Our Next World – June, 2016

covering 2016 - 2045

Introduction

Predictive Linguistics is the process of using computer software to aggregate vast amounts of written text from the internet by categories delineated by emotional content of the words. Predictive Linguistics uses emotional qualifiers and quantifiers, expressed as numeric values, for each and all words/phrases discovered/filtered in the aggregation process. Over 80 % of all the words gathered will be discarded for one or more reasons.

Predictive Linguistics works as NO conscious expressions are processed through the software.

Rather the contexts discussed within the report in the form of entities and linguistic structures (see below) are read up in the various intake software programs, and the emotional sums of the language found at that time are retrieved. Words that are identified within my system as 'descriptors' are passed through the processing as well. These descriptor words, in the main, are those words and phrases that provide us with the detail sets within the larger context sets.

As an example, the word 'prophecy' may be read up by our software at a sports oriented forum. In that case, perhaps, due to the emotional sums around the context, and the emotional values of the word itself within the lexicon, it would be put into the contextual 'bin' within the database as a 'detail word'. Note that the context of the use of the word in the sports forum is lost in the process and is of no use to us in these circumstances. What occurs is that the word is picked up as being atypical in its context, therefore of high potential 'leakage of future' value. The way this works is that most sports forum language about future events would be statistically more likely to use words such as 'bet' as in 'I bet this XXX will be outcome', or 'I predict', or 'I think that XXX will happen'. So it is the context plus emotional values plus rarity of use within the context that flags words for inclusion in the detail level of the data base. Further, it is worth noting that most detail level words are encountered in our processing mere days before their appearance. Within the IM data primarily, and then within ST data next. But a preponderance are discovered within the IM time period. Perhaps an artifact of our processing, if so, one not explored due to lack of time (cosmic joke noted).

Words are linked by their array values back to the lexicon using our set theory model (see below), and the language used within the interpretation (detail words excepted) derives from the lexicon and its links to the changing nature of contexts as they are represented within our model.

Predictive Linguistics is a field that I pioneered in 1993. The software and lexicon has been in continual change/update mode since. This is due to the constantly changing nature of language and human expression.

Predictive Linguistics works to predict future language about (perhaps) future events, due to the nature of humans. It is my operating assumption that all humans are psychic, though the vast majority do nothing to cultivate it as a skill, and are likely unaware of it within themselves. In spite of this, universe and human nature has it that they 'leak' prescient information out continuously in their choice of language. My software processing collects these leaks and aggregates them against a model of a timeline and that information is provided in this report.

The **ALTA report** is an interpretation of the **asymmetric trends** that are occurring even this instant as millions of humans are typing billions of words on the internet. The trends are provided in the form of a discussion of the larger collections of data (dubbed entities) down to the smallest aspect/attribute swept up from daily discussions within that context. Within the ALTA report format, detail words are provided as noted below. Phrases and idiomatic expressions are also provided as details. In the main, geographic references are merely summed, and if deemed pertinent, the largest bag in the collection is discussed as a 'probable', or 'possible' location to the events being referenced within the details.

In our discussions, the interpretation is provided in a nested, set theory (fuzzy logic) pattern.

Definitions:

Aspects/Attributes **are**: collections of data that are within our broader linguistic structures and are the 'supporting' sets that provide our insight into future developments. The Aspect/Attribute sets can be considered as the 'brought along' serendipitous future forecasts by way of links between words in these sets and the lexicon.

Entities **are**: the 'master sets' at the 'top' of our nested linguistic structures and contain all reference that center around the very broad labels that identify the entity: Markets, GlobalPop, and SpaceGoatFarts, as examples.

Lexicon **is**: at its core level, the lexicon is a digital dictionary of words in multiple languages/alphabets stripped of definitions other than such technical elements as 'parts of speech' identifiers.

The lexicon is quite large and is housed in a SQL database heavily populated with triggers and other executable code for maintenance and growth (human language expands continuously, so the lexicon must as well).

Conceptually, at the Prolog software engine processing level, the lexicon is a predicate assignment of a complex, multidimensional array of integers to 'labels', each of which is a word within the lexicon. The integers within the 8x8x10 level array structure are

composed of: *emotional qualifiers* which are assigned numeric representations of the intensity, duration, impact and other values of the emotional components given by humans to that word.

and also contain: *emotional quantifiers* which are assigned numeric representations of the degree of each of the 'cells' level of 'emotional assignment'.

Spyders **are**: Software programs, that once executed are self directing, within programmed limits, thus are called 'bots', and within these constraints are allowed to make choices as to linguistic trails to explore on the internet. The job of the spyders is to search, retrieve and pre-process (part of the exclusions process that will see 90% of all returned data eliminated from consideration in our model) the 'linguistic bytes' (2048 words/phrases in multibyte character format) which are aggregated into our modelspace when processing is complete.

List of entities explored in this report:

GlobalPop
The GlobalPop entity represents the linguistic sets within the data that are focused on the future of humanity, local or global. The 'local future' focus language is aggregated into our 'global future language' sets. This entity is independent of language, alphabet, or script form, and thus is our deepest and broadest set for emotional quantifiers and qualifiers about humanity's future.

USAPop (and any other nation state/territorial reference)
All sub sets of the populace of the planet, within our modelspace are identified by either a geospatial term such as a regional terrestrial label, e.g. '**AlpinePop**', or a geopolitical label, e.g. '**CanadaPop**'. These are used to isolate the subset of the global populace to which the terms are being applied in the forecast. The terrestrial references are frequently used to provide a context of 'shared views/concerns', as in 'those things all mountain dwelling people will have in common separate from other humans'.

Markets
The Markets entity is a super set of linguistic structures covering paper debt markets of all kinds, commodity trading markets, physical swap markets, currency usage (within populace), digital currency developments, new technology (FinTech),

Terra
The Terra entity is the master set for all structures that relate to the planet, and the

physical environment of planet earth. This master set frequently and increasingly has extensive cross links to the SpaceGoatFarts entity.

SpaceGoatFarts

This master set is where all data that fits under the contexts of [officially denied], [unknown], and [speculative] arrives. Our processing discovered significant amounts of data of the [unknown], and [officially denied] over 2000 – 2003 which led to the creation of the separate entity view labeled SpaceGoatFarts. As may be expected, this set contains the references to UFO's, Area 51, Break-away Civilization, and other 'woo-woo' subjects.

Data Types

IM = Immediacy data with forecasting effectiveness from 3 days to the end of the third week. Error range is 4 weeks.

ST = Shorter Term data with forecasting effectiveness from the 4th week out through and inclusive the end of the 3rd month (from date of interpretation). Error range = 4 months.

LT = Longer Term data with forecasting effectiveness from the end of the 3rd month out through and inclusive of the end of the 19th month. Error range = 19 months.

Terms employed:

Cross links – links from one cell in the data base and its software representation to another due to a shared linguistic structure or pattern.

Linguistic structure – In my modelspace, a linguistic structure is a 'master set' and all its contained sub sets (also known as 'directly held' sub sets). At the very highest level, each and all entities within my model are linguistic structures; which, in their turn, are composed of many sub sets of other linguistic structures. Modelspace allows for 256 layers of 'nesting' of these sets and sub sets. Each of which, can and may, be a complex set of its own. Obviously the model is derived from Object Oriented Programming at its highest level.

Meta Data Layer – in modelspace, when a meme appears directly held in numerous sets, at the same level of support, it is labeled as a 'meta data layer'. These 'layers' can be thought of as a common linguistic structure that forms with differing supporting sets in the various entities. For clarity, a meme in Terra entity would not have the same supporting sets as that same meme in the GlobalPop entity, but both would be part of the larger meta data layer that the meme reveals.

Modelspace – in the interpretation, the data sets are represented on screen in a 'virtual box' fashion in which a 3d box is drawn and the lexicon linked words from the latest data processing are shown within the 3d box by position, and color, brightness and hue of the individual pixels. Using an algorithm of my own design and the predicate calculus of the prolog programming language, modelspace is populated by these data base representations in a manner that resembles 'scatter graphs', but at a 3 dimensional level. By toggling on or off several advanced features of our 3d box software, the various levels of data, and cross links and other technical elements may be displayed.

MOM – model of modelspace. In the very first public release of information from my process, a self-referencing loop was created by internet articles about the release, and thus the next time the spyders were invoked, the process crashed on self-referential, circuitous references to my own work. As a corrective measure, MOM (models of modelspace) was devised as my very improvement on the process. MOM holds a copy of my interpretation as well as links to areas on the net to exclude from consideration within the predictive linguistic work.

Set – Our approach involves the use of complex (fuzzy) set theory originating in the software industry's quest for 'intelligent machines' or 'ai (artificial intelligence)'. In our approach, the fuzzy sets are based on the ability to define such concepts as 'near', 'close to', 'about', and 'like' among many others which provide me the ability to assign a numeric representation as a 'quantifier' to human emotions which are the key element to future forecasting from predictive linguistics.

Temporal Echo – these are linguistic echos across time that will reference the same, previously forecast, meme and its emotional parameters. The language manifest in both instances, that is, the temporal (meme) anchor and its echo will be related to each other, though frequently the repeating echo is larger in both scope and intensity. In some cases the meme is 'completed' in our predictive linguistics sense of that word by the echo phase of the meme.

TM = Temporal Marker, think of this as a 'book mark' against which you may remember specific details of the forecast. These are chosen due to some (more or less) easily identified linguistic 'tell-tale' that we expect to show up in the forecast language within media discussions.

Data and Interpretation

Meta Data

The most significant new linguistic structures across all entities to appear are currently hinting at what we will call, in the ALTA reports, the 'rise of the American Republics'. The data in these sets are almost all long term values. These longer term value sets are mostly focusing on the late 2017 time period insofar as they accrue more densely as modelspace is pushed way forward. As noted, **almost** all of these sets are longer term values, however there are a small, and apparently key group of shorter term sets that all also have a directly held value group of immediacy data. So, just to muddy the picture here, we have an upside down pyramid of data here with lots of longer term sets going out multiple generations occupying the top 2/3 (two-thirds), and the bottom 1/3 (one third) being mostly shorter term sets with just the very point of the structure being composed of immediacy data. The immediacy data upon which the whole edifice is building is entirely focused on the 'dollar'. The interpretation at a meta data level is that we are going to see "THE" event within these 'months of summer' that will be "THE" pivot point for our collective, global entry into our 'next world'.

The appearance of the word 'depression' appears forecast to be coming from the 'mouths' of the 'mainstream propaganda press' for the first time as we also have the first appearance of the longer term values for the 'fading of the USA federal corporation cabal' as a 'daily influence' on 'global events'.

Terra

The continuing 'sinkhole' story is about to get even stranger as the data is now predicting that the 'sinkholes' will 'line up (into) stitches' such that we humans shall be able, should we pay attention, to get an idea of the 'new (next) shape (for) earth's continents'.

