Banks. The supporting sets are forecasting a 'calamity (for the) Peoples Liberation Army' of China and its many and very diverse economic enterprises (upon which much of political power in China is based). In this 'calamity' the data would have it be 'breaking the (internal) PLA bank' that results in 'emergency meetings' and 'internal power struggles' as the 'underpinnings come loose'. The General emerges from this struggle described as 'brief, violent, silent, decisive' and is immediately 'moving giants' with 'tens of millions of hands'.

The data is holding a positive emotional sum state on the General and his reformation of the Army and Banks as modelspace is progressed through to November. Much of the drama component of the data sets are low visibility until in late September and then they are slowly rising as though there will be a

near continuous rumbling of rumors until late in October (more or less) and some 'solid' information available in November.

Some internally linked sets from the General's supporting sets are showing as having an impact on "global real estate markets" in September and October, however this is just the beginning with the impacts forecast to run nearly 2/two years. These sets are also in supporting positions to the 'capital flight cops' and other sets indicating a very very serious effort by the Chinese government to 're-obtain lost funds via asset forfeiture'. These may be due to efforts by The General or we may discover later that his power base includes this developing aspect of the Chinese political-social matrix.

The data sets are indicating that The General will be but one of several dozen attention grabbing developments in/from China. In some of the other sets we have indications that the stocks, formerly considered to be 'great possessions' will be 'dissipated in a great wave of dispersion'. These data sets include several references to violent shifts of funds within internal markets into such as 'gold mining' and 'bitcoin companies' but other than that, the data is lacking any brightness whatsoever.

There are internally cross linked sets that go over to Bitcoin and its many supporting sets with China as geographic references. In the newly accruing aspect/attribute sets the data shows BTC as 'bursting ahead' due to a union that produces a sudden rise within the social consciousness and discussion. Some of these sets are in support of the 'BTC as fashionista accessory', but in the main these are new sets focusing on new developments globally that will push BTC into a position of prominence in several roles. Not only such areas as Greece, but also in very diverse areas such as Africa, Australia, and even USA, the 'new fame/attention' for BTC is showing as 'being a motivating force' that produces shifts in mass behavior. There are repeated references for 'joyousness' that will be a captivating force for people as they move into BTC. This is likely referencing the same 'gamblers frenzy' language we once saw for the Chinese stock markets. As word spreads of some of the fantastic gains (in local currencies) being made by BTC, the impact will be magnified as many try to 'pile in' to the 'currency'.

The Markets entity is filling with sub sets going to the idea that politics, at a local level, but applied across the planet, is going to demand solutions from the central banks, first, then markets second. The politicians are described as being screaming, shrieking, seeking, slavering, demanding, insisting, and imploring, and begging for relief from the public pressure that is building so rapidly, and so widely as to threaten total social disruption. This is showing in the data sets as becoming a dominating theme of political discourse from late 2015 onward.

The data sets are indicating that much of the political-social pressure being put on the political sector that has the professional politicians so freaked-out, so beside-themselves, is coming as a result of the failure of the electronic (internet) based infrastructure that had formerly been reliable in providing the base support levels. The data sets are showing that the welfare state electronic support system, by December of 2015, will have had several failures so large as to be affecting multiple states. Further errors within the system will be 'stacking up' to the point that efforts will be required by state governments at levels they had not anticipated. This will lead to internal failures and many laughable situations when the many patches and fixes are applied to the system failures as they are being

encountered. Some of the laughable situations will become national sensations promoting a number of 'characters' into the public consciousness.

Further electronic problems will be occurring as systems globally run into several 'hard stops'. There are indications for bond and stock and currency systems that over the Fall (2015, northern hemisphere) and into 2016 be 'failing' repeatedly. Some of the failures will propagate 'garbage data' within the system and lead to several lock-ups as various markets find trades being blocked by electronic nonsense preventing algorithm execution. And example might be a sudden rise in interest rates on a bond of several hundreds of millions of points. It would not make trades easily accomplished.