A 'change of plans' is being forecast for many 'people' and their 'institutions' that have 'interests' in Central America. The 'change of plans' is showing up in a linguistic structure that is based on 'sinkholes' and their 'impact' on the 'landscape', and more importantly, on the 'drainage' and 'aquifers'. Many of these sets are showing 'rivers' that will 'disappear overnight' or 'be swallowed' in a 'single day' by the 'sinkholes'. Other sets with the linguistic structure have 'Panama' as geographic references and are citing 'problems' for the 'canal'. Many of these sets are focusing on the 'draining (before they reach the canal)' of a few of the 'supporting rivers (to the Panama Canal)'. These sets are further suggesting that some 'sinkhole' related 'topography changes' will result in 'hazards to navigation' and 'restrictions' and 'constraints' on the 'tonnage' and 'draw' of the 'shipping' transiting the 'canal'. This is showing as having a very 'significant' and 'increasing' impact on 'canal operations' over these next '4/four years'.

There are other 'sinkhole' related sets that appear to go to one that is described as 'self announcing', and 'sub sea', and 'self extinguishing'. The idea is that all three linguistic descriptors will be true by the time that humans understand what is going on, which will be that a 'sinkhole' opens up under the 'ocean' and

'suddenly drains' a 'significant quantity of water' that then reaches some form of 'intense heat' which is what 'returns' the 'water' to the 'ocean' via 'steam'. The 'steam geyser (in the) ocean' may be sited near enough to a shoreline to be visible from there, as there are not very many boat references appearing in the set (as of this processing at any rate).

Other sets within the now long forecast (and manifesting) 'sinkhole' sets are suggesting that the 'sinkholes' will begin to 'stitch (themselves/their appearance)' across the 'landscape' of where the 'separation(s) will occur'. So, the data sets are describing the 'sinkholes' as though the 'punctures' of a sewing needle leaving a 'trail across (the) earth' as the process continues. There are some hints within the very long term data that the 'sinkholes' will be (or now can be) used as a 'guide' to where the 'continents' will 'next separate'. This being suggested, the manifesting of the sinkholes (to date) would show a new 'separation' that will (may/could) 'break Mexico' into two pieces, as well as 'separate Kamchutka (the greater geographic region)' from Siberia.

We need to note that the 'sinkhole' sets are also very clear that this is 'early days yet' and we will need to watch the 'formation/appearance' of the 'sinkholes' over these next '14/fourteen years' to get a real idea of the 'new shape of earth (continents)'.

Other new 'sinkhole' sets include 'sub sea formations' that will be 'video recorded'. These 'sub sea/underwater' {ed note: some suggesting sets for 'fresh water' sinkholes in very deep lakes} manifestations are described as including 'flow holes' wherein the 'water' will 'rush into the sinkhole' only to be 'blasted out' by the 'heat/pressures encountered deep in the bottom'.

Some of the 'sinkhole' supporting sets include aspect/attributes for 'funneling (of water) out to distance' as in the idea of 'sinkholes' that will 'bring salt water far inland'. Other growth shows that 'sinkholes' are also related to 'atmospheric phenomenon' (at least temporally) and will be 'increasingly dominant (in weather/climate reports) over these next 'decades'.

Not to be boring, but more new growth in the sets going to 'ice age' and such 'extreme cold phenomena'. These new aspect/attribute sets contain language for 'extra seasonal' that is less revealing of the emotions in the total linguistic structure than the primary supporting sets which are more explicit as 'extremely (out of place or out of time) weather events predominantly focused on cold'. There are cross links internally within the structures that reinforce the idea of 'out of place weather events' such as 'floods in deserts', as well as 'snows in deserts'. Further down in the supporting structures at the tertiary level are detail sets that may be forecasting a return to the 'weather banding' we had seen a few years back with such 'stationary weather events' as the incredible heat bubble that settled over France and cause the deaths of tens of thousands.

A new, and significant set within the 'weather banding' is pointing toward 'bizarre effects (to be) seen' in the 'air' as the 'atmosphere changes'. These 'changes' are, for the next few years, going to be providing 'much more water' in the 'atmosphere'. The 'saturation rate' is showing as 'altering' such that 'more water (than we would have thought possible)' will be 'hanging about' in the 'upper atmosphere'. Note that the data shows it 'hanging around' until 'trigger(ing) conditions' will cause the 'lake (to) dump' from the air. The data is forecasting that several 'towns/villages' and even 'regions' will be 'scrubbed

away' as the 'lakes dump (onto the ground below)'. While the 'mysterious images high in the sky' will be 'gathering' much discussion, the data is indicating that the 'deadly lakes' part of the process is going to be such a 'severe danger' that 'actions will be taken'. The 'actions' are showing as including 'cloud seeding' as well as 'artillery shells (being shot into the threatening clouds)' and even some 'electromagnetic ray machines'. All of this in an attempt to get the 'danger in the sky' to 'dispense the lake' on some 'other ground'.

The 'atmosphere changes' are not only forecast to be 'visual', but we also have continuing growth in the sets for 'density pockets' where the 'atmosphere' has 'differing qualities' such that 'planes fall' and 'aerodynamics (don't) work'. The data sets are pointing towards a combination of 'upper dense air masses' and 'lower pockets (of less dense air)' that will be 'obstacles' for the 'planes'. The image coming out of the data is that the 'planes' attempt to 'drop altitude' to 'avoid dense turbulence' and 'fly into (a) pocket (of less dense) air' and 'fall like bricks'. These and other new sets are describing a 'climate (producing) new physical effects' across many 'months' as the 'atmosphere' is forecast to 'react to' the 'electromagnetic changes (in the) earth'.

The data sets accruing to the Terra entity are, in the majority, related to what can be termed 'earth changes' which implies both dynamic action, and a continuation of that action. We still have such a view developing within the data, that is, the majority of data related to the Terra entity are both dynamic, and continuing, in the 'pressures' being exerted on the 'ground beneath our feet'. These 'ground you are walking on' phrases are showing up in a number of languages which include all the continents of the planet. So, a safe conclusion may be that humanity in a larger part, is now sensing 'something' that is 'not right' with their planet.

The new data sets are pointing toward 'crumbling' of 'planetary blocks/substrates' which are going to create more of the 'sinkhole' phenomena growing over these last 20+ years. New growth is indicating that the same causal source for the 'sinkholes' is going to escalate and be 'mucking about' and causing 'confusion' about 'water' on the planet. The data is showing that the 'water' issues will include 'where to get it, after it went away', and 'why do we have so much of it?', and 'why did the tide stop way out there?'. The data provides details of 'port facilities' across the globe being 'left untouchable (by boats)' as the 'ocean levels' become 'erratic'. Some of the 'ocean level changes' are showing up in the data sets as being 'temporary', and being the result of the 'drains' being created by 'sinkholes' in the bottom of the ocean. Many of these sub sets contain new growth on the idea of the 'water' being 'returned' in the form of 'new geysers', and 'new steam vents' and 'new rivers (artesian wells seeping out of the hills)'.

The very very longer term data sets which are so sparse with details that it borders on speculation, shows a much wider, but much shallower ocean level globally such that places now within tidal range will be far removed from even being 'waterfront'. Some of the current data would seem to indicate that twin effects will be manifesting in this case, that being 'excessive precipitation being locked up in glaciers', as well as 'stretching (of the) ocean basins'.

The whole Terra entity is growing, as usual, slightly faster than all the other entities excepting Markets entity, and this has been the state of modelspace for a number of months. In the Terra entity, the growth is now higher in the 'earthquakes' and 'expansion effects' than in any other sub set. The data sets are

suggesting, via the growth patterns, that the next '4/four years' are 'hot' for 'episodic earth (reactions)'. The 'reactions' sub sets are clearly showing that 'solar activity' will be the proximate cause for the 'expansion (of) earth'.

New growth in the 'sun and earth interaction' set forecasts 'dramatic changes' in 'ground under our feet' as the 'topography' changes on 'most continents'; these sets include 'antarctica', and forecast some 'visible changes' in the 'usual face' of 'Antarctica'.

The continuing growth of the sets for a very large earthquake in China have now added many internal cross links over to the 'expanding earth' sub sets. These new growth areas include sets for 'disappearing aquifers', and 'changing tidal flows', and 'rising sediments (from harbor bottoms in upheaval)', and 'land slides' that will 'cover coastal roadways', as well as 'push over (into the water) train tracks'. Further sets include details for 'major (globally recognized) bridges' that will become 'useless' and 'dangerous' in 'a very frightening instant' during the 'earthquake'. Now what is necessary to understand is that none of these sets mentioned in this paragraph are going to happen in China. All of these are the 'pre-' and 'after' effects of the 'earthquake'. These sets are also suggesting that 'ocean currents' will be altered by the forces involved in the earthquake such that 'navies (will be forced to) re-chart' much of the 'coastal pacific rim'.

Data sets continue to accrue for new 'sea creature deaths' involving both 'invertebrates' and 'mammals'. In the latter instance, many cross links to the SpaceGoatFarts entity are suggesting that 'something (more human than not) dead' will 'wash up (on a) public beach' where 'the western powers have no juice', and the 'story' will go viral. The sad part is the 'death levels' of the 'sea creatures' is going to be totally 'beyond our ability to grasp'. These sets are suggesting that both 'sub sea heat producing vents (with toxic chemicals pouring out)', and 'sub sea earthquakes (causing prodigious land slides)' will be causes for the 'die off levels'.

The Terra entity has new sets for 'venting' behavior coming from 'streams of', or a 'series of non-volcanic vents'. While some of these 'vents' are showing as 'producing steam' and 'hot vapors', the source would appear to be an adjunct effect of the 'sink holes' in which 'water' is routed through the planet to reappear in totally different places. Thus the Terra entity is showing that 'hot salt water' with 'dead sea animals' in it will be 'gushing out of (new) vents' that will form in areas 'far removed' from the 'oceans'. This is, as may be expected, going to cause some real excitement among humans.

Other 'odd earth phenomenon' are forecast as including 'ocean "lightning"' in which there will be 'videos' of 'lightning' that will 'appear (to be) at the bottom' of a 'sea'. This 'effect' is being described as looking a lot like a 'major sub sea welding operation'. If so, it is likely NOT humans doing the 'welding'. And while looking like 'welding', the 'colors', and 'intensity' of the 'effect' are described as being 'not quite right (for sub sea (human) welding)'. These sets are mostly from the Terra entity where the descriptors have the 'phenomenon' being 'reported' (likely by 'oil service vessel employees'), but there are also SpaceGoatFarts entity cross links which go to the idea that 'much' as it 'noticeable' amounts of 'military attention' will be 'put onto' the 'effect'....but of course, are 'they' going to tell us what they 'think' that they 'find'?

Some other 'oil' related sets within the Terra entity are showing that 'jumping levels' are going to 'beset' the 'oil industry' as 'sudden depletion' will become the bee colony collapse disorder of the 'oil field business'. We do not yet have a label for the 'sudden depletion disease', but the data is forecasting that over the next few years, the 'industry' will be 'frantically searching' for the 'source' of the 'disappearing oil reserves'. At first it will be assumed that it was a case of 'over estimation' of the 'reserves', but the 'reality' will 'creep into awareness' over 2016 as several fields, not close in proximate, will be 'drained virtually overnight'.

As a counter to the 'draining' effects of the expansion of the earth, there are sets within the Terra entity that describe 'islands' that will be 'floating' (much like the 'pumice fields' seen in the Pacific in recent years). These 'floating islands' are described as 'gas born' from the 'ocean floor' as 'volcano gasses' will be 'venting (in the thousands)' of 'cubic feet per hour', and 'vast areas (of former) ocean floor' will 'lift up' to go 'float about' until the 'hot gasses cool', then the majority of the 'floating islands' are going to 'sink', but there are a couple which will apparently get 'lodged' on 'reefs' and 'atolls' such that a 'new form of land' becomes 'visible'. Again there are extensive cross links over to the GlobalPop entity showing that something of a 'minerals rush' will be taking place over these next 20+ years as the 'earth expansion effects' are to 'shove' new 'sources' for 'concentrated minerals' into 'the (potential) view' of humanity.

GlobalPop

The GlobalPop entity has repeated new linguistic structures going to the meme of 'waves (of) bizarre behavior', and no, not Zombies, at least not showing in the data. Rather the data sets are showing that 'solar influences' will be 'acted out' here on earth as 'waves (of mental disquiet)', and 'strange behavior' will be 'reported globally'. The 'strange behavior' will, of course, be all bound up with the 'natural reaction' to the 'instant global depression' that 'blankets' humanity in 'mere days' in Summer of 2016.

As the 'global debt bubble pops' and the 'credit system freezes up' the '(mostly western) global population' will 'react badly' in very short period of time. The data shows that the 'day', that is, the actual 'day' that the 'banks shut', there will be '24/twenty-four hours' of 'riots' sweeping 'around the planet' and reported by both 'alternative' and 'propaganda media'. Note that this will not be the only 'global day (of) popular action'.

The data sets are forecasting that the 'illusion' will 'crumble around (our) feet' this year. The 'personal financial pain' that 'near instantly' descends on the 'populace'. First the early signs are showing in May as the 'global financial markets' start to become so 'distorted' that 'violent swings (think several thousands of DOW points daily)' bring 'attention' to the 'financial degradation' at a 'moment by moment' level. This level of 'global focus' is exactly what TPTB do NOT need to have happen as it causes a 'spreading panic' around the 'sore point (of paper currencies, and what is an average person in the western world to do with paper?)'.

The 'dollar wall impact' and the 'responses' from the 'financial engineering world (fin/tech)' is showing

Our Next World - June, 2016

as 'nearly instantly' taking 'away trillions' in 'retirement funds', and '(potential) tax revenue', and 'securitized assets' all across the 'western world', however we need to note that the data sets are showing that 'europe' gets hit 'hard' and is the 'first (wounded) victim'. BUT we also need to know that temporal gap between the European and the American 'experience' is a very brief one, that only (according to the data sets) lasts longer than a 'day', merely because the 'breakup/crash' would seem to 'hit' in 'late afternoon (USA eastern time zone)'.

As modelspace is progressed past June, the data accruing to the 'fiat currencies' at a GlobalPop level are bringing in 'chaos' as the 'rumors' of the 'default (of the USA (and/or Federal Reserve))' cause their own set of 'financial crisis'. The 'rumors' about the 'failing dollar' show up as 'jumping' from 'place to place' starting in (apparently) Ecuador before being 'exported' around the planet by the internet. There are data sets showing the 'panic' in the 'USA officialdom' as they 'encounter' their 'inability' to 'counter (the) rumors' as they 'spread'. Of course, the picture painted by the data does show the 'conundrum' as 'denials' are (naturally) met with 'disbelief and skepticism'. And the 'mere fact' of the 'denials' will be 'taken up' as being 'confirmation' of the 'underlying truth (of the) rumor'. Will it be 'rumor' alone that will 'crater the dollar'? Or does the 'rumor' get 'legs' because there is the 'underlying solidity'.

The data is showing that the 'public response' is also 'nearly instant' in that there are going to be 'panic rush-to-buy mobs' going to anyplace where 'precious metals' are 'for sale'. The data sets are further showing that the 'supplies available' will be 'run out (bought up)' in 'mere minutes' once the 'rumor' reaches (that local area)'. The data sets are showing that 'banks' will 'refuse (to open their) doors' to the 'metals hungry crowds'.

A number of entities including GlobalPop have new sets for 'disbelieving (my lying) eyes' as reports (and even video and still photos) of 'impossible (visual) spectacles' will be 'forming up' over these next two years as the data is forecasting that the 'atmosphere (is/will) change'. This change (see Terra entity) is going to include 'capacity' to 'support (much more) water' in the air which will be causing 'bizarre refractions (of light)' as well as 'reflections (of impossible things)'.

EuroPop

The designation of 'EuroPop' may be ending with this report. Much of the new data sets in this area are showing a 'violent attack (by muslim extremists)', followed by 'open (street) battles between core peoples and muslims' that is described as 'breaking up (the last vestiges)' of the 'EU mind set'.

First the 'crashing Italian banking system' will put even more pressure on the 'EU central control', then the 'deaths (at the hands of muslim extremists)' will be 'brought into sharp focus' as a 'cultural hero' emerges in the background. The immediacy data shows a 'young man', 'northern european', who will 'rescue' a 'hostage (potential death) situation' with some 'extraordinary skill' and then go on to 'rise in public acclaim' to the point that 'his presence' becomes (in mere weeks) 'too much' for the 'central authorities' to 'tolerate'. They then 'pressure him' in such a way as to 'reveal their motives' to the 'public' just as 'yet another muslim attack' occurs. At this point the 'young hero' is showing as 'transforming' into a 'leader' who will then gain even more 'fame' in the 'fierce street warfare'. Further, the detail sets

are showing that the real problem for the 'EU central control' is going to be the 'refusal' on the part of the 'police' to 'engage' with the 'young hero' and his 'followers'. The data suggests that this 'lack of action' will be the trigger for the upcoming 'street warfare' that will 'erupt in Europe' over Summer, 2016.

Other areas of 'muslim versus european population' data sets are suggesting that the 'jewish communities' of 'Rome', and Spain, and some Austrian cities, will be 'accused' of 'small arms smuggling' after a 'gun battle' between 'muslim extremists' and 'jewish home defense group'. While the data shows the 'successful repelling (of the) extremists', the resulting 'political backlash' (mostly over the 'innocent victims' of the 'jewish rifle shooting') is showing as doing more damage to the cultural 'adhesion' of the jewish communities in Europe than the extremist attack would have achieved.

Much of the EuroPop entity new growth is either directly to, or tangentially part of, the 'break up' of the 'European Union'. Many new sets are showing that a 'sloughing' is going to lead to a 'breaking' of the 'associations' of the 'member states'. The 'impetus' for the 'break up' seems to originate in 'portugal' and 'spain' rather than the 'failing italian banks' nor the 'remnants of greece'.

The previously forecast sets for 'return migration wave' is still growing and with the recent processing has new sets that shorter term values. This may be hinting that we are within a few months of the 'expulsion war'.

ChinaPop

New data sets are suggesting that the soon-to-be-encountered 'chinese head (economic) head winds' are not only 'expected' by the 'Chinese central authorities', but also 'planned (into) their response'. This 'planned response' is showing as 'escalating' into 'global consciousness' as the 'fear language' within the 'chinese press' over 'failing foreign currencies' as May moves into June. What is forecast to 'shock' the GlobalPop (especially foreign central banksters and cabalistas) is going to be the 'key element' of the 'central plan (to provide people's wealth surety)' over the upcoming years is showing within the data as being a 'central authority push to gold'. This 'push to gold', is described in many different ways, but it all boils down to a 'central authorities decision' that is based on the idea that 'self preservation (of the chinese officialdom power structure) exists only in the people's health and wealth', and therefore, the 'officialdom' will be 'seen' to 'promote gold', as well as to 'champion silver', and 'to encourage bitcoin'.

The data growth in the 'new program (from chinese officialdom)' in 'building out (a silver infrastructure)' is showing as including 'silver (in new) trade forms'. Please note these are continuation of sets that have been in the ALTA reports for at least 2/two years. These sets in past ALTA reports referenced the 'new forms' of silver that would include the 'chinese hat form' among others as these would be 'favored' by ChinaPop. Thereafter, that is to say, once the 'chinese officialdom' begins its new 'role' as the 'champion of the people's silver', the data is forecasting that the 'global silver industry (for money/investment)' will 'change overnight'.

The data sets are forecasting that the 'Spring of Discontent' is going to turn into the 'Long Hot Summer' as far as the 'Chinese officialdom' is concerned. The data sets are painting a picture of the 'authorities'

rushing to 'cope' with the 'desperation' of 'unemployed workers' in the 'tens of millions' as the 'infrastructure (especially electricity)' is 'reeling' under the 'demand loads' and the 'failing currencies'. The picture is one of a 'continuing battle' against 'rising chaos' and 'constant civil unrest'.

The data sets involved in the 'economic chaos' sets for ChinaPop have new phrases originating this Summer that will 'float around' the planet as the meme of 'worker/middle class desperation' goes 'global'. Some of these phrases will distill down to 'we are all Greeks now' in various languages and alphabets.

Many of the new ChinaPop sets are clustering around a central theme of the 'mid-Summer Sickness' that will be 'overtaking Chinese economy' as the 'American dollar (comes under extreme selling pressures)', and the 'American population' reaches the 'breaking point'. These sets are suggesting that the '(financial) sickness of Summer (northern hemisphere)' will 'infect' the 'Chinese economy' as 'orders for goods (in dollars)' fall to 'never before seen low levels'. These sets are indicating that the 'officialdom' of China will 'scramble' to 'try to replace' the 'lost (forever) USA dollar business' with 'yuan' and 'other currencies sales', but whatever 'success' is achieved will be only a 'fractional recovery (of lost income)'.

The 'global financial sickness' is indicated to 'cripple' many of the 'segments (of the) national plan', and to 'cause endless emergency meetings' as the 'officialdom struggles' to 'fill 1000/one thousand leaks' with 'buckets of disappearing sand'. The '1000 leaks' language builds rapidly as modelspace is progressed through Summer and into Fall, and continues at a steady pace through the rest of the year. These 'leaks' are the 'failing segments' of the 'Chinese economy' which were 'tied to paper credit streams' too 'tightly' to be able to 'disengage' and they are going to be 'wiped out' except that like the USA banking structure, many will be 'too valuable (to the) social order' to be allowed to fail, and thus will be 'perpetually supported' by the 'Chinese state' starting sometime this year.