As noted, politics and markets are essentially the same thing, now as always, especially at an international level. In our data sets are now accruing several sets that are going to the idea of 'gold-mine wars'. These sets are focusing on several areas, and at this point, 5/five geographic regions are noted, among them the 'created islands' in the south China Sea. At this area the data sets are suggesting that the chinese know far more than they are letting on and that the newly created and militarized islands are not merely a far flung outpost, nor a strategic 'statements' of power, but rather have been chosen and created as part of a much larger project involving ocean resource extraction. The data sets are including fresh water in these sets but primarily are focusing on minerals. It is worth noting that some of the previously forecast 'new lands rising' in ALTA reports going back to 2005 are within the region that China is now fortifying. Further, the data suggests that over the next few years, as part of the 'giant economic recovery effort' made by the chinese government, as well external factors, the region of the south China Sea will be extensively mined. This will cause all kinds of contention with regional inhabitants as the impacts on already depleted and nearly extinct fisheries will be severe. The local inhabitants will be calling the period something akin to 'The Fish Wars'. These linguistics will find an echo in the Caribbean as 'The Conch Wars' in which local inhabitants will wage wars of sabotage against foreign corporations devouring resources in their waters. Returning to the south China Sea, we note that both IM and ST data types are suggesting that very soon we should see signs of 'geo-thermal power generation' at one of the islands. This is a temporal marker for the next stage in the global markets evolution into hyper(stag)flation.

The 'hyper(stag)flation' is also supported by sets that indicate that in spite of everything that the Federal Reserve can do, the 'interest rates' begin to rise during the coagulation of the last 3/three weeks of September that sets the 'dollar' up for wild actions in October. This period is being described as the 'dollar/yuan panic'. This part of the data is focusing on great volatility within currencies and within the 'equities (aka debt)' markets. Further, the 'bond trade' and 'capital flows' become some of the most bespoke language on the social media across the planet as they publicly break-down.

Markets entity has very large data sets that still are growing at very considerable rates. In some of these sets the data is forecasting a 'great devaluing' in which there are supporting sets that are going to vast amounts of 'debt' that is going to 'disappear' or 'vanish', in many cases, actually, over-night. The 'great vanishing' is described as global, begins in China, spreads to the western economies by way of the EU, and then sweeps over the Americas. Note that the data progression is talking about the next, or up-coming wave of devaluations and not current economic problems. The 'great vanishing of debt' is a participating sub set within the credit freeze set. It is referencing a 'stepping down' of 'valuations' on

things (not debt based 'assets' though these also lose value rapidly, but actual stuff) in four distinct 'passes' around the planet over these next 5/five plus years. The data sets are suggesting that in reaching the early 2020s, some items of 'value' in today's broken financial world will be worth 99% less than they now fetch! These include things like real estate, art, other 'collectibles', and such. However the data sets also show that over 2018 and 2019 a 'valuation shift' has occurred such that 'profitable business', or 'operating machinery (heavy equipment, factory kind of stuff)' will have rising valuations from that point forward, even though they are few and far between. It is during this period that the western societies begin their 'great recycling effort' as they attempt to 'recover value' from the 'mal-investment period (2000 – 2016)' by carefully demolishing malls, abandoned factories, sub divisions, and commercial real estate of all kinds while also just as carefully recovering usable materials, wire, pipe, et al.

The Markets entity has a large growth area within the propaganda sub set that goes to this long running meme of 'end cash' which is also terminating sub set on a cross link from the 'end freedom' sub set within TPTB entity. This 'end cash' meme is showing as 'hitting a hard wall' over late November and throughout Winter 2015/2016 (northern hemisphere) as the various 'electronic/electrical infrastructure' problems, crashes, false restarts, failures and other obstacles intruding in from the credit freeze bring about repeated 'times/periods of unavailability' for 'electronic assets/money'. Further aspects/attributes within this set go to the idea that some cell towers will be working when ATM's are not, and that those people with 'money on their phones' will still be able to 'do business'.