The 'sudden wall (of disappearing USA dollars)' is indicated to cause major social movements to arise over the Summer that will end up 'occupying (the) attention' of 'chinese officialdom' for the rest of this year and throughout the next several years. It will be a 'bright idea' in the face of one of the numerous 'riots' that will be 'daily on-going street battles' that will propel a 'governmental official' from 'line officer' to 'strategist' almost overnight. It is doubtful that anyone, including those in China will ever know of this 'promotion', but we will all witness the 'genius' of his idea as the 'strategy and tactics' of the 'chinese authorities' will 'instantly shift' on the 'proven success' of the 'anti-riot plan'. The data is suggesting that the results of the 'proven strategy' will become visible in the alternative press in late August. Also please note that it is not an accident that the 'ChinaPop in Space' meme comes onto the global scene at that time; nor is the appearance of the 'twins' (in the movies) unplanned.

The data sets are still accruing with yet another major 'earthquake' and the largest share of geographic references are for a very large region that is northwest China. These sets are also still growing cross links over to the SpaceGoatFarts entity where the terminating sets are also still growing for 'CERN LHC connection' being 'voiced' by China 'officialdom'. One of the 'prompts' for the 'change' of the 'global public stance' of the 'chinese officialdom' as regards to the 'secret space and science and technology programs' is that the level of damage from the 'earthquake' is described as 'threatening'

many of the 'global financial systems' most note worthy being 'insurance' and 'global gold mining'.

The data sets are indicating that 'Chinese officialdom' is going to 'roll out (the) great change' over the course of these next '2/two years'. The new data shows that 'central bank warfare' breaks out in 2016 between the 'Fed (USA)' and the 'PBOC (China)'. The data shows the 'warfare' starts as 'serious battles' over July. The 'run up' to the 'war' is going to be an 'escalation' of the 'negative rhetoric' from the 'Fed' against 'PBOC'. Then the data would have the 'Federal Reserve Bank' attempt to 'buy strength (into the) dollar'. This then triggers a 'response' from 'China officialdom'. The 'response' is such that it causes a 'shift (in the) position' of the 'financial stance' insofar as the 'global population view' is concerned. The data sets are indicating that the 'Chinese officialdom' will be held 'blameless' while the 'USA (Fed Reserve)' is going to look both as 'clown-like', and 'stupidly aggressive'. This new 'stance' is a result of the 'response' from the 'Fed Reserve' to the 'Chinese yuan re-set (versus the dollar)'.

The data sets are still growing in support of a 'small nation' and it's 'use of gold' as 'money'. This 'small nation' is now gaining growth as a 'proxy' for the 'Chinese officialdom'.

The data sets accruing to ChinaPop over the Summer 2016 as modelspace is moved forward have 'stimulation (of the) public appetite (for) silver'. The 'pressures' on the 'silver markets' will be, after the fact, shown to be a result of 'stockpiling' of 'silver and gold' by the 'populace' in China. The data sets would have the 'officialdom' making 'big pushes' to get the 'populace moving (to) purchase'. This is, in its sets, indicated to be an outgrowth in the 'dollar stoppage' as the 'dollar breakdown' continues, and the 'USAPop' gets hit by 'high inflation' as 'dollars (attempt to) come home (to the Fed)'. This in its turn is going to turn out to be a 'huge boon' for the 'power structure' in China as the 'silver shine' gets taken up 'seriously' by the 'population'. Noting what will happen to the 'silver to gold ratio', the 'Chinese officialdom' would seem to be trying to push the 'population' in the 'right direction', though of course for their own, self-serving interests.

GaelicPop

Strange is the'gaelic' language, and by its grammar and structure, dissimilar to most other languages, excepting it shares some common base elements with really ancient languages such as Pali and Sanskrit. What is of interest at the moment is the data is showing that 'ireland' and specifically 'far old gaelic ireland' is about to 'discover itself' to be even 'older/more ancient' as there will be some 'very very deep in the ground anthropologic discovery' that will 'place gaelic (as a language)' in what the data describes as "it's appropriate time". Further, the data describes this 'time' as being ' more than a half (precession cycle, aka = great year) back', or about 14 thousand years old, or about 5 thousand years older than anyone may think at the moment.

But that is not the 'strange part' being forecast by the data sets. Very extensive cross links to the SpaceGoatFarts entity show that the 'gaelic language (samples?)' to be (soonish) 'discovered' in a 'deep dry place' will be both 'readable' and 'sensible'. It would seem the data sets are describing the 'finding' of a 'treasure of words' that will be 'in Gaelic' and be 'over 12,000 years old'. The data is showing a huge level of excitement developing in GaelicPop no matter where located on earth, and that this 'excitement' is going to both 'continue' and 'grow' as the 'discovered Gaelic language' is 'translated.

From this point in the data we are looking at lots of 'unknown' references which automatically place us in the cross links over to the SpaceGoatFarts entity. In some of the sets there are hints we may be getting a version of 'Gaelic Vimana' (ancient flying machines of Vedic texts), or 'Gaelic Anti-gravity flying machines'.

The real issue involved with the 'anthropologic discovery' would seem to be 'the authorities' in both 'Ireland' and 'the vatican'. In both sub sets the data shows that 'consternation', and 'confusion', and 'blame' become primary emotional states as the 'authorities' will be finding themselves becoming 'aware' of the 'new discovery' only as the 'public knows'. The data sets are forecasting that some months after the 'discovery', a 'governmental shake up' will occur simultaneous with the 'economic dysfunction' and the 'political scandal (of this young century)'. This is showing as making things very interesting 'politically' as the 'population' gets a 'taste of (the) weakness (of the authorities)'. We can think 'blood in the water' as a 'call to (the) sharks (in GaelicPop)'. Other 'interests' that will be 'threatened' by the 'language discovery' include, of all places, 'India'. This will be due to 'links between (ancient) gaelic' and 'ancient tamil civilization' that will 'surface globally' during the 'gaelic (re)discovery (of) ancient roots'. In this process, the 'Indian government' is shown as being 'embarrassed by its (attempt) at cultural eradication (of former Tamil participation in pan-global sea-faring civilization)'.

In other areas, the language is showing that 'Ireland' is going to have 'heaving stomach' as it tries to 'digest' yet another 'economic punch', this time from a 'currencies' perspective. As this next round of 'economic troubles' comes to Ireland, the 'emigration escape' will once again be 'opened up'. These sets are describing a brief 'diaspora' in which the Irish entrepreneurs head 'south' to 'South America'. These 'leaving (a failing economy) behind (at) home' sets are also common to both Germany and France, as their 'educated entrepreneur class' becomes 'frustrated' with 'deteriorating conditions' and decides to 'go to where opportunity beckons'. It will be no accident when residents of the EU start to see 'commercial messages' that 'feature (the) good life' in South America. In spite of 'economic troubles' in many Southern hemisphere states the data is showing that the 'young population' of Ireland will be deciding to 'emigrate' as there is 'more perceived freedom' in 'Southern economies'.

Further the data sets are showing that some of the 'advertising' will be 'wasted' as 'conditions' will be going 'down hill' so fast as to insert 'currency fluctuations' and 'failing corporations' in to the many other 'problems' with 'leaving (a) failing economy'. In other words, after a brief 'flourish' the 'emigration' meme 'dies (along with the US dollar (as world reserve currency))'. It is then that the 'young irish blood' is showing as 'turning inward (on the weakened old political system)'.

Other interesting new sets are linking the 'Australian housing bubble' and its 'internal corruption' to 'corporate Ireland'. This link is going to involve some 'large sums of currency', and will, according to the data sets, 'be opened up (to public view)' as a ' side effect' or 'unintended consequence' of a 'murder investigation' in yet a 'third country' {ed note: late processing shows 'canada' may be site of the 'investigation into foul deeds'}.

Long term data shows an 'IrelandPop' becoming 'at home in sub ocean enterprise' with a special focus on 'deep western waters' and something that will become called "The Slope' by those involved.

IndiaPop

The 'hind', that area that is the 'greater sub continent' of India is showing up in the data in several different entities forecasting much activity over the rest of 2016. These entities include the Terra entity where the 'flooding' meme is growing supporting sub sets indicating 'floods' that will be both 'extra seasonal (out of seasonal patterns to some noticeable extreme)', as well as 'extreme' in the 'extent' and 'depth' of the 'flooding'. The data sets are showing that both 'precipitation' and 'tidal surges (earth expansion effects)' will be 'joining up' to 'create (the) largest flooding in centuries' across areas of the Indian sub continent which have not seen 'floods' nor even 'heard the word (spoken over the dry dirt) for several hundred years'. The western reporting of these events will use language such as '500 year flood'.

As the 'weather/climate changes' alter the water levels across India, issues with 'wells' and 'aquifer depths' will be rising in discussions, just as 'new phenomena' related to 'ocean levels' will be 'reported' from the 'south' and 'eastern' coasts. These effects are showing as including some alteration to the 'water level depth' currently over the ancient, man-made bridge that connects India to Sri Lanka. The data sets are showing that the 'changes' to affect 'water levels' will include 'reports' of 'noticeable impacts' on the Adam's bridge structure. At this point it would appear that the data is suggesting that 'water levels retreat'. Other interpretations could possibly include the 'bridge structure' being 'raised up' from the water. Without regard to the how, the data shows that the result is the 'revealing (of) the base' of the 'bridge'. This event is described within the new data sets as being a significant temporal marker that, due to the site involved, will reach global levels of discussion.

There are growth patterns in both IM data and the shorter term value sets for the idea that 'corporations' will be 'seized up/bound up' and 'participating (in the) just in time delivery system failure' as their 'funding sources (credit/debt)' become 'illiquid overnight'. The data shows that the 'overnight failure' of the 'global credit system' will put 'officialdom' in the position of 'attempting' to 'force compliance (contractual delivery)' basically at the 'point of a gun'. The data is showing that many 'nations' (first and most in the EUZone) will be 'sending out armed soldiers' to 'enforce public contracts' such as 'fuel deliveries' and 'food deliveries' and such things. However the data sets are also showing that these are all 'attempts' that that the most successful of them will be but 'days in duration'. The data is very clearly showing that the 'just in time delivery' system will break at 'so many levels' that the 'officialdom' will, within days in most areas, 'concede' that 'they lack (the) power' to 'bring [it/whatever] back on-line'. The data sets are painting a picture of the second half of 2016 filled with 'broken down (every damn thing)' such that 'efforts (to force) food delivery (by government)' will run into 'no diesel for trucks' which will be 'caused by' no 'electricity' for the pumps, and so on. Then there will be the 'no products (due to shipping breaking down)' to 'deliver' after only 'very few days'. This is seemingly a 'western global phenomenon', however the data is also showing that as a result of the 'credit freeze up' and 'dollar wall' in the western world, the 'producers (China et al)' get hit with a 'bout of constipation (of the production line'. Note that this 'constipation' is discussed further in the Markets entity.

As modelspace is progressed over Summer, northern hemisphere, the data accrues in greater amounts to the 'dysfunction' side of almost all the 'emotional contexts' that are currently active within the GlobalPop entity. So, picking any situation in which 'confrontation' is a potential 'outlet (for emotions)'

and the 'solutions' are not 'readily apparent', the data is forecasting that the 'confrontation' will be the path taken. NOT that this is indicating any more 'dynamic' a global war/strife than we already have, but more that the situations which will prompt 'confrontation' at a more personal level are going to 'be increasing' dramatically as the 'problems' are both 'insolvable' and 'reaching crescendo'.

USAPop

Tens of millions of wheels roll into WA DC creating the largest (on this continent) traffic jam ever seen that will take WEEKS to unsnarl as the 'truckers, bikers, moms, vets, and everyone else gets really pissed at the 'USA Federales'. The data shows that they 'express displeasure' at the 'sudden' and 'shocking' occurrence of the 'reduction/elimination' of their 'pension' or 'welfare' benefits. The data sets describing the 'wheels protest' are also citing 'high (escalating) energy prices' as a participating meme within the larger context propelling the 'protest(s)' in WA DC. The data further is filled with both 'confusion' and 'obstacles' as supporting sets for all of the 'protest' sets now filling in the USAPop supporting sets for June, July, and beyond.

Part of the problem with the interpretation process is that there are so many new sets indicating 'popular unrest' and 'anger at officialdom', and all of these have rising intensity (of emotion) values, thus obscuring some of the nuance used in the interpretation process. However, the data is still quite clear that 'protests' will be a 'growing phenomena' within USAPop as various cohorts within the 'population' will find themselves running smack into 'financial' or 'political repression' by the 'central USA authorities' over Summer and into Fall of this year.

The data sets are showing that a temporal marker of the (as yet to appear) 'federal focus' on 'Alaska' that produces some 'strange and weird language' at an 'international level' is going to be a 'domino falling' for the 'global push to (put humanity) into space'. The new ST sets are showing that 'China' is going to be 'leading the push (into Space)' at a level that the USAPop will 'fail to grasp' as the 'USA officialdom' is indicated to 'rachet up' the 'propaganda' as the 'Chinese space victories (and records)' begin to 'attract global attention'. Further the data sets are showing that USAPop is going to be 'exposed' to the 'push to space' just as the 'veils (of illusion) fall' from the 'economy' leaving a 'stark reality' to be 'unwillingly faced'.

Many of the new sets of 'aggravation', and 'anger', and 'angst', and 'anxiety' that are showing up in the USAPop focusing on the 'economy'. Within the larger 'economy' set, we have 3/three basic emotional driving descriptors that are 'propelling' the 'emotional storms' soon to affect the USAPop. These include 'currency (debasement)', 'student debt/EBT cards', and 'real estate'. In all three sets there are 'significant populations' within the USAPop who are going to be 'pushed into demonstrating anger/angst/anxiety' by these three motivating memes.

The most surprising of these is the 'real estate' sub sets. These sets are showing that the 'high end' of the 'national real estate market' is going to get a 'dump' of 'new inventory' just as the 'credit system tightens', and, in spite of new 'mortgage programs', the 'price structure support' is indicated to 'collapse' under the 'weight' of the 'new inventory flooding' the markets.

Part of the 'collapse' scenario is showing as 'starting' within 'southern California' as the 'new homes' being 'dumped' onto the 'market' go 'hand in hand' with the 'support lost' as the 'mortgage capacity' of the 'USA officialdom'

As modelspace is progressed through the 'Summer (northern hemisphere)', new sets start appearing in early June and growing over the next few months that go to the idea of a 'gold pressure' that will build over these months to an incredible 'gold (and silver (and Bitcoin)) fever'. These sets are new, immediacy and shorter term values that are growing in support of the longer term sets we have had for years that have been providing the 'panic (desperation) to own (gold/silver)'. These new sets, and their widening, growing supporting sets, are now filling with data sets describing 'long lines', and 'shuttered (gold/silver) stores'. Also our new sets are coming in with 'jewelery (being sold) as metal'. These sets are large with repetitious support in the areas of 'multiple block long lines (to sell jewelery as precious metal)', and 'organized buying clubs (for scrap precious metals)', and 'national (high dollar advertising) campaigns (soliciting gold/silver in ANY and ALL forms)', {ed note: look for wording around 'turn-in your old gold dental work' as the temporal marker for this set}. Many more new growth areas in the 'crashing markets' and 'rising (panic) to own (precious metals)' are filling the USAPop with detail sets that have direct analogs in both GlobalPop (as the rest of the planet participates in the 'dollar death by repatriation') and Markets entities.

The data sets have the 'fracturing' of the 'political party system' reaching a point of 'galvanizing', and 'motivating' enough of the 'population' such that by late Summer (northern hemisphere), the discussions will include words about 'abandoning (the) voting system', and 'walking away (from the political circus)'. These data sets have new growth for 'breaking (the) mind set' that has 'democrat' and 'republican' as 'positive adjectives'. In these data sets the 'fracturing' of the 'political' part of the 'system' is a direct 'consequence' of the 'breakdown (of the) banking system'. The 'frequent failures' of the 'banking system', and the 'just in time distribution system' come up in the data as being 'pressures' on the 'population' that are SOOOOO HUGE as to produce 'dynamic rage (actual get up off their asses action)'.

Much of the new growth for the 'death of the dollar' sets is focusing on 'higher prices' which have supporting sets that first and most have 'oil/energy' as their descriptor.

Potential is being described for a 'slip-strike earthquake' that is described as being 'damaging', but also is not being described as catastrophic. Rather the data sets are showing that a 'series' of 'earthquakes' will be 'involved' in the 'shifting' of the 'west coast (north America) population'. The accretion patterns suggest that the 'shifting population' will be at least partially 'motivated' by 'perception', and 'unease', and 'bad feelings', and 'unease', and 'nervousness' that **may be** part of a larger, prescient, and psychic impression coming to a large segment of the 'population'. This 'shifting population' data sets have been in the ALTA reports and modelspace for a number of years and continue to grow at a faster rate than other sets within the USAPop. The new growth in the 'earthquake perception' as 'motivation (to) move/relocate' sets are indicating via the new emotional sums defining the emotional tone of the meme that the 'impetus' to 'move' is both 'rising (in) size', and 'getting closer (to infecting the masses)'. The data sets would *seem to be indicating that an actual 'earthquake' will be 'so affecting' of the 'population' as to 'cause' or 'prompt' several 'millions' of the 'west coast population' to 'consider living'

in other areas.

The long term data accruing to the USAPop entity for the 'gold stores' in the 'american republic(s)' is indicated to be a case of 'dig, boy, dig!'. The data shows, in the longer term sets for a couple of years out, that 'governmental functions/departments/agencies' will all be 'desperate for cash/money/gold/silver/bitcoin', and will be 'altering' the 'economic infrastructure' to 'support/encourage new mining efforts'. The data is also showing that some 'American Republics' will have 'state owned (formerly private, then seized) gold/silver mines' in an attempt to 'bankroll (the) political power structure (in that republic)'.

The data sets are showing that the 'republics (states)' are 'into gold hunts' due to the 'fading Federal governmental programs'. The data further shows that this 'focus' on 'locating' and 'mining' is going to persist for at least '4/four generations' (or about 84+ years).
Coming back to the 'economic slap in the face by a cold, dead, wet fish' that hits the 'population' this year, the data sets are forecasting that the 'crashing (dynamic) markets' and the 'flailing', and 'obvious fear' on the 'faces of officialdom' will be setting 'nerves on edge' that are in turn forecast to be the proximate cause of the 'housing market crash'. Note that the data sets are forecasting that there will be 'waves of house sellers' who will be 'in panic' and 'cracking' as they 'keep dropping prices'. Further problems are showing as the 'rich chinese' will be also 'in panic' and they will try to 'sell (their) foreign holdings'. The combined effects of 'falling confidence', and 'officialdom freaking out publicly' and 'dollar dropping (like heart attack victim)' are forecast to cause 'corporations' to 'catch (panic) fever' along with the 'householder' and attempt to 'rapidly sell' their 'house'. This 'dumping effect' is described as being 'noticeable', and 'optimistic (that a sale can/will occur)'. Many of these sets, including their terminating points in the Markets entity, are forecasting that the 'credit freeze up' which accompanies the 'dollar dumping (begins in May at level never before seen)' will nearly 'instantly' cause 'falling prices'.

The data sets have numerous instances of immediacy data detail level aspect/attribute sets painting pictures of people 'walking away from' their 'debts and houses', as well as 'people walking into (empty/abandoned) houses' as the 'credit freeze' picks up in its 'chilling' of the 'economic flow' across the country.

The USAPop has several new sets headed by 'discarded', all of which are going to the idea of 'shaking off (trivialities)' as a 'developing central (social) meme'. This meme is somewhat similar to the idea of 'self deprivation', and 'frugality', but different in that the idea of the meme comes across as shading toward 'indulgent', but, more 'concentrated'. So, in the broader context of the meme, the data seems to be suggesting that over the rest of Summer 2016, for the USAPop, and observable in the alternative media (as a growing meme), will be the idea of 'depression is here, time to concentrate on what is personally important and declare everything else triviality, and to be discarded'. Many of the supporting sub sets would favor the 'concentrate' descriptor as the rising identifier for this linguistic structure in that the idea of 'distilling to its essence' will be that part of the meme that will 'cross generations'. This meme of 'concentrate (your) activities' is described differently for ALL the different generations within USAPop, but they are all represented. The 'primary school age' are showing as 'developing self (concentration)' and 'intensity' of 'expression/thought' over these next few months such that 'adults' are

'shocked at the change in demeanor' and so comment in Fall en mass. The 'advanced students (more or less high school age) are described as 'concentrating (their) attention' on 'distraction', again to a level of 'intensity' that will be 'scary to parents/adults'. The 'adults' involved need to be reassured that the 'behavior change' is temporary, and is, in context, something of a 'party while I got the chance 'cause it looks like major shitstorm is out there and I can't face it now' attitude. As many be expected, some of this mental state will also be shading over into the 'college age group', however, what is most surprising is the 'reappearance of the hippies (cultural context)' sets showing up. The data is indicating that 'wedding planners' and 'honeymoon places' are going to do very well this Summer as there will be a 'blow out marriage wave' among lots of 'college students' who will also be, in very large numbers, 'abandoning further school'. Both of these are also 'scary to parents' who are described as 'beyond bewildered' as the 'generation (they created) astounds them'. The 'parents' are described as 'concentrating' on what will appear as 'suddenly diminishing (vanishing) days (with their rapidly maturing children)'. Note this is being described as a phenomenon packing enough emotional energy to make for months of articles, blogs, and videos on the subject, mostly all from a totally personal level. The data suggests that it will not be until later in Fall that the 'larger social movement' within these generations will be noticed and begin its own linguistic life.