As modelspace is progressed into mid year 2016, new patterns are emerging that suggest that many areas of the US housing and commercial real estate will be devastated and non-functioning. In some of these areas, the data is describing former strip malls, and commercial office buildings being 'opened' (sometimes by the owners, sometimes, not) for the formation of 'impromptu markets' where local food growers/providers will be trading for items of value. The descriptions make these gatherings for local trade sound very much like 'souks' in Iran. In some of the data sets we get glimpses of thousands of people who will gather routinely (every weekend, that sort of thing) to try to sell whatever they can of household or personal possessions. The data continues to describe multiple mile long boulevards that are lined on both sides with tens of thousands of sellers. The data sets contain language going to some of these areas becoming 'new public commons/markets' over these next 20/twenty years of struggle.

New growth areas within the Markets entity seem to be suggesting that efficiencies within the blockchain technology area will be emerging in the form of new, very effective businesses. These businesses are showing with descriptors that include 'suddenly', 'dominating', 'displacing', and others of a similar vein. These descriptors bring along some of the imagery of a 'mainstream' being 'blind-sided'. The 'blind-sided' language is showing as especially affecting of several international corporations that will be overturned, displaced, upset, and bankrupt. This language reflects much of the language also seen recently with Uber versus Taxi's. This is a point of 'technology adoption' that is described as 'springing into life'. These new 'businesses', are not necessarily really 'businesses' as we understand them today. Much of the descriptors new activity reads as though the early language we saw for "SOC"s which are this reports designation for 'self organizing collectives'. These likely are NOT businesses recognized as such. The data is showing that some new 'ventures' is a placeholder for what name will evolve for these quasi-businesses/social-action networks. These are being described as being

very large obstacles for old businesses to maintain their business as usual mode of operation. The disruption sub sets are growing rapidly for all manner of things that the government is currently doing, and frequently, charging very high fees in the process. These new sets show that universe has a grand sense of timing as many of the governmental functions will be withering away just as these new 'organizations' does not really do it, say, 'peer-2-peer hubs' and a 'new level of efficiency' becomes possible (in some areas/regions).

SpaceGoatFarts
The data sets contain some new areas that are growing rapidly with both Shorter Term data as well as Longer Term data that is of the multiple generation kind. These data sets are growing in the area that has been labeled as 'the break-away civilization'. These new sets are accruing in support of a sub set that is describing the 'break-away civilization' meets the 'ever unemployed generation(s)' in the midst of the 'largest commodities (haul) from within earth ever' as a developing super set of what is occurring within the other, combined, entities.

Within these new growth sets the Shorter Term data types are describing 'first contact', though in this case it is not between humanity and space aliens or inter-dimensional beings. Rather the aspect/attribute sets favor the interpretation of humanity face-to-face with break-away civilization 'scouts'. Within the data the 'scouts' or 'scouting party' or 'reconnaissance group' are coming across as though they are somewhat 'error prone', or, perhaps more ominous, they are a 'sacrificial pawn' in the game that the break-away civilization is playing, and of which humanity is mostly unaware. The detail sets are suggesting that an 'encounter' between an 'eco-group (of earth bound humans)' with some of the 'break-away civilization scouts' will be 'observed' and made visible on the internet to a global talk-storm of proportions that are fitting the event. The data suggests that the labeling of the encounter will be generally categorized as fraud, false-flag, genuine, and unknown, with the proportions spreading out such that the 'genuine' believers will be viewed as something of a 'cult', albeit one with 'demonstrable evidence' of 'super normal encounter'.

This group is also described as growing over time, and being really annoying to people trying to focus public attention to other areas. In the data sets it reads something close to the idea of the prevalent attitude of the Middle Ages (that we think now that they thought then) of 'why worry about this life, it is the life in Heaven that demands our attention even today'. The accruing descriptors include such as 'passing time (until) their (imminent/pending/hoped for) return', and 'no crises today (is too big) for (our space brothers) to fix (when they come back)'. As may be expected, these 'genuine cultists' will not be the life of any political party.