The 50somethings, and the 'retiring baby boom' generations are indicated to be 'concentrating' mostly on 'staying alive' through very difficult times. While their progeny are going to be 'actively involved' in the 'social', 'economic' and 'political' chaos of 'hot Summer, 2016', the older generations are going to be hit with 'instant concentrated focus' on 'finances' and 'money' as the 'financial system' implodes. Now true the 'financial system (global) meltdown' that will begin with the 'aged papa' of 'Italian banks' going bust will affect all generations globally and almost instantly, it does not affect all equally. The 'older generations' within the USAPop are hit greatly 'disproportionately harder'. The very 'old' will take this upcoming period of 'financial system breakdown' to 'depart early'. Those who within the 'retirement' age are also going to be 'devastated' in that their 'paper wealth' is showing as 'disappearing' in a giant 'morass' of 'digital chaos' as the various 'systems', and 'firms', and 'software' begin 'separating' and 'acting badly' as the point of 'hyperinflation' is reached in the 'dollar death throes'.

The 'knock on effects' of the 'dollar crumble (towards dust)' will include a 'sudden poverty wave' that will affect the 'chinese credit markets' which in turn cause the 'panic selling (of foreign real estate holdings)' which further goes a great distance toward 'infecting (the) planet' with the 'financial melt down'.

The data sets are describing an 'American Summer' filled with 'political upheaval' at levels not seen since the late 1960's and the Vietnam War protests. Data in the 'secrets revealed' sets are focusing on yet more 'political revealing (of past crimes)' to be forthcoming over the next few months. As modelspace is progressed through June, July, and August, the amount of new growth in sets around 'officialdom' in a 'panic' about 'population (mental state) changes' ramps up significantly. The growth in detail sets around the 'government (in) panic (mode)' gets so large as to suggest that the subject of 'is the government in a panic?' to surface on its own in the alternative media. However, even the 'propaganda press' is forecast to release little 'hints' of 'government melt-down' as the 'heat of Summer' seemingly takes over the 'direction of the events (that) move (the population)'. The data sets are further gaining new aspect/attribute sets for 'blood (draining)' from 'officialdom faces (on video)', and 'officialdom

(members)' who will be 'trapped' in 'school (and other public buildings)' by 'chanting' and 'angry mobs'. Some of these episodes will be both 'dramatic' and 'very long lived (lasting over a week as politicians/officialdom are held hostage in a school)'. This will apparently only be 'relieved' by a 'cadre' of 'officialdom agents' who will be 'forcing through' the 'mobs' late at night (as a 'distraction') while the real 'rescue' happens from another 'point of entry'. Proving once again that mobs are not very bright.

Many of the 'governmental employee hostage situations' which are forecast to develop over this Summer and into Fall, are going to occur as a result of the chaos attendant upon 'governmental offices' as the 'dollar melts down'. The data sets are showing that 'crowds form' outside of 'federal government offices' across the 'nation' as a response by the people affected to the 'crashing'' of the 'dollar base system'. The data suggests that this will grow to include 'retirement plans (of all kinds)' as well as 'welfare'.

There are detail sets for 'retirees' who have been shafted by the 'collapse/disappearance' of their 'private pension plans' heading to 'government welfare offices' (and 'justice offices'), only to become part of 'vast crowds' seeking their 'living'. Images of 'old people' being 'trampled' as well as 'saved' come up in the data. There are instances of 'young mothers and children' being 'crushed' in the 'stampedes' as the 'doors open', or as 'soldiers (police) move in'. There are sets of 'blood running down stairs' being viewed 'on video' from 'dozens of states' as the 'social order glue' of the 'dollar' fails.

Within the 'reaction (to) dollar dying' sets are many describing a very 'brief wave' of 'looting' that will 'destroy and empty' most of the 'fast food restaurants' in several major metropolitan areas in the 'first day' of the 'social actions period'. The data sets are clearly tying the 'social actions period', or 'Days of Unrest' described as 'adding to (the) heat (of) summer' to the 'sudden (harsh) maturation' of 'younger Americans', as well as the 'departures (giving up)' of a 'substantial segment' of the 'baby boomers'.

As modelspace moves through Summer, the USAPop goes through huge changes. The 'failure (of the) dollar (based) financial system' having accelerated in May takes its toll on the 'middle class' in very early June. The data sets are showing that 'middle class' turns a 'corner and 'suddenly finds (itself)' living in the 'greatest depression' ever. Part of this particular depression is going to be the 'speed' with which it 'takes over' the 'global population mind set'. This is showing as leading to not only 'just in time delivery system crashes', but also 'tens of miles long road-side sales' as people try to 'cope' with the 'devastating debt destruction' that 'sweeps around our planet'. The data shows that 'malls' become 'squatters housing' as 'families fall apart', and 'relationships shatter' under the 'sudden plunge (into) abject poverty'.

The new detail sets for the USAPop are showing 'massive riots' as just the 'opening fireworks' for our 'national changes'. These 'changes' will include 'new forms' of 'social (and actual) prostitution' as the 'middle (and lower) class safety nets fail', and 'sales' of 'children' by 'government agencies' and 'foster parents' as the 'systems break down'. Further, forced labor gangs will become the precursors to 'forced raiding gangs'. It is such as these changes above that will produce a 'popular reaction' in the 'formation of tribes'. The ALTA reports have had the 'new tribalism' here in north America since 2006. These new accretion patterns are suggesting that the 'tribal formation period' will begin in late 2016 as the 'social order' especially around 'food (and energy) security/availability (going into Winter, northern

hemisphere)' starts to 'break down'.

A rather shocking part of the data sets in support of the 'break down' of the 'social order/organization' here in USAPop has to do with the 'rising death toll' taken on the 'population' by the 'debt destruction' and the subsequent 'sudden, shocking poverty', and the 'cessation (of the) just in time delivery system'.

Once again we have very large growth in the supporting sets for 'problems' in the 'just in time delivery system' also further magnifying the 'laying dead' issue as 'mortuaries fill up', 'hospitals' are 'refused pickup (by mortuaries)', and other examples of a 'credit system freeze' causing problems globally. The 'laying dead' issues are rising around 'public health problems' and 'failing (electrical)' and 'other infrastructure' {ed note: no gas for cremations}.

The 'laying dead' problems are but a small part of what will be called (by politicians) the 'great challenge (to the) nation'. These 'politicians' and other 'spokespeople for officialdom' will NOT be having to actually 'cope with' ANY of the 'problems' besetting the rest of the 'population', that is, not until some bright people take up 'frenching' the 'political power structure' in all of its forms with 'shit bombs' in all of their many forms. The data sets are showing that in at least one case the 'shit bomb' will actually be 'fatal' to the 'politician' involved, but, in perhaps a sign from universe, 'his death' will be used to 'label' or 'name' the phenomenon, much like 'crapper' is an appellation for toilet.

The 'shit bombs' and other 'political action/theater' of the USAPop over 2016 is described as being but a small 'reaction' of the 'populace' to the 'debt bomb explosion'. As the 'credit system freezes', the data shows 'tens of millions' of people are 'instantly reduced to barter' across the country and everything from 'sex' to 'food' to 'precious metals' to 'property' goes into 'rapid new territory' of 'real price discovery'. The data is showing that within the first week there will be 'enterprising young people' who will be 'constructing new markets/index' that 'chart' the 'progress' of 'depression' in 'local prices' for 'barter goods' around the nation. Within but a few days of the 'first cracks (in the dollar system)' the 'national tone' has changed, and 'bitcoin, gold, and silver' cannot be 'purchased in (former US) dollars'. Prior to that, bitcoin will 'reach parity' in some markets with 'gold', then the data sets are showing that USAPop segments such as 'gamers' and 'techies' will be 'banding together' to 'cobble up' replacements for 'local power systems' and 'internet nodes (this as several of the major telco components are destroyed either by natural disaster or the last (unseen, unknown) act of (real or faked) muslim extremism here in USA Land. Without regard to the cause, the failure of the national telco connections sets off the creation of the 'peoples redundant system' which is the 'carrier' for 'bitcoin settlements' at a 'national level'. It must be understood though that the level of 'national business activity' goes so completely 'flat' with the 'just in time delivery system failure' that 'bitcoin' takes on a 'new role' for 'large scale settlements' both here in USA and abroad. The level of changes described above will not be completely in place this year. In some of the memes above the bare beginning will be showing to many of us this year, yet by next (2017) year's end, all readers of this report will have lived in such conditions for a long number of very demanding months. The 'collapse of the currencies' are showing as affecting different regions of the nation differently for a considerable number of months.

The data sets are suggesting that the 'dollar death throes' are going to 'precipitate' a 'western nations revolution' that in turn will bring up a 'new constitution' for the 'american republics'. This period is

going to be defined and labeled by its relationship to the phrase 'the american republics'. Again note that the forecast is for 2017, though the first instances of the language should appear in 2016, thought probably from sources outside of USAPop. However, longer term sets are forecasting that the 'new constitution' language will not be limited to the USAPop in the upcoming 'four years'.

It is over the next '4/four years' that many of the very long term data sets from previous ALTA reports (going back to 2004) will be manifesting. These will include the 'separation' of the 'population' into 'tribes' as the 'diaspora moves happen'. The data sets are showing that 'groups' will 'drop out' of 'large scale population movements' to 'self form (into) tribe like alliances'. Some of these will be the long forecast 'coastal water tribes' of the Gulf and Atlantic states (American republics).

Again it needs to be noted that episodic 'earth changes' will also be 'intruding' into the 'direction' of the 'social order changes' here in USAPop and around the globe. In the 'north America' version of 'new world order (trying to impose itself on chaotic times and pissed off population)', the data is indicating that 'popular actions' which will involve 'federal government' as the 'victim' in some form will begin taking place in 2016 and escalate for a number of years as the 'power level' of the 'federal government' fades away with the 'USA dollar'.

Some of the 'episodic earth changes' will be also producing 'man magnified effects' as 'nuclear power plants' become 'catastrophe sites'. Not only will the 'ground (be) shifting' under the 'plants', but 'rivers' used for 'cooling' will 'dry up' (in at least one case, nearly all in a few hours inciting mass panic across a fairly large population base in the local valley environment), and additional problems come as the 'radioactive decay rates' will be 'subject to change (mostly accelerated)' and that will also 'induce erratic behavior' in what are basically 'giant nuclear heated steam engines'.

Other aspect/attribute sets are forecasting a strange connection between 'humans', and 'solar activities', and such emotive abstractions as 'luck'. An example would be the details suggesting that a 'gambler' will state that his 'staggering luck' was the result of 'sun association/relationship'. Other odd associations will include 'new cults' rising up over the next few years in which the 'devotion' will be 'solar focus', as in 'sun-human relationship', and 'light eating'. These cults are indicated to be 'nascent' until the 2020's, but growing, then (courtesy of cross links to the SpaceGoatFarts entity), the 'solar 2 human cults' will 'receive' a 'substantiation manifestation' that will 'jump (their) presence' globally. In many of these sets, there are hints from longer term data sets that 'technology' will be developed that will be used by some of these 'sun focused' groups that will, over the 2020's, be 'released to public domain'. The data is showing that the 'release' of the 'solar/human tools' will be the 'pivotal point' in the 'adoption' of the 'new (understanding of/relating to) sun human relationship'. This is also showing as including a substantial shift towards 'nudism' across the planet, but especially in the 'far northern latitudes' where the data shows that special 'solar facilities (for human exposure to (solar relationship))' will be built. The idea coming across from the accretion patterns is that the 'nudism' is more of a quasi-spiritual but now also involving technology experience. The technology is described with words that may be indicating that new language will have to be created to label these technical devices that will be used, but they involve the 'shifting' and 'alignment' of 'solar light' with the 'human'. These 'cults' are showing as 'originating' in the USAPop and then going 'global'. See SpaceGoatFarts entity for more on these new structures. Much of the 'new solar nudist' phenomenon is also internally

cross linked over to the 'big (emotional) hit' that USAPop is going to take as a result of the 'dollar wall' and the 'crack-up' of the 'financial-social infrastructure'. Many of these sets within the 'financial slap-in-face-with-cold-dead-fish wake-up' group within USAPop also lead off to dozens of new branches indicating such 'deep emotional/financial pain' that there rises up a 'plethora' of 'new religion-wanna-be people' claiming to 'have the answers'. As may be expected, none do so have any meaningful answers, and all but a very slim few of these 'cults' end very badly in these next 15/fifteen years.

The very long term data is forecasting that there will be a 'return' to the 'ideals' of 'past ages (of presumed USA glory)' that is going to 'coincide' with the reemergence of the 'renaissance' as forecast in previous ALTA reports.

Markets

The data sets are filling with repetitious language for 'bond(s) failure'. The language is not 'collapse' but rather very specifically focused on 'failure'. The language includes 'spikes', 'repeated power moves (up)', 'peaks', 'binding', 'yields up', 'deflationary failure', and 'pumping (higher)'. Other language goes to 'limits denied', and 'orders (pending) deliberately', and 'delay (an official) tactic'. Many other sets accrue in support of 'trader sweat', and 'boiling guts', and 'pounding heart', but these are not in the primary supporting chain, and are linguistic off shoots adding to the flavor of the upcoming 'bond disconnect'.

Other sets are showing that 'global (bond) harmony' is going to be 'disappearing' at a rate so fast as to be 'palpable' to the 'trading communities'. This appears in modelspace at the very edge of July...that is, the first few data elements that are within this set are splatting into our awareness in early July, about the 7th or so. Thereafter the data accrues at a pace that brings us to a large bulge of these supporting sets growing to a threshold of more general awareness by mid July. Stated another way for clarity, the data growth patterns would seem to be suggesting that the more general global population will become aware of the 'extreme dysfunction' of the 'bonds markets' by mid July. The forecast is for the subject to become more frequently discussed over August and through the 'disasters' of 'Fall, 2016'.

From the point of view of the data, what is forecast to happen is a 'bond (probably a 'corporation')' which is 'backed (but apparently not directly issued) by a government' is going to go 'into default' in such a manner as to cause a 'conflict'. The data sets are showing that the 'conflict' (later in June) is what creates the conditions for the wider 'bond(s) default(ing) period' of late June through August. There are some suggestions in the data that the 'bond' which triggers the rest is related to an 'insurance company' which is 'in distress' due to the 'large number of (natural disaster) claims' that it must settle.

The data sets continue new IM and ST value growth for 'locked out', and 'unable (to) claim (profits)', and other language going to a huge, massive "MF GLOBAL" situation developing as a result of the 'bond seizure' in which 'liquidity freezes (up nearly) instantly' such that 'corporations' are 'unable (to) convert (debentures)' into 'any form (of) money/cash'. This 'shut out' is also described as 'being locked out', and 'ripped off', and 'stolen (from)', and 'denied access (to legal profits)', and many other sets in the same range of meaning. Further sets go to the idea that 'corporations' involved in the 'denied transactions' will be 'under orders' from their 'banking partners' to 'commit illegal acts' and to 'falsify

records' as well as 'destroy records/evidence'. Other sets go to the same context of 'profits taken (away) by fraud' which is by 'acts of deceit' and 'document destruction'. There are any number of branching sets in this group which, when taken, bring up other linguistic structures that are going to similar situations in slight variants of the same 'locked out (of my account)' language.

And the data sets show that the 'victims howl (across the globe). And 'officialdom' lets them 'howl' while doing 'nothing'. The data sets are forecasting that 'millions' will 'lose' their 'winnings' as they will be 'denied (access)'. In spite of the very large emotional tone sums, and the amounts of 'dollars' involved, this 'caught out (unable to collect)' situation is but a small part of the large unfolding of the 'loss of the financial system'. The data accretion patterns have the 'caught out (unable to access profits)' episode hitting the media mere days before the 'Great Unraveling' starts 'peeling away' the 'various layers' (retirement plans/pensions/annuities/et al) of the 'global social safety net'.

The new data sets are virtually screaming that 'gold' and 'silver' and 'bitcoin' will, over the next 10/ten years, be 'reaching towards prices' that are being described as 'many tens of times' our current 'prices'. As this situation develops, the whole of the planet and human technology will undergo a total 'transformation'. These sets for the 'huge increase (in paper currency price of gold and silver)' are part of the sets for 'silver too precious to use (industrially)' which is being forecast as a 'result' of the 'monetizing' of 'silver'.

Much of the Markets entity new growth language is bringing in wording in supporting positions for 'consolidation'. Other supporting sets also include 'coagulation', and 'motion slowdown (economic)'. These supporting sets are primary support for 'contraction' of the 'economic activity'. The notable exception to this language is showing up in the 'gold/silver/bitcoin' sets.

The 'coagulation' set growth includes specific focus on 'Chinese (markets) falling'. Much of the language is dominated by 'crash', and 'double (daily) drop' that is forecast to be 'beyond 65%' in 'dropping values'.

This 'Great China Crash' language is heavily cross linked over to the 'dollar wall', and the 'collapse' of 'trade shipments' to/with much of the 'western (financially) world'. These sets have growth in sub sets including 'constipation' of the 'shipping channels' by which it is meant those 'channels' of 'raw materials through to finished products'. The data is showing that 'constipation' in China (et al) production channels is going to 'persist' for a number of 'years' as the 'western financial system' comes 'un-bound' and 'reverts (to) real value'. The data sets have detail language about 'New In Box' phrases showing up in the latter half of the next decade (post 2025) in which 'items' created before the 'Great China Crash', that were never 'just delivered' to the 'shores' of the USA during the 'breakdown' of the JIT delivery system' and then were 'shunted off' to 'rest quietly' for many years will be 'resold' back to China as 'curiosities' in about 10 to 14 years time to 'great profit' and 'much excitement'.

And we all thought that we had seen 'bad earnings reports' in the past. Nope, not according to the data. The data sets are forecasting a 'massive' and 'chaos triggering' reaction by 'USA based corporations' as the 'dollar craters' and 'earnings follow'. Yes, it would seem that perhaps 'corporation earnings' should rise in a period of a 'falling dollar', but the data would have that not be the case. A further 'slap in the

face' to the 'corporation pimps (globally)' will be the 'almost instant' follow on of announcements that 'chinese earnings' are 'crashing' to the extent that their 'corporation structures' are being 'threatened' by 'mass bankruptcies'. These new sets for 'spreading corporation malaise' and 'fading (corporation) earnings) globally' are also supporting the 'massive layoffs/firings' that will be 'rippling around the corporation world'. In many of these sets we see that the 'lucky' people are described as those 'accustomed to self reliance' and 'self-directed (self-motivated)'. The new detail sets for the 'corporation (employment) devastation' include many sets for 'wandering crowds (of former) salary workers (with nothing to do)', and 'vain attempts (by officialdom)' to 'control and direct' the 'tens of millions (of now) idle workers'.

It is, in part, the 'consolidation' in the 'corporate world', and the 'coagulation (of the) oil (markets)' that is showing as 'destroying wealth', and 'eviscerating (gutting/flaying/skinning)' the 'savers', and 'those who (are near) retirement'. The data sets are showing that, in part, the 'oil markets coagulation (dropping demand, over supply, glut)' is a 'prime mover' in the 'multiple times (increase)' in the 'perceived value (of precious metals)'.

Other factors within the new data sets that are forecast to have an impact on the 'precious metals markets' include the 'earthquake' still being forecast for China (location may be incorrect) in which the side or 'after' effects will include the 'shutting down' of many of the worlds 'mines'. Some of these will 'cease operations' due to 'insurance issues', others due to 'safety concerns', others due to 'collapsed tunnels', and others yet, including 'pit mines' are described as being 'flooded out' by 'shifting aquifers'. Note that these closures are not limited to China. Other economic impacts of the earthquake are described as 'disabling ports', and 'breaking dams' (though apparently not destroying them, more like creating threatening cracks and failure to make electricity).

The 'earthquake' is also showing as having wide spreading economic impacts within the 'financial system' as the China (slowdown/turmoil) Problem' gets worse. The idea coming up from the data is that a 'distracted' and 'damaged' China will be a giant economic 'brake' on much of the 'global financial system'. This is indicated to be the case for about 6 months or so, then the 'rebuilding effort' gets underway as a big 'push' to get to the 'mines' brings the last of the impacts on global markets to a close. However, the data shows that the 'chinese appetite for precious metals' becomes even more 'ravenous' as their own internal 'production' is 'reduced (by some unknown, but significant amount)'.

Modelspace, progressed slowly through Summer (northern hemisphere) 2016, has the Markets entity growth gaining as the volume leader over all other entities, excepting Terra. The Markets growth patterns have new sets for 'congestion' and 'crowds' and 'groups' that are all described as 'trying (to) force (themselves) into' or 'out of' one of the major areas of problems. The idea coming across is that the Markets are going to begin to reflect the 'panic (of the) herd'. This 'panic' is showing as being 'exacerbated' by the 'crowd effect'. Much of the detail reads like a script for a Three Stooges movie with 'large/great crowds' who are all trying to 'get through the same door(s)'. These sets are going directly to 'failing hedge funds', and 'retirement programs (dying)' that are trying to move 'vast quantities' of 'paper/debt currencies' out of their 'dying paper debt/assets'. Other sets are describing a 'global surge' to 'get out of paper (currencies)'.

The Markets entity has some interesting and humorous details such as the 'national smugness' of IndiaPop as they 'bask (in their) gold holdings'. Other, more positive areas include China (until the 'earthquake' cuts mining production), and Australia. The data sets in GlobalPop, and Markets entity show that the 'Russians', and the 'Chinese' are very very 'unsettled' and 'wary' as 'USA Central Officialdom' starts to 'show the cracks (in the edifice)' as it comes under 'internal pressures'.