In separate sets, not related to the 'terra born, break-away civilization', the SpaceGoatFarts entity is still gaining supporting sets for an upcoming 'encounter' by our species, with a space based new understanding. This new understanding is apparently a 'hard change to accept' for many humans and the longer term sets have multiple generations still grasping for some new anchor for their thought process. The data sets are describing 'space based events' and 'manifestations' that will prompt a general discussion about what is known and what is real in the attempt to answer the question of 'what is going on?'. The data also includes 'radical suicides' in which descriptor sets point to 'radical religious people including 'leaders' who will suicide' following the 'slowly emerging space based manifestations'.

The SpaceGoatFarts entity has new growth in the areas of 'breakdowns' of earth based computer networks. These data sets would seem to be implicating some [unknown] energies or force that originates off planet. The data is not suggesting any sources of this phenomenon that is also shown as being sporadic, and intermittent. Further descriptors include 'damaging', 'causing conflicts', 'gaining momentum (*the problems seem to shift from place to place over time)', 'disruptive', 'disabling', and other language indicating dysfunction due to 'computer error'.

The data sets have new growth in the areas of UFO and other 'strange things' being seen by humans globally. Now of course, videos being so easily made, the data is suggesting that dueling 'wars' of new UFO videos will be posted globally in a gathering stream of 'public captures'. These sets are NOT related to the 'new understanding from space' sets which are new to the SpaceGoatFarts entity.

Other areas of new growth are connecting via cross links, the break-away civilization, and terra based events such as earthquakes and 'land slip'. This latter is new to the SpaceGoatFarts entity and brings a multiple generation longer term set with it that goes out 10/ten generations. The supporting sets include language indicating that the change in the land form, while not caused by the earthquakes indicated to 'walk around the planet', the 'land form slip' is large enough that it will participate in infrastructure disruption, and diaspora.

Conclusion: Hard Edge of Time!

Universe/life provides everything for us, including those challenges we *need* to experience, in spite of our protestations to the contrary. This is especially true of change. Nothing, it seems, causes nearly as much protest from humans as real change.

Our processes here at HPH are predicting your own, individual experience of change, real serious change, over this next year, and the rest of your life.

Most humans will be concentrating on the moment's experience of change, the "wait a minute! What the hell is going on here?!" feeling that overtakes the usual state of their minds and brings it rushing back to this moment, the ever present now!

We will have all been through that feeling, that moment of crisis or elation, that snaps the mind to an appreciably new state of awareness of itself in its body in its time, in this ever-present now. It wrenches the mind, these encounters with Change, and impacts the body. Most frequently, this impact is first to the organs of the abdomen, and thus the appellation of 'gut wrenching' that can be so commonly applied by all humans as we all, at some point in our lives, will experience the 'rolling stomach' and 'twisting intestines' of crossing this emotional/experiential barrier.

So much of human life is spent in some other time, in our minds, than the experience of this moment. We live mainly in the fantasies of the past, and the fantastic projections of the future. It is so rare that

we live here, in this now, that our thoughts reflect this in such language as 'live in the now', and other encouragements to center the mind here, in this instant of time. Indeed, whole schools of philosophy and human endeavor such as Zen and Yoga and Taoism have emerged over the centuries to aid those seeking to do just that, live in this now.

Our data is forecasting Change at such levels globally over these next few years that all of humanity will be provided ample opportunity to experience the Now. Most will be NOT seeking it, so the encounter with this ever present Now is going to be a shock, brought up by crises, needed by so many souls apparently that universe had no other choice and has taken the expedient approach of a collectively grand, total humanity, experience of Change.

While humanity's experience of great, planet wide change is frequent, it is unusual and rare in any individual's life. These very rare, to the individual, planet wide, humanity affective periods of change, are what the TPTB/Illuminati are trying to engineer with their 9/11 and other false flags. Those humans now alive will be very soon able to easily ascertain the difference within their own mind and bodies as we, humanity, reach yet another one of these great shifts brought about by universe JUST so that YOU, along with 7/seven billion of your bothers, sisters, and cousins, will feel it as your body is pushed into the Ever Present NOW through the real Hard Edge of Time.