Continued accretion in the sub sets of 'panic', and 'dollar (among other currencies)' has large supporting sets of shorter term and immediacy data providing that the 'congestion' of 'crowds' trying to 'either get (their) money out (of the failing system)', or 'get their money into precious metals' will 'force (the) government' to 'control access to (governmental offices)'. The idea is that 'very large crowds' are at all the 'government offices' in any way connected with 'handing out money' (social security, welfare....) and inevitably, these 'situations' will 'get out of control (from viewpoint of government)". Note that this is not country specific, but does only refer to those countries whose paper currencies are directly supported by the USA Federal Reserve Bank.

As modelspace is moved, inching forward through Summer seeking the points of flex within the 'grand global political financial system', there are hints coming out in early June in new language about 'bitcoin'. This new language is centered around the use of actual 'bitcoin', not the 'blockchain'. This new language is forecast to be mainly appearing in China, and to have the 'near immediate effect' of causing a 'stampede (to) purchase (bitcoin)'. These new sets forecasting many new Chinese language(s) descriptors about 'bitcoin' are also to be found in ChinaPop entity. The directly held value sets are focusing in on 'chinese use (of) bitcoin', not merely as a 'capital/wealth storehouse', but also as an 'investment (speculation/gambling)' vehicle. The idea is coming across that some form of 'popular woman's entertainment show' will be the 'spark' which ignites a 'new level of adoption' by the 'chinese population'. The data sets are forecasting that by September, about 1/one per cent of the 'chinese young population (under 40)' will be 'favoring bitcoin' and 'dynamically involved (likely to obtain)' with 'bitcoin' in this year. The sheer numbers involved are described as being 'self reinforcing', and 'feeding frenzy', and 'jumping up (the) frequency (of) chinese purchases', and 'becoming self promoting'. This last group includes language about how the 'exchange owners' in China will be 'promoted in media' as a result of the 'new interest' in 'bitcoin' by the 'larger population'. The data sets point to these kinds of 'business promotion articles' which will all have a 'positive spin' as producing a 'problem' for the 'chinese officialdom'. The issue will come down to 'riots/disquiet/rumors/unrest' versus 'allowing gambling and speculation (on) bitcoin (which is not controlled by chinese central authorities) as a major (promoted) distraction'. We can all guess which one the 'power structure' will take. And thus the data is suggesting that 'Bitcoin' starts to 'cross the chasm' in China (for young adults with money). This is indicated to be participating in the 'boost' of the 'dollar price' of 'bitcoin' past the '$650' mark.

It is at the point in Summer (after the June solstice and sometime before mid August as it appears in modelspace) that Bitcoin begins to 'pop up' several times 'each day' that the data sets are also accumulating the new sets for 'massive (global) upheaval' in the 'bonds' and 'yield levels'. As modelspace is moved through this period, the data shows that 'attempts at (currency) creation' are undertaken by 'governments' in many different forms. The data sets further are showing that the 'population' in general, are reacting 'badly' to the 'erosion' of the 'dollar (and thus other local currencies) purchasing power'. These 'inflation hits' across all the 'markets' for 'commodities' and 'products' is

going to have huge impacts across the planet as 'chaos descends' onto the 'pricing of goods'. In some of the data sets the 'pricing chaos' is going to 'disable' many 'governments' as their 'goods' and 'necessary supplies' are 'delayed' as 'payment systems fail'. Further, many of the 'suppliers' to the various 'governments' around the planet are 'destroyed' by the 'credit/financial system lock-up/break-up'. The net effect will be that some 'governments' will have to 'attempt' to 'force corporations' to 'deliver'. This is showing as creating all kinds of further 'chaos'. See GlobalPop entity.

SpaceGoatFarts

The Terra entity forecast 'ramping up' in 'earthquakes', and 'land shifts', and 'ocean changes' are all extensively cross linked over to the SpaceGoatFarts entity where we have 'solar (dynamic) activity' as the terminating sub set. All of these cross links are minor compared to the massive cross connection between 'sun disease', and GlobalPop entity. These data sets are pointing to 'significant impacts' on humanity directly attributable to 'solar radiation', even though the 'radiation' will be 'unseen', 'unknown', and 'undetected (at the time)'. Without regard to its initial descriptors, the 'sub disease impacts' on humans will be 'reported' even in the mainstream propaganda press shortly after the 'first (intense) burst'.

The data sets for the 'sun disease' are also forecasting that further 'erratic solar weather' will be causing 'challenges' here on earth (and the other planets) as the 'terran weather' shifts into 'visible wonkyness' with 'snows' in 'summer', and 'heat waves' at the 'poles', and other demonstrations of 'never before reported strange weather phenomena'. These 'weather phenomena' will include 'more erratic ocean currents' and increasing 'heat waves' leading to 'large fish population deaths' in 'near shore waters' while also producing 'blinding fogs' in the 'mid day sun' in areas outside of view of land. These 'mid day evaporation fogs' are also going to show up on satellite photos and cause some considerable discussion.

Many other new sets are referring to 'odd' and 'exceptional' and 'out of place/out of time(?)' phenomenon to be 'encountered' over 2016 and 'reported upon'. Much of the 'reports' are to be 'dismissed' as there will be 'piling on effect', but the data is forecasting that some of the 'initial reports' will be 'credible' and will speak to truly 'bizarre events' here on earth.

Some of the 'bizarre events' may be better understood as 'trailing events' from the 'meddling' at the 'energetic level' of the 'CERN LHC'. These sets are suggesting that 'ephemeral effects' may be 'created' here on earth, but 'outside' the 'confines' of the 'LHC magnetic fields' such that 'self-directed field forces' will be 'established' and 'cause panics' where the 'effects appear'. PLEASE NOTE: no further details will be offered on the 'effects' produced by these fields as it is one of those 'self fulfilling' things to be avoided (according to the data accretion patterns). Basically we will all recognize it later, so enough said at this point.

The SpaceGoatFarts entity is also suggesting that 'real (sort of) space farts' will 'descend over earth'. These are actually sets that are describing 'new smells' that will be 'accompanying' the 'evaporation fogs', at least temporally. These 'smells' are described as being 'cloying', and 'blanketing whole regions',

as well as affecting even 'pilots' (mostly small airplanes). The data sets are describing something that will be a 'precursor' to 'larger events' later in this decade, but not of immediate concern.

The SpaceGoatFarts entity also contains growth in areas with extensive cross links over to the Markets entity as well as the GlobalPop entity where the area of 'space exploration' and 'space exploitation' are described as 'taking up' some 'new materials' into 'space' that will 'react unexpectedly' and produce the first 'space industrial crisis' of this century. Somehow this 'space industrial crisis' is indicated to be of great concern to certain latitudes here on earth. No detail sets to speak of related to the source of the 'crisis', and the interpretation is that the cause and effects may be some months off, or may be 'withheld' for some number of months such that the news comes out in early 2017.

The SpaceGoatFarts entity has many cross links over to the USAPop entity where the subject, viewed from this perspective could be labeled as 'new (improved) solar nudism'. The idea coming from the data sets in both entities is that an 'invention' will 'link humans (to) solar light' in ways 'not before experienced' such that 'new social phenomena (with many of the aspect sets of 'spiritual cults') ' will be 'taking off' in the USAPop. These sets are further showing that the 'technology', over the early 2020's, be 'adopted' by GlobalPop in some significant numbers as it has by then been 'proven out'. Of those sets which terminate links from the USAPop entity, the majority within the SpaceGoatFarts entity also have branches going over to the Markets entity. Many of these sets continue the growth around 'new solar technology'.

The data sets bulging out the 'space (unknown items (UFO's))' sets have new sets that indicate that all the 'work' being done by the 'minions' of 'officialdom' to 'hide' the UFO's will be 'undone' for 'hundreds of millions' of humans as the 'phenomenon (of UFO's)' makes it 'quite clear' that 'humanity' is 'not alone'. The 'non-disclosure disclosure' is going to involve a 'solar event' that is described as 'defining' this 'year' into 'history'. The data sets that describe this 'event/manifestation' are filled with supporting sub sets for 'electrical connection' in which the 'relationship' of 'sun (to) earth' is 'clearly demonstrated'. This 'demonstration' is indicated to include a 'return current' from 'earth' that is described as 'sheet-like' or 'a wide (thin(ish)) plane of electrical activity'.

There continues to be growth in sets for 'spectacular sky (visions/effects/optics)' in many different parts of modelspace, but almost all of these have cross links back to SpaceGoatFarts entity where our terminating sets fall in the broader category of 'unknown'. The data sets further are showing that the 'unknown' part of the larger set is going to be 'deeper' and 'more dense' than before the 'sky shows' begin. The data would seem to be suggesting that the 'upcoming sky spectaculars' will be 'making (human) science' go 'backwards' to 'unlearn bad understanding'.

Other 'sun' related sets in the new data show that the 'earthquakes' of this year are going to be very much less than those of 2017. The growth pattern of the 'earthquake' language, especially in the longer term data types is becoming more concentrated in scope and density for mid to late 2017.

Yet more 'strange stuff from space' is popping up in modelspace as it is progressed through July and August. Not associated with meteors, yet somehow in a 'supporting' position to the 'non-disclosure disclosure' of UFO's the data sets are describing a something that has more 'unknown' than known

elements to it. The very few items that do make sense would seem to be describing a 'tourist ship' or 'fun expedition adventure'. The way it is coming out of the data sets, it would appear that humans just may be a 'roadside attraction' for 'intergalactic cruise line'. And the really interesting part is that the 'visitors' are indicated to 'leave behind their trash'.

Conclusion: Self-knitting reality

Over the last several years the larger view of human activity here on earth has been developing a 'theme' of a sorts as the various threads of future manifestation seemingly are self-knitting into a more complete garment. The theme emerging could be titled 'Our Next World' as it has a humanity focus, but is seemingly describing a planet that we do not, as yet, inhabit. But, to the aware observer, the temporal progression forward continually brings evidence that we are having our old world replaced, under our moving feet.

All in reality is but change appearing to our consciousness. All in reality is but change **for** our consciousness. We are the truly the luckiest of humans, as we are able to wake up every morning to greet Our Next World as it unfolds in the change manifesting.

The Next World for humanity is not going to be as in the past. Gone will be the planet of old, gone will be the power structures of old. Both the earth, and humanity, will be young again. Will we remember that youth is but looking back on our previous lives from new eyes?

Ozymandias

I met a traveller from an antique land
Who said: "Two vast and trunkless legs of stone
Stand in the desert. Near them on the sand,
Half sunk, a shattered visage lies, whose frown
And wrinkled lip and sneer of cold command
Tell that its sculptor well those passions read
Which yet survive, stamped on these lifeless things,
The hand that mocked them and the heart that fed.
And on the pedestal these words appear:
`My name is Ozymandias, King of Kings:
Look on my works, ye mighty, and despair!'
Nothing beside remains. Round the decay
Of that colossal wreck, boundless and bare,
The lone and level sands stretch far away".

Percy Bysshe Shelley
